DATA CONTAINED IN THIS ISSUE

The statistics shown are the latest available at 11 December 2008. Data sources for the tables in this publication are listed in Appendix 1.

CHANGES IN THIS ISSUE

The families table (Table 1.7) has been changed, following the introduction of improved estimates of families from the Labour Force Survey (LFS) in October 2008. For more information on the improved estimates of families, see *Improvements to Family Estimates from the Labour Force Survey* (cat. no. 6224.0.55.002).

ELECTRONIC PRODUCTS

The spreadsheets and data cubes referenced in this publication are available free of charge on the ABS website at <<http://www.abs.gov.au>> [Access to all ABS products & statistics – By Catalogue Number – 6. Labour Statistics and Prices].

INQUIRIES

For information about other Australian Bureau of Statistics (ABS) statistics and services, please refer to the back of this publication.

LABOUR STATISTICS NEWS

LABOUR THEME PAGE

The ABS Labour Theme Page, available on the ABS website, provides a guide to the range of ABS statistics on the labour market, as well as links to the latest data released. To find the Theme Page, go to <http://www.abs.gov.au> [Themes – People – Labour].

RELEASE OF SEARS

The 2007 Survey of Employment Arrangements, Retirement and Superannuation (SEARS) provides a range of information on employment arrangements; working patterns; work and caring; retirement and retirement intentions; and superannuation. Results from the survey were released in November 2008 in the publication *Employment Arrangements, Retirement and Superannuation, Australia* (cat. no. 6361.0) and in a number of datacubes: *Employment Arrangements, Retirement and Superannuation; State Tables, Apr to Jul 2007* (cat. no. 6361.0.55.003) and *Datacubes: Employment Arrangements, Retirement and Superannuation, Australia, April to July 2007* (cat. no. 6361.0.55.004).

An expanded Confidentialised Unit Record File (CURF) (cat. no. 6361.0.55.001) was also released and is accessible through the Remote Access Data Laboratory (RADL). The expanded CURF allows authorised users to process the survey data from their desktop via a secure internet link. For more information about the CURF see *User Guide: Employment Arrangements, Retirement and Superannuation, Australia, April to July 2007* (cat. no. 6361.0.55.002). For information about accessing CURF microdata, see the CURF User Tool Kit at <http://www.abs.gov.au> [Services – CURFs – CURF Microdata].

AUSTRALIAN JOURNAL OF LABOUR ECONOMICS THEMATIC ISSUE - CALL FOR ARTICLES BASED ON SEARS

In early 2010, the *Australian Journal of Labour Economics* (AJLE) will publish a thematic issue dedicated to articles using the expanded CURF from SEARS 2007. The analysis should be innovative and will be peer reviewed. The final selection of articles lies with the editors of the AJLE. The deadline for submission of articles is 31 August 2009. Articles should be submitted to Boyd.Hunter@anu.edu.au and Nicholas.Biddle@anu.edu.au.

LABOUR STATISTICS NEWSLETTER

The Australian Bureau of Statistics is currently developing a labour statistics newsletter which is designed to provide users with insight into the ABS labour market program and updates on statistical developments. *Labour Statistics News* (cat. no. 6106.0) will be released twice-yearly, with the first issue expected to be released on 24 February 2009. Each issue will feature current projects, recent highlights, articles and analysis, contact details, and other related information. To subscribe to the newsletter please email "subscribe" to janelle.mcfarlane@abs.gov.au, or you may access the newsletter directly at <http://www.abs.gov.au>.

SUPPLEMENTARY SURVEYS ON LABOUR TOPICS

The Monthly Population Survey comprises the Labour Force Survey (LFS) and a range of supplementary surveys, which provide detailed information on a range of topics. Results from surveys on labour-related topics recently released include: *Labour Mobility, Australia, Feb 2008* (cat. no. 6209.0) and *Job Search Experience, Australia, Jul 2008* (cat. no. 6222.0).

RELEASE OF LABOUR
MOBILITY CURF

The 2008 Basic and Expanded Labour Mobility CURFs (cat. no. 6202.0.30.004) were released in November 2008. The Basic CURF is available on CD-ROM. The expanded CURF is available via RADL only. Access through the RADL enables the ABS to make more detailed microdata available than on CD-ROM, while still maintaining the confidentiality of ABS data providers. For more information about the Labour Mobility CURF see *Labour Force Survey and Labour Mobility, Australia: Basic and Expanded Confidentialised Unit Record Files, Technical Manual, Feb 2008* (cat. no. 6202.0.30.005).
For more information about accessing CURF microdata, see the CURF User Tool Kit at <<http://www.abs.gov.au>> [Services – CURFs – CURF Microdata].

SURVEY OF EMPLOYEE
EARNINGS AND HOURS
CURF

The ABS Labour Market Statistics section is currently developing a CURF from the May 2006 Survey of Employee Earnings and Hours (EEH). This will be the first CURF produced from the EEH survey. Subject to meeting ABS confidentiality requirements, and subject to receiving approval of the Australian Statistician, it is expected that the CURF will be released in March 2009.

FORTHCOMING CHANGES
TO LFS ESTIMATES
*REVISION OF POPULATION
BENCHMARKS*

From the February 2009 issue of *Labour Force, Australia* (cat. no. 6202.0), LFS estimates will be compiled using population benchmarks based on results from the 2006 Census. Additionally, for the period June 2001 to January 2009, LFS estimates will be revised based on the 2006 population benchmarks. The revised estimates will also be available with the release of the February 2009 issue of the publication *Labour Force, Australia* (cat. no. 6202.0) on 12 March 2009.

*REVISION OF LABOUR
FORCE SURVEY
STATISTICAL REGIONS*

LFS Statistical Region boundaries are revised at each sample redesign to align with the *Australian Standard Geographical Classification (ASGC)* (cat. no. 1216.0). From the February 2009 issues of *Labour Force, Australia, Detailed - Electronic Delivery* (cat. no. 6291.0.55.001) and *Labour Force, Australia, Detailed, Quarterly* (cat. no. 6291.0.55.003), regional estimates will be produced based on the 2006 LFS Statistical Regions. LFS estimates will be revised back to November 2007 based on the new regions. For further details, see *Information Paper: Labour Force Survey Sample Design* (cat. no. 6269.0).

*CLASSIFICATION OF
INDUSTRY AND
OCCUPATION*

From the February 2009 issue of *Labour Force, Australia, Detailed, Quarterly* (cat. no. 6291.0.55.003) the industry and occupation employment estimates will be based on new classification structures. At that point the LFS will discontinue using the old classifications and will release historical industry and occupation estimates backcast to the new classifications.

Industry will be classified to the *Australian and New Zealand Standard Industrial Classification (ANZSIC) 2006*. This classification system will replace the existing classification ANZSIC 1993. Industry estimates from November 1984 will be available on the new classification. For more information on the implementation of ANZSIC 2006 see *Information Paper: update on ANZSIC 2006 Implementation, 2008* (cat. no. 1295.0.55.001).

LABOUR STATISTICS NEWS *continued*

CLASSIFICATION OF INDUSTRY AND OCCUPATION *continued*

Occupation will be classified to the *Australian and New Zealand Standard Classification of Occupations (ANZSCO)*. This classification system will replace the classification *Australian Standard Classification of Occupations (ASCO) Second Edition*, introduced in August 1996. Occupation estimates from 1996 will be available on the new ANZSCO classification. For more information on the implementation of ANZSCO see *Information Paper: ANZSCO - Australian and New Zealand Standard Classification of Occupations, 2005* (cat. no. 1221.0).

TIME SERIES SPREADSHEETS

On the ABS website, the February 2009 issue of *Labour Force, Australia* (cat. no. 6202.0) will include its corresponding time series spreadsheets under the same catalogue number. These spreadsheets are currently found at *Labour Force, Australia, Spreadsheets* (cat. no. 6202.0.55.001), and these will cease following the January 2009 issue on 12 February 2009.

ABS EMAIL NOTIFICATION SERVICE

By subscribing to this free service, you will be kept informed via email of the latest releases of ABS products. To subscribe, follow the link from the ABS home page <<http://www.abs.gov.au>>, provide your email address, and select your topics of interest.

COMPARING UNEMPLOYMENT AND THE CLAIMANT COUNT

INTRODUCTION

Estimates of the number of unemployed people are of interest from several perspectives. From a social perspective, a lack of work can have a significant effect on the financial, personal and social lives of individuals and their families. From an economic perspective, there is interest in the extent of available labour, concern about a scarcity of skilled labour, the cost of labour, and the economic cost of unemployment.

A number of sources of useful information exist to inform policymakers and analysts about people without work and about people who are receiving assistance to enter the labour force. The Australian Bureau of Statistics' (ABS) monthly Labour Force Survey (LFS) has provided the official measures for employment and unemployment since February 1978, using definitions recommended by the International Labour Organisation (ILO). The key measures produced from the LFS are estimates of the number of employed and unemployed, and the unemployment rate.¹ The estimates are derived from a sample survey, which in 2008–09 consisted of approximately 22,800 households across Australia.

Another important source of data is compiled by the federal Department of Education, Employment and Workplace Relations (DEEWR) and relates to a count of the number of Labour Market Payment (LMP) recipients.² Within this population are 'Paid recipients', which excludes those who are not receiving a primary income support payment, and those who are not paid anything due to the application of the income test to either their own or their partner's income. Paid recipients can then be further classed as job seekers, and these are people for whom job search is their primary activity. 'Non job seekers' are exempt from undertaking job search as a primary activity (e.g. those temporarily incapacitated, undertaking training or part-time work), but they may still be looking.

Comparisons are sometimes made between the official unemployment estimates produced by the ABS and the claimant count produced by DEEWR. While both of these series have tended to move broadly in line with each other over time, the two measures differ in many ways.

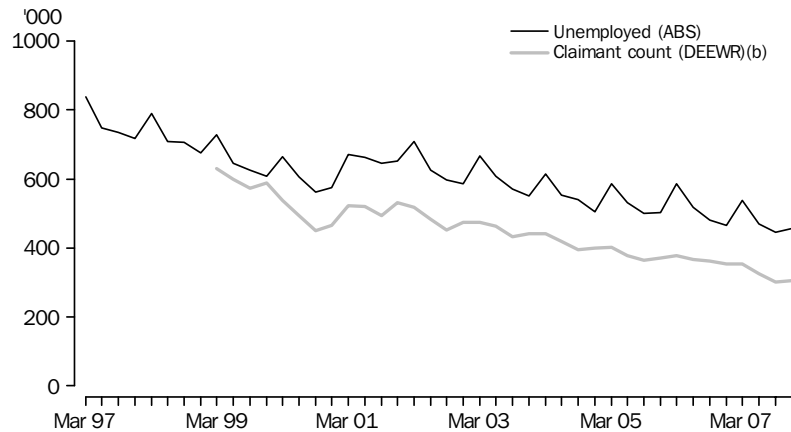

The purpose of this article is to explore the key differences between the two measures. It compares the unemployment estimates from the monthly LFS with claimant count data taken from an administrative dataset, based on various types of LMP delivered by Centrelink on behalf of DEEWR. The time series information relating to the claimant count presented in the article begins from 1999 and relates to 'job seekers'.^{3,4} Job seekers were chosen for comparison as they are more conceptually aligned with the ABS definition of unemployment, in that they both need to be undertaking 'active' job search.

OVERVIEW

In 2007, there were nearly half a million (478,300) unemployed people compared with 321,800 job seekers receiving labour market payments. Graph 1 shows the movement of the two measures over the period 1997–2007, both showing a downward trend over the past ten years.

OVERVIEW *continued*

1. UNEMPLOYED AND CLAIMANT COUNT COMPARISON—1997–2007 (a)

(a) Original quarterly time series data

(b) LMP recipients who are classed as jobseekers

Source: Labour Force Survey, DEEWR administrative dataset

In 1999, the claimant count data was on average 54,900 persons fewer than the ABS estimate, but between 1999 and 2000, the gap widened as a result of a number of changes relating to the Newstart Allowance payment and to the compilation of the DEEWR administrative dataset.⁵ Also from April 2001, a small population known as 'future starters' were included in the ABS estimates of unemployed people which also contributed to the difference between the two series.⁶

The ABS unemployed series is more sensitive to seasonal changes than the claimant count (as shown in Graph 1). The ABS estimates of unemployment are based on the number of people without work, who are actively seeking work and who are immediately available for work. The number of unemployed people generally peaks in the March quarters and troughs in the December quarters as people move in and out of unemployment due to calendar related influences such as the end of the academic year and increased economic activity at Christmas.

The DEEWR claimant count measures the number of people claiming unemployment related benefits, i.e. job seekers being paid Newstart Allowance or Youth Allowance (Other) — unemployed people aged 21 years and over (but below Age Pension Age) who are willing to undertake suitable paid employment, and those aged under 21 years who are not full-time students or full-time Australian Apprentices, both of whose primary activity is job search. The DEEWR claimant count series is not as sensitive to seasonal changes as the ABS unemployment series and shows relatively little systematic variation in level over each calendar year (see Graph 1).

SEX AND AGE ANALYSIS

An analysis of the sex and age distribution of the unemployment estimates and of the claimant count reveals a number of differences between the two groups. Overall, women accounted for 49% of all unemployed people in 2007, but just 39% of those job seekers in the claimant count. The overall difference observed in 2007 between the two measures for women has remained relatively consistent since 1999 (see Graph 2). During the period 1999–2007, there were on average around 110,000 more women who were unemployed compared to job seekers who were paid a LMP. It is apparent that many women who are 'unemployed', according to the ABS definition, do not appear in the

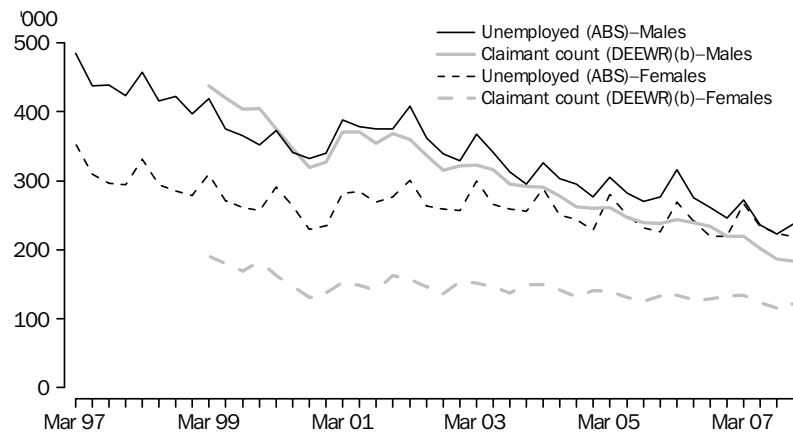

COMPARING UNEMPLOYMENT AND THE CLAIMANT COUNT *continued*

SEX AND AGE ANALYSIS *continued*

administrative data counts. This may be because they are unable to claim LMP due to their partner's income exceeding the amount specified in the relevant personal income test.⁷ It is also possible that many of these women do not appear in the 'claimant count' data as they may be eligible for a different type of income support payment, such as the parenting payment.

For men, the difference between the two measures was much smaller (20,800 on average) than for women, and during 1999 there were actually more men receiving LMP than were estimated as unemployed.

2. UNEMPLOYED AND CLAIMANT COUNT COMPARISON, by Sex—1997–2007 (a)

(a) Original quarterly time series data
(b) LMP recipients who are classed as jobseekers

Source: Labour Force Survey, DEEWR administrative dataset

The age distribution of unemployed men and women is quite different to the claimant count (see Graphs 3 and 4). In 2007, the peak age group for unemployed men and women was 15–19 years. In contrast, the peak age for claimant count males was 25–34 years while for females it was 45–54 years.

3. UNEMPLOYED AND CLAIMANT COUNT COMPARISON, Males by age group—2007 (a)

SEX AND AGE ANALYSIS
continued

4. UNEMPLOYED AND CLAIMANT COUNT COMPARISON, Females by age group—2007 (a)

(a) Original annual average quarterly data
 (b) LMP recipients who are classed as jobseekers
 Source: Labour Force Survey, DEEWR administrative dataset

There are substantially more young men (aged 15–24 years) who are unemployed than there are in the claimant count, and this is also the case for young women.

The large difference between the number of 15–24 year olds in each measure is related to the administration of LMP to young people. In 2007, there were 191,900 persons aged 15–24 years classified as unemployed compared to only 98,700 persons in this age group who received LMP. People aged 15–24 years are likely to be full-time students and, as such, if they are eligible for any assistance (based on their parents income) they would receive a different type of payment to that which is included in the claimant count data.

For men between the ages of 25 and 59 years, there is little difference in the number of men in unemployment and the number of men in the claimant count.

In contrast, for women there is a large difference in almost all age groups in the number who are unemployed and in the number who are in the claimant count. The reasons for this have been discussed earlier in the analysis and relate to the effect their partner's income may have on their eligibility for a LMP, and the fact that they may be receiving other forms of income support.

In regards to older people, that is, men aged 65 years and over, some women aged 63–64 years, and all women aged 65 years and over, they are not included in claimant count data as they are eligible to claim the Age pension.⁸ In contrast, the only age restriction in the ABS estimates is that people are aged 15 years and over.

CLAIMANTS WHO ARE NOT UNEMPLOYED

The previous paragraphs largely discussed people who are classified as unemployed in the monthly LFS, but who are excluded from receiving LMP. However, there are a number of people who receive LMP who would not be included in the unemployment estimates. For example, claimants are able to undertake paid work and yet continue to receive benefits until the income from that paid work reaches a specified level, at which time they become ineligible to receive further benefits. These people would not be classified as unemployed according to the ABS definition as they undertook one hour or more of paid work in the reference week; rather they would be classified as employed.

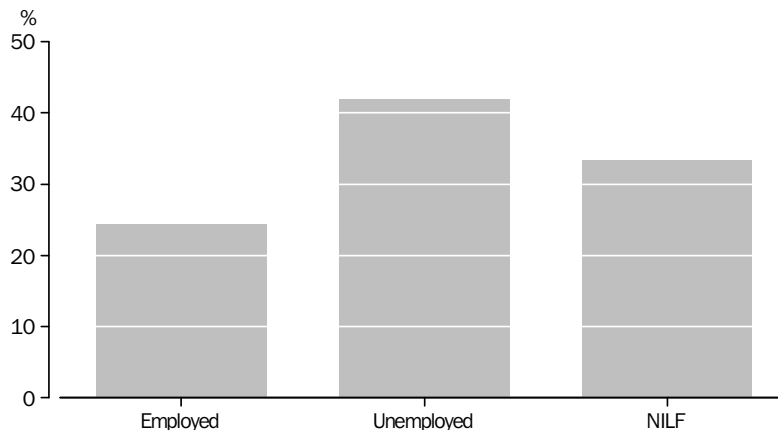

AN INDICATION OF
OVERLAP BETWEEN THE
TWO MEASURES

From the LFS it is not possible to estimate how many people, unemployed or otherwise, are receiving LMP. However, we can get an indication of this from the Survey of Income and Housing (SIH) which was last run in 2005–06. The SIH collects information about people's labour force status (although not as comprehensively as the LFS) as well as their sources of income. The SIH income data is able to indicate whether people receive Newstart Allowance (NSA) and Youth Allowance (YA), but it does not separately identify those recipients who only receive YA (Other). However, by excluding full-time students from the SIH data we are left with a population that approximates YA (Other), although full-time apprentices are still included. In this analysis, therefore, the following populations in the SIH; those receiving NSA, and the approximated YA (other) population, roughly equate to the paid jobseekers population in the claimant count.

As Graph 5 indicates, not all people receiving NSA and YA (excluding full-time students) are unemployed according to the ABS definition. In 2005–06, less than half (42%) of these recipients were defined as unemployed, with the remaining recipients classed as employed (25%) or not in the labour force (33%).⁹

Furthermore, the SIH indicates that only 34% of all unemployed people were receiving NSA and YA (excluding full-time students).

5. DISTRIBUTION OF PERSONS ON NEWSTART AND YOUTH ALLOWANCE(a), By labour force status—2005–06

(a) Excluding full-time students

SUMMARY

There are a number of differences between the ABS unemployment estimates and the DEEWR claimant count and some of these have been discussed in this article. The following table summarises the key differences between the two measures by highlighting the groups of people who would be considered unemployed but not receiving LMP and vice versa (Table 6).

COMPARING UNEMPLOYMENT AND THE CLAIMANT COUNT *continued*

6. SUMMARY OF KEY DIFFERENCES BETWEEN THE UNEMPLOYMENT ESTIMATE AND THE CLAIMANT COUNT

| | <i>Unemployment estimate (ABS)</i> | <i>Claimant count (DEEWR)</i> |
|-------------------------|--|---|
| Age in scope | Civilian population aged 15 years and over. | Includes all job seekers aged 15 to 64 years (upper age limit of 63–64 years for females, depending on date of birth). |
| Students | Includes all students aged 15 years and over as long as they meet the actively looking and availability criteria. | Excludes full-time students (receive a different type of payment). |
| Income and Assets | n.a. | Excludes those people whose personal/partners or parents income and assets are above the specified amount. |
| Paid work | Excludes all people who undertook one or more hours of paid work in the reference week. | Includes those people who have undertaken paid work in the reference week, where earnings are below the threshold for cut-off of LMP. |
| Active job search | Includes only those people who take active steps to find work in the four weeks prior to the survey (waived for future starters).(a) | Includes people who have been actively seeking work, or undertaking activities to improve their employment prospects. Also includes some people who have been exempt from active job search based on personal circumstances (e.g. illness, homelessness or major personal crisis).(b) |
| Available to start work | Excludes those who are not available to start work in the reference week. | No specific criterion concerning availability to start work. Includes people who 'accept suitable offers of work'. |

(a) For more information see end note 8.

(b) For more information see end note 7.

SUMMARY *continued*

While the ABS unemployment measure and the DEEWR claimant count tell similar stories over time, they differ in many ways. The ABS unemployment measure is the official measure of unemployment in Australia, and is the best source for the number of unemployed persons and the unemployment rate. However the DEEWR claimant count data are useful for examining the numbers of people at the national and small area level who will be affected by changes to labour market payments.

FURTHER INFORMATION

For further information on the ABS unemployment estimates see *Labour Force, Australia* (cat. no. 6202.0). For further information on the concept and definition of unemployment see *Labour Statistics: Concepts, Sources and Methods* (cat. no. 6102.0.55.001).

For further information on the DEEWR claimant count data see *Labour Market and Related Payments - a monthly profile*, (LMRP), available on the DEEWR website. This publication is produced on a monthly basis by DEEWR and includes information on the history of labour market payments, as well as small area estimates of claimant count data.

For further information about this article, please contact Deepa Wright (ph (02) 6252 6149 or email <deepa.wright@abs.gov.au>).

END NOTES

- The ABS definition of *employed* is: Persons aged 15 years and over who, during the reference week:
 - worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and own account workers); or
 - worked for one hour or more without pay in a family business or on a farm (i.e. contributing family workers); or
 - were employees who had a job but were not at work and were:
 - away from work for less than four weeks up to the end of the reference week;
 or

END NOTES *continued*

- away from work for more than four weeks up to the end of the reference week and received pay for some or all of the four weeks up to the end of the reference week; or
- away from work as a standard work or shift arrangement; or
- on strike or lock out; or
- on workers' compensation and expected to return to their job; or
- were employers or own account workers, who had a job, business or farm, but were not at work.

The ABS definition of *unemployed* is: Persons aged 15 years and over who were not employed during the reference week, and

- had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and were available for work in the reference week, or
- were waiting to start a new job within four weeks from the end of the reference week and could have started in the reference week if the job had been available then (future job starters).

The *unemployment rate* is defined as the number of unemployed persons expressed as a percentage of the labour force (employed and unemployed).

2. Labour Market Payment recipients had a payment status of current for receiving Newstart Allowance and Youth Allowance (Other).

3. The claimant count used in this article consists of all job seekers aged 15 to 64 years (63–64 for females, depending on date of birth) receiving Newstart Allowance and Youth Allowance (Other). These recipients include those who received income from paid work as well as those who did not receive any income.

Newstart Allowance is payable to eligible unemployed persons aged 21 years and over (but below Age Pension age) who are willing to undertake suitable paid employment and, unless exempted, participate in approved activities and/or job search.

Youth Allowance (Other) recipients are Youth Allowance recipients who are not full-time students or full-time Australian Apprentices, i.e. eligible unemployed persons aged under 21 years, looking for work or combining part-time study with job search, or undertaking any other approved activity, or temporarily incapacitated for work or study. It may also include those classified as independent, aged 15 years and above the school leaving age in their state who are satisfying or exempt from the activity test.

Youth Allowance is payable to eligible full-time students aged 16 to 25 years, and to eligible unemployed persons aged 16 to 20 years who satisfy the activity test. There are certain exceptions for some 15 to 25 year olds. Youth Allowees may be undertaking full-time study, full-time job search or a combination of approved activities. Some people will be exempt from the activity test because of their personal circumstances, e.g. illness, homelessness or major personal crisis.

The *activity test* must be satisfied in order for people to receive either the Newstart Allowance or the Youth Allowance (Other). To satisfy the activity test recipients must be actively seeking and willing to take up work or undertaking activities to improve their employment prospects.

END NOTES *continued*

DEEWR defines *job seekers* as all those people being paid Newstart and Youth Allowance (Other), excluding those who did not receive a payment due to their own and/or their partner's income, or where applicable, parental income, and all those known not to be required to search for work as their primary activity.

4. Due to changes in the administration of the labour market payments dataset between government departments, it is only possible to obtain electronically sourced claimant count data from 1999. Data is for one week of the quarter month and therefore differs to what is published in LMRP.

5. Between 1999–2000 there was a change in the definition of Newstart Allowance that reduced the number of recipients. Those recipients who were defined as 'current clients' were included in the administrative data, and all suspended clients were excluded (those who failed to comply with the administrative requirements).

During the period 1999–2000, there were also changes to the compilation of the DEEWR administrative dataset, that is all zero paid customers (those customers still 'current' who were not paid benefit due to their own or partners' earnings exceeding the allowed amount) were excluded. In addition, those clients in the Community Development Employment Projects were also excluded.

6. The ABS definition of *future job starters* is: persons aged 15 years and over who were not employed during the reference week, and were waiting to start a new job within four weeks from the end of the reference week and could have started in the reference week if the job had been available then.

7. Applicants of Newstart Allowance and Youth Allowance (Other) are also subject to *personal income and assets tests*. Applicants of Newstart Allowance who are partnered are ineligible to receive payments if their partner earns \$1,408.00 or more per fortnight. As of 1 July 2008, applicants of Youth Allowance (Other) who are partnered, away from home and job seekers are ineligible to receive payments if their partner earns \$1,278.00 or more per fortnight. Applicants of Youth Allowance (Other) who are partnered, with dependents and job seekers are ineligible to receive payments if their partner earns \$1,394.00 or more per fortnight.

8. The maximum age range for females receiving LMP varies between 63 and 64 years of age, depending on their date of birth.

9. The ABS definition of *not in the labour force* is: persons aged 15 years and over who were not classified as employed or unemployed, as defined by the ABS.

JOBLESS FAMILIES

INTRODUCTION

Children living in jobless families or without an employed parent may be considered to be disadvantaged or potentially disadvantaged. Depending on individual circumstances, children living without employed parents or guardians may be at higher risk of financial hardship, and may be without role models of employment to follow. However, there may be positive effects for children living without an employed parent, for example, if the reason the parent is without a job is to care for children or to undertake study to try to improve the economic well-being of the household later on.

This article presents an analysis of jobless families in Australia, using improved estimates recently made available from the monthly Labour Force Survey (LFS).

SOURCE

Various measures of jobless families can be derived from the data in *Labour Force, Australia: Labour Force Status and Other Characteristics of Families* (cat. no. 6224.0.55.001). The LFS is a monthly household survey with a sample of approximately 22,800 households in 2008-2009. Although the survey is primarily designed to collect employment and unemployment data, other information collected in the survey allows the production of family estimates.

In October 2008, family estimates for the period August 2004 to September 2008 were revised, using an improved methodology, and the frequency of publication was increased from annual to monthly. These estimates of types of families, accompanied by employment information for adult family members, are available at both the Australia and state/territory level for each month from August 2004 onwards. For more information on the new methodology, see *Improvements to Family Estimates from the Labour Force Survey, Australia 2008* (cat. no. 6224.0.55.002). The analysis in this article is based on estimates derived using the improved methodology.

CONCEPTS

Children

In considering children in jobless families, there are two definitions of children which can be used: namely, children under 15 years; or dependent children. Dependent children is the broader concept, comprising children under 15 years and children aged 15-24 years who are studying full time. Older dependent children (those aged 15-24 years) are more likely than children under 15 years to have access to other sources of income, such as part-time work or government benefits, rather than being reliant solely on their parents for financial support. For this reason there is an argument for excluding them from analysis if the focus is on risk of financial hardship. The analysis in this article is of jobless families with children under 15 years, as the group most at risk.

Families & Parents

The LFS provides two choices of unit that can be used to measure the employment participation of people who live with children: the parent/s who reside with a child; or the family of a child, including other related persons 15 years or older who usually reside with the parent/s and the child. This article primarily focusses on parent/s, as the labour force status of the parent/s is likely to have more influence on a child than the labour force status of other adults in the family.

Joblessness

Unemployment and non-employment are the two main measures in analysing joblessness. In ABS surveys, unemployed persons are those aged 15 years and over who were not employed during the reference week, had actively looked for work at any time in the four weeks up to the reference week, and were available for work in the reference

JOBLESS FAMILIES *continued*

Joblessness continued

week. Non-employment is a broader measure. As well as those who are unemployed, it also includes those who were not employed and did not meet the criteria to be unemployed (and may not even want a job). These people are classed as not in the labour force and this group can include retired people and people primarily caring for children or other family members at home.

Jobless families

There are three possible measures of jobless families:

- Parent/s unemployed (the parent/s have a labour force status of unemployed);
- Parent/s not employed (the parent/s have a labour force status of unemployed and/or not in the labour force); and
- No family member employed (no adult family member is employed).

The second measure 'parent/s are not employed' is the preferred ABS measure and is the one used in this analysis. This measure includes couple families where both parents are either unemployed or not in the labour force and lone parent families where the sole parent is unemployed or not in the labour force. This measure therefore includes families where the parent/s have chosen not to work, are not actively seeking work, are not available to start work or are unable to work. In contrast, the first measure, 'parent/s unemployed' excludes these families and so understates the number of families which may be of interest.

The third measure 'no family member employed' uses the labour force status of all members of the family, including non parent adults, such as grandparents and adult siblings. While there may be value in measuring families where the children have no role model of an employed person in the family, it is the labour force status of the parent/s that is likely to have more influence on a child than the labour force status of other adults in the family.

It is important to note that the family estimates from the LFS include families where one or both parents have an unknown labour force status. These parents are outside of the scope of the LFS and so employment information is not collected about them, but as other information about them is known (such as their age, sex and relationship to others in the household), they are included in LFS family estimates. These people have either a labour force status of 'Not determined, defence force personnel' for permanent members of the Australian defence forces or 'Not determined, other' for all others with an unknown labour force status. For the purposes of this article, permanent members of the Australian defence forces are treated as employed. It is not known if people with a labour force status of 'not determined, other' are employed or not and so these families are excluded from this analysis of jobless families.

NUMBER OF JOBLESS FAMILIES

The two tables below show the three measures of jobless families for November 2008. The data are available both as estimates of the number of families (with children under 15 years) and of the number of children aged 0 to 14 years.

JOBLESS FAMILIES *continued*

NUMBER OF JOBLESS
FAMILIES *continued*

1. FAMILIES WITH CHILDREN UNDER 15 YEARS (a)

| | LONE PARENT FAMILIES | | COUPLE FAMILIES | | TOTAL FAMILIES | |
|------------------------------|-------------------------|------|-----------------|------|----------------|------|
| | '000 | % | '000 | % | '000 | % |
| Total (all families) | 459.5 | .. | 1 797.8 | .. | 2 257.3 | .. |
| Measures of jobless families | | | | | | |
| Parent/s unemployed | 30.8 | 6.7 | *4.6 | *0.3 | 35.4 | 1.6 |
| Parent/s not employed | 203.7 | 44.3 | 74.8 | 4.2 | 278.5 | 12.3 |
| No family member employed | 182.6 | 39.7 | 62.5 | 3.5 | 245.1 | 10.9 |

* estimate is subject to sampling variability too high for most practical purposes

.. not applicable

(a) Excludes families with employment status unknown.

Regardless of which measure of jobless families is used, there are considerably more jobless lone parent families than couple families, both in number and as a proportion of all families. Using the measure 'parent/s not employed', 12% of all families with children under 15 years are jobless, while 44% of lone parent families and only 4% of couple families are jobless. Furthermore, although there are more couple families (1,797,800) in Australia than lone parent families (459,500), there are more jobless lone parent families (203,700) than jobless couple families (74,800).

2. CHILDREN AGED 0 - 14 LIVING IN FAMILIES (a)

| | LONE PARENT FAMILIES | | COUPLE FAMILIES | | TOTAL FAMILIES | |
|------------------------------|-------------------------|------|-----------------|-----|----------------|------|
| | '000 | % | '000 | % | '000 | % |
| Total (all children) | 742.4 | .. | 3 252.1 | .. | 3 994.5 | .. |
| Measures of jobless families | | | | | | |
| Parent/s unemployed | 45.7 | 6.2 | 6.9 | 0.2 | 52.6 | 1.3 |
| Parent/s not employed | 358.5 | 48.3 | 143.9 | 4.4 | 502.4 | 12.6 |
| No family member employed | 327.0 | 44.0 | 127.5 | 3.9 | 454.5 | 11.4 |

.. not applicable

(a) Excludes families with employment status unknown.

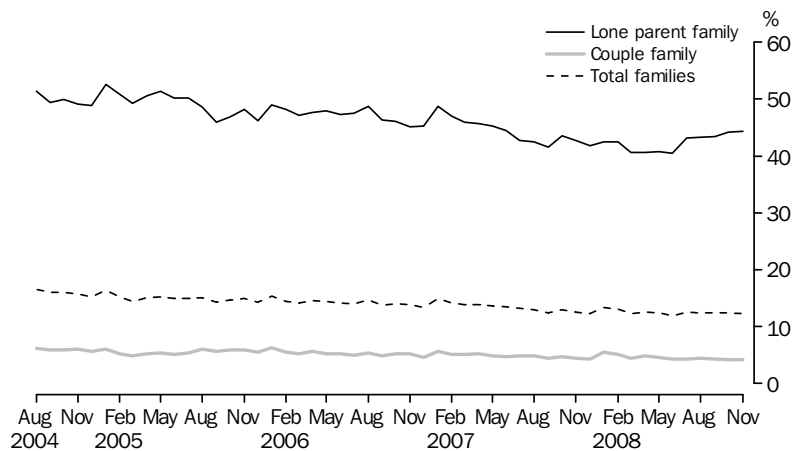

The count of children in jobless families is naturally higher than the count of families, as many families contain more than one child. The proportion of children in jobless families is similar to the proportion of jobless families with 13% of children living in jobless families. Almost half (48%) of all children under 15 years in lone parent families live with a parent who is not employed.

JOBLESS FAMILIES *continued*

JOBLESS FAMILIES OVER TIME

Over the 4 years for which the improved LFS family estimates are available, the proportion of families who were jobless has decreased. During the same period, the unemployment rate for the civilian population of Australia also decreased from 5.4% to 4.3% (trend) (*Labour Force, Australia* cat. no. 6202.0.55.001). Jobless families accounted for 16% of all families in August 2004 and by August 2008 this had dropped to 12%. In early 2008 and at the beginning of each calendar year there is an increase in the number of jobless families. This correlates to an increase in employed persons in December and a decrease in employed persons in January/February each year (*Labour Force, Australia* cat. no. 6202.0.55.001).

3. JOBLESS FAMILIES AS A PROPORTION OF ALL FAMILIES WITH CHILDREN UNDER 15 YEARS

COMPOSITION OF JOBLESS FAMILIES

Family type

Lone parent families account for almost three-quarters (73%) of all jobless families. In the majority (85%) of lone parent jobless families, the parent is not in the labour force rather than unemployed. Not in the labour force includes those parents who did not actively seek work or were not available for work as well as those who have chosen not to work, possibly because they are caring for child/ren. Parents who are not looking for work account for 90% of all jobless lone parent families where the parent is not in the labour force. Parents who are not looking for work include those without intention to work as they are caring for child/ren or others in the family or engaged in study.

Couple families may also have a parent choosing not to work to care for children but if the other parent is employed it is not a jobless family. For a couple family to be jobless, both parents need to be not employed. The lower rates of jobless couple families may reflect the greater flexibility in employment options for a family with two parents.

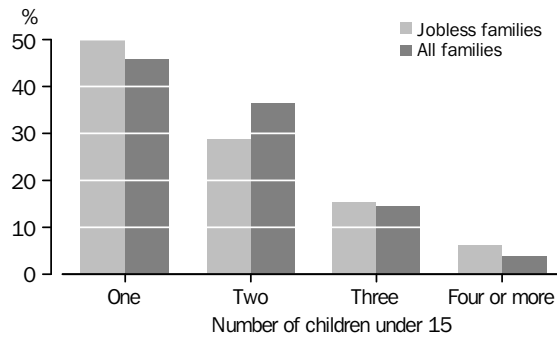

Family size

The chart below shows the distribution of jobless families and of all families by the number of children in the family. Families with one child under 15 years account for the largest share of all families (46%) and jobless families (50%). Jobless families have a higher proportion of families with only one child under 15 years and a lower proportion of families with two children.

JOBLESS FAMILIES *continued*

Family size *continued*

4. PROPORTION OF FAMILIES BY NUMBER OF CHILDREN UNDER 15 YEARS

Age of youngest child

The chart below shows the distribution of jobless families, and of all families, by the age of youngest child. The proportion of jobless families where the youngest child is under 5 years is higher than the proportion for all families, with over half (52%) the jobless families having at least one child under five years, compared to 46% of all families. This difference is even more apparent for lone parent families where families with the youngest child under 5 years account for 52% of jobless families and 35% of all families. This suggests that the presence of one or more young children may be a common reason for families, and, in particular lone parent families, to be jobless. Families where the youngest child is older (aged ten to fourteen) are less common, accounting for 27% of all families and 23% of jobless families.

5. PROPORTION OF FAMILIES BY AGE OF YOUNGEST CHILD

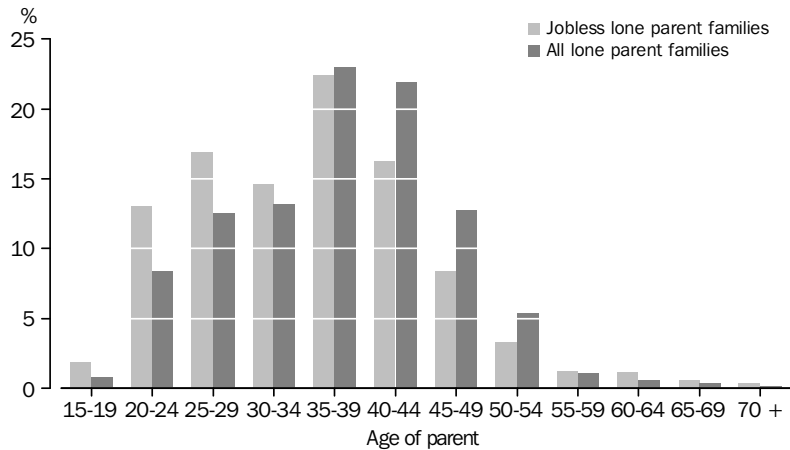

Age of parent/s

The chart below shows the distribution of lone parent families with children under 15 years by the age of the parent. The age distribution of jobless lone parents is generally younger than the distribution of all lone parents. For all families and jobless families with children under 15 years there are relatively few parents aged 60 and over. Jobless lone parent families account for a higher proportion of families with younger parents (aged 15 to 34) than all lone parent families.

JOBLESS FAMILIES *continued*

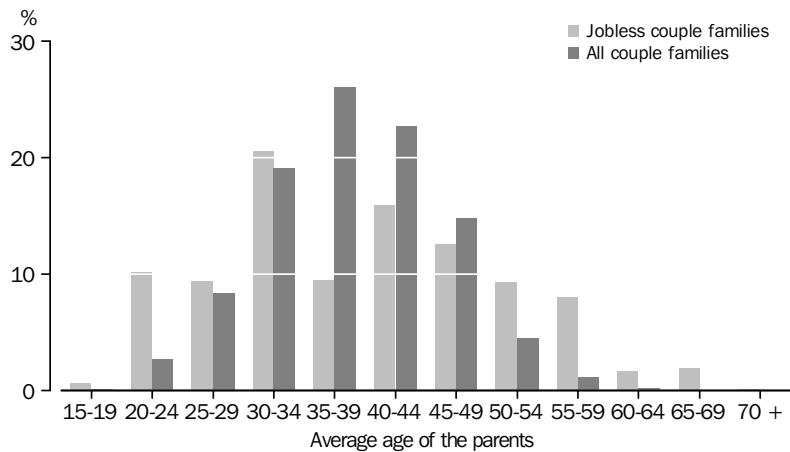

Age of parent/s continued

6. PROPORTION OF LONE PARENT FAMILIES BY AGE OF THE PARENT

A similar trend appears in the chart below which shows the distribution of couple families by the average age of both parents. Jobless couple families are more common amongst younger parents with 41% of jobless families and 30% of all families having an average age of the parents less than 35 years. Also, families where the average age of the parents is 50 years or higher account for 6% of all families and 21% of jobless families. These jobless families include families where the parent/s have retired and so are not in the labour force.

7. PROPORTION OF COUPLE FAMILIES BY AVERAGE AGE OF THE PARENTS

FURTHER INFORMATION

For further information about family estimates from the LFS see *Labour Force, Australia: Labour Force Status and Other Characteristics of Families* (cat. no. 6224.0.55.001) or contact Carmel O'Regan on Canberra (02) 6252 6127 or email <carmel.oregan@abs.gov.au>.

RETIREMENT INTENTIONS

INTRODUCTION

As Australia's population ages, the plans or intentions that people have for retirement are an issue that is becoming increasingly topical. The ageing of the population poses significant challenges for Australia's long-term social and economic outlook. As the proportion of the population who are of traditional working age (15–64 years) decreases over the next 40 years, it is projected that economic growth will slow, whilst spending pressures in areas such as health, age pensions, and aged care are projected to rise.¹ The ageing population therefore has the potential to have a large impact on the future well-being of Australian society.

Significant contributors to Australia's ageing population trend are the '*baby boomers*'. In this article, a baby boomer is defined as a person born between 1946 and 1964; during the post-World War II demographic 'baby boom'. In 2007, baby boomers were aged between 42 and 61 years. This group will be moving beyond the traditional working age and into retirement in the coming years (if they have not already done so), and the impact is likely to be reflected by an overall decrease in the labour force participation rate. As such, a number of policies have been introduced which aim to increase the participation rate. Some of these policies are designed to encourage older workers to remain in the labour force longer than they otherwise would have.

Moreover, while the fertility rate in Australia has recently increased it still falls below the replacement rate, meaning that there will be insufficient numbers of young people joining the labour force to offset the numbers that are leaving.² The recent policy shift involving increased numbers of younger skilled migrants will partially offset the rate of population ageing, however the large numbers of people retiring from the labour force are still likely to be reflected in a decline in labour force participation and a possible slowing of economic growth.

Information about the plans that people have for retirement provide insight into the timing and extent of older workers exiting paid work, as well as reasons why people retire and what might encourage them to delay their retirement plans. This article highlights the retirement intentions of employed Australians aged 45 years and over and the factors that influence when they intend to retire. This information was collected as part of the Survey of Employment Arrangements, Retirement and Superannuation (SEARS) conducted throughout Australia between April and July 2007.³

This article also examines the main sources of income that people expect to retire on, whether they expect to be self-funded during their retirement, and how long for. While this information was collected a year before the onset of the 'global financial crisis' in late 2008, it can provide some background to the potential impacts on people's superannuation and their ability to be self-funded in retirement.

OVERVIEW

In 2007, the survey estimated that there were 7.7 million people aged 45 years and over in Australia. Of these, 3.1 million (41%) were retired from the labour force; 3.9 million (50%) were currently employed; 110,700 (1%) were currently unemployed; and 574,600 (7%) were not currently in the labour force, but had not retired.⁴

There were more employed men aged 45 years and over than there were employed women (2.2 million, or 58% of men; compared to 1.7 million, or 44% of women). Conversely, there were more women who had retired than men (1.8 million, or 45% of women; compared to 1.3 million, or 36% of men). This partly reflects the fact that there

RETIREMENT INTENTIONS *continued*

OVERVIEW *continued*

are more women in the older age groups than men, and also reflects the tendency of women to retire earlier than men. Half of all retired people were aged 70 years and over (54% of retired men and 49% of retired women).

The baby boomer generation, who were aged between 42 and 61 years at the time of the survey, accounted for two-fifths (40%) of all employed people aged 15 years and over (39% of employed men and 41% of employed women) and the majority (87%) of employed people aged 45 years and over (85% of employed men and 90% of employed women). They also accounted for 21% of retired people aged 45 years and over (18% of retired men and 24% of retired women).

The remainder of this article analyses the 3.9 million employed people aged 45 years and over, and their plans for retirement. In addition, comparisons are made between this group's retirement plans and the currently retired population in terms of the age at which they retired, their decisions for retirement, and what their main source of income was at retirement.

Detailed information about retirement was only collected for people who had worked previously (for 2 weeks or more) and retired within the past 20 years. As retirement intentions data are only collected for people aged 45 years and over, for the purposes of this article the retired population has been restricted to those who retired within the previous 20 years and were aged 45 years and over at retirement.

RETIREMENT INTENTIONS

In 2007, there were 3.9 million employed people aged 45 years and over, of whom the majority (85%) intended to eventually retire from the labour force and mostly over the next 20 years (see Graph 1). About 15% (568,400) of employed people aged 45 years and over indicated that they did not intend to retire, and nearly two-thirds (64%) of these were men.

Of the 3.3 million people who indicated that they did intend to retire at some stage:

- 24% intended to retire aged 70 years and over (30% of men, 17% of women);
- 40% intended to retire aged 65-69 years (45% of men, 34% of women);
- 24% intended to retire aged 60-64 years (18% of men, 31% of women);
- 9% intended to retire aged 55-59 years (5% of men, 13% of women);
- 1% intended to retire aged 45-54 years (0.3% of men, 2% of women); and
- the remaining 2% did not know the age at which they would retire (2% of men, 2% of women).

RETIREMENT INTENTIONS *continued*

RETIREMENT INTENTIONS *continued*

1. EMPLOYED PERSONS AGED 45 YEARS AND OVER WHO INTEND TO RETIRE, Age intends to retire, April–July 2007

The average age at which people intended to retire was 64 years (64 years for men, 62 years for women). This is 5 years later than the average age at retirement for the retirees identified in the survey. Of those who had retired in the 20 years prior to the survey, and were over the age of 45 years when they retired, the average age at retirement was 59 years (60 years for men, 57 years for women).⁵

Of the 3.3 million employed people aged 45 years and over who intended to retire, 1.4 million people were only able to provide an approximate age range (of five years), while 74,400 people did not know when they intended to retire. Of the remaining 1.9 million people who were able to give an age at which they intended to retire, 19% (or 363,900 people) expected to leave the labour force and retire (with no intention of returning to paid work again) within the next 5 years. A further 29% (or 550,500 people) expected to leave in 5 to 9 years, 25% (or 480,500 people) in 10 to 14 years, 18% (or 340,900 people) in 15 to 19 years, and 8% (or 150,100 people) in 20 years or more. Over one million people plan to retire in the next ten years.

2. EMPLOYED PERSONS AGED 45 YEARS AND OVER WHO INTEND TO RETIRE(a), Expected time until retirement from all work, April–July 2007

(a) Employed persons aged 45 years and over who intended to retire and were able to provide an exact age at which they intended to retire.

RETIREMENT INTENTIONS *continued*

PLANS AND TRANSITIONS TO RETIREMENT

Full-time workers

Of the employed people aged 45 years and over who intended to retire, 2.4 million (71%) were working full-time. Close to half (48%) of these workers intended to leave full-time work and transition into part-time work before they retired, while 32% intended to continue with full-time work before they retired. The remaining 20% did not know whether they intended to work part-time before they retired from the labour force. A similar pattern was observed for men and women.

The average age that full-time workers intended to begin working part-time in transition to retirement was 60 years (61 years for men, 59 years for women), and the average age at which this group intended to retire from all work was 65 years (66 years for men, 64 years for women). Full-time workers who either intended to continue with full-time work until they retired, or who did not know if they would take up part-time work before retiring, intended to retire earlier at 63 years (63 years for men, 61 years for women).

Of the 1.1 million people who intended to leave full-time work and work part-time before retiring, nearly two thirds (64%) planned to change to part-time work but continue with their current employer. A further 12% intended to work part-time, change employer and change to a completely different line of work, and 5% intended to change employer and work part-time with no other plans to phase in retirement.

Of the 748,000 people who intended to continue with full time work until they retired, 69% planned to remain with their current employer with no further plans to phase in retirement. A further 18% planned to remain with their current employer but with less demanding duties, and 4% planned to remain with their current employer but either work on a contract basis or spend more time working from home.

Relatively few full-time workers who intended to continue with full time work until they retired planned to change their employer (10% or 71,600 people). Most of these either planned to change employer with no further plans to phase in retirement (25,700 people) or change employer and move to a completely different line of work (24,800 people).

Part-time workers

The majority (86%) of the 1.1 million people aged 45 years and over who were working part-time intended to retire from the labour force. The average age at which they intended to retire was 63 years (65 years for men, 62 years for women). The remaining 14% of part-time workers indicated that they did not intend to retire.

DECISIONS ABOUT WHEN TO RETIRE

'Financial security' is a major factor influencing people's decisions about when to retire, with 39% (1.3 million persons) of those intending to retire citing this as their main factor (see graph 3). For these people the average age they intended to retire at was 63 years (64 years for men, 62 years for women). With the global financial crisis negatively impacting on people's sense of financial security, some of this group may now be likely to retire later than they had originally intended.

'Personal health or physical abilities' also plays a major role in decisions about retirement, with 633,100 people (19% of those intending to retire) reporting this as the main factor influencing the timing of their retirement. The average age at which this group intended to retire was 65 years (66 years for men, 64 years for women). It is interesting to note that those who believe that their health will be the main factor that ultimately influences when they will retire, expect to retire on average 2 years later than those who think

RETIREMENT INTENTIONS *continued*

DECISIONS ABOUT WHEN TO RETIRE *continued*

financial security will play a larger role. Health problems are hard to predict, and those not intending to retire until their health fails are likely to be hopeful that this will occur later in life; whereas those waiting for a sense of financial security before retiring would be hopeful that this could be achieved earlier. However, the unpredictability of health problems is evident when the main factors influencing retirement intentions are compared with the main reasons for retirement amongst those already retired.

Amongst the 1.8 million people who retired between 1987 and 2007, and were over the age of 45 when they retired, the most commonly reported main reason for retirement was 'personal health or physical abilities' (31%), whereas 'financial security' was only reported as the main reason for retirement by 4% of retirees. The average age at retirement for those retiring mainly due to their health was 57 years (58 years for men, 56 years for women), whereas the average age at retirement for those retiring due to financial security was 61 years (62 years for men, 59 years for women). This shows that when health problems occur their impact on people's ability to participate in the labour market can override their requirement to be financially secure, and that health problems tend to interfere with labour force participation at a younger age than the achievement of financial security.

Another unpredictable factor that influences retirement decisions is 'being retrenched or made redundant'. While less than 1% of those intending to retire expected this to be the main factor influencing their decision about when to retire, of those who retired between 1987 and 2007, 151,600 people (8%) reported this as the main reason that they retired. The average age at retirement for this group was 57 years (58 years for men, 55 years for women).

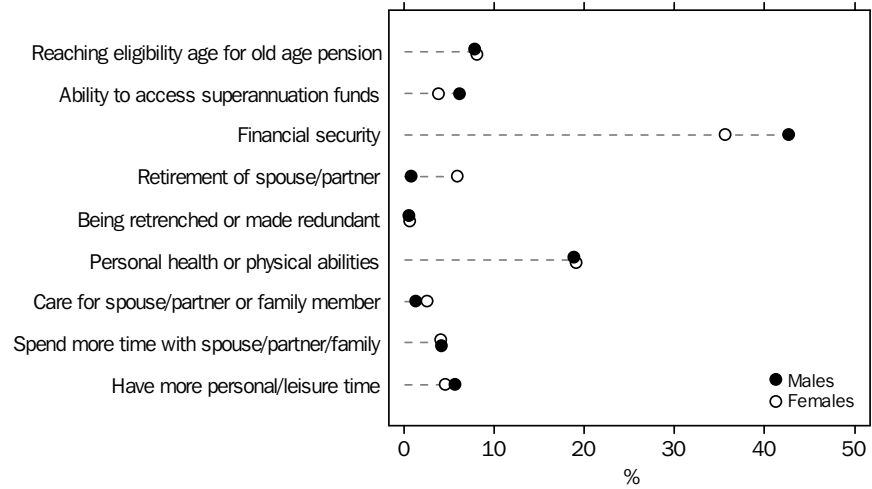

There were some sex differences in the main factors influencing the decision to retire. More women than men stated that the decisive factor was the 'retirement of (their) spouse/partner' (6% of women who intended to retire reported this, compared to 1% of men who intended to retire), or the 'need to care for (their) spouse/partner or family member' (3% of women compared to 1% of men). Conversely, more men than women gave 'financial security' as their main factor (43% of men compared to 36% of women) and the 'ability to access superannuation funds' (6% of men compared to 4% of women).

Of those who gave the 'ability to access superannuation funds' as the main factor influencing their decision about when to retire, the average age at which they intended to retire was 62 years (63 years for men, 61 years for women). This is higher than the age at which people can currently access their superannuation benefits in Australia, which is between 55 and 60 years, depending on date of birth.⁶

RETIREMENT INTENTIONS *continued*

DECISIONS ABOUT WHEN TO RETIRE *continued*

3. EMPLOYED PERSONS AGED 45 YEARS AND OVER WHO INTEND TO RETIRE, Selected main factors influencing decision about when to retire, April–July 2007

The decision about when to retire is not necessarily an individual one, as often this decision is discussed with partners (and in some cases other members of the household) to determine when it can happen and takes into consideration a number of factors. The amount of gross income that a household receives each week appears to have an impact on when people intend to retire (and is likely to be linked to their ability to be financially secure). People living in households which receive lower amounts of gross income per week intend to retire later than those households receiving higher amounts (see Graph 4).

4. EMPLOYED PERSONS AGED 45 YEARS AND OVER WHO INTEND TO RETIRE, Gross weekly household income by average age intends to retire, April–June 2007

MAIN EXPECTED SOURCE OF INCOME AT RETIREMENT

Of all employed people aged 45 years and over who intended to retire from the labour force, 43% reported that their expected main source of income at retirement would be income from 'superannuation, an annuity or allocated pension'. The average age at which this group intended to retire was 63 years (64 years for men, 62 years for women). A higher proportion of men than women reported that this would be their main source of income (49% and 36% respectively).

RETIREMENT INTENTIONS *continued*

MAIN EXPECTED SOURCE OF INCOME AT RETIREMENT *continued*

The second most commonly reported expected main source of income at retirement was a 'government pension or allowance', with nearly one quarter (24%) of people who intended to retire expecting that this would be their main source (23% of men and 26% of women). The average age at which this group intended to retire was 65 years (66 years for men, 64 years for women). These ages are consistent with the age eligibility requirements to access the aged pension, which are 65 years for males, and between 63 and 65 years for females, depending on their date of birth.⁷

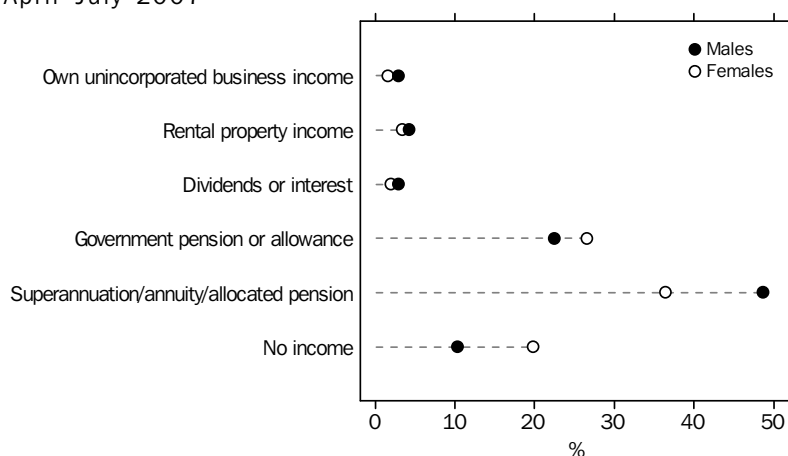

There were some men (10%) and women (20%) who intended to retire from the labour force and who did not expect to have any personal income source when they retired. These people expected to live off savings, assets or their partner's income. Women expecting to live off savings, assets or their partner's income had the lowest expected average age at retirement (60 years). Just over half (51%) of the women who intended to retire between the ages of 45 and 54 years, expected to have no personal income source when they retired.

People whose main expected source of income at retirement was 'own unincorporated business income', 'rental property income', 'dividends or interest', or 'superannuation, an annuity or allocated pension' were also asked to estimate how long they expected to be self-funding after they gave up all paid work. Close to half (44%) of those who reported their expected main source of income at retirement to be from 'superannuation, an annuity, or an allocated pension' estimated that they will be self-funding for life.

Both men and women intending to be funded by 'rental property income', or 'dividends or interest', also intended to retire relatively early, at 62 years. Over half (51%) of those intending to be mainly funded by 'rental property income' intended to be self-funding for life, as did 58% of those intending to be mainly funded by 'dividends or interest'.

Generally, men who intended to live off their 'own unincorporated business income' intended to retire relatively late. The average age at which they intended to retire was 66 years, and 43% of this group intended to be self-funding for life.

5. EMPLOYED PERSONS AGED 45 YEARS AND OVER WHO INTEND TO RETIRE, Selected main expected source of income at retirement, April–July 2007

RETIREMENT INTENTIONS *continued*

MAIN EXPECTED SOURCE OF INCOME AT RETIREMENT *continued*

There were notable differences reported by those who had already retired compared to those who intended to retire regarding their main (expected) source of income at retirement.

For those who had retired during the 20 years prior to the survey, the most common main source of income at retirement was a 'government pension or allowance' (47% of those who had already retired compared with 24% for people intending to retire). The next most common main source of income at retirement was 'no income' (living off savings, assets or their partner's income) (28% compared with 15% for people intending to retire). 'Superannuation, an annuity or allocated pension' was the main source of income at retirement for 14% of those who had retired during the 20 years prior to the survey, while almost half (43%) of those who intended to retire expected that this would be their main source of income. The change to a greater dependence on superannuation amongst future retirees reflects the impact of compulsory superannuation initiatives that were introduced in the late 1980s and early 1990s.⁸

INTENTIONS TO BE SELF-FUNDING IN RETIREMENT

More than half (52%) of the 3.3 million people who intended to retire intended to be self-funding in retirement; that is, their main expected source of income at retirement was 'own unincorporated business income', 'rental property income', 'dividends or interest', or 'superannuation, an annuity or allocated pension'. Most (62%) of those who intended to be self-funding were men.

Of the 1.7 million people who intended to be self-funding in retirement, 7% intended to be self-funding for 1 to 5 years, 11% for 6 to 10 years, 9% for 16 to 20 years, and 13% for 21 years or more. Almost half (45%) expected to be self-funding for life (see Graph 6). The remaining 4% did not know how long they intended to be self-funding for. There were higher proportions of women intending to be self-funding for 1 to 15 years, and higher proportions of men intending to be self-funding for 16 years to life.

6. EMPLOYED PERSONS AGED 45 YEARS AND OVER WHO INTEND TO RETIRE(a), Expected time to be self-funding in retirement, April–July 2007

(a) For employed persons aged 45 years and over who intended to retire and expected their main source of income at retirement to be 'own unincorporated business income', 'rental property income', 'dividends or interest', or 'superannuation, an annuity or allocated pension'.

RETIREMENT INTENTIONS *continued*

INTENTIONS TO BE SELF-FUNDING IN RETIREMENT *continued*

More than half of the 780,600 people intending to be self-funding for life were under 55 years of age at the time of the survey (58%), and this partly reflects the large number of employed people in this age range. The age range in which there was the highest proportion of people intending to be self-funding for life was 65-69 years, and 57% of these expected to be self-funding for life.

Over half (53%) of the baby-boomers intending to retire intended to be self-funding, compared to 44% of those who were aged 62 years or over at the time of the survey. However, a lower proportion of baby boomers expected that they would be self-funding for life; 44% of baby boomers intending to be self-funding in retirement intended to be self-funding for life, compared to 54% of those aged 62 or over at the time of the survey.

SEARS 2007 found that almost a quarter (23%) of all employed people aged 45 years and over intending to retire expected to be self-funding for life. This would imply that in the future, 77% of currently employed people aged 45 years and over who intend to retire will rely on their spouse or the government as their main source of income at some point in their retirement.

FURTHER INFORMATION

For further information about people's retirement intentions presented in this article and for information about SEARS 2007 see *Employment Arrangements, Retirement and Superannuation, Australia, April to July 2007* (cat. no. 6361.0).

For further information about this article, please contact Tracey Chester (ph (02) 6252 5609 or email <tracey.chester@abs.gov.au>).

2. ABS (Australian Bureau of Statistics) 2008, *Births, Australia, 2007*, cat. no. 3301.0, ABS, Canberra.
3. SEARS 2007 collected detailed information about employment arrangements, working patterns, work and caring, retirement and retirement intentions, superannuation coverage and other characteristics. For further information see *Employment Arrangements, Retirement and Superannuation, Australia, April to July 2007* (cat. no. 6361.0).
4. 'People who have retired from labour force' are those who had previously worked for two weeks or more, were not in the labour force and who did not intend to look for, or take up, paid work in the future.
5. It is important to note that age at retirement as presented in this publication only refers to 'surviving' retirees aged 45 years or over in 2007. Therefore, the distribution of age at retirement in this population is not representative of the age at which all people retire. For example, based on Australian life expectancy, a person who retired aged 40 years in 1982 (aged 65 years in 2007) would more likely be alive to participate in this survey than a person who retired aged 65 years in 1982 (who would be aged 90 years if still alive in 2007). Whilst this will have some effect on all age at retirement estimates, the effect would be more pronounced for estimates presented in relation to people who retired a long time ago, and in this article those who retired more than 20 years ago have been excluded from analysis.

SPOTLIGHT ON UNDERUTILISATION

QUARTERLY LABOUR FORCE UNDERUTILISATION RATE

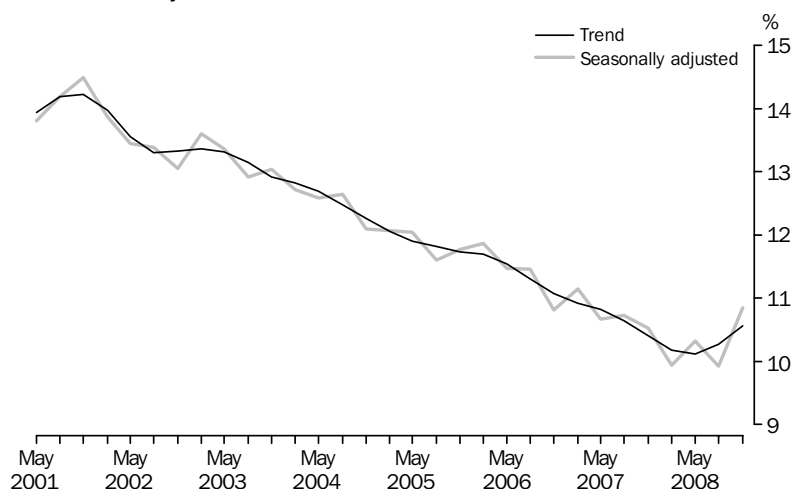

INTRODUCTION

The Australian labour market has experienced significant changes in recent decades. Among these is the increase in the proportion of employed people working part-time (from 15% in 1978 to 28% in 2007). As part-time employment has become more prevalent, there is an increasing scope for underemployment, that is part-time workers who would prefer to work more hours. With the increase in part-time employment, underemployment has become an important social and economic issue, and as such the quarterly labour force underutilisation rate (QLFUR) (unemployed plus the underemployed as a proportion of the labour force) is an increasingly important indicator of spare capacity in the labour market.

UNDERUTILISATION IS INCREASING

In seasonally adjusted terms the QLFUR was 10.8% in November 2008, an increase of 0.9 percentage points from August 2008 (9.9%). This was the largest quarter to quarter movement of the seasonally adjusted data since the series started in May 2001. As a result of this increase, the trend QLFUR was 10.6% in November 2008, an increase of 0.5 percentage points from the trend series low observed in May 2008 (10.1%), indicating a turning point in the series. However this will only be confirmed when more time points become available, after which the seasonally adjusted and trend series will be revised.¹

1. QUARTERLY LABOUR FORCE UNDERUTILISATION RATE, Persons—May 2001 – Nov 2008

Components of underutilisation

The QLFUR can also be thought of as the sum of the quarterly unemployment rate and the quarterly underemployment rate. Since May 2008, increases in both the trend quarterly unemployment rate and the trend quarterly underemployment rate have contributed to the increase in the QLFUR.

The trend quarterly unemployment rate increased from 4.2% in May 2008 to 4.4% in November 2008, while the trend underemployment rate increased from 5.9% to 6.2%, respectively.

Components of
underutilisation *continued*

2. QUARTERLY UNEMPLOYMENT RATE(a), Persons—May 2001 – Nov 2008

(a) The quarterly unemployment rate is compiled using data collected in the quarter months and may differ slightly from the official monthly unemployment rate.

3. QUARTERLY UNDEREMPLOYMENT RATE, Persons—May 2001 – Nov 2008

OTHER USEFUL
MEASURES

ABS produces a number of measures that are useful in gauging the extent and volume of labour market slack. Each month the ABS publishes the unemployment rate and the long-term unemployment rate, and each quarter the QLFUR (including the quarterly underemployment rate) is produced. Furthermore, the extended labour force underutilisation rate is produced annually and this measures the degree of labour underutilisation that exists within and outside of the labour force.

In addition, in the July issue of *Australian Labour Market Statistics* (cat. no. 6105.0), the ABS publishes volume or hours based measures of labour underutilisation. These measures provide estimates of the number of (additional) hours that the unemployed and underemployed have to offer.

FURTHER INFORMATION

For further data regarding the quarterly measures of labour underutilisation please see Tables 4.1 to 4.4 in this publication. For further information about any of the measures mentioned in this article, please contact Tracey Chester (ph (02) 6252 5609 or email <tracey.chester@abs.gov.au>).

.. not applicable

— nil or rounded to zero (including null cells)

(a) All children under 15 years, and all family members aged 15–24 years attending full-time education (except those who have a partner or child of their own usually resident in the household).

(b) See paragraphs 40 and 41 of the Explanatory notes.

(c) Couple families include same sex couples.

(d) Families estimates from the Labour Force Survey include families where one or more adult members have an unknown labour force status. This 'not determined' category comprises families where one or both spouses (or lone parent or family reference person) did not fully complete the questionnaire, were away from their usual residence for six weeks or more, or were permanent members of the Australian defence forces (out of scope of the LFS).

(a) For most countries the employed and unemployed populations are aged 15 years and over. However the age range varies for some countries: Malaysia — 15–64 years; Sweden — 15–74 years; UK and USA — 16 years and over. Definitions also vary in terms of the inclusion or exclusion of certain other segments of the population such as the armed forces.

(b) The 'economically active population' comprises all persons who supplied labour for the production of goods and services during a specified time period. Two common measures of the economically active population are the 'usually active population,' measured in relation to a long reference period such as a year, and the 'currently active population' (often referred to as 'the labour force'), measured in relation to a short reference period such as one day or one week.

(c) Participation rates for women are frequently not comparable internationally since, in many countries, relatively large numbers of women assist on farms or in other family enterprises without pay.

na not available

r revised

(a) Break in series between November 2006 and February 2007. See paragraphs 52 and 53 of the Explanatory Notes.

(b) Industries excluded from the list, but included in the Australian total are: Mining, Wholesale trade, Retail trade, Accommodation, cafes and restaurants and Communication services.

Note: The quarterly survey of Employment and Earnings - Public Sector has been replaced with an annual survey, commencing with the 2007-08 reference year. As a result, the June quarter 2007 issue was the final issue of *Wage and Salary Earners, Public Sector, Australia* (cat. no. 6248.0.55.001). Data from the 2007-08 survey are expected to be released in March 2009.

Source: Survey of Employment and Earnings - Public Sector. See Appendix 1.

(a) The quarterly trend and seasonally adjusted labour force estimates, unemployment estimates and unemployment rates are compiled using data collected in the quarter months and may differ slightly from the official monthly trend and seasonally adjusted estimates and rates published in *Labour Force, Australia* (cat. no. 6202.0) and presented in sections 1 and 3 of this publication. The quarterly labour force and unemployment estimates, and unemployment rates should only be used when comparing the quarterly underemployment estimates and underemployment rates, and the quarterly labour force underutilisation rates.

(b) Discrepancies may occur due to rounding.

* estimate has a relative standard error of 25% to 50% and should be used with caution

Note: The Job Vacancies Survey will not be conducted in 2008-09. The May issue of the publication *Job Vacancies, Australia* (cat. no. 6354.0), released in June 2008, was the final issue for 2008-09. The survey may be reinstated in 2009-10.

Source: Survey of Job Vacancies. See Appendix 1.

EXPLANATORY NOTES

INTRODUCTION

1 *Australian Labour Market Statistics* brings together a range of ABS labour statistics to present a statistical summary of the Australian labour market. It has been developed primarily as a reference document, and provides a broad basis for labour analysis and research.

2 In addition to data from the Labour Force Survey (LFS), this publication contains statistics from a range of other ABS labour surveys including Average Weekly Earnings, the Labour Price Index, Job Vacancies, Employment and Earnings – Public Sector, and Industrial Disputes. The publication also includes summary data from recently released labour force supplementary surveys.

3 This publication includes international data for selected labour market indicators.

LABOUR STATISTICS CONCEPTS, SOURCES AND METHODS

4 The concepts and definitions underpinning ABS labour statistics align closely with the standards and guidelines set out in Resolutions of the International Conference of Labour Statisticians. Descriptions of the underlying concepts of Australia's labour market statistics, and the sources and methods used in compiling the estimates, are presented in *Labour Statistics: Concepts, Sources and Methods* (cat. no. 6102.0.55.001), which is available on the ABS website at <<http://www.abs.gov.au>> [Themes – People – Labour – *Labour Statistics: Concepts, Sources and Methods*].

5 For an explanation of terms used in this publication, refer to the Glossary.

LABOUR STATISTICS THEME PAGE

6 The Labour Statistics theme page is a portal to all labour statistics and related information residing on the ABS website. The page contains hyperlinks to *Labour Statistics: Concepts, Sources and Methods* (cat. no. 6102.0.55.001); information about labour related surveys; and a help page for respondents to ABS labour related surveys. The Labour Theme Page can be accessed at <<http://www.abs.gov.au>> [Themes – People – Labour].

SEASONALLY ADJUSTED AND TREND ESTIMATES

7 Series in this publication include *original*, *seasonally adjusted* and *trend* series. Special care should be taken in interpreting data for the most recent months and quarters, as some of the original and all of the seasonally adjusted and trend series are subject to revision.

8 It is not uncommon for movements in original time series data and those provided from seasonally adjusted and trend series to differ. Movements in a time series of original data may reflect several factors, including:

- longer-term changes in the item being measured (i.e. trend movements)
- short-term irregular changes
- regular seasonal influences
- normal 'trading', 'working' or 'pay' day patterns
- systematic holiday effects.

9 Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour.

10 The Labour Force Survey uses the concurrent seasonal adjustment method to derive seasonal factors. Concurrent seasonal adjustment uses data up to the current month to estimate seasonal factors for the current and all previous months. This process can result in revisions each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the seasonally adjusted estimates for the previous month and one year prior to the current month.

EXPLANATORY NOTES *continued*

SEASONALLY ADJUSTED AND TREND ESTIMATES *continued*

11 Seasonal adjustment is able to remove the effect of events which occur at the same time in the survey every year. However, there are some events, like holidays, which are not always at the same time in the survey cycle or which are not at the same time across Australia. The effects of these types of events on Labour Force Survey estimates cannot in all cases be removed, because the pattern of their effects cannot be determined. However, two events which are adjusted for in the seasonally adjusted series are the January interview start date and the timing of Easter.

12 Trend estimates help the user to identify the underlying magnitude and direction of a time series. Seasonal adjustment removes the effect of the last three listed influences from the data, leaving only trend and short-term irregular movements. Trend estimates are then obtained by removing the effects of the short-term irregularities, which in some series can be a major contributor to movements in the original data.

13 Trend estimates are produced by smoothing the seasonally adjusted series using a statistical procedure based on Henderson moving averages. At each time point in a series, a trend estimate is calculated using a centred x-term Henderson moving average of the seasonally adjusted series. The moving averages are centred on the point in time at which the trend is being estimated. The number of terms used to calculate the trend varies across surveys. Generally, ABS monthly surveys use a 13-term moving average and quarterly surveys use a 7-term moving average.

14 Estimates for the most recent time points cannot be calculated using the centred average method as there are insufficient data to do so. Instead, alternative approaches that approximate the smoothing properties of the Henderson moving average are used. This can lead to revision in the trend estimates for the most recent time periods until sufficient data are available to calculate the trend using the centred Henderson moving average. Revisions of trend estimates will also occur with revisions to the original data and re-estimation of seasonal adjustment factors.

15 Seasonal factors are reviewed at least annually for ABS labour series, to take account of additional original data. The results of the latest reviews were used to compile the trend estimates given in this publication. For further information about the most recent reviews of seasonal factors for the labour surveys, see the following publications:

- for labour force see *Labour Force, Australia* (cat. no. 6202.0)
- for labour price index see *Labour Price Index, Australia* (cat. no. 6345.0)
- for average weekly earnings see *Average Weekly Earnings, Australia* (cat. no. 6302.0)
- for public sector employees see *Wage and Salary Earners, Public Sector, Australia* (cat. no. 6248.0.55.001)
- for job vacancies see *Job Vacancies, Australia* (cat. no. 6354.0).

16 The general methods used in the ABS for estimating trends are described in *Information Paper: A Guide to Interpreting Time Series – Monitoring Trends* (cat. no. 1349.0).

RELIABILITY OF ESTIMATES

17 Estimates in this publication are subject to two types of error:

- sampling error – errors that occur because the data were obtained from a sample rather than the entire population
- non-sampling error – errors that occur at any stage of a survey and can also occur in a census, e.g. incorrect responses to questions, processing errors, frame deficiencies.

18 For more information on these sources of error, and on measures of these types of errors, including standard errors, refer to the main publications associated with each of the data series presented in this publication (see the relevant sections later in these Explanatory Notes). More information on standard errors applying to LFS estimates is contained in *Information Paper: Labour Force Survey Standard Errors, 2005*

EXPLANATORY NOTES *continued*

RELIABILITY OF ESTIMATES

continued

(cat. no. 6298.0). To assist users, a spreadsheet incorporating the revised standard error models using composite estimation is available from *Labour Force Survey Standard Errors, Data Cube, 2007* (cat. no. 6298.0.55.001).

ROUNDING

19 Estimates have been rounded and discrepancies may occur between sums of the component items and totals.

LABOUR FORCE SURVEY DATA

Description of the survey

20 Data in tables 1.1–1.7, 2.1–2.10, 3.1–3.3, and 4.1 to 4.6 are obtained from the Labour Force Survey (LFS), which provides extensive information about the labour market on a monthly basis. The LFS is a component of the Monthly Population Survey (MPS), which includes the LFS and supplementary surveys.

Monthly Population Survey

21 The MPS is a population survey based on a multi-stage area sample of private dwellings (currently about 23,000 houses, flats, etc.), and list samples of discrete Indigenous communities and non-private dwellings (hospitals, hotels, motels, etc.), and covers about 0.24% of the population of Australia. The information is obtained from occupants of selected dwellings by interviewers, with the first interview conducted face-to-face and subsequent interviews over the telephone. Once selected, households are included for eight consecutive months before being replaced.

Labour Force Survey

22 The LFS has been conducted on a monthly basis since February 1978. Prior to that, from 1964 to 1978, a national survey was conducted quarterly. Telephone interviewing was introduced between August 1996 and February 1997. New questionnaires have been introduced periodically, most recently in April 2001.

23 The LFS includes all usual residents of Australia aged 15 and over except:

- members of the permanent defence forces
- certain diplomatic personnel of overseas governments, customarily excluded from census and estimated population counts
- overseas residents in Australia
- members of non-Australian defence forces (and their dependants) stationed in Australia.

24 From July 1993, Jervis Bay Territory has been excluded from the scope of the LFS.

Supplementary surveys

25 The supplementary surveys collect additional data on a different topic each month. Many topics covered are rotated on an annual or less frequent basis, while others are included once only. Results from each supplementary survey topic are released separately. A list of topics covered in recent years is in Appendix 3.

26 The supplementary surveys include a subset of the persons included in the LFS (see paragraph 20). The additional exclusions for most supplementary surveys are:

- persons living in private dwellings in remote and sparsely settled parts of Australia
- institutionalised persons
- boarding school pupils.

Multi-Purpose Household Survey

27 The Multi-Purpose Household Survey (MPHS) was introduced in 2004–05. This survey vehicle is designed to provide statistics annually for a number of small, self contained topics, including a number of labour related topics. Data for MPHS topics are collected each month over a financial year. A list of topics covered in recent years is in Appendix 3.

28 In addition to those already excluded from the LFS, the following people are excluded from most MPHS topics:

- people under 15 years
- people living in private dwellings in very remote parts of Australia

EXPLANATORY NOTES *continued*

Multi-Purpose Household Survey continued

- people living in non-private dwellings such as hotels, university residences, students at boarding schools, patients in hospitals, residents of homes (e.g. retirement homes, homes for people with disabilities) and inmates of prisons
- visitors to private dwellings.

29 Depending on the topic, there may be further exclusions from scope. For example, some MPHS topics collect information only from a certain population or interest group (e.g. information on retirement and retirement intentions is collected from people aged 45 years or over).

Reference period

30 Interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month, with questions relating to the week prior to the interview (the reference week).

Notes on data

31 From time to time, changes to survey methodology affect the time series produced. Some examples of changes to this survey are: new questions added to the LFS questionnaire in April 2001; and the introduction of telephone interviewing in 1996–97.

32 In February 2004 the definition of unemployed persons was changed to include all persons who were waiting to start work and were available to start in the reference week, with consequent revisions to data from April 2001 to January 2004. For further details, see *Information Paper: Forthcoming Changes to Labour Force Statistics, 2003* (cat. no. 6292.0).

33 In May 2007, an improved method of estimation, known as composite estimation, was introduced into the Labour Force Survey. In introducing this change the ABS revised unit record data from April 2001 to April 2007 based on the new estimation method. While estimates for periods prior to April 2001 are unrevised and were compiled using a different estimation method, no trend break was identified in the employed persons series. Also, no change was identified in the trend breaks in the unemployed persons and unemployment rate series which arose with the introduction of a redesigned survey form in April 2001. For further details, see *Information Paper: Forthcoming Changes to Labour Force Statistics, 2007* (cat. no. 6292.0).

34 The sample size of the Labour Force Survey for July 2008 was reduced by 24% when compared with the June 2008 sample. Detailed information about the sample reduction is provided in *Information Paper: Labour Force Survey Sample Design, Nov 2007 (Second edition)* (cat. no. 6269.0), which was released on 25 July 2008.

35 The reduced sample will still be representative, with selections made across all parts of Australia. However, there will be increased volatility in the estimates, particularly the original and seasonally adjusted estimates. Therefore, the ABS continues to encourage users to focus on trend estimates.

Population benchmarks

36 Labour Force Survey estimates are calculated in such a way as to add up to independent estimates of the civilian population aged 15 years and over (population benchmarks). These population benchmarks are projections of the most recently released quarterly Estimated Resident Population (ERP) data. For information on the methodology used to produce the ERP see *Australian Demographic Statistics Quarterly* (cat. no. 3101.0). To create the population benchmarks for the Labour Force Survey, the most recently released quarterly ERP estimates are projected forward one quarter past the period for which they are required. The projection is based on the historical pattern of each population component - births, deaths, interstate migration and overseas migration. By projecting one quarter past that needed for the current population benchmarks, demographic changes are smoothed in, thereby making them less noticeable in the population benchmarks.

EXPLANATORY NOTES *continued*

Population benchmarks continued

37 The ERP series are revised annually in the March quarter issue of *Australian Demographic Statistics Quarterly* (cat. no. 3101.0), released in September each year, to incorporate more up to date information available for the population components. The revised ERP estimates are used to update the quarterly population projections used in creating the Labour Force Survey population benchmarks. Benchmarks already used in producing the Labour Force Survey estimates are not updated. A process of smoothing is used in the creation of population benchmarks to reduce the effect of these annual revisions to ERP estimates on the Labour Force Survey population benchmarks.

38 Every five years the ERP series are revised to incorporate additional information available from the latest Census of Population and Housing. Following the incorporation of Census information, the ERP series prior to the latest Census are final and subject to no further revision. Labour Force Survey population benchmarks, and the estimates, are revised following this 5-yearly revision in the ERP. From the February 2004 issue of this publication, labour force estimates have been compiled using population benchmarks based on the results of the 2001 Census of Population and Housing. Revisions were made in that issue to historical labour force estimates from January 1999 to January 2004.

Estimation method

39 The estimation method used in the Labour Force Survey is Composite Estimation, which was introduced in May 2007. Composite Estimation combines data collected in the previous six months with current month's data to produce the current month's estimates, thereby exploiting the high correlation between overlapping samples across months in the Labour Force Survey. The Composite Estimator combines the previous and current months' data by applying different factors according to length of time in the survey. After these factors are applied, the seven months of data are weighted to align with current month population benchmarks. For details see *Information Paper: Forthcoming Changes to Labour Force Statistics, 2007* (cat. no. 6292.0).

Families series

40 The families estimates use family relationship information collected as part of the LFS. The survey questions used to determine family relationships are restricted to persons enumerated as usual residents of private dwellings. That is, the following persons are excluded from the family estimates:

- all persons enumerated in non-private dwellings (including hotels, motels, hospitals and other institutions)
- persons enumerated as visitors to (rather than usual residents of) private dwellings.

41 Family relationship information is determined for persons enumerated as usual residents of private dwellings that are in scope of LFS. This information is also determined for some additional persons who are enumerated as usual residents of private dwellings and are:

- aged less than 15 years
- out of scope of the LFS (i.e. persons who are permanent members of the Australian defence forces)
- away from their usual residence for more than six weeks
- for whom there was not a fully completed LFS questionnaire (but sufficient family relationship information was collected).

Further information and data on the LFS

42 LFS estimates are published monthly in *Labour Force, Australia* (cat. no. 6202.0). A series of time series spreadsheets are released at the same time as this publication under cat. no. 6202.0.55.001. More detailed estimates are released, in electronic format, one week later, under cat. no. 6291.0.55.001 for monthly data, or cat. no. 6291.0.55.003 for quarterly data. All electronic data can be accessed via the ABS website at <<http://www.abs.gov.au>>. Additional data are available on request.

EXPLANATORY NOTES *continued*

Further information and data on the LFS continued

43 For further information about the range of LFS products and services, and the concepts and methodology used in the LFS, refer to *Information Paper: Changes to Labour Force Survey Products* (cat. no. 6297.0) and *Labour Statistics: Concepts, Sources and Methods* (cat. no. 6102.0.55.001).

INTERNATIONAL DATA

44 Table 1.8 contains data from the International Labour Organisation.

45 Estimates of key indicators of the labour markets from various countries have been included for comparison with Australian estimates of labour force participation, employment, unemployment and unemployment rates.

EMPLOYER SURVEY DATA

46 Tables 2.11, 5.1–5.3, 6.1–6.2 and 7.1 of this publication contain data from ABS employer surveys.

Scope of employer surveys

47 Except where otherwise noted, the sample for ABS labour employer surveys is selected from the ABS Business Register, which is primarily based on registrations to the Australian Taxation Office's (ATO) Pay As You Go Withholding scheme. The population is updated quarterly to take account of new businesses, businesses that have ceased employing, changes in employment levels, changes in industry, and other general business changes. Businesses excluded from the scope of the employer surveys are:

- those primarily engaged in Agriculture, forestry and fishing (except for the Survey of Employment and Earnings)
- private households employing staff
- overseas embassies, consulates, etc.
- those located outside Australia.

PUBLIC SECTOR EMPLOYEES DATA

48 Table 2.11 contains employment data from the Survey of Employment and Earnings – Public Sector (SEE).

Description of the survey

49 The Survey of Employment and Earnings was conducted on a quarterly basis from the September quarter 1983. The June quarter 2007 issue of the publication *Wage and Salary Earners, Public Sector, Australia* (cat. no. 6248.0.55.001) was the final issue. The quarterly survey has been replaced with an annual survey commencing with the 2007–08 reference year and data are expected to be released in January 2009. The survey measures both the number of public sector wage and salary earners employed at the last pay period of the financial year and their total earnings.

Reference period

50 The reference period for employment is the last pay period of the financial year.

Notes on data

51 The private sector component of the Survey of Employment and Earnings was discontinued after the December quarter 2001.

52 The privatisation of Telstra Corporation in November 2006 significantly impacted the public sector employment series. Telstra Corporation was effectively privatised on 20 November 2006. For the purpose of ABS statistics this change from public sector to private sector is effective from March quarter 2007. For more information please see *Information Paper: Future Treatment of Telstra in ABS Statistics, 2007* (cat. no. 8102.0).

53 As a result of privatisation, Telstra Corporation was no longer in the scope of SEE, and Telstra data were excluded from the series from March quarter 2007. As a result, a trend break was applied to the Commonwealth government and total public sector employees series between November 2006 and February 2007.

Further information

54 For further information about data relating to public sector employees, and the concepts and methodology used, refer to *Wage and Salary Earners, Public Sector, Australia* (cat. no. 6248.0.55.001), and *Labour Statistics: Concepts, Sources and Methods* (cat. no. 6102.0.55.001).

EXPLANATORY NOTES *continued*

| | |
|----------------------------------|---|
| WAGE PRICE INDEX DATA | <p>55 Table 5.1 contains data from the <i>Labour Price Index, Australia</i> (cat. no. 6345.0) publication.</p> |
| <i>Description of the survey</i> | <p>56 The Labour Price Index (LPI) measures change in the price of labour in the Australian labour market, unaffected by changes in the quality or quantity of work performed. i.e. it is unaffected by changes in the composition of the labour force, hours worked, or changes in characteristics of employees (e.g. work performance). In the LPI, index numbers are compiled for a range of wage and non-wage costs. Information about the wage price indexes has been released for each quarter since September 1997. Approximately 20,000 matched jobs from 4,800 businesses are priced each quarter.</p> |
| <i>Reference period</i> | <p>57 The reference period for the survey is the last pay period ending on or before the third Friday of the mid-month of the quarter.</p> |
| <i>Further information</i> | <p>58 For further information about the range of products and services relating to the Wage Price Index, and the concepts and methodology used, refer to <i>Labour Price Index, Australia</i> (cat. no. 6345.0), the associated time series spreadsheets available from the ABS website and <i>Labour Price Index, Concepts, Sources and Methods</i> (cat. no. 6351.0.55.001).</p> |
| AVERAGE WEEKLY EARNINGS DATA | <p>59 Table 5.2 contains data from the Survey of Average Weekly Earnings (AWE).</p> |
| <i>Description of the survey</i> | <p>60 The Survey of Average Weekly Earnings has been conducted quarterly since August 1981. Approximately 5,500 businesses contribute to the survey each quarter. The purpose of the survey is to measure average gross weekly earnings of employee jobs in Australia.</p> <p>61 Average weekly earnings statistics represent average gross (before tax) earnings of employees and do not relate to average award rates nor to the earnings of the 'average person'. Estimates of average weekly earnings are derived by dividing estimates of weekly total earnings by estimates of number of employees. Changes in the averages may be affected not only by changes in the level of earnings of employees but also by changes in the overall composition of the wage and salary earner segment of the labour force.</p> |
| <i>Reference period</i> | <p>62 The reference period for the survey is the last pay period ending on or before the third Friday of the middle month of the quarter. For non-weekly payrolls, businesses are asked to provide one week's portion.</p> |
| <i>Notes on data</i> | <p>63 The privatisation of Telstra Corporation in November 2006 has significantly impacted on the private sector and public sector average weekly earnings series. Telstra Corporation was effectively privatised on 20 November 2006. For the purposes of ABS statistics this change from public sector to private sector is effective from March quarter 2007. The effect of this change is significant for both the private sector and public sector series. As a result, a trend break has been applied to both series between November 2006 and February 2007. For more information please see <i>Information Paper: Future Treatment of Telstra in ABS Statistics, 2007</i> (cat. no. 8102.0).</p> |
| <i>Further information</i> | <p>64 For further information about average weekly earnings statistics and the concepts and methodology used refer to <i>Average Weekly Earnings, Australia</i> (cat. no. 6302.0), and <i>Labour Statistics: Concepts, Sources and Methods</i> (cat. no. 6102.0.55.001).</p> |
| NATIONAL ACCOUNTS DATA | <p>65 Table 5.3 contains data from the Australian National Accounts.</p> |

EXPLANATORY NOTES *continued*

NATIONAL ACCOUNTS DATA

continued

66 Estimates of compensation of employees are contained within the Income Accounts of the Australian National Accounts, which are published in *Australian System of National Accounts* (cat. no. 5204.0) and *Australian Economic Indicators* (cat. no. 1350.0). For further information on how estimates are obtained, see *Australian System of National Accounts: Concepts, Sources and Methods* (cat. no. 5216.0).

INDUSTRIAL DISPUTES DATA

Description of the survey

67 Tables 6.1 and 6.2 contain data from the Industrial Disputes collection.

68 The ABS has been collecting information about industrial disputes since 1913. The Industrial Disputes collection produces estimates of the number of industrial disputes (where ten or more working days are lost), employees involved, and working days lost.

69 The scope of the Industrial Disputes collection is restricted to employing businesses at which an industrial dispute has occurred. For this collection, industrial disputes are defined as work stoppages of ten working days or more. Ten working days are equivalent to the amount of ordinary time worked by ten people in one day, regardless of the length of the stoppage, e.g. 3,000 workers on strike for two hours would be counted as 750 working days lost (assuming they work an eight-hour day).

70 Effects on other establishments not directly involved in the dispute, such as stand-downs because of lack of materials, disruption of transport services, power cuts, etc. are not included in the scope of this collection.

Reference period

71 The collection reference period is the calendar quarter.

Further information

72 For further information about industrial disputes statistics, and the concepts and methodology used, refer to the electronic publication *Industrial Disputes, Australia* (cat. no. 6321.0.55.001), and *Labour Statistics: Concepts, Sources and Methods* (cat. no. 6102.0.55.001).

JOB VACANCIES DATA

Description of the survey

73 Table 7.1 contains data from the Job Vacancies Survey (JVS).

74 The Job Vacancies Survey has been conducted since November 1983 and is a quarterly sample survey of approximately 5,000 employers. The survey produces estimates of the number of job vacancies in Australia. The May 2008 issue of the publication *Job Vacancies, Australia* (cat. no. 6354.0), released in June 2008, was the final issue for 2008. The Job Vacancies Survey will not be conducted during 2008–09 and may be reinstated in 2009–10.

Reference date

75 The reference date for the survey is the third Friday of the middle month of the quarter.

Notes on data

76 Prior to the August quarter 1999, job vacancies statistics were collected as part of the Job Vacancies and Overtime Survey. The overtime component of the survey ceased following the May quarter 1999.

77 The privatisation of Telstra Corporation in November 2006 impacted the private sector and public sector job vacancies series. For the purposes of ABS statistics this change from public sector to private sector was effective from March quarter 2007. For more information please see *Information Paper: Future Treatment of Telstra in ABS Statistics, 2007* (cat. no. 8102.0).

78 Although the privatisation of Telstra Corporation in November 2006 impacted on both the private and public sector series, the effect was significant only for the public sector series. As a result, a trend break was applied to the public sector series between November 2006 and February 2007.

EXPLANATORY NOTES *continued*

Further information

79 For further information about the range of products and services relating to ABS job vacancies statistics, and the concepts and methodology used, refer to *Job Vacancies, Australia* (cat. no. 6354.0), the associated time series spreadsheets available from the ABS website and *Labour Statistics: Concepts, Sources and Methods* (cat. no. 6102.0.55.001).

APPENDIX 1 DATA SOURCES FOR TABLES

HOW TO FIND DATA SOURCES

All ABS statistics on the ABS website can be downloaded free of charge.

To find a labour market related publication, spreadsheet or datacube on the ABS website, go to <<http://www.abs.gov.au>> [Statistics – By Catalogue Number – 6. Labour Statistics and Prices]. All products can be accessed by catalogue number and subject e.g. to find the publication *Labour Force, Australia* (cat. no. 6202.0), look under '62. Labour force'. Select '6202.0 – Labour Force, Australia' and from the Summary tab select the Details tab.

| No. | Table description | Data source | Notes |

GLOSSARY

| | |
|---|---|
| Active steps to find work | Includes writing, telephoning or applying in person to an employer for work; answering an advertisement for a job; checking factory noticeboards or the touchscreens at Centrelink offices; being registered with Centrelink as a jobseeker; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives. |
| Actual hours worked | The hours actually worked during the reference week, not necessarily hours paid for. |
| Adult employees | Adult employees are those employees 21 years of age or over and those employees who, although under 21 years of age, are paid at the full adult rate for their occupation. |
| Aggregate (actual) hours worked | The total number of hours a group of employed persons has actually worked during the reference week, not necessarily hours paid for. |
| Attending full-time education | Persons aged 15–24 years who were enrolled full-time at secondary school, high school, Technical and Further Education (TAFE) college, university, or other educational institution in the reference week. |
| Average compensation per employee | <i>National Accounts</i> . The total compensation of employees divided by the number of employees. |
| Average earnings (National Accounts basis) | See <i>average compensation per employee</i> . |
| Average hours worked | Aggregate hours worked by a group divided by the number of persons in that group. |
| Average weekly earnings | Average weekly earnings represent average gross (before tax) earnings of employees and do not relate to average award rates nor to the earnings of the 'average person'. Estimates of average weekly earnings are derived by dividing estimates of weekly total earnings by estimates of number of employees. For information about scope exclusions applying to employer surveys, refer to paragraph 43 of the Explanatory Notes. |
| Civilian population aged 15 years and over | All usual residents of Australia aged 15 years and over except members of the permanent defence forces, certain diplomatic personnel of overseas governments customarily excluded from census and estimated population counts, overseas residents in Australia, and members of non-Australian defence forces (and their dependants) stationed in Australia. |
| Commonwealth government employees | Employees of all departments, agencies and authorities created by or reporting to the Commonwealth Parliament. Those bodies run jointly by the Commonwealth Government and state governments are classified to Commonwealth. |
| Compensation of employees | <i>National Accounts</i> . The total remuneration, in cash or in kind, payable by enterprises to employees in return for work done by the employees during the accounting period. Compensation of employees comprises wages and salaries (in cash and in kind) and <i>employers' social contributions</i> . Compensation of employees is not payable in respect of unpaid work undertaken voluntarily, including the work done by members of a household within an unincorporated enterprise owned by the same household. Compensation of employees excludes any taxes payable by the employer on the wage and salary bill (e.g. payroll tax, fringe benefits tax). See <i>Australian System of National Accounts: Concepts, Sources and Methods</i> (cat. no. 5216.0) for further information. |
| Contributing family worker | A person who works without pay, in an economic enterprise operated by a relative. |
| Country of birth | Classified according to the <i>Standard Australian Classification of Countries (SACC)</i> (cat. no. 1269.0). |
| Couple families | A family based on two persons who are in a registered or de facto marriage and who are usually resident in the same household. |
| Dependants | All family members under 15 years, and all children aged 15–24 years attending full-time education (except those who have a partner or child of their own usually resident in the household). |

GLOSSARY *continued*

| | |
|---------------------------------|---|
| Dependent child | Any child in a family under 15 years of age or aged 15–24 years who is attending full-time education (except those who have a partner or child of their own usually resident in the household). |
| Dependent student | A child who is 15–24 years of age, who is attending full-time education, and who has no partner or child of his or her own usually resident in the same household. |
| Discouraged jobseekers | Persons with marginal attachment to the labour force who wanted to work and were available to start work within the next four weeks but whose main reason for not actively looking for work was that they believed they would not find a job for any of the following reasons: <ul style="list-style-type: none">■ considered to be too young by employers■ considered to be too old by employers■ lacked necessary schooling, training, skills or experience■ difficulties because of language or ethnic background■ no jobs in their locality or line of work■ no jobs available at all. |
| Duration of unemployment | <p>Under the redesigned LFS questionnaire, implemented in April 2001, the definition of duration of unemployment is the period of time from when an unemployed person began looking for work, until the end of the reference week; or the period of time since an unemployed person last worked in any job for two weeks or more, until the end of the reference week; whichever was the shorter period.</p> <p>Prior to April 2001, duration of unemployment was defined in the LFS as the period of time from when an unemployed person began looking for work, until the end of the reference week; or the period of time since an unemployed person last worked full-time for two weeks or more, until the end of the reference week; whichever was the shorter period.</p> |
| Employed | Employed persons include all persons aged 15 years and over who, during the reference week: <ul style="list-style-type: none">■ worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and own account workers); or■ worked for one hour or more without pay in a family business or on a farm (i.e. contributing family workers); or■ were employees who had a job but were not at work and were:<ul style="list-style-type: none">■ away from work for less than four weeks up to the end of the reference week; or■ away from work for more than four weeks up to the end of the reference week and received pay for some or all of the four week period to the end of the reference week; or■ away from work as a standard work or shift arrangement; or■ on strike or locked out; or■ on workers' compensation and expected to return to their job; or■ were employers or own account workers, who had a job, business or farm, but were not at work. |
| Employed full-time | See <i>full-time employed</i> . |
| Employed part-time | See <i>part-time employed</i> . |
| Employee | <i>Labour Force Survey and other household surveys.</i> A person who works for a public or private employer and receives remuneration in wages, salary, a retainer fee from their employer while working on a commission basis, tips, piece rates, or payment in kind, or a person who operates their own incorporated enterprise with or without hiring employees. |

GLOSSARY *continued*

| | |
|--|---|
| Employee <i>continued</i> | <i>Employer surveys.</i> Employees are wage and salary earners who received pay for any part of the reference period. For information about scope exclusions applying to employer surveys, refer to paragraph 43 of the Explanatory Notes. |
| Employee job | <i>Wage Price Index (WPI).</i> A job for which the occupant receives remuneration in wages, salary, payment in kind, or piece rates. All employee jobs in all employing organisations (except those excluded from all ABS labour employer surveys) are in scope of the WPI, except the following: <ul style="list-style-type: none">■ 'non-maintainable' jobs (i.e. jobs that are expected to be occupied for less than six months of a year)■ jobs for which wages and salaries are not determined by the Australian labour market (e.g. working proprietors of small incorporated enterprises, most employees of Community Development Employment Programs, jobs where the remuneration is set in a foreign country). For information about scope exclusions applying to employer surveys, refer to paragraph 43 of the Explanatory Notes. |
| Employer | <i>Labour Force Survey and other household surveys.</i> A person who operates their own unincorporated economic enterprise or engages independently in a profession or trade, and hires one or more employees. <i>Employer surveys.</i> A business with one or more employees. |
| Employers' social contributions | <i>National Accounts.</i> Contributions by employers to pension and superannuation funds; and premiums paid by employers to workers' compensation schemes for occupational injuries and diseases. |
| Extended labour force underutilisation rate | The unemployed, plus the underemployed, plus two groups of marginally attached to the labour force: <ul style="list-style-type: none">(i) persons actively looking for work, not available to start work in the reference week, but available to start work within four weeks and(ii) discouraged jobseekers as a percentage of the labour force augmented by (i) and (ii). |
| Family | Two or more persons, one of whom is at least 15 years of age, who are related by blood, marriage (registered or de facto), adoption, step or fostering; and who are usually resident in the same household. The basis of a family is formed by identifying the presence of a couple relationship, lone parent-child relationship or other blood relationship. Some households will, therefore, contain more than one family. |
| Family reference person | In families which are not couple families or one-parent families, as defined, the family reference person is the eldest person in the household. |
| Former workers | Unemployed persons who have previously worked for two weeks or more but not in the last two years. |
| Full-time educational attendance | Persons aged 15–19 who, during the reference week were enrolled full-time at secondary or high schools, and those aged 15–24 who, during the reference week, were enrolled full-time at a Technical and Further Education (TAFE) college, university, or other tertiary educational institution. |
| Full-time employed | <i>Household surveys.</i> Persons employed full-time are those employed persons who usually worked 35 hours or more a week (in all jobs) and those who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week. |
| Full-time employees | <i>Employer surveys.</i> Full-time employees are permanent, fixed term and casual employees who normally work the agreed or award hours for a full-time employee in their occupation and received pay for any part of the reference period. If agreed or award hours do not apply, employees are regarded as full-time if they ordinarily work 35 hours or more per week. |

GLOSSARY *continued*

| | |
|--------------------------------------|--|
| Gross domestic product (GDP) | <i>National Accounts.</i> The total market value of goods and services produced in Australia within a given period after deducting the cost of goods and services used up in the process of production but before deducting allowances for the consumption of fixed capital. Thus gross domestic product, as here defined, is at 'market prices'. It is equivalent to gross national expenditure plus exports of goods and services less imports of goods and services. See <i>Australian System of National Accounts: Concepts, Sources and Methods</i> (cat. no. 5216.0) for further information. |
| Gross mixed income (GMI) | <i>National Accounts.</i> The owners of unincorporated enterprises, or other members of their households, may work without receiving any wage or salary. Mixed income includes both <i>gross operating surplus</i> for the unincorporated enterprises and returns for the proprietors' own labour (akin to wages and salaries). See <i>Australian System of National Accounts: Concepts, Sources and Methods</i> (cat. no. 5216.0) for further information. |
| Gross operating surplus (GOS) | <i>National Accounts.</i> The amount of gross output remaining after subtracting costs incurred in producing that output, but before any deductions for consumption of fixed capital. See <i>Australian System of National Accounts: Concepts, Sources and Methods</i> (cat. no. 5216.0) for further information. |
| Household | A group of one or more persons in a private dwelling who consider themselves to be separate from other persons (if any) in the dwelling, and who make regular provision to take meals separately from other persons, i.e. at different times or in different rooms. Lodgers who receive accommodation but no meals are treated as separate households. Boarders who receive both accommodation and meals are not treated as separate households. A household may consist of any number of families and non-family members. |
| Industrial dispute | An industrial dispute is defined as a state of disagreement over an issue or group of issues between an employer and its employees, which results in employees ceasing work. Industrial disputes comprise strikes, which are a withdrawal from work by a group of employees; and lockouts, which are a refusal by an employer or group of employers to permit some or all of their employees to work. |
| Industry | An industry is a group of businesses or organisations that perform similar sets of activities in terms of the production of goods and services. Industry is classified according to the <i>Australian and New Zealand Standard Industrial Classification (ANZSIC), 1993</i> (cat. no. 1292.0). The industry assigned to an employed person is the industry of the organisation in which the person's main job is located. Unemployed persons who had worked for two weeks or more in the last two years are classified according to the industry of their most recent job. |
| Job leavers | Unemployed persons who have worked for two weeks or more in the past two years and <i>left that job voluntarily</i> – that is, because (for example): of unsatisfactory work arrangements/pay/hours; the job was a holiday job or they left the job to return to studies; or their last job was running their own business and they closed down or sold that business for reasons other than financial difficulties. |
| Job losers | Unemployed persons who have worked for two weeks or more in the past two years and <i>left that job involuntarily</i> : that is, they were laid off or retrenched from that job; left that job because of their own ill-health or injury; the job was seasonal or temporary; or their last job was running their own business and the business closed down because of financial difficulties. |
| Job vacancy | A job vacancy is an employee job available for immediate filling on the survey reference date and for which recruitment action has been taken. Recruitment action includes efforts to fill vacancies by advertising, by factory notices, by notifying public or private employment agencies or trade unions and by contacting, interviewing or selecting applicants already registered with the enterprise or organisation. Excluded are vacancies: <ul style="list-style-type: none">■ for jobs which became vacant on the survey date and were filled that same day■ for jobs of less than one day's duration |

GLOSSARY *continued*

| | |
|--|---|
| Job vacancy <i>continued</i> | <ul style="list-style-type: none">■ to be filled by persons already hired, or by promotion or transfer of existing employees■ to be filled by employees returning from paid or unpaid leave or after industrial dispute(s)■ not available for immediate filling on the survey reference date■ for work to be carried out by contractors■ for which no recruitment action has been taken■ where a person has been appointed but has not yet commenced duty■ to be filled by staff from contract labour agencies■ for jobs available only to persons already employed by the enterprise or organisation. <p>For information about scope exclusions applying to employer surveys, refer to paragraph 43 of the Explanatory Notes.</p> |
| Labour force | The labour force is the labour supply available for the production of economic goods and services in a given period, and is the most widely used measure of the economically active population. Persons in the labour force are classified as either employed or unemployed according to their activities during the reference period by using a specific set of priority rules. |
| Labour force status | A classification of the civilian population aged 15 years and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians. |
| Labour force underutilisation rate | The unemployed plus the underemployed, as a percentage of the labour force. |
| Local government employees | Employees of municipalities and shires and other local authorities created by or subject to the provisions of local government legislation, such as county councils in New South Wales. |
| Lone parent | A person who has no spouse or partner present in the household but who forms a parent-child relationship with at least one dependent or non-dependent child usually resident in the household. |
| Lone person | A person who makes provision for their food and other essentials for living, without combining with any other person to form part of a multi-person household. They may live in a dwelling on their own or share a dwelling with another individual or family. |
| Long-term unemployed | Persons unemployed for 12 months or more. See <i>duration of unemployment</i> for details of the calculation of duration of unemployment. |
| Long-term unemployment rate | The number of long-term unemployed persons expressed as a percentage of the labour force. |
| Marginal attachment to the labour force | Persons who were not in the labour force in the reference week, wanted to work, and: <ul style="list-style-type: none">■ were actively looking for work but did not meet the availability criteria to be classified as unemployed or■ were not actively looking for work but were available to start work within four weeks or could start work within four weeks if child care was available. <p>The criteria for determining those in the labour force are based on activity (i.e. working or looking for work) and availability to start work during the reference week. The criteria associated with marginal attachment to the labour force, in particular the concepts of wanting to work and reasons for not actively looking for work, are more subjective. Hence, the measurement against these criteria is affected by the respondent's own interpretation of the concepts used. An individual respondent's interpretation may be affected by their work aspirations, as well as family, economic and other commitments.</p> |
| Marital status | See <i>social marital status</i> . |

GLOSSARY *continued*

| | |
|---|--|
| Mean age | The sum of the ages of all the persons in a group, divided by the total number of persons in that group. |
| Mean duration of unemployment | The sum of the duration of unemployment of all the unemployed persons in a group, divided by the total number of unemployed persons in that group. |
| Median age | The age which divides a group of persons into two equal groups: one comprising persons whose age is above the median; and the other, persons whose age is below it. |
| Median duration of unemployment | The duration which divides unemployed persons into two equal groups: one comprising persons whose duration of unemployment is above the median; and the other, persons whose duration is below it. |
| Non-dependent child | A child of a couple or lone parent usually resident in the household, aged over 15 years and who is not a dependent student aged 15–24 years, and who has no partner or child of their own usually resident in the household. |
| Non-family member | A person who is not related to any other member of the household in which they are living. |
| Not in the labour force | Persons who were not classified as employed or unemployed. |
| Occupation | An occupation is a collection of jobs that are sufficiently similar in their main tasks to be grouped together for the purposes of classification. Occupation is classified according to the <i>ASCO Australian Standard Classification of Occupations, Second Edition</i> (cat. no. 1220.0). The occupation assigned to an employed person relates to the person's main job. Unemployed persons who had worked for two weeks or more in the last two years are classified according to the occupation of their most recent job. |
| One-parent family | A family consisting of a lone parent with at least one dependent or non-dependent child (regardless of age) who is also usually resident in the household. |
| Ordinary time earnings | See <i>weekly ordinary time earnings</i> . |
| Original series | Estimates produced directly from the survey data, before seasonal adjustment or trend estimation takes place. |
| Other family | Related individuals residing in the same household who do not form a couple or parent-child relationship with any other person in the household and are not attached to a couple or one parent family in the household. If two brothers, for example, are living together and neither is a spouse, a lone parent or a child, then they are classified as other family. |
| Overtime earnings | See <i>weekly overtime earnings</i> . |
| Own account workers | People who operate their own unincorporated economic enterprise or engaged independently in a profession or trade, and hired no employees. |
| Owner managers of incorporated enterprises | People who work in their own incorporated enterprise, that is, a business entity which is registered as a separate legal entity to its members or owners (also known as a limited liability company). These people are classified as employees under 'status in employment'. Technically they are employees, however, they are similar in characteristics to owner managers of unincorporated enterprises. |
| Owner managers of unincorporated enterprises | People who operate their own unincorporated enterprise, that is, a business entity in which the owner and the business are legally inseparable, so that the owner is liable for any business debts that are incurred. Includes those engaged independently in a trade or profession. These people are classified as employers under 'status in employment' if their business has employees, or own account workers if they do not. |
| Participation rate | The labour force participation rate for any group within the population is the labour force component of that group, expressed as a percentage of the population in that group. |

GLOSSARY *continued*

| | |
|--|---|
| Part-time employed | <i>Household surveys.</i> Persons employed part-time are those employed persons who usually worked less than 35 hours a week (in all jobs) and either did so during the reference week, or were not at work in the reference week. |
| Reason for leaving last job | Unemployed persons who had worked for two weeks or more in the past two years classified by whether they left that job voluntarily, that is, job leavers; or left that job involuntarily, that is, job losers. |
| Seasonally adjusted series | A time series of estimates with the estimated effects of normal seasonal variation removed. See paragraphs 7–13 of the Explanatory Notes for more detail. |
| Social marital status | Social marital status is the relationship status of an individual with reference to another person who is usually resident in the household. A marriage exists when two people live together as husband and wife, or partners, regardless of whether the marriage is formalised through registration. Individuals are, therefore, regarded as married if they are in a de facto marriage, or if they are living with the person to whom they are registered as married. |
| State capital cities | The areas determining the six state capital cities are the Statistical Divisions for those capital cities defined in the <i>Statistical Geography: Volume 1 – Australian Standard Geographical Classification (ASGC)</i> (cat. no. 1216.0). |
| State government employees | Employees of all State government departments and authorities created by, or reporting to, State Parliaments, including organisations for which the Commonwealth has assumed financial responsibility. Following self-government, the Northern Territory and the Australian Capital Territory administrations have been classified to State Governments. Employees of State Governments employed interstate are included in the estimates of the State in which they are based. |
| Status in employment | Employed persons classified by whether they were employees, employers, own account workers or contributing family workers. |
| Total earnings | See <i>weekly total earnings</i> . |
| Total hourly rates of pay index excluding bonuses | <i>Wage Price Index.</i> This index measures quarterly change in a weighted combination of ordinary time and overtime hourly rates of pay. See <i>Labour Price Index, Australia</i> (cat. no. 6345.0) for more information. |
| Trend series | A smoothed seasonally adjusted series of estimates. See paragraphs 7–13 of the Explanatory Notes for more detail. |
| Underemployed workers | Underemployed workers are employed persons who want, and are available for, more hours of work than they currently have. They comprise: <ul style="list-style-type: none">■ persons employed part-time who want to work more hours and are available to start work with more hours, either in the reference week or in the four weeks subsequent to the survey■ persons employed full-time who worked part-time hours in the reference week for economic reasons (such as being stood down or insufficient work being available). It is assumed that these people wanted to work full-time in the reference week and would have been available to do so. |
| Underemployment rate | The number of underemployed workers expressed as a percentage of the labour force. |
| Unemployed | Persons aged 15 years and over who were not employed during the reference week, and <ul style="list-style-type: none">■ had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and were available for work in the reference week, or■ were waiting to start a new job within four weeks from the end of the reference week and could have started in the reference week if the job had been available then. |
| Unemployed looking for first full-time job | Unemployed persons looking for full-time work who had never worked full-time for two weeks or more. |

GLOSSARY *continued*

| | |
|---|--|
| Unemployed looking for first job | Unemployed persons who had never worked for two weeks or more. |
| Unemployed looking for full-time work | Unemployed persons who: <ul style="list-style-type: none">■ actively looked for full-time work, or■ were waiting to start a new full-time job. |
| Unemployed looking for part-time work | Unemployed persons who: <ul style="list-style-type: none">■ actively looked for part-time work only, or■ were waiting to start a new part-time job. |
| Unemployment rate | The number of unemployed persons expressed as a percentage of the labour force. |
| Unemployment to population ratio | For any group, the number of unemployed persons expressed as a percentage of the civilian population aged 15 and over in the same group. |
| Usual hours worked | The hours usually worked per week by an employed person. |
| Wage and salary earners | See <i>employee</i> . |
| Weekly ordinary time earnings | Weekly ordinary time earnings refers to one week's earnings of employees for the reference period attributable to award, standard or agreed hours of work, calculated before taxation and any other deductions (e.g. superannuation, board and lodging) have been made. Included are piecework payments and one week's portion of regular production and task bonuses and commissions. Excluded are overtime payments and payments not related to the reference period, e.g. bonus payments for earlier periods of work. |
| Weekly overtime earnings | Weekly overtime earnings refers to payment for hours worked in the reference week in excess of award, standard or agreed hours of work, calculated before taxation and any other deductions (e.g. superannuation) have been made. |
| Weekly total earnings | Weekly total earnings of employees is equal to weekly ordinary time earnings plus weekly overtime earnings. |
| Working days lost | Refers to working days lost by employees directly and indirectly involved in the dispute. |
| Working days lost per thousand employees | Calculated for a quarterly period by dividing the total number of working days lost in the period by the total number of employees in the Australian labour force in the period (obtained from the ABS Labour Force Survey) and multiplying by 1,000. |
