The following table shews the number of persons engaged in mining in the Commonwealth and New Zealand during each of the years 1891, 1901, and 1907, together with the proportion of the total population so engaged:—

PROPORTION OF PERSONS ENGAGED IN MINING, AUSTRALASIA,

1891, 1901, 1907.

| State. | 1891. | | 1901. | | 1907. | |
|-----------------------|---------------------|---|---------------------|---|---------------------|---|
| | Miners Employed. | No. per 100,000 of Popu- lation. | Miners Employed. | No. per 100,000 of Popu- lation. | Miners Employed. | No. per 100,000 of Popu- lation. |
| New South Wales ... | 30,604 | 2,700 | 36,615 | 2,685 | 43,758 | 2,822 |
| Victoria ... | 24,649 | 2,151 | 28,670 | 2,381 | 24,125 | 1,947 |
| Queensland ... | 11,627 | 2,934 | 13,352 | 2,664 | 19,198 | 3,562 |
| South Australia ... | 2,683 | 834 | 7,007 | 1,931 | 7,841 | 2,033 |

| New Zealand ... | 16,929 | 2,688 | 12,732 | 1,637 | 13,081 | 1,423 |

3. Wages Paid in Mining.—In the next table will be found a statement of the average wages earned by employes in the chief branches of the mining industry in Australia. The value of the figures is rather prejudiced by the wide diversity of conditions, not only in the several States but in different districts of the same State.

The figures quoted for New South Wales in gold mining refer to the Hillgrove and Mount Boppy districts. For copper the figures refer to the Cobar district, and represent rates as awarded by the Arbitration Court. The maximum is paid when copper is £115 per ton or over, and the minimum when the metal is £70 per ton and under, a graduated rate prevailing between the extremes. The rates for silver miners are those ruling at Broken Hill. As regards Queensland the rates for hewing in coal mines are for miners not doing their own wheeling. Where own wheeling is done the rate varies from 2s. 3d. to 5s. 6d. No distinction was made as to class of mining in the returns received from South Australia, and the figures have, therefore, been placed with copper mining. Generally speaking, the classification of the labour in the various States does not permit of very satisfactory comparisons.

GRAPHS SHEWING VALUES OF PRINCIPAL MINERALS PRODUCED IN THE COMMONWEALTH, 1842 to 1907.

EXPLANATION OF GRAPHS—The values shown in the above diagrams are those of the total Commonwealth production of the most important minerals in successive years from 1842 to 1907.

The base of each small square represents an interval of one year, and the vertical height represents, in the case of gold £300,000; copper, £120,000; silver, lead, etc., £100,000; coal, £40,000; tin, £25,000; and total mineral production, £800,000.

The names of the various minerals are written on the graphs which respectively represent them, and the distinctive types of line used are exhibited in detail in the upper portion of the diagram.

WAGES PAID IN MINING INDUSTRY IN THE COMMONWEALTH.

| Class of Mine. | New South Wales. | Victoria. | Queensland. | South Australia. | Western Australia. | Tasmania. |
|----------------------|---------------------|-----------------------------|--|------------------|------------------------|--|
| GOLD— | | | | | | |

* To these rates the following bonus applies for two years from 1st January, 1907. From 7/6 to 8/4, 15 per cent.; over 8/4 to 9/-, 14 per cent.; over 9/-, 1/- per shift. † Also turners, 13/2; fillers, 11/4; set riders, 13/4; firemen, 11/4. § Also navvies, 8/6; winchmen, 10/6; platmen, 9/- to 9/6; punnpnen, 12/-; truckers, 8/- to 8/6; shift bosses, 12/- to 13/4; firemen, 8/6; brakemen, 9/6; fitters, 10/- to 13/4; plumbers, 10/6; electricians, 9/- to 10/6; gangers, 12/6; powder monkeys, 8/6 to 10/-; boys, 4/6 to 6/6.

SECTION XIII.

MANUFACTURING INDUSTRIES.

§ 1. General.

1. **Industrial Progress.**—The statistics of manufactures in the Commonwealth during recent years shew that many industries have now been permanently established on a secure basis, and also indicate a fairly rapid, though in some cases a somewhat irregular, progress both in regard to the extension of existing industries and the establishment of new ones. The scale on which many manufactories are established in Australia, however, appears small in comparison with those established in older countries of the world; but it should be remembered that owing to the sparseness of its population Australia cannot at present maintain industries on a very extensive scale, and also that until the inauguration of the Commonwealth in 1901 the field was still further limited by intercolonial tariffs.

(i.) *The Gold Discoveries, 1851.* During the period anterior to the gold discoveries (1851) little was done in regard to manufacturing industries in Australia. Such industries as had then been established were chiefly connected with the preparation of food-stuffs, and were to a large extent called into being by the isolated position of the country. It was found that, owing to the comparatively high prices which could be obtained for the products of the pastoral industry, those engaged in such pursuits in Australia could compete successfully in the world's markets. Owing to the sparseness of its population and to the distance of Australia from the world's centres of distribution, there was but little incentive towards any decided progress in agriculture, which was accordingly for many years almost entirely subsidiary to sheep and cattle raising. With the adoption of improved methods of agriculture, however, there were signs of an early extension in the cultivation of wheat, when the discovery of gold in 1851 completely changed the economic aspect in Australia and effected a revolution in all industrial relations. The large towns were practically depleted of their male able-bodied population, and the first effect of the gold rush upon manufacturing industries was disastrous. The supply of labour in many occupations was exhausted, and most branches of industry came to a standstill. There was, however, a rapid change. A decline in the activity of the gold-fields threw many immigrants, whose early lives had been passed in English cities, out of employment. The surplus of labour thus engendered accumulated in Melbourne and a few other large towns, establishing incipient artisan communities. This no doubt intensified the early impulses towards industrial employment. In the State of Victoria, in particular, it was sought to encourage the investment of capital in manufacturing enterprises by the establishment of protective Customs duties. Manufacturing industries were revived on a larger scale than formerly, and the population attracted by the discovery of gold remained in Australia and furnished the labour necessary to operate the factories thus established.

(ii.) *Later Progress.* Soon after the discovery of gold the construction of the first railways (1854) and the re-establishment of regular steamship communication with

Europe (1856) helped to encourage the industrial activity, which commenced to appear. The States of New South Wales and Victoria, which had recently (1855) received the benefits of responsible government, soon turned their attention to the settlement of an agricultural population on the land. The Acts which were passed (see Section VI., § 2) had a beneficial effect on the working classes, giving them opportunities for employment not previously open to them, and fostering the manufacturing industries by increasing the measure of primary production. During the following years the various manufacturing industries prospered. The statistics of the States are not sufficiently complete or uniform to enable a statement of the progress of these industries to be given. The following table, however, shewing, so far as returns are available, the number of factories and the number of employees in each State at decennial periods since 1861 and in 1907, will serve to indicate generally the progress which has been made:—

NUMBER OF FACTORIES AND EMPLOYEES IN EACH STATE, 1861 to 1907.

| Year. | N.S.W. | Victoria. | Queensland. | S. Aust. | W. Aust. | Tasmania. | C'wealth. |
|-------|--------|-----------|-------------|----------|----------|-----------|-----------|
|-------|--------|-----------|-------------|----------|----------|-----------|-----------|

NUMBER OF FACTORIES.

| | | | | | | | |
|------|-------|-------|--------|--------|-----|------|--------|
| 1861 | 601 | 531 | ... | ... | ... | ... | ... |
| 1871 | 1,813 | 1,740 | ... | ... | ... | ... | ... |
| 1881 | 2,961 | 2,488 | 571† | 823† | ... | ... | ... |
| 1891 | 3,056 | 3,141 | 1,328† | 996† | 175 | ... | ... |
| 1901 | 3,367 | 4,003 | 2,110† | 1,335† | 662 | 420* | 11,897 |
| 1907 | 4,432 | 4,530 | 1,359 | 1,086 | 643 | 505 | 12,555 |

NUMBER OF EMPLOYEES.

| | | | | | | | |
|------|--------|--------|--------|--------|--------|--------|---------|
| 1861 | ... | 4,395 | ... | ... | ... | ... | ... |
| 1871 | 13,583 | 19,569 | ... | 5,629 | ... | ... | ... |
| 1881 | 31,191 | 43,209 | ... | 10,995 | ... | ... | ... |
| 1891 | 50,879 | 53,525 | ... | 14,099 | ... | ... | ... |
| 1901 | 66,135 | 73,063 | 26,172 | 19,283 | 12,198 | 7,466* | 204,317 |
| 1907 | 86,467 | 90,903 | 27,954 | 22,701 | 12,607 | 8,209 | 248,841 |

* For 1902. † Not on same basis as other States.

Since the inauguration of the Commonwealth, the throwing open of the whole of the Australian markets to the industrial products of each State has facilitated the internal distribution of the products of Australian industry.

2. Defects in Industrial Statistics.—A complete statistical account of the growth of the manufacturing industries in Australia unfortunately cannot be given for any lengthy period, owing to the fact that the necessary statistics have not been collected in past years by the several States upon a definite and identical basis. Even in respect of either the definition of a "factory" or (so far as they might be included in related returns) the statistics of persons employed therein, there was formerly no common agreement. The relatively minor place that manufacturing industry held in relation to the total activity of Australia was, perhaps, responsible for the fact that the necessity for uniform method was not earlier recognised.

In 1896 it was agreed, as between Victoria and New South Wales, to adopt a common definition of the term "factory," viz., "any factory, workshop, or mill where four or more persons are employed or power is used." This agreement was adopted for the States generally at the Conference of State Statisticians in 1902, when it was decided,

however, that the term "factory" should include also "all establishments, whether making for the trade, wholesale or retail, or for export." It was further agreed that industries should be arranged, as far as possible, under a uniform classification. As a result of the conference of 1902 a higher degree of uniformity in the collection and presentation of industrial statistics was attained in the several States, so that returns upon which anything like a proper comparative study of the development and progress of various manufacturing industries in the Commonwealth may be based date back only as far as the year 1903, when the resolutions of the conference first came to be put into force. All the States did not, however, fall completely into line, and, as may be seen in the succeeding parts of this section, the comparisons afforded by the returns for the years 1903 to 1906, inclusive, are in some cases subject to various limitations. At the conference of statisticians held in Melbourne in 1906 special consideration was given to the methods to be adopted for the collection of statistical information regarding primary and secondary production and industry. A definite classification of industries was adopted, and a set of forms for the collection and compilation of industrial statistics on a definite and uniform basis in each State was agreed upon. The States have not, even yet, fallen entirely into line in collecting and classifying the returns. The particulars for the year 1907 are, however, in more complete co-ordination than those for previous years, and it is hoped that it will be possible to give particulars for future years for the several States in greater detail and on a perfectly uniform basis throughout.

3. **Classification of Manufacturing Industries.**—Under the classification adopted at the Conference of Statisticians held in 1906, factories were placed under nineteen different categories, according to the nature of the industry carried on therein; many of the categories were also subdivided. Where two or more industries are carried on by one proprietor in one building, each industry is, when possible, treated as a separate establishment. The statement given below shews the classification which has been adopted; it must be understood, however, that this classification does not pretend to be exhaustive, but merely serves as a guide for the collection and presentation of statistics in the several States on a definite and uniform basis:—

CLASSIFICATION OF MANUFACTURING INDUSTRIES.

§ 2. Number of Manufactories.

1. **General.**—In stating the number of factories in the States of the Commonwealth it is to be remembered that in the collection of statistics, for years prior to 1907, the same basis has not been adopted in each State. In 1906 in Queensland, for example, 689 factories would have been added under the system previously adopted in that State. This would bring the total up to 1993 on the former basis. The factories excluded, however, are those employing only two hands and no power, and the difference in other respects is not material.

In the following table shewing the total number of manufactories in the Commonwealth between the years 1903 and 1907, it should be noted that not only are the results affected by differences of classification, but also that the number of factories from year to year does not unequivocally indicate a change in the position of the industry, since amalgamations may account for part of the reduction of the numbers. Thus in Melbourne a number of breweries have been combined under a single company, and, of the number thus amalgamated, it is intended to keep only three breweries active.

MANUFACTORIES OF THE COMMONWEALTH, 1903 to 1907.

| Year. | N.S.W. | Victoria. | Queensland. | South Aust. | West. Aust. | Tasmania. | C'wealth. |

| XIX. Minor wares, n.e.i. ... | 94 | 100 | 108 | 104 | 135 |
| Total ... | 11,551 | 11,771 | 11,945 | 11,575 | 12,555 |

* South Australian figures for 1904.

For the purpose of the returns in the above table the definition of a factory adopted at the Conference of Statisticians in 1902 (see § 1, 2,) is used, viz., "Any factory, workshop or mill where four or more persons are employed or power is used." The total increase in the number of factories according to this table from 1903 to 1907 was 1004, or an average of 251 a year. The state of the manufacturing industries throughout Australia cannot, however, be gauged from a mere enumeration of the number of factories. Some of the factories concerned were practically in their infancy, employing but few hands, while others were developed on a large scale. Also amalgamations may account for a reduction in the numbers.

(ii.) *Classification of Factories in each State, 1907.* The following table shows the number of factories in each State of the Commonwealth at the end of the year 1907, classified according to the nature of the industry. (See classification given in § 1, 3, hereof):—

CLASSIFICATION OF FACTORIES IN EACH STATE, 1907.

| Class of Industry. | N.S.W. | Vic. | Qld. | S. Aus. | W. Aus. | Tas. | Cwth. |
|---|--------|-------|-------|---------|---------|------|--------|
| I. Treating raw material, product of agricul. and pastoral pursuits, etc. ... | 295 | 323 | 44 | 111 | 18 | 16 | 807 |
| II. Treating oils and fats, animal, vegetable, etc. ... | 40 | 21 | 15 | 11 | 3 | 2 | 92 |
| III. Processes in stone, clay, glass, etc. ... | 258 | 203 | 36 | 57 | 42 | 30 | 626 |
| IV. Working in wood ... | 522 | 290 | 212 | 56 | 59 | 76 | 1,215 |
| V. Metal works, machinery, etc. ... | 428 | 619 | 199 | 142 | 68 | 48 | 1,504 |
| VI. Connected with food and drink, etc. ... | 756 | 656 | 357 | 249 | 149 | 83 | 2,250 |
| VII. Clothing and textile fabrics, etc. ... | 890 | 1,220 | 109 | 192 | 121 | 131 | 2,661 |
| VIII. Books, paper, printing & engraving ... | 365 | 341 | 122 | 62 | 58 | 16 | 964 |
| IX. Musical instruments, etc. ... | 12 | 3 | ... | 1 | ... | ... | 16 |
| X. Arms and explosives ... | 3 | 5 | ... | ... | ... | ... | 8 |
| XI. Vehicles and fittings, saddlery and harness, etc. ... | 345 | 377 | 133 | 111 | 50 | 55 | 1,071 |
| XII. Ship and boat building & repairing ... | 31 | 12 | 17 | 6 | 4 | 6 | 70 |
| XIII. Furniture, bedding, and upholstery ... | 144 | 194 | 59 | 33 | 26 | 14 | 470 |
| XIV. Drugs, chemicals, and by-products ... | 58 | 64 | 5 | 9 | 7 | 1 | 144 |
| XV. Surgical and other scientific instruments ... | 8 | 11 | 5 | 1 | 1 | ... | 26 |
| XVI. Jewellery, timepieces, & platedware ... | 46 | 57 | 12 | 12 | 3 | 12 | 142 |
| XVII. Heat, light, and power ... | 166 | 70 | 25 | 14 | 25 | 9 | 309 |
| XVIII. Leatherware, n.e.i. ... | 14 | 24 | 2 | 3 | 2 | ... | 45 |
| XIX. Minor wares, n.e.i. ... | 51 | 40 | 7 | 16 | 7 | 6 | 135 |
| Total ... | 4,432 | 4,530 | 1,350 | 1,086 | 643 | 505 | 12,555 |

2. **Use of Mechanical Power.**—The principal motive power is steam, but the chief towns possess electric power stations owned either by the Government, or by public bodies or private companies. From these many manufactories find it convenient to derive their motive power. The distinction between factories employing steam, gas, oil, or electric machinery, and those employing either other power or none at all, affords an opportunity of ascertaining how many factories there are in the ordinary sense of the word, that is, establishments which are not merely workshops. For instance, in the Victorian clothing trade, out of 337 factories only 53 employ mechanical power, the balance may consequently be regarded merely as workshops.

The following table shews the number of factories in which machinery is worked by steam, gas, oil, or electricity, and the horse-power of engines or motors used, in each State and in the Commonwealth during the year 1907 :—

UTILISATION OF MECHANICAL POWER IN FACTORIES IN EACH STATE, 1907.

| State. | Number of Establishments. | | | Actual Horse-power of Engines Used. | | | | |
|---------------------|--|---------|--------|-------------------------------------|--------|-------|---------------|---------|
| | Using Machinery worked by Steam Gas, Oil, or Electricity | Others. | Total. | Steam. | Gas. | Oil. | Elec-tricity. | Total. |
| | No. | No. | No. | H.P. | H.P. | H.P. | H.P. | H.P. |
| New South Wales | 2,761 | 1,671 | 4,432 | 75,862 | 4,901 | 429 | 10,072 | 91,264 |
| Victoria ... | 2,717 | 1,812 | 4,530 | 42,945 | 4,516 | 1,060 | 4,182 | 52,703 |
| Queensland ... | 953 | 406 | 1,359 | 26,628 | 1,127 | 317 | 2,357 | 30,329 |
| South Australia ... | 728 | 358 | 1,086 | 11,121 | 1,917 | 1,287 | 1,240 | 15,565 |
| Western Australia | 432 | 211 | 643 | 17,558 | 197 | 716 | 2,705 | 21,178 |
| Tasmania | 252 | 253 | 505 | 6,168 | 145 | 304 | 2,987 | 9,604 |
| Commonwealth | 7,843 | 4,712 | 12,555 | 180,182 | 12,803 | 4,113 | 23,543 | 220,641 |

The percentage for the Commonwealth of the number of establishments using machinery worked by steam, gas, oil, or electricity on the total number of establishments is 62.42. The total average horse-power in use was 221,641, of which engines in which the motive power was steam formed 81.29 per cent. ; gas, 5.77 per cent. ; oil, 1.97 per cent. ; and electricity, 10.97 per cent.

§ 3. Number Employed in Australian Factories.

1. **Total Number Employed.**—Each person employed in and about a factory, in whatever capacity, is now included as a factory employé, consequently every proprietor who works in his business is counted as an employé, and all “outworkers” (see paragraph 6 hereinafter) are also included. The individuals embraced may be classed under the following heads, viz. :—(i.) Working proprietors; (ii.) managers and overseers; (iii.) accountants and clerks; (iv.) engine-drivers and firemen; (v.) skilled and unskilled workers in the factories, mills, or workshops; (vi.) carters and messengers; and (vii.) others.

(i.) *Average Numbers Employed, 1903 to 1907.* The following table shews, for each year from 1903 to 1907, inclusive, (a) the average numbers of persons (including both sexes and all ages) employed in manufacturing industries in each State; (b) the percentage of the numbers employed in each State on the total numbers employed in the Commonwealth; and (c) the numbers employed per ten thousand of the mean population in each State and the Commonwealth :—

**NUMBER OF PERSONS EMPLOYED IN MANUFACTURING INDUSTRIES,
1903 TO 1907.**

| Year. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tasmania. | C'wealth. |
|----------------------------------|--------|-----------|---------|----------|----------|-----------|-----------|
| AVERAGE NUMBERS EMPLOYED. | | | | | | | |
| 1903 ... | 65,633 | 73,229 | 19,286 | 18,049† | 11,828 | 7,785 | 195,810 |
| 1904 ... | 68,036 | 76,287 | 20,058 | 18,049 | 12,685 | 8,224 | 203,339 |
| 1905 ... | 72,175 | 80,235 | 21,705 | 19,273 | 12,733 | 8,468 | 214,589 |
| 1906 ... | 77,822 | 85,229 | 23,961 | 20,153 | 12,897 | 8,498 | 228,560 |
| 1907 ... | 86,467 | 90,903 | 27,954 | 22,701 | 12,607 | 8,209 | 248,841 |

PERCENTAGE OF AVERAGE NUMBERS ON TOTAL EMPLOYED.

| | % | % | % | % | % | % | % |
|----------|-------|-------|-------|-------|------|------|--------|
| 1903 ... | 33.50 | 37.37 | 9.84 | 9.28† | 6.04 | 3.97 | 100.00 |
| 1904 ... | 33.44 | 37.49 | 9.86 | 8.94 | 6.23 | 4.04 | 100.00 |
| 1905 ... | 33.62 | 37.37 | 10.11 | 9.03 | 5.93 | 3.94 | 100.00 |
| 1906 ... | 34.03 | 37.26 | 10.47 | 8.88 | 5.64 | 3.72 | 100.00 |
| 1907 ... | 34.75 | 36.53 | 11.23 | 9.12 | 5.07 | 3.30 | 100.00 |

AVERAGE NUMBERS EMPLOYED PER 10,000 OF MEAN POPULATION.

| | | | | | | | |
|----------|-----|-----|------|-----|-----|-----|-----|
| 1903 ... | 463 | 606 | 376* | ... | 534 | 439 | 502 |
| 1904 ... | 472 | 632 | 386* | 492 | 536 | 460 | 515 |
| 1905 ... | 489 | 662 | 413* | 518 | 509 | 472 | 534 |
| 1906 ... | 515 | 696 | 450 | 534 | 496 | 475 | 560 |
| 1907 ... | 558 | 734 | 519 | 589 | 481 | 458 | 599 |

* Inclusive of factories with two persons. † Figures for 1904.

(ii.) *Rates of Increase, 1903 to 1907.* From the preceding table it may be seen that there has been a general and steady increase in the average number of persons employed in manufacturing industries in each State during the period referred to. The following table shews the percentage of increase during each year on the average number for the preceding year:—

PERCENTAGES OF INCREASE IN AVERAGE NUMBER EMPLOYED, 1903 to 1907.

| Years. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tasmania. | C'wealth. |
|------------|--------|-----------|---------|----------|----------|-----------|-----------|
| 1903-4 ... | 3.66 | 4.18 | 4.15 | ... | 7.24 | 5.64 | 3.84 |
| 1904-5 ... | 6.08 | 5.18 | 8.21 | 6.67 | 0.38 | 3.61 | 5.52 |
| 1905-6 ... | 7.82 | 6.22 | 10.38 | 4.70 | 1.29 | 0.45 | 6.52 |
| 1906-7 ... | 11.11 | 6.66 | 16.67 | 11.80 | — 2.25 | — 3.49 | 8.80 |

2. Classification of Numbers Employed in Factories in the Commonwealth, 1903 to 1907.—The following table gives a classification of the average numbers of persons employed in factories of different descriptions in the Commonwealth during the years 1903 to 1907, inclusive:—

AVERAGE NUMBER OF PERSONS EMPLOYED IN VARIOUS FACTORIES IN COMMONWEALTH, 1903 to 1907.

| Class of Industry. | 1903.* | 1904. | 1905. | 1906.† | 1907. |
|---|----------------|----------------|----------------|----------------|----------------|
| I. Treating raw material, product of agricultural and pastoral pursuits, etc. | 7,547 | 7,182 | 7,460 | 7,809 | 8,956 |
| II. Treating oils and fats, animal, vegetable, etc. | 1,649 | 1,601 | 1,717 | 1,760 | 1,727 |
| III. Processes in stone, clay, glass, etc. | 7,900 | 7,907 | 8,285 | 8,779 | 8,909 |
| IV. Working in wood | 16,498 | 16,285 | 16,938 | 18,347 | 19,457 |
| V. Metal works, machinery, etc. | 35,586 | 37,164 | 40,061 | 43,431 | 47,060 |
| VI. Connected with food and drink, etc. | 31,761 | 33,033 | 35,026 | 36,720 | 40,228 |
| VII. Clothing and textile fabrics, etc. | 53,041 | 56,269 | 59,025 | 62,594 | 68,373 |
| VIII. Books, paper, printing and engraving | 17,187 | 18,167 | 18,441 | 19,565 | 20,733 |
| IX. Musical instruments, etc. | 254 | 282 | 384 | 386 | 430 |
| X. Arms and explosives | 361 | 302 | 280 | 347 | 323 |
| XI. Vehicles and fittings, saddlery and harness, etc. | 7,753 | 8,161 | 8,780 | 9,027 | 10,288 |
| XII. Ship and boat building and repairing | 1,978 | 1,853 | 1,964 | 2,124 | 2,049 |
| XIII. Furniture, bedding and upholstery | 5,297 | 5,214 | 5,422 | 5,890 | 6,819 |
| XIV. Drugs, chemicals and by-products | 2,048 | 2,153 | 2,373 | 2,600 | 2,895 |
| XV. Surgical and other scientific instruments | 125 | 142 | 146 | 178 | 170 |
| XVI. Jewellery, timepieces, and platedware | 1,064 | 1,239 | 1,237 | 1,397 | 1,700 |
| XVII. Heat, light, and power | 3,636 | 3,992 | 4,443 | 4,834 | 5,372 |
| XVIII. Leatherware, n.e.i. | 463 | 557 | 592 | 731 | 788 |
| XIX. Minor wares, n.e.i. | 1,642 | 1,836 | 1,945 | 2,041 | 2,564 |
| Total | 195,810 | 203,339 | 214,589 | 228,560 | 248,841 |

* South Australian figures for 1904. † Excluding Queensland Government Railways. For preceding years the Queensland statistics include all establishments where two or more hands were employed except Government Railway workshops.

The total increase in the average number of hands employed from 1903 to 1907 was 53,031, or an annual average of 13,258. The increase was general throughout all the various classes of industry except Class X., in which there was the small decrease of thirty-eight hands. The greatest development took place in Classes VII. and V., the increases being 15,332 and 11,474 respectively.

3. Classification of Numbers Employed in each State, according to Class of Industry, 1907.—The following table shews a similar classification of employes in manufacturing industries in each State for the year 1907:—

AVERAGE NUMBER OF PERSONS EMPLOYED IN VARIOUS FACTORIES IN EACH STATE, 1907.

| Class of Industry. | N.S.W. | Vic. | Qld. | S. Aus. | W. Aus. | Tas. | C'wth. |
|---|---------------|---------------|---------------|---------------|---------------|--------------|----------------|
| I. Treating raw material, product of agricul. and pastoral pursuits, etc. | 3,727 | 3,101 | 646 | 1,096 | 167 | 129 | 8,956 |
| II. Treating oils and fats, animal, vegetable, etc. | 639 | 563 | 142 | 291 | 57 | 35 | 1,727 |
| III. Processes in stone, clay, glass, etc. | 3,675 | 3,383 | 451 | 655 | 515 | 230 | 8,909 |
| IV. Working in wood | 5,896 | 4,647 | 3,077 | 1,071 | 3,345 | 1,421 | 19,457 |
| V. Metal works, machinery, etc. | 18,093 | 13,469 | 4,111 | 6,826 | 2,489 | 2,072 | 47,060 |
| VI. Connected with food and drink, etc. | 12,064 | 12,894 | 9,897 | 3,159 | 1,411 | 1,303 | 40,228 |
| VII. Clothing and textile fabrics, etc. | 21,922 | 33,118 | 5,130 | 4,791 | 2,202 | 1,507 | 68,373 |
| VIII. Books, paper, printing & engraving | 7,593 | 7,701 | 2,182 | 1,652 | 1,074 | 531 | 20,733 |
| IX. Musical instruments, etc. | 380 | 34 | ... | 16 | ... | ... | 430 |
| X. Arms and explosives | 16 | 307 | ... | ... | ... | ... | 323 |
| XI. Vehicles and fittings, saddlery, and harness, etc. | 3,464 | 3,633 | 1,154 | 1,234 | 512 | 291 | 10,288 |
| XII. Ship and boat building & repairing | 1,680 | 144 | 71 | 97 | 19 | 38 | 2,049 |
| XIII. Furniture, bedding, and upholstery | 2,481 | 2,370 | 796 | 642 | 275 | 255 | 6,819 |
| XIV. Drugs, chemicals, and by-products | 1,106 | 1,323 | 61 | 348 | 45 | 12 | 2,895 |
| XV. Surgical and other scientific instruments | 84 | 50 | 21 | 5 | 10 | ... | 170 |
| XVI. Jewellery, timepieces, & platedware | 626 | 737 | 117 | 146 | 28 | 56 | 1,700 |
| XVII. Heat, light, and power | 2,040 | 1,864 | 421 | 421 | 350 | 276 | 5,372 |
| XVIII. Leatherware, n.e.i. | 272 | 422 | 52 | 24 | 18 | ... | 788 |
| XIX. Minor wares, n.e.i. | 709 | 1,063 | 125 | 227 | 90 | 53 | 2,564 |
| Total | 86,467 | 90,903 | 27,954 | 22,701 | 12,607 | 8,209 | 248,841 |

The largest number employed in any particular class in the Commonwealth was in Class VII., in which there were 68,373 employés, or 27.48 per cent. on the whole number. The class affording employment to the smallest number of hands was Class XV., in which there were 170 hands, or 0.07 per cent. on the total number of employés. Classes VI., VII., and VIII. comprise those industries in which female labour is largely employed. (See § 4 hereof.)

4. Classification of Numbers Employed in each State according to Nature of Employment, 1907.—In the following table the average numbers of persons employed in each State during the year 1907 are classified according to the nature of their employment:—

**AVERAGE NUMBER OF PERSONS EMPLOYED IN EACH STATE, CLASSIFIED
ACCORDING TO NATURE OF EMPLOYMENT, 1907.**

| State. | Average Number of Persons Employed. | | | | | | Total. |
|-----------------------|-------------------------------------|------------------------|-------------------------|-----------------------------|---|---------------------------------|---------|
| | Working Proprietors. | Managers and Overseers | Accountants and Clerks. | Engine-drivers and Firemen. | Workers, Skilled & Unskilled in Factory Mill or Workshop. | Carters, Messengers and Others. | |
| New South Wales ... | 3,983 | 2,792 | 2,857 | 2,308 | 71,979 | 2,548 | 86,467 |
| Victoria ... | 4,604 | 2,713 | 2,746 | 1,544 | 75,148 | 4,148 | 90,903 |
| Queensland ... | 1,270 | 994 | 1,116 | 1,103 | 21,228 | 2,243 | 27,954 |
| South Australia ... | 1,021 | 666 | 795 | 499 | 18,865 | 855 | 22,701 |
| Western Australia ... | 525 | 426 | 515 | 346 | 9,799 | 996 | 12,607 |
| Tasmania ... | ...* | 772 | 310 | 314 | 6,545 | 268 | 8,209 |
| Commonwealth ... | 11,403 | 8,363 | 8,339 | 6,114 | 203,564 | 11,058 | 248,841 |

* Included in Managers and Overseers.

5. Classification of Factories according to Number of Hands Employed, 1907.—The number of factories in each State classified according to the numbers of hands employed, and the total numbers of hands employed in each class of factory, are shewn in the following table:—

**CLASSIFICATION OF FACTORIES ACCORDING TO NUMBER OF HANDS EMPLOYED,
1907.**

| No. of Persons Employed in each Factory. | N.S.W. | Victoria. | Q'sland. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|--|--------|-----------|----------|----------|----------|------|-----------|
| NUMBER OF FACTORIES. | | | | | | | |
| Under 4 ... | 647 | 617 | 182 | 120 | 87 | 165 | 1,818 |
| 4 ... | 508 | 597 | 169 | 126 | 63 | 48 | 1,511 |
| 5 to 10 ... | 1,636 | 1,624 | 463 | 407 | 229 | 137 | 4,496 |
| 11 to 20 ... | 803 | 811 | 232 | 210 | 147 | 67 | 2,270 |

6. Outworkers.—The term "outworker" or "homeworker" has acquired a special meaning in connection with manufacturing industries, and technically embraces only those to whom work is given out by factory owners to be wrought upon in their own homes. Individuals working for themselves are not included. The following table gives particulars, so far as available, of the average number of outworkers connected with factories in each State during each year from 1903 to 1907, inclusive :—

NUMBER OF OUTWORKERS CONNECTED WITH FACTORIES, 1903 to 1907.

| Year. | N.S.W. | Victoria. | Q'sland. | Sth. Aus. | West Aus. | Tas. | C'wealth. |
|----------|--------|-----------|----------|-----------|-----------|------|-----------|
| 1903 ... | 308 | 955 | * | * | * | 71 | * |
| 1904 ... | 439 | 991 | * | * | * | 42 | * |
| 1905 ... | 374 | 1,186 | * | * | * | 86 | * |
| 1906 ... | 501 | 1,431 | * | * | * | 57 | * |
| 1907 ... | 592 | 1,429 | 264 | 66 | 18 | 60 | 2,429 |

* Not available.

Although the figures from 1903 to 1907, for the States of New South Wales and Victoria, show generally a fairly steady and rapid increase in the number of outworkers, they are considerably smaller than the figures for early years. For example, in 1897 there were 2382 outworkers registered in Victoria in the clothing trades, while the number of employés in factories for those trades was 14,293. The corresponding figures for the same year in New South Wales were 546 outworkers and 8602 factory employés. Thus it will be seen that the number of employés in factories has largely increased, while the increase in the number of outworkers has been relatively small.

The Factories Acts in each State contain provisions regulating the employment of outworkers. Generally records of out-work must be kept by factory proprietors, specifying the names and remuneration of workers, and stating the places where the work is done. Further particulars are given in a later part of this book. (See Section XXVII. *Industrial Unionism and Industrial Legislation.*)

§ 4. Sex Distribution in Factories.

1. Employment of Females in Factories.—In all the States the employment of female labour in factories is now regulated by Act of Parliament. In Victoria the first Act dealing with the subject was passed in the year 1873, and provided that no female should be employed for more than eight hours a day without the permission of the Chief Secretary. The number of working hours for women is now limited to forty-eight per week in all the States except Tasmania, where the maximum number of working hours is ten per day. The maximum periods of continuous labour, and the intervals of cessation

therefrom, are also prescribed by the several Acts. Further reference is made to the restrictions regarding the employment of females in a later part of this book. (See Section XXVII. *Industrial Unionism and Industrial Legislation.*)

2. **Distribution of Employes according to Sex, 1903 to 1907.**—In Victoria the ratio of the average number of females to the average number of males employed in factories during the year 1886 was about one to five. Five years later (1891) it was somewhat less, but in 1896 had increased to about one woman to three men, and at present is about one to two. The employment of women is, however, largely confined to a few trades.

In New South Wales the male workers were about seven times the number of females in 1886; in 1891 the proportion had become six to one; in 1903 about four to one; and is now rather higher than three to one. The great prosperity in clothing and textile industries is one of the main causes of increase in female employment. Large numbers are occupied in tailoring and dress making, in wholesale manufactories, in tobacco factories, and preserving works. Certain trades are specifically known as women's trades, such for example as clothing and textile trades, preparation of food, book-binding, and lighter work connected with the drug trade, such for example as wrapping. In common with commercial establishments, a considerable number of women are also employed as clerks and typewriters in factories.

(i.) *Average Numbers of Males and Females Employed, 1903 to 1907.* The following table shews the average numbers of male and female employes, so far as available, in factories in each State from 1903 to 1907:—

AVERAGE NUMBER OF MALES AND FEMALES EMPLOYED IN MANUFACTURING INDUSTRIES, 1903 to 1907.

| State. | 1903. | 1904. | 1905. | 1906. | 1907. |
|--------------------------|---------|---------|---------|---------|---------|
| MALES. | | | | | |
| New South Wales | 52,453 | 53,457 | 56,111 | 59,979 | 65,953 |
| Victoria | 49,434 | 50,554 | 52,925 | 56,339 | 59,691 |
| Queensland | *16,086 | *16,758 | *18,105 | *19,961 | 23,191 |
| South Anstralia | †14,408 | 14,408 | 15,832 | 16,451 | 18,423 |
| Western Australia | 10,420 | 11,078 | 11,091 | 11,015 | 10,667 |
| Tasmania | 6,445 | 6,880 | 7,105 | 7,220 | 6,972 |
| Commonwealth | 149,246 | 153,135 | 161,169 | 170,965 | 184,897 |
| FEMALES. | | | | | |
| New South Wales | 13,180 | 14,579 | 16,064 | 17,843 | 20,514 |
| Victoria | 23,795 | 25,733 | 27,310 | 28,890 | 31,212 |
| Queensland | *3,200 | *3,300 | *3,600 | *4,000 | 4,763 |
| South Australia | †3,641 | 3,641 | 3,441 | 3,702 | 4,278 |
| Western Australia | 1,408 | 1,607 | 1,642 | 1,882 | 1,940 |
| Tasmania | 1,340 | 1,344 | 1,363 | 1,278 | 1,237 |
| Commonwealth | 46,564 | 50,204 | 53,420 | 57,595 | 63,944 |

* Estimated. † 1904 figures.

It may be seen that during the years specified there has been for the whole Commonwealth a total increase in the number of male employes of 35,641, or an annual average of 8910, and in the number of female employes a total increase of 17,380, or an annual average of 4345.

(ii.) *Average Numbers of Males and Females Employed per 10,000 of Mean Population, 1903 to 1907.* The following table shows the average numbers of male and female employes per 10,000 of the mean male and female population respectively in each State from 1903 to 1907 :—

**AVERAGE NUMBERS OF MALE AND FEMALE EMPLOYES PER 10,000 OF MEAN
MALE AND FEMALE POPULATION RESPECTIVELY, 1903 to 1907**

| State. | 1903. | 1904. | 1905. | 1906. | 1907. |

| Commonwealth ... | 249 | 265 | 278 | 296 | 325 |

* Estimated. † 1904 figures.

3. **Rate of Increase for each Sex.**—The percentages of annual increase in the average numbers of males and females employed in manufacturing industries, based upon the figures for the preceding year, are shewn below for the whole Commonwealth, for the years 1903 to 1907 :—

**PERCENTAGES OF ANNUAL INCREASE IN AVERAGE NUMBERS OF MALE AND
FEMALE EMPLOYES, 1903 to 1907.**

| Particulars. | 1903-4. | 1904-5. | 1905-6 | 1906-7. |
|------------------|---------|---------|--------|---------|
| Males % | 2.60 | 5.25 | 6.08 | 8.15 |
| Females % | 7.82 | 6.40 | 7.81 | 11.02 |

The above table shews that there has been relatively a larger increase in the number of female than in the number of male employes. This matter is referred to further in the following paragraph hereof. The subjoined statement shews the percentages of annual increase in each State during the last year (1906-7) :—

PERCENTAGES OF INCREASE IN AVERAGE NUMBERS OF MALE AND FEMALE EMPLOYEES, 1906-7.*

| Particulars. | | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|--------------|---|--------|-----------|---------|----------|----------|-------|-----------|
| Males ... | % | 9.96 | 5.95 | 16.18 | 11.98 | -3.16 | -3.43 | 8.15 |
| Females ... | % | 14.97 | 7.69 | 19.07 | 15.55 | 3.08 | -3.21 | 11.02 |

* The negative sign indicates a decrease.

4. Increasing Ratio of Female Employment in Factories.—The increasing extent to which females are employed in the factories of the Commonwealth may perhaps be best shown by giving the number of females to every 100 male employes for each year and for each State:—

NUMBER OF FEMALES PER 100 MALES IN AUSTRALIAN FACTORIES, 1903 to 1907.

| Year. | N.S.W. | Victoria. | Queensland. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|-------|--------|-----------|-------------|----------|----------|-------|-----------|
| 1903 | 25.13 | 48.14 | *19.89 | +26.07 | 13.51 | 20.79 | 31.20 |
| 1904 | 27.27 | 50.90 | *19.89 | 26.07 | 14.51 | 19.53 | 32.78 |
| 1905 | 28.63 | 51.60 | *19.89 | 22.35 | 14.80 | 19.46 | 33.15 |
| 1906 | 29.75 | 51.28 | *20.04 | 23.31 | 17.09 | 17.68 | 33.69 |
| 1907 | 31.10 | 52.29 | 20.53 | 23.22 | 18.19 | 17.74 | 34.58 |

* Estimated. † 1904 figures.

Although this table shows that from 1903 to 1907 there has been an increase in the percentage specified from 31.20 to 34.58, the tables given in the next succeeding paragraph show that this increase has not been due so much to the incursion of female labour into what may be termed men's trades, as to the activity in those trades in which women are ordinarily engaged, more especially in dressmaking, millinery, etc.

5. Employment of Females in Particular Industries, 1907.—The employment of women in manufacturing industries in Australia is largely confined to a few trades, of which the more important are comprised in Classes VI., VII., and VIII. (see § 1, 3. above), viz., in connection with food, drink, etc., clothing and textile fabrics, and books, paper, printing, etc. The following table shows the average number of females employed in each of these classes during the year 1907 in each State, and also shows the percentages of the average numbers so employed on the total average numbers of females employed in all classes of factories:—

AVERAGE NUMBERS OF FEMALES EMPLOYED IN PARTICULAR INDUSTRIES AND PERCENTAGES ON AVERAGE TOTAL EMPLOYED, 1907.

| Class. | N.S.W. | Vict. | Qld. | S. Aust. | W.Aust. | Tas. | Cw'ith. |
|---|--------|--------|-------|----------|---------|-------|---------|
| AVERAGE NUMBERS. | | | | | | | |
| VI. Food, drink, etc. ... | 2,546 | 3,203 | 589 | 892 | 113 | 195 | 7,038 |
| VII. Clothing and textile fabrics ... | 14,955 | 24,397 | 3,847 | 3,507 | 1,631 | 920 | 48,857 |
| VIII. Books, paper, printing, etc. ... | 1,692 | 1,079 | 344 | 454 | 142 | 59 | 4,670 |
| Total ... | 19,193 | 29,579 | 4,580 | 4,153 | 1,886 | 1,174 | 60,565 |
| PERCENTAGES ON TOTAL AVERAGE FEMALE EMPLOYEES. | | | | | | | |
| VI. Food, drink, etc. ... | 12.41 | 10.26 | 12.36 | 9.16 | 5.82 | 15.76 | 11.00 |
| VII. Clothing and textile fabrics ... | 72.90 | 78.16 | 76.57 | 77.30 | 84.07 | 74.37 | 76.41 |
| VIII. Books, paper, printing, etc. ... | 8.25 | 6.34 | 7.22 | 10.62 | 7.32 | 4.77 | 7.30 |
| Total ... | 93.56 | 94.76 | 96.15 | 97.08 | 97.21 | 94.90 | 94.71 |

It will be seen that by far the greater part of the total number of females employed in factories work in one or other of the three classes of industry indicated. Class VII. being the most important.

The classification of the employment of women in Class VII. in the two States of largest population is of interest. The following table shews, also, for the sake of comparison, the number of males employed:—

EMPLOYMENT IN CLASS VII., 1907.

| Class VII. | New South Wales. | | Victoria. | |
|----------------------------------|------------------|----------|-----------|----------|
| | Males. | Females. | Males. | Females. |
| Woolen and tweed mills | 179 | 216 | 742 | 847 |
| Boots and shoes | 3,163 | 1,623 | 4,185 | 2,118 |
| Slop clothing | 2,722 | 6,273 | 1,912 | 6,271 |
| Clothing (tailoring) | | | | |
| Dressmaking and millinery | 56 | 4,421 | 170 | 8,595 |
| Dyeworks and cleaning | 38 | 29 | 42 | 81 |
| Furriers | 19 | 16 | 29 | 55 |
| Hats and caps | 335 | 759 | 576 | 828 |
| Waterproof and oilskin | 28 | 131 | 47 | 143 |
| Shirts, ties, and scarves | 113 | 1,341 | 249 | 5,047 |
| Rope and cordage | 183 | 4 | 404 | 277 |
| Tents and tarpaulins | 136 | 142 | 61 | 23 |
| Other | ... | ... | 7 | 112 |
| Total | 6,967 | 14,955 | 8,424 | 24,397 |

§ 5. Child Labour in Factories.

1. **Conditions of Child Labour.**—The employment of young persons in factories in each State of the Commonwealth is regulated by Acts of Parliament in a similar manner to the employment of female labour. Excepting under special circumstances, children under a certain age may not be employed at all in factories. The minimum age in New South Wales, Queensland, and Western Australia is fourteen, and in the other States is thirteen years. Other restrictions on the employment of young persons in factories are more particularly referred to in a later part of this book. (See Section XXVII. *Industrial Unionism and Industrial Legislation.*) The general object of the restrictions imposed is to assure that a proper period shall be devoted to primary education, and that the early years of toil shall not exhaust the worker before the attainment of full growth.

2. **Average Number of Children Employed in Factories, 1903 to 1907.**—In the statistical compilations of the various States the term "child" may be taken to denote any person under sixteen years of age, excepting in New South Wales, where it denoted, for years prior to 1907, any person under fifteen. The following table shews the average number of children of each sex employed in manufacturing industries in each State during the year 1907. It will be seen that the Commonwealth figures for years prior to 1907 are incomplete. There have been increases in the average number employed in all the States for which returns are available, except South Australia, where there has been a small decrease. The largest increase was in New South Wales, where the numbers rose from 1194 in 1903 to 4286 in 1907, a total increase of 3092, or an annual average of 773. These figures are, however, subject to the disability mentioned on the next page.

AVERAGE NUMBER OF CHILDREN EMPLOYED IN FACTORIES, 1903 to 1907.

| State. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------|--------|--------|--------|--------|--------|
| MALES. | | | | | |
| New South Wales ... | 774 | 748 | 668 | 881 | 2,406 |

| Queensland ... | * | * | * | * | 1,119 |
| South Australia ... | * | 1,245 | 1,362 | 1,166 | 1,127 |
| Western Australia ... | 179 | 217 | 197 | 203 | 216 |
| Tasmania ... | 125 | 168 | 284 | 251 | 214 |
| Commonwealth ... | †3,774 | †5,436 | †5,772 | †5,714 | 8,335 |
| FEMALES. | | | | | |
| New South Wales ... | 420 | 452 | 473 | 579 | 1,880 |
| Victoria ... | 2,332 | 2,952 | 3,034 | 2,997 | 3,095 |
| Queensland ... | * | * | * | * | 576 |
| South Australia ... | * | 395 | 324 | 400 | 480 |
| Western Australia ... | 47 | 94 | 81 | 126 | 159 |
| Tasmania ... | 47 | 75 | 128 | 99 | 97 |
| Commonwealth ... | †2,846 | †3,968 | †4,040 | †4,201 | 6,287 |
| TOTAL. | | | | | |
| New South Wales ... | 1,194 | 1,200 | 1,141 | 1,460 | 4,286 |
| Victoria ... | 5,028 | 6,010 | 6,295 | 6,210 | 6,348 |
| Queensland ... | * | * | * | * | 1,695 |
| South Australia ... | * | 1,640 | 1,686 | 1,566 | 1,607 |
| Western Australia ... | 226 | 311 | 278 | 329 | 375 |
| Tasmania ... | 172 | 243 | 412 | 350 | 311 |
| Commonwealth ... | †6,620 | †9,404 | †9,812 | †9,915 | 14,622 |

* Not available. † Incomplete.

The relatively large increase in the figures for the Commonwealth for the last year is accounted for largely by the fact that in New South Wales, during years prior to 1907, the term "child" denoted any person under the age of fifteen years of age, which, in 1907, was raised to sixteen years in order to come into line with the other States of the Commonwealth. It should be noted also that the Commonwealth figures for the years 1903 to 1906 are exclusive of returns for Queensland, and for the year 1903 are also exclusive of South Australia.

3. **Industries Employing Child Labour, 1907.**—The employment of children is largely confined to a limited number of industries, the most important of which are specified in the table below, which shows the average number of children of each sex, employed in the several industries indicated, in each State during the year 1907:—

NUMBER OF CHILDREN ENGAGED IN VARIOUS INDUSTRIES, 1907.

| Class. | Industry. | N.S.W. | | Victoria. | | Q'ld. | | S. Aust. | | W. Aust. | | Tas. | | Cwlth. | |

| .. | Shirts, ties, scarfs, etc. | 6 | 138 | 14 | 520 | 10 | 95 | 3 | 34 | ... | 23 | ... | ... | 33 | 810 |

4. **Apprenticeship.**—The apprenticeship systems of the several States may be summarised as follows :—

In New South Wales, no child may be apprenticed until the attainment of the age of fourteen years, in Victoria and Queensland, twelve years. There is no limitation in the case of the other States, nor any regulating Acts except as applying to charity apprentices. The statutes limiting the age at which children may begin to work may be regarded as applicable by way of preventing too early apprenticeship, so also may those directing that education be continued up to a certain age or standard.

Indentures must be entered into specifying the conditions of the employment. Apprenticeships may not exceed seven years in duration, and become inoperative at twenty-one years of age, or in the case of women, on marriage.

The Arbitration Courts and Wages Boards have power to limit the number of apprentices which may be taken into a factory. No general statistics of the number of apprentices in Australia have been collected up to the present time. Other enactments relating to child labour are referred to elsewhere.

§ 6. Amount of Wages Paid and Value of Production.

1. **Introduction.**—The importance of the manufacturing industries of the Commonwealth is indicated by the fact that the total value of the output for 1907 exclusive of the States of Western Australia and Tasmania, for which particulars are not available, was £86,972,413, of which amount the sum of £52,542,012 represents the value of the raw materials used. The difference between these two amounts, viz., £34,430,401, represents the amount by which the value of the raw materials was enhanced in the process of manufacture. The total amount of salaries and wages paid in factories in all the States during 1907 was £18,323,977; the corresponding amount, exclusive of the States of Western Australia and Tasmania, being £16,291,425.

2. **Amounts of Salaries and Wages Paid, 1907.**—The total amounts of salaries and wages paid during the year 1907 in various classes of factories in the Commonwealth (excluding all sums drawn by working proprietors) are shewn in the following table.

It has been found that it is not practicable to shew satisfactorily in this book the rates of wages paid to employes in various classes of manufacturing industries in Australia, owing to the fact that the rates in many industries vary very considerably in different parts of the country.

**AMOUNTS OF SALARIES AND WAGES PAID IN FACTORIES IN COMMONWEALTH,
1907.***

| Class of Industry. | N.S.W. | Vict. | Q'land. | S. Aust. | W. Aust. | Tas. | Cwltth. |
|--|-----------|-----------|-----------|-----------|-----------|---------|------------|
| | £ | £ | £ | £ | £ | £ | £ |
| I. Treating raw material, product of agricultural and pastoral pursuits, etc. | 242,761 | 206,642 | 51,109 | 72,717 | 15,723 | 10,681 | 599,638 |
| II. Treating oils and fats, animal, vegetable, etc. | 45,658 | 47,193 | 11,614 | 18,824 | 5,053 | 3,400 | 131,742 |
| III. Processes in stone, clay, glass, etc. | 306,927 | 270,016 | 29,850 | 52,943 | 47,843 | 15,533 | 732,112 |
| IV. Working in wood | 466,832 | 358,522 | 243,476 | 94,278 | 384,965 | 106,202 | 1,654,275 |
| V. Metal works, machinery, etc. | 1,884,144 | 1,226,616 | 363,530 | 642,100 | 301,795 | 228,975 | 4,647,160 |
| VI. Connected with food and drink, etc. | 898,637 | 905,224 | 590,293 | 246,070 | 173,884 | 74,750 | 2,888,858 |
| VII. Clothing and textile fabrics, etc. | 1,051,153 | 1,397,053 | 223,710 | 226,572 | 145,672 | 79,183 | 3,128,343 |
| VIII. Books, paper, printing and engraving | 637,883 | 645,205 | 203,707 | 133,127 | 146,362 | 54,291 | 1,820,575 |
| IX. Musical instruments, etc. | 35,298 | 2,299 | ... | 1,306 | ... | ... | 38,903 |
| X. Arms and explosives | 1,220 | 18,337 | ... | ... | ... | ... | 19,557 |
| XI. Vehicles and fittings, saddlery and harness, etc. | 243,910 | 232,408 | 77,443 | 84,696 | 50,939 | 20,996 | 710,392 |
| XII. Ship and boat building and repairing | 214,018 | 9,547 | 7,367 | 13,558 | 1,939 | 3,788 | 250,217 |
| XIII. Furniture, bedding and upholstery | 190,091 | 172,941 | 51,131 | 54,596 | 30,924 | 15,860 | 515,543 |
| XIV. Drugs, chemicals, and by-products | 76,382 | 94,395 | 3,737 | 22,587 | 5,531 | 640 | 203,272 |
| XV. Surgical and other scientific instruments | 6,348 | 3,036 | 1,689 | 691 | 1,084 | ... | 12,848 |
| XVI. Jewellery, timepieces, and platedware | 48,548 | 62,142 | 7,773 | 12,464 | 3,087 | 4,517 | 138,531 |
| XVII. Heat, light, and power | 243,231 | 215,508 | 43,904 | 45,984 | 58,888 | 31,992 | 639,557 |
| XVIII. Leatherware, n.e.i. | 16,805 | 25,151 | 2,122 | 1,342 | 1,306 | ... | 46,726 |
| XIX. Minor wares, n.e.i. | 40,810 | 81,442 | 6,184 | 10,539 | 5,708 | 1,036 | 145,728 |
| Total | 6,650,715 | 5,982,677 | 1,923,639 | 1,734,394 | 1,380,708 | 651,844 | 18,323,977 |

* Excluding all amounts drawn by working proprietors.

The maximum amount of salaries and wages paid in any particular class was in Class V., the amount being £4,647,160, or 25.36 per cent. on the total amount; the minimum amount was in Class XV., £12,848, or 0.07 per cent. on the total amount. The State in which the largest amount was paid was New South Wales, where the amount paid was over ten times as much as was paid in Tasmania. The following statement shews the average amount paid per employé in each State respectively; the figures are exclusive of working proprietors:—

AVERAGE AMOUNT OF SALARIES AND WAGES PAID PER EMPLOYE, 1907.

| Particulars. | N.S.W. | Vic. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|-------------------|--------|-------|---------|----------|----------|-------|-----------|
| Amount paid ... £ | 80.63 | 69.33 | 71.82 | 80.00 | 114.23 | 79.40 | 77.17 |

In comparing the figures in the above table regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others (see § 2 hereof). In Victoria, for instance, where the average is lowest there are a large number of factories and hands employed in Class VII., and in that class wages are low, a great many women and children being employed. The position occupied by Western Australia is no doubt partly due to the increased cost of living in that State.

3. Value of Raw Materials used in Factories, 1907.—The total value of raw materials worked up (i.e., exclusive of fuel, lubricants, etc.) in factories in the Common-

wealth, exclusive of the States of Western Australia and Tasmania, for which particulars are not available, during 1907, was £52,542,012, which represents 61.46 per cent. of the total value of the finished products. (See next paragraph hereof.) The following table shows the value of the raw materials worked up in various factories in each State except Western Australia and Tasmania, during the year 1907:—

**VALUE OF RAW MATERIALS WORKED UP IN FACTORIES IN COMMONWEALTH,
1907.**

| Class of Industry. | N.S.W. | Vic. | Qld. | S.A. | W.A.* | Tas.† | Cwth.‡ |

| XIX. Minor wares, n.e.i. ... | 120,910 | 319,598 | 5,765 | 16,939 | ... | ... | 463,212 |
| Total ... | 22,746,162 | 17,926,128 | 6,490,086 | 5,879,636 | ... | ... | 52,542,012 |

* Details too incomplete for publication. † Figures not available. ‡ Exclusive of Western Australia and Tasmania.

The class in which the maximum value of raw materials was used was Class VI., "Connected with Food and Drink, etc.," the value being £20,632,739, or more than twice the value in any other class. The next important class in order of value was Class V., "Metal Works, Machinery, etc.," in which raw materials to the value of £9,488,809 were used. The class in which the minimum value appears is Class XV., "Surgical and other Scientific Instruments," the value being £12,214.

4. **Total Value of Output of Manufacturing Industries, 1907.**—The value of the output of new goods manufactured and repairs effected in factories of various classes in each State, except Western Australia and Tasmania, during the year 1907 is shown in the following table. The figures given represent not only the increased value due to the process of manufacture, but also include the value of the raw materials used. The difference between the value of the materials used and the total output (see paragraph 5 hereof) is the real value of production from manufactories.

TOTAL VALUE OF OUTPUT OF FACTORIES IN COMMONWEALTH, 1907.

| Class of Industry. | N.S.W. | Victoria. | Q'land. | S.A. | W.A.* | Tas.* | Cwth.† |
|---|------------|------------|------------|-----------|-------|-------|------------|
| | £ | £ | £ | £ | £ | £ | £ |
| I. Treating raw material, product of agricultural & pastoral pursuits, etc. | 4,507,210 | 2,336,399 | 1,241,370 | 602,325 | ... | ... | 8,637,304 |
| II. Treating oils and fats, animal, vegetable, etc. | 686,894 | 433,603 | 96,279 | 155,559 | ... | ... | 1,377,335 |

| XII. Ship and boat building and repairing... | 387,314 | 24,368 | 15,099 | 24,530 | ... | ... | 451,811 |
| XIII. Furniture, bedding, and upholstery | 598,412 | 598,875 | 125,564 | 140,325 | ... | ... | 1,463,176 |
| XIV. Drugs, chemicals, and by-products | 595,073 | 760,008 | 17,933 | 192,931 | ... | ... | 1,565,950 |
| XV. Surgical and other scientific instruments | 19,675 | 8,518 | 5,838 | 4,200 | ... | ... | 33,231 |
| XVI. Jewellery, timepieces, and platedware | 146,043 | 240,327 | 26,425 | 37,225 | ... | ... | 450,020 |
| XVII. Heat, light, and power | 1,373,709 | 830,088 | 202,352 | 137,812 | ... | ... | 2,543,961 |
| XVIII. Leatherware, n.e.i. | 107,947 | 162,153 | 9,306 | 6,343 | ... | ... | 285,748 |
| XIX. Minor wares, n.e.i. | 194,750 | 480,292 | 14,776 | 33,617 | ... | ... | 723,335 |
| Total | 37,231,012 | 29,693,634 | 11,209,515 | 8,838,252 | ... | ... | 86,972,418 |

* Not available. † Exclusive of Western Australia and Tasmania.

It may be seen that the State of New South Wales far outstrips the other States in the total value of the output of her factories, the value being £37,231,012, or 42.88 per cent. on the total value for the four States. The next State in order of value is Victoria, which produces 34.14 per cent.; the value of the output of Queensland is 12.88 per cent. and of South Australia 10.10 per cent. on the total value for the four States. The two most important classes in order of value of output (Classes VI. and V.) are the same as in order of value of raw materials used; the next class is, however, Class VII., as regards output, but is Class I. as regards raw materials used. The following statement shews the value of output per head of mean population during 1907. The population of the Commonwealth is taken exclusive of the two States for which particulars are not available:—

VALUE OF OUTPUT OF FACTORIES PER HEAD OF MEAN POPULATION, 1907.

| Particulars. | N.S.W. | Victoria. | Q'land. | S.A. | W.A.* | Tas.* | Cwth.† |
|-----------------------|--------|-----------|---------|-------|-------|-------|--------|
| Amount per head ... £ | 24.06 | 23.95 | 20.82 | 22.70 | ... | ... | 23.41 |

* Not available. † Exclusive of Western Australia and Tasmania.

5. Value of Production of Manufacturing Industries, 1907.—The difference between the figures given in paragraph 4 and the corresponding figures in paragraph 3 hereof represents the amount added to the value of the raw materials by the process of manufacture. This is the real measure of the value of production from manufacturing industries. The following table shews the value added in this manner in each State, for which figures are available, during the year 1907 for various classes of factories:—

VALUE OF PRODUCTION FROM MANUFACTURING INDUSTRIES IN COMMON-WEALTH, 1907.

| Class of Industry. | N S.W. | Victoria. | Q'land. | S.A. | W.A.* | Tas.* | Cwlth.† |
|---|------------|------------|-----------|-----------|-------|-------|------------|
| | £ | £ | £ | £ | £ | £ | £ |
| I. Treating raw material, product of agricultural and pastoral pursuits, etc. ... | 581,377 | 439,412 | 182,971 | 122,670 | ... | ... | 1,325,439 |
| II. Treating oils and fats, animal, vegetable, etc. ... | 199,443 | 138,890 | 42,605 | 48,447 | ... | ... | 429,385 |
| III. Processes in stone, clay, glass, etc. ... | 659,698 | 542,580 | 51,846 | 97,789 | ... | ... | 1,351,913 |
| IV. Working in wood... .. | 811,015 | 605,826 | 389,130 | 162,733 | ... | ... | 1,968,704 |
| V. Metal works, machinery, etc. ... | 3,940,999 | 1,945,016 | 799,185 | 1,434,459 | ... | ... | 8,119,659 |
| VI. Connected with food and drink, etc. ... | 2,860,572 | 2,736,462 | 1,984,745 | 716,810 | ... | ... | 8,298,589 |
| VII. Clothing and textile fabrics, etc. ... | 1,738,546 | 2,097,525 | 387,811 | 347,496 | ... | ... | 4,571,378 |
| VIII. Books, paper, printing, and engraving ... | 1,091,434 | 1,261,509 | 432,523 | 98,119 | ... | ... | 2,883,585 |

| X. Arms and explosives ... | 1,630 | 42,043 | ... | ... | ... | ... | 43,673 |
| XI. Vehicles and fittings, saddlery and harness, etc. ... | 399,153 | 375,431 | 158,378 | 128,321 | ... | ... | 1,041,283 |
| XII. Ship and boat building and repairing ... | 222,437 | 17,462 | 12,029 | 17,979 | ... | ... | 329,907 |
| XIII. Furniture, bedding, and upholstery ... | 303,580 | 272,905 | 75,874 | 87,065 | ... | ... | 738,824 |
| XIV. Drugs, chemicals, and bi-products ... | 274,281 | 316,522 | 9,765 | 48,170 | ... | ... | 648,718 |
| XV. Surgical and other scientific instruments ... | 13,988 | 6,371 | 4,460 | 1,200 | ... | ... | 26,017 |
| XVI. Jewellery, timepieces, and plated ware ... | 80,391 | 120,474 | 10,578 | 21,575 | ... | ... | 233,016 |
| XVII. Heat, light, and power ... | 1,073,714 | 636,935 | 182,302 | 104,328 | ... | ... | 1,997,279 |
| XVIII. Leatherware, n.e.i. ... | 32,733 | 47,482 | 6,216 | 2,654 | ... | ... | 89,065 |
| XIX. Minor wares, n.e.i. ... | 73,840 | 160,694 | 9,011 | 16,578 | ... | ... | 260,123 |
| Total | 14,484,850 | 11,767,506 | 4,719,429 | 3,458,616 | ... | ... | 34,430,401 |

* Not available. † Exclusive of Western Australia and Tasmania.

It may be seen that as regards the amount of the value added the classes are approximately in the same order as in the case of value of production. The value added to raw material by process of manufacture per head of mean population is shewn in the following statement :—

VALUE OF PRODUCTION OF MANUFACTURING INDUSTRIES PER HEAD OF MEAN POPULATION, 1907.

| Particulars. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust.° | Tas.* | Cwlth.† |
|--------------|--------|-----------|---------|----------|-----------|-------|---------|
| Value | £ 9.36 | 9.49 | 8.76 | 8.88 | ... | ... | 9.27 |

* Not available. † Exclusive of Western Australia and Tasmania.

Thus it may be seen that the position of the two leading States, New South Wales and Victoria, in regard to total value of output of factories per head of mean population is reversed in regard to value added per head, though the difference in either case is very small. The other two States for which particulars are available retain their relative positions in both cases.

As the total value of the output for the four States for which particulars are available was estimated at £86,972,413, there remained, after payment of £52,542,012, the value of the raw materials used, of £16,291,425 for salaries and wages, and of £1,832,447 for fuel, the sum of £16,306,529 to provide for all other expenditure and profits. The

following table gives corresponding particulars for each State for which particulars are available, expressed absolutely and as percentages of the total value of the output:—

VALUE OF OUTPUT AND COST OF PRODUCTION, 1907.

| State. | Raw Materials Used. | Fuel. | Salaries and Wages. | All other Expenditure and Profits. | Total Value of Output. |
|------------------------|---------------------|-----------|---------------------|------------------------------------|------------------------|

* Not available. † Exclusive of Western Australia and Tasmania.

For every hundred pounds worth of goods manufactured in each State and in the Commonwealth the percentages given in the above table represent the proportions of the various elements included in the price of the goods as they left the factories.

§ 7. Investment of Capital in Manufacturing Industries.

1. **General.**—The amount of capital invested in manufacturing industries may be estimated approximately by taking the sum of the value of land and buildings occupied as manufactories and the value of the plant and machinery used in connection therewith. As an indication of the permanent character and stability of the industries which have been established in the Commonwealth, it may be noted that the values of both land and buildings and of machinery and plant used in the factories are rapidly increasing. Thus, for the whole Commonwealth the total value of land and buildings and plant and machinery has increased from 1903 to 1907, by £5,735,961, from £43,596,921 to £49,332,882, that is, at the rate of £1,433,990 per annum.

The following statement shews for the year 1907 the values of land and buildings and of machinery and plant used in connection with manufacturing industries in each State:—

CAPITAL INVESTED IN MANUFACTURING INDUSTRIES, 1907.

| Value of— | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | Cwltth. |
|-------------------------|-------------------|-------------------|------------------|------------------|------------------|------------------|-------------------|
| | £ | £ | £ | £ | £ | £ | £ |
| Land and buildings ... | 9,508,259 | 8,376,642 | 2,261,539 | 2,487,606 | 1,637,307 | 834,611 | 25,105,864 |
| Machinery and plant ... | 9,043,772 | 6,771,458 | 3,989,679 | 1,553,654 | 1,893,351 | 975,104 | 24,227,018 |
| Total ... | 18,552,031 | 15,148,100 | 6,251,218 | 4,041,260 | 3,530,558 | 1,809,715 | 49,332,882 |

It may be seen from the above table that the total capital invested in the manufacturing industry in the Commonwealth during the year 1907 was approximately £49,332,882, or £11.87 per head of mean population; of that sum £25,105,864 was invested in land and buildings occupied as manufactories, the remaining £24,227,018 being the value of the plant and machinery used in connection therewith.

2. *Value of Land and Buildings.*—The value of the land and buildings occupied in connection with manufacturing industries may be conveniently classified according to the nature of the industry conducted therein.

(i.) *Total Value in Commonwealth, 1903 to 1907.* The following table shews for the whole Commonwealth the approximate values of land and buildings occupied in connection with manufacturing industries of various classes during each year from 1903 to 1907, inclusive:—

VALUE OF LAND AND BUILDINGS OCCUPIED AS FACTORIES IN COMMONWEALTH, 1903 TO 1907.

| Class of Industry. | 1903. | 1904. | 1905. | 1906. | 1907. |
|---|-------------------|-------------------|-------------------|-------------------|-------------------|
| | £ | £ | £ | £ | £ |
| I. Treating raw material, product of agricultural and pastoral pursuits, etc. ... | 814,684 | 788,816 | 791,535 | 777,371 | 781,733 |
| II. Treating oils & fats, animal, vegetable, etc. ... | 380,038 | 374,000 | 375,097 | 363,622 | 343,424 |
| III. Processes in stone, clay, glass, etc. ... | 739,904 | 734,873 | 741,110 | 728,995 | 820,332 |
| IV. Working in wood ... | 1,181,236 | 1,172,010 | 1,132,615 | 1,219,155 | 1,090,551 |
| V. Metal works, machinery, etc. ... | 2,975,650 | 3,341,310 | 3,231,594 | 3,313,200 | 3,709,314 |
| VI. Connected with food and drink, etc. ... | 6,750,689 | 6,787,809 | 6,956,539 | 6,638,474 | 6,708,611 |
| VII. Clothing and textile fabrics, etc. ... | 2,892,181 | 2,875,560 | 2,931,080 | 2,919,301 | 3,396,599 |
| VIII. Books, paper, printing, and engraving ... | 2,156,872 | 2,174,697 | 2,155,476 | 2,134,021 | 2,357,799 |
| XI. Musical instruments, etc. ... | 26,041 | 26,141 | 26,041 | 27,741 | 27,405 |
| X. Arms and explosives ... | 35,461 | 28,832 | 29,233 | 30,314 | 31,152 |
| XI. Vehicles & fittings, saddlery & harness, etc. ... | 1,012,603 | 1,011,668 | 980,989 | 951,288 | 1,079,859 |
| XII. Ship and boat building and repairing ... | 1,079,068 | 1,105,053 | 1,102,918 | 1,111,752 | 991,907 |
| XIII. Furniture, bedding, and upholstery ... | 657,729 | 629,304 | 652,976 | 618,422 | 633,237 |
| XIV. Drugs, chemicals, and by-products ... | 319,858 | 291,506 | 307,593 | 335,393 | 444,060 |
| XV. Surgical and other scientific instruments ... | 39,029 | 53,217 | 32,736 | 37,197 | 31,779 |
| XVI. Jewellery, timepieces, and platedware ... | 143,450 | 161,604 | 140,535 | 159,356 | 204,734 |
| XVII. Heat, light, and power ... | 1,994,379 | 1,831,126 | 1,858,594 | 1,857,610 | 2,202,528 |
| XVIII. Leatherware, n.e.i. ... | 64,010 | 63,897 | 61,472 | 60,365 | 57,043 |
| XIX. Minor wares, n.e.i. ... | 140,587 | 138,029 | 139,666 | 143,204 | 193,797 |
| Total ... | 23,403,489 | 23,589,452 | 23,647,799 | 23,427,281 | 25,105,864 |

The figures in the above table for the years 1903 to 1906, inclusive, are subject to the limitations that the actual returns for these years for the States of New South Wales and South Australia are not available. In order to present an approximate total for the Commonwealth, however, 1901 figures for New South Wales, and 1907 figures for South Australia are included for the years specified. It may be seen that the total net increase was £1,702,375, or an annual average of £425,594. In eight classes, viz., Classes I., II., IV., VI., X., XII., XIII., and XVIII., there were comparatively small decreases. The largest decreases were in Classes IV. and XII., amounting to £90,685 and £87,181 respectively. The largest increases were in Classes V. and VII., and amounted to £735,664 and £504,418 respectively.

(ii.) *Value in each State, 1907.* The following table gives similar information for each State up to the 31st December, 1907:—

VALUES OF LAND AND BUILDINGS OCCUPIED AS FACTORIES IN EACH STATE, 1907.

| Class of Industry. | N.S.W. | Victoria. | Q'land. | S.A. | W.A. | Tas. | Cwlth. |
|--|-----------|-----------|-----------|-----------|-----------|---------|------------|
| | £ | £ | £ | £ | £ | £ | £ |
| I. Treating raw material, product of agricultural and pastoral pursuits, etc. | 294,209 | 325,629 | 49,620 | 70,934 | 25,315 | 16,026 | 781,733 |
| II. Treating oils and fats, animal, vegetable, etc. | 152,077 | 107,290 | 22,201 | 51,533 | 6,323 | 4,000 | 343,424 |
| III. Processes in stone, clay, glass, etc. | 394,886 | 288,579 | 35,170 | 48,076 | 41,829 | 11,792 | 820,332 |
| IV. Working in wood ... | 390,705 | 237,958 | 139,155 | 86,397 | 184,255 | 52,081 | 1,090,551 |
| V. Metal works, machinery, etc. | 1,651,096 | 957,781 | 230,623 | 391,234 | 421,165 | 57,415 | 3,709,314 |
| VI. Connected with food and drink, etc. | 2,030,840 | 2,288,112 | 886,199 | 611,015 | 397,583 | 494,862 | 6,708,611 |
| VII. Clothing and textile fabrics, etc. | 1,367,641 | 1,303,321 | 187,581 | 314,771 | 144,430 | 78,855 | 3,396,599 |
| VIII. Books, paper, printing and engraving ... | 813,389 | 781,501 | 361,347 | 204,667 | 173,220 | 23,675 | 2,357,799 |
| IX. Musical instruments, etc. | 20,440 | 5,240 | ... | 1,725 | ... | ... | 27,405 |
| X. Arms and explosives ... | 2,954 | 28,198 | ... | ... | ... | ... | 31,152 |
| XI. Vehicles and fittings, saddlery and harness, etc. | 377,164 | 336,408 | 122,346 | 151,416 | 65,155 | 27,370 | 1,079,859 |
| XII. Ship and boat building and repairing ... | 560,938 | 401,585 | 10,821 | 12,123 | 1,640 | 4,800 | 991,907 |
| XIII. Furniture, bedding and upholstery ... | 229,158 | 233,067 | 64,239 | 48,781 | 37,790 | 20,202 | 633,237 |
| XIV. Drugs, chemicals, and by-products ... | 142,497 | 225,428 | 6,560 | 53,715 | 15,810 | 50 | 444,060 |
| XV. Surgical and other scientific instruments ... | 13,088 | 8,151 | 5,850 | 1,050 | 3,640 | ... | 31,779 |
| XVI. Jewellery, timepieces, and platedware ... | 67,944 | 92,030 | 12,300 | 20,180 | 3,120 | 9,160 | 204,734 |
| XVII. Heat, light, and power ... | 911,519 | 647,927 | 119,317 | 387,214 | 106,528 | 30,023 | 2,202,528 |
| XVIII. Leatherware, n.e.i. | 17,900 | 27,463 | 3,600 | 5,740 | 2,340 | ... | 57,043 |
| XIX. Minor wares, n.e.i. | 69,314 | 80,974 | 4,610 | 27,035 | 7,064 | 4,300 | 193,797 |
| Total ... | 9,508,259 | 8,376,642 | 2,261,539 | 2,487,606 | 1,637,207 | 834,611 | 25,105,864 |

The maximum value for the Commonwealth of land and buildings in any particular class was in Class VI., amounting to £6,708,611, or 26.72 per cent. on the total value. The next classes in importance were Classes V., VII., VIII., and XVII., in which the values were £3,709,314, £3,396,599, £2,357,799, and £2,202,528 respectively. The sum of the values for the five classes mentioned amounted to £18,374,851, or 73.19 per cent. on the total value for all classes.

(iii.) *Total Values in each State, 1903 to 1907.* The following table shows the total values, so far as returns are available, of land and buildings occupied as manufactories in each State at the end of each year from 1903 to 1907, inclusive:—

TOTAL VALUES OF LANDS AND BUILDINGS OCCUPIED AS FACTORIES IN EACH STATE, 1903 to 1907.

| Year. | N.S.W. | Victoria. | Queensland. | S. Aust.† | W. Aust. | Tasmania. | C'wealth. |
|-------|------------|-----------|-------------|-----------|-----------|-----------|------------|
| | £ | £ | £ | £ | £ | £ | £ |
| 1903 | *8,029,890 | 7,967,945 | 2,631,039 | 2,487,606 | 1,291,115 | 995,894 | 23,403,489 |
| 1904 | *8,029,890 | 7,641,051 | 2,699,191 | 2,487,606 | 1,731,233 | 1,000,481 | 23,589,452 |
| 1905 | *8,029,890 | 7,771,238 | 2,709,951 | 2,487,606 | 1,685,597 | 963,517 | 23,647,799 |
| 1906 | *8,029,890 | 8,062,110 | 2,405,559 | 2,487,606 | 1,775,279 | 666,837 | 23,427,281 |
| 1907 | 9,508,259 | 8,376,642 | 2,261,539 | 2,487,606 | 1,637,207 | 834,611 | 25,105,864 |

* According to Census 1901. † 1907 figures throughout, those for previous years not being available.

It may be seen that, so far as returns are available, there has been a general though irregular increase in the States of Victoria and Western Australia, as well as for the

whole Commonwealth. There have been irregular decreases in Queensland and Tasmania. The irregularities, however, are probably due partly to the returns having been made on different bases for the succeeding years in carrying into effect the resolutions passed at the Conferences of Statisticians (see § 1, 2, hereof).

3. *Value of Plant and Machinery.*—The following table shows for the whole Commonwealth the approximate value of plant and machinery used in connection with factories at the end of each year from 1903 to 1907, inclusive. The figures, however, are subject to certain limitations, inasmuch as returns for South Australia for the years 1903 to 1906, inclusive, are not available; South Australia figures for 1907 have therefore been taken throughout:—

**VALUE OF PLANT AND MACHINERY USED IN FACTORIES IN COMMONWEALTH,
1903 to 1907.**

| Class of Industry. | 1903. | 1904. | 1905. | 1906. | 1907. |
|---|-------------------|-------------------|-------------------|-------------------|-------------------|
| | £ | £ | £ | £ | £ |
| I. Treating raw material, product of agricultural and pastoral pursuits, etc. ... | 534,784 | 568,476 | 578,382 | 618,891 | 644,597 |
| II. Treating oils & fats, animal, vegetable, etc. ... | 306,945 | 312,539 | 327,182 | 328,484 | 331,595 |
| III. Processes in stone, clay, glass, etc. ... | 670,644 | 691,881 | 734,285 | 745,504 | 752,084 |
| IV. Working in wood... .. | 1,583,895 | 1,491,195 | 1,490,402 | 1,422,545 | 1,506,933 |
| V. Metal works, machinery, etc. ... | 3,410,662 | 3,580,494 | 3,657,936 | 3,749,781 | 4,237,810 |
| VI. Connected with food and drink, etc. ... | 6,786,451 | 7,267,717 | 7,177,535 | 7,436,991 | 7,340,941 |
| VII. Clothing and textile fabrics, etc. ... | 863,075 | 903,216 | 962,164 | 1,177,456 | 1,133,083 |
| VIII. Books, paper, printing, and engraving ... | 1,748,719 | 1,795,758 | 1,824,315 | 1,889,705 | 1,993,135 |
| IX. Musical instruments, etc. ... | 5,070 | 6,030 | 6,730 | 6,327 | 7,829 |
| X. Arms and explosives | 52,766 | 45,017 | 44,037 | 44,476 | 45,613 |
| XI. Vehicles & fittings, saddlery & harness, etc. ... | 160,741 | 157,743 | 161,479 | 194,136 | 195,271 |
| XII. Ship and boat building, and repairing ... | 268,697 | 243,770 | 256,340 | 241,371 | 240,486 |
| XIII. Furniture, bedding, and upholstery ... | 101,223 | 92,631 | 94,768 | 97,392 | 106,613 |
| XIV. Drugs, chemicals, and by-products ... | 252,850 | 278,244 | 282,293 | 306,285 | 332,349 |
| XV. Surgical and other scientific instruments ... | 4,543 | 4,885 | 5,013 | 7,329 | 6,340 |
| XVI. Jewellery, timepieces, and platedware ... | 29,920 | 31,831 | 32,972 | 38,796 | 45,927 |
| XVII. Heat, light, and power | 3,336,066 | 4,299,529 | 4,524,472 | 4,895,419 | 5,208,454 |
| XVIII. Leatherware, n.e.i. | 12,188 | 12,230 | 11,867 | 15,489 | 16,523 |
| XIX. Minor wares, n.e.i. | 64,173 | 65,816 | 65,407 | 68,831 | 82,435 |
| Total | 20,193,432 | 21,848,442 | 22,237,599 | 23,285,208 | 24,227,018 |

It may be seen that during the period in question there has been a steady and substantial net increase amounting in all to £4,033,586, or an annual average of £1,008,397. The increase has occurred in all classes of industry except in Classes IV., X., and XII., in all of which there have been comparatively small decreases amounting to £76,962, £7153, and £28,211 respectively. The largest increase was in Class XVII., "Heat, Light, and Power," and amounted to £1,872,368; the next largest was in Class V., "Metal Works, Machinery, etc." and amounted to £827,148.

(i.) *Total Value in each State 1903 to 1907.* The classified figures in the preceding table for the whole Commonwealth are shown below for each State. It will be seen that the increase in value referred to is general throughout the States, with the exception of Queensland, where there is apparently a small decrease. This apparent decrease may, however, be really due to the reclassification of factories, so as to come into line with the other States:—

VALUE OF PLANT AND MACHINERY IN FACTORIES, 1903 to 1907.

| Year. | N.S.W. | Victoria. | Queensland. | S. Aust.* | W. Aust. | Tasmania. | C'wealth. |
|-------|-----------|-----------|-------------|-----------|-----------|-----------|------------|
| | £ | £ | £ | £ | £ | £ | £ |
| 1903 | 7,009,806 | 5,010,896 | 4,052,584 | 1,553,654 | 1,644,331 | 922,161 | 20,193,432 |
| 1904 | 7,536,903 | 6,027,134 | 4,200,303 | 1,553,654 | 1,776,481 | 753,967 | 21,848,442 |
| 1905 | 7,919,948 | 6,187,919 | 3,988,056 | 1,553,654 | 1,834,098 | 753,924 | 22,237,599 |
| 1906 | 8,295,337 | 6,450,355 | 4,282,502 | 1,553,654 | 1,861,477 | 841,883 | 23,285,208 |
| 1907 | 9,043,772 | 6,771,458 | 3,989,679 | 1,553,654 | 1,893,351 | 975,104 | 24,227,018 |

* Figures for 1907 throughout, previous years not available.

(ii.) *Classified Value in each State, 1907.* The following table shows the value of plant and machinery used in factories in each State during the year 1907, classified according to the nature of the industry in which used:—

VALUE OF PLANT AND MACHINERY USED IN FACTORIES IN EACH STATE, 1907.

| Class of Industry. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|---|------------------|------------------|------------------|------------------|------------------|----------------|-------------------|
| I. Treating raw material, product of agricultural and pastoral pursuits, etc. ... | £ 261,074 | £ 225,496 | £ 87,583 | £ 48,764 | £ 10,480 | £ 11,300 | £ 644,597 |
| II. Treating oils and fats, animal, vegetable, etc. ... | 158,923 | 112,176 | 35,562 | 14,396 | 6,938 | 3,600 | 331,595 |
| III. Processes in stone, clay, glass, etc. ... | 426,840 | 202,403 | 44,163 | 26,898 | 44,412 | 7,368 | 752,084 |
| IV. Working in wood ... | 436,816 | 228,263 | 290,121 | 37,686 | 417,087 | 96,960 | 1,506,933 |
| V. Metal wks., machinery, etc. ... | 1,850,946 | 947,315 | 418,993 | 395,774 | 369,097 | 255,685 | 4,237,810 |

| XVII. Heat, light, and power ... | 1,835,803 | 1,792,948 | 438,488 | 197,221 | 571,335 | 372,659 | 5,208,454 |
| XVIII. Leatherware, n.e.i. ... | 5,999 | 9,745 | 384 | 145 | 250 | ... | 16,523 |
| XIX. Minor wares, n.e.i. ... | 21,044 | 54,387 | 1,020 | 2,789 | 1,285 | 580 | 82,435 |
| Total ... | 9,043,772 | 6,771,458 | 3,989,679 | 1,553,654 | 1,893,351 | 975,104 | 24,237,018 |

The greatest value for any particular class of industry is for Class VI. "Connected with Food and Drink, etc.," and amounts to £7,340,941, or 30.30 per cent. on the total value for all classes. The next greatest value is for Class XVII. "Heat, Light, and Power," and amounts to £5,208,454, or 21.50 per cent. on the total. The next greatest is for Class V., "Metal Works, Machinery, etc.," amounting to £4,237,810, or 17.49 per cent. on the total value. The total for the three classes just specified amounts to £16,787,205, or 69.29 per cent. on the total value for all classes.

§ 8. Particular Industries.

1. **General.**—The preceding remarks and tables, together with the summary of manufacturing industries given at the end of this section, furnish a general view of the recent development of particular classes of industries in Australia treated under the nineteen categories referred to in § 1.3 hereof. In order to make the information complete, it must necessarily be supplemented by details exhibiting the development of individual industries. This alone will furnish adequate information as to the channels into which the main efforts of Australian manufacture flow. It is therefore proposed to deal herein with such particular industries as are of special importance in the Commonwealth by reason either of the number of persons employed, the number of factories, the amount of capital invested therein, the value of the production, or other features of special interest. In cases where there are only either one or two establishments of a particular class in any State, returns are not published, in order to avoid disclosing information as to the operations of individual factories.

2. **Tanning, Fellmongery, and Wool-scouring Industries.**—In Class I. (see § 1. 3 hereof) the most important industry is tanning, the returns for which, however, are grouped with the fellmongering and wool-scouring industries. Until recent years tanning in Australia was confined to the production of the coarser class of leathers, but lately the tanning of the finer leathers has been undertaken with satisfactory results. The position of these industries in the several States in 1907 was as follows:—

TANNING, FELLMONGERY AND WOOL-SCOURING, 1907.

| Item. | N.S.W. | Vic. | Qld. | S.A. | W.A. | Tas. | Cwth. |

* Not available. † Incomplete

3. **Soap and Candle Factories.**—In Class II. (See § 1. 3 hereof) the manufactures of soap and candles are the most important industries. These two manufactures are frequently carried on in the same establishments, so that separate returns cannot be obtained; it may, however, be said generally that the manufacture of soap is the more important of the two. The following table gives particulars of soap and candle factories in each State during the year 1907:—

SOAP AND CANDLE FACTORIES, 1907.

| Item. | N.S.W. | Vic. | Q'ld. | S.A. | W.A. | Tas.* | Cwltb.† |

* Information not available. Totals exclusive. † See note * to preceding table.

(ii.) *Production of Soap and Candles, 1904 to 1907.* The subjoined statement shews that there has been a considerable increase in the production of both these industries. As regards the production of soap, exclusive of South Australia, there was an increase of 11,868 cwt., or an annual average of 3,956 cwt. The returns as to the production of candles are incomplete; it may be seen, however, that there have been considerable increases in both New South Wales and Victoria.

PRODUCTION OF SOAP AND CANDLES, 1904 to 1907.

| State. | Soap. | | | | Candles. | | | |

* Not available.

5. **Agricultural Implement Factories.**—The manufacture of agricultural implements is an important industry in Australia, and is of particular interest owing to the fact that it is one of the first industries to which what has been called the "New Protection" system is sought to be applied (see Section XXVII. hereof). The nature of the machines manufactured may be gathered from the machines scheduled in the Customs tariff, 1906-7, which includes stripper harvesters, strippers, stump-jump ploughs, disc cultivators, winnowers, corn-shellers and baggers, drills, and other implements usually employed in agriculture. The stripper-harvester, which combines the stripper with a mechanism for winnowing and bagging grain, is an Australian invention, and is exported to many countries.

No information is available concerning the actual production or the number and value of the machines and implements of local production used in Australia.

The following table gives particulars of the agricultural implement works of Australia :—

AGRICULTURAL IMPLEMENT WORKS, 1907.

| Items. | N.S.W. | Victoria | Q'land. | S.Aust. | W.A.* | Tas. | Cwth.† |

* See note ^o to preceding table.

6. **Engineering, Ironfoundry Works and Metal Trades.**—The classification in these industries is not very satisfactory. Generally, engineering shops, ironworks, and foundries are included, as also are factories for making nails, safes, patterns, meters, and springs. Railway workshops, agricultural implement factories, smelting and metallurgical works, and ordinary blacksmiths' shops are not included. The combination of industries is rendered necessary by the limited classification still adopted by some of the States:—

ENGINEERING, IRONFOUNDRY WORKS AND METAL TRADES, 1907.

| Items. | N.S.W. | Vic. | Q'ld. | S.A. | W.A. | Tas. | Cwlth. |

* Information not available.

In addition to engineering works which supply local domestic requirements, there are now a number of large and important establishments which engage in the manufacture of special classes of machinery and implements. The manufacture of mining and smelting machinery and apparatus forms an important section of this industry, and many Australian mines have been locally equipped.

7. **Railway Carriages and Rolling Stock, Railway and Tramway Workshops.**—The railway workshops of Australia form an important item in the metal and machinery class, and are chiefly State Institutions. The following table gives the details concerning them, but includes also private establishments manufacturing rolling stock:—

RAILWAY CARRIAGES AND ROLLING STOCK, RAILWAY AND TRAMWAY WORKSHOPS, 1907.

| Items. | N.S.W. | Victoria | Q'Ind. | S. Aust. | W. Aust. | Tas. | Cwlth. |

* Information not available.

8. **Smelting Works.**—The subjoined table gives particulars of metal smelting works. There are only two works of this description in each of the States of Victoria and South Australia, and there is only one in Western Australia. Particulars for these States are, therefore, not given separately, but are included in the total for the Commonwealth :—

SMELTING WORKS, 1907.

* As there are only two smelting works in each of the States of Victoria and South Australia, and only one in Western Australia, particulars are not disclosed, but are included in the total for the Commonwealth.

Blast furnaces for the smelting of iron ores have been established in Australia. (See Section XII. hereof, p 512). The blast-furnace plant at the works of William Sandford Limited, Lithgow, in New South Wales, was brought into commission on the 8th May, 1907. The ore which has been used was obtained from the deposit at Coombing Park, near Carcoar. The quantity raised amounted to 34,731 tons. The following materials were received at the blast furnace:—Iron-ore, 34,500 tons; slag, 2831 tons; coke, 20,873 tons; and limestone, 13,433 tons. The output of this furnace was 18,631 tons, valued at £60,550. The number of hands employed at the works and the mine averaged 871, and the wages paid amounted to £79,944.

9. **Bacon-curing Factories.**—The following table gives particulars of factories engaged in bacon curing in each State during the year 1907 :—

BACON-CURING FACTORIES, 1907.

| Items. | N.S.W. | Vic. | Qld. | S.A. | W.A. | Tas. | Cwth. |

* See note † to preceding table. † Exclusive of Western Australia.

11. Meat and Fish Preserving, Ice and Refrigerating Works.—These industries are now of considerable importance in Australia. The freezing of various kinds of produce for export has long been an established industry. Large freezing works have now been installed at many ports in the Commonwealth for the purpose of freezing produce chiefly for export, and insulated space for the carriage of frozen produce is provided by a number of steamship companies trading between Australia and other parts of the world. Particulars regarding the export of frozen beef and mutton may be found on pages 364 and 368 hereof, respectively. Special terms have been made by the Commonwealth Government in its new English mail contract for the provision by the contractors of increased cold-storage facilities. The export of frozen produce is stated to be capable of considerable expansion. The particulars given in the subjoined table include ice-making and freezing works, and also meat-canning factories, separate particulars for all the States not being available :—

MEAT AND FISH-PRESERVING, ICE AND REFRIGERATING WORKS, 1907.

| Items. | N.S.W. | Vic. | Q'land. | S.A. | W.A. | Tas.* | Cwlth.† |

* Not available. † New South Wales and Queensland only.

13. **Jam and Fruit Preserving, Pickles, Sauces, and Vinegar Manufactories.**—The jam and fruit-preserving industry has increased in importance of late years with the extension of orcharding and fruit-growing. As an exporting industry it is comparatively young, but is of increasing value, and is stated to be capable of considerable expansion. The subjoined table gives particulars of factories at which these industries were carried on in each State during the year 1907. Separate returns for the individual industries are not available for most of the States:—

JAM AND FRUIT PRESERVING, PICKLES, SAUCES, AND VINEGAR MANUFACTORIES, 1907.

14. **Confectionery.**—The following table shows the position of the confectionery industry in 1907, and it will be seen how it has expanded in ten years when it is stated that in 1896 there were in New South Wales 17 establishments, with 475 employés; and in Victoria 13 establishments, employing 512 persons and using plant and machinery valued at £16,570. In Tasmania there are no factories of this class.

* Tons of 2000 lbs. † Exclusive of South Australia. ‡ Not available.

The increase for the whole Commonwealth during the last year is partly due to the inclusion of South Australia, for which State returns for previous years were not available. There has, however, been a satisfactory increase in all the other States, except Tasmania, in which there was a slight decrease.

16. **Sugar Mills.**—The following table shews the position of the cane-crushing branch of the sugar-making industry in 1907. This industry is carried on in Queensland and New South Wales, the only States of the Commonwealth in which the sugar-cane is grown. Reference to the other States is therefore omitted from the table :—

SUGAR MILLS, 1907.

| Items. | N.S.W. | Queensland. | Total. |
|--|-----------|-------------|-----------|
| Number of factories | 5 | 52 | 57 |
| " employés | 610 | 4,155 | 4,765 |

| " plant and machinery ... | £ 507,324 | 1,482,989 | 1,990,313 |
| Total amount of wages paid during year ... | £ 46,844 | 229,636 | 276,480 |

* Information not available.

The first crushing of sugar for commercial use is said to have taken place in New South Wales about 1850 on the plantation of Mr. Thomas Scott; the planting-out of cane was not, however, taken up by settlers, notwithstanding Mr. Scott's earnest advocacy of the industry, until 1862, when a small growth resulted in the establishment

of a mill in Queensland; the appliances were rude, but the result satisfactory. In April, 1864, a mill with a modern crushing and boiling plant was opened at Cleveland (Q.) by Hon. Lionel Hope, but his success was only partial, and he closed down his works till 1867. In 1866 the Pampania Company opened a small factory in Queensland, and in the following year two other mills started work. Two factories were erected, in the Maryborough district, and in 1868 others were working in the Mackay, Bowen and other districts. The industry was by the end of 1870 firmly established.

The Sugar Works Guarantee Act of 1893 empowered the Queensland Government to guarantee the issue of debentures by companies intending to embark in this industry to raise money for the erection of mills and purchasing plant; and an amending Act of 1895 empowered the Government to take up such debentures, but provided that the total amount so expended should not exceed £500,000, and that when that amount was reached the power of guarantee should also cease. Twelve mills have received advances, which now amount to £417,347. There have been some special temporary advances, which are outside the Acts. The total amount repaid from 1893 to June, 1908, was £286,975.

An unfortunate feature of the industry is that large quantities of molasses have been and still are allowed to run to waste. Part of the molasses produced is used in distillation, part is turned into food cake for cattle, and part is used for manuring land, but the greatest part produced is put to no use whatever.

The product of the sugar mill is raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. The following tables shew the progress of this industry from the dates at which information is first obtainable:—

SUGAR MILLS, NEW SOUTH WALES, 1870 to 1907.

| Items. | 1870. | 1877. | 1886. | 1891. | 1896. | 1901. | 1906. | 1907. |
|-----------------------------|-------|---------|---------|-----------|-----------|-----------|-----------|-----------|
| Number of factories ... | 27 | 50 | 64 | 33 | 23 | 12 | 5 | 5 |
| " employés ... | ... | 1,065 | 2,259 | 1,621 | 1,475 | 695 | 622 | 610 |
| Sugar produced ... Tons | 677 | 7,537 | 13,750 | 16,033 | 28,557 | 19,519 | 23,909 | 29,172 |
| Molasses produced ... gals. | ... | 345,543 | 507,000 | 1,074,080 | 2,520,580 | 1,300,909 | 1,305,466 | 1,211,000 |

During the year 1907, 277,386 tons of cane were crushed in sugar mills in New South Wales. The reduction in the number of New South Wales mills is due chiefly to a tendency, noticeable also in many other branches of industry, to concentrate the cane-crushing in mills fitted with modern machinery, and the consequent closing of the small home mill. On the north coast of New South Wales some land formerly devoted to sugar-growing has been turned into pastures in connection with the dairying industry.

SUGAR MILLS, QUEENSLAND, 1868 to 1907.

1. 1890. 2. Tons of cane crushed.

Information regarding the cultivation of sugar-cane may be found in the section of this book dealing with *Agricultural Production*. (See pages 410 to 413.)

17. **Sugar Refineries.**—The establishment of the sugar-refining industry considerably antedates the establishment of the sugar-milling industry, the raw material operated upon being originally brought chiefly from Mauritius and the East. In 1907 there were two sugar refineries in each of the States of Victoria and Queensland; there was one in

each of the States of New South Wales and South Australia; and there were none in either of the other States. The returns for the individual States cannot be disclosed.

In the six refineries in the Commonwealth an average number of 1387 hands were employed during the year 1907. The actual horse-power of engines used was 2815. The approximate value of land and buildings was £258,891; of plant and machinery, £740,774; and the total amount of wages paid during the year was £131,546.

As regards production, the amount of crude sugar used was 3,168,298 cwt., and of refined sugar produced 3,061,175 cwt., both these amounts being exclusive of the two refineries in Queensland, for which returns are not available.

18. **Breweries.**—Established at an early date in Australia, the main feature of the history of the brewing industry has been the change from the small local brewery in every township of moderate size to the large centralised city brewery. A recent amalgamation in Melbourne resulted in the closing of several large breweries. A workmen's co-operative brewery has been opened in Sydney and a co-operative brewery has been opened in Melbourne by a number of "free" hotelkeepers.

The following table gives particulars of breweries in each State during the year 1907:—

BREWERIES, 1907.

| Particulars. | N.S.W. | Victoria. | Q'sland. | S. Aust. | W. Aust. | Tas. | Cwltth. |

(i.) *Development of Industry.* This industry was early established in Australia, and the figures given in the subjoined table shew its progress during recent years. In 1896 there were in New South Wales eight establishments employing 641 persons, of whom 471 were males and 170 females. The plant and machinery employed were valued at £55,700. In Victoria, in this same year, there were twelve establishments employing 650 persons, of whom 424 were males and 226 were females. The value of the plant and machinery employed was £42,410. The Australian market is now largely supplied with local manufactures.

DEVELOPMENT OF TOBACCO, CIGAR AND CIGARETTE FACTORIES, 1904 to 1907.

| State. | Number of Factories. | | | | Number of Persons Employed. | | | | Approximate Value of Plant and Machinery. | | | |

21. **Woolen and Tweed Mills.**—The manufacture of woollens and tweeds was established in Australia at a comparatively early period in its industrial history, the first record in Victoria dating back to 1867. The following table, which gives particulars of the mills in each State during the year 1907, shews that the industry is now well established:—

WOOLLEN AND TWEED MILLS, 1907.

| Items. | N.S.W. | Vic. | Q'ld.* | S.A.* | W.A. | Tas. | Cwltth. |
|---|----------|---------|--------|-------|------|--------|---------|
| Number of factories | 5 | 9 | ... | ... | ... | 4 | 21 |
| „ employés | 395 | 1,589 | ... | ... | ... | 257 | 2,509 |
| „ male employés | 179 | 742 | ... | ... | ... | 85 | 1,116 |
| „ female | 216 | 847 | ... | ... | ... | 172 | 1,393 |
| Actual horse-power of engines employed | 307 | 2,187 | ... | ... | ... | 136 | 2,765 |
| Average number of months in operation during year | 11.7 | 11.9 | ... | ... | ... | 12 | ... |
| Approx. value of land and buildings | £ 28,250 | 116,330 | ... | ... | ... | 22,020 | 180,419 |
| „ „ plant and machinery | £ 39,433 | 259,740 | ... | ... | ... | 45,413 | 377,800 |
| Total amount of wages paid during year | £ 17,588 | 86,007 | ... | ... | ... | 11,381 | 127,221 |

* As there is only one woollen mill in Queensland and as there are only two in South Australia, particulars are not disclosed, but are added in with the total for the Commonwealth.

(i.) *Progress of Industry, 1904 to 1907.* The progress of the woollen and tweed cloths manufacturing industry during the last four years is shewn in the following table for each State in which mills were in operation:—

DEVELOPMENT OF WOOLLEN MILLS IN AUSTRALIA, 1904 to 1907.

| State. | Number of Factories. | | | | Number of Persons Employed. | | | | Approximate Value of Plant and Machinery. | | | |

* See note to preceding table.

(ii.) *Quantity and Value of Production, 1907.* The production of the woollen mills of Australia consists chiefly of tweed cloths, flannels, and blankets, all of which have acquired a reputation for purity and durability. Detailed particulars for the several States are not generally available. The total value of the production of woollen mills in the Commonwealth during the year 1907 was approximately £410,000. The total length of tweed and cloth manufactured was about 1,500,000 yards, valued at about £160,000. In New South Wales 526,340 yards of tweed and cloth, in Victoria 867,789 yards, and in Tasmania 38,091 yards were manufactured. In Victoria, also, 4,088,383 yards of flannel, 199,743 pairs of blankets, and 12,089 shawls were manufactured; while in Tasmania the quantity of these items produced amounted to 258,098 yards of flannel, 25,737 pairs of blankets, and 1695 rugs and shawls.

No cotton spinning or weaving or linen weaving is carried on in Australia. Cotton ginning has been carried on at periods far apart in the northern States, and a mill was lately reopened at Ipswich in Queensland.

22. *Boots and Shoes.*—Among the specialised secondary industries of Australia the boot and shoe industry stands pre-eminent in respect of the number of factories engaged in it, the employment afforded by it, and the range of its output. The following table shews particulars of this industry for each State during the year 1907:—

BOOT AND SHOE FACTORIES, 1907.

| Items. | N.S.W. | Vic. | Q'land. | S.A. | W.A. | Tas. | Cwth. |
|--|-----------|---------|---------|--------|--------|--------|---------|

* Including canvas shoes and house boots. † Not available.

23. **Hats and Caps.**—The manufacture of hats and caps is now well established in several of the States of the Commonwealth. In South Australia there is only one factory of this description, while there are not any either in Western Australia or in Tasmania. The total value of hats and caps manufactured in the Commonwealth during

1907 was estimated at £416,591. The position of the industry in 1907 is shewn in the following table :—

HAT AND CAP FACTORIES, 1907.

| Items. | N.S.W. | Vic. | Q'land. | S.A.* | W.A. | Tas. | Cwlth. |
|--|----------|--------|---------|-------|------|------|---------|
| Number of factories | 22 | 33 | 3 | ... | ... | ... | 58 |
| " employés | 1,094 | 1,404 | 140 | ... | ... | ... | 2,638 |
| " male employés | 335 | 576 | 36 | ... | ... | ... | 947 |

* See note * to preceding table. † No information available.

(ii.) *Quantity and Value of Production, 1907.* Particulars regarding the quantity and value of the production of hat and cap factories in each State are incomplete.

In New South Wales, Queensland, and South Australia together 1,928,760 hats and caps, valued at £186,591, were manufactured during the year 1907. No particulars are available for the State of Victoria.

24. Coach and Wagon Building Works.—This industry (including wheelwrights, etc., forms the principal branch of manufacture in Class XI. (see § 1, 3, above). The subjoined table gives particulars of factories in this branch of industry in each State during the year 1907. The returns include cycle factories and also establishments for the manufacture of wheels, spokes, etc. :—

* As there is only one electric light and power station in South Australia, and only two in Tasmania, particulars are not disclosed, but are included in the total for the Commonwealth.
† Not available.

Further reference to electric light and power stations in each State may be found in the sections of this book dealing with *Tramways* and *Local Government*.

27. **Gas and Coke Works.**—There are gas works in operation in nearly all the chief towns in the Commonwealth. The subjoined table gives particulars of gas and coke works in each State. Further reference to gas works in the capital towns of each State is made in the section of this book dealing with the subject of *Local Government*.

GAS AND COKE WORKS, 1907.

§ 9. General Summary of Manufacturing Industries.

1. **Introduction.**—It has not been possible, within the limits of this article, to give anything like a detailed account of the individual manufacturing industries of the Commonwealth. In the last sub-section hereof an attempt was made to give a brief statistical account of certain of the most important individual industries, but otherwise limits of space have necessitated the subject being dealt with under the classification specified in § 1. 3, hereof. It is proposed to give herein a summary of each of the nineteen classes in that classification for each State and the Commonwealth, so as to furnish a comprehensive and comparative view of the totality of the manufacturing industry in Australia.

2. **Comparative Summary of the Manufacturing Industries of Australia.**—In the statement given on pages 578 to 581 hereof a summary will be found specifying certain particulars for each class of industry (see § 1. 3, hereof) and for each State. Particulars regarding the total value of the work turned out and the value of the raw materials (exclusive of fuel, oil, etc.) used or worked up, given in the last two columns of such summary are not available for either of the States of Western Australia or Tasmania; totals are given for the Commonwealth exclusive of these States.

In connection with the paucity of detailed information in regard to certain aspects of the manufacturing industry, allowance must be made for the fact that the information has been collected for the first time in some of the States, while in others, the alteration of the form in which they were asked to supply the information doubtless caused some delay.

SECTION XIV.

WATER CONSERVATION AND IRRIGATION.

§ 1. Water Supply Works.

1. **General.**—In every country in which droughts are recurrent, there are few problems of greater importance to be solved than that of an adequate system of water conservation. Much has been done so far as the supply of water to centres of population is concerned, and a description of several of the metropolitan water works will be found herein, viz., in the section dealing with "Local Government."

2. **The Goldfields Water Supply of Western Australia.**—The scheme by which the Government of Western Australia undertook to provide a permanent supply of water for the population on the eastern goldfields of that State comes properly under the heading of "Water Supply Works," but owing to its magnitude and special character it could not be included in the section "Local Government."

The Act under which the works were constructed was introduced in Parliament by Sir John Forrest, G.C.M.G., then Premier of Western Australia, in September, 1896, and provided for an expenditure of £2,500,000 and a daily supply of 5,000,000 gallons. The works, designed by the late Mr. C. Y. O'Connor, Engineer-in-Chief of the State, were originally known as the "Coolgardie Water Scheme," but are now officially called the "Goldfields Water Supply." So soon as the Act was passed through Parliament the works were energetically undertaken, so that, apart from reticulation works, the whole scheme was completed early in 1903, viz., in about six years. The scheme is unique in more than one way. The weir across the Helena River, near Mundaring, at a point where the width between the banks is 760 feet, is the highest overflow weir in existence. The surplus water flows directly over the weir crest and down the solid concrete face of the wall to the river 100 feet below. The capacity of the Mundaring reservoir is 4,600,000,000 gallons, and its daily output capacity 5,000,000 gallons. The main service reservoir from which the goldfields towns are supplied, is situated at Bulla Bulling, 351 miles from Mundaring, and at an altitude 1200 feet above that of the last-named locality. It becomes, therefore, necessary to pump a daily quantity of 5,000,000 gallons of water, weighing approximately 22,300 tons, over a distance of 351 miles, and to raise it 1200 feet. This is done by means of eight pumping stations along the principal main, the diameter of which is 2 feet 6 inches. The area to which the trading operations of the scheme are confined extends from Guildford, in the west, to Kanowna, in the east, and there are twelve smaller reservoirs and tanks, with a total capacity of 31,500,000 gallons, in the neighbourhood of the towns which are supplied with water from the scheme. The total cost was £3,078,500, and the price of water ranges from two shillings and sixpence in the western area to eight shillings and fourpence at Kanowna, with an average of about five shillings and sixpence. During the financial year 1907-8 the total consumption amounted to 837,296,000 gallons, while the number of services was 12,400. The gross revenue was £172,550, and the working expenses £74,883, leaving a gross profit of

£97,667. Of this amount interest at $3\frac{1}{2}$ per cent. and payment of 2 per cent. to sinking of the supplementary debenture capital of £353,000 absorbed £16,885, thus leaving £80,802 available for payment into the general revenue of the State. As interest on the main capital amounts to £91,700, and payments to the sinking fund to £80,000, or a total of £171,700, there was therefore a deficiency of £90,898 on the year's transactions to be made good from general revenue.

3. The Mines Water Supply Branch.—Prior to the commencement of the Goldfields Water Supply Scheme works of different kinds were carried out by Government in order to afford temporary relief to the population on the goldfields. These works comprised shallow and artesian boring, conservation and protection of water in natural and artificial reservoirs, sinking of wells, erection of condensers, etc. Administratively the goldfields area is divided into three water supply districts—Coolgardie, Murchison, and Pilbara. It has been the policy of the department charged with the supervision of water supply works, viz., the Mines Department, to lease watering stations wherever that could be done to advantage, and from twenty to thirty leases are generally executed in the course of a year. The tanks which have been constructed by the department vary in size from 200,000 gallons to 37,500,000 gallons (at Niagara).

§ 2. Artesian Wells

1. General. (i.) *The Great Australian Artesian Basin.* Although there are some artesian wells outside this area, yet, in speaking of the "Great Australian Artesian Basin," the area is understood which includes (a) considerably more than one-half of Queensland, taking in practically all that State lying west of the Great Dividing Range, with the exception of an area in the north-west contiguous to the Northern Territory; (b) a considerable strip of New South Wales along its northern boundary and west of the Great Dividing Range; and (c) the north-eastern part of South Australia proper, together with the extreme south-eastern corner of the Northern Territory. This basin (shewn approximately by map in Section XXVI., Local Government), is said to be the largest yet discovered, and is about 569,000 square miles, of which 376,000 square miles are in Queensland, 110,000 square miles in South Australia, and 83,000 square miles in New South Wales. The area of the intake beds is estimated at 68,000 square miles, viz., 50,000 square miles in Queensland and 18,000 square miles in New South Wales. The basin is what is technically known as a one-sided or half-basin, the intake beds outcropping along its eastern and north-eastern sides only, while the remainder of the water-bearing formation is hidden under the superficial deposits forming the plains of the interior of the States. Although it has not been definitely decided whether the basin has outlets towards the Gulf of Carpentaria in the north, and towards the Great Australian Bight or towards Lake Eyre in the south, there is a preponderance of opinion and strong evidence in favour of the existence of such outlets, an opinion which receives strong support from the maps published by the Geological Department of Queensland, which shew an apparent dip in the water-bearing strata towards the Gulf of Carpentaria in the north and towards Lake Eyre and the Great Australian Bight in the south. It is estimated that at present there are about 1650 bores tapping the basin in the three States.

(ii.) *The Western Australian Basin.* The Recent and Tertiary strata which enter Western Australia at its eastern border, and which have a prevailing dip towards the Great Australian Bight, form an artesian water area. But where boring operations have been undertaken the water has been found to be salt or brackish, and there are other conditions affecting the supply, such as local variations in the thickness of the beds, their relative porosity, and the unevenness of the floor upon which they rest, which so far have not been examined with sufficient thoroughness to enable many particulars to be given in regard to this basin.

In the coastal area to the west of the Darling Range artesian boring has, on the other hand, been carried on successfully for many years.

(iii.) *Plutonic or Meteoric Water.* While it has long been held that the Australian artesian basin is a typically-formed one, and that its intake beds are as described above, a theory has been recently advanced (viz., by Professor Gregory,¹ formerly of Melbourne, but now of Glasgow University), that the water, although called artesian, is not impounded rain-water, or *meteoric* water at all, but is derived from the older rocks, *i.e.*, that it is *plutonic* in character. If this were so, and if the water contained in the basin were merely such as occurs in the molten lava from volcanoes or imprisoned in the solidified quartz of granites, we should, of course, be rapidly exhausting our supply. He founds his main arguments on (a) the amount of friction caused by the flow of water through the minute interstices between the sand grains, *i.e.*, on the loss of its hydrostatic head before the bores are reached; (b) on anomalies in temperature and pressure; (c) on the chemical analysis of some of the waters; and (d) on evaporation measurements in Central Australia. He suggests the pressure of overlying rock, and gas pressure caused by the internal heat of the earth, as causes of the flow from the bores.

This new theory has recently been replied to at length by the Government Geologist of New South Wales.² While this Year Book is hardly the place to enter at length upon arguments of a purely scientific nature, it may be said that Mr. Pittman avers that "many of Professor Gregory's statements appear to be in opposition to observed facts." In regard to the loss of hydrostatic head, he quotes the opinion of the United States Geological Survey in regard to bores in Kentucky, and the experience in connection with the Grenelle bore in Paris. So far as temperature is concerned, he shews that it would be illogical to contend that, because some Australian bores give higher rates of increase than the average results of a number of ascertained bores and tunnels in other parts of the world, the water must be plutonic and not meteoric. In regard to pressure, stress is laid on the more accurate results obtained with the dumpy level than with the aneroid, and it is shewn how accurately the height to which the water would rise has been predicted in many localities. It is also pointed out that the isopotential lines as laid down are tentative, as information in regard to many private wells is unreliable. The question of the chemical constituents of artesian water is dealt with at length, and it appears that instead of decreasing from east to west, as stated by Professor Gregory, the salinity of the water actually increases, and that some of the wells in the eastern district mentioned by the latter as being particularly rich in saline matter are actually outside the artesian basin altogether.

In regard to evaporation measurements in Central Australia, Mr. Pittman shews also that these do not affect the question at issue at all, as the water does not enter the porous beds in Central Australia, but on the flanks of the Dividing Range, where the rainfall is copious. The theories of the pressure of overlying rock and of gas pressure are also utterly repudiated.

The strength of the argument seems to be unquestionably in favour of the older theory of meteoric water, as upheld by Mr. Pittman, and in his reply he appears to have disposed of every feature in Professor Gregory's argument to which weight might have been attached.

2. Queensland.—The publication of the valuable reports issued annually by the Hydraulic Engineer of Queensland has been suspended during the last six years, and complete statistics are only available to 30th June, 1902. At that date the following bores were in existence :—

1. See *J. W. Gregory, F.R.S., D.Sc.*: "The Dead Heart of Australia"; London, John Murray, 1906.

2. *E. F. Pittman, A.R.S.M., Government Geologist of New South Wales*: "Problems of the Artesian Water Supply of Australia, with special reference to Professor Gregory's Theory." (Clarke Memorial Lecture, delivered before the Royal Society of New South Wales, 31st October, 1907).

| Private owners | 530 | 9 | 131 | 168 | 838 |
| Total | 564 | 9 | 151 | 210 | 934 |

The depth of 850 of these wells is given, and it appears that there were 229 less than 500 feet deep, 200 from 500 to 1000 feet, 231 from 1000 to 2000 feet, 124 from 2000 to 3000 feet, and 66 over 3000 feet. The deepest well was one known as Bimerah Run No. 3, Whitewood, lying between the Barcoo and Thomson Rivers; this had a depth of 5045 feet, and was stated to yield 70,000 gallons daily. This flow is, of course, a comparatively small one, many wells yielding, when uncontrolled, from one to three million gallons a day. A well at Cunnamulla is stated to have a daily flow, when uncontrolled, of no less than 4,500,000 gallons. The waters of many of the wells have been analysed, and some found suitable for wool-scouring only, others are suitable for watering stock but not for irrigation, owing to the presence of alkali; others again serve for both stock and irrigation, while some, such as those containing sulphuretted hydrogen, are not of any use. Water fit for stock may generally be said to be "safe" for domestic purposes in spite of its slightly mineral taste. The wells yielding the mineral water known as "Helidon Spa," which is much in use in Queensland and New South Wales, are shallow wells from 60 to 200 feet in depth.

It is stated that the total number of artesian wells in Queensland at the end of 1907 was 1081, of which 174 were Government wells. The maximum depth for Government wells is given as 4010 feet, and of private wells as 5045 feet, while the minimum depths were 250 feet and 60 feet respectively. The maximum and minimum temperatures of Government wells were 174° and 70° Fahrenheit, and of private wells 202° and 60° Fahrenheit.

3. **New South Wales.**¹—Artesian boring in New South Wales dates from 1879, when a private bore was put down on the Kallara pastoral holding, between Bourke and Wilcannia. The first Government bore was that at Goonery, on the Bourke-Wanaaring road, completed in 1884. At the middle of 1908, out of 449 known wells in New South Wales, nearly 200 were Government wells, a very much larger proportion than in Queensland.

The distribution of these wells was as follows:—

NEW SOUTH WALES ARTESIAN BORES ON 30th JUNE, 1908.

| Purpose of Bore. | Flowing. | Pumping. | Failure. | Total. |
|--|----------|----------|----------|--------|
| Private | 198 | 34 | 21 | 253 |
| Artesian wells district | 25 | ... | 1 | 26 |
| Water and Drainage Trust district | 11 | ... | ... | 11 |
| Country towns water supply | 2 | ... | ... | 2 |
| Public watering place | 58 | 28 | 17 | 103 |
| Improvement lease | 48 | 2 | 4 | 54 |
| Total | 342 | 64 | 43 | 449 |

1. See Percy Allan, *M. Inst. C.E., M. Am. Soc. C.E., Principal Assistant Engineer for Water Conservation in New South Wales*, in "The Drought Antidote for the North-West." (Lecture delivered before the Sydney University Engineering Society, October 10th, 1906.)

The total depth of these 449 wells is given as 675,495 feet.

Of the wells at the end of 1906, the depth is stated in 390 cases, and it appears that only 18 wells were less than 500 feet deep; while 76 ranged from 500 to 1000 feet; 215 from 1000 to 2000 feet; 64 from 2000 to 3000 feet; and 17 over 3000 feet. As in Queensland, there is a preponderance of wells from 1000 to 2000 feet in depth, but neither the shallow wells under 500 feet, nor the very deep wells over 3000 feet are so numerous in proportion as in the northern State. The two deepest wells in New South Wales are those at Boomi, in County Benarba, with a depth of 4008 feet and a daily outflow of 1,428,640 gallons; and at Dolgelly, in the Parish of Careunga, in County Stapylton, with a depth of 4086 feet, and an outflow of 682,200 gallons per day. The largest outflow is stated to be that at the Munna Munna well, in County Leichhardt, which yields 1,657,230 gallons a day, and has a depth of 2197 feet. The total flow of the bores cannot be given, as many of the private bores have not been gauged, and in other cases the gaugings are not regarded as reliable. Accurate meter-gaugings are, however, being extended throughout the State, and the Department of Water Conservation hopes, therefore, soon to be in a position to give fairly reliable information on this point.

The water of a large number of wells has been analysed by Mr. J. C. H. Mingaye, F.C.S., etc., of the New South Wales Mines Department, and it may be of interest to give a list of those containing, among all the wells examined, the maximum quantities of particular salts in solution:—

NEW SOUTH WALES ARTESIAN BORES—CHEMICAL ANALYSIS.

| Name of Bore. | County. | Salt found in greater quantity than in any other bore. ¹ | Grains per Imperial Gallon. |
|----------------------------|---------------------------|--|-----------------------------|
| Tunderbrine No. 1 | Gowen | Sodium carbonate (Na ₂ CO ₃) | 124.7 |
| Fort Bourke | Gunderbooka | Potassium carbonate (K ₂ CO ₃) | 12.3 |
| Gaffney's | Barrona | Calcium carbonate (Ca CO ₃) | 10.5 |
| Bancanya | Mootwingee | Magnesium carbonate (Mg CO ₃) | 10.7 |
| Cuttaburra | Irrara & Barrona | Sodium chloride (Na Cl) | 349.0 |
| Warratta | Evelyn | Potassium chloride (K Cl) | 22.1 |
| Momba | Fitzgerald and Yungnulgra | Magnesium chloride (Mg Cl ₂) | 28.0 |
| Sandy Creek | Mootwingee | Sodium sulphate (Na ₂ SO ₄) | 28.1 |
| Gilgandra | Ewenmar | Potassium sulphate (K ₂ SO ₄) | 19.3 |
| Wingadee No. 1 | Leichhardt | Iron oxide (Fe ₂ O ₃) and alumina (Al ₂ O ₃) | 1.4 |
| Coonamoona | | Silica (Si O ₂) | 4.5 |
| Momba | Fitzgerald and Yungnulgra | Calcium chloride (Ca Cl ₂) and calcium sulphate (Ca SO ₄) | 22.2 & 12.0 |
| Burrawang No. 2, I.L. 1211 | Cunningham | Total solid matter | 1802.0 |

1. This is, of course, not necessarily the salt found in greatest quantity.

The Zetz Spa, much used as a mineral water in New South Wales, comes from Ballimore, near Dubbo.

It may be said that the cost of artesian wells works out at an average of about 17s. 6d. per lineal foot; it depends, of course, upon the depth to which boring operations have to be extended, and on the accessibility of the bore to a railway station. Contracts have recently been let for boring and the use of six-inch casing at the following rates:—To 1000 feet, 11s. per foot; 1000 to 1500 feet, 12s. 6d.; 1500 to 2000 feet, 13s.; 2000 to 2500 feet, 14s.; 2500 to 3000 feet, 16s.; 3000 to 3500 feet, 19s.; 3500 to 4000 feet, 24s. To these prices must be added the cost of cartage and of finishing off the work.

4. **South Australia.**—The information about artesian wells is very defective. Early in 1908 a list of twenty-five of the principal Government bores was published, of which four were under 1000 feet in depth, twelve from 1000 to 2000 feet, two from 2000 to 3000 feet, and seven over 3000 feet. The deepest flowing well was at Goyder's Lagoon, measuring 4580 feet, and yielding 600,000 gallons per day. The maximum flows, viz., 1,250,000 gallons and 1,000,000 gallons daily, occurred at Coward Springs and Dulkaninna respectively.

Artesian water has also been found outside the basin at Tintinara, on the Adelaide to Melbourne railway, where a well, 253 feet deep, yields 4300 gallons daily, and at Booloonda, where a well, 687 feet in depth, gives 19,200 gallons daily.

5. **Victoria.**—Victoria lies altogether outside the artesian basin, and as water is obtainable in most parts of the State at shallow depths, there has not been much occasion for artesian boring. As early as 1884, however, an artesian well was bored at Sale, which for a number of years gave a supply of about 100,000 gallons per day until, either through corrosion of the casing or by choking up with sand from below, the flow ceased. In 1905 a new bore was, therefore, put down, which at a depth of 277 feet yielded sufficient water to fill Lake Guthridge, a local depression. But as the water was impure and contained too much sulphuretted hydrogen boring operations were continued to 520 feet, when the lowering of the casing shut off the supply of water. A second bore was then put down at some distance from the first, and this, at a depth of 238 feet, yielded fresh and clear water. The supply at present is stated to be about 145,000 gallons per day.

In 1906 eight bores were put down on the Overnewton Estate, Maribyrnong, to depths varying from 147 to 272 feet; small supplies of good and medium water for stock purposes were obtained, but only one of the wells yielded water fit for drinking purposes.

6. **Western Australia.**—Out of twenty-four artesian bores put down by the Mines Department Water Supply Branch to the end of 1906 in the artesian basin east of the Darling Range, fifteen were less than 500 feet in depth; five between 500 and 1000 feet; three between 1000 and 2000 feet; and one only, at Davyhurst, over 2000 feet, viz., 3624 feet.

The number of wells between the Darling Range and the coast in 1906 was stated at forty-two, of which fourteen were less than 500 feet; nine from 500 to 1000 feet; sixteen from 1000 to 2000 feet; two from 2000 to 3000 feet; and one over 3000 feet. The last-named bore, situated at Carnarvon, is 3011 feet in depth, and yields a daily supply of 515,000 gallons. The maximum outflow, 1,167,000 gallons per day, is said to be obtained from a well at Guildford.

At the end of 1907 the total number of bores was 71, of which 40 were Government bores. The total depth bored is given as 44,625 feet in Government and 26,315 feet in private bores. The total cost of State bores was about £52,000, of which amount £7000 was spent in 1907. The total daily flow is stated as 20,929,000 gallons. The maximum and minimum depths of State bores were 3011 feet and 56 feet respectively, and the maximum and minimum temperatures 140° and 60° Fahrenheit.

§ 3. Irrigation Plants.

1. **General.**—Various causes have combined to keep proposals for irrigation works on a large scale before the Parliaments of several of the States for a number of years without any very tangible results, except in the case of Victoria and South Australia. The absence of the example of any country which has constructed such works under similar climatic and labour conditions, the very partial success of some of the smaller works undertaken in Australia, and the abundant supply of artesian water obtained during the last twenty years in parts of the continent most liable to droughts, have all tended to delay the undertaking of any large works.

2. **Victoria.**—(i.) *Classification of Works.* The Water Conservation Works in Victoria naturally divide themselves into those providing mainly a domestic supply, such as the Yan Yean works, controlled by the Melbourne and Metropolitan Board of Works; the Coliban, Broken River, Kerang Lakes, and Mallee Supply works, which, although now administered by the State Rivers and Water Supply Commission, are properly local government works; other works for domestic supply controlled by Water Works Trusts or Municipal Corporations, and irrigation works proper. With the exception of the last named class particulars as to these works will be found in the section "Local Government" of this book.

(ii.) *Works Controlled by the Commission.* With the exception of the First Mildura Irrigation and Water Supply Trust, these works are now all under the control of the

State Rivers and Water Supply Commission, which was created by the Water Act 1905, in force since 1st May, 1906. The works comprise the following:—

- (a) The Goulburn River works (including the Waranga Basin, with a storage capacity of 9500 million cubic feet, and constructed at a cost of £716,003;
- (b) The Loddon River works, with a storage capacity of 610 million cubic feet, constructed at a cost of £156,408;
- (c) The Kow Swamp works, with a storage capacity of 1780 million cubic feet, constructed at a cost of £187,779; and
- (d) Nineteen other irrigation and water supply districts, the capital expenditure on which has been £806,932.

Many of the original irrigation trusts had been badly managed and were in financial difficulties when they were taken over by the Commission, and it became necessary for Government to write off considerable amounts both of capital debt and of arrears of interest, so that the capital cost of the works taken over by the Commission, including works for domestic supply, on 30th June, 1907, stood as follows:—

| | |
|---|----------------|
| (a) Free head works, in respect of which no charge for interest is to be made against any district served by these works... | £1,172,027 |
| (b) Other State works | 1,749,892 |
| (c) Branch distributory channels connected with Long Lake free head works | 10,370 |
| (d) Irrigation and water supply works— | |
| Total advances... | £791,528 |
| Less repaid, £5591; and written-off, £540,404 | 545,995 |
| | <u>245,533</u> |
| Total | £3,177,822 |

In the above statement the amount shewn under (b) is exclusive of £456,700, the cost of the Geelong Water Supply works, which have been placed under the control of the Geelong Municipal Waterworks Trust.

The Commission is charged with the duty of assessing the values of properties served by the various water supply works, and of imposing thereon certain rates. In 1906-7 the gross revenue amounted to £88,847, and the expenditure to £62,329. Deducting from the latter amount £8869 expenditure charged to capital account, the working expenses may be stated as £53,460, and the net revenue as £35,387.

(iii.) *Mildura.* The first settlement of Mildura dates from 1884. After being managed until 1887 by Chaffey Bros., and then until 1895 by Chaffey Bros. Company Limited, it was in that year taken over by the First Mildura Irrigation Trust, and has since then made great progress. Its population, which at the Census of 1891 was 2321, had by September, 1907, increased to 4355. The exports of dried and canned fruit from Victoria, nearly all of which came from Mildura, amounted in 1907 to £190,654, viz.:—Canned fruits, £48,718; dried fruits—raisins, £123,679; other, £18,257. Of these exports £128,762 worth were sent to the other States of the Commonwealth, chiefly New South Wales, Queensland, and Western Australia, while the balance of £61,892, of which raisins accounted for £47,513, was exported oversea.

No precise figures are available as to the capital cost of the works at Mildura, probably the sum was not less than £180,000. The amount due to Government is £58,700, exclusive of £17,729 for accumulations of interest.

(iv.) *Area Irrigated.* The total area of districts served by irrigation plants in 1906-7 is given as 2,702,180 acres, of which 103,070 acres were irrigated. Of the area watered, viz., 160,574 acres, 12,069 acres were under cereals, 41,373 acres under lucerne and other permanent fodder crops, 10,183 acres under sorghum and other annual fodder crops, 59,008 acres under pasture, 35,941 acres (of which 28,640 acres at Mildura) were vineyards, orchards, and gardens, while the balance of 2000 acres was in fallow, etc. The total

waterings at Mildura were 31,970 acres over an actual area of 7,189 acres, giving an average of 4.4 waterings per annum.

(v.) *The Trawool Scheme.* A project has been mentioned of constructing a weir across the Upper Goulburn river at the Trawool Gorge, in the neighbourhood of Seymour. If this scheme should ever be carried out, the weir would have to be about 1700 feet long, and at the deepest part of the river 140 feet high. It is expected that the weir would impound water for about twenty miles upstream, and that it would provide a reservoir of a capacity of 60,000 million cubic feet. About 28,000 acres of gullies and river flats would be permanently submerged. The estimated cost is about £1,500,000. This would make it by far the largest reservoir in existence, the Assouan dam only holding 35,840 million cubic feet, while the capacity of the Waranga basin amounts to 8811 million cubic feet. The Barren Jack reservoir, now in course of construction, in New South Wales, will, with water of a maximum depth of 224 feet, hold 33,613 million cubic feet, but as it is now being built, providing for a depth of 120 feet only, is limited to 7000 million cubic feet.

3. **South Australia.**—(i.) *The Renmark Irrigation Trust.* The Renmark Irrigation Trust was established on similar lines to Mildura, but on a considerably smaller scale. At present the land assessed for the purposes of the trust measures about 3600 acres, and maintains a population of about 1000. The export of Renmark products averages about £35,000 per annum. It is claimed that without irrigation the land would barely feed 500 sheep.

(ii.) *Other Waterworks.* The Bundaleer reservoir consists in a large earth and clay embankment which impounds water in a natural basin away from the main water-courses. Its capacity is stated as 1,319,000 gallons.

The Barossa waterworks have a reservoir wall of concrete seventy-five feet in height. The reservoir has a holding capacity of 993,340,000 gallons.

The largest of the South Australian undertakings is the Beetaloo waterworks, which command the towns of Port Pirie, Moonta, Wallaroo, Kadina, and fifteen others, besides one million acres of country lands. The cast-iron reticulation pipes in connection with Beetaloo are 637 miles in length, and the capital cost of the works was £989,950.

None of the South Australian works, Renmark excepted, are, however, irrigation works properly so called, although they are to some extent used for irrigation purposes.

4. **New South Wales.**—(i.) *Irrigation Trusts.* The first attempts at irrigation, apart from artesian wells, were made by the establishment of the three Irrigation Trusts of Wentworth in 1890, Hay in 1892, and Balranald in 1893. The Wentworth Trust controlled an area of 10,600 acres, but has been dissolved and its powers assumed by Government. The original area under the Hay Trust was 12,847 acres, but in 1896 this was reduced to 3000 acres. The trust was at the same time remodelled through having three Government officials appointed as members. The Balranald Trust controls 1000 acres; it has petitioned Government for dissolution and for the administration of its works to be handed over to the Western Land Board.

(ii.) *Private Irrigation Works.* The most extensive private irrigation works in the State are those at North Yanko, which take their water from Cudgell Creek, a tributary of the Murrumbidgee.

(iii.) *The Barren Jack Scheme.* The weir which will impound the waters at Barren Jack is situated about three miles below the confluence of the Murrumbidgee and Goodradigbee Rivers. The catchment area will be fully 5000 square miles, and it is estimated that if the dam is constructed to a sufficient height to allow of a maximum depth of 120 feet of water the capacity of the basin will be about 7000 million cubic feet. If, however, a larger supply be required it will be possible to raise the weir, so as to allow of a depth of 224 feet of water. The length along the crest of the weir in its ultimate shape will be 784 feet, the thickness at the crest 18 feet, and the maximum thickness at

the base 169½ feet, with a maximum height from the foundation of 240 feet. This would give a depth of water at the face of the dam of 224 feet, equivalent to a holding capacity of the reservoir of 33,613 million gallons, or only 10.8 per cent. less than that of the Assouan dam. The dam itself will contain about 581,000 tons of materials. The distributing channels in connection with this work, as it is at present being carried out, will command an area of about 358,000 acres, of which 195,000 acres is first-class land, but eventually 1,500,000 acres could be irrigated. The dam has been in course of construction for less than two years, but the progress made has been so satisfactory that it is expected that the land will be ready for settlement in 1910. It should be possible, when the complete scheme has been carried out, to settle from 50,000 to 100,000 people on the land to be made available. As the scheme is purely a gravitation scheme, the working expenses are expected to be small, and the water should therefore cost the settlers much less than in places where expensive pumping operations have to be resorted to.

(iv.) *Other Schemes.* Of other projects, the execution of which is probably only a matter of time, may be mentioned :—

- (a) The Wyangala scheme, which would tap the Lachlan below its junction with the Abercrombie River ;
- (b) The Terramungamine scheme, which would draw its water from the Macquarie River, in the neighbourhood of Narromine ; and
- (c) The Bungowannah scheme, which would be connected with the Murray not far from Albury.

5. Conflicting Interests.—The relative rights of the States of New South Wales, Victoria, and South Australia to the waters of the Murray River appeared to be indeterminate. Territorially the south bank of the Murray was the boundary between the two former States, *i.e.*, the region of the river itself, up to the point where it enters South Australia, was wholly within New South Wales.

At the Federal conventions which preceded the establishment of the Commonwealth the South Australian representatives expressed their fear lest too much irrigation on the Murray and Darling might impair the navigability of the latter river, and the result was the insertion of a provision in the Commonwealth Constitution which reads as follows:—

“ *Section 100.*—The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or the residents therein to the reasonable use of the waters of rivers for conservation and irrigation.”

Under this section negotiations have for several years been in progress between the three interested States, and an arrangement was some time ago come to under which, subject to Parliamentary sanction being given to the arrangement in the three States concerned, the navigability of the Darling will be maintained, while at the same time New South Wales and Victoria will be able to construct large irrigation works. This sanction has, however, not been obtained in any of the three States, and there does not appear to be any immediate prospect of a satisfactory settlement.

SECTION XV.

COMMERCE.

§ 1. Introductory.

1. **General.**—The development of the commerce of Australia might be considered from several standpoints—for example, the historical, the legal, or the purely financial—all of which are important.

The importance of the subject demands a reference to the constitutional power of the Commonwealth in respect to commerce and to the various Acts which have been passed in the exercise of that power, since these profoundly affect its trade and commerce.

In setting out the statistics of commerce regard will be had to the significant features of its development, both from the historical and financial point of view.

2. **Constitutional Powers of Commonwealth in regard to Commerce.**—Under the provisions of the Commonwealth Constitution Act [*vide* pp. 47 to 54 of this volume] power to make laws with respect to “trade and commerce with other countries and among the States” is vested in the Commonwealth Parliament. [Chap. I., Part V., sec. 51. (i.), *vide* p. 48.]

The Constitution Act further provides in relation to trade that:—

“On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, shall pass to the Executive Government of the Commonwealth.” [Section 86.]

“Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth.” [Section 88.]

“On the imposition of uniform duties of customs the power of the Parliament to impose duties of customs and of excise, and to grant bounties on the production or export of goods, shall become exclusive.

“On the imposition of uniform duties of customs all laws of the several States imposing duties of customs or of excise, or offering bounties on the production or export of goods, shall cease to have effect, but any grant of or agreement for any such bounty lawfully made by or under the authority of the Government of any State shall be taken to be good if made before the thirtieth day of June, one thousand eight hundred and ninety-eight, and not otherwise.” [Section 90.]

“Nothing in this Constitution prohibits a State from granting any aid to or bounty on mining for gold, silver, or other metals, nor from granting, with the consent of both Houses of the Parliament of the Commonwealth expressed by resolution, any aid to or bounty on the production or export of goods.” [Section 91.]

“On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free.” [Section 92. 1st paragraph.]

"The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to railways the property of any State." [Section 98.]

"The Commonwealth shall not, by any law or regulation of trade, commerce, or revenue, give preference to one State or any part thereof over another State or any part thereof." [Section 99.]

"The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation." [Section 100.]

"There shall be an Interstate Commission, with such powers of adjudication and administration as the Parliament deems necessary, for the execution and maintenance, within the Commonwealth, of the provisions of this Constitution relating to trade and commerce, and of all laws made thereunder." [Section 101.]

"The Parliament may by any law with respect to trade or commerce forbid, as to railways, any preference or discrimination by any State, or by any authority constituted under a State, if such preference or discrimination is undue and unreasonable or unjust to any State; due regard being had to the financial responsibilities incurred by any State in connection with the construction and maintenance of its railways. But no preference or discrimination shall, within the meaning of this section, be taken to be undue and unreasonable, or unjust to any State, unless so adjudged by the Interstate Commission." [Section 102.]

"The members of the Interstate Commission—

- (i.) Shall be appointed by the Governor-General in Council;
 - (ii.) Shall hold office for seven years, but may be removed within that time by the Governor-General in Council, on an address from both Houses of the Parliament in the same session praying for such removal on the ground of proved misbehaviour or incapacity;
 - (iii.) Shall receive such remuneration as the Parliament may fix; but such remuneration shall not be diminished during their continuance in office."
- [Section 103.]

"Nothing in this Constitution shall render unlawful any rate for the carriage of goods upon a railway, the property of a State, if such rate is deemed by the Interstate Commission to be necessary for the development of the territory of the State, and if the rate applies equally to goods within the State and to goods passing into the State from other States." [Section 104.]

Provisions of a temporary nature and which have now ceased to operate were also made as follows:—

"But notwithstanding anything in this Constitution, goods imported before the imposition of uniform duties of customs into any State, or into any colony which, whilst the goods remain therein, becomes a State, shall, on thence passing into another State within two years after the imposition of such duties, be liable to any duty chargeable on the importation of such goods into the Commonwealth, less any duty paid in respect of the goods on their importation." [Section 92.]

"Notwithstanding anything in this Constitution, the Parliament of the State of Western Australia, if that State be an original State, may, during the first five years after the imposition of uniform duties of customs, impose duties of customs on goods passing into that State and not originally imported from beyond the limits of the Commonwealth; and such duties shall be collected by the Commonwealth.

"But any duty so imposed on any goods shall not exceed during the first of such years the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and shall not exceed during the second, third, fourth, and fifth of such years respectively, four-fifths, three-fifths, two-fifths, and one-fifth of such

latter duty, and all duties imposed under this section shall cease at the expiration of the fifth year after the imposition of uniform duties.

"If at any time during the five years the duty on any goods under this section is higher than the duty imposed by the Commonwealth on the importation of the like goods, then such higher duty shall be collected on the goods when imported into Western Australia from beyond the limits of the Commonwealth." [Section 95.]

§ 2. Commonwealth Commercial Legislation.

1. **Customs Act 1901 (No. 6 of 1901).**—"An Act relating to the Customs," assented to on the 3rd October, 1901, came into operation by proclamation on the 4th October, 1901. This provided for the establishment of the necessary administrative machinery for all matters pertaining to the customs, and prescribed, *inter alia*, the manner in which customs duties shall be computed and paid. It does not however determine the rates thereof.

During the interval between the inception of the Commonwealth, viz., on 1st January, 1901, and the coming into operation of the Customs Act 1901, the Customs Acts of the several States were administered by the Executive Government of the Commonwealth, under section 86 of the Constitution.

2. **Customs Tariff Act 1902 (No. 14 of 1902).**—The first Commonwealth Customs Tariff imposing uniform rates of customs duty in all the States was introduced in the House of Representatives on the 8th October, 1901. "An Act relating to Duties of Customs," assented to on the 16th September, 1902, made provision that uniform duties of customs specified in the tariff schedule should be imposed from the 8th October, 1901, at four o'clock in the afternoon, reckoned according to the standard time in force in the State of Victoria. From this time onwards trade between the States became free, with, however, the exception, under section 95 of the Constitution Act, of the right of Western Australia to levy duty on the goods from other States. [Repealed by the Customs Tariff Act 1908 (No. 7 of 1908).]

3. **Sea Carriage of Goods Act (No. 14 of 1904).**—"An Act relating to the Sea Carriage of Goods," assented to on the 15th December, 1904, to commence on the 1st January, 1905, provides that—"Where any bill of lading or document contains any clause, covenant or agreement whereby (a) the owner, charterer, master, or agent of any ship or the ship itself, is relieved from the liability for loss or damage to goods arising from the harmful or improper condition of the ship's hold, or any other part of the ship in which goods are carried, or arising from negligence, fault, or failure in the proper loading, stowage, custody, care, or delivery of goods received by them or any of them to be carried in or by the ship; or (b) any obligations of the owner or charterer of any ship to exercise due diligence and to properly man, equip, and supply the ship, to make and keep the ship seaworthy, and to make and keep the ship's hold, refrigerating and cool chambers, and all other parts of the ship in which goods are carried, fit and safe for their reception, carriage, and preservation, are in any wise lessened, weakened, or avoided; or (c) the obligations of the master, officers, agents, or servants of any ship to carefully handle and stow goods, and to care for, preserve, and properly deliver them, are in any wise lessened, weakened, or avoided; that clause, covenant, or agreement shall be illegal, null and void, and of no effect."

"In every bill of lading with respect to goods a warranty shall be implied that the ship shall be, at the beginning of the voyage, seaworthy in all respects and properly manned, equipped, and supplied."

"In every bill of lading with respect to goods, unless the contrary intention appears, a clause shall be implied whereby, if the ship is at the beginning of the voyage seaworthy

in all respects and properly manned, equipped, and supplied, neither the ship nor her owner, master, agent, or charterer shall be responsible for damage to or loss of the goods resulting from (a) faults or errors in navigation; or (b) perils of the sea or navigable waters; or (c) acts of God or the King's enemies; or (d) the inherent defect, quality, or vice of the goods; or (e) the insufficiency of package of the goods; or (f) the seizure of the goods under legal process; or (g) any act of omission of the shipper or owner of the goods, his agent, or representative; or (h) saving or attempting to save life or property at sea; or (i) any deviation in saving or attempting to save life or property at sea."

4. Secret Commission Act 1905 (No. 10 of 1905).—"An Act relating to Secret Commissions, Rebates, and Profits," assented to on the 16th November, 1905, provides that—"Any person who, without the full knowledge and consent of the principals directly or indirectly, (a) being an agent of the principal, accepts or obtains, or agrees or offers to accept or obtain, for any person, for himself, or for any person other than the principal; or (b) gives or agrees to give or offers to the agent of a principal, or to any person at the request of an agent of the principal, any gift or consideration as an inducement or reward for any act done or to be done, or any forbearance observed or to be observed, or any favour or disfavour shewn or to be shewn in relation to the principal's affairs or business, or on the principal's behalf, or for obtaining or having obtained, or aiding or having aided to obtain for any person an agency or contract for or with the principal, shall be guilty of an indictable offence."

"Any person who (a) gives to an agent; or (b) being an agent receives or uses, with intent to deceive the principal, any receipt, account, or document in respect of which the principal is interested, or in relation to a dealing, transaction, or matter in which the principal is interested, the receipt, account, or document being false, erroneous, or defective in any material particular, or likely in any way to mislead the principal, shall be guilty of an indictable offence."

"Any agent who, without the full knowledge and consent of the principal, buys from or sells to himself, or any firm of which he is a partner, or any company of which he is a director, manager, officer, or employé, or in which he or any person for him or on his behalf is a shareholder, any goods for or on behalf of his principal, shall be guilty of an indictable offence."

"Whoever aids, abets, counsels, or procures, or is in any way directly or indirectly knowingly concerned in or privy to (a) the commission of any offence against this Act; or (b) the commission outside Australia of any act, in relation to the affairs or business or on behalf of a principal residing in Australia, which, if committed in Australia, would be an offence against this Act, shall be deemed to have committed the offence and be punishable accordingly."

"This Act applies to trade and commerce with other countries and among the States, and to agencies of and contracts with the Commonwealth or any department or officer thereof."

5. Commerce (Trade Descriptions) Act 1905 (No. 16 of 1905).—"An Act relating to Commerce with other Countries," assented to on the 8th December, 1905, and brought into operation by proclamation on the 8th June, 1906, gives power to compel the placing of a proper description on certain prescribed goods, or on packages containing the same, being imports or exports of the Commonwealth. In this Act, unless the contrary intention appears, "trade description" in relation to any goods, means any description, statement, indication, or suggestion, direct or indirect, (a) as to the nature, number, quantity, quality, purity, class, grade, measure, gauge, size, or weight of the goods; or (b) as to the country or place in or at which the goods were made or produced; or (c) as to the manufacturer or producer of the goods or the person by whom they were selected, packed, or in any way prepared for the market; or (d) as to the mode of manufacturing, producing, selecting, packing, or otherwise preparing the goods; or (e) as to the material or ingredients of which the goods are composed, or from which they are derived; or (f)

as to the goods being the subject of an existing patent privilege, or copyright, and includes a customs entry relating to goods; and any mark which, according to the custom of the trade or common repute, is commonly taken to be an indication of any of the above matters, shall be deemed to be a trade description within the meaning of this Act."

" 'False trade description' means a trade description which, by reason of anything contained therein or omitted therefrom, is false or likely to mislead in a material respect as regards the goods to which it is applied, and includes every alteration of a trade description, whether by way of addition, effacement, or otherwise, which makes the description false or likely to mislead in a material respect."

The goods prescribed are:—(a) Articles used for food or drink by man, or used in the manufacture or preparation of articles used for food or drink by man; or (b) medicines or medicinal preparations for internal or external use; or (c) manures; or (d) apparel (including boots and shoes), and the materials from which such apparel is manufactured; or (e) jewellery; or (f) seeds and plants.

6. Australian Industries Preservation Act 1906 (No. 9 of 1906).—"An Act for the Preservation of Australian Industries and for the Repression of Destructive Monopolies," assented to 24th September, 1906, provides that any person or any corporation making or engaging or continuing in any combination "with intent to restrain trade or commerce to the detriment of the public or with intent to destroy or injure by means of unfair competition any Australian industry the preservation of which is advantageous to the Commonwealth, having due regard to the interests of the producers, workers, or consumers," or any person or corporation monopolising or attempting or conspiring to monopolise any part of the trade of the Commonwealth with intent to control, to the detriment of the public, the supply or price of any service, merchandise, or commodity, is guilty of an offence. (Amended, see Act No. 5 of 1908.)

7. Customs Tariff 1906 (No. 14 of 1906).—"An Act relating to Duties of Customs" amends the Customs Tariff of 1902 in relation to the duties on harvesters and agricultural implements and machinery and prescribes the prices to be the maximum prices of Australian harvesters and drills delivered to the purchaser at the railway station or port nearest to the factory where they are made. [Repealed by Customs Tariff Act 1908 (No. 7 of 1908.)]

8. Customs Tariff (South African Preference) 1906 (No. 17 of 1906).—"An Act relating to Preferential Duties of Customs on certain goods the produce or manufacture of the British Colonies or Protectorates in South Africa which are included within the South African Customs Union," assented to 12th October, 1906, to operate from 1st October, 1906, provides for special preferential rates of duty on certain goods imported from and being the produce of any of the Colonies or Protectorates included within the South African Customs Union.

9. Australian Industries Preservation Act 1907 (No. 5 of 1908).—"An Act to amend the Australian Industries Preservation Act 1907," assented to 14th April, 1908, provides additional machinery for procuring evidence of offences against the principal Act.

10. Customs Tariff 1908 (No. 7 of 1908).—"An Act relating to Duties of Customs," assented to 3rd June, 1908, repeals Section 5 of the Customs Tariff 1902 (No. 14 of 1902) and the schedule of that Act and the whole of the Customs Tariff 1906 (No. 14 of 1906) as from 8th August, 1907, at 4 o'clock in the afternoon, reckoned according to the standard time in the State of Victoria,¹ and imposes new rates of Customs Duties from that time. This Act provides preference rates of customs duties on certain "goods the produce or manufacture of the United Kingdom which are shipped in the United Kingdom to Australia and not transhipped, or if transhipped then only if it is proved to the satisfaction of the Collector (of customs) that the goods have not, since they were shipped in the United Kingdom, been subjected to any process of manufacture."

1. "Standard time" is identical in the States of New South Wales, Victoria, Queensland, and Tasmania.

11. **Customs Tariff Amendment 1908 (No. 13 of 1908).**—"An Act to amend the Tariff Act of 1908," assented to 10th June, 1908, provides that where the rate of duty to be paid on goods the produce or manufacture of the United Kingdom is not set out in the Customs Tariff 1908, and where such goods are not expressly declared to be free, the "General Tariff" rates shall apply. This Act also provides that no higher duty shall be payable under the South African Preference Act 1906, than the duty under the General Tariff of the Customs Tariff 1908, and that no duty shall be payable under that Act on any goods which are free of or exempt from duty under the General Tariff of the Customs Tariff 1908. The purpose of this Act is merely to remove possible doubt as to the intention of the original Acts.

§ 3. Method of Recording Imports and Exports.

1. **Value of Imports.**—The recorded value of goods imported from countries beyond the Commonwealth represents the amount on which duty is payable or would be payable if the duty were charged *ad valorem*. The value of goods subject to duty is taken to be 10 per cent. in advance of the fair market value in the principal markets of the country whence the goods were exported, the increase being roughly intended to represent the cost plus insurance, freight, and other charges to the place of landing.

2. **Value of Exports.**—The recorded value of goods exported is taken to represent the value in the principal markets of the Commonwealth in the ordinary commercial acceptance of the term.

3. **Records of Past Years.**—In the years preceding federation each State independently recorded its trade, and in so doing did not distinguish other Australian States from foreign countries. As the aggregation of the records of the several States is, necessarily, the only available means of ascertaining the trade of Australia for comparison with later years, it is unfortunate that past records of values and the direction of imports were not on uniform lines admitting of the preparation of a record for Australia as a whole. On the introduction of the Customs Act 1901, the methods of recording values were made uniform throughout the States, but it was not until September, 1903, that a fundamental defect in the system of recording transhipped goods was remedied. Up to this date goods arriving in any Australian port for transshipment to a port in another Australian State were recorded at the latter port only, where they were ordinarily recorded as from the transshipping State, and not as an import from the oversea country.

In recording exports an analogous defect also existed in most of the States, since goods despatched from one Australian State for transshipment in another State to an oversea country were simply recorded in the former as an export to the transshipping State; thus no proper record of the export as oversea was made. Owing to this defect the oversea trade prior to September, 1903, is understated by an amount which it is impossible to accurately estimate, since it varies with the development of the shipping facilities of the States concerned. To discover the direction of the transhipped trade is not possible. The figures presented in the tables hereinafter are therefore the values as recorded, and must be taken as subject to the defects explained.

4. **Vessels (Ships) Imported and Exported.**—The imports or exports of vessels were not recorded prior to the year 1905. The value of vessels imported during the years 1905, 1906, and 1907 was, respectively, £265,957, £366,300, and £680,700, while the exports for the same years were respectively £79,975, £51,365, and £90,201.

5. **Ships' Stores.**—Prior to 1906 goods shipped in Australian ports on board oversea ships as ships' stores were included in the general exports. From 1906 ships' stores have been specially recorded as such, and omitted from the return of exports. The value of ships' stores during 1906 amounted to £875,966, of which bunker coal represented £575,471, or 65.7 per cent., and during 1907 to £998,897, bunker coal representing £663,724, or 66.45 per cent.

§ 4. Oversea Trade.

1. **Total Oversea Trade.**—The following table shews the total trade of the Commonwealth with oversea countries from the earliest date for which records are available. In consequence of the defects of record, referred to in the preceding section, the results can be only an approximate to the actual figures. The very marked rise and sudden fall in the value of imports during the period 1837 to 1842 were contemporaneous with heavy land speculation and a subsequent severe financial crisis. The great increase of trade in the early fifties is due to the discovery of gold. In the State of Victoria the value of imports from oversea countries increased from £500,000 in 1851 to nearly £11,000,000 in 1853, and to £13,000,000 in 1854; while in New South Wales similar imports rose from £1,390,000 in 1851 to £5,500,000 in 1854, when the total imports into the Commonwealth reached the sum of £34 13s. 10d. per head, and the total trade £56 3s. 10d. per head of the population. The rapid influx of persons anxious to share the good fortunes of these times, however, soon reduced the value of the trade per head, till, in 1858, it had declined to £31 19s. 6d. per head. The period 1867-1872 shews a marked reduction in the value of trade per head. For some years prior to this period New South Wales had experienced a succession of indifferent seasons, and Victoria was suffering from a congested labour market consequent on the decline of alluvial gold-mining in that State. This congestion of the labour market during the years 1862 to 1866 gave rise to the agitation for a protective tariff to provide employment in manufacture, and in April, 1866, the Tariff Act, which expressed the protective policy since adhered to in Victoria, was assented to.

OVERSEA TRADE OF COMMONWEALTH, 1826 to 1907.

1. Reckoned on mean population of the year.

The graphs illustrating the movement of the oversea trade of Australia (See pages 609, 610) shew that periods of depressed trade have been recurrent at more or less regular intervals of from seven to nine years, and measured by population, each succeeding depression since 1855 has carried the trade per head lower than the preceding one, until the lowest point was reached in 1894.

The year 1892 marked the beginning of a period of acute financial stress, culminating in the commercial crisis of 1893. The collapse of these years, by no means confined to Australia, but affecting in varying degree many countries, is plainly reflected in the records of the trade of that period, for the trade for 1894 had fallen to £54,028,227, a decline of no less than 26.75 per cent. in three years. In 1895 there was slight recovery, and a continuous upward movement until 1901, when the trade reached £92,130,183, or £24 5s. 10d. per head. A decline, due to drought, in the exports of agricultural, pastoral, and dairy produce, reduced the trade of 1902 to £84,591,037, but although in the next year there was a further shrinkage in the exports of agricultural produce, the increase in the value of the exports of metals, specie, butter, and wool was so large as to effect an increase in the total trade. From 1902 the increase has been continuous, reaching in 1907 the amount of £124,633,280, equal to £29 19s. 10d. per inhabitant.

2. Ratio between Exports and Imports.—The foregoing table shows the percentage of exports on imports for each year. From this it will be seen that, with few exceptions due to temporary dislocations of trade, prior to 1892 the balance of trade has been on the side of imports, but from 1892 the reverse has been the case, the value of exports having increased by 118.44 per cent. and the imports by 72.07 per cent. The excess of imports in the earlier years represents the introduction of capital in the form of Government loans and for investment in private undertakings, and the excess of exports in the later years represents mainly the interest and profit on the earlier investments, repayment of loans to foreign bondholders, and also freight on trade which is carried mainly by ships of the United Kingdom and foreign countries.

§ 5. Direction of Trade.

1. Countries of Origin of Imports.—In April 1908 the British Board of Trade appointed a Departmental Committee "to consider and report how far any change is desirable in the form in which the Trade Accounts of the United Kingdom are published as regards the countries from which imports are received and to which exports are sent."

In addition to the returns shewing the trade of the United Kingdom with foreign countries according to the country of shipment the Board of Trade have, since 1904, published supplementary returns shewing the trade according to the country of consignment. This action has been endorsed by the committee from whose report the following extracts are taken:—"The evidence generally is undoubtedly to the effect that the imports are best shewn by countries from which they are consigned, and the exports by countries to which they are consigned. Some witnesses have expressed the opinion that it would be useful if the trade returns could be made to indicate the countries in which imported goods were actually produced or manufactured. In the majority of cases the country from which goods are consigned to the United Kingdom is probably the country of their origin or manufacture. It may frequently happen, however, that goods procured by purchase in a particular country from which they are consigned to the United Kingdom have originally been produced or manufactured in some other country, and in these cases, the real interchange of trade is properly shewn in our trade statistics by treating the goods as consigned from the country from which they were procured by the British importer, and not from the country in which they were produced or manufactured. The importer of such goods would indeed, as a rule have no definite knowledge as to their primary origin, since it would not be in the interest of the foreign seller to divulge that information."

From the 1st January, 1905, the Trade and Customs Department, in addition to the usual record of the countries whence goods directly arrived in Australia, has kept a record of the countries of their origin. The following table shews, for the years 1906 and 1907, the value of imports recorded as direct from the principal countries, and also the disposition of the value of imports against the countries where they were produced or manufactured. A similar comparison for the year 1905 will be found in the previous issue of this work.

| Total Imports from all Countries | 44,744,912 | 100 | 51,809,033 | 100 | 44,744,912 | 100 | 51,809,033 | 100 |

The only country from which the value of direct imports exceeds by any large amount the value of the imports of goods which were manufactured or produced therein, that is to say, the only country which shews a balance of any magnitude as a distributor of the goods of other countries to Australia, is the United Kingdom. The records of our imports therefrom during the year 1907 shew that while the total direct imports from that country amounted to £31,906,447, the value of the manufactures or produce of the United Kingdom itself, imported from all countries whatsoever during the same year, was £26,843,610. From the foregoing figures it appears that goods to the value of at least £5,062,837 were received from other countries through the United Kingdom.

Other countries which shew balances as distributors to Australia, though absolutely of much less amount, are Belgium, Hong Kong, New Zealand, and Straits Settlements. The countries mentioned are, of course, not the only countries through which goods are indirectly imported into Australia, for the direct imports from other countries, notably France and Germany, include considerable values which are not of the produce of those countries. These values, however, are more than balanced by value of French and German goods received through the United Kingdom and other countries.

2. **Direct Imports according to Country of Shipment.**—The following table, shewing the average yearly value of imports from each of the principal countries during each succeeding quinquennial period from 1887 to 1906, and for the year 1907, shews considerable change in direction of imports during the past twenty years. The countries mentioned in this table are those where the goods were shipped or whence they were directly consigned to Australia:—

TRADE WITH VARIOUS COUNTRIES, 1887 to 1907.

3. Imports Shipped from the United Kingdom.—The foregoing table shews that while the value of direct imports from the United Kingdom during 1907 is above the yearly average of the period under review, the proportion to total imports has diminished, having fallen from 70.14 per cent. during the years 1887-91 to 61.59 per cent. in 1907. It will be observed, however, that the percentage proportion for 1907 is an advance on that of the immediately preceding quinquennium. The apparent diversion of Australian trade from Great Britain is more fully dealt with hereinafter, viz., in Section 11 of

this chapter. The values of the principal imports from the United Kingdom during the year 1907 are as follows:—

Ale and beer, £361,368. Apparel and textiles:—apparel, £3,533,300; textiles, £8,868,575; arms, ammunition and explosives, £489,675; books and periodicals, £431,884; brushware, £118,589; earthenware, etc., £173,604; clocks and watches, £128,926; cocoa and chocolate, £213,078; confectionery, £122,373; cordage, metal, £95,277; cordage, other, £122,811; cutlery, £137,800; drugs and chemicals:—alkalies (soda), £81,591; fertilisers, £100,393; medicines, £161,893; other drugs and chemicals, £555,506; electrical materials, £246,455; fancy goods, £199,070; fish, fresh and preserved, £169,808; furniture, £78,379; glass and glassware, £128,438; indiarubber manufactures, £317,041; instruments, musical, £87,160; instruments, scientific, etc., £232,364; iron and steel:—pig, £155,803; bar, hoop, ingot, etc., £529,291; scrap, £44,883; girders, beams, etc., £64,675; plate and sheet, galvanised, £1,279,278; not galvanised, £179,113; pipes and tubes, £374,905; rails, fishplates, etc., £563,468; tinned plates, plain, £247,290; wire, £61,739; wire netting, £400,112; jewellery and precious stones, £427,788; leather and leather manufactures, £305,386; machines and machinery, £1,741,527; metals, manufactures of, £1,613,725; milk, preserved, £103,769; oils (not essential), £174,341; paints and colours, £301,070; paper, £649,442; pickles, sauces, etc., £105,669; plated-ware, £189,127; soap, £61,457; specie, £396,655; spirits, £810,989; stationery, £261,097; tobacco, £185,398; tools of trade, £234,341; varnishes, £66,701; vehicles:—bicycles, etc., £177,724; motors, £190,442; other vehicles, £122,058; vessels (ships), £665,760; yarns, £137,507.

4. Imports Shipped from British Possessions.—The growth of the value of imports from other British possessions during the past twenty years has been such as to increase the proportion to total imports from 12.41 per cent. in the years 1887-91 to 12.93 per cent. in 1907, the actual values being respectively £4,389,783 and £6,701,430. Of the total imports from British possessions during 1907, 38.58 per cent. were from New Zealand, 29.07 per cent. from India, and 10.83 per cent. from Ceylon.

5. Principal Imports from British Possessions, 1907.—These are as follows:—

(i.) *Canada.* Apparel and textiles, £26,433; boots and shoes, £7773; drugs and chemicals, £21,071; fish, £36,517; agricultural implements and machinery, £91,096; other machines and machinery, £47,647; paper, £41,787; timber, £28,722; bicycles and other vehicles, £13,632.

The imports from Canada include manufactures of the United States to the value of about £95,000, the largest items being machinery and medicines, while on the other hand Canadian produce—paper, £60,000, and implements and machinery, £60,000—is received into Australia from other countries, mainly from the United Kingdom and from the United States.

(ii.) *Ceylon.* Coffee and chicory, £4030; nuts, £18,220; tea, £672,801. The large increase in the imports from Ceylon—from £124,057 during the years 1887-91, to £725,444 in 1907—is due to the displacement of China teas in the Australian markets by those of India and Ceylon. Of the total imports of tea during the year 1907, 58.76 per cent. was the produce of Ceylon.

(iii.) *Fiji.* Bananas, £51,402; copra, £8081; sugar, £30,310.

(iv.) *Hong Kong.* Apparel and textiles, £22,150; fish, preserved, £9736; rice, £62,417; oils, £24,379; tea, £52,508. The imports from Hong Kong are mainly the produce of China.

(v.) *India.* Bags and sacks, £1,089,433; canvas, £206,969; carpets, mats, etc., £11,410; coffee and chicory, £15,650; cotton, raw, £20,173; rice, £22,464; shellac, £19,324; manures, £24,041; oils, £56,980; skins and hides, £23,934; spices, £6416; tea, £323,475; wax, paraffin, £7757.

(vi.) *Mauritius.* Sugar, £43,660.

(vii.) *Natal.* Coal, £3180; maize, £2162.

(viii.) *New Zealand.* Apparel and textiles, £18,102; horses, £22,953; sheep, £39,259; military stores, £21,445; coal, £4590; copra, £13,719; fibre, £109,004; fish, £33,292; gold, bullion and ore, £1,406,516; grain—barley, £17,798; hops, £11,930; implements and machinery (agricultural) £5164; machines and machinery, £21,098; meats, £24,900; seeds, £18,635; ships, £20,000; skins and hides, £237,702; timber, £397,699; wool, £28,187.

(ix.) *Straits Settlements.* Rice, £44,828. Oils, fats, and waxes:—Kerosene, £33,407; paraffin wax, £9779; other oils, etc., £15,982—spices, £38,803; tapioca, £58,053; wood and wicker manufactures, £11,248. The rice imported from the Straits Settlements is largely the produce of Burma, and the oils of Sumatra.

6. Imports from Foreign Countries.—The imports from foreign countries during the year 1907 represented 25.48 per cent. of the total imports as compared with 17.45 per cent. during the years 1887-91. Compared, however, with the average of the past ten years, the proportion during the year 1907 shews a slight decline.

7. Principal Imports from Foreign Countries.—The details are as follows:—

(i.) *Argentine Republic.* The imports from the Argentine Republic are almost entirely of grain and fodder, and were abnormally large in the years 1902 and 1903 in consequence of the failure of crops in Australia in these years.

(ii.) *Belgium.* Apparel, £35,098; textiles, £51,820; candles, £10,119; drugs, chemicals, and fertilisers, £46,540; glass and glassware, £114,391—iron and steel:—Partly manufactured, £80,998; girders, beams, etc., £11,604; plate and sheet, £49,199; railway iron, £28,990; wire, £39,526; wire netting, £55,253—jewellery, £35,169; leather, £10,820; machines and machinery, £45,575; matches and vestas, £36,711; metal manufactures, £52,985; motors, £22,734; paper, £46,944; wine, £41,180; zinc manufactures, £27,191.

A large proportion of the iron, steel and metal manufactures, and of the manures from Belgium, is of German origin. The motors are almost entirely of French manufacture.

(iii.) *Chile.* Soda nitrate, £20,768.

(iv.) *China.* Apparel and textiles, £10,457; rice, £5589; tea, £54,336.

The decline of the value of imports from China during the past twenty years is due to the loss of the tea trade, which now draws its supplies mainly from India and Ceylon.

(v.) *France.* Apparel and textiles, £70,072; corks, £22,435; drugs and chemicals, £162,486; fruits, £8097; leather, £9399; spirits, £45,875; tiles, £14,892; cigars and cigarettes, £9064; wine, £23,105.

The value of the direct imports recorded from France is much below the value of imports of goods of French origin. The most important imports of French origin are—apparel and textiles, £889,545; cream of tartar, £113,085; leather, £24,177; pipes, smoking, £62,759; spirits, £176,748; wines, £94,430; vehicles, motors, £59,945.

(vi.) *Germany.* Ale and beer, £43,133; apparel and textiles, £455,962; arms, ammunition, and explosives, £54,346; brushware, £23,633; cement, £23,208; chinaware, etc., £101,874; cocoa and chocolate, £23,361; drugs and chemicals: calcium carbide, £79,574; fertilisers, £21,971; other drugs, etc., £121,327; furniture, £66,510; glass and glassware, £100,337; hops, £12,416; indiarubber manufactures, £42,711; metals and manufactures of metals:—metals unmanufactured, £23,563; iron and steel—bar, ingot, etc., £50,596; plate and sheet, £39,800; pipes and tubes, £30,702; railway iron, £25,192; tools of trade, £19,867; wire, £320,238; wire netting, £122,355; machines and machinery, £214,908; lamps and lampware, £43,049; other manufactures of metals, £231,009—musical instruments, £281,904; jewellery, £42,933; leather and leather manufactures (excluding boots and shoes), £37,735; matches and vestas, £27,549; milk, preserved, £30,011; paper, £240,951; spirits, £59,709; stationery, £55,222; tobacco, £33,173.

The imports from Germany, as stated in the foregoing list, include considerable amounts of the produce and manufacture of other countries, but on the other hand still

larger amounts of German goods are received into the Commonwealth from other countries.

(vii.) *Italy.* Apparel and textiles, £52,342; fruits, £35,502; matches and vestas, £33,472; marble, £18,158; nuts, £14,349; sulphur, £10,407.

(viii.) *Japan.* Apparel and textiles, £275,995; bags, baskets, etc., £19,659; china-ware and earthenware, £11,264; fancy goods, £9688; fertilisers (superphosphates), £11,123; furniture, £13,212; perfumery, £10,630; rice, £25,597; oils and waxes, £26,536; sulphur, £51,418; timber, £33,971.

(ix.) *Java.* Cotton, raw, £9828; hats and caps, £10,208; rice, £59,694; kapok, £80,498; tea, £43,696.

(x.) *Netherlands.* Apparel and textiles, £12,938; cocoa and chocolate, £21,567; cameos and precious stones, £7774; spirits, £43,212. The value of the imports of Netherlands manufacture from all countries of cocoa and chocolate amounted to £55,306, and of spirits to £96,536.

(xi.) *Norway.* Fish, preserved, £5173; milk, preserved, £13,642; timber, £292,938. The value of the total imports from all countries of preserved milk of Norwegian origin amounted to £133,054, and of preserved fish, to £23,172.

(xii.) *Philippine Islands.* Flax and hemp, £65,796; cigars, £27,502.

(xiii.) *Sweden.* Calcium carbide, £20,788; machines and machinery, £15,196; matches and vestas, £8526; paper, £12,463; timber, £84,071. The foregoing figures relate to direct imports, which represent only 39.30 per cent. of the total value of imports of the produce of that country imported during 1907. The principal articles of Swedish production, imported directly and indirectly, were:—Calcium carbide, £58,833; cream separators, £82,902; electrical machinery and appliances, £54,527; matches and vestas, £29,530; lamps and lampware, £8443; paper, £32,319; timber, £87,427.

(xiv.) *Switzerland.* Apparel and textiles, £23,471; milk, £2444; watches, £10,197. The value of imports recorded as direct from Switzerland amounts to only 5.70 per cent. of the value of the total imports of the produce of that country. The principal articles of Swiss production imported were:—Apparel and textiles, £538,748; cocoa and chocolate, £27,969; milk, £20,796; cigars, £12,827; watches, £60,082.

(xv.) *United States of America.* Apparel and textiles:—Boots and shoes, £44,542; other apparel, £94,477; textiles, £166,685—ammunition and explosives, £63,969; barley, £27,267; cameras, magic lanterns, phonographs, etc., £77,704; clocks and watches, £64,119; fish, £96,083; furniture, £78,590; glass and glassware, £46,633; glucose, £28,903; indiarubber manufactures, £31,454; leather, £90,706; meats, £41,031; medicines, £49,136; metal manufactures:—iron and steel: bars, ingots, etc., £42,236; girders, beams, etc., £12,884; pipes and tubes, £66,225; plate and sheet, £88,047; tools of trade, £216,335; wire, £172,500; machines and machinery, agricultural, £239,941; other machines and machinery, £725,450; other metal manufactures, £322,437; musical instruments, £40,005; oils, fats and waxes:—kerosene, £422,437; lubricating oils and greases, £123,461; naphtha, £25,165; paraffin wax, £40,524; turpentine, £81,628; paper, £222,277; resin, £72,340; soap, £37,144; stationery, £46,217; timber, £719,619; tobacco, cigars, etc., £461,799; wood manufactures, £87,025; vehicles, bicycles and motors, £113,373.

In addition to the direct imports from the United States, which include Canadian goods to the value of £74,000, United States goods to the value of nearly £1,000,000 were received through other countries. The greater part of this indirect trade from the United States is received through the United Kingdom, and the principal articles thus received are apparel and textiles, boots and shoes, leather, machines and machinery, timber, and tobacco.

8. *Direction of Exports.*—The following table shows the average yearly value of exports to principal countries during each quinquennial period from 1887 to 1906 and for the year 1907. As in the case of the import trade, considerable alteration in the direction of exports is evident. The largest increases in exports to British possessions are shewn to the various South African colonies, due to exports of agricultural and pastoral

produce and timber, and to India and Ceylon, mainly due to exports of gold, and in some recent years also of timber, chiefly railway sleepers. The large increases in the case of Belgium, Germany, and France are more apparent than real, and are mainly due to the increase in local sales of wool, skins, etc., and the resulting direct export to the countries mentioned, while formerly a much larger proportion of wool, etc., was sent to the United Kingdom for sale, and ultimately found its way from there to the Continent:—

TRADE WITH VARIOUS COUNTRIES, 1887 to 1907.

EXPORTS (INCLUDING BULLION AND SPECIE).

| Country. | Yearly Average of Quinquennial Periods. | | | | Year. |

9. Exports to the United Kingdom.—Notwithstanding an increase of over 50 per cent. (54.41) in the actual value of exports to the United Kingdom during the year 1907 as compared with the yearly average of the period 1887-91, the proportion of the total exports despatched to the United Kingdom has fallen from 74.74 per cent. in the earlier period to 46.65 per cent. in the year 1907. This decrease is, to some extent, undoubtedly due to the fact that wool and other commodities which were formerly despatched to the

United Kingdom, and distributed from that centre, are now shipped direct to continental ports.

The principal exports to the United Kingdom during the year 1907 were as follows:—Butter, £2,538,656; fruit, including pulp, £223,374; grain:—wheat, £3,521,827; flour, £62,952; hair, £23,558; jewellery and precious stones, £135,938; leather, £381,245; meats, frozen—beef, £37,903; mutton and lamb, £1,141,718; rabbits and hares, £470,136; other frozen meat, £19,416; potted meat, £38,181; preserved meat, £92,958. minerals and metals—copper, ingots, £775,202; in matte, £1,137,197; ore, £132,061; gold—bullion, £865,268; in matte, £1,841,326; silver—bullion, £70,705; in matte, £530,018; ore, £18,744; lead—pig, £259,645; in matte, £646,245; ores, n.e.i., £163,374; spelter and concentrates, £75,443; tin, ingots and ore, £1,011,131; oil, cocoanut, £141,081; pearlshell, £253,770; skins, hides, £72,693; rabbit and hare, £281,938; sheep, £304,802; other skins, £183,980; specie, gold, £1,476,669; tallow, £923,382; timber, £92,806; wine, £91,744; wool—greasy, £9,853,520; scoured, £3,080,280.

10. Exports to British Possessions.—The largest relative increase in the value of exports during the period under review has been in the direction of British Possessions. The increase of the value of exports to these countries, 426 per cent., has raised the proportion of total exports to British Possessions from 8.46 per cent., during 1887-91 to 18.02 per cent. in 1907. The countries mostly concerned in this great increase—which is in a large measure due to heavy shipments of gold—are Cape Colony, Ceylon, India, and New Zealand.

11. Principal Exports to British Possessions, 1907.—These are as follows:—

(i.) *Canada.* Butter, £13,377; meats, £31,317; oil, cocoanut, £4100; skins, £9108; timber, £4398; tin, £16,156; wool, £11,903.

(ii.) *Cape Colony.* Butter, £79,617; grain, wheat, £651,617; flour, £59,009; leather, £63,072; meats—frozen beef, £125,204; mutton and lamb, £39,631; other meats, £5835; specie, £50,000; sugar, £158,328; timber, £25,759.

(iii.) *Ceylon.* Butter, £5402; coal, £6545; horses, £4886; gold, bullion, £166,000; specie, £3,205,075; grain—flour, £17,711; lead, pig, £43,292; silver, bullion, £469,200; sugar, £7795.

(iv.) *Fiji.* Apparel and textiles:—apparel, including boots and shoes, £14,534; textiles, £16,997; bags, sacks, and cordage, £7663; biscuits, £11,908; coal, £14,685; drugs and chemicals, £8023; grain, prepared—bran, pollard, and sharps, £15,922; flour, £12,039; machines and machinery, £7872; metal manufactures, £36,758; oils, £14,896; specie, £52,000; timber, £12,293.

(v.) *Hong Kong.* Butter, £15,443; coal, £26,572; copper, ingots, £15,401; fish, £39,887; flour, £194,223; lead, pig, £74,493; sandalwood, £51,078; specie, gold, £397,522; wheat, £12,225.

(vi.) *India.* Coal, £23,788; copper, ingots, £85,096; gold, bullion, £919,256; specie, £805,353; horses, £224,341; grain, wheat, £5696; hay and chaff, £8211; lead, pig, £18,530; meats, £7510; silver, bullion, £72,460; tallow, £8754; timber, £266,865; wool, £20,115.

(vii.) *Natal.* Animals, living—horses, £4026; sheep, £23,187. Butter, £97,626; fodder, £2195; fruit, £7473; grain—wheat, £80,768; flour, £158,165; jams and jellies, £7109; leather, £7024; meats, frozen—beef, £90,884; mutton, £119,667; pork, £5416; poultry, £4486; meats, other, £6479; plants and trees, £5887; specie, gold, £100,000; tallow, £10,459; timber, £11,064.

(viii.) *New Zealand.* Apparel, textiles, etc.:—apparel, boots and shoes, £22,597; other apparel, £28,421; textiles, £59,106; bags and sacks, £16,595. Books and periodicals, £39,101; coal, £103,705; drugs and chemicals—fertilisers, £65,573; medicines, £36,375; other drugs, etc., £38,946. Electrical materials, £20,930; fruit, fresh, £56,419; dried, £22,983; glass and glassware, £28,469; grain—oats, £35,298;

GRAPHS SHEWING VALUES OF IMPORTS, EXPORTS, AND TOTAL TRADE OF
COMMONWEALTH, 1826 TO 1907.

EXPLANATION OF GRAPHS.—The base of each square represents an interval of five years, and the vertical height five million pounds sterling for Imports and Exports, and ten million pounds sterling for Total Trade.

GRAPHS SHEWING THE VALUES PER HEAD OF POPULATION OF IMPORTS, EXPORTS AND TOTAL TRADE OF COMMONWEALTH, 1826 TO 1907.

EXPLANATION OF GRAPHS.—The base of each square represents an interval of five years, and the vertical height fifty shillings per head of the population. The basic lines of Imports and Exports are *nil* per head, and that of Total Trade is five pounds per head.

flour, £55,006; rice, £29,107; indiarubber manufactures, £45,116; jewellery and precious stones, £14,101; lead, pig, £14,809; leather and leather manufactures, £39,673; metals, manufactures of:—agricultural implements and machinery, £29,062; other machines and machinery, £66,605; other manufactures of metals, £86,955; onions, £10,530; potatoes, £38,854; salt, £16,081; seeds, £6125; soap, £22,960; specie:—gold, £757,000, silver, £2600, bronze, £2290; spirits, £22,410; stationery, £15,064; sugar, £19,092; tea, £61,471; timber, £180,243; tin, ingots, £26,571; tobacco, £73,621; vessels, £9900, wine, £26,359.

(ix.) *Papua*. Apparel and textiles, etc., £6447; flour, £1244; meats, £8537; tobacco, £4743.

(x.) *Straits Settlements*. Animals, living, horses, £26,952; butter, £25,648; coal, £66,940; gold, specie, £10,000; grain, flour, £145,401; machines and machinery, £7131; meats, £22,703; tin ore, £187,702.

12. **Exports to Foreign Countries.**—The foregoing table shews a very great increase in the value of exports to foreign countries, both in actual amounts and in relation to total exports. The value of exports to foreign countries during 1907 shews an increase of 420 per cent. over similar figures for the years 1887-91, thus increasing the porportion per cent. of all exports from 16.80 per cent. in the earlier years to 35.33 per cent. in 1907. This increase is chiefly due to the growing demand among foreign nations for Australian wool, large consignments of which are now made direct to Belgium, France, Germany, and the United States.

13. **Principal Exports to Foreign Countries.**—These are as follows:—

(i.) *Argentine Republic*. Agricultural implements and machinery, £7976; timber, £8308.

(ii.) *Belgium*. Bark, tanning, £10,241; copper, £302,276; grain, wheat, £9029; lead, £235,138; leather, £32,796; silver ore, £316,057; hides and skins, £318,161; spelter, £961,065; tallow, £13,787; tin, £56,168; wool, £3,417,193.

(iii.) *Chile*. Coal, £447,595; wheat, £95,260.

(iv.) *China*. Horses, £3299; butter, £13,338; coal, £18,474; copper, £148,979; flour, £47,037; lead, £23,348; sandalwood, £10,886; specie, gold, £11,940; timber, undressed, £19,497.

(v.) *France*. Copper, £114,449; hides and skins, £768,267; lead, £31,172; spelter, £188,444; tin, £18,805; wool, £7,004,581.

(vi.) *Germany*. Bark, tanning, £78,352; copper, £133,620; fruit, fresh, £19,642; grain—bran, pollard, and sharps, £6846; wheat, £6230; hides and skins, £46,025; lead, £92,570; linseed cake and oilcake, £6715; meats, £76,561; oil, cocoanut, £24,743; ores:—antimony, £16,100; copper, £15,992; scheelite, £25,387; silver and silver lead, £101,510; tin, £76,042; wolfram, £130,037; spelter, concentrates, etc., other than gold, £55,411; other ores, £14,002; tallow, £3527; timber, £20,184; wool, £4,117,394.

(vii.) *Italy*. Copper, £24,476; skins, £51,829; wool, £77,413.

(viii.) *Japan*. Grain, wheat, £50,881; horses, £11,715; lead, £21,685; manures, £19,580; oils, £18,328; tallow, £32,065; wool, £481,771.

(ix.) *Java*. Butter, £45,600; coal, £18,893; drugs and chemicals, £5791; flour, £144,091; horses, £25,502.

(x.) *Netherlands*. Lead, £81,330; shale, kerosene, £11,957; silver ore, £56,641; spelter, £157,479; tallow, £7643; wool, £6654.

(xi.) *Peru*. Coal, £48,681; wheat, £214,400.

(xii.) *Philippine Islands*. Butter, £23,040; coal, £155,430; flour, £139,958; fodder, £16,102; meats, £133,412; timber, £65,046.

(xiii.) *United States of America*. Coal, £265,993; cocoanut oil, £20,030; copper, £700,509; gold, bullion, £239,714; hides and skins, £219,551; silver in matte, £39,134; tin, £32,609; wool, £815,254.

§ 6. Development of Export Trade to Eastern Countries.

1. **Trade with Eastern Countries.**—During recent years attention has been given by Australian exporters to the possibilities of the markets of eastern countries. Commissioners have been sent by the States to eastern trade centres to investigate and advise as to the requirements of these markets in regard to such commodities as Australia is prepared to supply, and a survey of the export returns of the past five years discloses a very material increase in the value of the export trade in the direction indicated.

The principal countries concerned in this trade are China, India, Ceylon and Burmah, Japan, Java, Philippine Islands, Straits Settlements, and Hong Kong, and the particulars given in the following tables apply to these countries only:—

VALUE OF PRINCIPAL ITEMS OF MERCHANDISE EXPORTED FROM THE COMMONWEALTH TO EASTERN COUNTRIES, 1903 to 1907.

| Article. | 1903. | 1904. | 1905. | 1906. | 1907. |
|--|------------|------------|-----------|------------|-----------|
| | £ | £ | £ | £ | £ |
| Butter | 68,591 | 84,569 | 93,707 | 109,792 | 136,299 |
| Coal | 223,204 | 167,588 | 260,343 | 336,550 | 319,292 |
| Copper | 89,412 | 330,324 | 426,937 | 176,835 | 250,051 |

| Other merchandise | 157,635 | 163,811 | 337,182 | 209,135 | 304,934 |
| Total merchandise | 1,143,342 | 2,298,963 | 2,970,633 | 3,121,178 | 3,790,152 |
| Specie and gold and silver bullion | 9,537,575 | 10,268,946 | 6,466,356 | 7,339,865 | 6,059,735 |
| Total exports | 10,680,917 | 12,567,909 | 9,436,991 | 10,461,043 | 9,849,887 |

The following tables shew the value of the principal articles exported to each of the undermentioned eastern countries during each of the years 1903 to 1907:—

BUTTER.

| Country. | 1903. | 1904. | 1905. | 1906. | 1907. |
|--------------------------|--------|--------|--------|---------|---------|
| | £ | £ | £ | £ | £ |
| China | 3,908 | 10,854 | 9,966 | 14,518 | 13,338 |
| Hong Kong | 13,412 | 10,994 | 17,073 | 17,007 | 15,443 |
| India, Ceylon, and Burma | 5,679 | 4,897 | 5,615 | 7,152 | 6,766 |
| Japan | 1,872 | 3,014 | 2,233 | 4,475 | 6,464 |
| Java | 20,648 | 23,542 | 26,533 | 29,886 | 45,600 |
| Philippine Islands | 13,952 | 23,426 | 21,984 | 25,431 | 23,040 |
| Straits Settlements... | 9,120 | 7,842 | 10,303 | 11,323 | 25,648 |
| Total | 68,591 | 84,569 | 93,707 | 109,792 | 136,299 |

The exports of butter given above for the year 1907 were supplied by the several States as follows:—New South Wales, £28,616; Victoria, £93,281; Queensland, £13,123; South Australia, £1279.

COAL.

| Country. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------------------------|----------------|----------------|----------------|----------------|----------------|
| | £ | £ | £ | £ | £ |
| China | 7,078 | 5,805 | 16,643 | 31,652 | 18,474 |
| Hong Kong | 15,095 | 7,672 | 38,231 | 26,237 | 26,572 |
| India, Ceylon, and Burma ... | 28,340 | 24,927 | 31,129 | 18,610 | 30,333 |
| Japan | ... | 263 | 7,019 | ... | 2,650 |
| Java | 27,214 | 14,313 | 20,881 | 30,848 | 18,893 |
| Philippine Islands | 113,508 | 100,647 | 111,665 | 133,032 | 155,430 |
| Straits Settlements... .. | 31,969 | 13,961 | 34,775 | 96,171 | 66,940 |
| Total | 223,204 | 167,588 | 260,343 | 336,550 | 319,292 |

The increase in the exports of coal during 1906 and 1907 is really greater than appears from the above figures, as prior to 1906 "bunker" coal was treated as an export to the country for which the ship cleared. These exports of coal are all from New South Wales.

COPPER.

| Country. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------------------------|---------------|----------------|----------------|----------------|----------------|
| | £ | £ | £ | £ | £ |
| China | 16,171 | 263,046 | 257,800 | 34,297 | 148,979 |
| Hong Kong | 1,174 | 23,512 | 33,942 | 4,400 | 15,401 |
| India, Ceylon, and Burma ... | 72,067 | 103,165 | 133,231 | 117,322 | 85,096 |
| Japan | ... | ... | ... | 19,550 | 60 |
| Java | ... | 601 | 1,964 | 1,266 | 515 |
| Total | 89,412 | 390,324 | 426,937 | 176,835 | 250,051 |

The fall in value of copper exported from Australia to China in 1906, as compared with 1905, is explained by Mr. J. B. Suttor, Commissioner for New South Wales in the East, as due to "there having been over-importations in 1905 for minting purposes. This was really overdone, large stocks being held over and re-exported in 1906 owing to higher prices ruling elsewhere." The copper exported to the East during 1907 was from New South Wales and South Australia, the amounts being respectively £59,741 and £190,310.

GRAIN AND PULSE—WHEAT.

| Country. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------------------------|--------------|---------------|---------------|----------------|----------------|
| | £ | £ | £ | £ | £ |
| China | ... | ... | ... | 1,662 | 103,593 |
| Hong Kong | ... | 7,789 | 4,530 | 519 | 12,225 |
| India, Ceylon, and Burma ... | ... | 7 | 45 | 100,211 | 6,828 |
| Japan | 1,699 | 46,509 | 95,046 | 6,623 | 50,881 |
| Java | 6 | 10 | 6 | 16 | 1 |
| Philippine Islands | ... | ... | 1 | 181 | ... |
| Total | 1,705 | 54,315 | 99,628 | 109,212 | 173,528 |

The exports of wheat given above for the year 1907 were supplied by the following States:—New South Wales, £25,609; Victoria, £63,121; South Australia, £84,798.

GRAIN AND PULSE—FLOUR.

| Country. | 1903. | 1904. | 1905. | 1906. | 1907. |
|---------------------------------|--------|--------|---------|---------|---------|
| | £ | £ | £ | £ | £ |
| China | 84 | 247 | 3,129 | 4,539 | 47,087 |
| Hong Kong | 201 | 3,779 | 77,181 | 146,257 | 194,223 |
| India, Ceylon, and Burma | 1,348 | 7,323 | 15,865 | 18,479 | 18,349 |
| Japan | 2,460 | 5,092 | 11,897 | 35,325 | 3,820 |
| Java | 25,009 | 65,309 | 93,444 | 107,319 | 144,091 |
| Philippine Islands | 260 | 9,348 | 49,887 | 95,569 | 139,958 |
| Straits Settlements... .. | 918 | 6,770 | 47,203 | 130,689 | 145,401 |
| Total | 30,280 | 97,868 | 298,606 | 538,177 | 692,879 |

The flour exported during 1907, as above, was supplied by the several States as follows:—New South Wales, £196,520; Victoria, £253,845; Queensland, £2342; South Australia, £218,629; Western Australia, £21,543.

GRAIN AND PULSE, OTHER THAN WHEAT AND FLOUR.

| Country. | 1903. | 1904. | 1905. | 1906. | 1907. |
|---------------------------------|-------|--------|--------|-------|--------|
| | £ | £ | £ | £ | £ |
| China | 79 | 2,255 | 635 | 452 | 3,423 |

| Straits Settlements... | 1,600 | 7,296 | 1,952 | 6,511 | 1,909 |
| Total | 87,441 | 238,318 | 387,408 | 490,606 | 362,999 |

The above exports of timber were from the several States as follows:—New South Wales, £138,887; Victoria, £390; Queensland, £8836; Western Australia, £203,933; Tasmania, £10,953.

WOOL.

| Country. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------------------------|--------|---------|---------|---------|---------|
| | £ | £ | £ | £ | £ |
| China | ... | 8 | ... | ... | ... |
| Hong Kong | ... | 13,262 | 7,740 | ... | ... |
| India, Ceylon, and Burma ... | 13,671 | 10,518 | 7,928 | 12,084 | 20,115 |
| Japan | 71,582 | 332,602 | 140,704 | 279,860 | 481,771 |
| Philippine Islands | ... | ... | ... | 135 | ... |
| Total | 85,253 | 356,390 | 156,372 | 292,079 | 501,886 |

The wool exported to the East by the several States during 1907 was as follows:—New South Wales, £354,433; Victoria, £101,273; Queensland, £46,180.

§ 7. Trade of Commonwealth since Federation.

1. **Classified Summary of Australian Trade.**—The tables hereunder present the trade of the Commonwealth during each of the years 1901 and 1903 to 1907, arranged in classes according to the nature of the goods.

It was long ago pointed out¹ that the statistical presentation of imports and exports would be increased in value by being properly arranged under categories (classes and orders). The following arrangement has been adopted, viz. :—

STATISTICAL CLASSIFICATION OF IMPORTS AND EXPORTS.

| Class. | Articles. |
|--------|--|
| I. | FOODSTUFFS of animal origin, excluding, however, living animals. |
| II. | FOODSTUFFS of vegetable origin, and common salt. |
| III. | BEVERAGES, non-alcoholic only, and the substances used in making them. |
| IV. | SPIRITS AND ALCOHOLIC LIQUORS, including spirits for industrial purposes, and such pharmaceutical preparations as are dutiable as spirits. |
| V. | TOBACCO, and all preparations thereof. |
| VI. | LIVE ANIMALS. |
| VII. | ANIMAL SUBSTANCES, mainly unmanufactured, which are not foodstuffs. |
| VIII. | VEGETABLE SUBSTANCES and non-manufactured fibres. |
| IX. | APPAREL, TEXTILES, and various manufactured fibres. |
| X. | OILS, FATS, AND WAXES. |
| XI. | PAINTS AND VARNISHES. |
| XII. | STONES AND MINERALS, used industrially. |
| XIII. | SPECIE, gold, silver, and bronze. |
| XIV. | METALS, UNMANUFACTURED, and ores. |
| XV. | METALS, PARTLY MANUFACTURED. |
| XVI. | METALS, MANUFACTURED, including machinery. |
| XVII. | LEATHER AND MANUFACTURES of leather, together with all substitutes thereof, and also INDIARUBBER AND INDIARUBBER MANUFACTURES. |
| XVIII. | WOOD AND WICKER, both raw and manufactured. |
| XIX. | EARTHENWARE, CEMENTS, CHINA, GLASS AND STONWARE. |
| XX. | PAPER AND STATIONERY. |
| XXI. | JEWELLERY, TIMEPIECES, AND FANCY GOODS. |
| XXII. | OPTICAL, SURGICAL, AND SCIENTIFIC INSTRUMENTS. |
| XXIII. | DRUGS, CHEMICALS, AND FERTILISERS. |
| XXIV. | MISCELLANEOUS. |

IMPORTS ARRANGED IN CLASSES, 1901 and 1903 to 1907.

| Classes. | 1901. | 1903. | 1904. | 1905. | 1906. | 1907. |

| Grand total ... | 42,433,811 | 37,811,471 | 37,020,842 | 38,346,731 | 44,744,912 | 51,809,033 |

1. By R. M. Johnston, I.S.O., the Statistician of the State of Tasmania.

The exports are shewn according to the same classification, and the usual distinction is made between exports of Australian produce and re-exports. It will be seen what a small proportion of the total exports is made up by re-exports, and that more than one-half of the latter consists of specie:—

**EXPORTS ARRANGED IN CLASSES, AND DISTRIBUTING AUSTRALIAN PRODUCE
AND THE PRODUCE OF OTHER COUNTRIES, 1901 and 1903 to 1907.**

| Classes. | 1901. | 1903. | 1904. | 1905. | 1906. | 1907. |

2. **Imports of Bullion and Specie.**—Of the total imports of bullion and specie into the Commonwealth during 1907, 77.78 per cent. was in the form of gold bullion, and was received almost entirely from New Zealand for the purpose of minting.

3. **Exports of Bullion and Specie.**—Of the total exports of bullion and specie during 1907 gold represented 89.92 per cent., 56.60 per cent. being in the form of specie, and 33.32 per cent. bullion.

The countries which appear as the largest recipients of gold from Australia are the United Kingdom, Ceylon, India, and the United States of America, in the order named, but as large amounts of gold, recorded as exported to Ceylon, are shipped *under option*, and may be despatched thence to any country needing gold, the actual amount sent to each country cannot be stated.

§ 9. Effects of Prices on the Values of Exports.

1. **Significance of Price in Totals.**—In comparing the value of exports from, and also imports into, any country for a series of years the question naturally arises as to how much any variation in the aggregate value is due to fluctuations in prices, and how much to increase or decrease of actual quantities, for, in aggregates expressed only in value—the only possible method when the commodities differ—the two sources of variation are confused.

The scheme of comparison followed hereinafter is that of the British Board of Trade. This is to select all such articles of export as are recorded by units of quantity, and to apply to the quantities exported during each year the average price per unit ruling in some year, arbitrarily taken for the purposes of comparison as the basic year. The ratio which the total actually recorded for the year under review bears to the total obtained by applying to the quantities of the year under review, the average prices ruling during the basic year, may be called the "price-level" of the latter—as compared with the former—for the group of commodities considered, and may be taken (so it is assumed in the method of the British Board of Trade) as a measure of the effect of the change of price in the intervening period. Since the value of the articles used in the calculations represents as much as 85.6 per cent. of all exports during 1907—after excluding specie and gold bullion, which are not subject to price changes—a fairly extended basis, on which an estimate of the effect of prices over the full range of exports can be founded, is afforded.¹

2. **Effect of Prices.**—The following table shews the values of exports as actually recorded in each year, together with the values computed on the assumption that the prices of 1901 were maintained.² The table also shews the yearly "price-levels," based upon the results so ascertained.

This table obviously furnishes a measure of the influence of prices on the value of exports of each year since 1901. Column IV., viz., values computed on 1901 prices, represents the volume of exports (less specie and gold bullion), expressed in the common denominator, viz., the currency unit, and from the figures therein it will be seen that, had the prices of 1901 remained constant, the value of the exports during the year 1907, for example, would have been £47,289,306 only, instead of £61,902,383, viz., the value actually recorded. The difference between these amounts, viz., £14,613,077, results from rise of prices,¹ viz., from the group advance of 30.9 per cent. in the price of commodities in the period intervening between 1901 and 1907.

EFFECT OF PRICES AND PRICE-LEVELS FOR THE PERIOD 1901 to 1907

(BASIC YEAR, 1901).

| Year. | Exports of Specie and Gold Bullion. | Other Exports. | | Total Exports (including Specie and Bullion). | | Price Levels, ³ Year 1901 = 100. |
|----------|-------------------------------------|---------------------|---------------------------------|---|---------------------------------|---|
| | | Values as Recorded. | Values Computed on 1901 Prices. | Values as Recorded. | Values Computed on 1901 Prices. | |
| I. | II. £ | III. £ | IV. £ | V. £ | VI. £ | VII. |
| 1901 ... | 14,338,434 | 35,357,738 | 35,357,738 | 49,696,172 | 49,696,172 | 1000 |
| 1902 ... | 14,567,500 | 29,347,587 | 27,375,976 | 43,915,087 | 41,943,476 | 1072 |
| 1903 ... | 18,408,702 | 29,841,410 | 26,697,120 | 48,250,112 | 45,105,822 | 1118 |
| 1904 ... | 16,914,691 | 40,571,224 | 36,139,840 | 57,485,915 | 53,054,531 | 1123 |
| 1905 ... | 10,977,111 | 45,863,924 | 38,465,210 | 56,841,035 | 49,442,321 | 1192 |
| 1906 ... | 16,895,059 | 52,842,704 | 42,295,310 | 69,737,763 | 59,190,369 | 1249 |
| 1907 ... | 10,921,864 | 61,902,383 | 47,289,306 | 72,824,247 | 58,211,170 | 1309 |

1. This basis is thus subject only to the limitations of the fundamental assumption and to its limitation to 85.6 per cent. of the total.
2. The method of the British Board of Trade is clearly valid for certain purposes, and is adopted because it widens the field of comparison. It is not, however, universally valid.
3. These are index numbers for the total group of exports, excluding specie and gold bullion.

3. **Influence of Quantity and Price on Total Increased Value of Exports.**—The estimated actual and relative effects of the influence of—(i.) increase or decrease in the exports of specie and gold bullion, (ii.) increase or decrease of *quantities* of other exports, (iii.) variation of prices on the value of the exports, of each year compared with 1901 is shown below :—

ANALYSIS OF INFLUENCE OF QUANTITY AND PRICE ON INCREASE OR DECREASE IN EXPORTS, 1902 to 1907, COMPARED WITH 1901.

| Year. | Particulars. | Variation above (+) or below (−) 1901 Exports due to change in :— | | | Total Variation above (+) or below (−) Value of 1901 Exports. |
|-------|--|---|---|--|---|

| | variation taken as 100 | +17.83 | +19.62 | +24.94 | +40.32 |
| | Variation, per cent. | | | | |
| 1907. | Variation, actual £ | −3,416,570 | +11,931,568 | +14,618,077 | +23,128,075 |
| | Relative magnitude of variation. Total | −15 | +52 | +63 | +100 |
| | variation taken as 100 | −23.83 | +33.75 | +30.90 | +46.56 |
| | Variation, per cent. | | | | |

1. On the fundamental assumption.

From the above figures it will be seen that the exports of 1907, for example, as compared with 1901, shew a decrease of 23.83 per cent. in specie and gold bullion, an increase of 33.75 per cent. in the quantities of other exports, and an increase of 30.90 per cent. in the group-prices for all exports, excluding specie and gold bullion. These aggregate to 46.56 per cent., or absolutely £23,128,075. Thus, of this total increase, £11,931,568, or 52 per cent., was due to increased quantities of other exports, and £14,613,077, or 63 per cent., was due to increased prices, while the exports of specie and gold bullion decreased by £3,416,570.

§ 10. External Trade of Australia and other Countries.

1. Essentials of Comparisons.—Direct comparisons of the external trade of any two countries are possible only when the general conditions prevailing therein, and the scheme of recording, are sensibly identical. For example, in regard to the mere matter of record, it may be observed that in one country the value of imports may be the value at the port of shipment, while in another the cost of freight, insurance, and charges may be added thereto. Or again, the values of imports and exports in the one may be declared by merchants, whereas in the other they may be the official prices, fixed from time to time by a commission constituted for the purpose. The figures relating to the external trade of any country are also affected in varying degree by the extent to which they include transit or re-export trade. Including bullion and specie, the transit trade of Belgium, for example, represents 41.93 per cent. of the gross trade recorded: of Switzerland, 32.97 per cent.; of France, 20.29 per cent., and of the United Kingdom, 24.56 per cent., whereas in Australia the same element represents only 6 per cent., and in New Zealand even less.

2. "Special Trade" of Various Countries.—Special trade may be defined, agreeably to the practice of the British Board of Trade, as (a) imports entered for consumption in the country (as distinguished from imports for transshipment or re-export), and (b) exports of domestic products.

In the following table the figures relate, as nearly as is possible, to imports entered for consumption in the various countries quoted, and to exports of their domestic products. It is to be noted, however, that these figures do not unequivocally denote the same thing throughout, since, in the United Kingdom and other manufacturing countries, raw or partly manufactured materials are imported as for home consumption, and, after undergoing some process of manufacture or further modification, are re-exported as domestic production, and further, the statistical records of many countries do not distinguish between bullion and specie imported for the use of the particular country (*home consumption*) and the amount in transit, nor between the exports of that produced within the country and that re-exported. Nevertheless a comparison of this character reveals approximately the extent of the external trade which otherwise would not be manifest

From the following table it may be seen that, for the particular years indicated, the value of the total trade per inhabitant was greatest in New Zealand (£40 Os. 9d. per head); the next country in order of value per inhabitant was Belgium (£30 13s. 3d. per head), followed closely by Switzerland (£30 12s. 2d. per head). Australia comes fourth (£28 10s. 10d. per head), and is some way in advance of the next country, viz., the United Kingdom (£22 6s. 5d. per head):—

TRADE OF VARIOUS COUNTRIES (IMPORTS FOR HOME CONSUMPTION AND EXPORTS OF DOMESTIC PRODUCTS, INCLUDING BULLION AND SPECIE), FOR LATEST AVAILABLE YEAR.

* Official values are said to be 25 per cent. below real values.

3. External Trade as a Measure of Prosperity.—External trade as a measure of prosperity is by no means unequivocal. Comparisons can be accepted as furnishing satisfactory indications of the relative progress or welfare of different countries, only when taken together with all other facts that should be considered in this connection. It is, for example, obvious that the external trade of a community depends not only upon the aggregate of its requirements, but also upon the extent to which it fails to supply requirements from its own resources. A community largely self-contained, for example, may have but a small external trade per head, and yet, by virtue of its capacity to produce and manufacture its own raw material, may actually enjoy greater prosperity and a higher standard of living than another country whose external trade per head is much greater. The same observation applies equally to comparisons of the trade of the same country at different periods. A young country, the industries and export trade of which are mainly connected with raw or natural products, may, for example, through internal development, find the growth of its external trade diminishing per head of population without necessarily suffering any real diminution in the well-being of its people. And it is further obvious that circumstances may arise when enlargement of both imports and exports is actually a consequence of economic difficulties. For example, in 1903, owing to shortage in the local supply, it became necessary to *import* wheat and flour into Australia to the value of £2,556,968, and to meet the charges for this by equivalent *exports*, the effect, considered *per se*, being to enlarge both. In this case, however, the increase is not an evidence of economic progress.

4. Australian Trade Evidence of Prosperity.—Despite the above suggestions regarding the necessity of caution, so as to avoid hasty inferences based upon aggregate trade, a consideration of its general characteristics over a number of years, and of its marked development will suffice to show that Australian affairs are progressing rapidly and most favourably, especially when it is taken into account that there are no counterbalancing elements of disadvantage.

§ 11. Trade of the United Kingdom with Australia. Has it been Diverted?

1. **General.**—The question has been raised at times whether there be a diversion of the trade of the United Kingdom with Australia, and this question has naturally become during recent years one of more than ordinary interest with publicists in both countries. The Advisory Committee on Commercial Intelligence of the British Board of Trade considered the matter of such importance that in June, 1905, Mr. R. J. Jeffray was sent to Australia as a Commissioner to investigate the conditions and prospects of British trade therewith, and with a view to improving the trade between the Commonwealth and the United Kingdom, Mr. C. H. Wickes, Commissioner of the British Board of Trade, arrived in Australia in December, 1908, for the purpose of advising British manufacturers of the particular requirements of the Australian markets. To thoroughly treat the various changes in the character and volume of the import trade from Great Britain, and from her more important competitors, viz., the United States of America and Germany, would require more space than can be spared in this volume, so that attention must perforce be restricted to the most important features of the question at issue.

2. **Proportion of Trade from United Kingdom.**—The percentages given in the following table shew the proportions of the imports into Australia from the United Kingdom, and from the other countries mentioned, during each of the years 1886 to 1907:—

PROPORTION OF IMPORT TRADE FROM THE UNDERMENTIONED COUNTRIES,
1886 TO 1907.

| Year. | Percentage Proportions from— | | | | | Year. | Percentage Proportions from— | | | | |
|-------|------------------------------|------------------|---------|----------------|------------------------|-------|------------------------------|------------------|---------|----------------|------------------------|
| | United K'dom. | British Poss'ns. | Germ'y. | United States. | Total Foreign C'tries. | | United K'dom. | British Poss'ns. | Germ'y. | United States. | Total Foreign C'tries. |
| 1886 | 73.37 | 11.23 | 2.05 | 6.11 | 15.40 | 1897 | 66.22 | 10.72 | 5.75 | 10.10 | 23.06 |
| 1887 | 72.26 | 12.50 | 2.23 | 5.37 | 15.24 | 1898 | 66.62 | 10.88 | 5.86 | 10.16 | 22.50 |
| 1888 | 71.62 | 12.03 | 2.71 | 6.48 | 16.35 | 1899 | 61.85 | 11.75 | 6.07 | 13.00 | 26.40 |
| 1889 | 68.98 | 13.45 | 3.65 | 6.67 | 17.57 | 1900 | 61.28 | 11.28 | 6.54 | 12.16 | 27.44 |
| 1890 | 68.08 | 12.66 | 4.77 | 6.54 | 19.26 | 1901 | 59.47 | 11.22 | 6.59 | 13.80 | 29.31 |
| 1891 | 70.15 | 11.40 | 4.53 | 6.79 | 18.45 | 1902 | 58.64 | 13.22 | 6.53 | 12.27 | 28.14 |
| 1892 | 70.74 | 11.37 | 4.32 | 6.04 | 17.89 | 1903 | 52.51 | 13.17 | 6.24 | 16.84 | 34.32 |
| 1893 | 72.78 | 12.14 | 3.40 | 4.98 | 15.08 | 1904 | 60.63 | 12.22 | 7.17 | 12.40 | 27.10 |
| 1894 | 71.92 | 11.96 | 3.78 | 5.39 | 16.12 | 1905 | 60.17 | 14.04 | 6.42 | 11.70 | 25.79 |
| 1895 | 71.62 | 11.46 | 4.42 | 5.95 | 16.92 | 1906 | 59.39 | 15.09 | 7.16 | 10.36 | 25.52 |
| 1896 | 68.28 | 10.74 | 5.31 | 8.59 | 20.98 | 1907 | 61.59 | 12.93 | 6.85 | 11.33 | 25.48 |

In order to draw accurate conclusions from the above table, however, special attention must be given to the nature of imports from the United States, since the imports from that country have in some years been increased by imports of breadstuffs, a trade in which the United Kingdom could not participate. The years affected by the imports of breadstuffs were 1886, 1889, 1896, 1897, and 1903. Increased imports of such items as kerosene oil and timber also tend to increase the proportion of imports from the United States without any prejudicial effect on the trade of the United Kingdom. Similar modification is not necessary in regard to Germany, as the nature of the imports from that country is substantially the same as from the United Kingdom.

It has already been pointed out in this chapter that, prior to the year 1905, imports into the Commonwealth were recorded only against the country whence they were directly imported. Although the values of direct imports do not afford satisfactory data, it is necessary for any comparison extending further back than 1905 to use such figures. These figures are unsatisfactory on account of the varying proportions of indirect trade.

In order to furnish a comparison free from the influence of such trade, as from its nature is not open to the United Kingdom, the following table shewing the direct imports during the years 1886, 1906, and 1907 of the principal classes of goods which enter largely into the trade of the countries named has been prepared. It may be mentioned that the imports for the year 1886 were extracted from the "Statistical Registers" of the several States for a comparison—published in a previous issue—with the year 1906, and as their compilation involved a large amount of labour they are again utilised for comparison with the year 1907:—

PRINCIPAL DIRECT IMPORTS FROM THE UNITED KINGDOM, GERMANY AND THE UNITED STATES. 1886, 1906 and 1907.

| Nature of Imports. | Year. | United Kingdom. | Germany. | United States. | All Countries. |

| | 1907 | 73.66 | 8.01 | 12.46 | 100 |
| Total above-mentioned imports | 1886 | 89.24 | 1.67 | 3.06 | 100 |
| | 1906 | 71.89 | 7.97 | 7.92 | 100 |
| | 1907 | 72.52 | 7.54 | 8.45 | 100 |
| Increase— | | | | | |
| 1906 over 1886 | ... | 18.03 | 27.53 | 22.99 | 100 |
| 1907 over 1886 | ... | 42.90 | 17.96 | 18.03 | 100 |
| 1907 over 1906 | ... | 76.11 | 5.16 | 11.37 | 100 |
| Total imports | 1886 | 73.37 | 2.05 | 6.11 | 100 |
| | 1906 | 59.39 | 7.16 | 10.36 | 100 |
| | 1907 | 61.59 | 6.85 | 11.33 | 100 |
| Increase— | | | | | |
| 1906 over 1886 | ... | 14.18 | 23.71 | 24.10 | 100 |
| 1907 over 1886 | ... | 38.74 | 16.18 | 21.45 | 100 |
| 1907 over 1906 | ... | 75.46 | 4.94 | 17.49 | 100 |

The foregoing table might have appeared to justify the inference that, of the total increase (£7,250,811) in the value of imports of the particular classes named in 1906, as compared with 1886, the sum of £1,307,267, or 18.03 per cent., belonged to the United Kingdom; £1,996,509, or 27.53 per cent., to Germany; and £1,667,096, or 22.99 per cent., to the United States. Similarly of the increase (£5,427,951) in the same trade in 1907 over 1906, it would appear that the United Kingdom has secured £4,130,782, or 76.11 per cent.; Germany, £280,058, or 5.16 per cent.; and the United States £618,264, or 11.37 per cent.

Turning, however, to the following table, in which the imports are related to the particular country of manufacture or production, it is shewn that any conclusion drawn

from the records of direct imports would be misleading in regard to the distribution of the increased trade last referred to.

In the next table it is shewn that, of the increase in 1907 over 1906 above referred to, viz., £5,427,951, the United Kingdom secured only £2,843,095, or 52.38 per cent., while Germany's share is increased to £615,533, or 11.34 per cent., and that of the United States is £612,513, or 11.28 per cent.

From the foregoing it is evident that no reliable conclusion in regard to any diversion of trade can be drawn from the records of direct imports; consequently attention must be confined to recent years if a just conclusion is to be reached, and for this reason the following table has been prepared:—

IMPORTS INTO THE COMMONWEALTH OF PRODUCTS OR MANUFACTURES OF THE UNITED KINGDOM, GERMANY, AND THE UNITED STATES OF AMERICA IMPORTED DURING THE YEARS 1905, 1906, and 1907.

| Nature of Imports. | Year. | United Kingdom. | Germany. | United States. | All Countries. |
|---|-------|-----------------|-----------|----------------|----------------|
| | | £ | £ | £ | £ |
| Animal foods ... | 1905 | 153,305 | 6,951 | 154,007 | 686,031 |
| | 1906 | 175,077 | 9,224 | 164,734 | 697,830 |

3. Significance of Increase of Trade with other Countries.—It has been suggested that the larger proportion of imports now received from foreign countries is due to the establishment and increase of direct shipping with the countries concerned, and that trade formerly received through English ports is now received direct. From the Australian records it is impossible to ascertain the value of the indirect trade with foreign countries through the United Kingdom prior to 1905. The returns of the British Board of Trade, however, shew the exports from the United Kingdom to Australia of foreign and colonial products distinct from the domestic exports, and from this source the table hereunder has been compiled.

It is proper here to mention that, taken in quinquennial periods, the values of the total exports from the United Kingdom to Australia—after making allowance for freight and charges—are in very close agreement with the corresponding import values recorded in this country. The figures for the period 1903 to 1907 are almost identical.

VALUE OF MERCHANDISE AND BULLION AND SPECIE DESPATCHED FROM THE UNITED KINGDOM TO AUSTRALIA, 1888 to 1907.

| Years. | Merchandise. | | | Bullion and Specie. | Total. | Percentage Proportion of Foreign and Colonial Produce. |
|---------------|-------------------------|-------------------------------|-------------------------|---------------------|------------|--|
| | United Kingdom Produce. | Foreign and Colonial Produce. | | | | |
| | | Re-exported. | Transhipped under Bond. | | | |
| £ | £ | £ | £ | £ | | |
| 1888-1892 ... | 19,943,394 | 2,281,589 | 802,802 | 70,317 | 23,098,102 | 13.35 |
| 1893-1897 ... | 14,822,762 | 1,710,129 | 547,784 | 414,403 | 17,495,078 | 12.91 |
| 1898-1902 ... | 19,500,929 | 1,966,731 | 442,279 | 153,347 | 22,063,286 | 10.92 |
| 1903-1907 ... | 18,959,481 | 2,515,548 | 998,098 | 133,330 | 22,606,457 | 15.54 |

From the above table it will be seen that the value and the proportion of foreign goods despatched to Australia through the United Kingdom during the last quinquennium is greater than in the period 1888-92. During the quinquennium 1888-92 the value of foreign and colonial produce despatched from the United Kingdom to Australia was £3,084,391, equal to 13.35 per cent. of all goods so despatched, while during the period 1903-7 the corresponding amount was £3,513,646, or 15.54 per cent. It is therefore apparent that the increase of direct imports from foreign countries has not been, in the aggregate, at the expense of the indirect trade via Great Britain.

§ 12. Customs Tariff 1908.

The primary object of the introduction of a new tariff was to afford increased protection to Australian industries. The Act also provides a tariff of preferential rates as against the general tariff rates on certain goods "the produce or manufacture of the United Kingdom, which are shipped in the United Kingdom to Australia and not transhipped, or if transhipped, then only if it is proved to the satisfaction of the Collector (of Customs) that the goods have not, since they were shipped in the United Kingdom, been subjected to any process of manufacture."

The following tables shew as nearly as possible the results which would be obtained by applying to the imports of 1907 the rates of duty imposed under the tariffs of 1902 and 1908 respectively. Some items which were, under the 1902 tariff, subject to a certain rate of duty, have, under the 1908 tariff, been subdivided and made subject to various rates of duty. It has therefore been necessary to estimate the value of these several subdivisions before applying the new rates, but as the value of these items is relatively small the effect of any error in the estimates in relation to classes of goods would be negligible.

The passage of the Tariff Act of 1908 is too recent to admit of any assured estimate of its effects, or of the consequences of the preference in favour of the United Kingdom. The following table, however, while it must furnish results necessarily differing from the actual results for 1908 when to hand, will afford the best comparative indication possible of the magnitude of the tariff changes. The basis chosen for making the comparison is that furnished by the latest trade returns available (1907):—

TOTAL IMPORTS.—COMPARISONS OF TARIFFS FOR 1902 AND 1908 APPLIED TO TOTAL IMPORTS DURING 1907.

| Class.* | Value of Imports, 1907. | Under Tariff of 1902. | | | | | Under Tariff of 1908. | | | |
|---------|-------------------------|-----------------------|-----------------------------|---|---------------|------------|-----------------------|-----------------------------|---|---------------|
| | | Dutiable Imports. | | Equivalent <i>ad val.</i> rate of Duty. | | | Dutiable Imports. | | Equivalent <i>ad val.</i> rate of Duty. | |
| | | Value. | Per cent. on Total Imports. | On Dutiable Goods. | On all Goods. | | Value. | Per cent. on Total Imports. | On Dutiable Goods. | On all Goods. |

* Less bullion and specie. † Imports other than produce of U.K. ‡ Similar imports of the United Kingdom origin are admitted free under preference tariff, or at a rate of duty lower than the general rate. § Dutiable at rates similar to those on goods of U.K. origin. ¶ For description of classes see page 616.

In order to facilitate the interpretation of the foregoing tables the following synopsis of the changes made in the rates of duty on the various classes of goods is appended:—

SYNOPSIS OF THE PRINCIPAL DIFFERENCES BETWEEN THE TARIFF OF 1908 AND THE TARIFF OF 1902 AND AMENDMENTS AS APPLIED TO THE CLASSIFIED DIVISIONS OF COMMODITIES IMPORTED INTO THE COMMONWEALTH DURING 1907.

CLASS I.—FOODSTUFFS OF ANIMAL ORIGIN.

General Comparisons. Under Class I. the total value of imports during 1907 was £688,642. Under the 1902 tariff £58,995 (8.58 per cent.) of this total would have been free, but under the tariff of 1908 the value of free goods would fall to £51,307 (7.47 per cent.) The average rate of duty on dutiable goods has been raised from an equivalent *ad valorem* rate of 20.33 per cent. to 26.55 per cent., thus increasing the average rate of duty on the total imports of the class from 18.59 to 24.57 per cent.

Preference to United Kingdom. The value of foodstuffs of animal origin, the produce of the United Kingdom imported during 1907, amounted to £177,767. Preference equal to 25 per cent. of the duty against other countries is given to the United Kingdom

on preserved and concentrated milk, though the preference rate under the 1908 tariff is 50 per cent. higher than the tariff of 1902, viz., 1½d. per lb. as against 1d. per lb. Preserved and concentrated milk of United Kingdom origin amounting to 718,521 lbs., valued at £13,727, was imported during 1907. The advantage of the preference tariff on such a consignment as against the duty on a similar consignment from foreign countries would amount to £1497. On all *dutiable* goods within this class, being the produce of the United Kingdom, the average equivalent *ad valorem* rate has been raised from 23.54 to 25.20 per cent., thus raising the duty on all goods (*dutiable* and free) of United Kingdom origin within the class from 23.24 per cent. to 24.90 per cent.

CLASS II.—FOODSTUFFS OF VEGETABLE ORIGIN AND SALT.

General Comparisons. During 1907, imports of this class amounted to £1,574,933. Under the 1902 tariff £65,881 (4.18 per cent.) of this would have been free, while, by the addition of sago and tapioca to the free list, under the 1908 tariff, free goods would amount to £130,789 (8.30 per cent.). The average rate of duty on *dutiable* goods in this class has been raised from an equivalent average *ad valorem* rate of 36.58 per cent. to 42.38 per cent., the rates on all goods within the class rising from 35.06 per cent. to 38.86 per cent.

Preference to United Kingdom. The value of the imports of the produce of the United Kingdom within this class during 1907 was £493,382, of which £244,539 is favoured by preference equal to a reduction of the general tariff rates by 27.8 per cent., so affording relief of duty to the amount of £19,667 as compared with similar imports from foreign countries. The average *ad valorem* rates on these goods are respectively:—General tariff, 28.92 per cent.; preference tariff 20.88 per cent. Notwithstanding this preference the rates of duty against the United Kingdom have been raised from an equivalent average *ad valorem* rate of 22.61 per cent. to 27.84 per cent. on *dutiable* goods, and from 20.26 per cent. to 24.89 per cent. on all goods within the class.

CLASS III.—BEVERAGES (NON-ALCOHOLIC) AND SUBSTANCES USED IN MAKING.

General Comparisons. The value of the imports in this class in 1907 was £1,549,785. The most important item of the class is tea, which represented £1,152,727. Under the 1902 tariff tea was entirely free, whereas under the 1908 tariff a duty of 1d. per lb. is imposed on tea imported in packets not exceeding 20 lbs. in weight. The value of free goods within the class was, under the 1902 tariff, £1,200,047 (77.43 per cent.), and under the 1908 tariff £1,179,170 (76.08 per cent.). The equivalent average *ad valorem* rate on *dutiable* goods has been raised from 15.24 per cent. to 20.07 per cent., and on the total of the class from 3.44 per cent. to 4.80 per cent.

Preference to United Kingdom. This class contains a small proportion only of the produce of the United Kingdom, the amount, during 1907, being £186,059, of which £150,973 was cocoa and chocolate. A preference of ½d. per lb. is given to the United Kingdom on cocoa shells, nibs, etc., under the 1908 tariff, though these preference rates are much higher than the general rates previously existing.

CLASS IV.—SPIRITS AND ALCOHOLIC LIQUORS, INCLUDING INDUSTRIAL SPIRITS AND PHARMACEUTICAL PREPARATIONS, DUTIABLE AS SPIRITS.

Previous tariff remains unchanged. There are no free goods or preference rates in this class.

CLASS V.—TOBACCO AND PREPARATIONS THEREOF.

General Comparisons. The following changes have been made in the rates of duty on tobacco:—Tobacco manufactured, from 3s. 3d. per lb. to 3s. 6d. per lb. and to 3s. 9d. when cut; tobacco unmanufactured, from a general rate of 1s. 6d. per lb. to 1s. 6d. per

lb. on unstemmed and 2s. per lb. on stemmed or partly stemmed or in strips when cleared to be locally manufactured into tobacco or cigarettes, and 2s. 6d. on unstemmed and 3s. on stemmed or partly stemmed or in strips when cleared to be manufactured into cigars. The duty on cigars has also been increased by 1s. 3d. per lb. The general effect of these increases is to raise the average equivalent *ad valorem* rate of duty from 169.75 per cent. to 180.50 per cent.

There are neither free goods nor preference rates in this class.

CLASS VI.—ANIMALS, LIVING.

General Comparisons. Under the tariff of 1902 living animals were all free. Under the tariff of 1908 the following duties were imposed:—Horses and cattle, not for stud purposes, 10s. each; pigs, 5s. each, and sheep, not for breeding purposes, 2s. each.

CLASS VII.—ANIMAL SUBSTANCES MAINLY UNMANUFACTURED WHICH ARE NOT FOODSTUFFS.

General Comparisons. The value of the goods of this class imported during 1907 amounted to £576,054. Under the 1902 tariff £427,267 (74.18 per cent.) would have been free but, by the imposition of duty on certain yarns, formerly free, the free goods under the 1908 tariff would fall to £401,604 (70.24 per cent.) The dutiable articles in this class are:—Feathers, undressed; gelatine, sheet; glue, gelatine and cements; hair, curled; and yarns; and the average equivalent *ad valorem* rate of duty on these goods has been increased from 10.29 per cent. to 12.01 per cent., the duty on the total of the class being similarly raised from 2.66 per cent. to 3.58 per cent.

Preference to United Kingdom. The value of the produce of the United Kingdom of this class of goods imported during 1907 amounted to £155,881, of which £113,917 was favoured by preference, £29,826 worth of yarn being free as against a 5 per cent. duty on similar goods from other countries, while the remaining £84,091 enjoys a preference equal to 35.20 per cent. of the general tariff, the average rates being respectively:—General rate, 14.19 per cent.; preference rate, 9.19 per cent. The value of the preference to the United Kingdom in this class of goods amounts to £5689, as compared with the duty on similar goods from other countries. The average *ad valorem* rate of duty on *dutiable* goods of the United Kingdom in this class has been raised from 8.71 per cent. under the 1902 tariff to 9.68 per cent. under the tariff of 1908, and the corresponding rate on all goods of the United Kingdom in the class from 4.85 per cent. to 6.12 per cent.

CLASS VIII.—VEGETABLE SUBSTANCES AND NON-MANUFACTURED FIBRES.

General Comparisons. The value of imports in this class during 1907 amounted to £863,603. Under the 1902 tariff £833,587 (96.52 per cent.) would have been free, but under the 1908 tariff the value of free goods would be reduced to £756,811 (87.64 per cent.). The reduction of the value of free goods is due to the imposition of a duty of 1s. per lb. on small corks (up to 8-oz. bottles, bungs and rings; and 6d. per lb. on other corks.

The high average *ad valorem* rate of duty on the dutiable goods of this class is due to the duty on starch, which, under the 1902 tariff, was 2d. per lb., equivalent to an *ad valorem* rate of 85 per cent. Under the general tariff of 1908 the duty on foreign starch has been raised to 2½d. per lb. The very marked difference between the average *ad valorem* rates of duty on dutiable goods of the United Kingdom—60.17 per cent.—and dutiable goods from other countries—31.50 per cent.—is due to the fact that 83 per cent. of the starch imported during 1907 was the produce of the United Kingdom. The average equivalent *ad valorem* rate on all *dutiable* goods in this class has been reduced from 46.15 per cent. under the 1902 tariff to 36.54 per cent. under the tariff of 1908. This result is not due to any reduction of duties, but to the introduction of corks, which were free under the 1902 tariff, into the dutiable class, under

the 1908 tariff, at an *ad valorem* rate below the previous average. The average rate on imports of this class has been raised from 1.60 per cent. to 4.52 per cent.

Preference to United Kingdom. The value of vegetable substances of United Kingdom origin imported during 1907 amounted to £92,158. Preference of $\frac{1}{2}$ d. per lb., equal to 20 per cent. of the general tariff rate, is given on starch manufactured in the United Kingdom. On the 1,097,546 lbs. of this starch, valued at £11,134, the value of the preference would amount to £2287. The average *ad valorem* rates of duty on the produce of the United Kingdom which are subject to duty has been reduced from 72.67 per cent. under the tariff of 1902 to 60.17 per cent. under the tariff of 1908 (see explanation in previous paragraph), while the rates on all produce of the United Kingdom within the class have been raised from 10.23 per cent. to 12.25 per cent.

CLASS IX.—APPAREL, TEXTILES, AND MANUFACTURED FIBRES.

General Comparisons. The imports under this class during 1907 amounted to £15,367,604. Of this total the value of free goods under the 1902 tariff would have been £2,518,935 (16.40 per cent.), and although duty has been imposed on a small amount of goods which were formerly free, the total value of free goods under the 1908 tariff has been increased to £6,006,838, or 39.06 per cent. of the total class. This increase of free goods is due to the removal of duties under the preference provisions referred to below. The rate of duty on dutiable goods has been increased from an average equivalent *ad valorem* rate of 14.09 per cent. under the 1902 tariff to 22.88 per cent. under the tariff of 1908. The rate on all goods in the class has increased from 11.78 per cent. to 13.93 per cent.

Preference to United Kingdom. The produce of the United Kingdom within this class imported during 1907 amounted to £9,900,952. Of these goods £929,072 would be free under the general tariff, and £3,500,170 would be free under preference conditions, while similar goods from other countries—amounting to £417,529 in 1907—would pay a duty of 5 per cent. Further preference equal to $17\frac{1}{2}$ per cent. of the average general tariff rate is granted to the United Kingdom on goods to the value of £5,280,127. The value of similar goods of foreign countries imported during 1907 was £3,404,696. The average rates on these goods are respectively:—General rate, 28.91 per cent.; preference rate, 23.82 per cent. Thus in this class the United Kingdom is favoured by preference on trade already secured by her to the value of £8,780,297, representing an advantage of £443,518 in duty, as compared with similar goods of other countries, and is further favoured by the foregoing preference rate in her competition for that portion of the same trade, amounting to £3,822,225 in 1907, which was supplied by foreign countries. The average rate of duty on *dutiable* goods the produce of the United Kingdom, in this class, has been raised from an average equivalent of 13.16 per cent. to 23.82 per cent., while the rates on all goods of the United Kingdom within the class have been raised from 11.91 per cent. to 13.16 per cent.

CLASS X.—OILS, FATS, AND WAXES.

General Comparisons. The imports of this class during 1907 amounted to £1,192,177. Under the 1902 tariff £656,921 (55.10 per cent.) would have been free, and under the tariff of 1908 £623,606 (52.30 per cent.) would be free. The equivalent *ad valorem* rate of duty on dutiable goods in the class has been raised from 18.71 per cent. to 24.92 per cent., the rates on all goods within the class increasing from 8.40 to 11.89 per cent. The high rate of duty on oils of the United Kingdom as compared with those of foreign countries, viz., 22.40 per cent., as against 10.21 per cent. under the tariff of 1908, is due to kerosene—which is from foreign countries—being free. The value of kerosene imported during 1907 amounted to £499,951, equal to 41.93 per cent. of the total of the class.

Preference to United Kingdom. The imports during 1907 of oils, etc., the produce of the United Kingdom amounted to £164,060. Of this total £25,226 is favoured by

preference rates 22.11 per cent. below the general tariff rates. The average of these rates is respectively:—General tariff, 31.09 per cent.; preference tariff, 24.22 per cent. The value of the preference to the United Kingdom in this class amounts to £1734. The average equivalent *ad valorem* rate of duty against the oils, etc., of the United Kingdom have been raised from 22.40 per cent. to 23.37 on *dutiable* oils, and from 21.33 per cent. to 22.40 on all oils, etc., from the same country.

CLASS XI.—PAINTS AND VARNISHES.

General Comparisons. The value of paints and varnishes imported during 1907 amounted to £445,769. Under the 1902 tariff £26,573 (5.97 per cent.) would have been free, but under the tariff of 1908 the free portion is reduced to £16,473 (3.70 per cent.), all of which is from the United Kingdom and free under preference rates. All foreign goods within this class are subject to duty under the 1908 tariff. The average equivalent *ad valorem* rate on *dutiable* goods of this class has been raised from 10.91 per cent. to 16.32 per cent., and the rates on the total imports of the class from 10.26 to 16.20 per cent.

Preference to United Kingdom. The total imports during 1907 of paints, etc., manufactured in the United Kingdom amounted to £364,288. Under the preference tariff £16,473 of this would be free, while similar paints from foreign countries would pay a duty of 5 per cent. A further preference, equal to 20.24 per cent. of the average general tariff rate, is given on goods to the value of £112,183. These average rates are respectively:—General tariff, 24.07 per cent.; preference tariff, 19.20 per cent. The total value of the preference given in this class to manufactures of the United Kingdom amounts to £6289. The average *ad valorem* rates on paints and varnishes of United Kingdom manufacture subject to duty have been raised from 11.15 per cent. to 17.22 per cent., and the rates on the total imports of the class from 10.63 to 16.45 per cent.

CLASS XII.—STONES AND MINERALS USED INDUSTRIALLY.

General Comparisons. The value of the goods in this class imported during 1907 amounted to £127,372. Under the 1902 tariff £23,377 (18.35 per cent.) of this total would have been free, but by an imposition of 20 per cent. duty on plumbago and 10 per cent. on stone, sawn or in the rough, n.e.i., the free goods have been reduced under the 1908 tariff to £18,751, or 14.72 per cent. of the total. The average equivalent *ad valorem* rate of duty on *dutiable* goods of this class has been raised from 16.47 per cent. to 21.35 per cent., and the rate on all goods within the class from 13.45 per cent. to 18.21 per cent.

Preference to United Kingdom. The total value of the produce of the United Kingdom in this class in 1907 amounted to £59,535. Roofing slates account for £26,615, or 44.70 per cent. of this total, and on this item a preference is given equal to 20 per cent. of the general rate, the respective rates being:—Preference rate, 20 per cent.; general rate, 25 per cent. The value of the preference to the United Kingdom on roofing slates would thus amount to £1331. The duty on roofing slates under the 1902 tariff was 15 per cent. The average equivalent *ad valorem* rate of duty on *dutiable* goods of this class, being the produce of the United Kingdom, has been increased from 16.84 per cent. to 21.10 per cent., and the rate on all United Kingdom goods in the class from 14.89 per cent. to 19.39 per cent.

CLASS XIII.—SPECIE.

CLASS XIV.—METALS (UNMANUFACTURED) AND ORES.

Of the total imports in this class, viz., £1,763,202, gold bullion represents £1,426,827, or 80.92 per cent. This gold is mainly for minting purposes, and is re-exported in the form of specie.

CLASS XV.—METALS (PARTLY MANUFACTURED).

These metals are all free.

NOTE.—In regard to the last-mentioned Classes XIV. and XV., the Tariff Act 1908 makes special provision, inasmuch as it provides (Division VI.A) that duties prescribed in the tariff on certain forms of iron and steel included in the classes mentioned are “to come into operation (and any then existing bonus to cease) on dates to be fixed by proclamation and exempt from duty in the meantime.” The items referred to are:—Iron and Steel.—Scrap iron and steel and pig iron, ingots, blooms, slabs, billets, puddled bars and loops, or like crude manufactures less finished than iron or steel bars, but more advanced than pig iron (except castings); bar, rod, angle, tee, sheet and plate (plain), wire and hoop; iron and steel tubes and pipes, not dutiable in another division of the tariff—duty, 12½ per cent. *ad valorem*. Machinery, machines and parts, mowers, reapers and reapers and binders—duty, 17½ per cent. *ad valorem*.

An Act entitled the Manufactures Encouragement Act, assented to on the 14th December, 1908, provides for the payment, subject to prescribed conditions, of bounties on the manufacture of certain forms of iron and steel as follows:—

| Description of Goods. | Rate of Bounty. | Total Amount which may be authorised. | Date of Expiry of Bounty. |
|---|------------------------|---------------------------------------|---------------------------|
| CLASS I. | | | |
| Pig iron, made from Australian ore... .. | 12s. per ton | £150,000 | 30th June, 1914 |
| Puddled bar iron, made from Australian pig iron | | | |
| Steel, made from Australian pig iron | | | |
| CLASS II. | | | |
| Galvanised sheet or plate iron or steel, made from Australian ore | 10 per cent. on value. | £30,000 | 30th June, 1912 |
| Wire netting, not being prison made and being made from Australian ore or from wire manufactured in the United Kingdom | | | |
| Wire made from Australian ore | | | |
| Iron and steel tubes or pipes (except rivetted or cast) not more than 6 inches internal diameter, made from Australian pig iron or steel | | | |
| ... | | | |

CLASS XVI.—METALS MANUFACTURED, INCLUDING MACHINERY.

General Comparisons. The total imports of manufactured metals during 1907 amounted to £10,531,166. Under the 1902 tariff £4,723,892 (44.85 per cent.) of this total would have been free, while, under the tariff of 1908, the free goods would be £4,448,141, or 42.24 per cent. of the whole. The average equivalent *ad valorem* rate of duty on *dutiable* goods in this class has been raised from 12.71 per cent. under the 1902 tariff to 16.72 per cent. under the tariff of 1908, and the rate on all goods within the class from 7.01 per cent. to 9.66 per cent. These relatively low rates of duty are due to the inclusion of galvanised iron and steel, plate and sheet, which represents 12.87 of the whole class and which is subject to a low *ad valorem* rate of duty. The actual rates imposed on this commodity under the 1908 tariff are:—Corrugated galvanised, preference rate, 20s. per ton; general rate, 30s. per ton; galvanised, not corrugated, preference rate, 10s. per ton; general rate, 20s. per ton.

Preference to United Kingdom. The imports of United Kingdom manufactures of metals during 1907 amounted to £6,767,768. Under the 1908 tariff, preference representing a sum of £196,309 is given to the United Kingdom on goods to the value of £4,462,278, and further favour is given by reduced rate of duty mentioned below in her competition for the balance of the same trade supplied by other countries, which, during 1907, amounted to £1,343,031. The amount of this preference is made up by allowing £680,954 of United Kingdom manufactures to be free, against a 5 per cent. duty on

similar foreign goods, amounting in 1907 to £155,086, and by imposing on United Kingdom goods amounting to £3,781,924 an average equivalent *ad valorem* rate of 14.22 per cent. against a rate equal to 18.51 per cent. on similar goods of other countries to the value of £1,187,995. The average equivalent *ad valorem* rate of duty on *dutiable* goods of the United Kingdom in this class has been raised from 11.63 per cent. under the 1902 tariff to 14.76 per cent. under the 1908 tariff. The rates of duty on all goods of the United Kingdom in the class have been raised from 7.14 per cent. to 9.90 per cent.

CLASS XVII.—LEATHER AND MANUFACTURES OF LEATHER AND SUBSTITUTES THEREFOR, ALSO INDIARUBBER AND INDIARUBBER MANUFACTURES.

(Boots and Shoes are included in Class IX.)

General Comparisons. The value of the imports of goods in this class during 1907 was £1,004,822. The free goods (£265,334) are identical under the tariffs of 1902 and 1908. The average equivalent *ad valorem* rate of duty on *dutiable* goods in this class has been raised from 15.50 per cent. under the 1902 tariff to 20.99 per cent. under the tariff of 1908, thus raising the duty on all goods in the class from 11.40 per cent. to 15.45 per cent.

Preference to United Kingdom. The value of the manufactures of the United Kingdom, in this class, imported during 1907 amounted to £414,302. Of this total, goods to the value of £204,366 are favoured by an average rate 19.58 per cent. below the average rate of duty on similar goods from other countries, the average equivalent *ad valorem* rates being respectively:—General tariff, 25.53 per cent.; and preference tariff, 20.53 per cent. The value of the preference to the United Kingdom in this class represents £10,218. The average equivalent *ad valorem* rate on *dutiable* manufactures of the United Kingdom in this class has been raised from 15.84 per cent. under the 1902 tariff to 21.17 per cent. under the tariff of 1908, thus increasing the rates of all goods in the class of United Kingdom manufacture from 11.69 per cent. to 15.63 per cent.

CLASS XVIII.—WOOD AND WICKER, RAW AND MANUFACTURED.

General Comparisons. The value of the imports of this class during 1907 amounted to £2,100,305. Of this total £555,155 (26.42 per cent.) would have been free under the 1902 tariff, but under the tariff of 1908 the value of free goods would be reduced to £111,249 (5.30 per cent.). This reduction in the value of free goods is very largely due to the imposition of a duty of 6d. per 100 sup. feet on New Zealand pine, undressed. The value of this item imported during 1907 was £388,665. The average rate of duty on *dutiable* imports in this class has been raised from an equivalent *ad valorem* rate of 16.63 per cent. under the 1902 tariff to 17.41 per cent. under the tariff of 1908, the corresponding rates on all imports in the class rising from 12.23 per cent. to 16.48 per cent.

Preference to United Kingdom. The imports of United Kingdom produce is relatively small in this class, amounting to only £149,006, or 7.1 per cent. of the total for 1907. These imports from the United Kingdom are principally furniture and manufactured articles of wood, and to this fact is due the higher average rate of duty compared with the rate on foreign goods in this class. The foreign imports are largely of timber undressed or partially dressed bearing a relatively low *ad valorem* duty. Preference equal to a reduction of 14.66 per cent. of the average general tariff rates, and representing a sum of £5429, is given to the United Kingdom on goods to the value of £107,835 in this class. The average rates on these goods are respectively:—General tariff, 34.33 per cent.; preference tariff, 29.30 per cent. The rates of duty on *dutiable* imports of the United Kingdom of this class have been raised from an equivalent of 19.69 per cent. under the 1902 tariff to 28.36 per cent. under the tariff of 1908, the rates on all imports of United Kingdom produce within the class rising from 14.48 to 21.33 per cent.

CLASS XIX.—EARTHENWARE, CEMENTS, CHINA, GLASS AND STONEWARE.

General Comparisons. The total value of imports under this class during 1907 was £863,849. The value of free goods under the 1908 tariff would be £35,932 (4.16 per cent.), as against £18,243 (2.11 per cent.) under the tariff of 1902. The rates of duty on *dutiable* goods have been raised from an average equivalent *ad valorem* rate of 19.44 per cent. to 22.92 per cent., thus raising the average rates of duty on the total imports of the class from 19.03 per cent. to 21.96 per cent.

Preference to United Kingdom. The value of earthenware, etc., the produce of the United Kingdom imported during 1907 amounted to £399,074, of which under the 1908 tariff £348,379 is favoured by an average preference reduction of 20.3 per cent. on the general rates, representing £18,925 of duty. Notwithstanding this preference, however, the rates of duty have been slightly increased in comparison with the 1902 tariff, the average duty on *dutiable* goods having increased from 20.09 per cent. to 20.60 per cent., and on all imports of the United Kingdom within the class from 19.67 per cent. to 20.16 per cent.

CLASS XX.—PAPER AND STATIONERY.

General Comparisons. The total imports of paper and stationery during 1907 amounted to £2,071,344. Of this total £1,336,390 (64.52 per cent.) would have been free under the 1902 tariff, and under the tariff of 1908 the value of free goods would be £1,264,042 (61.02 per cent.). The average rate of duty on *dutiable* goods of this class has been raised from an equivalent *ad valorem* rate of 21.55 per cent. under the 1902 tariff to 25.22 per cent. under the tariff of 1908, the rates on all imports of the class rising from 7.65 per cent. to 9.83 per cent.

Preference to United Kingdom. The value of paper and stationery manufactured in the United Kingdom imported during 1907 amounted to £1,199,123. Of this total £184,560 would be free under the preference tariff of 1908, while similar foreign goods would pay a duty of 5 per cent., and goods to the value of £334,414 would be favoured by an average preference rate of 18.18 per cent. below the general tariff rate. The average rates on these goods are respectively:—General tariff, 26.50 per cent.; preference tariff, 21.68 per cent. Thus, on goods amounting to £518,974 a preference representing £25,340 would be given to the United Kingdom on paper and stationery. The average rate of duty on *dutiable* paper and stationery manufactured in the United Kingdom has been raised from an equivalent *ad valorem* rate of 22.65 per cent. under the 1902 tariff to 26.75 per cent. under the tariff of 1908, the corresponding rates of all imports of United Kingdom manufacture within the class rising from 7.02 per cent. to 8.19 per cent.

CLASS XXI.—JEWELLERY, TIMEPIECES, AND FANCY GOODS.

General Comparisons. The value of imports of this class during 1907 amounted to £1,261,046. The value of free goods, viz., £223,836, would be the same under both tariffs. These free goods are principally cameos and precious stones unset. The average rate of duty on *dutiable* goods in this class has been raised from 21.73 per cent. under the 1902 tariff to 25.46 per cent. under the tariff of 1908, and the average rate on all goods within the class from 17.87 per cent. to 20.94 per cent.

Preference to United Kingdom. The imports of this class being the produce of the United Kingdom were £516,552. Of this total £33,432 would be free under the general tariff and the remaining £483,120 would, under the 1908 tariff be favoured by an average

rate 19.46 per cent. below the average general tariff rate, which is 28.31 per cent. on the same goods. The value of the preference in this class amounts to £26,614. The rate of duty on *dutiable* goods of the United Kingdom in this class has been raised very slightly from 22.55 per cent. to 22.81 per cent., the rate on all imports of the United Kingdom produce in this class being raised from 21.09 per cent. to 21.33 per cent.

CLASS XXII.—OPTICAL, SURGICAL, AND SCIENTIFIC INSTRUMENTS.

General Comparisons.—The value of these instruments imported during 1907 amounted to £379,300. Under the 1902 tariff £119,749 (31.57 per cent.) would have been free, but under the tariff of 1908 the free goods have been increased to £305,833 (80.63 per cent.). The average rate of duty on *dutiable* goods in this class has been reduced from 19 per cent. under the 1902 tariff to 17.91 per cent. under the tariff of 1908, thus, with the extension of the free list, reducing the rate on all imports of the class from 13 per cent. to 3.47 per cent.

Preference to United Kingdom. The value of the manufactures of the United Kingdom of this class during 1907 amounted to £152,189. Of this total, goods to the value of £69,467 are favoured by preference representing £3790, £26,047 of these goods being free, compared with a duty of 5 per cent., and the remaining £43,420 being favoured by an average rate equal to a reduction of 22.55 per cent. on the average general tariff rates. The rates of duty on *dutiable* imports of United Kingdom manufacture in this class have been raised from 17.73 per cent. under the 1902 tariff to 19.68 per cent. under the tariff of 1908, though by the extension of the free list the average rate on the imports of all goods of the United Kingdom in the class has been reduced from 11.08 per cent. to 5.62 per cent. The higher rate of duty on *dutiable* goods from the United Kingdom, as compared with *dutiable* goods from foreign countries, in this class is due to a low rate of duty (5 per cent.) on certain goods, which, when of United Kingdom manufacture, are not in the *dutiable* class, but are free under the preference tariff. The higher rate on all imports from the United Kingdom, as compared with other countries, is due to phonographs, which represent 46 per cent. of the total of the class, and which are almost entirely of foreign manufacture, being free.

CLASS XXIII.—DRUGS, CHEMICALS AND FERTILISERS.

General Comparisons. The total value of imports in this class during 1907 amounted to £1,840,933. The value of goods which would be free differs very little between the two tariffs, being respectively £1,468,747 (79.78 per cent.) under the 1902 tariff and £1,456,694 (79.12 per cent.) under the tariff of 1908. Fertilisers represent £389,169, or 26.72 per cent. of the free goods under the 1908 tariff. The average rate of duty on *dutiable* goods in this class has been increased from an equivalent *ad valorem* rate of 19.15 per cent. under the 1902 tariff to 21.20 per cent. under the tariff of 1908, and the rates on all imports of the class have been increased from 3.87 per cent. to 4.42 per cent.

Preference to United Kingdom.—The imports of United Kingdom produce in this class in 1907 amounted to £338,227. Of this total £615,075 would be free under the general tariff of 1908, and other goods to the value of £20,395 would be free under the preference tariff, while similar goods from other countries would bear a duty of 5 per cent. *ad valorem*. Preference equal to a reduction of 17.48 per cent. on the general tariff rates is also given to the United Kingdom on goods amounting to £48,010. The value of the preference of the United Kingdom in this class represents £3422. The average rate of duty on *dutiable* imports of produce of the United Kingdom in this class has been raised from 18.26 per cent. to 19.74 per cent., and the rate on all produce of the United Kingdom within the class has been raised from 4.49 per cent. to 4.78 per cent.

CLASS XXIV.—MISCELLANEOUS.

General Comparisons. The total value of imports in this division during 1907 amounted to £3,978,018, of which the following are the more important items:—Arms, ammunition and explosives, £661,254; musical instruments and parts, £418,156; matches and vestas, £156,069; vehicles and parts, including bicycles, etc., £694,590; vessels transferred from abroad, £680,700. Under the 1902 tariff the free goods in this class would have been £2,110,942 (53.07 per cent.), but under the 1908 tariff the value of free goods would fall to £1,788,979 (44.97 per cent.). The average rate of duty on *dutiable* goods in this division has been raised from an equivalent *ad valorem* rate of 19.69 per cent. under the 1902 tariff to 23.54 per cent. under the tariff of 1908, and the rate on all goods in the class has been raised from 9.24 per cent. to 12.91 per cent.

Preference to United Kingdom. The value of the imports of United Kingdom produce in this class during 1907 amounted to £2,496,994. Of this total £983,080 would be free under the general tariff of 1908, and £612,973 would be free under the preference tariff, while similar goods of foreign manufacture would pay a duty of 5 per cent. Preference equal to a reduction of 22.50 per cent. on the average general tariff rate is also given on goods to the value of £821,041. The total value of the preference to the United Kingdom in this class amounts to £81,578.

TOTAL IMPORTS.

General Comparisons. The value of total imports during 1907 was £51,809,033. Of this total the value of free imports under the 1902 tariff would have been £19,716,089, or 38.06 per cent., and under the 1908 tariff the free goods would be increased to £22,155,203, or 42.76 per cent. The total before mentioned, however, includes £406,875 of specie, £1,426,827 of gold bullion, and £498 of silver bullion. Excluding this bullion and specie the imports of *merchandise* during the year represent a value of £49,974,833, of which £17,881,889, or 35.78 per cent., would have been free under the 1902 tariff, and £20,321,003, or 40.66 per cent., would be free under the tariff of 1908. This increase of free goods is almost entirely due to the removal of duties from produce or manufactures of the United Kingdom under the preferential tariff. The total value of merchandise which would be free under the tariff of 1908 (£20,321,003) is made up as follows:—Produce or manufactures of the United Kingdom £11,378,098 (£6,299,833 being free under the general tariff, and £5,078,265 under the preferential tariff), and produce of other countries £8,942,905. The average rate of duty on *dutiable* merchandise has been increased from an average equivalent *ad valorem* rate of 26.59 per cent. under the 1902 tariff to 33.09 per cent. under the tariff of 1908, and the average rate on all imports of merchandise—both dutiable and free, but excluding bullion and specie—has been increased from 17.07 per cent. to 19.63 per cent. The foregoing rates are largely influenced by the high *ad valorem* rates of duty levied, for revenue purposes, on alcoholic liquors and tobacco. Excluding these classes, the imports of merchandise during 1907 represent £47,664,740. The average equivalent *ad valorem* rate on the whole of this reduced total of both dutiable and free imports would, under the 1902 tariff, have been 10.24 per cent., and under the tariff of 1908 it would be 12.76 per cent. Under the 1902 tariff £29,782,851 would have been dutiable at an average *ad valorem* rate of 16.39 per cent., while under the 1908 tariff the value of dutiable goods would be reduced to £27,343,737, but the average *ad valorem* rate would be raised to 22.24 per cent.

From a consideration of these latter figures it may be stated that the total imports of dutiable articles, apart from alcoholic liquors and tobacco, may—provided the reduction be in like ratio throughout all classes—be reduced to £22,000,000 before the Customs revenue will be less than would have been yielded by similar imports under the tariff of 1902. The following table presents a summarised statement of the results obtained by applying to the imports of 1907 the rates of duty provided in the tariff of 1902 and amendments and the tariff of 1908:—

SUMMARISED COMPARISONS OF THE TARIFF OF 1902 AND AMENDMENTS AND THE TARIFF OF 1908 APPLIED TO THE IMPORTS INTO THE COMMONWEALTH DURING 1907.

| | Tariff of 1902 and Amendments. | Tariff of 1908. |

| „ „ less alcoholic liquors and tobacco | 10.24 | 12.76 |
| „ <i>dutiable</i> merchandise | 26.59 | 33.09 |
| „ „ „ less alcoholic liquors and tobacco | 16.39 | 22.24 |

Preference to United Kingdom. The total value of imports of produce or manufacture of the United Kingdom during 1907 was £26,843,610. Under the 1902 tariff £8,419,911 (31.36 per cent.) of this total would have been free. Under the 1908 tariff the value of free imports would be increased to £11,779,766 (43.88 per cent.), of which £6,701,501 would be free under the general tariff, and £5,078,265 would be free under the preferential tariff. On all *dutiable* imports of United Kingdom produce the average equivalent *ad valorem* rate of duty has been raised from 22.15 per cent. under the tariff of 1902 to 29.85 per cent. under the tariff of 1908, and the average rate on all imports of United Kingdom origin has been raised from 15.21 per cent. to 16.75 per cent. Thus it will be seen that the imports of United Kingdom origin during 1907 would, under the 1902 tariff, have been required to pay duty amounting to £4,080,000, whereas under the tariff of 1908 the sum of £4,500,000 would be required of the same imports.

On the basis of the 1907 imports, preference would be given to the United Kingdom on goods to the value of £17,191,922. Of this total £5,078,265 would be free, while similar goods to the value of £960,431 from other countries would pay an average equivalent *ad valorem* rate of 5.15 per cent., and other goods to the value of £12,113,657 are given preference equal to a reduction of 19.55 per cent. on the average rate of duty on similar goods of foreign countries of a total value of £7,893,085. These equivalent *ad valorem* rates are respectively:—General tariff rate, 25.10 per cent.; preferential tariff rate, 20.20 per cent. The value of the preference to the United Kingdom on the total

imports of 1907 is represented, firstly, by a reduction of duty—in the trade already secured—amounting to £856,122 on the duty which would be leviable on similar goods from other countries, and, secondly, by the advantage to be obtained by the favour of the foregoing preference rate, in her competition for the balance of the same trade supplied by other countries, which in 1907 amounted to £8,853,516.

The following table presents a summarised statement of the comparative results obtained by applying to the imports during 1907 of goods of United Kingdom origin the rates of duty imposed under the tariff of 1902 and amendments and the tariff of 1908 :—

SUMMARISED COMPARISON OF THE TARIFF OF 1902 AND AMENDMENTS AND THE TARIFF OF 1908 APPLIED TO THE PRODUCE OF MANUFACTURE OF THE UNITED KINGDOM IMPORTED INTO THE COMMONWEALTH DURING 1907.

| | Tariff of 1902 and Amendments. | Tariff of 1908. |
|---|--------------------------------------|--------------------|

| On <i>dutiable</i> imports, less alcoholic liquors and tobacco, etc. Per cent. | 14.26 | 20.60 |

13. South African Preference.—Under the Customs Tariff (South African Preference) Act, No. 17 of 1906, preferential rates of duty were prescribed for certain goods “when those goods are imported from and are the manufacture of any of the British South African Colonies or Protectorates which are included within the South African Customs Union.”

Preference to South African States was further confirmed by the Customs Tariff Amendment Act 1908 (No. 13 of 1908).

The imports into the Commonwealth from South African States during 1907 amounted only to £22,906, of which £15,602 was from Cape Colony, and £7304 from Natal.

The principal articles of South African origin to which preference is given are :— Butter and cheese, confectionery, fodder, grains—oats, wheat, maize, bran, and flour ; jams and jellies, leather, machinery—agricultural and mining ; meats—fish, poultry, and game ; timber, feathers, fruits and vegetables, spirits, tobacco, sugar, and wine.

§ 13. Imports of Dutiable and Free Goods.

In the previous edition of this work—"Year Book No. 1"—a statement was given of the imports during 1906, distinguishing between dutiable and free imports and shewing the equivalent *ad valorem* rates of duty paid on each class of goods. Owing to the introduction of a new tariff on the 8th August, 1907, and consequent frequent changes made during the passage of the Act through Parliament, no satisfactory analysis of a similar nature of the imports of 1907 can possibly be made. In the preceding section, however, a comparative analysis is given of the results of the application to the imports of the year 1907 of the rates of duty imposed under the tariff of 1902 and amendments, and under the tariff of 1908 respectively. This table will furnish the best available substitute for the one above referred to.

§ 14. Trade of the Individual States of the Commonwealth.

1. **Character of Data.**—The following tables shew the trade of each State of the Commonwealth for the quinquennium immediately preceding Federation and for the years 1901 and 1903 to 1907.

Owing to the many differences existing between the statements of trade hitherto published by the various States and by the Commonwealth, and to the frequent alteration of the figures in succeeding editions of the several publications, it is not possible to furnish an exact statement of the trade of the several States. The figures here given, therefore, should be regarded as merely approximate.

2. **Record of Transhipments.**—In order to ensure a correct detailed record of the export trade of the Commonwealth, it has been the practice of the Department of Trade and Customs, since the 1st September, 1903, to record goods transferred by sea from one State to another State of the Commonwealth, for transhipment abroad from the latter State, in the following manner :—

- (i.) As an outward interstate transfer from the State from which the goods are originally moved.
- (ii.) As an inward interstate transfer to the State in which the goods are transhipped.
- (iii.) As an export (oversea) from the State in which the goods are transhipped abroad.

The record thus obtained in each of the several States does not indicate the proportion of the export trade of the Commonwealth actually contributed by each State, nor does it correctly indicate the amount of interstate trade.

In order to obtain a proper record of the trade of each State with oversea countries, and with other States of the Commonwealth, it is necessary to take into account the goods transhipped, not only in, but also from each State. The exact practice may be understood by giving an example. Five thousand tons of copper are, let us suppose, to be exported from Tasmania to Germany, the available oversea ship starting from a New South Wales port. The following records would then be made, viz.:—

- (i.) An "outward interstate transfer" of 5000 tons of copper from Tasmania to New South Wales.
- (ii.) An "inward interstate transfer" to New South Wales from Tasmania of 5000 tons of copper.
- (iii.) An "oversea export" of 5000 tons of copper from New South Wales to Germany.

In this supposed case the trade is virtually, so far as Tasmanian trade is concerned, a direct export from Tasmania to Germany, and forms no essential element of the trade of New South Wales, either interstate or oversea.

3. Adjustment of Data.—In the tables hereinafter the necessary adjustments have been made, so far as sea-traffic is concerned. But goods transferred overland from one State to another, and subsequently exported to oversea countries, are at present necessarily included in the exports from the State in which the goods are shipped oversea. In such cases no adjustment is possible, because the necessary data are not available. Moreover, the demands for the supply of information, which would become essential if it were decided to obtain the data, would place a serious additional burden on the mercantile community, while the question whether the magnitude of the general advantage would compensate for the trouble is at least very problematical.

The following summary table shews the progress of the trade of the Commonwealth with oversea countries and of the trade between the several States. The periods selected for comparison are the quinquennium immediately preceding Federation (1896-1900), the quinquennium immediately following (1901-5) and the latest year (1907). The results show that the total oversea trade of the Commonwealth has increased by 66.50 per cent., viz., from £74,856,000 per annum in the earlier period to £124,633,280 in 1907, while the interstate trade has risen from £27,484,000 to £42,280,980, equal to 53.83 per cent.

TRADE DEVELOPMENT, COMMONWEALTH, 1896 to 1907.

| Development in period | 1896-1900. | 1901-5. | 1907. | 1896-1900. | 1901-5. | 1907. |

SECTION XVI.

SHIPPING.

§ 1. General.

1. **Legislation.**—The shipping of the Commonwealth has hitherto been conducted partly under Imperial Acts, consolidated in the Merchants Shipping Act of 1894, and amendments of these, and partly under Acts of the several States of the Commonwealth. Since the scope of the local enactments differs materially in the different States, to define the proper limits of the jurisdiction of the Imperial and State laws cannot here be attempted.

By section 98, Part IV., of the Commonwealth Constitution Act, the power to make laws with respect to trade and commerce was extended to navigation and shipping, and in pursuance of this power a Bill for an Act relating to Navigation and Shipping was introduced into the Senate on the 17th March, 1904, but was not proceeded with.

On the 29th June, 1904, a Royal Commission was appointed to inquire into the Bill and report upon its provisions and any matter incidental thereto. In March and April, 1907, a conference between representatives of the United Kingdom, the Commonwealth of Australia, and New Zealand was held in London on the subject of merchant shipping legislation. The result of the deliberations was that an amended Bill was introduced into the Senate on the 12th September, 1907. Owing to pressure of Parliamentary business, however, the consideration of the Bill was held over. It was reintroduced into the Senate on the 17th September, 1908, but had not been passed into law when the session of Parliament was closed. The Bill was drawn largely on the Merchants Shipping Acts and the Acts of New Zealand and New South Wales, and, as introduced, contains 417 sections divided into eleven parts, as follows:—I. Introductory. II. Masters and Seamen. III. Foreign Seamen. IV. Ships and Shipping. V. Passengers. VI. The Coasting Trade. VII. Wrecks and Salvage. VIII. Pilots and Pilotage. IX. Courts of Marine Inquiry. X. Legal Proceedings. XI. Miscellaneous.

2. **Record of Shipping before Federation.**—Prior to Federation it was customary for each State to regard the matter of shipping purely from the State standpoint, and vessels arriving from or departing to countries beyond Australia, via other Australian States, were recorded as if direct to the oversea country. Thus a mail steamer from the United Kingdom, which made Fremantle her first port of call in Australia, would be recorded not only there, but also again in Adelaide, Melbourne and Sydney, as an arrival from the United Kingdom. Consequently any aggregation, especially of the recent shipping records of the different States, would repeatedly include a large proportion of the shipping visiting Australia. In earlier years, when many vessels sailed from the various State ports direct for their destination, the error of repeated inclusion was less serious, but as the commerce of Australia developed, more and more ports of call were

included in the voyage of each vessel, and this made the mere aggregation of State records correspondingly misleading. It has, as a matter of fact, led to some erroneous publications of statistical results and deductions.

3. Shipping since Federation.—With the inauguration of the Commonwealth, the statistics of its shipping, especially of its oversea shipping, became of greater intrinsic importance. As an index of the position of Australia among the trading countries of the world, such statistics had a constitutional importance commensurate with Commonwealth interests, and correspondingly greater than those of individual States. And the nationality of the shipping trading with Australia became also a matter of greater moment.

4. Difficulties of Comparisons of Total Shipping.—From what was said in paragraph 2 above, it is obviously impossible now to obtain results for Australia not subject to the defect of repeated inclusions of the same vessels. Unfortunately the statistical records of the first three years of federal history are subject to the same defect, and do not admit of direct comparison with those now kept. A careful estimate of the extent and effect of repeated inclusion has been made and applied to the records of the earlier years, so as to extend the comparative results to those years. The error of such estimation will be negligible for comparative purposes.

5. Present System of Record.—The present system of record treats Australia as a unit, and counts, therefore, only one entry and one clearance for each visit to the Commonwealth. Repeated voyages of any vessel are of course included.

On arrival of every vessel at a port in the Commonwealth, whether from an oversea country or from another port within the Commonwealth, the master is required to deliver to the Customs officer a form giving all particulars, necessary for statistical purposes, in regard to the ship and crew, and also the port of embarkation and nationality of any passengers carried. Similarly on departure from a port a form containing corresponding information is lodged. These forms, which provide a complete record of the movements of every vessel in Commonwealth waters, are at the end of each month forwarded by the Customs officer at each port to this Bureau, and furnish the material for the compilation of the Shipping and Migration Returns.

Under the system previously in force it was found that the estimates of population, in so far as they were based on seaward movement, were rather unsatisfactory, and it is believed that the method referred to above will give a result as nearly correct as is possible.

§ 2. Oversea Shipping.

1. Total Oversea Shipping.—In order to extend, as indicated, the comparison of the oversea shipping to the earliest years for which any records are available, an estimate of its probable amount has been made. This estimate is based on a comparison of the results obtained by merely aggregating State statistics with the defect of multiple records, and the results obtained under the present system, which avoids the multiple record. From the nature of the case, it is obvious that the ratio of repeated inclusion to the total traffic has been continually advancing, and this fact has been duly taken into account in deducing the results in the following table:—

**TOTAL OVERSEA SHIPPING ENTERED AND CLEARED THE COMMONWEALTH, 1822
to 1907. (MULTIPLE RECORD EXCLUDED BY ESTIMATION PRIOR TO 1904.)**

| Year. | Vessels. | Tons. | Year. | Vessels. | Tons. | Year. | Vessels. | Tons. |

| 1832 | 206 | 59,628 | 1861 | 2,466 | 1,149,476 | 1890 | 3,363 | 4,150,027 |
| 1833 | 241 | 72,647 | 1862 | 2,917 | 1,389,231 | 1891 | 3,778 | 4,726,307 |
| 1834 | 249 | 77,066 | 1863 | 3,378 | 1,564,369 | 1892 | 3,432 | 4,239,500 |
| 1835 | 310 | 96,928 | 1864 | 3,344 | 1,537,433 | 1893 | 3,046 | 4,150,433 |
| 1836 | 310 | 93,974 | 1865 | 3,005 | 1,317,934 | 1894 | 3,397 | 4,487,546 |
| 1837 | 442 | 113,432 | 1866 | 3,378 | 1,470,728 | 1895 | 3,331 | 4,567,883 |
| 1838 | 471 | 132,038 | 1867 | 2,927 | 1,277,679 | 1896 | 3,309 | 4,631,266 |
| 1839 | 652 | 191,507 | 1868 | 3,080 | 1,350,573 | 1897 | 3,279 | 4,709,697 |
| 1840 | 915 | 277,335 | 1869 | 3,107 | 1,472,837 | 1898 | 3,222 | 4,681,398 |
| 1841 | 900 | 278,738 | 1870 | 2,877 | 1,381,878 | 1899 | 3,356 | 5,244,197 |
| 1842 | 862 | 232,827 | 1871 | 2,748 | 1,312,642 | 1900 | 3,719 | 5,894,173 |
| 1843 | 736 | 183,427 | 1872 | 2,788 | 1,380,466 | 1901 | 4,028 | 6,541,991 |
| 1844 | 629 | 155,654 | 1873 | 3,159 | 1,609,067 | 1902 | 3,608 | 6,234,460 |
| 1845 | 735 | 164,221 | 1874 | 3,153 | 1,728,269 | 1903 | 3,441 | 6,027,843 |
| 1846 | 888 | 211,193 | 1875 | 3,437 | 1,914,462 | 1904 | 3,700 | 6,682,011 |
| 1847 | 1,033 | 245,358 | 1876 | 3,295 | 1,863,343 | 1905 | 4,088 | 7,444,417 |
| 1848 | 1,132 | 305,840 | 1877 | 3,157 | 1,930,434 | 1906 | 4,155 | 7,966,657 |
| 1849 | 1,137 | 355,886 | 1878 | 3,372 | 2,127,518 | 1907 | 4,394 | 8,822,866 |
| 1850 | 1,300 | 425,206 | 1879 | 3,344 | 2,151,338 | | | |

It will be borne in mind that while the above figures in themselves have no absolute significance, nevertheless, on the assumption that the element of duplication has been in fairly constant ratio, they furnish the best available indication of the growth of Australian oversea shipping.

2. **Comparison with other Countries.**—The place of Australia among various countries in regard to oversea shipping is indicated in the following table, both absolutely and in respect of tonnage per head of population:—

OVERSEA SHIPPING OF VARIOUS COUNTRIES.

| Country. | Year. | Tonnage Entered and Cleared. | | Country. | Year. | Tonnage Entered and Cleared. | |
|---------------------|-------|------------------------------|-----------------|---------------|-------|------------------------------|-----------------|
| | | Total. | Per Inhabitant. | | | Total. | Per Inhabitant. |
| Argentine Rep. | 1904 | 19,648,389 | 4.0 | Japan | 1905 | 28,568,908 | 0.6 |
| Belgium | 1905 | 23,170,224 | 3.3 | Natal | 1906 | 4,405,379 | 3.8 |
| Canada | 1906 | 16,843,429 | 2.8 | New Zealand | 1906 | 2,481,866 | 2.8 |
| Cape Colony | 1906 | 8,504,590* | 3.4 | Norway | 1905 | 8,165,688 | 3.5 |
| Commonwealth | 1907 | 8,822,866 | 2.1 | Spain | 1905 | 33,037,622 | 1.7 |
| Denmark | 1905 | 13,839,942 | 5.4 | Sweden | 1905 | 18,183,459 | 3.4 |
| France | 1905 | 44,116,004 | 1.1 | United K'dom | 1906 | 120,790,310 | 2.8 |
| Germany | 1905 | 38,325,260 | 0.6 | United States | 1906 | 54,371,320 | 0.7 |
| Italy | 1905 | 39,849,276 | 1.1 | | | | |

* These figures, as far as they relate to steam vessels, represent gross tonnage.

3. **Shipping Communication with various Countries.**—Particulars of the number and tonnage of vessels recorded between Australia and various countries, distinguishing British from foreign countries, are given in the following tables, the table below shewing the tonnage of vessels which were recorded as having entered the Commonwealth from the particular countries mentioned, that on page 653 shews the tonnage of vessels which were recorded as having cleared the Commonwealth for the particular countries, while on page 654 is shown the total number and tonnage of vessels recorded as entered and cleared from and to the countries named.

SHIPPING TONNAGE ENTERED AND CLEARED FROM AND TO VARIOUS COUNTRIES.

ENTERED.

In respect of these tables it may be pointed out that the statistics for any country do not fully disclose the extent of its shipping communication with particular countries. The reason of this is that vessels are recorded as arriving from, or departing to, a particular country, whereas, as a matter of fact, many regular lines of steamers call and transact business at the ports of several countries in the course of a single voyage. The lines of steamers trading between Australia and Japan, for example, often call at New Guinea, the Philippine Islands, China, etc., but, being intermediate ports, these countries are not referred to in the statistical records. Similarly in the case of the large mail steamers passing through the Suez Canal. A steamer may call at Colombo, Aden, Port Said, Genoa, Marseilles, London, Antwerp, and Bremerhaven, yet obviously can only be credited as cleared for one of these ports to the consequent exclusion of all the other ports from the records. Further reference is made in the following paragraphs to the more important of those countries with which the shipping of the Commonwealth is not fully represented in the foregoing tables.

4. **General Trend of Shipping.**—(i.) *General.* A grouping of countries into larger geographical divisions, as in the following tables, shews more readily the general direction of Australian shipping, and, to some extent, avoids the limitations of the records in relation to particular countries, by covering more closely the main trade routes.

It has already been shewn in the opening section of this chapter, that direct comparisons of the annual oversea shipping of the Commonwealth are possible only since the beginning of 1904.

A comparison of the total tonnage of shipping which entered and cleared the Commonwealth during 1907 with similar records for 1904 shews an increase of 2,140,855, or 32.04 per cent., vessels with cargo having increased by 1,155,059 tons, or 19.82 per cent., and vessels in ballast by 985,796, or 115.5 per cent. This increase has been general in all directions except that of Africa, the largest increase during the period being with South America.

(ii.) *Shipping with the United Kingdom and European Countries.* The shipping between the Commonwealth and the United Kingdom and European countries during the past four years shews that steady increase which indicates the consistent development of a well established trade. The shipping in this direction during 1907 amounted to 3,029,032 tons, or 34.3 per cent. of the total oversea shipping of the Commonwealth, and was recorded against the several countries as follows:—United Kingdom, 2,171,696 tons (71.7 per cent.); Germany, 524,467 tons (17.3 per cent.); France, 187,149 tons (6.2 per cent.); Belgium, 65,890 tons (2.2 per cent.); other European countries, 79,830 tons (2.6 per cent.)

The increases of tonnage during 1907 and the relative increases per cent., compared with 1904, for the same countries were respectively:—United Kingdom, 50,545 tons, or 2.4 per cent.; Germany, 152,696, or 41.1 per cent.; France, 96,841, or 107.2 per cent.; Belgium, 34,918, or 112.7 per cent.

The failure of the statistical records to present, in all cases, the full measure of the shipping communication between particular countries is illustrated by the case of Italy. Although the mail steamers which pass through the Suez Canal call at Naples and Genoa, and during 1907 embarked or landed at those ports 3503 passengers for or from Australia, and also carried a direct trade valued at £432,961 between Italy and the Commonwealth, the records for the year shew only one vessel of 1095 tons (a sailing vessel in ballast) as passing between the two countries. Italian merchants complain that the space at their disposal in the mail boats is frequently insufficient, and a direct line of subsidised steamers was recently spoken of.

(iii.) *Shipping with New Zealand.* The tonnage of shipping between the Commonwealth and New Zealand shews a very satisfactory expansion from 1,179,407 tons in 1904 to 1,524,092 tons in 1907, an increase of 344,685 tons, or 29.2 per cent., during the three years, while the figures for the later year are 118,816 tons, or 8.5 per cent., greater than in 1906. The shipping with New Zealand represented 17.3 per cent. of the total shipping of the Commonwealth during 1907.

(iv.) *Shipping with Asiatic Countries and Islands in the Pacific.* The total tonnage between the Commonwealth and Eastern countries during 1907 amounted to 1,685,227 tons, or 19.1 per cent. of the whole, which, although nearly 200,000 tons less than in 1906, represents an increase of 543,189 tons, or 47.6 per cent., as compared with 1904. The principal countries responsible for this increase and the amount of the same due to each, were:—Philippine Islands, 147,251 tons; Hong Kong, 113,590 tons; Japan, 113,309 tons; Hawaiian Islands, 44,157 tons; and Fiji, 38,357 tons. Owing to the

limitation of the records, already alluded to, the figures given in the tables do not represent the full volume of the shipping between the Commonwealth and the Philippines. In addition to the shipping recorded to the Philippine Islands the regular steam lines between the Commonwealth and Japan make Manila a regular port of call, and it is by these vessels that the general trade—apart from the coal trade—is chiefly carried. The whole of the shipping which was recorded as entered the Commonwealth during 1907 from the Philippines (113,904 tons) was in ballast, and of the 151,202 tons which was recorded as cleared for that country, 120,124 tons cleared from Newcastle with coal.

(v.) *Shipping with Africa.* The shipping tonnage recorded between the Commonwealth and African countries during 1907 amounted to only 350,581 tons, a decrease as compared with 1904 of 215,178 tons. Much of the trade between South Africa and Australia, however, is carried by steamers calling at ports in the former country on their voyages between the Commonwealth and the United Kingdom; and which are not shewn in relation to African ports in the shipping returns. Shipping tonnage with African countries—mainly confined to Cape Colony, Natal, and Portuguese East Africa—rose from 565,759 tons in 1904, to 649,802 tons in 1905, but fell to 527,574 tons in 1906, and to 350,581 tons in 1907.

Of the 243,738 tons of shipping which entered the Commonwealth from Africa during 1907, 220,908 tons, or 90.6 per cent.—equal to 63.0 per cent. of the total tonnage recorded between the two countries—was in ballast.

(vi.) *Shipping with North and Central America.* The shipping of the Commonwealth with these countries during 1907 amounted to 1,019,348 tons (11.55 per cent. of the whole) representing an increase of 323,187 tons, or 46.4 per cent., as compared with 1904. Compared with 1906 the increase is even greater, amounting to 391,728 tons, or 62.4 per cent. The shipping between the Commonwealth and the United States during 1906, however, was unusually small, mainly in consequence of the smaller number of vessels arriving in Australia from the latter country in ballast during that year. The 1,019,348 tons of shipping with North and Central America during 1907 were recorded against the several countries as follows:—United States, 806,828 tons (79.2 per cent.); Canada, 131,109 tons (12.9 per cent.); Mexico, 71,374 tons (7.0 per cent.), the balance of 10,037 tons being distributed against the Central American States and the Island of St. Vincent.

(vii.) *Shipping with South America.*—The greatest increase in the shipping of the Commonwealth during the past three years has been in the direction of South America. The shipping in this direction, which during 1907 was engaged almost exclusively in the carriage of coal from the State of New South Wales to Chile and Peru, has been nearly trebled within the past three years, having increased from 420,346 tons in 1904 to 1,214,586 tons in 1907, an increase of 189 per cent. Of the total shipping tonnage between the Commonwealth and South America during 1907, 825,409 tons, or 68.0 per cent., is credited to the coal port of Newcastle, 334,381 tons having entered and 491,028 tons having cleared at that port, while of the same total 186,380 tons entered and 103,541 tons cleared at the port of Sydney. Of the South American countries, Chile is responsible for 970,809 tons (79.9 per cent.); Peru, 154,514 tons (12.7 per cent.); Argentine Republic, 38,445 tons (3.2 per cent.); Uruguay, 30,822 tons (2.5 per cent.); Ecuador, 11,231 tons; and Brazil, 8765 tons.

An important fact, from its bearing on freight rates and its consequent possible effect on the coal trade of New South Wales with South America, is the absence of back freights from that country. Of the 564,221 tons of shipping which entered the Commonwealth from South America during 1907, only two vessels, totalling 3754 tons, carried cargo.

GENERAL DIRECTION OF THE SHIPPING OF THE COMMONWEALTH.

5. **Nationality of Oversea Shipping.**—The greater part of the shipping visiting the Commonwealth is of British nationality, though, as will be seen from the following table, the proportion has gradually diminished during the period under review from 75.35 per cent. in 1904 to 72.54 per cent. in 1907. Of the increase in tonnage in 1907 as compared with 1904, viz., 2,140,855 tons, 1,365,362 tons (63.77 per cent.) was British and 775,493 tons (36.23 per cent.) was foreign. Compared with 1906 British vessels accounted for 69.78 per cent. of the increase.

The tonnage of Australian-owned vessels engaged in the oversea trade represents about 7 per cent. of the total, and the tonnage of New Zealand vessels about 9 per cent. Both are engaged mainly in the trade with New Zealand and eastern countries. An examination of the figures in the above table shews that, of the increase in tonnage in 1907 as compared with 1904, viz., 2,140,855 tons, 1,365,362 tons (*i.e.*, 63.77 per cent.) was British and 775,493 tons (*i.e.*, 36.23 per cent.) was foreign, and that of the increase of 1907 over 1906 only 69.78 per cent. was for British vessels. But to sustain the proportion of British tonnage as in 1904 it was necessary that 75.35 per cent. of the increase should be British.

If, however, the tonnage of ships carrying cargo only is considered as indicating more closely the proportion of the actual carrying trade done, the proportion of British vessels is higher and the fall between the years 1904 and 1907 is slightly less marked. The relative proportion of British and foreign tonnage which entered and cleared the Commonwealth with cargo during the past four years was as follows:—

**PROPORTION OF TONNAGE ENTERED AND CLEARED THE COMMONWEALTH WITH
CARGO OF BRITISH AND FOREIGN NATIONALITY, 1904 to 1907.**

| Nationality. | 1904. | 1905. | 1906. | 1907. |
|----------------|--------|--------|--------|--------|
| British | 76.73 | 76.30 | 74.42 | 75.19 |
| Foreign | 23.27 | 23.70 | 25.58 | 24.81 |
| Total | 100.00 | 100.00 | 100.00 | 100.00 |

That the proportion of foreign tonnage should increase is the natural corollary of the extension of the trade of the Commonwealth with foreign countries. This is particularly patent in regard to Germany and France. Both of the countries desire to increase their mercantile marine, and it is therefore natural that the increased direct trade between those countries and Australia should be carried by their own vessels rather than by the vessels of a third country. During the last year, too, the Royal Dutch Packet Company has established a line of steamers between Java and other islands of the East Indies and Australia.

The more important competitors for the Australian shipping trade among the foreign nations are Germany, France, and Norway, and it is therefore of interest to consider the general direction of their activity. It is well to bear in mind, when comparing the figures in the table on the next page, that the French shipping from and to France and to New Caledonia is practically identical with the steamers of the Messageries Maritimes, which maintain a regular service between France and New Caledonia via Australian ports, and that the German shipping from and to Germany consists mainly of the vessels of two lines, the Norddeutscher Lloyd, and the German-Australian Steamship Company, which have had regular and frequent services to Australian ports for the past twenty-five years:—

A further analysis is appended, distinguishing between steam and sailing vessels of British and foreign nationality, which entered and cleared the Commonwealth during the years 1904-7. Steam tonnage during 1907 was 1,945,923 greater than in 1904, 1,548,488 tons (*i.e.*, 90.9 per cent.) of the increase being British, and 397,435 tons (*i.e.*, 9.1 per cent.) being foreign. The tonnage of sailing vessels shews an increase during the same period of 194,932 tons, for while British tonnage fell by 183,126 tons, that of foreign nations increased by 378,058 tons.

The following table shews also the proportion of steam and sailing vessels engaged in the Australian trade. As might be expected, the proportion of sailing vessels is shewn to be a decreasing one, falling during the period under review from 33 per cent. to 27 per cent. of the total tonnage, and it is in this branch of shipping that the foreign element is stronger than the British.

STEAM AND SAILING VESSELS ENTERED AND CLEARED, 1904 to 1907.

| Description and Nationality of Vessels. | 1904. | | 1905. | | 1906. | | 1907. | |

| Total | 6,682,011 | 100 | 7,444,417 | 100 | 7,966,658 | 100 | 8,822,866 | 100 |

6. **Tonnage in Ballast.**—The following table shews the tonnage of oversea vessels which entered and cleared the Commonwealth in ballast during the years 1904-7. Of the total British tonnage which entered during 1907, 32.23 per cent. was in ballast, and of foreign tonnage 48.60 per cent. was in similar condition. Of the total tonnage which entered the Commonwealth during 1907, 36.75 per cent. was in ballast, while of the tonnage cleared 4.51 per cent. only was without cargo:—

TONNAGE ENTERED AND CLEARED IN BALLAST, 1904 to 1907.

| Year. | Entered. | | | Cleared. | | |
|-------------|-----------|----------|-----------|----------|----------|---------|
| | British. | Foreign. | Total. | British. | Foreign. | Total. |
| 1904 | 508,237 | 285,392 | 793,629 | 54,569 | 5,303 | 59,872 |
| 1905 | 772,423 | 390,731 | 1,163,154 | 102,890 | 59,734 | 162,624 |
| 1906 | 808,190 | 430,675 | 1,238,865 | 65,263 | 40,057 | 105,320 |
| 1907 | 1,043,383 | 599,897 | 1,643,280 | 106,183 | 89,834 | 196,017 |

PROPORTION OF TOTAL BRITISH AND FOREIGN TONNAGE WHICH ENTERED AND CLEARED IN BALLAST, 1904 to 1907.

| Year. | Entered. | | | Cleared. | | |
|-------------|-----------------------|-----------------------|---------------------|-----------------------|-----------------------|---------------------|
| | British. per cent. | Foreign. per cent. | Total. per cent. | British. per cent. | Foreign. per cent. | Total. per cent. |
| 1904 | 20.15 | 35.35 | 23.84 | 2.17 | 0.63 | 1.79 |
| 1905 | 27.84 | 41.08 | 31.22 | 3.71 | 6.30 | 4.37 |
| 1906 | 27.28 | 39.88 | 30.92 | 2.30 | 3.70 | 2.66 |
| 1907 | 32.23 | 48.60 | 36.75 | 3.36 | 7.56 | 4.51 |

Vessels in search of freights arrive in Australia from all parts of the world. The tonnage which entered each State of the Commonwealth, in ballast, during 1907 was as follows:—

TONNAGE OF OVERSEA VESSELS IN BALLAST WHICH ENTERED EACH STATE OF THE COMMONWEALTH DURING THE YEAR 1907.

| State | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|-------------------------|-----------|-----------|---------|----------|----------|--------|-----------|
| Tonnage | 1,258,900 | 36,342 | 37,942 | 135,287 | 75,436 | 99,373 | 1,643,280 |
| Percentage of total ... | 76.61 | 2.21 | 2.31 | 8.23 | 4.59 | 6.05 | 100 |

The large exports of coal from New South Wales afford special inducements to vessels in search of freights. During 1907, 1,258,900 tons, or 76.61 per cent. of all ballast tonnage arriving in Australia, entered in New South Wales, 935,886 tons having entered at the coal port of Newcastle. The heavy exports during 1907 of wheat and wool have also furnished freights for vessels arriving in ballast in various parts of the Commonwealth. The relatively large tonnage in ballast recorded in Tasmania is mainly due to French vessels—sailing under the bounty system—calling at Hobart for orders.

§ 3. Shipping of Ports.

1. Shipping at Ports.—Appended is an abstract of the total shipping tonnage—over-sea and coastwise—which entered the more important ports of Australia during the year 1907, together with similar information in regard to some of the ports of New Zealand and of the United Kingdom. The figures for the United Kingdom ports are for the year 1906, the latest available:—

SHIPPING OF PORTS, AUSTRALIA AND VARIOUS COUNTRIES.

| Port. | Tonnage Entered. | Port. | Tonnage Entered. |
|----------------------|------------------|-----------------------------------|------------------|
| AUSTRALIA— | | ENGLAND AND WALES— | |
| Sydney | 5,963,016 | London | 17,596,315 |
| Melbourne | 4,654,356 | Liverpool (inc. Birkenhead) ... | 11,395,620 |
| Port Adelaide | 2,320,871* | Cardiff | 9,952,109 |
| Newcastle | 2,046,253 | Newcastle and N. & S. Shields ... | 8,732,342 |
| Brisbane | 1,837,099 | Southampton | 3,631,513 |
| Fremantle | 1,591,675 | Hull | 3,924,294 |
| Townsville | 941,958 | Dover | 2,752,387 |
| Albany | 858,072 | Newport | 2,857,864 |
| Hobart | 766,583 | Sunderland | 2,700,185 |
| Mackay | 631,491 | Middlesbrough | 2,353,537 |
| Rockhampton | 581,620 | Blyth | 2,080,938 |
| Cairns | 522,197 | Bristol | 1,939,963 |
| Port Pirie | 440,222 | Swansea | 1,978,805 |
| Geelong | 429,021 | Manchester | 1,767,017 |
| Bowen | 347,981 | SCOTLAND— | |
| Bunbury | 206,621 | Glasgow | 4,266,925 |
| Launceston | 245,789 | Leith | 1,994,573 |
| NEW ZEALAND— | | IRELAND— | |
| Wellington | 2,687,741 | Belfast | 2,846,212 |
| Lyttelton | 1,913,488 | Dublin | 2,525,867 |
| Auckland | 1,469,203 | | |
| Dunedin | 939,027 | | |

* Exclusive of coastwise shipping confined to the State of South Australia.

From the figures above it may be seen that the shipping business of the ports of Sydney and Melbourne is only exceeded by that of four ports in the United Kingdom, viz., London, Liverpool, Cardiff, and Newcastle.

§ 4. Vessels Built and Registered.

1. **Vessels Registered.**—The number and net tonnage of steam and sailing vessels on the registers at the various ports of the Commonwealth at the end of each of the years 1901 to 1907 are as follows:—

VESSELS ON THE REGISTER, 1901 to 1907.*

| Year. | Steam. | | Sailing. | | Total. | |
|-------------|---------|--------------|----------|--------------|---------|--------------|
| | Number. | Net Tonnage. | Number. | Net Tonnage. | Number. | Net Tonnage. |
| 1901 | 943 | 203,541 | 1,433 | 141,722 | 2,376 | 345,263 |
| 1902 | 965 | 208,043 | 1,483 | 141,125 | 2,448 | 349,168 |
| 1903 | 1,004 | 219,985 | 1,578 | 136,888 | 2,582 | 356,873 |
| 1904 | 1,011 | 223,558 | 1,700 | 129,801 | 2,711 | 353,359 |
| 1905 | 1,052 | 222,551 | 1,690 | 129,291 | 2,742 | 351,842 |
| 1906 | 1,082 | 238,742 | 1,644 | 128,288 | 2,726 | 367,030 |
| 1907 | 1,108 | 249,600 | 1,555 | 126,402 | 2,663 | 376,002 |

* Prior to 1904 vessels registered in the Northern Territory of South Australia are not included.

2. **Vessels Built.**—The following table shews the number and net tonnage of steam and sailing vessels built and registered in Australia during the years 1901 to 1907:—

VESSELS BUILT AND REGISTERED, 1901 to 1907.

| Year. | Steam. | | Sailing. | | Total. | |
|-------------|---------|--------------|----------|--------------|---------|--------------|
| | Number. | Net Tonnage. | Number. | Net Tonnage. | Number. | Net Tonnage. |
| 1901 | 16 | 1,533 | 35 | 960 | 51 | 2,493 |
| 1902 | 21 | 1,195 | 58 | 1,574 | 79 | 2,769 |
| 1903 | 35 | 1,536 | 51 | 1,160 | 86 | 2,696 |
| 1904 | 16 | 730 | 54 | 1,079 | 70 | 1,809 |
| 1905 | 29 | 1,375 | 12 | 417 | 41 | 1,792 |
| 1906 | 28 | 874 | 17 | 1,109 | 45 | 1,983 |
| 1907 | 26 | 1,108 | 19 | 593 | 45 | 1,701 |

§ 5. Interstate Shipping.

1. **Total Vessels and Tonnage.**—In the following table are shewn the number and tonnage of vessels recorded as having entered each State of the Commonwealth from any other State therein, and similarly the number and tonnage clearing from each State to other Commonwealth States. The table gives results for the quinquennial intervals since 1886. The shipping on the Murray River, between the States of New South Wales, Victoria and South Australia, is not included:—

INTERSTATE SHIPPING, 1886 to 1907.—NUMBER OF VESSELS.

ENTERED.

| State. | 1886. | 1891. | 1896. | 1901. | 1906. | 1907. |

| Western Australia | 243,199 | 506,964 | 1,371,550 | 1,951,320 | 2,020,293 | 1,998,688 |
| Tasmania ... | 472,681 | 723,611 | 531,586 | 918,758 | 1,358,184 | 1,412,429 |
| Commonwealth ... | 6,968,817 | 9,355,287 | 10,937,844 | 14,252,233 | 17,758,860 | 18,705,328 |

The figures presented in the above table include oversea vessels—largely mail boats—passing from one State to another. This renders them somewhat unsatisfactory.

In the earlier part of this section attention was drawn to the custom in vogue prior to Federation of recording vessels from or to "oversea countries via other Commonwealth States" as *direct* from or to the oversea country. At each port in Australia these vessels were, on the inward voyage (to Australia), entered as from the oversea country, and cleared to the next Australian port as "interstate"; on the return journey—the outward voyage—they were entered as "interstate," and cleared as for the oversea country. In order to preserve the continuity of the records of the shipping communication of the several States with oversea countries this method has been followed by the Department of Trade and Customs in continuation of the pre-existing practice, excepting that vessels arriving or departing via other Commonwealth States are now so recorded instead of as "direct."

From the above it will be seen that while certain movements of the vessels referred to are included in the interstate shipping, other movements of the same vessels, between the same ports, are not so included.

To ascertain the aggregate movement of shipping between the States during the year 1907, including the total interstate movements of oversea vessels, the figures in the following table must be added to those of the preceding one:—

**SHIPPING ENTERED AND CLEARED FROM AND TO OVERSEA COUNTRIES VIA
OTHER COMMONWEALTH STATES, 1907.**

| State. | Entered. | | Cleared. | | Total. | | |
|-----------------------|----------|-----------|-----------|-----------|-----------|-----------|-----------|
| | Vessels. | Tonnage. | Vessels. | Tonnage. | Vessels. | Tonnage. | |
| New South Wales ... | 431 | 1,367,490 | 469 | 1,502,675 | 900 | 2,870,165 | |
| Victoria ... | 341 | 1,092,124 | 369 | 1,177,430 | 710 | 2,269,554 | |
| Queensland ... | 152 | 452,264 | 156 | 490,991 | 308 | 943,255 | |
| South Australia ... | 223 | 767,502 | 156 | 550,486 | 379 | 1,317,988 | |
| Western Australia ... | ... | ... | ... | ... | ... | ... | |

| | (1906) | 1,045 | 3,349,036 | 1,107 | 3,442,747 | 2,152 | 6,791,783 |

2. **Total Interstate Movement of Shipping.**—The table hereunder shows the total interstate shipping, including all interstate movements of vessels from and to oversea countries, via other Commonwealth States, for the year 1907:—

TOTAL INTERSTATE MOVEMENT OF SHIPPING, 1907.

| State. | Entered. | | Cleared. | | Total. | | |
|-----------------------|----------|-----------|------------|-----------|------------|-----------|------------|
| | Vessels. | Tonnage. | Vessels. | Tonnage. | Vessels. | Tonnage. | |
| New South Wales ... | 2,129 | 4,125,857 | 2,019 | 3,922,156 | 4,148 | 8,048,013 | |
| Victoria ... | 1,975 | 3,684,866 | 2,060 | 3,903,830 | 4,035 | 7,588,696 | |
| Queensland ... | 669 | 1,167,718 | 637 | 1,151,821 | 1,306 | 2,319,539 | |
| South Australia ... | 1,033 | 2,378,918 | 1,039 | 2,360,007 | 2,072 | 4,738,925 | |
| Western Australia ... | 343 | 990,664 | 361 | 1,008,024 | 704 | 1,998,688 | |
| Tasmania ... | 872 | 762,496 | 860 | 763,060 | 1,732 | 1,525,556 | |
| Commonwealth ... | 1907 | 7,021 | 13,110,519 | 6,976 | 13,108,898 | 13,997 | 26,219,417 |
| | 1906 | 6,672 | 12,258,291 | 6,627 | 12,292,352 | 13,299 | 24,550,643 |

The necessary data are not available to enable a similar adjustment to be made for earlier years.

3. **Vessels Engaged Solely in Interstate Trade.**—The elimination of the element of oversea vessels, included in the interstate shipping returns, cannot be accurately effected; nevertheless a close approximation is furnished if it be assumed that vessels entered in the several States as from "oversea countries via other Commonwealth States" have really been cleared from other States as "interstate," and further, that the vessels cleared to "oversea countries via other Commonwealth States" have likewise been entered elsewhere as "interstate." Applying this suggestion, and also eliminating all interstate movements of oversea vessels, the number and tonnage of vessels engaged solely in the interstate trade during the years 1906 and 1907 will be found to be:—

**NUMBER AND TONNAGE OF VESSELS ENGAGED SOLELY IN INTERSTATE TRADE.
1906 and 1907.**

| Year. | Entered. | | Cleared. | | Total. | |
|-------------|----------|-----------|----------|-----------|--------|------------|
| | No. | Tons. | No. | Tons. | No. | Tons. |
| 1906 | 4,520 | 5,466,508 | 4,475 | 5,500,569 | 8,995 | 10,967,077 |
| 1907 | 4,697 | 5,596,430 | 4,652 | 5,594,809 | 9,349 | 11,191,239 |

This treatment cannot be extended to the individual States, as the records do not disclose the particular relationship of the States concerned.

4. Interstate and Coastal Services.—The foundation of the coastal steamship services in Australia dates back to the year 1851, when a regular trade was established between Melbourne and Geelong by the small screw steamer "Express." Early in the fifties a company was formed in Tasmania with a capital of £40,000 for the purpose of purchasing steamboats, and employing them in the carriage of passengers and goods between Hobart and Melbourne. This service was commenced in 1852, and was thus the first regular interstate service in Australia. About this time the great influx of population and the increase in commerce, caused chiefly by the gold discoveries, emphasised the desirability of establishing more regular and quicker means of communication between the principal ports of Australia, and in 1862 the regular interstate service between New South Wales and Victoria was inaugurated by the s.s. *You Yangs*, which was put into commission in regular service between Melbourne, Sydney, and Newcastle. In 1875 a company was formed in Adelaide for the purpose of supplying suitable steamers for the requirements of the trade between Adelaide and Melbourne. The first two steamers of the company were named the *South Australian* and the *Victorian*, and were small vessels of only 400 tons burthen. From the start success attended these enterprises, and the services thus initiated were rapidly extended and their operations broadened. Numerous other companies were formed to cope with the increasing trade between ports in the Commonwealth, and the companies engaged from time to time added to their fleets of steamers by the acquisition of more modern and rapid vessels, until at the end of the year 1907 the total net tonnage owned by the eleven companies from whom returns have been received amounted to 125,560 tons. A summary of the various mail services carried on during the year 1908 is given in Section XVIII. of this work.

The subjoined table gives particulars, so far as they are available, of all steamships engaged in regular interstate or coastal services at the end of each year from 1901 to 1907, inclusive:—

**PARTICULARS OF STEAMSHIPS ENGAGED IN REGULAR INTERSTATE AND
COASTAL SERVICES IN THE COMMONWEALTH, 1901 to 1907.**

§ 6. Lighthouses and Lights.

The following summary gives particulars of lighthouses and lights on the coast of each State :—

LIGHTHOUSES AND LIGHTS ON THE COASTS OF THE COMMONWEALTH, 1907.

| Position of Light. | Description. | Colour of Light. | Distance Visible (Nautical Miles). |
|--|---|----------------------------------|------------------------------------|
| QUEENSLAND. | | | |
| 6 small lights at entrance to the Norman River | | | |
| Booby Island | 2nd order dioptric; revolving flash; circular tower | White | 16 |
| Goode Island | 4th order dioptric; fixed; circular tower | Red and white sectors | 24 |
| Piper Island... .. | 4th order dioptric; fixed; lightship | White, with red sect'rs | 10 |
| 1 jetty light at Thursday Is. | | | |
| Claremont Island | 4th order dioptric; fixed; lightship | White, with red sect'rs | 10 |
| Pipon Island | 4th order dioptric; fixed; iron skeleton tower | White, with red sect'rs | 13 |
| Grassy Hill | 4th order dioptric; fixed; circular tower | White | ... |
| 2 small lights in Cook Harb. | | | |
| Rocky Islet | 4th ord. holophote; circular tower | White | 14 |
| Archer Point | 4th ord. holophotal; circular tower | Condensing; white, red and green | 20 |
| Low Island | 3rd order dioptric; revolving every minute; circular tower | White | 14 |
| Island Point (Port Douglas)... | 5th order dioptric; fixed; circular tower | Red | 8 |
| 2 small lights Dickson Inlet (Magazine Island) | | | |
| North Barnard Island | 6th order dioptric; fixed; circular lantern on concrete base | White | 14 |
| Bay Rock | 4th order dioptric; fixed; circular tower | Red and white | 15 |
| 14 smaller lights in Hinchinbrook Channel and Cairns Harbour | | | |
| Cape Cleveland | 4th order dioptric; revolving every 20 seconds; iron tower | Red and white | 20 |
| Cape Bowling Green | 3rd order dioptric; revolving every minute; iron tower | White | 14 |
| North Head, Bowen... .. | 5th order dioptric; fixed; hexagonal wooden tower | Red and white | 11 |
| 6 smaller lights in Bowen Harbour | | | |
| Dent Island | 4th order dioptric; revolving every 30 seconds; iron tower | White | 16 |
| Flat-top Islet | 4th order dioptric; fixed; iron tower | Red and white sectors | 19 |
| 13 smaller lights in the Pioneer River | | | |
| Pine Islet | 2nd order dioptric; fixed and flash; iron tower | Red and white | 20 |
| North Reef | 2nd order dioptric; fixed and flash; iron tower | White | 13 |
| Balaclava | 4th order dioptric lights in each tower; 2 square skeleton towers | White | 15 and 10 |
| 23 smaller lights on beacons in Fitzroy River | | | |
| Sea Hill | 4th order dioptric; circular tower | White and red sectors | 17 |
| Entrance to Middle Channel, Broadmount, 7 lights | | | |
| Pilot station, Keppel Bay ... | 6th order catoptric; fixed | White | 7 |
| Gas buoy at Timandra Bank | Occulting | White light | ... |
| Gas buoy (ent. to Fitzroy R.) | Occulting | White light | ... |
| Cape Capricorn | 3rd order dioptric; revolving every minute; iron tower | White | 23 |
| " " (2) | One reflector and one 4th order holophote; light-rooms | White | ... |
| South Channel, Port Curtis... (entrance leading lights) | Two 4th and two 6th order holophotes | White | ... |
| Gatcombe Head | 5th order dioptric; fixed; hexagonal wooden tower | Red and white | ... |
| 3 small lights in Port Curtis | | | |
| Bustard Head | 2nd order dioptric; fixed and flash; iron tower | White and red | 24 |
| " " | 5th order dioptric; fixed; sq. tower | White | ... |
| " " | Catoptric; fixed; mast | White | ... |
| Burnett Heads (South Head) | 5th order dioptric; fixed; hexagonal wooden tower | White | 10 |
| 14 smaller lights on beacons in the Burnett River | | | |
| Lady Elliot Island | 4th order dioptric; flash every 30 seconds; iron tower | White | 12 |
| Sandy Cape | 1st order dioptric; revolving every 1½ minutes; iron tower | White | 27 |

| Position of Light. | Description. | Colour of Light. | Distance Visible (Nautical Miles). |
|--|--|--------------------------------|------------------------------------|
| Woody Island (middle) ... | 4th order dioptric; fixed; hexagonal wooden tower | Red and white sectors | 19 |
| 51 smaller lights in Wide Bay, Sandy St., & Mary R. | 4th order dioptric; fixed; hexagonal wooden tower | Red and white sectors | 16 |
| Double Island Point ... | 3rd order dioptric; revolving every 30 seconds; circular tower | White | 24 |
| Fisherman's Island (front) ... | 5th order holophote; iron tower | Red | ... |
| 30 smaller lights on beacons in the Brisbane River and Moreton Bay | 5th order dioptric; iron tower | Red and white sectors | ... |
| Pile lighthouse ... | 4th order dioptric; occulting; hexagonal, on screw piles | Red and white sectors | ... |
| Cleveland Point ... | 6th order dioptric; fixed; hexagonal wooden tower | White | 8 |
| North-west Channel, Moreton Bay (gas buoys) | Steel buoys; 2 black, 1 red; 2 fixed, 1 occulting | White | ... |
| Bribie Island— Front leading light ... | 4th order dioptric, condensing; lantern and storeroom on skeleton wood tower | White | 12 |
| Back leading light ... | 4th order holophote; skeleton wood tower | White | 15 |
| Caloundra Head ... | 4th order dioptric, condensing; circular wood and iron tower | White, with red sectors | 16 |
| Howard Range ... | 4th order holophote; square wooden light-room | White | ... |
| Tangaluma ... | Biform (2 holophotes, 4th order); square wooden light-room | White | 23 |
| Cowan Cowan ... | 4th order dioptric; fixed; wooden tower | Red and white sectors | 12 |
| Comboyuro ... | 4th order dioptric; fixed; wooden tower | Red and white sectors | 9 |
| Yellow Patch ... | 4th order dioptric; fixed; square wooden light-room | Red and white sectors | 11 |
| North Point ... | 6th order dioptric; fixed; square wooden light-room | White sector | 7 |
| Cape Moreton 1 small secondary light | 1st order catoptric; revolving every minute; circular stone tower | White | 26 |
| NEW SOUTH WALES. | | | |
| Tweed River (Fingal Head) ... | 4th order catadioptric; fixed | White | 12 |
| Cape Byron ... | 1st order dioptric; flashing—flash $\frac{1}{2}$ sec. dura., eclipse $4\frac{1}{2}$ secs. dura. | White | 26 |
| .. (same tower) ... | 4th order dioptric; fixed | Red | ... |
| Richmond River (2) ... | 4th order catadioptric; fixed | White | 12 |
| Clarence River * | 4th order catadioptric; fixed | White | 10 |
| South Solitary Is. (summit) ... | 1st order dioptric; revolving—flash every half minute | White (incandescent petroleum) | 20 |
| Lagger's Point (Trial Bay) ... | Catoptric; fixed | White | 5 |
| Smoky Cape ... | 1st order dioptric; group flashing | White | 28 |
| Tacking Point ... | 4th order catadioptric; fixed | White | 12 |
| Crowdy Head (summit) ... | 4th order catadioptric; fixed | White and red | 12 |
| Sugarloaf Point (Seal Rocks) | 1st order dioptric; revolving—flash every half minute | White | 23 |
| .. (same tower) | 4th order catadioptric; fixed | Green | ... |
| Nelson Head (summit) ... | Catoptric; fixed | White and red | 8 |
| Port Stephens (Stephens' Pt.) | 2nd order catoptric; revolving—red and white light alternately, short eclipse between the 2 colors | Red and white alternately | W. 17 R. 12 |
| Port Hunter, Newcastle— | | | |
| Nobby's Head (summit) ... | 2nd order dioptric; fixed | White | 17 |
| Leadg. lights (2) off Stockton | Dioptric; fixed | Green | ... |
| Stony Point, S. breakwater | Dioptric; fixed | Red | ... |
| Fairway leading lights (2) ... | Fixed | White and red | ... |
| Beacon north of lifeboat station and fog bell | Fixed | Red | ... |
| Leading lights (2) for north harbour | Fixed | White and red | ... |
| Outer breakwater light and fog bell | Fixed | Red | ... |
| Norah Head ... | 2nd order dioptric; flashing—flash $\frac{1}{2}$ sec. duration, eclipse $4\frac{1}{2}$ sec. | White | 18 |
| Broken Bay (Barrenjoey) ... | 2nd order dioptric; fixed | Red | 15 |
| Port Jackson, Sydney— Macquarie (Outer S. Head) | 1st order dioptric; revolving—flash every minute | White | 26 |
| Hornby (Inner Sth. Head) | Catoptric; fixed | White | 15 |
| Leading lights (2) East chnl. | Oil lamps; fixed | Red | ... |

* Leading lights are exhibited at Maclean, Lawrence, Elizabeth Island, and Ulmarra for navigating the river.

* In some cases the vessels included in the above return were subsequently recovered.

SECTION XVII.

ROADS AND RAILWAYS.

§ 1. Roads and Bridges.

1. **Introduction.**—At the present time but few of the main roads in Australia have the importance which they at one time possessed, for originally they were the main arteries of traffic between the chief towns and ports and the interior, a function which has been greatly modified by the development of railways. Owing to the very limited opportunity for inland water carriage, and the great extent of the Commonwealth, roads are still the sole means by which traffic can be conducted throughout a large part of the interior. They moreover serve as feeders to the railways.

In the early days of colonisation main roads were constructed by convict labour, connecting the settled districts, such as Penrith, Parramatta, and Windsor, with the metropolis of Sydney, but the interior of the country was not open to access until the year 1815, when a track as far as Bathurst was completed under the direction of Governor Macquarie. The construction of this road greatly increased the area available for agricultural and pastoral pursuits by rendering accessible the rich and fertile plains in the vicinity of Bathurst. In the following years settlement spread to such an extent that it was impossible to keep pace in the matter of road-making with the demands of the settlers. For many years the authorities chiefly confined their attention to the maintenance and improvement of the main roads already constructed, and to extending them to the principal centres of settlement, and it was not until the period subsequent to the discovery of gold, when many new routes were opened and the amount of traffic largely increased, that the matter received serious attention at the hands of the State Governments. Most of the early bridges were constructed of stone, and many of them are still in existence. In later years, during the period immediately following the progress of settlement in the interior, bridges were usually constructed of wood, and these have since been replaced, after a life of about twenty-five years. Nearly all the bridges of recent date are of iron or steel. Some of the larger and more modern bridges are notable, being fine examples of engineering skill.

During the latter half of the nineteenth century great progress was made in all the States in the construction of roads and bridges, so that at the present time there is a considerable network of roads spreading over the occupied regions of the Commonwealth. There are still, however, in the less settled parts, especially in Queensland and Western Australia, vast areas of territory inaccessible by roads, and even in the more thickly populated parts of the Commonwealth new roads and deviations, many of an important character, are required in order to facilitate settlement on the land. At the present time the general policy adopted in the States is to construct necessary roads and bridges, often to serve as feeders to the railway systems by conveying the traffic from country districts to convenient stations along the line. Throughout the Commonwealth there are a number of stock routes provided with wells and places for watering stock. Particulars as to these routes in the several States are not generally available, except in the case of Western Australia. It is hoped in a future issue to afford fuller information, together with a map shewing these routes. In all the States the control, construction, and maintenance of roads and bridges have been, to a large extent, decentralised and placed in the hands of suitable local bodies.

2. **Expenditure on Roads and Bridges.**—Figures shewing the total expenditure on roads and bridges in the States are not available. The subjoined statement, however, gives the amounts of total loan expenditures by the State Governments up to the 30th June, 1908.

ROADS AND BRIDGES.—TOTAL LOAN EXPENDITURE IN EACH STATE AND IN THE COMMONWEALTH UP TO THE 30th JUNE, 1908.

| State, etc. ... | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tasmania. | C'wealth. |
|-----------------|------------|-----------|----------|------------|----------|------------|------------|
| Expenditure | £1,801,943 | £176,006 | £972,608 | £1,464,736 | £166,818 | £2,525,283 | £7,107,394 |

The following table shows the annual expenditure from loans on roads and bridges by the central Governments in each State and in the Commonwealth during each financial year since 1901:—

ROADS AND BRIDGES.—LOAN EXPENDITURE BY STATE GOVERNMENTS, 1902 TO 1908.

| State. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|------------------|---------------------|---------------------|---------------------|---------------------|----------|----------|---------|
| N.S.W. ... | £ 150,777 | £ 73,471 | £ 47,812 | £ 59,019 | £ 28,666 | £ 11,162 | £ 1,690 |
| Victoria ... | 47,104 | 44,770 | 17,267 | 14,945 | 1,919 | 444 | 23 |
| Queensland ... | ... | 1,333 | ... | ... | ... | ... | ... |
| S. Australia ... | 185 | 200 | 78 | ... | ... | ... | ... |
| W. Australia ... | 740 | ... | ... | ... | 712 | 15,613 | 7,956 |
| Tasmania ... | 77,536 ¹ | 55,687 ¹ | 39,037 ¹ | 55,303 ² | 57,536 | 75,399 | 94,443 |
| C'wealth ... | 276,342 | 175,461 | 104,194 | 129,267 | 88,833 | 102,618 | 104,112 |

1. For the calendar years 1901, 1902, and 1903 respectively.

2. For the eighteen months ended 30th June, 1905.

The two tables given above shew only a small proportion of the actual expenditure upon roads and bridges in the different States, for the reason that (a) there have been large expenditures from revenue, both by the central Governments and by local authorities, and (b) the State Governments have in many cases voted grants and subsidies on the amount of rates collected, and have issued loans to local authorities either for the express purpose of the construction of roads and bridges or for the general purpose of public works construction. Returns of expenditure, where available, are given below for each State. Although no revenue is now derived directly from roads and bridges, they are indirectly of great value to the community, forming, next to railways and public lands, the most considerable item of national property.

3. **New South Wales.**—The first Act dealing generally with the subject of roads in New South Wales was passed in 1833, and provided for the construction and improvement of roads and streets throughout the colony. The Governor was authorised to open up new roads, for the purpose of which land could be compulsorily acquired. Main roads were distinguished from parish roads; the former, which were specified in a schedule, were to be maintained and repaired at the public expense, while the latter, which were situated mainly in the County of Cumberland, were to be maintained at the expense of the parishes. The Governor was also authorised to appoint Commissioners to report periodically upon the state of repair of the roads. In 1855 an Act was passed by the New South Wales Government requiring the footways in George and Pitt Streets in Sydney to be paved by the owners of the properties abutting on to those streets. Two years later the Roads Department was created to take over the control, construction, and mainten-

ance of roads and bridges in New South Wales. In the few years immediately following an improved system of road-making was adopted, and great progress is said to have been made in the repair of old roads and in the construction of new ones. The striking reduction in both the time of transit and cost of carriage is apparent in the following statement,¹ which indicates on the whole a saving of about 57 per cent. in time and 54 per cent. in cost.

NEW SOUTH WALES.—COMPARATIVE STATEMENT OF COST OF CARRIAGE OF GOODS BY ROAD AND TIME OF TRANSIT, 1857 TO 1864.

| Main Road. | Distance. | 1857. | | 1864. | |
|-----------------------------|-----------|------------------|---------------|------------------|---------------|
| | | Time of Transit. | Cost per Ton. | Time of Transit. | Cost per Ton. |
| | Miles. | Days. | £ s. d. | Days. | £ s. d. |
| Sydney to Goulburn ... | 134 | 17½ | 12 5 0 | 7½ | 3 15 0 |
| Sydney to Bathurst ... | 145 | 23½ | 15 10 0 | 11 | 6 10 0 |
| Newcastle to Murrurundi ... | 119 | 21 | 9 0 0 | 8 | 6 10 0 |

Since 1864 the cost of carriage by road, however, has not been further reduced, and the control of roads and bridges, with the exception of municipal roads and certain roads in the vicinity of Sydney, constructed by private road trusts, remained in the hands of the central Government until the year 1906.

(i.) *Administration and Control.* The control of all roads, bridges, and ferries is now regulated by the Local Government Act 1906, which came into force on the 1st January, 1907 (see Section XXVI hereinafter). Under the provisions of this Act the eastern and central divisions of the State are divided into shires and municipalities for the general purposes of local government, for the endowment of which a sum of not less than £150,000 is payable annually out of the consolidated revenue on the basis of a percentage subsidy on the proceeds of the general rates received by the District Councils. The control of all roads, bridges, and ferries (except those proclaimed "National") has been transferred from the Roads Department to the respective shire and municipal councils, who are now responsible for their construction and maintenance. Power is given to construct new roads, to widen or close existing roads, to make by-laws for the regulation of traffic, etc.; in the case of the acquisition of land for the purpose of constructing new roads or of widening existing roads, the provisions of the Roads Act 1902 are incorporated.

(ii.) *Principal Main Roads.* The four principal main roads in New South Wales run in the same direction as, and are roughly contiguous to, the four State-owned main railway lines. (a) *The Southern Road*, 385 miles in length, runs from Sydney to Albury, and before the days of railway construction formed part of the highway over which the interstate traffic between Melbourne and Sydney used to flow. (b) *The South Coast Road*, 250 miles long, runs from Campbelltown along the top of the coast range and across the Illawarra district as far as Bega, from which place it extends as a minor road to the southern limits of the State. (c) *The Western Road*, 513 miles long, runs through Bathurst, Orange and many other important townships as far as Bourke, on the Darling River. (d) *The Northern Road*, 405 miles in length, runs from Morpeth, near Newcastle, as far as Maryland, on the Queensland border.

(iii.) *Length and Classification of Roads and Bridges.* Owing to the alteration in the arrangements for the collection of statistics necessitated by the inauguration of the new system of local government, particulars as to the length of roads and streets for the year 1907 are not generally available. The following tables give the length of roads, the number of culverts, bridges, and ferries, from 1901 to 1906, inclusive:—

1. See Official Year Book, New South Wales, 1905-6, p. 156.

**NEW SOUTH WALES.—LENGTH OF ROADS, NUMBER OF CULVERTS, BRIDGES,
AND FERRIES, 1901 TO 1906.**

| Year. | Miles of Roads. | Number of Culverts under 20 ft. Span. | Number of Bridges over 20 ft. Span. | Number of Punts, Boats and Ferries. |
|-------------|-----------------|---------------------------------------|-------------------------------------|-------------------------------------|
| 1901 | 52,472 | 38,760 | 2,979 | 318 |
| 1902 | 53,908 | 39,082 | 3,251 | 331 |
| 1903 | 53,796 | 41,286 | 3,446 | 454 |
| 1904 | 53,892 | 41,286 | 3,446 | 454 |
| 1905 | 56,316 | 41,929 | 3,508 | 460 |
| 1906 | 58,326 | 43,564 | 3,548 | 457 |

NEW SOUTH WALES.—CLASSIFICATION OF ROADS ON THE 31st DECEMBER, 1906.

| Classification. | Metalled, Wood-blocked, Ballasted, Gravelled or Corduroyed. | Formed. | Cleared or Drained. | Bush or Un-touched Road. | Total |
|--|---|---------|---------------------|--------------------------|--------|
| | Miles. | Miles. | Miles. | Miles. | Miles. |
| Scheduled (outside municipalities) ... | 8,735 | 5,533 | 13,102 | 5,162 | 32,532 |
| 27 " (within ") ... | 734 | 117 | 198 | 42 | 1,091 |
| Unclassified (outside ") ... | 422 | 1,202 | 4,410 | 9,540 | 15,574 |
| " (within ") ... | 58 | 34 | 57 | 49 | 198 |
| *Roads under municipal councils ... | 3,417 | 1,767 | 1,926 | 1,821 | 8,931 |
| Total roads in New South Wales ... | 13,366 | 8,653 | 19,693 | 16,614 | 58,326 |

* Particulars given are to the end of 1907.

The more important bridges, numbering 256, have been proclaimed under the provisions of the Local Government Act as "National works," and these, together with the bridges, etc., in the Western Division, remain under the control of, and are maintained by, the Public Works Department.

(iv.) *Expenditure on Roads and Bridges.* The subjoined table shews the total expenditure up to the year 1900, and the annual expenditure for succeeding years to 1907, by the central Government and by road trusts:—

**NEW SOUTH WALES.—TOTAL AND ANNUAL EXPENDITURE BY ROADS DEPARTMENT
AND BY ROAD TRUSTS, 1901 TO 1907.**

| Year ended 30th June. | Expenditure by Roads Department. | | | Expenditure by Road Trusts. | Total Expenditure. |

* Not available. † Incomplete.

4. **Victoria.**—In Victoria a comprehensive system of local government, under which the control of roads and bridges is vested in District Councils, has been in force for many years. In the Imperial Act of Parliament, by which the State of Victoria was constituted a separate colony, there was a provision authorising the Governor to incorporate the inhabitants of each county to form districts for the purpose of local government, and to establish elective District Councils, with power to make by-laws for, *inter alia*, the proper control, construction and maintenance of roads and bridges, which were to be paid for partly out of local tolls and rates. In 1852 a committee was appointed by the Legislative Council to inquire into the state of repair of roads and bridges, and as to how the funds for their construction and repair might be best expended. On the report of this committee was based the first Victorian Act which dealt with local government in country districts. The report contained an interesting account of the state of the country at that time; it pointed out the urgency of providing suitable roads and bridges as an aid to settlement and development; it emphasised the importance of setting aside more adequate funds for the purpose, and directed attention to the deplorable state of the lines of internal communication. The committee recommended that main lines of roads should be constructed throughout the colony by means of grants from the public revenue, and that toll-gates should be erected on the roads when completed. The following were the lines which it was advised should be first formed as main roads:—(a) From Wodonga to Melbourne *via* Kilmore. (b) From Melbourne to the Murray River *via* Mount Alexander. (c) From Melbourne to Geelong. (d) From Melbourne to Portland *via* Bacchus Marsh. (e) From Melbourne to Gippsland *via* Brighton and Dandenong. (f) From Geelong to Westward, and (g) from Geelong to Colac. The committee further recommended the appointment of a Central Road Board to have exclusive powers as to making or improving any new or existing main line of road, and that the Governor should be empowered to declare any part of the colony to be a Road District under the control of an elective District Board of from five to nine members, who were to have power to construct and maintain any new parish or existing cross-road, for which purpose they should be empowered to levy rates. With some slight alterations these recommendations were embodied in the Roads Act of 1853, which established a Central Road Board for the whole State, with an inspector-general and staff, and which also provided for the erection of local road districts under the management of local boards. In 1859 municipalities were established in Victoria, and in 1863 the Roads Districts and Shires Act and the Municipal Corporations Act were passed; these Acts were amended from time to time until they were consolidated by the Local Government Act of 1890, which was in turn amended and consolidated by the Local Government Act of 1903 (see Section XXVI hereinafter).

(i.) *Administration and Control.* Under the provisions of the last-named Act the absolute property in all land proclaimed as a road, street or highway is vested in the Crown. The control, construction, and maintenance of all roads, streets, and bridges are in the hands of District or Municipal Councils, who are empowered to open new roads, and to close, divert, or increase the width of any existing street or road, provided that no new road less than one chain in width may be opened without the consent of the Minister. Power is also given under certain conditions to reduce the width of any existing road or street to a width of not less than one chain. Where land has been alienated from the Crown, and there is no road to any part of such land from the nearest highway, if the owners of such land desire to have a private road communicating with the highway they may apply to that effect in writing to the council, who may then purchase the necessary land, and may open a road not less than thirty-three feet wide, which road will thenceforth be a private road for the use of the persons who applied for the same. The councils are further empowered to make and repair streets, lanes, or passages on private property, or forming means of back access to private property, and may compel the owners of such property to pay the cost of so doing. Footways in front of houses or grounds may be kerbed, flagged, paved, or asphalted, and the owners of such houses or grounds must bear half the cost of so doing. The revenue of the councils is derived from rates which may be either general or extra. The councils are empowered to raise loans for the purpose of

making or opening new streets and roads, and for diverting, altering, or increasing the width of streets and roads, provided that the amount of such loan must not exceed ten times the average income of the council during the three years immediately preceding.

(ii.) *General and Local Government Expenditure.* The gross amount expended by the State Government of Victoria on roads and bridges was £7,756,345 up to the end of June, 1900; figures for succeeding years are given in the table below. The annual expenditure from ordinary revenue by municipalities is not returned separately, but is included in Public Works Construction and Maintenance; the subjoined table shews the cost from general revenue of municipalities of private streets, roads, etc., and also shews the amounts of municipal loan expenditure from 1901 to 1907, inclusive.

VICTORIA.—AMOUNTS EXPENDED BY GENERAL GOVERNMENT ON ROADS AND BRIDGES, AND AMOUNTS EXPENDED BY LOCAL AUTHORITIES ON THE FORMATION OF PRIVATE STREETS, ROADS, LANES, ETC., TOGETHER WITH AMOUNTS OF MUNICIPAL LOAN EXPENDITURE ON STREETS, ROADS, AND BRIDGES, 1901 to 1907.

| Financial Year. ¹ | Annual Expenditure by State Government. | Municipal Loan Expenditure. | | Formation of Private Roads, Streets, Lanes, etc. ² | |
|------------------------------|---|------------------------------|---------|---|---------|
| | | Cities, Towns, and Boroughs. | Shires. | Cities, Towns, and Boroughs. | Shires. |
| | | £ | £ | £ | £ |
| 1901 | 72,890 | 16,844 | 12,928 | 18,829 | 4,521 |
| 1902 | 75,855 | 13,047 | 15,656 | 17,655 | 4,542 |
| 1903 | 69,200 | 13,540 | 12,696 | 15,279 | 4,028 |
| 1904 | 42,144 | 12,929 | 1,444 | 15,432 | 4,072 |
| 1905 | 30,393 | 21,515 | 2,560 | 21,593 | 2,083 |
| 1906 | 56,145 | 5,673 | 8,480 | 18,237 | 1,390 |
| 1907 | 43,119 | 21,137 | 7,495 | 25,244 | 3,052 |

1. The financial years of Melbourne and Geelong end on the 31st December and the 31st August respectively; those of all other municipalities on the 30th September.

2. Including the cost of flagging, asphaltting footpaths, etc., but exclusive of loan expenditure.

The total amount spent by the State Government on roads and bridges up to the year 1901 was £7,756,345, bringing the total expenditure to the end of 1907 up to £8,146,091.

5. Queensland.—In Queensland the construction and maintenance of public roads are controlled under a system of local self-government, for the purposes of which the whole State is divided into (a) towns and (b) shires. The City of Brisbane was constituted a municipality about three months prior to the separation of Queensland from New South Wales in 1859, and a general system of local government was inaugurated in the State in 1878. At the present time the duties, rights, and responsibilities of the local authorities with regard to roads, streets, and bridges are regulated by the Local Authorities Act of 1902. The councils are invested with full powers to open, close, divert, or widen streets, roads, and bridges, and to make by-laws for the regulation of traffic, etc. The members of the councils are elected by the ratepayers, and with the aid of executive officers they undertake the supervision and control of all necessary constructions and improvements of roads and bridges within their district. The rates which the councils are empowered to levy are supplemented by Government grants. Separate returns as to the expenditure by towns and shires on roads and bridges are not available, the amounts being included in the returns of expenditure on public works, particulars as to which expenditure may be found in the Section of this book on *Local Government*.

6. South Australia.—In South Australia the construction of an extensive main road system was initiated by Sir Henry Young, who was Governor of the colony from 1848 to 1854, and this system provided the principal means of communication between the outlying country and the capital and port before the introduction of railways. By the District Councils Acts, 1887 to 1904, and the Municipal Corporations Acts, 1890 to 1903, a system of local self-government has been extended to all the settled parts of the State, which parts are divided into districts and municipalities under the control of councils. Under the provisions of these Acts and of the Roads Act of 1884 the councils are invested with full powers as to the opening and making of new streets and roads, and the diverting, altering, or increasing the width of existing roads; as to raising, lowering, or altering the ground or soil of any street or road; and as to the construction, purchase, and management of bridges, culverts, ferries, and jetties.

(i.) *Main Roads and District Roads.* All the roads in each district are classified either as main roads or as district roads. Both classes of roads are under the direct control either of Municipal Corporations or of District Councils, but in the case of main roads the expenditure on construction and maintenance is chiefly provided for by Government grants, which are paid into a main road fund, while the expenditure on district roads is paid for out of general rates, and out of subsidies on the amount of such rates, granted by the central Government. Under the Main Roads Act 1908, a number of roads were declared to be main roads.

The total estimated length of streets and roads in South Australia up to the 30th June, 1908, was as follows:—

| Particulars. | Woodblocked. | Macadamised. | Other. | Total. |
|--------------|--------------|--------------|--------|--------|
| Miles | — | 8,615 | 23,726 | 32,341 |

(ii.) *Expenditure by Corporations on Main and District Roads.* The following table shews the expenditure by municipal corporations on both main and district roads during each year from 1901 to 1907, inclusive:—

SOUTH AUSTRALIA.—EXPENDITURE BY CORPORATIONS ON STREETS, ROADS, AND BRIDGES, 1901 TO 1907.

| Year. ¹ | District Roads. | | | Main Roads Fund. | | | |
|-----------------------|-----------------|---------------|---------------|------------------------|--------|---------------|---------------|
| | Total Receipts. | Expenditure. | | Receipts. | | Expenditure. | |
| | | Construction. | Main-tenance. | From Main Road Grants. | Total. | Construction. | Main-tenance. |
| | £ | £ | £ | £ | £ | £ | £ |
| 1901 ... | 148,872 | 4,906 | 50,628 | 7,403 | 8,738 | 159 | 7,745 |
| 1902 ... | 159,753 | 11,671 | 46,980 | 5,470 | 7,249 | 117 | 6,580 |
| 1903 ... | 155,857 | 3,005 | 52,539 | 5,458 | 6,986 | ... | 6,433 |
| 1904 ² ... | 158,540 | 10,235 | 50,769 | 5,116 | 6,559 | 85 | 6,109 |
| 1905 ... | 162,850 | 17,475 | 43,245 | 6,125 | 8,420 | 419 | 7,320 |
| 1906 ... | 166,097 | 14,521 | 48,901 | 7,028 | 8,144 | 192 | 7,291 |
| 1907 ... | 154,918 | 5,697 | 47,024 | 6,815 | 7,506 | 681 | 6,703 |

1. Up to and including the year 1903 the financial year ended on the 31st December, but after that date ends on the 30th November. 2. For eleven months ended the 30th November.

(iii.) *Expenditure of District Councils on Main and District Roads.* The following table gives similar information with respect to main and district roads under the control of District Councils:—

**SOUTH AUSTRALIA.—EXPENDITURE BY DISTRICT COUNCILS ON STREETS, ROADS,
AND BRIDGES, 1901 TO 1907.**

| Year Ended 30th June. | District Roads. | | | Main Roads Fund. | | | |

| 1907 ... | 128,787 | 27,795 | 47,731 | 70,550 | 70,769 | 5,598 | 57,152 |

7. *Western Australia.*—In Western Australia the construction, maintenance, and management of roads and bridges throughout the State, except those within the boundaries of municipalities, are under the control of District Road Boards, constituted by the Roads Acts 1902 to 1904.

(i.) *District Roads and Bridges.* Under the provisions of these Acts any part of the State, not within a municipality, may be constituted by the Governor-in-Council into a Road District, under the control of a Board of seven members elected by the ratepayers. The Board is invested with full powers for controlling and managing all roads and bridges within the district, and is empowered to make by-laws for the general regulation of traffic, to control the weight of engines and machines permitted to cross any bridge or culvert, to regulate the speed limits of vehicles, lights to be carried by vehicles, the lighting of streets and roads, and the licensing of bicycles and motor cars. A District Road Board, may not, however, construct any road or street less than sixty-six feet wide without the consent of the Governor, nor any bridge or culvert at a greater cost than £100, except by the direction of the Minister. The construction of the more important bridges and culverts is generally carried out by the Government, the work, after completion, being handed over to the Road Board for maintenance. In case of land being required for the purpose of constructing a new street or road, or for widening an existing street or road, the provisions of the Public Works Act of 1902 are incorporated in the Roads Acts. A Board may levy general rates within its district not exceeding one shilling and sixpence in the £ on the annual ratable value, and, if valued on the basis of unimproved values of lands, the general rate must not exceed twopence half-penny in the £ on the capital unimproved value. Boards are also empowered to raise loans for the purpose of constructing new roads, but the amount of such loans must not be greater than ten times the average amount of general rates collected for two years. For the purpose of paying the interest on money borrowed a Board may levy a special rate not exceeding one shilling and sixpence in the £. District Road Boards may also exercise the powers of Drainage Boards under the provisions of the Land Drainage Act of 1900.

(ii.) *Municipal Streets, Roads, and Bridges.* As regards roads, streets, and bridges within municipalities, these are under the control of local authorities elected under the provisions of the Municipal Corporations Act 1906. The municipal councils are invested with full powers for making, maintaining, and managing all streets, roads, and bridges within the municipal area, and may request the Governor to declare any such land reserved, used, or by purchase or exchange acquired for a street or way, to be a public

highway, and on such request the Governor may, by notice in the *Gazette*, proclaim such highway absolutely dedicated to the public.

(iii.) *Stock Routes.* Although the road districts cover a considerable area, amounting in all to about one million square miles, there are still vast tracts of country in Western Australia inaccessible by road. For the purpose of travelling stock in the less settled parts of the State, stock-routes have been provided and placed under the control of the Public Works Department. These routes are six in number, and are as follows:—(a) *The Kimberley-De Grey Stock Route*, starting about twenty miles south of Derby, runs as far as Broome, and continues thence in a south-westerly direction to the De Grey River. The route is about 350 miles in length, and follows the sea-coast at a distance of from two to ten miles along that part known as the Ninety-mile Beach. There are forty wells, as a rule from ten to fifteen miles apart. (b) *The De Grey-Peak Hill Route* starts from Pardoo, the junction of the Kimberley-De Grey and De Grey¹ Mingenew routes, and runs alongside of the De Grey River for about 100 miles, when it turns south for another 100 miles as far as Nullagine. (c) *The De Grey-Mingenew Route* commences at Pardoo and runs in a south-westerly direction for about 250 miles to the Fortescue River, where it turns south and runs irregularly to Mingenew, on the Midland Railway. The route is over 900 miles long. There are about eighty wells, in addition to permanent pools in the river beds, no watering stations being more than about fifteen miles apart. (d) *The Fortescue-Cue Route* runs from the Fortescue River to Cue, and is about 400 miles long. (e) *The Peak Hill-Leonora Route* starts from the Murchison, at the termination of the De Grey-Peak Hill route, and runs in a south-easterly direction to Leonora; it is about 300 miles long and has about thirty wells. (f) *The Coolgardie-Eucla Route* is about 500 miles in length. In 1903 an artesian bore was put down at Madura by the Public Works Department, 2001 feet deep, with a flow of 70,000 gallons a day.

(iv.) *Length of Roads, Number of Bridges, and Expenditure on Roads and Bridges.* The following table gives particulars of the operations of the Road District Boards since the 1st January, 1903, when the Roads Act of 1902 (now amended by the Act of 1904) came into force:—

WESTERN AUSTRALIA.—PARTICULARS OF ROADS UNDER CONTROL OF DISTRICT ROAD BOARDS, 1904 to 1907.

| Year ended the 30th June. | Area. | Revenue. | | | | Expenditure. | Length of Roads. | | | | No. of Bridges and Culverts. | |

1. Returns incomplete, not having been furnished when asked for. 2. Exclusive of three municipalities, which have not supplied the information. 3. Exclusive of four municipalities.

S. Tasmania.—In 1869 a Roads Act was passed in Tasmania empowering the Governor-in-Council to declare any portion of the colony to be a road district under the control of a Road Trust consisting of from five to seven members elected by the landowners. The trustees were invested with full control of all cross and by roads, but could not construct any road less than sixty-six feet wide without the consent of the proprietors on each side. Under the provisions of the Main Roads Act 1880 the Minister of Lands and Works for the time being was appointed Commissioner of Main Roads, and was invested with the supervision of all main roads and bridges except those situated in municipalities, which were first constituted by the Rural Municipalities Act of 1858, and also excepting those within road districts under the Act of 1869. The trustees of road districts were appointed to act as Main Road Boards. In 1884 previous enactments were repealed and their provisions were amended and consolidated by the Roads Act of that year; under this Act Main Road Boards were established. In 1906 both Road Trusts and Main Road Boards were abolished by the Local Government Act, which, however, specially provided that the councils of all municipalities constituted under the Act shall exercise all powers conferred upon, and shall be liable to all the obligations imposed upon Road District Trusts and Main Road Boards by the Roads Act of 1884. The whole State, with the exception of Hobart and Launceston, is divided into municipal districts, each of which is under the control of a warden and councillors, and each of which is deemed to be a road district and a main road district for the purposes of the Roads Act 1884.

(i.) *Cross Roads.* Under the provisions of the Roads Act of 1884 the Governor-in-Council was empowered to declare from time to time by proclamation any part of the State to be a road district for the purpose of the Act, and any such district was to be under the control of a Road Trust, the members of which were elected by the landholders in the district. The trustees were empowered to construct, maintain, and regulate all cross-roads within their district, cross-roads being defined to comprise the following roads:—(a) Any road leading from one town to another. (b) Any road leading from a town or public bridge to a main road. (c) Any road leading from a town to a navigable river. (d) Any road which may be proclaimed by the Governor as a cross-road. (e) All streets within a town, excepting those in any town in any rural municipality, which were under the control of municipal councils. The annual expenditure of Road Trusts was provided for partly by rates which they were empowered to levy, and partly by Government grants.

(ii.) *Main Roads.* Under the Act of 1884 main roads were from time to time determined by Parliament, and the Minister for Lands and Works was *ex officio* Com-

missioner of Main Roads. The powers and duties of this officer have not been altered by the Local Government Act of 1906. Municipal Councils and Road District Trusts were constituted Main Road Boards for all main roads situate in or passing through their district, with the exception of the main road from Hobart to Launceston, and for all bridges except those specified in the schedule to the Act. The Commissioner or any Main Road Board, subject to the authority of the Governor-in-Council, might, after a main road had been declared by law, take land required for such road, and might open a new road through the same. All powers, duties, and functions conferred by the Act upon any Main Road Board could be exercised by the Commissioner in respect of the main road from Hobart to Launceston, the bridges specified in the schedule to the Act, and all main roads not situated in any main road district. The expenditure on main roads was provided for by funds voted by Parliament by means of Main Roads Maintenance Acts.

(iii.) *Roads and Bridges under the Land Act 1903.* It is provided by the Lands Act of 1903 that as soon as 500 acres of first-class agricultural land have been taken up in one locality, and in not less than five lots, the Governor shall, for the purpose of making roads, bridges, or drains in the vicinity of the land so taken up, raise a sum equal to ten shillings an acre for every acre so taken up, by the issue and sale of debenture stock chargeable on the Consolidated Revenue Fund. The Governor is authorised to raise in the same manner a sum of money not exceeding five shillings for every acre of second-class land sold, and not exceeding two shillings and sixpence for every acre of third-class land sold, for similar purposes. With respect to the sale of lands within any town, not being within a mining area, of a value of not less than £250, the Governor may, for the purpose of making streets, roads, or other improvements in the vicinity of the land so sold, raise a sum equal to ten shillings for every pound of the value of such land, by the issue and sale of debenture stock as above. Provision is also made for the Commissioner of Roads, or for such other person as the Governor may appoint, to purchase and take any lands which he may deem necessary for the purpose of constructing roads or other public works.

(iv.) *Mileage of Main and Other Roads and Expenditure of Main Road Boards and Road Trusts, 1901 to 1906.* The subjoined table gives particulars as to lengths of roads open and as to the expenditure of Main Road Boards and Road Trusts, during the years 1901 to 1906, inclusive. Returns for the year 1907 from municipal councils under the Local Government Act of 1906 are too incomplete for publication.

TASMANIA.—LENGTH OF ROADS AND EXPENDITURE OF MAIN ROAD BOARDS AND ROAD TRUSTS, 1901 TO 1906.

| Year. | Main Road Boards. | | District Road Trusts. | | | |
|----------|---------------------|--------------|-----------------------|----------------------|-----------|--------------|

| 1902 ... | 765 | 7,661 | 102 | 6,732 | 29,944 | 27,579 |
| 1903 ... | 650 $\frac{3}{4}$ | 8,805 | 105 | 6,855 | 25,359 | 30,368 |
| 1904 ... | 650 | 6,954 | 104 | 7,045 | 29,638 | 29,459 |
| 1905 ... | 678 | 7,028 | 104 | 7,124 | 30,063 | 28,566 |
| 1906 ... | 678 $\frac{3}{4}$ | 8,025 | 105 | 7,272 | 31,791 | 31,633 |

§ 2. Railways.

(A) General.

1. Introduction.—Although it was early recognised that railway construction was essential to the proper development and settlement, and to the future commercial prosperity of a large country like Australia, ill supplied with navigable rivers, the progress made in opening up lines during the twenty years which followed the completion of the first line in 1855, was very slow. This was no doubt due partly to the difficulty of borrowing money at a reasonable rate of interest, owing to the depreciation of Australian securities in London, and partly to the sparseness of the population, which it was feared would not justify the necessary expenditure. In the vicinity of Sydney, also, the ranges of mountains in the districts near the coast had to be either traversed or pierced by tunnels at a considerable expenditure of time and money, thus retarding the expansion of the railway systems which have their starting point at that city. Since the year 1875, however, greater activity in the construction of railways has been manifested, and satisfactory progress has been made in all the States of the Commonwealth; the State Governments now fully recognise the great importance to the community of carrying on the work of construction, and of conducting the administration and management of the railways on businesslike principles, free from undue political influence, and yet with regard to the general development of the country.

2. Railway Communication in the Commonwealth.—In the eastern, south-eastern, and southern parts of Australia there now exists a considerable network of railway lines converging from the various agricultural, pastoral and mining districts towards the principal ports, which are themselves connected by systems of lines running roughly parallel to the coast. These are shewn on the accompanying map. In the east, lines radiating from Townsville, Rockhampton, Brisbane, and Sydney, extend inland in various directions for distances ranging up to over 600 miles; in the south-east there are numerous lines, those in Victoria converging towards Melbourne, while others in New South Wales have their terminus in Sydney; in the south there are three main lines, with numerous branches, running from Melbourne, while from Adelaide one main line, with several branches to the coastal towns, runs inland in a northerly direction for a distance of nearly 700 miles, and another line runs in a south-easterly direction to various ports and meeting the main line from Melbourne on the border of South Australia and Victoria. In addition to these main lines and their numerous branches, there are extensive suburban systems in Melbourne and some of the other cities of Australia, a considerable portion of the suburban traffic in Sydney being conducted by means of electric tramways. All these lines which have just been referred to are connected together by the main interstate line, which permits of direct communication between the four capital towns—Brisbane, Sydney, Melbourne, and Adelaide—a distance from end to end of 1790½ miles. The journey from Brisbane to Adelaide by rail occupies just over three days, including one stop of 8 hours 50 minutes at Sydney, and another of 3 hours 49 minutes at Melbourne; the distance between the capitals, and the times occupied are as follows:—

| | | | | | |
|-----------------------|-----|-----|-----------|-----|--------------------|
| Brisbane to Sydney | ... | ... | 725 miles | ... | 27 hours, 20 mins. |
| Sydney to Melbourne | ... | ... | 582½ " | ... | 16 " 51 " |
| Melbourne to Adelaide | ... | ... | 492½ " | ... | 17 " 15 " |

The longest railway journey which can be undertaken in Australia, on one continuous line of railway, is from Longreach in Queensland to Oodnadatta in South Australia, a total distance of 3303 miles. In Western Australia there is a connected system of main or trunk lines between the ports of the State and the agricultural, pastoral, and mining districts. From these main lines a number of branches have been constructed, opening up fresh agricultural areas to the ports and markets of the State. The majority

of such branch lines will, on being ultimately extended, form connections between main lines and thus provide short and convenient routes between principal centres. In the northern parts of Queensland and in the Northern Territory there are also a number of disconnected lines running inland from the more important ports. In Tasmania the principal towns are connected by a system of lines, and there are also, more especially in the western districts, several lines which have been constructed for the purpose of opening up mining districts.

3. Mileage Open for Traffic.—In all the States of the Commonwealth the principle that the control, construction, and maintenance of the railways should be in the hands of the Government has long been adhered to, excepting in cases presenting unusual circumstances. In various parts of the Commonwealth lines have been constructed and managed by private companies, but at the present time practically the whole of the railway traffic in the Commonwealth is in the hands of the various State Governments. A large proportion of the private lines which are at present running have been laid down for the purpose of opening up forest lands or mining districts, and are not generally used for the conveyance of passengers or the public conveyance of goods. (See *C. Private Railways*, hereinafter.)

(i.) *Mileage of Government and Private Lines, 1855 to 1908.* The subjoined table shows the mileage of both Government and private lines open for traffic (exclusive of sidings and cross-overs) in each State and also in the Commonwealth at suitable periods since the inauguration of railways in Australia in 1855 up to the year 1908. The figures from 1855 to 1881 are given as up to the end of the calendar year; later figures are as up to the end of the financial year ended on the 30th June, unless otherwise stated, excepting the mileages for private lines which are in all cases taken for the calendar year:—

GOVERNMENT AND PRIVATE RAILWAYS.—MILEAGE OPEN, 1855 to 1908.

| State. | 1855. | 1861. | 1871. | 1881. | 1890-1. | 1900-1. | 1906-7. | 1907-8. † |
|---------------------|--------|--------|--------|--------|---------|---------|---------|-----------|
| | Miles. | Miles. | Miles. | Miles. | Miles. | Miles. | Miles. | Miles. |
| New South Wales | 14 | 73 | 358 | 1,040 | 2,263 | 2,926 | 3,534 | 3,743½ |
| Victoria ... | 2½ | 114 | 276 | 1,247 | 2,763 | 3,238 | 3,396 | 3,443 |
| Queensland ... | * | * | 218 | 800 | 2,205 | 2,904 | 3,240 | 3,694½ |
| South Australia ... | 16½ | 56 | 133 | 845 | 1,666 | 1,736 | 1,866 | 1,937½ |
| Northern Territory | * | * | * | * | 145½ | 145½ | 145½ | 145½ |
| Western Australia | * | * | 12 | 92 | 1,656 | 1,984 | 2,457 | 2,581½ |
| Tasmania ... | * | * | 45 | 168 | 425 | 5618 | 618 | 667½ |
| Commonwealth ... | 23½ | 243 | 1,042 | 4,192 | 10,123½ | 13,551½ | 15,256½ | 16,212½ |

* No railways yet constructed. † To the 31st December. This line between Goolwa and Port Elliot was opened in 1854 as a horse tramway, but now forms part of the railway system. ‡ To the 31st December, 1891. § To the 31st December, 1901. ¶ The increase in this year's figures is largely due to the fact that more complete particulars of private railways have been procured.

It will be seen from the above table that the rate of construction up to the year 1871 was very slow, the average annual length of lines opened from 1861 to 1871 being only 80 miles for the whole Commonwealth. By the middle of the following decade, however, the principal mountain ranges had been crossed, and the work of construction could be proceeded with at a greater rate, and at a less cost per mile. The greatest period of activity was from 1881 to 1891, when the average annual length opened for traffic was 594 miles for the whole Commonwealth; the corresponding figures for the following periods from June, 1891, to June, 1901, and from June, 1901, to June, 1907, were 342 miles and 284 miles respectively. The increase shewn in the last financial year is to a great extent due to the fact that more complete particulars regarding private railways have been collected.

4. **Comparative Mileage of State-owned and Private Lines, 1908.**—The subjoined table shews for each State and for the Commonwealth (a) the length of lines owned by the respective State Governments, all of which lines are of course open for general use by the public, (b) the length of private lines available for general use by the public, and (c) the length not so available. The mileages specified in the case of State-owned lines are as up to the 30th June, 1908; those given for private lines are as up to the 31st December, 1908.

GOVERNMENT AND PRIVATE RAILWAYS.—COMPARATIVE MILEAGE OF STATE-OWNED LINES, OF PRIVATE LINES AVAILABLE FOR GENERAL TRAFFIC, AND OF PRIVATE LINES NOT SO AVAILABLE, 1908.

| State. | State-owned Lines. | Private Lines available for General Traffic. | Total Open for General Traffic. | Private Lines used for Special Purposes only. | Total. |
|--------------------|--------------------|--|---------------------------------|---|---------|
| | Miles. | Miles. | Miles. | Miles. | |
| New South Wales | 3,472½ | 144 | 3,616½ | 127 | 3,743½ |
| Victoria... | 3,396 | 14½ | 3,410½ | 32½ | 3,443 |
| Queensland ... | 3,359 | 315 | 3,674 | 20½ | 3,694½ |
| South Australia | 1,879½ | ... | 1,879½ | 58 | 1,937½ |
| Northern Territory | 145½ | ... | 145½ | ... | 145½ |
| Western Australia | 1,943 | 277 | 2,220 | 361½ | 2,581½ |
| Tasmania ... | 463 | 165½ | 628½ | 38½ | 667½ |
| Commonwealth | 14,658½ | 915½ | 15,574 | 638½ | 16,212½ |

5. **Comparative Railway Facilities in Different States, 1908.**—The area of territory and the population per mile of line open to the public for general traffic (including both Government and private lines) on the 30th June, 1908, are shown in the subjoined statement for each State and also for the Commonwealth:—

GOVERNMENT AND PRIVATE RAILWAYS.—COMPARISON OF RAILWAY FACILITIES IN DIFFERENT STATES, 1908.

| State. | Population. | Area. | Per Mile of Line Open. | |
|--------------------|-------------|-----------|------------------------|------------|
| | | | Population. | Area. |
| | | | Number. | Sq. miles. |
| New South Wales | 1,578,331 | 310,372 | 436 | 85.8 |
| Victoria | 1,255,757 | 87,884 | 368 | 25.7 |
| Queensland | 551,936 | 670,500 | 150 | 182.5 |
| South Australia | 394,663 | 380,070 | 210 | 202.2 |
| Northern Territory | 3,600 | 523,620 | 25 | 3,598.7 |
| Western Australia | 265,556 | 975,920 | 119 | 439.6 |
| Tasmania | 180,398 | 26,215 | 287 | 41.8 |
| Commonwealth | 4,230,241 | 2,974,581 | 271 | 191.0 |

6. **Classification of Lines according to Gauge, 1908.**—The subjoined tables shew the total mileage, exclusive of sidings and cross-overs, of (i.) Government railways;

(ii.) Private railways open to the public for general traffic; and (iii.) Private lines used for special purposes, classified according to gauge. Particulars of Government railways are up to 30th June, 1908, and of private railways to the 31st December, 1908:—

GOVERNMENT AND PRIVATE RAILWAYS.—CLASSIFICATION ACCORDING TO GAUGE,
1908.

* To the 31st December.

The following statement shows the annual average increase in mileage opened since 1901 in each State:—

| State | N.S.W. | Vic. | Qld. | S.A. | N.T. | W.A. | Tas. | Cwth. |
|-------------------------------|--------|------|------|------|------|------|------|-------|
| Average annual mileage opened | 78½ | 19½ | 69½ | 17½ | ... | 73½ | ½ | 260½ |

2. **Non-conformity of Gauge.**—With but few exceptions all the railway lines in the Commonwealth open for general traffic are now owned and managed by the respective States in whose territory they run, but, unfortunately for the purpose of interstate traffic, the construction of the various systems in different parts of Australia has proceeded without uniformity of gauge. In 1846 Mr. Gladstone, then Colonial Secretary, recommended in a despatch to the Governor of New South Wales that the 4 ft. 8½ in. gauge should be adopted. In 1850, however, the engineer to the Sydney Railroad and Tramway Company strongly advocated the adoption of the 5 ft. 3 in. gauge, and in 1852 an Act was passed making it compulsory that all railways in New South Wales should be constructed to the wider gauge, the Governors of Victoria and South Australia being duly advised of the step that had been taken. But in 1852 the company mentioned, having changed their engineer, also changed their views as to the gauge question, and in the following year they succeeded in obtaining the repeal of the Act of 1852 and in passing another, under the provisions of which the narrower gauge was made imperative. This step was taken without the concurrence of the other States concerned, and a considerable amount of ill-feeling arose, especially in Victoria, where two private companies had already placed large orders for rolling stock constructed to the broad gauge originally chosen. The result was that it was decided in Victoria to adhere to the 5 ft. 3 in. gauge as the standard gauge for that State, while the Sydney Railroad and Tramway Company proceeded with the construction of their lines to the 4 ft. 8½ in. gauge, and these two gauges have since been adhered to as the standard gauges of the respective States. The Queensland Government had at the outset adopted a gauge of 3 ft. 6 in. as being best suited to the requirements of the colony, and have since adhered to that gauge through-

out the State, so that all goods have to be discharged and reloaded at the boundary between that State and New South Wales. In South Australia the broad gauge of Victoria was at first adopted, and the part of the interstate line between Adelaide and the Victorian boundary was constructed to that gauge, so that the line from Melbourne to Adelaide is uniform. In the lines which have been constructed more recently, however, and in the Northern Territory, the South Australian Government has, with a view to economy in construction, adopted a gauge of 3 ft. 6 in. In Western Australia and Tasmania the 3 ft. 6 in. gauge was also adopted. It was recognised in both these States that the construction of railways was essential to their proper development, but as their financial resources would not bear a heavy initial expenditure in connection with the establishment of railway lines, it was decided to adopt the narrow gauge. In Victoria light railways have been constructed in recent years to a gauge of 2 ft. 6 in., whilst in Tasmania short lengths have been laid down to a 2 ft. gauge.

3. Interstate Communication.—Until the railway systems of the eastern States were connected at the common boundaries the inconvenience of non-conformity of gauge was not felt. Since then, however, the necessary transshipments of both passengers and goods have been a source of trouble, delay, and expense. On the 14th June, 1883, a railway bridge over the River Murray at Wodonga was opened for traffic, and communication was then established between Melbourne and Sydney; on the 19th January, 1887, the last section of the Victorian line to Serviceton, on the South Australian border, was completed, and a junction was thus effected with the South Australian line to Adelaide. On the 16th January, 1888, a junction was effected between the New South Wales and Queensland lines at Wallangarra, but there was still a break in the line from Sydney at the Hawkesbury River, thirty-six miles from Sydney. This last link was, however, completed on the 1st May, 1889, by the opening of the Hawkesbury River bridge, 2900 feet in length, and railway communication was thus established between the four capital cities, Brisbane, Sydney, Melbourne, and Adelaide.

4. Unification of Gauge.—The development of the railway systems of the Commonwealth has shewn that the adoption of different gauges on the main lines in the several States was a serious error. The extra cost, delay, and inconvenience incurred by the necessity of transferring through-passengers and goods at places where there are breaks of gauge, though not at present of any appreciable magnitude, are becoming more serious as the volume of business increases. As an indication of the extra cost thus involved the following junction charges payable on interstate traffic between New South Wales and Victoria and *vice-versa* are given :—

| General Merchandise. 1st to 3rd Classes. | Special and Miscellaneous Class. | Small Consignments. | Live Stock. |
|---|-------------------------------------|------------------------|----------------|
| 3s. 6d. per ton | 2s. 6d. per ton | 1s. 6d. each | 3s. per truck. |

Although the cost of alteration to a uniform gauge would be great, many propositions have from time to time been put forward with the object of securing such a gauge, and attention has been drawn to the importance of the unification of gauges before further expenditure on railway construction is incurred by the States. The problem is, however, one which is by no means easy of solution, and the difficulties are increased by the introduction of what may be called questions of local or State policy. That its solution would facilitate the development of commerce and the settlement on the land throughout the Commonwealth, is now widely recognised. The economic disadvantages of breaks of gauge, and of any artificial restrictions in regard to trade finding its proper geographical outlets, are also seen by dispassionate observers. It is obvious, too, that in the event of a foreign invasion of any part of the seaboard, the interchange and concentrations of rolling stock for the transport of men and war material would be impeded, and might result in confusion and loss. It is asserted, moreover, that unification of gauges would

tend to reduce to a negligible quantity all tendency to disorganisation and undue congestion likely to occur at times of bountiful seasons; that various trades and industries would be benefited by the concentration, at times of abnormal or periodic activity, of idle trucks from other States; in other words, that the fullest use of all rolling stock and the meeting of all exigencies would be facilitated.

As regards the unification of gauges, the question naturally arises as to which gauge, if any, should be adopted as the universal gauge of the Commonwealth. As regards Government railways only, the New South Wales gauge has a mileage of 3,472½; Victoria and South Australia have a combined mileage of 3,913½ of 5 ft. 3 in. gauge; while Queensland, South Australia, the Northern Territory, and Western Australia have together 6,727½ miles of 3 ft. 6 in. gauge. The mere question of preponderance of mileage, therefore, indicates the 3 ft. 6 in. gauge for adoption. But this question is obviously subordinate to those involving engineering and economic considerations. Thus the relative efficiency from the widest point of view, the relative costs of alterations of permanent way and rolling stock, of carrying capacity and speed, that is to say, questions of a technical nature about which figures are not available, enter into the grounds for decision. As regards the unification of the New South Wales and Victorian lines, the advantage of reducing the broad gauge to the 4 ft. 8½ in. gauge is that there would be no necessity for the alteration of tunnels, cuttings, bridges, or viaducts.

5. Average Mileage Worked, Train Miles Run, Number of Passenger Journeys, and Tonnage of Goods and Live Stock Carried on Government Railways, 1901 to 1908.—The preceding table gives the actual mileage open for traffic at the end of each financial year, but, in considering the returns relating to revenue and expenditure and other matters, it is desirable to know the average number of miles actually worked during each year. The next table shews the average number of miles worked, the total number of train miles run, the number of passenger journeys, and the tonnage of goods and live stock carried by the Government railways of each State during each financial year from 1900-1 to 1907-8, inclusive:—

* For the calendar years 1901, 1902, and 1903 respectively. The average mileage worked is larger than the actual mileage open, owing to the fact that the Government Railways have running powers over certain private lines. † The returns are for a period of six months ended the 30th June, 1904; the figures here given are estimated for a full period of twelve months. ‡ These figures are partly estimated, the actual returns excluding journeys by season ticket holders. § Exclusive of live stock. || Exclusive of live stock returns for Queensland and Tasmania.

6. History of Railway Construction.—The first movement in the direction of the introduction of railways into Australia took place in 1846, when it was resolved, at a public meeting held in Sydney, that a survey should be made for a proposed line to connect the metropolis with Goulburn, a distance of 136 miles; the cost of construction was estimated at £6000 per mile, and a net profit of 8 per cent. per annum was anticipated. This survey was completed in 1848, and in the same year the Sydney Railroad and Tramway Company was formed, with a capital of £100,000, for the purpose of laying down a line between Liverpool, Parramatta, and Sydney, which it was proposed to extend later to Bathurst and Goulburn.

(i.) *New South Wales.* When the work of construction of the Sydney to Liverpool line was first commenced there was an abundant supply of labour, and rapid progress was at first made; the scheme was only well under weigh, however, when the discovery of gold caused a general exodus from the city, and the company found it impossible to secure sufficient labour to enable them to carry on their undertaking. In 1853 a movement for the construction of a line from Maitland to Newcastle took place and the Hunter River Railway Company was formed, and the work of construction was proceeded with at once. It was not long before this company shared the fate of its predecessor, and the properties and works of both companies were transferred to the Government under Act 18 Vic., No. 40, which placed the construction of the lines under the control of three Commissioners. It is interesting to note that the Government consented, in the year 1852, to allow 500 railway labourers to be brought out at the expense of the immigration fund. With the assumption of control by the Government the work of construction was vigorously pushed forward, and on the 26th September, 1855, the line from Sydney to Parramatta, 14 miles in length, was opened for traffic. For some years

after this, however, railway construction languished, the enthusiasm of its advocates being, doubtless, considerably damped by the reflection that the short line from Sydney to Parramatta cost about £700,000—or £50,000 a mile. On the 27th May, 1869, the extension to Goulburn was completed. This line now forms part of the main interstate line between Sydney and Melbourne. In the meantime—in 1857—Newcastle had been connected with East Maitland by a line 17 miles in length; the line forms the first section of what is now known as the Northern Line. From Parramatta a line was extended in a westerly direction to Blacktown in 1860, and this line has now been further extended to form the main Western Line. For the purpose of convenience of reference and administration the Government railways in New South Wales are divided into three main lines with their branches, viz.:—the Northern Line, the Western Line, and the Southern Line. (a.) *The Northern Line* forms part of the main interstate route between New South Wales and Queensland. A junction was effected at Wallangarra, on the border between the two States, on the 16th January, 1888, and on the 1st May, 1889, the bridge over the Hawkesbury River was opened for traffic. After passing through Newcastle, 104 miles from Sydney, the line throws off a long branch from Werris Creek, extending in a north-westerly direction to Narrabri, Cryon, Collarendabri, and Inverell, which is 500 miles distant from Sydney. There is another line in the extreme north-east district of the State, known as the Grafton-Tweed line, at present isolated from the other railway lines. It has been suggested that this line should be joined to the main Northern line, and also to the South-coast line from Brisbane, and thus to form an alternative route between the two States. The total length of the line is 147 miles, and the last section to Grafton was completed in 1905; from Murwillumbah, the northern terminus, a steamer now runs to Tweed Heads which is connected with Brisbane by the Queensland South-coast line. (b.) *The Western Line*, running inland in a westerly direction, was completed as far as Bourke, its present terminus, 508 miles from Sydney, in 1885. It has three important branches, the first running from Orange to Condobolin, on the River Lachlan; the second from Dubbo to Coonamble; and the third from Nyngan to Cobar, from which place it is proposed to eventually extend the line to Broken Hill, *via* Wilcannia. (c.) *The Southern Line* forms part of the main route between Sydney and Melbourne, a junction having been effected between the New South Wales and Victorian lines in 1883, as stated above. Numerous branches have been constructed from the main southern line; Goulbourn is the junction for two branches; one to Cooma, passing through the pastoral district of Monaro for a distance of 130 miles, was opened in 1889; the other to Crookwell, 36 miles in length, was completed in 1902. From Cootamundra there are also two branch lines, the last extensions of which were opened for traffic in 1903; one runs to Wyalong, a distance of 80 miles, and the other to Tumut, 65 miles in length. From Junee a branch runs parallel to the Murrumbidgee River and was opened as far as Hay in 1882, and to Finley in 1898, thus bringing the Riverina district into direct communication with Sydney. From Culcairn one branch to Corowa was opened in 1892 and another to Germanton in 1902. The southern system also includes the Illawarra line, which runs from Sydney along the south coast as far as Nowra, a distance of 92 miles.

(ii.) *Victoria*. While the Sydney Railroad and Tramway Company was struggling with financial difficulties, and endeavouring to secure a sufficient supply of labour to enable them to carry on their undertaking, the work of railway construction was commenced in the neighbouring State of Victoria. In 1853, three private companies, viz.:—the Melbourne and Hobson's Bay Railway Company; the Melbourne, Mount Alexander, and Murray River Railway Company; and the Geelong and Melbourne Railway Company—having a total capital of £1,450,000, were incorporated for the purposes of railway construction. On the 13th September, 1854, the first complete railway in Australia, from Flinders Street, Melbourne, to Port Melbourne, was opened for traffic. This line was constructed by the Melbourne and Hobson's Bay Railway Company; it had been commenced nearly three years later than the line to connect Parramatta with Sydney.

but was only $2\frac{1}{2}$ miles long. On the 13th May, 1857, the same company opened for traffic the line from Flinders Street to St. Kilda. On the 17th June, 1857, a line from Williamstown to Geelong, thirty-nine miles in length, built by the third of the companies referred to, was declared open, and during the period from 1859 to 1861 lines to Richmond, Windsor, Hawthorn, and Brighton were opened by the Melbourne and Suburban Railway Company, which had been incorporated in 1857 with a capital of £300,000. In the meantime the Government, in addition to providing substantial aid to these companies in the shape of land grants and guarantees of interest, had taken over two unfinished lines and proceeded to complete the work of construction on its own account. These lines, running from Williamstown to Footscray, and from Melbourne to Sunbury, were opened for traffic in 1859. On the 21st October, 1860, the line to Essendon, constructed by the Melbourne and Essendon Railway Company, was opened. In 1865 the Hobson's Bay Company and the Suburban Company were amalgamated under the name of the Melbourne and Hobson's Bay United Railway Company. By the end of the year 1868 the Government had acquired all the railway lines in the State, with the exception of those owned by the amalgamated companies, which lines amounted to a total length of $16\frac{1}{2}$ miles, and which were eventually purchased by the Government in 1878. At the present time the Government railways are divided into seven systems—the South-eastern, the Eastern, the North-eastern, the Northern (including the Midland district lines), the North-western, the Western and South-western, and the Suburban systems.

(a) *The South-eastern system* branches off from the suburban system at Dandenong, and was completed as far as Port Albert, its present terminus, in 1892; a branch line to Outtrim was opened in 1896. (b) *The Eastern system* also leaves the suburban system at Dandenong. The line was opened for traffic as far as Bunyip in 1877, and was extended *via* Moe and Sale, as far as Bairnsdale on the Gippsland lakes, 171 miles from Melbourne, in 1888; branches run to Neerim South, Thorpdale, North Mirboo, and Briarolong. The Eastern system also comprises two extensions to the suburban system, the first running from Croydon to Healesville, with a branch from Lilydale to Warburton, the second running to Upper Fern Tree Gully, with a narrow gauge (2 ft. 6 in.) extension to Gembrook, completed in 1900. (c) *The North-eastern system* comprises the Victorian part of the main interstate line between Melbourne and Sydney, which was opened for traffic as far as Wodonga in 1873, though it was not until ten years later that the bridge over the River Murray was completed, and railway communication between New South Wales and Victoria established. Numerous branches from the main line have been constructed, the principal being the Goulburn Valley line, which was opened to Numurkah in 1881, and to Cobram in 1888, with spur lines to Rushworth, Echuca (connecting *via* the Northern line), Katamatite, Picola, and Tocumwal—the extension to the last-named place being constructed in 1905. A branch to Bright was opened as far as Myrtleford in 1883, and was extended in 1890; a branch to Yea in 1883, with the final extension to Mansfield in 1891; to Tallangatta and to Yackandandah in 1891; and a narrow gauge (2 ft. 6 in.) branch to Whitfield in 1899. (d) *The Northern system* joins the suburban system at Digger's Rest, twenty-one miles from Melbourne. The main line was opened for traffic as far as Bendigo in 1862, and was extended to Echuca in 1864. A large number of branch lines belong to this system. From Carlsruhe a branch runs to Ballarat, *via* Daylesford and Creswick, while another line branches off from Creswick to Maryborough. Between Carlsruhe and Daylesford the line attains a height of 2469 feet above sea-level, being the greatest altitude of any line in Victoria. From Maryborough the line was extended to the north as far as St. Arnaud in 1878, to Donald in 1882, to Birchip in 1893, and to Mildura in 1903; other branches were finally extended to Swan Hill, Sea Lake and Ultima, and were opened in 1890, 1895, and 1900 respectively. Mildura is the most northerly point reached by rail in Victoria, and is situated close to the confluence of the Darling and Murray Rivers. (e) *The North-western line* connects with the suburban system at Rockbank, eighteen and a half miles from Melbourne; it was opened as far as Ballarat, *via* Geelong, in 1862, and was extended in sections *via* Ararat, Stawell, Murtoa, Horsham, and Dimboola as far as Serviceton, on

the South Australian border, on the 19th January, 1887, a junction with the main line to Adelaide being thus effected. The direct line from Melbourne to Ballarat, however, was not completed until February, 1887. Several comparatively short lines branch off from Ballarat, while other branches were opened to Hopetoun and to Goroke in 1894; to Rainbow in 1899; and from Stawell to Grampians in 1905. (f) *The Western and South-western system* was opened up to Geelong in 1857, as stated above. The line was extended to Winchelsea in 1876, to Colac in 1877, to Warrnambool and to Port Fairy in 1890, and was connected with the main line to Serviceton, *via* Hamilton and Ararat, in 1890. An extension to Portland was completed in 1877, and branch lines were opened to Casterton and Coleraine in 1884 and 1888 respectively. (g) *The Suburban system* includes a number of short lines referred to above connecting up the suburbs of Melbourne, and also comprises longer sections of lines radiating from the metropolis in various directions, and thus joining the various main systems with the terminal stations in Melbourne.

Since the year 1899 four narrow gauge (2 ft. 6 in.) lines, with a total mileage of 81½ miles, have been opened for traffic in Victoria; these lines have been built for the purpose of providing a light and cheap means of communication to districts but sparsely populated, and have, in some cases, been constructed on the principle (provided for by the Railway Lands Acquisition Acts 1893 to 1899) of "loading" the lands increased in value by the building of the lines.

(iii.) *Queensland.* Legislative sanction for the construction by the Government of the first railway line in Queensland, from Ipswich to Grandchester, was granted in the year 1863, and on the 25th February in the following year the formality of cutting the first sod was carried out with due ceremony at Ipswich. The line was opened on the 31st July, 1865, and was extended to Toowoomba, seventy-seven miles from Ipswich, in 1867. In the same year a line, thirty miles in length, was opened between Rockhampton and Westwood, extended to Emerald in 1879 and to Longreach in 1892. Branches were opened from Emerald to Clermont and from Emerald to Springsure in 1884 and 1887 respectively. In the meantime the line had been extended from Toowoomba—(a) to the south as far as Wallangarra, on the New South Wales border, in 1887; and (b) to the west, *via* Dalby, Roma, and Mitchell, as far as Charleville, in 1888. An extension from Charleville to Cunnamulla, 503 miles from Toowoomba, was opened in 1898. Communication between Brisbane and Rockhampton was opened up in 1903, and in the same year the South-coast line from Brisbane was extended to Tweed Heads. The first section of the Townsville line, as far as Reid River, a distance of thirty-five miles, was opened in 1880, and was extended to Charters Towers in 1882; to Hughenden in 1887; and to Richmond in 1904; while a further extension to Cloncurry, 173 miles from Richmond, was completed in 1908. The first section of the Mackay line was opened in 1885, and extended to Eton in 1886. The Normanton line, as far as Haydon, a distance of thirty-eight miles, was brought into use in 1889, and extended to Croydon in 1891. In 1885 a line from Cooktown to Palmer's Road, thirty miles in length, was opened for traffic, and an extension to Laura was completed in 1888. The line running from Cairns was commenced in 1887, and was completed as far as Atherton in 1903. Two further extensions to this line are now under construction, one from Atherton, through Herberton, to the Evelyn tableland, a distance of thirty-one miles, and the other from Tolga to the Johnston River, a distance of nineteen miles. The Bowen line was opened to Guthalungra in 1890, and extended to Bobawaba in 1891.

(iv.) *South Australia.* The first railway line constructed in the State of South Australia was the Adelaide City and Port Railway, opened on the 21st April, 1856, the length being seven and a half miles and the gauge 5 ft. 3 in. This line was extended to the Semaphore, a further distance of one and a half miles, in 1878, and is now called the Port line. In 1857 a line from Adelaide, nineteen miles long, reaching as far as Smithfield, was opened for traffic, and was extended to Terowie, *via* Gawler, Roseworthy, and Hamley Bridge in 1880. Terowie is the terminus of the broad gauge line, but from the

main line a narrow gauge (3 ft. 6 in.) line was run to Petersburg in 1881, connection being thus formed with the narrow gauge lines, which had been previously constructed, running from Port Wakefield, Moonata, Port Pirie, and Port Augusta, from which place it is now proposed to construct a transcontinental line by connecting it with Kalgoorlie, on the Western Australian goldfields. From Petersburg a branch to Cockburn on the New South Wales border was opened in 1887, and an extension through New South Wales territory to Broken Hill, a distance of thirty-six miles, was opened by the Silverton Tramway Company in 1888. Another branch from Quorn was opened to Oodnadatta, 688 miles from Adelaide, in 1891. (a) *The Interstate Line*.—The first section of the South Australian part of the interstate line was opened from Adelaide to Aldgate, a distance of twenty-one and three-quarter miles, in 1883, and extended until the Victorian boundary was reached on the 1st January, 1885. In the districts lying to the south of Adelaide, a horse-tramway line, constructed in 1854 between Goolwa and Port Elliott, was extended to Victor Harbour in 1864, and to Strathalbyn in 1869; railway communication was opened up between these districts and Adelaide in 1884. (b) *The Northern Territory Railway*.—In the Northern Territory a survey was made in 1878 for a line between Palmerston and Pine Creek, a distance of 145½ miles, and this line was opened for traffic in 1889; it is proposed to carry it across the continent in a southerly direction to meet the trunk line from Adelaide to the north, which at present has its terminus at Oodnadatta. (c) *Recent Extensions*. On the 14th September, 1906, a line from Tailem Bend to Pinnaroo, 86½ miles in length, was completed. Large areas in the vicinity of this line have since been thrown open for settlement. On the 18th November, 1907, the first section of the Western system from Port Lincoln to Gummins—42 miles long—was opened. In 1908 extensions of existing lines were completed from Largs Junction to Outer Harbour, and from Mitcham to Clapham.

(v.) *Western Australia*. Railway operations commenced in Western Australia with the construction of a private line from Lockeville to Yoganup, a distance of 12 miles, opened by the Western Australian Timber Company in 1871. A line from Geraldton to the copper mining district of Northampton, a length of thirty-four miles, was opened for traffic on the 26th July, 1879. In the following year no further lines were opened, but on the 1st March, 1881, the Fremantle-Guilford line, nineteen and a half miles long, was brought into use, to which line extensions were made to Chidlow's Well, opened on the 11th March, 1884, and to York and Beverley in 1885 and 1886 respectively, while branch lines to Northam and to Newcastle followed in October, 1886, and January, 1888. (a) *The South-Western Railway*.—On the 12th March, 1891, a third separate system was added by the opening of a line running sixteen miles inland from Bunbury, and this line was connected with the other systems in the State in 1893, by the opening of a line 110 miles in length from East Perth Junction to Picton Junction, near Bunbury. Further extensions and branches were opened in the next two years, and on the 30th June, 1895, 573 miles had been opened for traffic. (b) *The Eastern Goldfields Line*.—The Goldfields railway system was commenced by the construction of the line from Northam to Southern Cross, a distance of 170 miles, opened in 1894. On the 1st January, 1897, communication was established with Kalgoorlie, and the line was extended to Menzies on the 13th February, 1899, and to Laverton, 595½ miles from Perth, on the 1st February, 1905. (c) *The Northern Line*.—In the meantime the Geraldton line had been connected with Perth by the Midland Railway, constructed by a private company under a land grant concession, and on the 21st November, 1894, line from Mullewa Junction, near Geraldton, was opened, passing through pastoral country for a distance of about fifty-seven miles in the direction of the Murchison fields. In the Murchison district an extension as far as Nannine was opened for traffic on the 1st June, 1903. On the 1st July, 1889, the West Australian Land Company opened for traffic a line which had been constructed, 243 miles in length, from Albany to Beverley, the southern terminus of the eastern system, under a land grant concession of 12,000 acres per mile of line constructed. The lands and railways belonging to this company

were acquired by the Government by purchase on the 1st December, 1896, at a price of £1,100,000. This line is now known as the Great Southern line, and from it several spur lines serving agricultural areas have been recently constructed. (d) *The Water Supply Question.*—Reference may here be made to the fact that the main natural difficulty with which railway engineers have had to contend in Western Australia has been found to be the scarcity of water in practically the whole of the country traversed by their system. Excepting only the South-Western lines, the water supply for the locomotives is generally obtained from dams or reservoirs which are dependent upon the rainfall. The Railway Department on the Eastern and Eastern Goldfield Railway expended over £180,000 in dams prior to the Goldfields water scheme water being available, and a large condensing plant capable of condensing 100,000 gallons of water daily, was erected at Coolgardie in 1899. A sextuple multiple effect condensing plant for sea water was laid down at Geraldton in 1904, and a water-softening plant, capable of softening 2000 gallons of water per hour, was erected at Laverton in 1906. The Goldfields water scheme, however, now renders the whole of the lines from Midland Junction to Kanowna independent of local conservation.

(vi.) *Tasmania.* In Tasmania an agitation had long existed for the construction of a line of railway from Hobart to Launceston, and, although Parliament granted a vote of £5000 for the survey of this line as far back as the year 1863, it was not formally opened for traffic until November, 1876, from which time the line was continuously worked by the Tasmanian Main Line Railway Company up to October, 1890, when it was purchased by the Government for the sum of £1,106,500. In the meantime the construction of a line between Launceston and Deloraine, forty-five miles in length, had been commenced, and was opened on the 10th February, 1871. This line was originally projected by a private company—the Launceston and Western Railway Company—but a large part of the capital was raised by the Government, and, the company becoming involved in financial difficulties, the line was taken over by the State in 1872. In 1884 a length of forty-eight miles of line was opened for traffic by the Emu Bay Railway Company, extending from Emu Bay to Mount Bischoff and to Waratah. Branches from the main line between Hobart and Launceston were opened from Parattah to Oatlands, a distance of four and a half miles, in 1885, and from Bridgewater to Glenora, twenty-four and a half miles in length, in 1888. The line from Launceston to Scottsdale, a distance of forty-seven miles, was brought into use on the 9th August, 1889. The lines from Deloraine to Devonport and from Conara to St. Mary's were opened in 1885 and 1886 respectively. Several years elapsed before any further extensions were taken in hand. In 1892 the Government submitted several railway proposals to Parliament, and, having obtained the necessary authority, railway construction was once more resumed. The railway systems of Tasmania are now fairly well developed, and, though their construction has been slow, it must be remembered that they have had to face severe competition with sea-borne traffic, and that, owing to the limited area and population of the State, there are no large inland centres to support the traffic on the railways.

7. *Length and Gauge of Railway System in each State.*—A map shewing the State railway lines, and also the private lines open to the public for general traffic, in the different States of the Commonwealth is given at the end of this sub-section. In all the States the Government railways are grouped, for the purpose of convenience of administration and management, into several divisions or systems, some of which have already been briefly referred to above in dealing with the history of construction of the railways. The subjoined summary shews concisely the gauge and length of the main and branch lines included in each division or system of the different States of the Commonwealth for the year ended the 30th June, 1908:—

GOVERNMENT RAILWAYS, 1908.

| Particulars. | Length. | | Gauge. | |

* Including 52 miles from Inglewood to Goondiwindi, Queensland, opened 13th October, 1908.

8. Administration and Control of Government Railways.—In each State of the Commonwealth the policy has now been established that the railway should be kept under the control of the Government. This policy, as has been shewn, was early actualised in Australia, and, excepting in cases presenting unusual circumstances, may be regarded as the settled policy of the country. It may here be observed that for many years past nationalisation of railways throughout Europe has been a feature of the development of railway policy, and so far there is no sign of any movement in an opposite direction. Indeed it may be said that the Governments have recognised the supreme importance of a railroad policy, not only as an element in the industrial, but even in the political life of nations, and have felt that nothing short of complete ownership and direct management of the railroads would give them the power which, for national reasons, they must exert. And in America the modern tendency is to so condition the freights by Governmental action as to give at least a quasi-national character to the railways.

(i.) *New South Wales.* Prior to the year 1833 the control of the State railways in New South Wales was vested in the Minister for Works, under the provisions of the Railways Act of 1858, the actual management being in the hands of a Commissioner. In 1888, however, the Act referred to was repealed by a new Act, the object of which was to improve the administration and to free it from political influences. Under this Act, as amended in 1901, three Commissioners were appointed for a period of seven years, but in 1906 an amending Act was passed, which provides for the appointment of a Chief Commissioner with supreme power, an Assistant Commissioner for Railways, and an Assistant Commissioner for Tramways. The Chief Commissioner is required to present an annual report to Parliament, through the Minister for Railways, setting forth an account of his proceedings, and of the revenue and expenditure during the previous year. New lines are constructed by the Railway and Tramway Construction Branch of the Public Works Department, and on completion are handed over to the control of the Chief Commissioner.

(ii.) *Victoria.* In consequence of general dissatisfaction in regard to the management of the railways by political heads, a new Railway Act was passed and came into force on the 1st November, 1883. Under its provisions the management and control of the State railways were placed in the hands of three Commissioners, who supervised the construction of new lines as well as the general management of lines already

open for traffic. On the 1st January, 1892, the duty of the construction of new lines was transferred to the Board of Land and Works, and the Minister, under the provisions of the Railways Act of 1891, was given greater powers to interfere in matters of policy. In 1895 the Government appointed a Board to inquire into and report upon the general working of the Railway Department, and as a result of their report the Railways Act of 1896 was passed. The management was again placed in the hands of one Commissioner until the year 1903, when the Victorian Railway Commissioners Act was passed, and the administration was again placed in the hands of three Commissioners.

Proposals for the construction of new lines are in every case, in which the estimated cost is in excess of £20,000, investigated by the Parliamentary Standing Committee on Railways, whose recommendation is submitted to the Legislature. Any new line authorised by Parliament is constructed under the supervision of the Chief Engineer for Railway Construction, who is responsible to the Minister of Railways for the time being, and is not subject to the control of the Commissioners. New lines are constructed under the authority of the Railway Lands Acquisition Acts 1893 to 1899.

(iii.) *Queensland.* The first Act referring to the construction of railways, passed by the Queensland Legislature in 1863, provided for the appointment of a Commissioner of Railways, who was to be the permanent head of the Railway Department, but was, however, also to be subordinate, as regards all matters of administration, to the Minister in charge of the railways for the time being. This arrangement was continued until the year 1888, when an Act was passed providing for the appointment of three Commissioners invested with full powers as to the administration, management, and construction of the railways, the control of which was thus removed from political influence. The functions of a Minister for Railways were not abolished, but they were so defined and limited that the Minister became in effect an intermediary between the Commissioners and Parliament, to which body the Commissioners were bound to make an annual report, setting forth an account of their proceedings and a financial statement for the previous year. The Railways Act Amendment Act of 1896 again provided for the appointment of one Commissioner only, for a term not exceeding three years, extended in 1902 to a maximum term of seven years. Under the Act of 1896 the Commissioner is required to prepare an annual report of the Railway Department. New lines are constructed by the Commissioner under the Railways Act of 1906. Under this Act the ratepayers in any district in which a new line is constructed are liable for the amount of any deficiency in case the earnings in any year are less than the working expenses, together with interest at the rate of 3 per cent. on the cost of construction. The separation from each other by long distances of some of the railway lines in Queensland puts difficulties in the way of their economical administration and supervision, since it is found necessary to maintain, in connection with each of the principal detached lines, a separate staff of engineering and managing officials.

(iv.) *South Australia.* The Railway Clauses Consolidation Act, passed in South Australia in March, 1847, was the first Act passed in Australia referring to the construction of railways; its provisions, however, contained many obsolete clauses of English railway legislation, and were soon modified. In 1887 an Act to make better provision for the construction, maintenance, and management of railways was passed, and came into force on the 1st June, 1888; it removed the control of the railways from political influence and provided for the appointment of three Commissioners, into whose hands the management and the supervision of the railways passed. The Act of 1887 was, however, amended by the Railway Commissioners Act of 1894, which provides for one Commissioner only, assisted by a Board of Advice. Under the Act of 1894 the Commissioner has the same powers as were vested in the three Commissioners under the Act of 1887. Further amendments were made in the years 1902 and 1906, but since the Act of 1894 was passed the management, maintenance, and construction of the railways have remained in the hands of one Commissioner, who is required to present to Parliament an annual report of his proceedings, and of the revenue and expenditure during the previous year.

(v.) *Western Australia.* From the time of the inception of railways in this State until the granting of responsible government in 1890, the construction, maintenance, and control of all railways were in the hands of an official holding the title of Commissioner of Railways, and having a seat in the Executive Council. This official was invested with very extensive powers for all purposes connected with railways, and had also to supervise the safe working and the charges made by private railway owners. On the institution of responsible government the office of Commissioner was converted into a Ministerial one; the active management was placed in the hands of an officer styled General Manager of Railways, while construction works on new lines were carried out by the Department of Public Works. In 1902 a Bill was introduced into Parliament providing for the appointment for a term of five years of a Railway Commissioner to be free from political influence. This Bill received the Vice-regal assent on the 20th December, 1902. The former Railway Acts, of which the Act in question was an amendment, continued to remain in force, with the result that certain anomalies and ambiguities arose, in consequence of which a Consolidating Government Railways Act was passed in 1904. Under its provisions the administration of all Government railways was placed in the hands of the Commissioner, who was relieved from the supervision of private railways. The construction of new railways or of extensions is left, as formerly, in the hands of the Minister controlling the Department of Public Works. The Act of 1904 was amended in certain details in 1907.

(vi.) *Tasmania.* The law relating to the control and management of the Tasmanian Government railways was amended and consolidated by the Railway Management Act of 1891, which has in turn been amended by Acts passed in 1893, 1896, and 1901. The control and construction of Government railways is vested in a responsible Minister, the active management and maintenance being in the hands of an officer styled the General Manager, who is subject to such directions as he may receive from the Minister.

9. **Lines under Construction, and Authorised and Proposed Lines.**—The following statement gives particulars up to the 30th June, 1908, of the mileage of Government railways (a) under construction, and (b) authorised for construction but not commenced:—

MILEAGE UNDER CONSTRUCTION AND AUTHORISED, 30th JUNE, 1908.

| Particulars. | N.S.W. | Vic. | Q'land. | S.A. | W.A. | Tas. | Cwth. |
|----------------------------|--------|------|---------|------|------|------|-------|
| Mileage under construction | 185½ | 28½ | 360 | 10 | 101 | ... | 685½ |
| Mileage authorised | 391½ | 66½ | 96 | 48½ | 304 | ... | 906½ |

(i.) *Lines under Construction.* In spite of the great extension of State railways which has taken place since the year 1875 throughout the Commonwealth, there are still, in some of the States, tracts of country of immense area, which are as yet practically undeveloped, and in which little in the nature of permanent settlement has been accomplished; the general policy in the States is to extend the existing lines inland, in the form of light railways, as settlement increases, and although it is true that lines which were not likely to be commercially successful in the immediate future have been constructed from time to time, for the purpose of encouraging settlement, the general principle that the railways should be self-supporting is kept in view. (a) In *New South Wales* the lines under construction are chiefly of the "pioneer" class, and are made with a view to affording railway communication over level country to districts in which the traffic would not warrant the expenditure necessary to provide thoroughly equipped lines. As the traffic increases the permanent way is strengthened in order to allow the heavy types of engines to run over it. It is probable that railway extension in New South Wales, in the near future, will be mainly confined to lines of the "pioneer" class. One of the most important lines now under construction is that from Maitland to Dungog, a distance of 32½ miles. The extension of this line as far as Grafton, a further distance of 278 miles,

has been authorised, and, when completed, will form part of an alternative main route between Newcastle and Brisbane. Other lines under construction are as follows:—Manilla to Barraba, 32 miles; Mudgee to Gulgong, 20½ miles; Aria Park to Barellan, 41 miles; Belmore to Chapel-road, 3½ miles; Cryon to Walgett, 34 miles; and Trundle to Tullamore, 22½ miles. (b) *Victoria*. In this State the following lines were under construction by the Board of Land and Works on the 30th June, 1908:—Moe to Walhalla, a distance of 26½ miles; and an extension, 2½ miles long, across the Murray River to the township of Tocumwal in New South Wales. It is proposed to construct a line from Ouyen to Kow Plains, a distance of 55½ miles, for the purpose of opening up about 650,000 acres to settlement in the western Mallee. (c) *Queensland*. At the end of the year 1907-8 two important railways were nearing completion, viz., Inglewood to Goondiwindi, 53 miles; and Julia Creek to Cloncurry, 83 miles. In addition the following lines had been commenced on the day labour system—from Kānnangur to Blackbutt, 28 miles; from Goondiwindi to Talwood, 56 miles; from Caboolture to Woodford, 18 miles; the Boyne Valley line, 52 miles; New Zealand Gully to Yeppoon, 20 miles; Atherton to Evelyn, 31 miles; and Tolga to Johnstone River, 19 miles. (d) *South Australia*. In this State the only line under construction on the 30th June, 1908, was the Port Lincoln extension north of Cummins, 10 miles in length, the gauge being 3 feet 6 inches. (e) In *Western Australia* the following lines were in course of construction by the Public Works Department on the 30th June, 1908:—Hopetoun to Ravensthorpe, 34½ miles; Donnybrook to Preston, second section, 23 miles; Jarrahwood to Nannup, 17 miles; and Narrogin to Wickiepin, 26½ miles.

(ii.) *Lines Authorised for Construction*. (a) In *New South Wales*, in addition to the North-coast railway extension from Dungog to Grafton, a distance of 278 miles, the following lines had been authorised for construction up to the 30th June, 1908:—Narromine to Peak Hill, 36 miles; Lockhart to Clear Hills, 50½ miles; and Gulgong to Dunedoo, 26½ miles. (b) In *Victoria* the following lines were authorised during 1907:—Nyora to Wollamai, 17½ miles; Rupanyup to Marnoo, 15½ miles; and Alexandra Road to Alexandra, 4½ miles. (c) *Queensland*. In addition to the new lines upon which work has been commenced, the following extensions have been approved by Parliament:—Blackall to 115 Miles, 44 miles; and Dalby towards Tara, 52 miles. (d) In *South Australia* the construction of lines from Laura to Booleroo Centre, on the 3 feet 6 inch gauge, and from Gawler to Angaston, on the 5 foot 3 inch gauge, were authorised during 1907. (e) In *Western Australia* five lines having a total length of 304 miles were authorised for construction up to the 30th June, 1908. These lines were—from Widge-mooltha to Norseman, 57 miles; from Newcastle to Bolgart, 24 miles; from Mount Magnet to Black Range, 93 miles; from Pinjarra to Marrinup, 15 miles; and from Port Hedland to Marble Bar, 115 miles.

(iii.) *Proposed Transcontinental Lines*. (a) A proposal which has recently received considerable attention is to connect the railways of the eastern and southern districts of Australia with the Western Australian lines by the construction of a line between Port Augusta, in South Australia, and Kalgoorlie, on the Western Australian goldfields, a distance of 1100 miles. The Transcontinental Railway Bill, passed in 1907 by the Federal Houses of Parliament, provided for the expenditure of a sum of £20,000 for a preliminary survey of the proposed line, the estimated cost of construction of which amounts to £4,559,000. This survey was commenced in 1908, and was nearing completion in February, 1909. The greater part of the country which it is proposed to traverse is practically unoccupied owing to the scarcity of permanent surface water, but there are otherwise no engineering difficulties in connection with the construction of this line, which it is claimed would be of immense benefit in the expedition of the European mails to the southern and eastern parts of the continent, and, if occasion should arise, in facilitating the transport of troops. (b) Another proposal is to extend the main northern line from Adelaide, which at present terminates at Oodnadatta, as far as Pine Creek, the southern terminus of the Northern Territory line from Palmer-

ston. The distance between Oodnadatta and Pine Creek by the route followed by the telegraph wire is 1140 miles, and it is claimed that, if a railway line were constructed between these two places, it would be practicable for passengers and mails to reach London from Adelaide in seventeen days, *via* Port Darwin and the trans-Siberian railway. In the course of the year 1896 offers were made on behalf of various syndicates to construct this line, but the Government was not at that time prepared to recommend the acceptance of any offer based upon the land grant or guarantee system. In 1902, however, the Trans-continental Railway Act was passed, and the Government invited tenders for the construction of 1063 miles of 3 ft. 6 in. line on the land grant system, to be built at the rate of at least 100 miles in any one year, the grant of land offered amounting to nearly 80,000,000 acres. No tenders were accepted and subsequent offers have been refused. The country through which this line would pass presents no great engineering difficulties; for the most part it is one vast plain, with an occasional sand ridge or a watercourse.

10. **Cost of Construction and Equipment of Government Railways.**—The total cost of construction and equipment of the State railways of the Commonwealth at the 30th June, 1908, amounted to £139,988,015, or to an average of £9550 per mile open for traffic. Particulars as to the capital expenditure incurred in each State are given in the following table:—

**GOVERNMENT RAILWAYS.—COST OF CONSTRUCTION AND EQUIPMENT TO THE
30th JUNE, 1908.**

| State. | Length of Line Open. | Total Cost of Construction and Equipment. | Average Cost per Mile Open. | Cost per Head of Population. |
|---------------------------|----------------------|---|-----------------------------|------------------------------|
| | Miles. | £ | £ | £ |
| New South Wales | 3,472½ | 45,683,484 | 13,156 | 28.94 |
| Victoria | 3,396 | 41,928,567 | 12,346 | 33.39 |
| Queensland | 3,359 | 22,575,603 | 6,721 | 40.90 |
| South Australia | 1,879½ | 13,909,635 | 7,402 | 35.24 |
| Northern Territory | 145½ | 1,180,174 | 8,115 | 327.82 |
| Western Australia | 1,943 | 10,732,941 | 5,524 | 40.41 |
| Tasmania | 463 | 3,977,611 | 8,591 | 22.04 |
| Commonwealth | 14,658½ | 139,988,015 | 9,550 | 33.09 |

It will be seen that the lowest average cost per mile open is in Western Australia, and is only £5524, which is less than one-half of the highest average cost, namely, £13,156 in New South Wales, compared with an average of £9550 for the whole Commonwealth. In Western Australia there have been comparatively few engineering difficulties to contend with, and also the system has been adopted in that State of giving contractors the right to carry traffic during the period of their contracts, with the result that, at all events in all goldfields railway contracts, the cost of construction has been considerably lessened.

(1.) *Reduction of Cost per Mile in Recent Years.* The average cost per mile of the lines constructed lately in the Commonwealth is very much less than the figure given in the above table, in consequence of the construction of light "pioneer" lines, which have already been referred to, and which it was originally considered in New South Wales could be laid down at a cost of £1750 per mile (exclusive of stations and bridges). It should also be remembered that in the early days of railway construction there were considerable engineering difficulties to overcome, and that labour was scarce and dear. Since 1891 over one thousand miles of the "pioneer" lines have been opened in New South Wales, the average cost ranging from about £2000 to £7500 per mile, according to

the difficulties met in the country traversed. The lowest cost per mile for any line previously constructed had been that of the line from Nyngan to Cobar, the average cost of which was £3736. In Victoria also the cost of construction has been greatly reduced in recent years. The total cost to the 30th June, 1908, of the narrow gauge (2 ft. 6 in.) lines, having a length of eighty-one and a half miles, was only £169,987, which gives an average cost per mile of only £2035. In the other States also the cost of construction per mile has been reduced by building light railways as cheaply as possible. Fairly substantial permanent way is laid down with reduced ballast, and, as settlement progresses and traffic increases, the road is strengthened and the stations and siding accommodation enlarged. The subjoined table gives examples of some of the more expensive lines, most of which were built in the early days, while the next succeeding table gives instances of lines which have been constructed in more recent years at a comparatively small cost per mile.

GOVERNMENT RAILWAYS.—EXAMPLES OF LINES CONSTRUCTED AT LARGE CAPITAL EXPENDITURE PER MILE OPEN.

| Line. | Gauge. | | Length. Miles. | Total Cost. | Average Cost per Mile. | Date of Opening. |
|--------------------------|--------|-----|-------------------|-------------|------------------------------|---------------------|
| | ft. | in. | | £ | £ | |
| NEW SOUTH WALES— | | | | | | |
| Penrith to Bathurst ... | 4 | 8½ | 112½ | 2,737,329 | 24,410 | 1876 |
| Sydney to Kiama ... | 4 | 8½ | 72½ | 2,016,003 | 27,766 | 1887 |
| Homebush to Waratah ... | 4 | 8½ | 95½ | 2,835,967 | 29,700 | 1887 |
| VICTORIA— | | | | | | |
| Melbourne to Bendigo ... | 5 | 3 | 101 | 4,832,243 | 47,896 | 1862 |
| Geelong to Ballarat ... | 5 | 3 | 45½ | 1,898,687 | 35,683 | 1862 |

GOVERNMENT RAILWAYS.—EXAMPLES OF LINES CONSTRUCTED AT SMALL CAPITAL EXPENDITURE PER MILE OPEN.

| Line. | Gauge. | | Length. Miles. | Total Cost. | Average Cost per Mile. | Date of Opening. |
|----------------------------------|--------|-----|-------------------|-------------|------------------------------|---------------------|
| | ft. | in. | | £ | £ | |
| NEW SOUTH WALES— | | | | | | |
| Parkes to Condobolin ... | 4 | 8½ | 62½ | 129,796 | 2,066 | 1898 |
| Dubbo to Coonamble ... | 4 | 8½ | 95½ | 230,254 | 2,402 | 1903 |
| VICTORIA— | | | | | | |
| Wangaratta to Whitfield ... | 2 | 6 | 30½ | 38,857 | 1,274 | 1899 |
| Strathmerton to Tocumwal ... | 5 | 3 | 9½ | 17,791 | 1,806 | 1905 |
| Birchip to Woomelang ... | 5 | 3 | 26½ | 38,700 | 1,463 | 1899 |
| SOUTH AUSTRALIA— | | | | | | |
| Port Lincoln to Cummins ... | 3 | 6 | 42 | 91,587 | 2,187 | 1907 |
| Mount Gambier to Narracoorte ... | 3 | 6 | 63½ | 211,610 | 3,330 | 1887 |
| QUEENSLAND— | | | | | | |
| Dalby to Bell ... | 3 | 6 | 23½ | 28,677 | 1,220 | 1906 |
| Hughenden to Richmond ... | 3 | 6 | 70½ | 110,779 | 1,574 | 1904 |
| WESTERN AUSTRALIA— | | | | | | |
| Southern Cross to Kalgoorlie ... | 3 | 6 | 138½ | 235,718 | 1,702 | 1897 |
| Mullewa to Cue ... | 3 | 6 | 197 | 266,022 | 1,350 | 1898 |

The comparisons afforded in this table are subject to certain limitations inasmuch as the figures in each cost represent the total cost to date, and the cost is naturally greater in the case of the older lines. Further, the figures given represent the cost of construction only (i.e., are exclusive of cost of equipment), and cannot therefore be directly compared with the average cost given on page 705.

(ii.) *Proposed Adoption of Special Locomotives for Cheap Pioneer Lines.* The adaptation of the steam locomotive to the working of steep gradients and sharp curves has progressed during late years, so that very steep gradients, which were at one time considered to be only workable by a rack or grip rail with special complicated engines running at very slow speeds, are now being worked by adhesion locomotives. In view of the great importance of supplying a cheap and effective pioneer railway service to many parts where the steep and broken nature of the country would involve great expenditure on lines built to suit the standard classes of locomotives, the Standing Committee on Railways in Victoria has considered the advisability of adopting a special form of geared locomotive which would not be suitable for high speeds, but which could be worked on steep gradients and on curves of small radius. It is suggested that by the adoption of locomotives of this type considerable saving in cost could be made, due to (a) shortening of distance by use of steeper grades in places where easier grades would necessitate long detours. (b) Reduction of sub-grade works, *i.e.*, earthworks, culverts, trestles, etc., by use of steeper grades and sharper curves to keep the formation nearer to the natural surface. (c) Cheaper track by using lighter rails and less ballast than necessary for standard adhesion locomotives.

(iii.) *Capital Cost of Construction and Equipment, Total and per Mile Open, 1901-8.* The increase in the total capital cost of construction and equipment of Government railways in each State and in the Commonwealth on the 30th June in each year, from 1901 to 1908, inclusive, is shewn in the following table:—

**GOVERNMENT RAILWAYS.—CAPITAL COST OF CONSTRUCTION AND EQUIPMENT,
1901 to 1908.**

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | 1908. |

* Working expenses include £47,058 for special expenditures and charges, and £103,064 for pensions and gratuities. (See paragraph 16 below).

(i.) *Traffic Receipts and Revenue from other Sources.* The gross revenue is composed of (a) receipts from coaching traffic, including the carriage of mails, horses, parcels, etc., by passenger trains; (b) receipts from the carriage of goods and live stock, and (c) rents and miscellaneous items. The following table shews the amount derived from each of these sources for the year ended the 30th June, 1908, and the respective percentages of the whole revenue :—

GOVERNMENT RAILWAYS.—AMOUNT AND PERCENTAGE OF GROSS REVENUE FROM DIFFERENT SOURCES IN EACH STATE AND IN THE COMMONWEALTH FOR THE YEAR ENDED 30th JUNE, 1908.

* For the financial years 1901, 1902, and 1903 respectively.

† For twelve months ended the 30th June, 1904.

The falling-off in the amount of the gross railway revenue in Victoria during the year 1907-8 was due to a partial failure of the grain and other crops, owing to the unfavourable season, and to reductions in rates made during the year (see paragraph 23 hereinafter). There was a decrease in Victoria in the previous year of £188,003 in the revenue derived in connection with grain and its products, and of £20,184 in dairy produce, whereas there was an increase of £49,558 in the revenue from live-stock traffic due to the unusual movement of stock which took place in consequence of the dry weather during 1908. In Western Australia, also, the falling-off is to a large extent accounted for by the reductions in rates.

13. **Coaching, Goods, and Miscellaneous Receipts, 1901 to 1908.**—The subjoined table shews the gross revenue, during the years 1901 to 1908, inclusive, classified according to the three chief sources of receipts. The total of the three items specified has already been given in the preceding paragraph hereof:—

COACHING, GOODS, AND MISCELLANEOUS RECEIPTS, 1901 to 1908.

| State. | 1900-1. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |

* Tasmanian figures for 1901, 1902, and 1903 are for years ended the 31st December. † For twelve months ended the 30th June, 1904.

The falling-off in the amounts of revenue during the last year in the States of Victoria and Western Australia is commented upon in the preceding paragraph hereof.

14. **Coaching Traffic Receipts per Average Mile Worked, per Passenger-train Mile, and per Passenger Journey.**—The subjoined table shows the receipts from coaching traffic per average mile of line worked, per passenger-train mile, and per passenger journey in each State and in the Commonwealth for the year ended the 30th June, 1908:—

GOVERNMENT RAILWAYS.—COACHING TRAFFIC RECEIPTS PER MILE OPEN, PER PASSENGER JOURNEY, AND PER PASSENGER-TRAIN MILE, 1908.

| State. | Number of Passenger Journeys. | Number of Passenger Train Miles. | Coaching Traffic Receipts. | | | |
|-----------------------|-------------------------------|----------------------------------|----------------------------|--------------------------|---------------------------|------------------------|
| | | | Gross. | Per Average Mile Worked. | Per Passenger-Train Mile. | Per Passenger Journey. |
| | No. | No. | £ | £ | d. | d. |
| New South Wales ... | 47,487,030 | 6,504,568 | 1,850,061 | 534 | 68.26 | 9.35 |
| Victoria ... | 74,907,425 | *6,138,332 | 1,935,261 | 569 | 75.66 | 6.20 |
| Queensland ... | 10,419,794 | 2,125,160 | 671,939 | 200 | 75.88 | 15.48 |
| South Australia ... | 12,839,428 | 1,874,318 | 511,423 | 275 | 65.48 | 9.56 |
| Northern Territory... | 2,882 | 10,609 | 3,663 | 25 | 82.86 | 305.03 |
| Western Australia ... | 12,945,561 | †1,938,026 | 483,099 | 264 | 58.32 | 8.95 |
| Tasmania ... | 1,019,668 | ‡356,845 | 137,124 | 292 | 92.22 | 32.27 |
| Commonwealth ... | 159,621,788 | 18,997,858 | 5,592,570 | 388 | 70.65 | 8.41 |

* The returns include 2,494,834 mixed-train mileage, which has been divided between passenger-train miles and goods-train miles in the proportion of one-third and two-thirds respectively. † The returns include 718,007 mixed-train mileage, which has been divided as just stated. ‡ The returns include 700,612 mixed-train mileage, which has been divided as just stated.

The receipts per passenger journey show that there is a considerable difference in the amount of the average receipt per passenger journey. Disregarding the Northern Territory, this amount ranges from 6.20 pence in Victoria, where there is a large metropolitan suburban traffic, to 32.27 pence in Tasmania. The difference in these amounts cannot be accounted for by the amounts of rates charged, which are fairly uniform in the several States (see paragraph 23 hereof), but is largely due to the different traffic conditions which prevail on various lines in the Commonwealth (see paragraph 20 hereof). In order to adequately analyse these figures it would be necessary to have particulars regarding the number of passenger-miles, *i.e.*, the total distance travelled by passengers, in each State; which particulars are not generally available (see paragraph 21 hereof).

The preponderance in the number of passenger journeys in Victoria is accounted for, to a great extent, by the large number of metropolitan suburban passengers in that State. Of the total number of passengers carried in Victoria, 68,799,680 were metropolitan suburban passengers, *i.e.*, were carried between stations within twenty miles of Melbourne, while in New South Wales the number of suburban passengers (between stations within twenty-two miles of Sydney and Newcastle) was 41,404,022. In Sydney a large proportion of the metropolitan suburban traffic is carried on the electric tramways, the number of passenger journeys during the year 1907-8 being 159,722,892. In Melbourne, on the other hand, the number of passengers carried on the cable tramways systems during the same period was 63,945,512; on the St. Kilda-Brighton electric tramways the number was 1,146,484; and on the North Melbourne tramways was 1,639,768, making a total of 66,731,764, which is not as great as the number carried on the metropolitan suburban railways. This matter is referred to hereinafter. (See para. 20.)

15. **Goods and Live-Stock Traffic Receipts per Mile Worked, per Goods-Train Mile, and per Ton Carried.**—The following table shows the gross receipts from goods and live-stock traffic per mile worked, per goods-train mile, and per ton carried for the year ended the 30th June, 1908:—

GOVERNMENT RAILWAYS.—GOODS AND LIVE-STOCK TRAFFIC RECEIPTS PER MILE WORKED, PER GOODS-TRAIN MILE, AND PER TON CARRIED, 1908.

| State. | Number of Goods-Train Miles. | Goods and Live-Stock Tonnage. | Goods and Live-Stock Traffic Receipts. | | | |
|------------------------|------------------------------|-------------------------------|--|--------------------------|-----------------------|------------------|
| | | | Gross. | Average per Mile Worked. | Per Goods-Train Mile. | Per Ton Carried. |
| | No. | Tons. | £ | £ | d. | d. |
| New South Wales ... | 7,746,484 | 10,175,389 | 3,043,443 | 877 | 94.29 | 71.78 |
| Victoria ... | 4,245,076† | 3,754,861 | 1,868,441 | 550 | 105.63 | 119.42 |
| Queensland ... | 4,432,563 | 2,423,529* | 1,250,489 | 372 | 67.70 | 123.83 |
| South Australia ... | 3,135,803 | 2,255,996 | 1,184,867 | 637 | 90.68 | 126.05 |
| Northern Territory ... | 20,398 | 3,513 | 8,463 | 58 | 99.57 | 578.17 |
| Western Australia ... | 1,976,204‡ | 2,058,741 | 973,741 | 532 | 118.25 | 113.51 |
| Tasmania ... | 671,185§ | 465,186* | 131,933 | 281 | 47.18 | 68.07 |
| Commonwealth ... | 22,227,713 | 21,137,215 | 8,461,377 | 582 | 91.36 | 96.07 |

* Exclusive of live-stock tonnage. † The returns include 2,494,834 mixed-train mileage, which has been divided between passenger-train miles and goods-train miles in the proportion of one-third and two-thirds respectively. ‡ The returns include 718,007 mixed-train mileage, which has been divided as just stated. § The returns include 700,612 mixed-train mileage, which has been divided as just stated.

From the above table it may be seen that, disregarding the Northern Territory, the average amount of freight paid per ton ranges from 71.78 pence in New South Wales to 126.05 pence in South Australia. The remarks made in the preceding paragraph (14) hereof with regard to the average fare paid per passenger and to passenger-miles, apply equally to the average amount of freight paid per ton and to ton-miles.

16. **Working Expenses.**—In order to make an adequate comparison of the working expenses of the Government railways in the several States, allowance should be made for the variation of gauges and of physical and traffic conditions, not only on the railways of the different States, but also on different portions of the same system. Where traffic is light, the percentage of working expenses is naturally greater than where traffic is heavy; and this is especially true in Australia, where ton-mile rates are in many cases based on a tapering principle—*i.e.*, a lower rate per ton-mile is charged upon merchandise from remote interior districts—and where on many of the lines there is but little back-loading. Further, though efforts have been made from time to time to obtain a uniform system of accounts in the several States, the annual reports of the Commissioners do not yet comprise fully comparable data of railway expenditure.

The following table shows the total annual expenditure, comprising expenses on (a) maintenance of way, works, and buildings; (b) locomotive power—repairs and renewals; (c) carriages and waggons—repairs and renewals; (d) traffic expenses; (e) compensation; and (f) general and miscellaneous charges; and also the percentage of these expenditures upon the corresponding gross revenues in each State from 1901 to 1908:—

* Including amounts paid for pensions and gratuities, and also special expenditures and charges for belated repairs and in reduction of deficiencies as follows:—For the year 1900-1, £111,943; for 1901-2, £115,244; for 1902-3, £196,137; for 1903-4, £220,092; for 1904-5, £351,141; for 1905-6, £217,179; and for 1906-7, £276,630; and for 1907-8, £150,122. † For further particulars see next table. ‡ For the calendar years 1901, 1902, and 1903 respectively. § Estimated for a period of twelve months ended the 30th June, 1904.

From the above table it may be seen that during the last financial year there has been for the whole Commonwealth a slight increase in the percentage of working expenses to gross earnings. This increase is due chiefly to the fact that in three of the States, consequent on the favourable results of previous years, reductions were made in passenger fares and freight rates, while at the same time the natural growth of the traffic in certain commodities was somewhat retarded in some districts owing to the unfavourable season.

(i.) *Victoria—Special Expenditures and Charges.* The amounts of working expenses for Victoria specified in the preceding table include sums in respect of special expenditure and charges paid in liquidation of certain "extraordinary liabilities." The annual report of the Victorian Railways Commissioners for the year 1907-8 shews the amount of the "extraordinary liabilities" taken over at the 1st July, 1903, to be £825,180, composed as follows:—

| Belated Repairs. | Deficiency in Rolling Stock. | Deficiency in Value of Stores. | Loan Funds Advanced for Renewal of Way and Works and Replacement of Rolling Stock. | Railway Accident Fund. | Total. |
|------------------|------------------------------|--------------------------------|--|------------------------|----------|
| £181,087 | £403,950 | £60,855 | £149,869 | £29,419 | £825,180 |

During the years 1901 and 1902 also, special expenditures and charges in respect of "extraordinary liabilities" were paid out of the year's railway revenue.

These "extraordinary liabilities" have now been completely liquidated at a cost lower than the original estimated cost specified above. The following table shows the amounts actually paid in reduction of these liabilities out of railway revenue during each year from 1901 to 1908, inclusive, and also shows the amounts paid for pensions and gratuities:—

VICTORIA.—SPECIAL EXPENDITURES AND CHARGES, 1901 to 1908.

20. Traffic Conditions.—Reference has already been made to the difference in the traffic conditions on many of the lines of the Commonwealth (see paragraphs 14, 15, and 16 hereof). These conditions differ not only in the several States, but also on different lines in the same State, and this is true with regard to both passenger and goods traffic. By far the greater part of the population of Australia is confined to a fringe of country near the coast, more especially in the eastern and southern districts. A large proportion of the railway traffic between the chief centres of population is therefore carried over lines in the neighbourhood of the coast, and is thus, in some cases, open to sea-borne competition. On most of the lines extending into the more remote interior districts traffic is light; the density of population diminishes rapidly as the coastal regions are left behind; there is a corresponding diminution in the volume of traffic, while, in comparison with other more settled countries, there is but a little back-loading.

As an indication of the different traffic conditions prevailing in the several States, the following table is given shewing the numbers of passenger journeys and the tons of

goods carried (a) per 100 of the mean population; and (b) per average mile worked in each State during the financial year 1907-8:—

PASSENGER JOURNEYS AND TONNAGE OF GOODS AND LIVE STOCK, 1907-8.

| Particulars. | N.S.W. | Vic. | Q'land. | S.A. | N.T. | W.A. | Tas. | Cwth. |
|--------------|--------|------|---------|------|------|------|------|-------|
|--------------|--------|------|---------|------|------|------|------|-------|

(a) PER 100 OF MEAN POPULATION.

| Particulars | No. | N.S.W. | Vic. | Q'land. | S.A. | N.T. | W.A. | Tas. | Cwth. |
|--------------------------|------|--------|-------|---------|-------|------|-------|------|-------|
| Passenger journeys ... | No. | 3,009 | 5,965 | 1,888 | 3,253 | 80 | 4,875 | 565 | 3,773 |
| Goods and live stock ... | Tons | 644 | 299 | *439 | 571 | 97 | 775 | *258 | 499 |

(b) PER AVERAGE MILE OF LINE WORKED.

| Particulars | No. | N.S.W. | Vic. | Q'land. | S.A. | N.T. | W.A. | Tas. | Cwth. |
|--------------------------|------|--------|--------|---------|-------|------|-------|-------|--------|
| Passenger journeys ... | No. | 13,689 | 22,057 | 3,217 | 6,901 | 20 | 7,074 | 2,169 | 11,077 |
| Goods and live stock ... | Tons | 2,933 | 1,105 | *748 | 1,212 | 24 | 1,125 | *990 | 1,467 |

* Exclusive of live stock.

Particulars of the actual numbers of passengers and tons of goods and live stock carried have already been given (see paragraph 5 hereof).

(i.) *Metropolitan and Country Passenger Traffic.* A further indication of the difference in passenger traffic conditions might be obtained from a comparison of the volume of metropolitan and country traffic in each State. Particulars are, however, available only for the States of New South Wales and Victoria. The subjoined table shews the number of metropolitan and country passengers carried in each of the States mentioned and the revenue derived therefrom during the year 1907-8:—

METROPOLITAN AND COUNTRY PASSENGER TRAFFIC, 1907-8.

| Particulars. | Number of Passenger Journeys. | | | Revenue. | | |
|--------------|-------------------------------|-----------|------------|---------------|------------|------------|
| | Metropolitan. | Country. | Total. | Metropolitan. | Country. | Total. |
| N.S.W. ... | *41,404,022 | 6,083,008 | 47,487,030 | £455,021 | £1,124,800 | £1,579,821 |
| Vic. ... | †68,799,680 | 6,107,745 | 74,907,425 | †686,062 | 1,016,008 | 1,702,070 |

* Within 22 miles of Sydney and Newcastle. † Within 20 miles of Melbourne.

From this table it may be seen that the number of passenger-journeys in country districts in Victoria is only slightly greater than the corresponding number in New South Wales, while the number of metropolitan passenger-journeys in Victoria is far greater than in New South Wales, although in the latter State both Sydney and Newcastle are included. In Sydney a larger proportion of the suburban traffic is carried by the tramway systems than in Melbourne.

(ii.) *Goods Traffic.* Particulars regarding the quantities of various classes of commodities carried on the Government railways are available for all the States except Tasmania. The following table shews the number of tons of various representative commodities carried, and the percentage of each class on the total tonnage carried during the financial year 1907-8:—

CLASSIFICATION OF COMMODITIES CARRIED, 1907-8.

| State. | Minerals. | Fire-wood. | Grain and Flour. | Hay, Straw, and Chaff. | Wool. | Live Stock. | All other Commodities. | Totals. |

1. Exclusive of 371,375 tons of coal, on which only shunting and haulage are collected. 2. Coal, stone, lime, and bricks. 3. Flour only. 4. Sugar cane. 5. Not available. 6. Exclusive of live stock.

21. **Passenger-Mileage and Ton-Mileage.**—Owing to want of uniformity in the presentation of data in the Railway Reports of the several States, the useful comparisons which can be made with regard to the operations of the Government railways in the Commonwealth are to some extent limited, and it is not possible to furnish totals for the Commonwealth in respect of various important particulars. It would seem desirable, therefore, that more complete and uniform data should be presented in the Reports. It is hoped that in future years it will be possible to include in this article more complete and uniform statistics for each State and for the whole Commonwealth.

An example of want of uniformity in an important detail is the absence of information which would enable particulars regarding "passenger-mileage" (*i.e.*, the total distance travelled by passengers) and "ton-mileage" (*i.e.*, the total distance for which goods and live stock are carried) to be shewn for each State and for the Commonwealth. This information is available either wholly, or in part, for four of the States only, *viz.*, New South Wales, South Australia, Western Australia, and Tasmania, but is not available at all for either Victoria or Queensland. Of the four States which give particulars of the nature indicated, New South Wales is the only one which furnishes the information in a classified form according to class of passengers and nature of commodities carried. The other three States supply particulars for all classes of passengers and goods together respectively. The mere record of the total number of passenger-miles and ton-miles for all classes of passengers and for all classes of goods respectively, although of considerable value, would appear to be insufficient to enable a proper analysis and criticism of the control of railway operations to be made.

(i.) *Passenger-Miles.* Particulars for the whole of the Commonwealth period regarding total "passenger-miles" are available for one State only, namely, Tasmania. For New South Wales particulars are available for suburban and extended-suburban traffic—*i.e.*, including gall stations within 22 miles of Newcastle, within 34 miles of Sydney, and including Richmond and Branxton. For South Australia particulars are available for each year since 1904. No particulars are available for other States. In the

tables given below the average number of passengers carried per "train," etc., is obtained by dividing the number of "passenger-miles" by the number of "passenger-train-miles." The averages given for New South Wales are naturally smaller than those for the other States, since the figures for New South Wales refer to suburban and extended-suburban traffic only.

SUMMARY OF "PASSENGER-MILES," 1901 to 1908.

| Year ended the 30th June. | Passenger Train Mileage. | Number of Passenger Journeys. | Total Passenger Miles. | Amount Received from Passengers. | Average Number of Passengers carried per Train. | Average Mileage per Passenger-journey. | Average Receipt per Passenger-mile. | Average Fare per Passenger-journey. |

‡ Partly estimated.

(ii.) *Ton-Miles.* Particulars regarding total "ton-miles" are available for each year since 1901 for the States of New South Wales, South Australia, and Tasmania; corresponding particulars for Western Australia are available for the last two years only. The average freight-paying load carried per "train" is obtained by dividing the total "ton-miles" in the third column by the goods-train mileage in the first column. In New South Wales the amount of earnings specified excludes terminals. In South Australia and Tasmania they include terminals, while in Western Australia they exclude wharfage and jetty dues, but include all other charges.

SUMMARY OF "TON-MILES," 1901 to 1908.

| Year ended the 30th June. | Goods Train Mileage. | Total Tons Carried. | Total "Ton-Miles." | Earnings. | Average Freight-paying Load carried per "Train." | Average Miles per Ton. | Earnings per "Ton-miles." |

* Exclusive of live stock. † To 31st December for years 1901, 2, and 3; to 30th June for succeeding years. ‡ Partly estimated. § Particulars for previous years not available.

(iii.) *Classification of Commodity Ton Mileage, 1908.* New South Wales is the only State for which particulars, specifying the ton-mileage and the earnings per ton-mile for various classes of commodities, are available. It is hoped that in future years it will be possible to give corresponding particulars for the other States.

The subjoined statement gives particulars for the last financial year. Miscellaneous traffic consists of timber, bark, firewood, bricks, drain-pipes, coal, road-metal in six-ton lots, agricultural and vegetable seeds in five-ton lots, and traffic of a similar nature.

A and B classes consist of lime, vegetables, tobacco leaf, caustic soda and potash, cement, copper ingots, fat and tallow, water and mining plant in six-ton lots, leather in one and three-ton lots, agricultural implements in five-ton lots, and other traffic of a similar nature.

22. Interest Returned on Capital Expenditure.—It may be seen from the figures given in the table in paragraph 19 hereof, that the Government railways in Australia have, on the whole, made a substantial profit during each year since the inception of the Commonwealth, but unfortunately the community does not get the full benefit of this profit, owing to the high rates of interest at which money for railways was borrowed in the early days. Though the average rate during the year ended the 30th June, 1908, was about $3\frac{1}{2}$ per cent., an average does not accurately express the position. At an early period the need of constructing railways for the sole purpose of opening up undeveloped districts was recognised, and lines were built which could not possibly pay for some years to come; as these railways always preceded population the money had to be raised at an almost speculative rate of interest, frequently amounting to 6 per cent., while the more recent loans have been effected at less than 3 per cent., hence the railways have been handicapped by a burdensome interest. At the present time also spur lines are constructed, which can scarcely be expected to instantly return revenue in excess of the expenditure, and so must, for a time at any rate, be a charge on the more developed branches of the railway systems, and tend to increase the ratio of working costs to revenue. It may be noted, however, that although the loans made for expenditure on railway construction and equipment very largely increase the amount of the public debt of the Commonwealth, forming, in fact, more than half the total debt, the money borrowed has not been sunk in undertakings which give no return, but has been expended on works which are increasingly reproductive, yielding in most cases a direct return on the capital expended, and representing a greater value than their original cost. In Europe the national debts of various countries have been incurred principally through the expenses of prolonged wars and the money has gone beyond recovery, but in Australia the

expenditure is represented to a large extent by public works which pay a direct return, which is, on the whole, greater than the amount of interest due upon capital invested. In addition to the purely commercial aspect of the figures relating to the revenue and expenditure of the Commonwealth railways, it is of great importance that the object with which many of the lines were constructed should be kept clearly in view; the anticipated advantage in building these lines has been the ultimate settlement of the country rather than the direct returns from the railways themselves, and the policy of the State Governments has been to use the railway systems of the Commonwealth for the development of the country's resources, to the maximum extent consistent with the direct payment by the customers of the railways of the cost of working and interest charges. Further, the money has been spent in developing immense agricultural, pastoral, and mineral resources, which add to the wealth of the community, while the benefits conferred in providing a cheap and convenient mode of transit, and in generally furthering the trade and the best interests of the Commonwealth, are incalculable.

(i). *Profit or Loss after Payment of Working Expenses and Interest, 1901 to 1908.*

The net revenue of the Government railways in each State after payment of working expenses is shewn above, on page 716. The following table shews the amount of interest payable on expenditure from loans on the construction and equipment of the railways in each State, the actual profit or loss after deducting working expenses and interest and all other charges from the gross revenue, and the percentage of such profit or loss on the total capital cost of construction and equipment:—

23. **Passenger Fares and Goods Rates.**—Considerable reductions have been made in recent years in passenger fares and in freight rates. These fares and rates are not only changed from time to time to suit the convenience and varying necessities of the railways, but, as traffic is developed and revenue increased, they are also in many cases reduced to an extent consistent with the direct payment by the customers of the railways of the cost of working and interest charges. During the last financial year reductions were made in the rates and fares in three of the States. In Victoria reductions were made during the year in the charges for the carriage of goods and in the fares for the conveyance of passengers equivalent respectively to approximately £47,000 and £67,000, a total of approximately £114,000 per annum. In Queensland rates and fares were reduced to the extent of £100,000 per annum. The charges on the Mackay, Bower, Cairns, Cooktown, and Normanton lines were previously on higher scales than on the larger systems, and the opportunity was taken to reduce them to the same level on all lines in the State. In Western Australia reductions were made in rates in many directions. These account to a large extent for the falling-off in revenue as compared with the previous year, more especially in respect to goods earnings (see paragraphs 12, 13, and 15 hereof). In New South Wales reductions in rates and fares made prior to July, 1907, and subsequently, operated throughout the last year to the extent of about £174,000; further reductions amounting to about £40,000 were made in the carriage of starving stock.

(i) *Passenger Fares.* On the Australian Government railways two classes are provided for passenger traffic. The fares charged may be classified as follows:—(a) Fares between specified stations (including suburban fares). (b) Fares computed according to mileage rates. (c) Return, season, and excursion fares. (d) Special fares for workmen, school pupils, and others. Fares in class (a) are issued at rates lower than the ordinary mileage rates. Fares in class (b) are charged between stations not included in class (a). Generally it may be said that mileage-rate fares are computed on the basis of about two pence per mile for first-class and about 1½ pence per mile for second-class single tickets. In Tasmania, however, the fares are computed on the general basis of 1½ pence per mile first-class, one penny per mile second-class, with one-sixth added, and a terminal charge of one penny. In New South Wales and Queensland the mileage rates are based upon a tapering principle, *i.e.*, a lower charge per mile is made for a long journey than for a short journey. First-class return fares are generally about 1½ to 1¾ times the single fare, and the second-class are about 30 to 45 per cent. lower than the first-class fares. In Tasmania, however, return fares (except excursions) are double the single fares. Excursion tickets are issued for the return journey at from about single fare to about 1½ times the single fare. Season tickets and special fares are issued at reduced rates.

The following table shows the passenger fares for different distances charged in each State, between stations for which specific fares are not fixed :—

* Ordinary mileage rates are not published; the amounts given are therefore computed from fares between specified stations.

(ii.) *Parcel Rates.* In all the States parcels may be transmitted by passenger train upon payment of the prescribed rates, which are based upon weight and distance carried. The rates vary slightly in the different States. In New South Wales they range from threepence for a parcel not exceeding 3 lbs. for any distance up to 87 miles, to fifteen shillings for a parcel weighing from 98 lbs. to 112 lbs., for a distance over 510 miles. In Victoria the charge for a parcel weighing from 84 lbs. to 112 lbs. for a distance over 450 miles is twelve shillings. The corresponding rate in Queensland is twelve shillings and sixpence; in South Australia eleven shillings and threepence; in Western Australia thirteen shillings; and in Tasmania for a distance of 250 miles the rate is five shillings and sixpence.

(iii.) *Goods Rates.* The rates charged for the conveyance of goods and merchandise may generally be divided into three classes, viz. :—(a) Mileage rates, (b) District or "development" rates, and (c) Commodity rates. In each of the States there are a number—ranging from 5 in Tasmania to 9 in Victoria—of different classes of freight. The mileage rates are based upon a tapering principle, i.e., a lower charge per ton-mile is made for a long haul than for a short haul. District rates are charged between specified stations and are somewhat lower than the mileage rates. In addition to the ordinary classification of freights under class (a), certain commodities, such as wool, grain, agri-

cultural produce, and crude ores, are given special rates, lower than the mileage rates, under class (c). Special low rates are also charged for truck loads of various commodities.

Space will not permit of anything like a complete analysis of goods rates in the several States being here given. As an indication of the range and amount of such rates the following table is given shewing for each State the charges made per ton for hauls of different distances in respect of (a) agricultural produce not otherwise specified; (b) the highest-class freight; and (c) the lowest-class freight:—

GOODS MILEAGE RATES ON GOVERNMENT RAILWAYS, 1908.

| State. | Charge per Ton for a Haul of— | | | | | |
|--------|-------------------------------|------------|------------|------------|------------|------------|
| | 50 Miles. | 100 Miles. | 200 Miles. | 300 Miles. | 400 Miles. | 500 Miles. |

| Average per ton-mile | d. 1.66 | 1.38 | 1.13 | 0.75 | 0.67 | 0.62 |

The classification of commodities varies in the several States. Generally the highest-class freight includes expensive, bulky, or fragile articles, while the lowest-class comprises many ordinary articles of merchandise, such as are particularly identified or connected with the primary industries of each State.

In New South Wales, for example, the highest-class freight comprises such articles as benzine and petroleum, belting, cardboard boxes, vehicles, calcium-chloride, china and glassware, drugs and medicines, electroplate ware, fireworks, furniture and household goods, guns, instruments, safes, plants, saddlery, empty tanks, and venetian blinds. In the same State the lowest-class freight comprises agricultural and vegetable seeds, asbestos, bark, barley, screenings, bisulphide of carbon, bones and bonedust, bricks and building stone, chalk, charcoal, clay, coal and coke, drain pipes and tiles, firewood, horns and hoofs, ice, scrap iron, lead, manures, rabbit-proof netting, posts and rails, and shale; while the agricultural produce class includes grain, meal, malt, bran, pollard, millet seed, green chicory root, cabbage, cauliflowers, potatoes, pumpkins, melons, turnips, other agricultural produce not otherwise specified, in "Up" transit, and also manures in "Up" or "Down" transit.

24. **Numbers and Description of Rolling Stock, 1908.**—The following table shews, so far as possible in a comparable manner, the number of locomotives and of various classes of rolling stock in use on the Government railways in each State. The figures given are subject to certain limitations, inasmuch as the classification adopted, as well as the various types of rolling stock in use, are not identical in the several States. In Victoria and Queensland, for example, the brake-vans classified under the heading of coaching vehicles are used indiscriminately for coaching and goods traffic. Again, it is believed that in New South Wales the number of passenger vehicles is really greater than that shewn, certain of the other classes of vehicles being used for composite purposes:—

CLASSIFICATION OF LOCOMOTIVES AND ROLLING STOCK, 1907-8.

| Sydney to Bourke | 508 | | | | |

GRAPHS SHEWING THE FINANCIAL POSITION OF THE GOVERNMENT RAILWAYS OF AUSTRALIA, 1855 TO 1908.

EXPLANATION OF GRAPHS.—In the above diagram the base of each small square represents throughout one year. The significance of the vertical height of each square varies, however, according to the nature of the several curves.

In the heavy curve denoting the total capital cost of the railways of the Commonwealth, each vertical side of each square denotes £2,000,000.

In the three lighter curves, representing (i.) gross revenue, (ii.) working expenses, and (iii.) net revenue, the vertical height of each single square denotes £400,000. For the curve of average cost per mile open, the vertical side of the small square denotes £2,000. The mileage open is shown by dotted curves, the vertical side of each square representing 200 miles.

For the percentages a new zero is taken at "20" on the scale for the general diagram. The vertical height of each square represents 2 per cent. in the curve shewing the percentage of working expenses on gross revenue. For the curve of percentage of net revenue on capital cost, the vertical height of each square represents only 0.2, that is to say, the vertical scale is ten times that of the preceding curve.

GRAPHS SHEWING PERCENTAGES OF WORKING EXPENSES TO GROSS REVENUE FOR STATES AND COMMONWEALTH, 1855 TO 1908.

EXPLANATION OF GRAPHS.—In the above diagram the base of each small square represents throughout one year. The vertical side of a small square denotes throughout 10 per cent., the heavy zero lines being different for each State and the Commonwealth, with, however, one exception, viz., that the zero line for South and Western Australia is identical.

The curve for Victoria commences only in 1859; that for Queensland in 1865; that for Tasmania in 1872; and that for Western Australia in 1879, these being the years in which the Government railway systems of the several States were inaugurated.

GRAPHS SHOWING PERCENTAGES OF NET REVENUE TO CAPITAL COST OF GOVERNMENT RAILWAYS FOR STATES AND COMMONWEALTH, 1855 TO 1906.

EXPLANATION OF GRAPHS.—In the above diagram the base of each small square represents throughout one year. The vertical side of a small square denotes 1 per cent., the thick zero lines, however, for each State and for the Commonwealth being different. This was necessary to avoid confusion of the curves.

Where the curve for any State falls below that State's zero line, loss is indicated, the working expenses having exceeded the gross revenue.

The curve for Victoria commences only in 1859; that for Queensland in 1865; that for Tasmania in 1872; and that for Western Australia in 1879, these being the years in which the Government railway systems of the several States were inaugurated.

(c) **Graphical Representation of Government Railway Developments.**

1. **General.**—Its railways are so important a factor in the development of Australia that it has been deemed desirable to graphically represent the main facts of their progress from their beginning, viz., from 1855 onwards. To this end the graphs shewn on pages 730 to 732 have been prepared. The distribution of the railways is shewn on the map on page 729.

2. **Capital Cost and Mileage Open** (page 730).—The graph shews that the ratio between these elements was, naturally enough, very variable from 1855 to 1870, consequent upon progressive decrease in cost of construction. It then became subject to a more regular change, implying reduction of average cost.

3. **Cost per Mile Open.**—The fluctuations in cost per mile open are clearly indicated by the graph on page 730. In 1855 the cost per mile open was no less than £28,430; by 1858 it had fallen to £17,752, when it rose again to a maximum of £35,958 in 1862. It then diminished rapidly till 1883—when it reached £10,496 per mile—then slowly till 1887, when it amounted to £10,017 per mile. Again rising, this rate attained to £10,537 in 1892, since which it has, on the whole, been declining, attaining its lowest value, £9550, in 1908.

4. **Gross Revenue.**—This graph (page 730) exhibits considerable irregularities, the most striking of which are the maxima at 1892 and 1902. The fall commencing in 1892 was in consequence partly of the commercial crisis and partly of the then droughty conditions of several of the States, while that of 1902-3 was due to drought. In the latter case the recovery was very rapid.

5. **Working Expenses and Net Revenue.**—The characteristics of these graphs (page 730), are similar to those of "Gross Revenue," and the same remarks apply. It may be noted, however, that the working expenses are increasing at a much slower rate than gross and net revenue.

6. **Percentage of Working Expenses to Gross Revenue.**—This is shewn for each State and for the Commonwealth on page 731, and for the Commonwealth only, on a larger scale, on page 730. The curve shews considerable fluctuations, but points also to the fact that, although a slight rise occurred in 1908, there was from 1903 to 1907 a rapid, and therefore very satisfactory, decline in the percentage of working expenses to gross revenue. The fluctuations of this percentage, for the individual States, call for no special comment.

7. **Percentage of Net Revenue on Capital Cost.**—For the Commonwealth this graph is shewn on a large scale on page 730 and on page 732 both for Commonwealth and States. After exhibiting somewhat remarkable oscillations in the earlier years, and less marked ones between 1885 and 1900, and also a rapid fall to 1903, the curve from that year shews a well marked increase until the year 1907, a slight fall occurring in the last year. Maxima were reached in 1865, 1877, 1881, and 1907—viz., 3.44, 3.71, 4.14, and 4.35 per cent.

For the individual States the results are in general very satisfactory, the increases in the percentages recently being greatest for Queensland, New South Wales, and South Australia, less marked for Victoria and Tasmania, and oscillatory for Western Australia.

The remarkable maximum for Western Australia in 1896 is consequent upon the large use made of the western railways at the time of the development of the Western Australian goldfields.

8. **General Indications of Graphs.**—Reviewing the cost of railways, as a whole, it may be noted that for the periods indicated the average cost on the entire total runs as follows:—

| Period ... | 1855-1872. | 1873-1882. | 1883-1892. | 1893-1897. | 1898-1902. | 1903-1908. |
|-------------------|-------------|-------------|-------------|-------------|------------|------------|
| Cost per mile ... | £ 24,561 | £ 13,700 | £ 10,286 | £ 10,167 | £ 9,852 | £ 9,742 |

With the exception of the last year, when bad seasons occurred just at the time when rates had been reduced in some of the States, the percentage of working expenses on the gross revenue has lately been rapidly falling, while the percentage of net revenue on total capital cost has been rising even more rapidly. For the period 1903 to 1907 the fall in percentage of working expenses on gross revenue was from 68.80 to 57.13 per cent., while the rise of the percentage of net revenue on total capital cost was from 2.53 to 4.35 per cent.

While the sinister influence of the drought of 1902 is strikingly shewn in the curves (a) by the fall in the gross and net revenue in 1902 and 1903, (b) by the fall in the percentage of net revenue on capital cost, and (c) by the increase of working expenses on gross revenue, the rapidity of recovery is even more striking, and goes to indicate the great elasticity of the economic condition of the Commonwealth. Still more remarkable is the fact that a group of railways, necessarily constructed largely in accordance with a policy of widespread development of Australia's resources rather than as mere commercial enterprises, and costing so large a sum as £139,988,015 for construction and equipment up to the 30th June, 1908, should, nevertheless, yield so large a revenue, bringing in for the year 1907-8 a return, as pointed out, of no less than 4.22 per cent.

(D).—Private Railways.

1. **Total Mileage Open, 1908.**—As has been stated in a previous part of this Section (see A. 3) a number of private railway lines have from time to time been constructed in the Commonwealth. By far the greater proportion of such lines, however, have been laid down for the purpose of hauling timber, coal, or other minerals, and are not generally used for the conveyance of passengers or for public traffic; in many cases they are often practically unballasted and are easily removable, running through bush and forest country in connection with the timber and sugar-milling industries, and for conveying firewood for mining purposes. Many of these lines may perhaps be said to be rather of the nature of tramways than of railways. Private railways referred to herein include (a) lines open to the public for general passenger and goods traffic; and (b) branch lines from Government railways and other lines which are used for special purposes and which are of a permanent description. Other lines are referred to in the part of this Section dealing with Tramways (see § 3, *Tramways*).

The following table gives particulars of private railways in the Commonwealth open for traffic up to the 30th June, 1908:—

MILEAGE OF PRIVATE RAILWAYS OPEN, 30th JUNE, 1908.

| Particulars. | N.S.W. | Victoria. | Q'land. | S.A. | W.A. | Tas. | C'wealth. |
|-------------------------|--------|-----------|---------|------|------|------|-----------|
| For general traffic ... | 144 | 14½ | 315 | ... | 277 | 165½ | 915¾ |
| For Special purposes... | 127 | 32¾ | 20¾ | 58 | 361½ | 38¾ | 638¾ |
| Total ... | 271 | 47 | 335¾ | 58 | 638½ | 204¼ | 1,554½ |

A classification of these lines according to their gauge has already been given (see A. 6).

2. **Classification of Private Railways, 1908.**—The subjoined statement gives particulars regarding private railways, so far as returns are available, in each State up to the 30th June, 1908. In this statement the lines inset are sub-branches from the main branches specified.

CLASSIFICATION OF PRIVATE RAILWAYS IN AUSTRALIA, 1908.

| Railway Lines. | Gauge. | Length | Nature of Traffic Carried, etc. |
|--|-------------|-------------|---------------------------------|

3. **New South Wales.**—In this State the mileage of private railways open to the public for general traffic on the 30th June, 1908, was 144, and of lines used for special purposes was 127. Most of these lines were constructed primarily for the purpose of conveying coal from the mines to the Government railway systems.

(i.) *Private Railways Open for General Traffic.* The most important of the lines open for general traffic are as follows:—(a) *The Deniliquin-Moama Line.* In 1874 permission was granted by the New South Wales Government to a private company to construct a line forty-five miles long from Deniliquin, in the Riverina district, to Moama, on the Victorian boundary opposite Echuca, which is connected by rail with Melbourne. The line was opened in 1876, the land required being granted by the Government. The cost of construction and equipment up to the end of the year 1907 was £162,672. During that year 14,848 passengers and 41,718 tons of goods and live stock were carried. The company owns 4 locomotives, 10 passenger coaches, and 59 waggons. (b) *The Cockburn-Broken Hill Line.* This line is owned by the Silvertown Tramway Company. It was opened in 1888, and connects Broken Hill with the South Australian railway system, having a total length of 36 miles. To the end of 1907 the capital expenditure was £191,105, including the cost of 16 locomotives, 16 passenger coaches, and 577 goods waggons. During that year 61,383 passengers and 937,679 tons of goods were carried. The number of employés was 278. (c) *East Greta Line.* This line, belonging to the East Greta Coal Mining Company, runs from East Greta Junction, on the Northern line of the Government railways, to Stanford Merthyr, a distance of 8 miles. The total capital cost to the end of 1907 was £85,035. During the year 1907 378,604 passengers and 26,306 tons of minerals, etc., were carried. The company owns 11 locomotives, 21 passenger coaches, and 16 goods waggons, the number of employés being 149 at the end of the year 1907. (d) *The New Redhead Coal Company's Railway.* The lines owned by this company branch from the North-coast line of the Government railways, and

run from Adamstown to Burwood Extended colliery, and from Dudley Junction to Dudley colliery, a total distance of $7\frac{1}{2}$ miles. The capital cost to the end of 1907 was £82,443. The line is worked by the Railway Department, coal waggons being supplied by the coal companies using the line. (e) *The Seaham Coal Company's Railways*. These lines have a total length of $9\frac{1}{2}$ miles. Particulars as to capital cost are not available. During the year 1907 20,066 passengers and 6820 tons of goods were carried. The company owns 6 locomotives and 5 passenger coaches, in addition to a number of coal and goods waggons. (f) *Hexham-Minni Railway*. This line branches from the Northern line of the Government railways and has a length of 6 miles. Further particulars are not available. (g) *The Commonwealth Oil Corporation's Railway*. This line runs from Newnes Junction on the Great Western Line of the Government railways to the Company's refinery, a distance of 32 miles. Three of the Shay geared type of locomotives (see p. 707 hereof) are in use on this line. (h) *The Warwick Farm Line* is a short line, three-quarters of a mile in length, connecting the Government line near Liverpool with the Warwick Farm Racecourse. Government rolling-stock is used.

In addition to the lines referred to above, legislative sanction was obtained in 1890 for the construction of a private line from the flux quarries at Tarrawingee to the Broken Hill line, a distance of forty miles. The line was purchased by the Government in 1901, and was leased to the Silverton Tramway Company to work for a period of five years at an annual rent of 3 per cent. on the capital outlay.

4. **Victoria.**—In Victoria the only private railway open for general traffic is the Kerang-Kondrook tramway, opened in 1889. The cost of construction of this line to the end of 1907 was £29,013, paid out of a loan advanced by the Victorian Government. The total length is $14\frac{1}{2}$ miles. The line is at present controlled by the Kerang Shire Council, but proposals have recently been made for its transfer to the Railway Department.

A line running from Elsternwick to Oakleigh, a distance of about five miles, has been constructed by a private company, but is not in use.

5. **Queensland.**—In this State private railways open for general traffic may be grouped under two heads:—(i.) Lines constructed primarily for mining purposes, and (ii.) Shire tramways.

(i.) *Mining Railways.* (a) *The Chillagoe Railway.* The most important of these is the Chillagoe railway, constructed under the Mareeba to Chillagoe Railway Act 1897, and opened in 1901. This line runs from Mareeba, on the Cairns railway, to Mungana, a distance of 103 miles. The cost of construction and equipment to the end of 1907 was £394,483. During that year 47,404 passengers and 154,006 tons of goods, etc., were carried. (b) *The Stannary Hills Line.* This line branches from the Chillagoe railway at Boonmoo and runs to Rocky Bluff, via Stannary Hills, a total distance of twenty-one miles. The capital cost to the end of 1907 was £63,408. During that year 8711 passengers and 61,445 tons of goods, etc., were carried. (c) *The Mount Garnet Railway.* This line also branches from the Chillagoe railway at Lappa Junction, and runs for a distance of thirty miles, as far as Mount Garnet. The capital cost to the end of 1907 was about £100,000. During that year 6379 passengers and 7165 tons of goods, etc., were carried.

(ii.) *Shire Tramways.* Under Part XV. of the Local Authorities Act of 1902 provision is made whereby not less than one-third of the ratepayers in any district may petition the local authority to apply to the Governor for the constitution of a tramway area. The Governor may define the area and may also approve of the plans and specifications of the proposed tramway. The amount which may be advanced by the Government for the construction or purchase of a tramway may not exceed a sum equal to £3000 for every mile of its length. As regards repayment of loans, no sum need be paid during the first three years, but after the expiration of that period the principal and interest must be repaid by half-yearly instalments on the basis provided for by the

“Local Works Loans Act 1880 to 1899.” For the purpose of raising the money to pay these instalments the local authority may levy a rate upon all ratable property within the tramway area. The money required for the tramway may be raised by the local authorities by the issue of debentures.

At the end of the year 1907 there were seven shire tramways in operation having a total length of 161 miles. Particulars are given in paragraphs 2 and 9 hereof.

6. South Australia.—In this State there are no private railways open for general traffic. The only private line is that owned by the Broken Hill Proprietary Company, running from Iron Knob to the seaboard near the head of Spencer’s Gulf, a distance of 58 miles. The line is used for the carriage of flux for use in connection with the smelting works at Port Pirie.

7. Western Australia.—Owing to the Government’s past difficulty in constructing lines, urgently required for the development of the country, private enterprise was encouraged to undertake the work of construction on the land-grant principle, and two trunk lines were thus constructed. The greater part of the private lines now open, however, have been constructed in connection with the timber industry. (i.) *The Midland Railway.* This line is 277 miles in length, and runs from the Midland Junction, ten miles from Perth, to Walkaway, where it joins the Government line running to Geraldton. It was constructed under a concession of 12,000 acres of land per mile of line constructed, to be selected along the entire route of the railway. The total capital expenditure up to the year 1901 was £1,999,006, the revenue for the year 1907 being £90,256, and the expenditure £48,873. (ii.) *The Great Southern Railway.* This line, which was built by private enterprise under the land-grant system, is 243 miles in length, and was acquired by the Government by purchase on the 1st January, 1897. The total price paid, with all the interests of the private company and of the original concessionaire, was £1,100,000, which was divided by the Government for book-keeping purposes into £300,000 for the land and £800,000 for the railway. (iii.) *Millar’s Karri and Jarrah Company’s Lines.* These lines have mostly been built under special timber concessions and leases. There were, at the end of the year 1907, in all eight lines situated in various parts of the State extending into the bush, whence logs are brought to the mills. At the end of 1907 the total length of these lines was 294 miles, and the total capital expended was £330,945. The company owned 21 locomotives, 6 passenger coaches, and 718 goods and timber trucks. Two of these lines have recently been taken over by the Government.

8. Tasmania.—In this State there are three private lines open for general traffic. They are all situated in the western part of the island.

(i.) *The Emu Bay Railway Company.* The lines owned by this company run from Burnie to Waratah, from Guildford to Zeehan, and from Rayna to Maestris, and have a total length of 103½ miles. The total cost of construction and equipment to the end of 1907 was £594,419. During that year 32,935 passengers and 90,007 tons of goods were carried. The company owns 8 locomotives, 5 passenger coaches, and 140 waggons.

(ii.) *The Mount Lyell Mining and Railway Company.* The railways owned by this company run from Regatta Point, Strahan, to Queenstown, and from Kelly Basin to Linda. The former line, 22 miles in length, was constructed in 1895-6, while the latter line, 30 miles long, was taken over from the North Mount Lyell Copper Company on the amalgamation of the two companies in 1903. The line from Kelly Basin to Linda is now run only intermittently. The total cost of construction and equipment to the 30th September, 1907, was £532,724. During the year 1907, 33,850 passengers and 118,624 tons of goods and minerals were carried. The company owns 11 locomotives, 10 passenger coaches, and 174 goods waggons, trucks, and vans.

(iii.) *The Magnet Silver Mining Company’s Railway.* This line runs from Magnet Junction on the Emu Bay Company’s line to Magnet, a distance of 10 miles. The

capital expenditure to the end of 1907 was £21,000, including the cost of 2 locomotives, 1 passenger coach, and 4 goods waggons. During the year 1907 2679 passengers and 4046 tons of goods and minerals were carried.

9. **Operations of Private Railways 1907.**—The tabular statement given below shews particulars, so far as returns are available, for the year 1907 of all private railways open to the public for general traffic in the Commonwealth:—

PARTICULARS OF PRIVATE RAILWAYS OPEN FOR GENERAL TRAFFIC, 1907.

§ 3. Tramways.

1. **General.**—Tramway systems are in operation in all the States of the Commonwealth, and in recent years considerable progress has been made in the adoption of electrical traction, the benefit of which is now enjoyed by a number of the principal towns of the Commonwealth.

There are also in many parts of Australia private tramway lines which are used for special purposes, usually in connection with the timber, mining, or milling industries. Though efforts have been made to collect particulars of these lines, the returns are generally too incomplete for publication.

(i.) *Total Mileage Open and Classification of Lines.* The following table shows the total mileage of tramway lines open for general passenger traffic in each State and in the Commonwealth at the end of the year 1908, classified (a) according to the motive power utilised and (b) according to the nature of the authority by which the lines are controlled:—

TRAMWAYS.—CLASSIFICATION OF MILEAGE OPEN FOR PASSENGER TRAFFIC, 1908.

| Nature of Motive Power or Controlling Authority. | N.S. Wales. | Victoria. | Q'land. | *South Australia. | Western Australia. | Tas. | C'wealth. |
|--|-------------|------------|------------|-------------------|--------------------|----------|-------------|
| ACCORDING TO MOTIVE POWER. | | | | | | | |
| | Miles. | Miles. | Miles. | Miles. | Miles. | Miles. | Miles. |
| Electric | 91½ | 35 | 30¾ | — | 45½ | 9 | 211½ |
| Steam | 48¾ | 1 | — | — | — | — | 49¾ |
| Cable | — | 45¾ | — | — | — | — | 45¾ |
| Horse | — | 13 | — | 23½ | 25½ | — | 61¾ |
| Total | 139½ | 94¾ | 30¾ | 23½ | 70¾ | 9 | 368¾ |
| ACCORDING TO CONTROLLING AUTHORITY. | | | | | | | |
| Government | 132¾ | 5½ | — | 17½ | 23 | — | 178½ |
| Municipal | — | — | — | — | 6½ | — | 6½ |
| Private | 7 | 89¾ | 30¾ | 6 | 41½ | 9 | 183¾ |
| Total | 139½ | 94¾ | 30¾ | 23½ | 70¾ | 9 | 368¾ |

* Exclusive of 53 miles of single track in the metropolitan district, now in course of electrification.

2. **New South Wales.**—In this State the tramways, with but few comparatively unimportant exceptions, are the property of the Government, and are under the control of the Railway Commissioners.

(i.) *Government Tramways.* In Sydney and suburbs the Government tramways are divided into distinct systems. There were in June, 1908, five such systems in operation within the metropolitan area, the most important being the city and suburban lines—78 miles in length—and the North Shore line—11½ miles in length. Both of these systems are now operated by electricity. There are three systems on which the motive power used is steam, namely—(a) the line from Ashfield to Mortlake and Cabarita, 8½ miles long, (b) the line from Kogarah to Sans Souci, nearly 5 miles in length, and (c) the steam tramway at Manly, 1½ miles long. There are also Government steam tramways in operation at Newcastle, Broken Hill, and Parramatta.

(a) *Sydney Tramways.* The first tramway constructed in Sydney ran from Bridge-street to Hay-street *via* Hunter-street. It was opened in September, 1879, and the motive power was steam. In the following few years these steam tramways were considerably extended. The electric system was not introduced into the city until the close of the year 1899, though it had at that time been in operation for some years in North Sydney. The tramways in the heart of the city, running along King-street to the suburb of Woollahra, as well as those in North Sydney, were originally worked by underground cables, and have since been converted into electric lines on the overhead trolley system. In December, 1899, the electric tramway, extending from the Circular Quay along George-street to the Redfern Station, and thence to the densely-populated district of Pyrmont, was opened for traffic. This tramway is a double track, and is $3\frac{1}{4}$ miles in length. Single lines have been constructed along Castlereagh and Pitt streets, with the object of relieving the traffic along George-street. The whole of the steam tramways in Sydney and suburbs, with the exception of the Ashfield-Mortlake, the Kogarah-Sans Souci, and the Manly lines, have now been converted into electric lines, and provision for the extra power required for the electrification of the first two of these lines has been made at the central station.

(b) *Other Tramway Systems.* In Newcastle the first section of the tramways, from Perkins-street to Plattsburg, was opened in 1887; the total length open on the 30th June, 1907, was $17\frac{1}{2}$ miles. At Broken Hill and Parramatta the first sections of the tramways were opened in 1902. On the 30th June, 1907, the mileage open at Broken Hill amounted to $6\frac{1}{2}$, and at Parramatta to $4\frac{1}{2}$ miles. On the same date the total length of all Government tramways open for traffic was $132\frac{3}{4}$ miles, the capital cost of construction and equipment of these lines being £3,732,991. There were also $20\frac{1}{2}$ miles of line under construction, while further extensions amounting in all to 16 miles had been authorised. There are also three short lengths of tramways in New South Wales run by private companies. Further particulars are given below.

(c) *Particulars of all Government Tramways, 1901 to 1908.* The following table shews the total length, the capital cost, the gross revenue, working expenses, and net earnings, and the percentages of working expenses on gross revenue, and of net earnings on capital cost for each financial year from 1900-1 to 1907-8, inclusive.

The net result of the year 1907-8, after providing for all working expenses and £134,504 interest on the capital invested, was a surplus of £68,425, as compared with £48,961 for the previous year:—

NEW SOUTH WALES.—PARTICULARS OF WORKING OF GOVERNMENT TRAMWAYS.

1901 TO 1908.

| Year ended the 30th June. | Total Length of Lines Open. | Capital Expended on Lines Open. | Gross Revenue. | Working Expenses. | Net Earnings. | Percentage of Working Expenses on Gross Revenue. | Percentage of Net Earnings on Capital Cost. |
|---------------------------|-----------------------------|---------------------------------|----------------|-------------------|---------------|--|---|
| | Miles. | £ | £ | £ | £ | per cent. | per cent. |
| 1901 ... | 79 $\frac{1}{2}$ | 2,194,493 | 551,674 | 462,471 | 89,203 | 83.83 | 4.07 |
| 1902 ... | 104 | 2,829,363 | 631,757 | 541,984 | 89,773 | 85.79 | 3.19 |
| 1903 ... | 124 $\frac{1}{2}$ | 3,371,587 | 752,034 | 654,165 | 97,869 | 86.98 | 2.90 |
| 1904 ... | 125 $\frac{3}{4}$ | 3,471,759 | 802,985 | 673,625 | 129,360 | 83.89 | 3.73 |
| 1905 ... | 125 $\frac{3}{4}$ | 3,637,922 | 813,569 | 685,682 | 127,887 | 84.28 | 3.51 |
| 1906 ... | 126 | 3,669,096 | 851,483 | 665,083 | 186,400 | 78.11 | 5.08 |
| 1907 ... | 128 $\frac{3}{4}$ | 3,669,524 | 908,701 | 727,947 | 180,754 | 80.11 | 4.92 |
| 1908 ... | 132 $\frac{3}{4}$ | *3,732,991 | 1,011,994 | 809,065 | 202,929 | 79.95 | 5.44 |

* £44,770 of this sum has been paid from the Consolidated Revenue, and no interest is payable thereon.

(d) *Particulars of Different Systems of Government Tramways, 1907-8.* In the subjoined statement particulars are given of the working of the electric, steam, and horse tramways in Sydney, and of the other Government tramways at Newcastle, Broken Hill, and Parramatta :—

NEW SOUTH WALES.—PARTICULARS OF THE WORKING OF THE VARIOUS GOVERNMENT TRAMWAYS, 1907-8.

| Particulars. | Sydney. | | | New-castle. (Steam.) | Broken Hill. (Steam.) | Parramatta. (Steam.) | Total. |
|----------------------|-------------|--------|-----------|-------------------------|--------------------------|-------------------------|-----------|
| | Electric. | Steam. | Total. | | | | |
| Length ... miles | 89½ | 14½ | 104½ | 17½ | 6½ | 4½ | 132½ |
| Total cost ... | £ 3,288,480 | 95,479 | 3,383,959 | 248,340 | 70,534 | 30,158 | 3,732,991 |
| Gross revenue ... | £ 925,224 | 12,030 | 937,254 | 52,789 | 18,926 | 3,025 | 1,011,994 |
| Working expenses ... | £ 735,442 | 15,549 | 750,991 | 39,003 | 16,442 | 2,629 | 809,065 |
| Interest ... | £ 118,300 | 3,476 | 121,776 | 9,069 | 2,558 | 1,101 | 134,504 |
| Profit or loss* ... | £ +71,482 | —6,995 | +64,487 | +4,717 | —74 | —705 | +68,425 |

* The positive sign indicates a profit, the negative a loss.

The total capital cost shewn in the preceding table was made up as follows :—

| Permanent Way. | Rolling Stock. | Power-house, Sub-stations, and Plant. | Machinery. | Workshops. | Furniture. | Total. |
|----------------|----------------|---------------------------------------|------------|------------|------------|------------|
| £2,116,914 | £723,065 | £758,714 | £41,547 | £90,359 | £2,392 | £3,732,991 |

The average cost per mile open was £15,946 for permanent way and £12,174 for all other charges, making a total of £28,120 per mile.

During the year 1907-8, eight new extensions, amounting in all to a length of 4 miles, were opened for traffic. On the 30th June, 1908, nine extensions having a total length of 20 miles were under construction, and up to the same date eleven additional extensions, amounting to about 17 miles, had been authorised for construction.

(e) *Sydney Electric Tramways.* The total length of the city and suburban lines is 78 miles, and of the North Shore line 11½ miles, making the total length of the electric tramways in Sydney 89½ miles. The current for the operation of these tramways is generated at the power-house at Ultimo, which has been erected at a total cost of £758,714, including the cost of the sub-stations and plant. The current generated at the power-house is partly continuous and partly alternating, and is used both for lighting and traction purposes. The standard voltage of the continuous current is 600; the alternating current is transmitted by means of high-tension cables to sub-stations, where it is converted to continuous current at the standard voltage. The total output of the power-house, for both lighting and traction purposes, during the year 1907-8, was 41,974,191 kilowatt-hours, of which the direct-current supply was 15,250,021, and the alternating current 26,724,170 kilowatt-hours. The output for traction purposes only was 37,422,267 kilowatt-hours. The following table gives particulars of the working of the electric tramways for each financial year from 1901 to 1908, inclusive :—

NEW SOUTH WALES.—PARTICULARS OF SYDNEY ELECTRIC TRAMWAYS,

1901 TO 1908.

| Year ended 30th June. | Mileage Open for Traffic (Single Track). | Total Cost of Construction and Equipment. | Gross Revenue. | Working Expenses. | Net Revenue. |
|-----------------------|--|---|----------------|-------------------|--------------|
| | Miles. | £ | £ | £ | £ |
| 1901 | 44½ | 1,017,321 | 258,161 | 201,149 | 57,012 |
| 1902 | 52 | 1,285,014 | 340,742 | 257,557 | 83,185 |

| 1907 | 33,941,485 | 15,630,887 | 144,038,105 | 727 | 4,044 |
| 1908 | 37,422,267 | *16,517,552 | *159,722,892 | 738 | 4,735 |

* On special occasions steam motors and cars were running to meet exceptional demands, and these figures include same.

(ii.) *Private Tramways.* There are three private tramway lines in New South Wales open for general traffic. (a) There is an electric tramway running from Rockdale to Brighton-le-Sands, a distance of one and a-quarter miles. This line was originally opened as a steam tramway in 1885, but was subsequently converted into electric. The total cost to the end of 1907 was £12,073. During that year the number of tram-miles run was 20,500. (b) A private steam tramway passes through the township of Parramatta. Commencing at the park gates, it runs as far as the Duck River, a distance of three miles, where it connects with the Parramatta River steamers, conveying passengers and goods to and from Sydney. This line was opened for traffic in 1863. (c) Another steam tramway runs between Fassifern and Toronto, on Lake Macquarie, a distance of two and three-quarter miles, and was first opened in 1891. The number of tram-miles run during the year 1907 was about 14,000.

Particulars regarding private tramways used for special purposes are not available.

(iii.) *Sydney Harbour Ferries.* As the ferry services on the waters of Port Jackson are mainly subsidiary to the suburban railway and tramway systems, it has been thought advisable to include them here rather than under shipping. Returns for the year 1907 were received from five companies, and shew that these companies had 62 boats in commission which were licensed to carry a total of 32,079 passengers, or an average of 517 per boat and per trip. The total number of passengers carried during the year is stated as 21,757,243, an average of nearly 60,000 per day. In addition to the ordinary passenger traffic there are two lines providing for vehicular traffic, and thus affording the only rapid means of transit between the city and the northern suburbs. The five companies employed during the year a total of 666 persons. Their capital expenditure to the end of 1907 amounted to £206,435, the gross revenue during 1907 to £200,705, and the expenditure to £140,566, thus giving a net revenue of £60,139. The

services are well managed, and the boats constructed during recent years—double-ended screwboats—are claimed to be superior in size and equipment to boats employed on similar service in any part of the world.

3. **Victoria.**—In Melbourne there are a number of tramway systems carried on under the control of various authorities, the most important being the cable system worked by the Melbourne Tramway and Omnibus Company. There are also two lines of electric tramways, one running from St. Kilda to Brighton, a distance of five and one-eighth miles, belonging to the Government, and under the control of the Railway Commissioners; the other, from Flemington Bridge to the Saltwater River and Keilor Road, a distance of seven and a-quarter miles, is run by a private company. There is also a private cable tramway, two and a-quarter miles in length, between Clifton Hill and Preston; and there are two private tramways worked by horses—one, seven miles in length, runs from Sandringham to Beaumaris, the other, one and a-half miles long, from Brunswick to Coburg. There is a short steam tramway, about one mile long, at Sorrento. There are also systems of electric tramways at Ballarat and Bendigo, constructed and run by a private company. A number of tramways have been constructed for special purposes in various parts of the State under the provisions of the Tramways Act 1890.

(i.) *Melbourne Cable Tramways.* The Melbourne Omnibus Company began its services by the initiation of the omnibus lines in 1869, and in 1878 the company changed its name to the Melbourne Tramway and Omnibus Company, with a view to the introduction of a tramway system in the city and suburbs of Melbourne. It was not, however, until the year 1883, when the Melbourne Tramway and Omnibus Company's Act was passed, that the necessary authority was given by Parliament for that purpose. Under this Act the company was empowered to construct tramways in the streets of Melbourne and suburbs, with the consent of the municipalities interested, who had the option of electing to construct the tramways themselves. All the municipalities decided to exercise the option conferred upon them, and, according to the provisions of the Act, a Tramways Trust was formed. This body, which is composed of seven members from the Melbourne City Council and one member each from the councils of eleven of the surrounding municipalities, received full power to construct tramways, and to borrow money for that purpose, secured on the municipal properties and revenues and on the tramways themselves. The Trust raised sufficient funds to pay for the construction of the tramway tracks and the engine-houses from which the cables are worked. It was required by the original Act, as amended in 1897 and 1892, to complete the tramways by the end of the year 1893, and to grant a thirty-two years' lease of the tramways to the company, dating from the 1st July, 1884—when the liability for interest on the loans commenced—and expiring on the 1st July, 1916. The company is required to find sufficient capital to build the rolling-stock and to equip the lines and engine-houses with all necessary working requisites. The company pays to the Trust annually the interest due upon the loans raised, and also a sufficient sum as a sinking or redemption fund, to repay by its accumulation the principal of the loans raised by the Trust, and at the expiration of the lease must hand back the lines in good working order to the Trust. The expenses of the Trust were paid out of the loan up to the end of the year 1903, but since that date have been paid by the company to an amount not exceeding £1000 per annum, the municipalities being liable for the remainder. The total amount the Trust was empowered to borrow was £1,650,000, which has been raised in London by means of debentures bearing interest at $4\frac{1}{2}$ per cent. The premiums received amounted to £55,794, making a total of £1,705,794. This amount had been expended by the end of the year 1893, when further loan expenditure ceased. On the 1st July, 1908, the sinking fund amounted to £1,032,000. The first line—that to Richmond—was opened to traffic in November, 1885, and the work being rapidly pushed on, the others were opened at short intervals, and the whole system was completed in 1891. The complete system consists of forty-three and a-half miles of double-track cable lines, using constantly over ninety miles of wire rope, and four and a-half miles of double-track horse lines.

(a) *Particulars of Working, 1901 to 1908.* The subjoined statement shews the tram mileage, the number of passengers carried, and the revenue and expenditure for each year ended the 30th June, from 1901 to 1908, inclusive:—

MELBOURNE CABLE TRAMWAYS.—PARTICULARS OF WORKING, 1901 to 1908.

| Year ended the 30th June. | Tram Mileage. | Number of Passengers Carried. | Revenue. | | | Working Expenses. | | | |
|------------------------------|------------------|--|---------------------|---------|---------|-------------------|--------------------------------|---------|---------|
| | | | Traffic Rec'pts. | Other.* | Total.* | Wages. | Repairs & Main- tenance. | Other.* | Total.* |
| | | | £ | £ | £ | £ | £ | £ | £ |
| 1901 | 8,964,734 | 47,195,647 | 465,427 | 18,025 | 483,452 | 122,014 | 80,006 | 60,480 | 262,500 |
| 1902 | 9,226,883 | 47,261,572 | 454,683 | 20,152 | 474,835 | 125,596 | 68,569 | 75,269 | 269,554 |

| 1904 | 8,968,928 | 49,183,742 | 444,495 | 28,781 | 473,276 | 124,050 | 71,612 | 45,928 | 241,590 |
| 1905 | 8,932,073 | 50,297,357 | 448,740 | 31,066 | 479,806 | 123,803 | 62,177 | 48,395 | 234,375 |
| 1906 | 9,032,523 | 52,925,654 | 469,079 | 59,861 | 528,940 | 125,390 | 59,361 | 47,395 | 232,146 |
| 1907 | 9,536,397 | 59,069,280 | 507,206 | 39,274 | 546,480 | 140,487 | 69,736 | 54,445 | 264,668 |
| 1908 | 9,810,808 | 63,954,512 | 545,269 | 40,561 | 585,830 | 153,040 | 64,993 | 60,606 | 278,639 |

* Including amounts on account of omnibus lines.

(ii.) *Electric Tramways.* There are in Melbourne two electric tramway systems, namely (a) the St. Kilda-Brighton line and (b) the North Melbourne tramways.

(a) *The St. Kilda-Brighton Line.* Under the St. Kilda and Brighton Electric Street Railways Act 1904 the Board of Land and Works was authorised to construct a tramway from St. Kilda to Brighton. The amount of interest payable on the cost of the land acquired for the tramway was guaranteed by the municipalities of St. Kilda and Brighton for a period of twenty years, and authority was given by the Act to the municipalities to levy either a general or special rate not exceeding one shilling in the pound for the purpose of paying the guarantee. The profit, if any, during the first twenty years is to be set off in reduction of the guarantee. The line was opened for traffic in May, 1906, and the extension to Brighton Beach was opened in the following year. The total capital cost to the 30th June, 1908, exclusive of rolling-stock, was £42,050, and of rolling-stock was £15,473, making a total of £57,523. The subjoined statement gives particulars of the working of this line for the financial year ended the 30th June, 1908:—

| Mileage Open. | Car Mileage. | Passengers Carried. | Gross Revenue. | Working Expenses. | *Special Expenditure. | Interest. | Net Loss |
|------------------|-----------------|------------------------|-------------------|----------------------|--------------------------|-----------|----------|
| | | | £ | £ | £ | £ | £ |
| 5.13 | 335,007 | 1,146,484 | 10,374 | 10,988 | 3,311 | 2,140 | 6,065 |

* Replacement of rolling-stock, car-shed, and equipment destroyed by fire.

(b) *The North Melbourne Tramways,* extending through the northern suburbs to the Saltwater River and to Keilor Road, were constructed by a private company, and were opened for traffic towards the end of the year 1906.

(c) *The Ballarat and Bendigo Electric Tramways* are under the control of a private company, and run along the main streets and to and from the outlying suburbs of the two towns.

(d) *Particulars of Working of all Electric Tramways, 1903 to 1907.* The following table gives particulars of the working of all electric tramways in Victoria for each year from 1903 to 1907, inclusive:—

VICTORIA.—PARTICULARS OF WORKING OF ELECTRIC TRAMWAYS, 1903 to 1907.

| Year. | Current Generated for Traction Purposes at Central Stations. | Mileage Open for Traffic. | Total Cost of Construction and Equipment. | Gross Revenue. | Working Expenses. | Tram Miles Run. | Number of Passengers Carried. | Number of Cars in Use. | Number of Employés. |
|-------|--|---------------------------|---|----------------|-------------------|-----------------|-------------------------------|------------------------|---------------------|
| | | | | | | | | | |
| 1903 | 331,712 | 10½ | 106,553 | + | + | 326,878 | 1,214,323 | 12 | 55 |
| 1904 | 463,633 | 10½ | 115,309 | + | + | 453,027 | 1,749,225 | 12 | 86 |
| 1905 | 703,226 | 23½ | 191,882 | + | + | 699,729 | 2,759,868 | 53 | 210 |
| 1906 | 1,790,353 | 34 | 222,486* | 48,554* | 34,522* | 1,793,647 | 7,037,312 | 78 | 379 |
| 1907 | 1,562,221* | 34½ | 272,180* | 69,296 | 55,740 | 1,963,494 | 7,519,361 | 95 | 338 |

* Incomplete; the figures given are for 27½ miles only: † Not available for publication.

(iii.) *Private Tramways for Special Purposes.* There are in Victoria a number of tramways used for special purposes, chiefly in connection with the timber, mining, and milling industries. These lines have been constructed either under authority of the Department of Public Works, pursuant to Section 36 of the Tramway Act 1890, or under leases or licenses issued by the Department of Lands and Survey, pursuant to Sections 144 and 145 of the Land Act 1901. Particulars of these lines are too incomplete for publication.

4. **Queensland.**—In this State there is a system of electric tramways running through the streets of the city and suburbs of Brisbane and controlled by a private company which has its head office in London. The total length of the Brisbane system was thirty and three-quarter miles at the end of the year 1908. There are also a number of tramways, having a total length of 640 miles, run in connection with sugar mills. Particulars of Shire tramways have been given in the part of this section dealing with private railways (see pp. 736 and 738).

(i.) *Brisbane Electric Tramways.* These tramways are run on the overhead trolley system, the voltage of the line current being 550. The total cost of construction and equipment to the end of the year 1908 was approximately £1,250,000. The following table gives particulars of these tramways for each calendar year from 1901 to 1908, inclusive:—

QUEENSLAND.—BRISBANE ELECTRIC TRAMWAYS, PARTICULARS OF WORKING,
1901 TO 1908.

| Year. | Current Generated. | Mileage Open for Traffic. | Tram Miles Run. | Number of Passengers Carried. | Gross Revenue. | Working Expenses. | No. of Cars in Use. | Number of Persons Employed. |
|---------|--------------------|---------------------------|-----------------|-------------------------------|----------------|-------------------|---------------------|-----------------------------|
| | | | | | | | | |
| 1901... | 3,192,955 | 21 | 2,756,443 | 16,183,801 | 111,483 | 64,710 | 79 | 375 |
| 1902... | 3,852,308 | 24½ | 3,015,548 | 18,125,302 | 125,451 | 73,473 | 88 | 390 |
| 1903... | 3,975,355 | 27 | 3,157,574 | 18,376,000 | 126,526 | 77,539 | 100 | 400 |
| 1904... | 4,154,797 | 29 | 3,243,686 | 18,452,704 | 126,647 | 76,586 | 104 | 430 |
| 1905... | 4,561,780 | 30½ | 3,323,823 | 20,049,978 | 128,436 | 78,918 | 106 | 485 |
| 1906... | 4,370,004 | 30½ | 3,323,657 | 22,052,424 | 141,414 | 78,493 | 107 | 550 |
| 1907... | * | 30½ | 3,330,011 | 24,251,329 | 158,298 | * | 107 | * |
| 1908... | 4,915,202 | 30½ | 3,367,972 | 27,221,466 | 177,567 | * | 107½ | 619 |

* Not available. † Including 99 motors and 8 trailers.

(ii.) *Sugar-Mill Tramways.* There are a number of tramways in various parts of Queensland used in connection with the sugar-milling industry, chiefly for the purpose of hauling cane to the mills. Some of these lines are of a permanent nature, running

through sugar-cane plantations, while others are portable lines running to various farms. At the end of the year 1908, there were 28 sugar-mills running tramways. The total mileage was 640, of which 460 miles were steam and 180 miles horse tramways.

5. **South Australia.**—Up to the year 1906 there were a number of horse tramways in the principal streets of Adelaide and suburbs run by various private companies. Power to acquire part of these lines, with a view to their electrification, was given to the Adelaide Corporation by the Municipal Tramways Trust Act 1906. In accordance with the provisions of the Act, a Trust consisting of eight members, of whom two were nominated by the Governor, two elected by the City Corporation, and two each by the Suburban Corporations and the District Councils, was formed in 1907, and a length of forty-nine route miles of horse traction tramways were purchased from the private companies at a cost of £288,357. Within three years from the 31st December, 1906, the Trust is to electrify the main lines at a cost not exceeding on the average £12,000 per mile. At the commencement of the year 1909 there were fifty-three miles of single track in process of electrification. The power-house will be located at Port Adelaide, nine miles from the city. It will be equipped with three 1500-kilowatt turbo-alternators generating current at 11,000 volts, which will be stepped down and passed through rotary converters to direct current at 600 volts. The cost of construction of the whole undertaking when complete will be approximately £750,000. There are also in South Australia nineteen and three-quarters miles of Government horse tramways in country districts, worked in connection with the railway system, and six miles of private tramways used for passenger service. The subjoined statement gives various particulars of these lines:—

SOUTH AUSTRALIA.—PARTICULARS OF HORSE TRAMWAYS, 1908.

| Particulars. | Length. | Gauge. | Nature of Traffic. |
|-------------------------------------|---------|---------|-----------------------|
| GOVERNMENT TRAMWAYS. | | | |
| | Miles. | ft. in. | |
| Moonta, Moonta Bay, and Hamley Flat | 5½ | 5 3 | Passengers and goods. |
| Gawler | 1½ | 5 3 | „ „ |
| Victor Harbour and Breakwater ... | 1 | 5 3 | „ „ |
| Dry Creek and Magazine | 1 | 2 0 | Explosives. |
| Magazine and Broad Creek | 1½ | 2 0 | „ |
| Port Broughton and Mundoorra ... | 10 | 3 6 | Passengers and goods. |
| PRIVATE TRAMWAYS. | | | |
| Fort Adelaide and Alberton | 2¼ | 5 3 | Passengers. |
| Glenelg and Brighton | 3¾ | 4 8½ | „ |

The total length of the Government tramways referred to above is nineteen and three-quarter miles, and of the private tramways six miles. On the two private tramways mentioned 237,449 passengers were carried during the year 1907, the gross receipts amounting to £1780.

6. **Western Australia.**—In this State there are a number of horse tramways, amounting in all to a length of twenty-three miles, which are the property of the Government. Of these the most important is the line between Roeburne and Cossack, constructed on a 2 ft. gauge and under the control of the Railway Department. The length of this line is eight and a half miles. The remaining fourteen and a half miles belonging to the Government are made up of eleven short lengths varying from eight chains to four and a-half miles, worked in connection with the jetties at various ports for the purpose of providing the necessary communication between such jetties and the goods sheds or warehouses. Most of these short lines are leased at annual rentals, and they are under the supervision of the Harbour Master. Their maintenance and improvement is in the hands

of the Public Works Department. In addition to these Government lines there are electric tramway systems at Perth and Kalgoorlie carried on by private companies, and at Fremantle, under municipal control.

(i.) *Government Tramways.* Particulars as to the working of the Government horse-tramways or as to the rents received therefrom are not generally available. The following statement, however, shews particulars of the working of the Roeburne-Cossack line for the financial year ended the 30th June, 1908 :—

**WESTERN AUSTRALIAN GOVERNMENT RAILWAYS.—PARTICULARS OF THE
ROEBURNE-COSSACK LINE, FINANCIAL YEAR, 1907-8.**

| Mileage Open. | Cost of Construction and Equipment. | Gross Earnings. | Working Expenses. | Interest. | Loss. |
|---------------|-------------------------------------|-----------------|-------------------|-----------|-------|
| 8½ | £24,827 | £2,402 | £2,099 | £864 | £561 |

The total loss on the working of this line since its inception to 30th June, 1908, amounted to £21,471.

(ii.) *Steam Tramways.* During the year 1908 there were four private steam tramways, having a total length of 60½ miles, working in Western Australia; only one of these was run for passenger traffic, the other three being used in connection with the timber industry. The following statement gives particulars of these lines :—

WESTERN AUSTRALIA.—PRIVATE STEAM TRAMWAYS, 1908.

| Particulars. | Length | | Terminal Points. | Nature of Traffic. |
|---------------------------------|--------|---------|-------------------------|--------------------|
| | Miles. | Ft. in. | | |
| Leonora-Gwalia | 2½ | 3 6 | Leonora to Gwalia ... | Passenger |
| Nallan Tram Wood Line | 10 | 3 3 | From Nallan into bush | Firewood |
| Sons of Gwalia Firewood Tramway | 24 | 1 8 | From Leonora into bush | ,, |
| Kurramia Timber Line | 24 | 3 6 | From Kurramia into bush | ,, |

(iii.) *Electric Tramways.* There are now four towns in Western Australia which enjoy the benefits of electric tramway systems, namely, Perth, Fremantle, Kalgoorlie, and Boulder City.

(a) *The Perth Electric Tramways* were opened for traffic by a private company in 1899, and the system has since been extended to many of the outlying suburbs. On the 31st December, 1907, there were 19¾ miles of line open, the total cost of construction and equipment to that date being £143,584, exclusive of amounts paid out of revenue to a sinking fund for the redemption of debenture stock.

(b) *The Kalgoorlie and Boulder City Tramways* are also run by a private company, the first line being opened in 1902. In the commencement of 1904 legislative authority was given for the construction of lines in Boulder City and suburbs, and in November, 1904, the last section of the Boulder system was completed. At the end of the year 1907 the total mileage of the whole system—in Kalgoorlie and Boulder City—amounted to 19 miles, the total cost of construction and equipment being approximately £172,000.

(c) *The Fremantle Tramways* were opened in November, 1905, under the control of the municipality. On the 1st August, 1907, there were 6½ miles of line open for traffic, the cost of construction and equipment at that date being £78,525.

(d) *Particulars of Working of all Electric Tramways, 1901 to 1907.* The subjoined table shews, so far as returns are available, particulars of the working of all electric tramway systems in the State for each year from 1901 to 1907, inclusive:—

WESTERN AUSTRALIA.—PARTICULARS OF ELECTRIC TRAMWAYS, 1901 to 1907.

| Year. | Current Generated. | Mileage Open for Traffic.† | Total Cost of Construction and Equipment. | Tram Miles Run. | Number of Passengers Carried. | Gross Revenue. | Working Expenses. | No. of Cars in Use. | No. of Persons Employed. |

* Exclusive of Kalgoorlie tramways, for which returns are not available. † Exclusive of Kalgoorlie tramways and also of amounts paid out of revenue to sinking fund for redemption of debenture stock of the Perth Tramways Company. ‡ Exclusive of Perth tramways. § Exclusive of amounts paid out of revenue to sinking fund for the redemption of debenture stock of the Perth Tramways Company. || Including returns for the Fremantle tramways for a period of ten months ended the 31st August, 1906, at which date the municipal financial year ends. ¶ For the year 1907, miles of route are given; for previous years the figures represent miles of single track.

7. **Tasmania.**—In Hobart there is a system of electric tramways, amounting in all to a length of nine miles, owned by a private company. Under the authority of the Launceston Tramway Act of 1906 the Launceston City Council entered into an agreement with a private company for the construction of a system of electric tramways in the city and suburbs of Launceston. The agreement provides that the company is to run the tramways for a period of twenty-five years, when the Council may purchase the lines and stock at cost price; the electric power required is to be supplied by the Council.

(i.) *Hobart Electric Tramways.* These tramways were opened for traffic in 1893, the total cost of construction and equipment to the 31st December, 1907, being £88,500. The following table gives particulars of the working of this system for each year from 1901 to 1907, inclusive:—

TASMANIA.—PARTICULARS OF WORKING OF HOBART ELECTRIC TRAMWAYS, 1901 to 1907.

| Year. | Current Generated. | Mileage Open for Traffic. | Tram Miles Run. | Number of Passengers Carried. | Gross Revenue. | Working Expenses. | Number of Cars in Use. | Number of Persons Employed. |
|-------|--------------------|---------------------------|-----------------|-------------------------------|----------------|-------------------|------------------------|-----------------------------|

* Exclusive of the sum of £4400 spent on renewal of permanent way.

8. **Electrical Traction in Commonwealth, 1907-8.**—The subjoined table gives particulars of electric tramways for each State and the Commonwealth. The returns for Tasmania, for the Ballarat and Bendigo tramways in Victoria, and for the Perth

and Kalgoorlie tramways in Western Australia, are for the calendar year 1907; for the Brisbane tramways the returns are for the calendar year 1908; and for other tramways the returns are for the financial year 1907-8. There are at present no electric tramways running in South Australia:—

SECTION XVIII.

POSTS, TELEGRAPHS, AND TELEPHONES.

§ 1. Posts.

1. **The Commonwealth Postal Department.**—Under the provisions of section 51 of the Commonwealth Constitution Act the Commonwealth Parliament was empowered to make laws with respect to the control of the postal, telegraphic, and telephonic services in Australia, and by proclamation, made under section 69 of the same Act, the six separate State Post and Telegraph Departments were amalgamated and taken over by the Federal Executive on the 1st March, 1901. On the 1st December following the Commonwealth Post and Telegraph Act 1901 came into operation, and the provisions of the various State Acts referring to the postal and telegraphic services thereby ceased to apply; it was, however, specially provided by the Act of 1901 that all regulations in force and all rates and charges levied under any State Act should continue in force and be applied in the same manner as if such State Act were not affected by the Commonwealth Act. The administration of the Act of 1901 was placed in the hands of a Postmaster-General, a responsible Minister with Cabinet rank, whilst a principal officer in each State was provided for under the style of Deputy Postmaster-General. The rates and charges levied in each State for the transmission of letters, telegrams, and postal articles at the date of Federation remained in force until the Post and Telegraph Rates Act came into operation on the 1st November, 1902. This Act secured uniformity throughout the Commonwealth in the rates charged for the conveyance of newspapers by post, and for the transmission of telegrams, but did not alter the charges made in the individual States for the transmission of letters, cards, parcels, and packets. At present there are anomalies in postal rates, to which reference is made hereinafter.

2. **First Post Office in Australia.**—The first Australian office for postal purposes was established in Sydney by Lieutenant-Governor Paterson under a Government order dated the 25th April, 1809, and the site selected was in High-street (now known as George-street) at the residence of Mr. Isaac Nicholls, who was empowered "in consideration of the trouble and expense attendant on this duty" to charge on delivery to the addressee the following sums:—For every letter, one shilling; for every parcel not exceeding 20 lbs. weight, two shillings and sixpence; and for all exceeding that weight, five shillings. Soldiers' letters were charged only one penny. The duties of this office were extended in June, 1810, by Governor Macquarie, who established it as a regular post office, at which all parcels and letters, either colonial or foreign, were to be deposited previous to their distribution.

3. **Postal Services in Early Days.**—After the establishment of this office in Sydney very little improvement in regard to postal matters took place for a number of years, and it was not until 1825 that an Act was passed by Sir Thomas Brisbane, with the advice of the Council, "to regulate the postage of letters in New South Wales." A proclamation under this Act was issued, fixing the rates of postage and the salaries and allowances of postmasters, and inviting tenders for the conveyance of mails between Sydney and Parramatta, Windsor and Liverpool; between Liverpool and Campbelltown; from Parramatta to Emu Plains, and thence to Bathurst. It was not, however, until 1828 that the provisions of the Act were put into full force and a system of general post-office communication was established. In that year rates of postage were fixed, depending

upon the distance and the difficulty of transmission. The lowest single inland rate was threepence and the highest one shilling, the postage on a letter increasing according to its weight, the minimum fee being charged on letters not exceeding a quarter of an ounce. The fee for newspapers was one penny. Letters from New South Wales to Van Diemen's Land were charged threepence each, while other letters by ship were charged fourpence each single rate, and sixpence for any weight in excess. The Act of 1825 was amended by the Postal Act of 1835, under which the Governor was authorised to establish a General Post Office at Sydney, and to make rules and regulations, and to fix rates for the conveyance of letters and parcels. In 1837 a post office was established in Melbourne, and a fortnightly service was established between that city and Sydney. In the same year stamps were introduced in the form of stamped covers or wrappers, which are said to have been the first postage stamps ever used. Post offices were established and a postal service was organised in the other States of the Commonwealth shortly after their settlement, and a tolerably good overland service by horses and mail coaches soon developed between the capitals and the up-country towns, villages, and stations as settlement progressed. In Tasmania the mails were delivered in 1824 by foot post once a fortnight, while in 1835 a mail cart made the journey twice a week from Hobart to Launceston—121 miles—in nineteen hours. In Western Australia the Legislative Council passed an Act establishing a postal department in 1834; a weekly mail between Guildford and York and an overland monthly mail from Perth to King George's Sound were commenced in 1841, and in the following year a regular mail service between all the settled districts of the State was inaugurated.

4. Development of Postal Services.—The New South Wales Postal Act of 1835, referred to above, was amended in 1838, 1840, and again in 1851, when the postage on town letters, *i.e.*, letters received at any post office for delivery at such post office or at any place within the limits of the township in which such post office was situated, was fixed at one penny; for letters transmitted between separate postal towns the postage was twopence, and for letters received from or to be transmitted by ship to places beyond the limits of the colony the fee was threepence in addition to the inland postage. For parcels the rate was twopence up to four ounces weight, and one halfpenny for every additional ounce. Regular mail communication was established between Sydney and Adelaide in 1847, and the rate of postage, on a single letter, was fixed at one shilling and sixpence. In the State of Victoria an Act was passed in 1854 providing for the extension of postal facilities and fixing the rates to be charged for the transmission of letters. The postage on town letters was twopence; on letters for transmission between separate postal towns, sixpence; and on letters for transmission beyond the limits of the State, one shilling. Mails were conveyed along the main roads by mail coaches, built after the style of the old-fashioned English coaches; after the discovery of gold, in 1851, coaches built on the model of the Mexican *estafeta* gradually supplanted the old style. Mails were despatched at night and were delivered with greater rapidity until they were finally sent by railway. The history of the post office in Australia, subsequent to the discovery of gold, has been one of great progress and improvement.

(i.) *Number of Post Offices, Letters and Postcards, and Newspapers, 1841 to 1907.* The number of post offices open in each State and in the Commonwealth at decennial periods since 1841, and at the end of each year from 1901 to 1907, inclusive, is given in the subjoined table, which also shews, for the same years, the total number (in thousands) of letters and postcards dealt with, and the number per 100 of the population, as well as the total number (in thousands) of newspapers dealt with, and the number per 100 of the population in each State and in the Commonwealth. The true total number of letters and postcards and of newspapers dealt with is not obtained by merely adding the figures of the several States together, since interstate letters are counted both in the State from which they are despatched and in that in which they are received for delivery. A second total is therefore given, excluding such interstate excess, obtained by subtracting from the first total for all the States half the sum of the number of interstate letters despatched and received in each of the States:—

DEVELOPMENT OF POSTAL SERVICES, 1841 to 1907.

| Year. | New South Wales. | Victoria. | Queens-land.† | South Australia. | Western Australia. | Tas-mania. | Common-wealth. | C'wealth (excl'ding Interstate Excess). |

* In the figures given in this line allowance is made for the fact that in the aggregate obtained by adding together the results of the several States, interstate mail matter is included twice, being counted both in the despatching and in the receiving State. As to the method in which this allowance is computed, see page 753. † Figures for years 1901 to 1906 are exclusive of packets posted at the General Post Office in Adelaide.

5. *Postal Matter Dealt with, 1901 to 1907.*—In the preceding tables is shewn only the *total number* of letters and postcards, newspapers, parcels and packets dealt with—*i.e.*, despatched and received—by the Postal Department in each State, regardless of the place from which they are despatched or of the place at which they are received for delivery. In the following tables the total numbers of letters and postcards, newspapers, parcels, and packets dealt with are divided into (i.) those posted in each State for delivery within the Commonwealth, (ii.) those received in each State from places outside the Commonwealth, and (iii.) those despatched from each State to places outside the Commonwealth.

(i.) *Matter Posted in each State for Delivery within the Commonwealth, 1901 to 1907.* The matter dealt with under this heading is classified in the two following tables, shewing (a) matter posted in each State for delivery within that State, and (b) matter posted in each State for delivery in other States of the Commonwealth, while the third table (c) shews the total matter posted in each State for delivery within the Commonwealth, *i.e.*, it shews the sums of the corresponding figures in tables (a) and (b).

(a) *Matter Posted in each State for Delivery within that State, 1901 to 1907.* The following table shews the number of letters and postcards, newspapers, parcels, and packets posted in each State for delivery within that State during each year from 1901 to 1907, inclusive:—

NUMBERS OF LETTERS AND POSTCARDS, NEWSPAPERS, PARCELS, AND PACKETS POSTED IN EACH STATE FOR DELIVERY WITHIN THAT STATE, 1901 to 1907.

* Figures for years 1901 to 1906 are exclusive of packets posted at G.P.O., Adelaide.

6. **Postal Facilities, 1907.**—The subjoined statement shews the area in square miles and the number of inhabitants to each post office (including receiving offices) in each State and in the Commonwealth at the end of the year 1907. It will be observed that the most sparsely populated States have the greatest number of offices in comparison with their population, but in order to judge the relative extension of postal facilities the area of country to each office must also be taken into account :—

**SQUARE MILES OF TERRITORY AND NUMBER OF INHABITANTS TO EACH
POST AND RECEIVING OFFICE, 1907.**

| State | N.S.W. | Vic. | Qld. | S.A. | W.A. | Tas | CwIth. |
|---|--------|-------|-------|-------|-------|------|--------|
| Number of post and receiving offices... | 2,319 | 2,326 | 1,389 | 716 | 365 | 406 | 7,521 |
| Number of square miles of territory to each post office in State | 134 | 38 | 483 | 1,262 | 2,673 | 64 | 395 |
| Number of inhabitants to each office ... | 676 | 536 | 390 | 548 | 716 | 453 | 558 |
| Number of inhabitants per square mile | 5.05 | 14.20 | 0.81 | 0.43 | 0.27 | 7.02 | 1.41 |

7. **Rates of Postage.**—The charges made for the postage of newspapers and parcels, and of interstate and foreign letters, are the same in all the States of the Commonwealth. The rates for the transmission of inland letters, however, are not uniform, the Post and Telegraph Act 1901 having specially provided that the rates and charges levied in any State should continue in force.

(i.) *Letters.* The inland letter postage is at the rate of one penny per half-ounce on town and twopence per half-ounce on country letters throughout the Commonwealth, except in the States of Victoria and South Australia. In Victoria the charge made is one penny per half-ounce, and in South Australia twopence per half-ounce, on all letters posted for delivery within the State. In Victoria the minimum charge was altered in 1890 from twopence per ounce to one penny per half-ounce, but the diminution in revenue at that time was so great that in 1892 the rate was again raised to twopence per ounce; on the 1st April, 1901, it was once more reduced to one penny per half-ounce under the provisions of an Act passed in December, 1900. In New South Wales the town rate of one penny per half-ounce, which is in force in the metropolitan suburban district, is also in operation within a twelve-mile radius of Newcastle, and a thirteen-mile radius of the majority of the other principal country towns. In Queensland the town rate extends to all places within a radius of eleven miles from the General Post Office at Brisbane, and also includes all letters to be delivered from the same office at which they were posted. In Western Australia the town rate has effect within a radius of thirteen miles from the General Post Office at Perth, and in other towns and suburbs within a radius depending upon their population. The postage to the United Kingdom was reduced in January, 1891, from sixpence per half-ounce *via* the Red Sea, and fourpence *via* the Cape of Good Hope, to the uniform rate of twopence halfpenny. In 1891 the States were represented at the Congress of the Universal Postal Union held in Vienna, and on the 4th July a convention was signed on their behalf, by which they joined the Union from the 1st October of that year. On that date the rate of postage to all British possessions and to foreign countries included in the Union was reduced to twopence halfpenny. The charge for postage of interstate letters and of letters to the United Kingdom and to British possessions is now uniformly twopence per half-ounce throughout the Commonwealth; the rate on letters to foreign countries and to other places is twopence halfpenny for each half-ounce.

(ii.) *Newspapers.* The different rates charged for the carriage of newspapers in the various States, prior to Federation, continued after the control of the Postal Departments had been taken over by the Commonwealth, until the 1st November, 1902, when a uniform rate was imposed by the Post and Telegraph Rates Act 1902. On all news-

papers posted for delivery within the Commonwealth (without condition as to the number contained in each addressed wrapper posted) by registered newspaper proprietors, or by newsvendors, or returned by newsvendor or agent to the publishing office, a charge of one penny per twenty ounces on the aggregate weight is imposed. On all other registered newspapers posted within the Commonwealth for delivery therein the charge is a halfpenny per ten ounces for each newspaper. At the end of the year 1907 there were in all 1088 publications registered in the Commonwealth under section 29 of the Post and Telegraph Act 1901 for transmission by post as newspapers, being an increase of 126 on the corresponding number for the previous year. The charge on postage of registered newspapers for transmission to the United Kingdom and to other parts of the world is one penny up to four ounces, and a halfpenny for every additional two ounces. Newspapers which are not registered are charged at the same rates as parcels or packets.

(iii.) *Parcels.* Parcels may not exceed 11 lbs. in weight, 3 ft. 6 in. in length, or 6 ft. in length and girth combined. The rate for the inland postage of parcels is sixpence up to 1 lb., and then threepence for every additional pound. For interstate transmission the rate is eightpence up to 1 lb., and then sixpence per lb., and for transmission to the United Kingdom the rate is one shilling up to 1 lb., and sixpence for every additional pound.

(iv.) *Packets.* The regulations for the conveyance of packets vary in the several States. The ordinary rate is one penny for each two ounces. Packets must not as a rule exceed 2 ft. in length, 1 ft. in breadth or depth; or, if in a roll, 2 ft. 6 in. in length. Special rates are allowed for the conveyance of commercial papers, patterns, samples, etc.

8. **Registered Letters.**—Under section 38 of the Post and Telegraph Act 1901 provision is made for the registration of any letter, packet, or newspaper upon payment of the prescribed fee, and any person who sends a registered article by post may obtain an acknowledgment of its due receipt by the person to whom it is addressed by paying the prescribed fee (see hereunder) in advance at the time of registration in addition to the registration fee.

(i.) *Registration Fees.* The fee payable upon registration of an article is threepence, and the fee payable in order to obtain an acknowledgment of the delivery of the registered article is twopence halfpenny in addition. Registered letters must, as a rule, be handed in at least half-an-hour before the closing of the mails.

(ii.) *Number of Registered Letters Posted, 1907.* The subjoined table shews the number of registered letters posted in each State during the year 1907—except in the State of Queensland, for which returns are not available—classified according to the places to which they were despatched for delivery, viz. :—

REGISTERED LETTERS POSTED DURING 1907.

9. Ocean Mail Services.—The question of regular steamship communication with Europe was first mooted in Sydney, and a meeting was held there in 1846 to consider the question. A committee was appointed to gather information on the subject, and eventually this body recommended the establishment of a steam service *via* Torres Straits and Singapore. No further step was, however, taken until 1849, when the Admiralty Department in London advertised for tenders for the conveyance of the mails between Singapore and Sydney. The tender of a company called the Indian and Australian Steamship Company was accepted, and a contract was entered into, but the company became involved in financial difficulties, and failed to carry out their undertaking. The discovery of gold in Victoria, and the consequent increase in the population and commercial importance of Melbourne, induced the Imperial authorities to modify the conditions and to again invite tenders for a service between Singapore and Sydney, *via* King George's Sound, Adelaide, and Melbourne. The tender of the Peninsular and Oriental Company was accepted, and the service was inaugurated in September, 1852, by the arrival at Melbourne of the "Chusan." This service was continued until 1854, when it was stopped in consequence of the Crimean War, but in 1856 a line of steamers was again started, and the service was carried on by the Peninsular and Oriental Company, in conjunction with the Royal Mail Company, for some years.

(i.) *Mail Route via San Francisco.* The service *via* the Red Sea did not at that time give much satisfaction to the public, and was looked upon with a certain amount of disfavour in New South Wales and New Zealand. The effect was to stimulate the colonists to agitate for an improved service, and proposals were made for the establishment of a line of mail packets from Sydney to Panama *via* Wellington, by rail across the isthmus, and thence to Great Britain. The result was that in 1866 the line was started, and continued in operation until the end of 1868, when it was terminated through the failure of the company by which it had been carried out. The completion of the railway across the American continent in 1869, with its western terminus at San Francisco, opened up a new and agreeable route, and in that year a monthly service was inaugurated by the Union Steamship Company, in conjunction with the Pacific Steamship Company, from Sydney to San Francisco *via* Auckland. This service was subsidised to the extent of £37,000 per annum, of which New South Wales paid £25,750 and New Zealand £11,250, and was continued until November, 1890, when a new contract was entered into and the amount of the subsidy largely reduced, the amount of the contribution being based upon the weight of mail matter carried. Various extensions of the contract were made, but the last agreement made between the New Zealand Government and the Oceanic Steamship Company of San Francisco expired on the 10th November, 1906, and has not since been renewed. From that date mails were carried at Postal Union rates until the 12th April, 1907, when the service was discontinued.

(ii.) *Route via Suez Canal.* The establishment of a mail route *via* America had the effect of stimulating the steamship owners who were engaged in the service *via* Suez, and from that time there was a marked improvement in the steamers, as well as in the punctuality and speed with which the mails were delivered. The Peninsular and Oriental Company have, with very few interruptions, carried mails from the Australian States almost from the inception of the ocean steam service. Towards the end of 1873, the Orient-Pacific Company commenced carrying mails between Australia and the United Kingdom, and has continued to do so ever since. New contracts were entered into with the Peninsular and Oriental and the Orient-Pacific Companies for a weekly service, subsidised by the Imperial Government and by all the States of Australia, to commence on the 1st February, 1898, for a period of seven years. The total amount of the subsidy was £170,000 per annum, of which £98,000 was payable by the Imperial Government and £72,000 by the Australian States in proportion to their population. These contracts expired on the 31st January, 1905, and pending negotiations for a new contract the mails were carried at poundage rates. On the 1st February, 1905, the Peninsular and Oriental Company commenced its eighth Australian contract with the British Postmaster-General on behalf of the Imperial Post Office only, and in connec-

tion with the India and China mail services, one payment being arranged for the whole service, and the Commonwealth Government not, as hitherto, being a party to the contract. Mails are still carried from Australia by the Peninsular and Oriental Company, but are carried at Postal Union rates and not under contract with the Commonwealth. On the 25th April, 1905, the Orient Pacific Company concluded a new contract with the Commonwealth Government for a fortnightly service between England and Australia, and the mails are now carried under this contract. The subsidy is at the rate of £124,880 per annum; the contract expired on the 31st January, 1908, but has been extended until 1910, when a new mail contract comes into operation. The contract time is twenty-nine days between Adelaide and Naples, and the agreement contains conditions that only white labour is to be employed, and that steamers used in the service are to be fitted for the conveyance of refrigerated cargo. The Orient Company have stipulated for liberty to cancel the contract at six months' notice, if any new legislation is imposed which would be detrimental to the Company's interest, unless the Federal Government indemnify them by an increase in subsidy to the extent of the loss imposed. Fremantle has, since the year 1900, been the first and last port of call for the mail steamers to Europe, in lieu of Albany, the original port of call; the Peninsular and Oriental and Orient-Pacific Companies' steamers sail alternately conveying the weekly homeward and outward mails.

(a) *The New Mail Contract.* On the 1st January, 1906, tenders were invited by the Commonwealth Postmaster-General for a fortnightly mail service between Adelaide and Brindisi, to alternate with a similar service to be provided by the Imperial Government, and a contract was entered into with Sir James Laing and Company Limited, providing for a service at an annual subsidy of £125,000. This contract, however, fell through, and new tenders were accordingly called for. On the 15th November, 1907, an agreement was entered into with the Orient Steam Navigation Company Limited providing for a fortnightly service for a period of ten years, commencing in February, 1910. The mail service is to be carried out by existing vessels belonging to the company and by five new mail ships, to be specially built, of at least 11,000 tons gross registered tonnage and of not less than seventeen knots speed. Two more new vessels are to be added within eighteen months and six years respectively from February, 1910. The vessels are to call at Fremantle, Adelaide, Melbourne, Sydney, and Brisbane, and at least six of them at Hobart during the months of February to May, inclusive. The voyage from Brindisi to Adelaide is to be completed within twenty-six days fourteen hours, and from Adelaide to Brindisi within twenty-seven days two hours, but the latter period may be exceeded by thirty-six hours during the prevalence of the south-west monsoon. The amount of the subsidy is fixed at £170,000 per annum; but, if the earnings of the company be decreased, or the expenses increased, by reason of any Commonwealth shipping legislation passed subsequently to the date of the agreement, to the extent of not less than £5000 a year, the contractors have the right to terminate the agreement unless the subsidy is increased. Insulated space of not less than 2000 tons of forty cubic feet is to be provided in each of the new vessels, and the freights are not to exceed one halfpenny per lb. for butter and sixty shillings per ton for fruit. White labour only is to be employed, and no discrimination is to be made between unionists and non-unionists. If before or during the sixth year of the period of the contract an accelerated service is provided by any competing line of mail ships, the contractors must, if so required by the Postmaster-General, provide a service equal to the competing service, at an increased subsidy, to be determined by agreement or arbitration. The Commonwealth flag must be flown on the mail ships, which the Commonwealth has the right to purchase at a valuation at any time. Within six months of the Postmaster-General establishing a permanent wireless telegraphy station at Rottneest Island, or at any point on the coast between Fremantle and Brisbane, the company must fit the mail ships with wireless telegraphy installations.

(b) *French and German Subsidised Mail Services.* Vessels belonging to the Messageries Maritimes and the Norddeutscher Lloyd, which are under contract respectively with the French and German Governments to convey mails monthly between Marseilles

and New Caledonia and between Bremen and Sydney, *via* Genoa, also carry mails for the Commonwealth Government from Australia to Europe at Postal Union rates. The Messageries Maritimes service commenced in November, 1882; the total tonnage of vessels belonging to this company in the Australian service at the end of the year 1907 was 30,014 tons, the amount of the annual subsidy granted by the French Government being £120,000. The first contract for the establishment and maintenance of a mail steamship line between Germany and Australia was made between the Imperial German Government and the Norddeutscher Lloyd in 1885, and the service was inaugurated in July, 1886, with the steamer "Salier."

(iii.) *Route via Vancouver and Canadian-Pacific Railway.* During the year 1893 a direct monthly service was started between Sydney and Vancouver, in British Columbia, *via* Wellington, in New Zealand, and thence to Liverpool *via* the Canadian-Pacific Railway, the New South Wales Government paying an annual subsidy of £10,000 for the maintenance of this service for a period of three years. In 1896 the agreement was renewed for a further period of three years, and in 1899 was again renewed for four years, subject to the same terms and conditions, except that the route was *via* Brisbane instead of Wellington. The contract was further extended, at an increased subsidy, from time to time until the 31st July, 1907, and afterwards, at a subsidy of £26,626 per annum, for a period of two years from 1st August, 1907.

(iv.) *Other Ocean Mail Services.* In addition to the mails *via* the Suez Canal and *via* Vancouver a number of other services, both regular and irregular, are maintained between the Commonwealth and various parts of the world, and also between the principal ports in the various States and a number of small ports in the less settled parts of the Commonwealth which are inaccessible by rail. The following statement gives a summary, in so far as returns are available, of all mail services maintained between the Commonwealth and other countries and between ports in the Commonwealth. The amounts of subsidies specified are the amounts payable per annum unless otherwise stated:—

SUMMARY OF MAIL SERVICES, COMMONWEALTH OF AUSTRALIA, 1907.

| Description of Service. | Frequency of Service. | Ports between which Service is maintained. | Particulars regarding Subsidies. |
|---|------------------------------|---|---|
| 1. <i>To and from Europe, via Suez—</i> | | | |
| (a) Peninsular and Oriental* ... | Fortnightly | Adelaide, Fremantle and London, <i>via</i> Brindisi and Marseilles | Subsidised by Imperial Govt. Mails from Aust. at Postal Union rates |
| (b) Orient Pacific* | .. | Adelaide, Fremantle & London, <i>via</i> Naples | Subsidised. Date of agreement, April, 1905. Term extended to Feb., 1910. Amt. of subsidy £124,800. † Subsidy paid by all States on a <i>per capita</i> basis. |
| (c) Messageries Maritimes ... | Monthly | New Caledonia and Marseilles, <i>via</i> Fremantle and Adelaide | Subsidised by French Govt. Mails from Aust. at Postal Union rates. |
| (d) Norddeutscher Lloyd ... | .. | Fremantle, Adelaide & Bremen, <i>via</i> Genoa | Subsidised by German Govt. Mails from Aust. at Postal Union rates. |
| 2. <i>To and from Europe, via Vancouver†</i> Canadian Australian Steamship Co. | .. | Sydney and Vancouver, B.C., <i>via</i> Brisbane, Fiji, Honolulu, and once every eight weeks to Fanning Island | Subsidised by agreement dated 31st July, 1907, for two years. Amount of subsidy, £26,626. Subsidy paid by all States on a <i>per capita</i> basis. |
| 3. <i>To and from New Zealand—</i> | | | |
| (a) Conjointly by Union S.S. Co. and Huddart, Parker Proprietary | Weekly | Sydney, Melbourne, Hobart, Bluff, Dunedin, Christchurch and Wellington | Poundage rates. |
| (b) Do. do. do. ... | .. | Sydney, Hobart, and Auckland | |
| (c) Conjointly by Shaw, Savill, and Albion Co. & N.Z. Shipping Co. | Fortnightly | Hobart, Bluff, Dunedin, and Wellington | |
| (d) Other Steamers,.... | Irregularly, when convenient | Sydney, Wellington, Auckland, and Lyttelton | |

* Mails carried also to India *via* Colombo. † Carries also mails to Canada and the United States. ‡ Including £4880 paid for extension to Brisbane. In addition the Queensland Government also pays £21,120 for such extension.

| Description of Service. | Frequency of Service. | Ports between which Service is maintained. | Particulars regarding Subsidies. |
|---|---------------------------------------|---|---|
| 4. To and from ports in N.S. Wales— | | | |
| (i.) NORTHERN PORTS— | | | |
| (a) North Coast S.N. Co. ... | Twice weekly | Sydney, Manning River, Port Macquarie, Macleay, Nambucca, Bellingham Rivers, Coffs Harbour, Clarence River, Byron Bay, and Richmond River | Poundage rates. |
| (b) Cain's Co-Operative S S. Co. ... | Weekly | Sydney & Port Macquarie | " " |
| (ii.) SOUTH COAST PORTS— | | | |
| Illawarra and S. Coast S.N. Co. ... | Twice weekly | Sydney, Bermagui, Moruya and Tathra | " " |
| 5. To and from Northern Ports of Qld.— | | | |
| (a) Australian United Steam Navigation Co. | | | |
| | Weekly | Brisbane, Gladstone, Townsville, Cairns, Mourilyan, Geraldton, Pt. Douglas & Cook'n | Subsidised by agreement dated 25th Nov., 1905, for three years. Amount of subsidy, £17,000. |
| (b) Do. do. do. ... | Once every three weeks | Brisbane, Normanton & Burketown, via Townsville, Cooktown, and Thursday Island | Subsidised by agreement dated 16th January, 1906, for three years. Amount of subsidy £6000. Subsidies under 4 (a) and (b) paid by Queensland. |
| (c) Other steamers ... | Irregularly, when convenient | Various... | Poundage rates. |
| 6. To and from Ports in S. Australia— | | | |
| (i.) NORTHERN TERRITORY— | | | |
| (a) The Eastern and Ausn., and the China Navigation Co.'s | | | |
| | Irregularly | To and from Adelaide, Melb'rne, and Sydney, via North Queensland ports, extending to China and Japan | " " |
| (b) Jolly and Co. ... | Four times a year | Port Darwin and Victoria R., calling half-yearly at Roper River | Subsidised by agreement dated 1st April, 1904, for three years and nine months. Amount of subsidy, (a) £125 per voyage, (b) £75; (c) £350; (d) £125 per voyage. |
| (c) " " ... | do. | Port Darwin & Boroloola | |
| (d) " " ... | Every eight weeks | " Wyndham | |
| (ii.) TO SOUTH COAST PORTS— | | | |
| (a) Gulf Steamship Co. ... | Weekly | Pt. Adelaide & Kingscote | Subsidised to 31st December, 1907. Amount of subsidy, (a) £295; (b) £173; (c) £173; (d) £132; (e) £75. |
| (b) " " ... | Twice a wk. | " Edithburgh | |
| (c) " " ... | " | " Stansbury | |
| (d) " " ... | Weekly | " Ardrossan | |
| (e) " " ... | " | " Pt. Vincent | |
| (f) Adelaide Steamship Co. ... | " | " Pt. Lincoln | Subsidised for three and three-quarter years from 1st April, 1904. Amount of subsidy, £1495. |
| (g) Adelaide Steam Tug Co. ... | As required | Landing and embarking mails | Subsidised for one year from 1st July, 1906. Amount of subsidy, £567. |
| (h) " " " ... | " | Port Pirie & Hummocks Hill | Subsidised without agreement. Amount of subsidy, £36. Subsidies under 5 (i.) (b), (c), (d), and (ii.) (a), (b), (c), (d), (e), (f), (g), (h) paid by South Australia. |
| 7. Western Australia— | | | |
| (i) INTERSTATE— | | | |
| (a) By P. & O. and Orient Lines | | | |
| | Weekly | Fremantle and Adelaide | P. and O. at Postal Union rates. Orient line subsidised. See above 1 (a) and (b). |
| (b) Adelaide Steamship, the Ausn. United S. Navigation, and the Huddart, Parker lines | Conjointly, weekly | Fremantle, Albany, and Adelaide | Poundage rates. |
| (c) Messageries Maritimes, Nord-deutscher Lloyd, the German and Ausn., and the White Star lines | Each monthly | Fremantle and Adelaide | Postal Union rates by first two, and poundage rates by last two lines. |
| (ii.) TO & FROM PORTS ON N. W. COAST | | | |
| (a) Adelaide Steamship Co. | | | |
| | Monthly | Fremantle and Derby | Subsidised by agreement dated 26th February, 1907, for three years. Amount of subsidy, £4000. Subsidy paid by Western Australia. |
| (b) " " ... | Once each sixty days | Fremantle & Wyndham | |
| (c) West Aust. & Ocean S. Co.'s | Fortnightly | Fremantle and Broome | Poundage rates. |
| (d) Ausn. United S. Navigation and Adelaide S. Co.'s | Irregularly during the cattle she's'n | Fremantle, Derby, and Wyndham | |
| (iii.) TO AND FROM PORTS ON S. COAST | | | |
| (a) Melbourne Steamship Co. | | | |
| | Weekly | Albany and Esperance | Subsidised by agreement dated 1st January, 1906, for three years. Amount of subsidy, £3000. Subsidy paid by Western Australia. |
| (b) " " ... | Fortnightly | Albany & Israelite Bay | |
| (c) " " ... | Quarterly | Albany and Eucla | |

| Description of Service. | Frequency of Service. | Ports between which Service is maintained. | Particulars regarding Subsidies. |
|--|---------------------------|--|---|
| 8. <i>Tasmania</i> — (a) Union S. Co. and Huddart, Parker Proprietary | 3 times a week | Melb'rne & Launceston | Subsidised by agreement dated 1st October, 1906, for three years. Amount of subsidy, £13,000, payable by all States on a <i>per capita</i> basis. Poundage rates. |
| (b) Do. do. do. ... | Twice a wk. | .. Burnie | |
| (c) Do. do. do. ... | Weekly | Sydney, Hobart, and Wellington | |
| (d) Union Steamship Co. ... | Fortnightly | Sydney, Eden, Launceston, and Devonport | |
| (e) New Zealand mail services, see above New Zealand, 3 (a) & (b) | Twice a wk. | Sydney, Melb'ne, Hobart, Bluff, Dunedin, Christchurch, Wellington and Auckland | |
| (f) To and from ports in Western districts | Weekly | Hobart and Strahan | |
| (g) Ellerker and Co., and Patterson and Co. | When convenient | Various | |
| 9. <i>To Eastern Ports</i> — (a) A. Currie and Co. ... | Once every five weeks | †Melbourne, Sourabaya, Samarai, Batavia, and Singapore | Subsidised by Victorian Government for trade purposes at £2000 a year for three years from December, 1907. Mails at poundage rates. |
| (b) China Navigation, Eastern & Ausn., and Burns, Philp Co.'s | About three times a month | Sydney, to Hong Kong, Manila, etc., <i>via</i> North Queensland ports | Postal Union rates. |
| (c) Norddeutscher Lloyd ... | Monthly | <i>Via</i> Germ'n New Guinea, Bismarck Archipelago, and Singapore | |
| (d) Nippon Yusen Kaisha ... | .. | Sydney to Manila, China, and Japan, <i>via</i> N. Queensland ports | |
| (e) Various other steamers ... | About monthly | Sydney or Newcastle and ports in Borneo, Java, Sumatra, and Malay Peninsula | |
| 10. <i>South Africa</i> — White Star, Lund's, Currie's, and other Companies | Irregularly | Various | |
| 11. <i>North America</i> — (a) Weir line | Monthly | Sydney, San Francisco, and Vancouver | Poundage rates. |
| (b) Oceanic S.S. Co. | .. | Sydney, Auckland, Pago Pago, Honolulu, and San Francisco | †Postal Union rates. |
| (c) Various steamers | About fortnightly | Sydney or Newcastle to San Francisco | Poundage rates. |
| (e) Various steamers | Monthly | Sydney to Guaymas (Mexico) | |
| 12. <i>South America</i> — Various steamers | About weekly | Sydney or Newcastle to ports in Chili, Brazil, Peru and Uruguay | |
| 13. <i>Pacific Islands</i> — (a) Burns, Philp and Co. ... | Monthly | Sydney to Lord Howe & Norfolk Islands, N. Hebrides, British New Guinea & Solomon Is. | Subsidised by Commonwealth at £12,000 per annum. |
| (b) | Every two months | Sydney to Gilbert and Marshall Islands | |
| 14. <i>Noumea</i> — (a) Messageries Maritimes ... | Fortnightly | Sydney and Noumea and to Vila (New Hebrides) once a month | Postal Union rates. |
| (b) Other steamers | About fortnightly | Sydney and Noumea | Poundage rates. |
| 15. <i>Fiji</i> — (a) Union S.S. Co. | Monthly | Sydney and Suva | |
| (b) S.S. South Australian ... | Every six weeks | Sydney & Suva, Fotuna, Rotamah & Wallis Is. | |
| (c) Union S.S. Co. | Monthly | Sydney, Auckland, Suva, Tonga, and Samoa | |
| 16. <i>Fiji and Noumea</i> — Burns, Philp and Co. | .. | Sydney, Noumea, & Suva | |
| 17. <i>Ocean and Pleasant Islands</i> — Various steamships | .. | Sydney, Ocean and Pleasant Islands | |

† Calling also irregularly at Sydney or Adelaide.

‡ Service ceased 12th April, 1907.

10. **Amount of Mail Subsidies Paid by Each State, 1901 to 1907.**—The mail subsidies are paid by the Commonwealth Postal Department, but are debited to the several States. The following table shews the total amount paid by each State by way of mail subsidies for each year from 1901 to 1907, inclusive :—

MAIL SUBSIDIES.—TOTAL AMOUNTS PAID BY EACH STATE, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------------------|---------|---------|---------|---------|---------|---------|---------|
| | £ | £ | £ | £ | £ | £ | £ |
| New South Wales ... | 35,888 | 35,901 | 36,670 | 39,802 | 45,679 | 57,110 | 59,878 |
| Victoria ... | 22,642 | 23,137 | 22,555 | 22,179 | 38,770 | 47,182 | 48,390 |
| Queensland ... | 39,297 | 38,815 | 40,876 | 42,971 | 41,292 | 42,145 | 44,836 |
| South Australia ... | 15,252 | 16,539 | 13,173 | 28,412 | 11,685 | 17,344 | 18,031 |
| Western Australia* ... | 12,091 | 13,143 | 16,727 | 16,712 | 16,162 | 18,643 | 17,344 |
| Tasmania ... | 9,162 | 9,682 | 10,096 | 13,546 | 17,706 | 17,039 | 9,996 |
| Commonwealth ... | 134,332 | 137,217 | 140,097 | 163,622 | 171,294 | 199,463 | 198,475 |

* Including tonnage and other dues refunded to the Adelaide Steamship Company in connection with the North-west Coast contract.

The following table shews the amount paid by each State in respect of each mail subsidy during the year 1907 :—

MAIL SUBSIDIES.—AMOUNT PAID BY EACH STATE IN RESPECT OF EACH SUBSIDY, 1907.

| State. | Orient-Pacific. | Van-couver Service. | Victoria-Tas-manian Service. | Northern Ports of Queens-land. | South Coast of South Australia. | Western Australia. | | Total. |
|------------------|-----------------|---------------------|------------------------------|--------------------------------|---------------------------------|--------------------|--------------|---------|
| | | | | | | N. W. Coast. | South Coast. | |
| | £ | £ | £ | £ | £ | £ | £ | £ |
| N. S. W. ... | 46,304 | 9,868 | 3,706 | ... | ... | ... | ... | 59,878 |
| Victoria ... | 38,005 | 7,394 | 2,991 | ... | ... | ... | ... | 48,390 |
| Queensland ... | 16,528 | 3,199 | 1,299 | 23,810 | ... | ... | ... | 44,836 |
| S. Australia ... | 11,861 | 2,292 | 932 | ... | 2,946 | ... | ... | 18,031 |
| W. Australia ... | 8,137 | 1,553 | 635 | ... | ... | 4,019 | 3,000 | 17,344 |
| Tasmania ... | 5,514 | 1,089 | 3,393 | ... | ... | ... | ... | 9,996 |
| C'wealth ... | 126,349 | 25,395 | 12,956 | 23,810 | 2,946 | 4,019 | 3,000 | 198,475 |

Particulars of amounts paid for the carriage of mails at poundage rates and by railways and other conveyances are given in a later part of this section. (See Paragraph 26. *Distribution of Expenditure of Postal Department.*)

11. **Average and Fastest Time of Mails to and from London.**—Great progress has been made in regard to the means of postal communication with the United Kingdom and the continents of Europe and America. In 1857 there was an unsatisfactory ocean mail service, which nominally brought monthly mails, with news nearly sixty days old ; at the present time, though but fifty years have elapsed, there are four lines of modern ocean steamships, which bring the mails in about twenty-nine days to Adelaide, in addition to the monthly service *via* Vancouver, by which mails are sent from Sydney to London in thirty-five days. After leaving Fremantle, where the Western Australian

mails are landed, the outward mail steamers *via* the Suez Canal all call at Adelaide, where the remaining mails are landed and conveyed to their ultimate destination by rail. The subjoined table shews the average and the fastest times occupied in the conveyance of mails from London to Adelaide and *vice versa* during the year 1907:—

AVERAGE AND FASTEST TIME OCCUPIED IN CONVEYANCE OF MAILS VIA SUEZ CANAL, BETWEEN LONDON AND ADELAIDE, AND VICE VERSA, DURING 1907.

| Service. | London to Adelaide. | | | | Adelaide to London. | | | |
|--|---------------------|--------|---------------|--------|---------------------|--------|---------------|--------|
| | Average Time. | | Fastest Time. | | Average Time. | | Fastest Time. | |
| | Days. | Hours. | Days. | Hours. | Days. | Hours. | Days. | Hours. |
| Peninsular and Oriental S.N. Co., <i>via</i> Brindisi and Colombo ... | 28 | 11 | 28 | 0 | 30 | 4 | 29 | 12 |
| Orient Pacific S. N. Co., <i>via</i> Naples and Suez ... | 30 | 5 | 29 | 9 | 32 | 0 | 31 | 1 |
| *Messageries Maritimes, <i>via</i> Mar- seilles ... | ... | ... | ... | ... | 32 | 19 | 32 | 3 |
| *Norddeutscher Lloyd, <i>via</i> Genoa | ... | ... | ... | ... | 32 | 19 | 30 | 13 |

* No mails were received from London by the Messageries Maritimes or by the Norddeutscher Lloyd services.

The journey by rail from Adelaide, where the mails for the eastern States are landed, to Melbourne takes $17\frac{1}{2}$ hours; from Adelaide to Sydney, 42 hours, including a stop of about seven hours at Melbourne; while the through journey from Adelaide to Brisbane takes just over three days. The journey from Melbourne to Hobart occupies about 29 hours, *via* Launceston, and about 32 hours direct.

The subjoined table shews the average and the fastest times occupied in the conveyance of mails between Sydney and London and *vice-versa* by the mail routes *via* Vancouver and San Francisco respectively during the year 1907:—

AVERAGE AND FASTEST TIMES OCCUPIED IN CONVEYANCE OF MAILS VIA VANCOUVER AND SAN FRANCISCO RESPECTIVELY, BETWEEN LONDON AND SYDNEY, AND VICE VERSA, DURING 1907.

| Service. | London to Sydney. | | Sydney to London. | |
|--|-------------------|---------------|-------------------|---------------|
| | Average Time. | Fastest Time. | Average Time. | Fastest Time. |
| | Days. | Days. | Days. | Days. |
| Canadian-Australian Line, <i>via</i> Vancouver ... | $37\frac{1}{2}$ | 37 | $38\frac{2}{3}$ | 34 |
| *Oceanic Steamship Co., <i>via</i> San Francisco ... | $43\frac{1}{2}$ | 40 | $38\frac{2}{3}$ | 34 |

* Service discontinued 12th April, 1907.

12. Letters, Packets, and Newspapers Transmitted by Different Ocean Mail Routes during the Year 1907.—The subjoined table shews the number of letters, packets, and newspapers transmitted for interstate delivery and for delivery in countries other than Australia, by the different routes during the year 1907:—

**NUMBER OF LETTERS, PACKETS, AND NEWSPAPERS RECEIVED AND DESPATCHED
BY DIFFERENT OCEAN MAIL ROUTES, 1907.**

| Classification. | P. and O. Co., <i>via</i> Colombo and Marseilles. | Orient Royal Mail Line, <i>via</i> Suez and Naples. | Can- adian Aus- tralian Steamers <i>via</i> Van- couver. | Oceanic S.S. Co., <i>via</i> San Fran- cisco. | Nord- deut- scher- Lloyd, <i>via</i> Genoa. | Messa- geries Marit- times, <i>via</i> Mar- seilles. | Total by all Mail Steamers. |
|---------------------------------------|---|---|---|---|--|---|--------------------------------------|
| RECEIVED. | | | | | | | |

* In the returns for the States of New South Wales, Victoria, and South Australia, the number of newspapers received from other countries is included in the number of packets received. † Service discontinued April, 1907.

13. **Money Orders and Postal Notes.**—The issue of money orders and postal notes in the Commonwealth is regulated by sections 74 to 79 of the Post and Telegraph Act 1901. A money order, which may be issued for payment either within the Commonwealth or abroad, may not be granted for a larger sum than £20, nor a postal note, which is payable only within the Commonwealth, for a larger sum than twenty shillings. Money orders are sent direct from the Commonwealth to the United Kingdom, and to most of the British colonies and possessions; to the German Empire and German colonies; to Italy; and to the United States of America. Money orders, payable in Japan and China, are sent *via* Hong Kong; orders payable in all other countries are sent through the General Post Office in London, where new orders are issued and forwarded to the addresses of the payees, less threepence for every £5, or part thereof. In order that the full amount of the original order may be forwarded to the payee, this extra commission must be paid by the remitter.

(i.) *Value of Orders Issued and Drawn and of Notes Sold, 1907.*—The following table shews the total value of money orders issued and drawn, and of postal notes sold in each State and in the Commonwealth during the year 1907, together with the total amount of commission on money orders and poundage on postal notes received by the Postal Department :—

VALUE OF MONEY ORDERS ISSUED AND DRAWN AND OF POSTAL NOTES SOLD, TOGETHER WITH THE TOTAL AMOUNTS OF COMMISSION AND POUNDAGE RECEIVED IN EACH STATE DURING 1907.

| State. | Value of Money Orders Issued. | Value of Money Orders Paid. | Net Money Order Commission Received. | Value of Postal Notes Sold. | Poundage Received on Postal Notes. |
|-----------------------|-------------------------------|-----------------------------|--------------------------------------|-----------------------------|------------------------------------|
| | £ | £ | £ | £ | £ |
| New South Wales ... | 2,433,898 | 2,506,434 | 20,567 | ... | 17,615 |
| Victoria ... | 938,197 | 1,266,234 | 9,588 | 735,933 | 14,486 |
| Queensland ... | 734,564 | 615,828 | 6,859 | 215,534 | 4,198 |
| South Australia ... | 293,053 | 322,585 | 3,083 | 149,262 | 3,027 |
| Western Australia ... | 858,767 | 587,893 | 6,996 | 182,139 | 3,234 |
| Tasmania ... | 275,046 | 208,742 | 2,685 | 94,192 | 1,857 |
| Commonwealth ... | 5,533,525 | 5,507,716 | 49,778 | ... | 44,417 |

(ii.) *Rates of Commission on Money Orders.* The rates of commission chargeable for the issue of money orders are as follows :—

RATES OF COMMISSION, MONEY ORDERS, 1906.

| If Payable in— | For sums— | | | | | | | | | |
|------------------------------|---|-------------------------------------|-------------------------------------|--------------------------------------|---------------------------------------|---------------------------------------|---------------------------------------|---------------------------------------|-------|-------|
| | Not exceeding £2. | Exceeding £2, but not exceeding £5. | Exceeding £5, but not exceeding £7. | Exceeding £7, but not exceeding £10. | Exceeding £10, but not exceeding £12. | Exceeding £12, but not exceeding £15. | Exceeding £15, but not exceeding £17. | Exceeding £17, but not exceeding £20. | | |
| | s. d. | s. d. | s. d. | s. d. | s. d. | s. d. | s. d. | s. d. | s. d. | s. d. |
| State of issue ... | 0 6 | 0 6 | 1 0 | 1 0 | 1 6 | 1 6 | 2 0 | 2 0 | 2 0 | 2 0 |
| Other Australian States ... | 0 6 | 0 9 | 1 6 | 1 6 | 2 3 | 2 3 | 3 0 | 3 0 | 3 0 | 3 0 |
| New Zealand and Fiji ... | 0 6 | 1 0 | 1 6 | 2 0 | 2 6 | 3 0 | 3 6 | 4 0 | 4 0 | 4 0 |
| U. Kingdom & other countries | Six pence for each pound or fraction of a pound | | | | | | | | | |

Remittances may also be made by telegraph to and from money order offices in the Commonwealth which are also telegraph or telephone offices, and to New Zealand. The charge for a telegraph money order is the cost of the telegram of advice in addition to the ordinary commission. The remitter must also send a telegram to the payee advising the transmission of the money, which telegram must be produced by the payee when applying for payment.

(iii.) *Rates of Poundage on Postal Notes.* The values of the notes issued have been so arranged that any sum of shillings and sixpences up to £1 can be remitted by not more than two of these notes. Broken amounts not exceeding fivepence (but not fractions of a penny) may be added by affixing postage stamps. The poundage or commission charged on notes of different denominations is as follows :—

| Denomination of Note ... | 6d. to 1s. 6d. | 2s. to 4s. 6d. | 5s. | 7s. 6d. | 10s. to 20s. |
|--------------------------|----------------|----------------|------|---------|--------------|
| Poundage charged ... | ½d. | 1d. | 1½d. | 2d. | 3d. |

| 3 0 | 491,602 | 10 0 | 757,163 | Total ... | 6,052,343 |

20. The Value Payable Post.—This is a system under which the Postal Department undertakes to deliver registered articles sent by parcel post within the Commonwealth, and to recover from the addressee on delivery a specified sum of money fixed by the sender, and to remit the sum to the sender by money order, for which the usual commission is charged. The object of the system is to meet the requirements of persons who wish to pay at the time of receipt for articles sent to them, and also to meet the requirements of traders and others who do not wish their goods to be delivered except on payment. In addition to the ordinary postage, commission on the value of the articles transmitted at the rate of twopence on sums not exceeding ten shillings, and one penny for each additional five shillings or part thereof, must be prepaid by postage stamps affixed to the articles distinct from the postage and marked "commission." The registration fee (threepence) and the proper postage must also be prepaid. If the addressee refuse delivery, the parcel is returned to the sender free of charge. The subjoined statement gives particulars of the number and value of parcels sent through the Value Payable Post in each State during the years 1905, 1906, and 1907. The system has been established in Queensland for some years, but was only extended to the whole Commonwealth with the advent of Federal control of the post office:—

VALUE PAYABLE PARCELS POST.—NUMBER POSTED, VALUE COLLECTED AND REVENUE, 1905 to 1907.

* Exclusive of postage.

21. Transactions of the Dead Letter Office, 1907.—Under sections 45 to 53 of the Post and Telegraph Act 1901 the Postmaster-General may cause all unclaimed and undelivered postal articles originally posted within the Commonwealth which have been returned from the place to which they were forwarded to be treated as unclaimed articles and opened. Every unclaimed letter and postal article must be kept for the

prescribed period at the office to which it has been transmitted for delivery, and must then be sent to the General Post Office. Letters and packets originally posted elsewhere than in the Commonwealth are returned to the proper authorities in the country in which they were so posted, or, if originally posted in another State, are returned to the General Post Office of that State; but unclaimed or undelivered newspapers may be forthwith sold, destroyed, or used for any public purpose. Opened postal articles not containing anything of value are returned to the writer or sender if his name and address can be ascertained, but may otherwise be destroyed forthwith. As regards opened letters and packets containing valuable or saleable enclosures, a list and memorandum of the contents are kept, and a notice is sent to the person to whom the letter or packet is addressed if he be known, or otherwise to the writer or sender thereof if he be known. Upon application within three months of the date of such notice the letter or packet may be claimed by the addressee, or, failing him, by the writer or sender. If unclaimed within three months the letter and contents may be destroyed or sold, and the proceeds paid into the consolidated revenue fund. The following table shews the total number of letters, postcards, and packets dealt with by the Dead Letter Offices in the Commonwealth during the year 1907, together with the number of inland, interstate, and international letters either returned to writers, delivered, etc., destroyed, or returned as unclaimed:—

*For nine months' accounts only.

§ 2. Telegraphs.

1. **First Lines Constructed.**—The electric telegraph was first introduced into Australia for use by the public in the year 1854, when a line from Melbourne to Williamstown was opened. The first line in South Australia, from Adelaide to Port Adelaide, was opened in 1856, while the first line in New South Wales was brought into operation in 1858, when the line from Sydney to Liverpool, twenty-two miles in length, was opened. In Tasmania the first telegraphic line was completed in 1857, while in the following year communication was established between Sydney, Melbourne, and Adelaide. The first line to be constructed in Queensland was that between Brisbane and Rockhampton, a distance of 396 miles, which was opened in 1864. In Western Australia the first telegraph constructed was from Perth to Fremantle, a distance of twelve miles, which was brought into use in 1869, and in the same year the cable joining Tasmania with the continent of Australia was completed.

2. **Development of Services.**—During the period from 1871 to 1881 great progress was made throughout Australia in the way of telegraphic construction, over 14,000 miles of line, exclusive of railway telegraph lines, being opened for use during the period mentioned, making the total length of the line open at the end of the year 1881, 25,470 miles. In the case of South Australia this increase was to a large extent due to the construction of the transcontinental lines (a) from Adelaide to Port Darwin (a distance of 2230 miles), which was completed on the 22nd August, 1872, at a cost of nearly half a million sterling, and (b) from Port Augusta to Port Lincoln, and thence along the coast of the Great Australian Bight as far as Eucla, on the Western Australian border. In Queensland there was a large increase resulting from the construction of the line to Normanton, on the Gulf of Carpentaria, while in Western Australia the line from Perth to Albany was extended as far as Eucla on the 9th December, 1877, thus establishing telegraphic communication between the six capital towns, Brisbane, Sydney, Melbourne, Adelaide, Perth, and Hobart. At the present time the systems of telegraph lines throughout Australia are well developed. The longest line extends from Thursday Island, in Torres Straits, by submarine cable to Paterson, on the mainland of Cape York Peninsula; from Paterson the line runs in a southerly direction as far as Brisbane, where it joins the main interstate line to Sydney, Melbourne, and Adelaide; from Adelaide it runs to Port Augusta, then on to Port Lincoln, on Eyre's Peninsula, and thence to Eucla, on the Western Australian boundary; from Eucla the line extends along the coast of the Great Australian Bight to Albany, and thence it runs adjacent to the west coast of Western Australia as far as Onslow, *via* Perth, Geraldton, and Carnarvon. From Onslow connection extends to Broome, in Roebuck Bay, from which place communication is made to Singapore by the Eastern Extension Company's cable. From Roebuck Bay the line crosses the Kimberley district in an easterly direction, and then runs north as far as the terminus at Wyndham. Branch lines extend to all important coastal and inland towns. In Queensland a line runs to Burketown, near the coast of the Gulf of Carpentaria, *via* Normanton; another line extends to Cloncurry and Urandangi, in the extreme west of the State. New South Wales, Victoria, and the south-eastern parts of South Australia are equipped with a considerable network of lines converging from the country districts towards the more important towns, while from Adelaide the transcontinental line referred to above, runs in a northerly direction to Port Darwin, from which place communication is provided with Europe by submarine cable by way of Batavia, Singapore, and Madras. In Western Australia a line runs from Eucla to the Coolgardie goldfields *via* Balladonia and Dundas, and from Coolgardie communication is provided with Perth and with Sir Samuel, in the East Murchison district.

3. **Length of Telegraph Lines and Wire Open, 1901 to 1907.**—The following table shews the length of telegraphic lines and of telegraph wire exclusive of railway telegraphs, available for use in each State at the end of each year, from 1901 to 1907 inclusive:—

**LENGTH OF TELEGRAPH LINE AND WIRE, EXCLUSIVE OF RAILWAY TELEGRAPHS,
AVAILABLE FOR USE IN EACH STATE, 1901 to 1907.**

| Commonwealth ... | 2,568 | 2,589 | 2,607 | 2,674 | 2,787 | 2,920 | 3,208 |

5. **Revenue and Expenditure, 1901 to 1907.**—Particulars as to the revenue from the telegraph systems in each State for the years 1901 to 1907 are given on page 780, while particulars as to the expenditure for the year 1907 are also given on the same page.

6. **Number of Telegrams dealt with, 1901 to 1907.**—The subjoined table shews the number of telegrams despatched in each State for delivery in that State, the number of telegrams despatched in each State for delivery in other States of the Commonwealth and

received for delivery in each State from other States, and also the total number of telegrams—exclusive of cablegrams—dealt with in each State. The last set of figures represents the sum of the corresponding figures for each State in the first two sets of figures. The true total for the Commonwealth in the last table, however, is not obtained by merely adding together the figures for the several States, since interstate telegrams are counted both in the State in which they are despatched and in that in which they are received. A second total is therefore shewn, obtained by subtracting from the first total half the sum of the number of interstate telegrams received and despatched:—

NUMBER OF TELEGRAMS DESPATCHED AND RECEIVED IN EACH STATE,

1901 TO 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

* Partly estimated. † Interstate cablegrams. ‡ Including interstate cablegrams.

§ Allowing for interstate excess.

7. **Rates for Transmission of Telegrams.**—The present rates for the transmission of telegrams within the Commonwealth were fixed by section 7 of the Post and Telegraph Rates Act 1902, and came into force on the 1st November, 1902. Under this Act charges are made for telegrams according to whether they are "ordinary" or "press" telegrams. "Press" telegrams are defined to mean those the text of which consists of political, commercial, etc., information, and of news intended for publication in a newspaper. The telegram must be sent by an authorised correspondent, and must be addressed to a registered newspaper or recognised news agency. The subjoined tables shew the scales of charges :—

SCALE OF CHARGES FOR ORDINARY TELEGRAMS.

| Particulars. | Town and Suburban, within Prescribed Limits, or within 15 Miles from the Sending Station. | Other Places within the State, except Town and Suburban. | Interstate. |
|----------------------------------|---|--|-------------|
| | s. d. | s. d. | s. d. |
| Including address and signature— | | | |
| Not exceeding 16 words | 0 6 | 0 9 | 1 0 |
| Each additional word | 0 1 | 0 1 | 0 1 |

Double the foregoing rates are imposed for the transmission of telegrams on Sunday, Christmas Day, and Good Friday, and between the hours of 8 p.m. and 9 a.m., and for telegrams sent on "urgent" forms.

SCALE OF CHARGES FOR PRESS TELEGRAMS.

| Particulars. | Within any State. | Interstate. | Relating to Parli- amentary, Executive, Departmental, and other Common- wealth Proceedings, as may be prescribed. |
|----------------------------------|----------------------|-------------|---|
| | s. d. | s. d. | |
| Not exceeding 25 words | 0 6 | 1 0 | s. d. ... |
| From 25 to 50 words | 0 9 | 1 6 | ... |
| From 50 to 100 words | 1 6 | 3 0 | ... |
| Every additional 50 words | 0 6 | 1 0 | ... |
| Within the Commonwealth. | | | |
| Not exceeding 25 words | ... | ... | 1 0 |
| From 25 to 100 words | ... | ... | 1 6 |
| Every additional 50 words | ... | ... | 0 6 |

8. **Wireless Telegraphy.**—Under the Wireless Telegraphy Act 1905 the Postmaster-General is given the exclusive privilege of establishing and using stations and appliances for receiving and transmitting messages by wireless telegraphy within Australia. The Postmaster-General is empowered to grant licenses to establish and use stations and appliances for wireless telegraphy, on the fulfilment of the prescribed conditions and payment of the prescribed fees. The Act does not apply to ships belonging to the King's Navy. Up to the present time no wireless telegraphy stations have been established in the Commonwealth.

§ 3. Submarine Cables.

1. **First Cable Communication with the Old World.**—As far back as 1857 the question of connecting Australia with the old world by means of submarine cables was brought forward in South Australia. No steps, however, were taken in the direction of constructing the cable until the year 1869, when various schemes were proposed. About this time the British Australian Telegraph Company was formed for the purpose of laying a cable to Australia without subsidy or guarantee. Communication had already been provided between London and Singapore *via* Bombay and Madras, and also through Java from Batavia to Banjoewangie. The proposal of the above company was to lay cables from Singapore to Batavia and from Banjoewangie to Port Darwin, from which place connection would be made overland with the Queensland telegraph system at Normanton. It was, however, subsequently decided that the company's line should end at Port Darwin, the South Australian Government undertaking to construct an overland line from Port Augusta to Port Darwin, a distance of 1971 miles. In November, 1871, the submarine cable was completed, and communication was established between Port Darwin and London. On the 22nd August, 1872, the construction of the line from Port Darwin to Adelaide was accomplished at an expenditure of nearly £500,000. The cable from Port Darwin is now under the control of the Eastern Extension Telegraph Company.

2. **The Tasmania-Victoria Cables.**—In the meantime the cable joining Tasmania to the continent of Australia had been laid, and was open for use in 1869, the total length being 170 miles. This cable starts from Flinders, near Cape Schanck, in Victoria, and ends at Low Head, at the mouth of the River Tamar, in Tasmania. The line is owned by the Eastern Extension Telegraph Company, and was subsidised by the Tasmanian Government to the extent of £4200 per annum; the receipts are also guaranteed up to £5600 per annum. Both the subsidy and the guarantee expire in the year 1909.

On the 28th February, 1908, the Postmaster-General entered into an agreement with Messrs. Siemens Brothers and Company Ltd., of London, for the manufacture and laying of two submarine cables between Tasmania and Victoria. The laying of these cables was completed in February, 1909. Their aggregate length is approximately 350 nautical miles of main cable, and 20 nautical miles each of intermediate and shore end cable, making a total of 390 nautical miles. The contract price, excluding the supply of spare cable, was £49,455.

3. **The Eastern Extension Company's Cables.**—In addition to the Victoria-Tasmania cable and the original cable from Port Darwin referred to above, the Eastern Extension Company have constructed and have control over several other cables connecting with various places in the Commonwealth. (a) In 1879 the original cable *via* Banjoewangie was duplicated, the States of New South Wales, Victoria, South Australia, Western Australia and Tasmania having agreed to pay the above company a subsidy of £32,400 per annum for a period of twenty years, the amount to be divided between the States on a population basis. (b) In 1881 a cable was constructed connecting Broome, in Roebuck Bay, W.A., with Banjoewangie; from Broome there is direct telegraphic communication with Perth, from which place communication is made with the Eastern States by the interstate line *via* Albany, Eucla, and Port Augusta. (c) In July, 1899, the company offered to lay a cable direct to Great Britain *via* the Cape of Good Hope, and also offered reductions in the rates charged, if the States would agree to certain conditions giving the company the right of direct dealing with the public. The States of South Australia, Western Australia and Tasmania accepted the terms offered, and New South Wales entered into the agreement in January, 1901. The cable was opened *via* Fremantle and Durbau in October, 1901. (d) Another submarine cable from Fremantle to Adelaide forms an alternative line of communication between the eastern States and Western Australia. (e) There is an alternative route, partly belonging to the Eastern Extension

Company and connecting the Port Darwin-Singapore cable with London, *via* Hong Kong, Shanghai, Posiett Bay (Pacific Russia), Libau (Russian Baltic), and Newbiggin (England).

4. **The Pacific Cable.**—In July, 1898, a conference of representatives of Great Britain, Canada, New South Wales, Victoria, Queensland, South Australia and New Zealand was held for the purpose of considering a project for a cable to be laid across the Pacific Ocean, touching only British territory on its way from Australia to Canada, thus providing an "All Red" route, as it is termed, for a cable system between England and Australia. In the following year it was agreed at a meeting held by representatives of the countries interested that the cable should be laid and that Great Britain and Canada should each pay five-eighteenths of the cost, and the States of New South Wales, Victoria, Queensland, and the Dominion of New Zealand should each pay one-ninth. The construction and management of the cable were placed under the control of a Board composed of seven members—two each from Great Britain, Canada, and Australia, and one from New Zealand—called the Pacific Cable Board. The Australian shore-end of the cable was landed at Southport, Queensland, in March, 1902, and the cable was completed and opened for use on the 3rd November, 1902. There are cable-stations at Norfolk Island, Fiji, and Fanning Island, and a branch cable runs from Norfolk Island to New Zealand. The following table shows particulars of the revenue, expenditure, total loss, and the proportion of the loss payable by the Commonwealth for each financial year since the opening of the cable:—

REVENUE; EXPENDITURE, AND LOSS ON WORKING OF PACIFIC CABLE, 1903 to 1908.

| Year ended the 31st March. | Revenue. | Expenditure, (including Annuities and Renewal Fund. | Loss. | Commonwealth Proportion of Loss. |
|----------------------------|----------|---|--------|----------------------------------|
| | £ | £ | £ | £ |
| 1903 ... | ... | ... | 90,518 | 30,172 |
| 1904 ... | 80,118 | 167,869 | 87,751 | 29,250 |
| 1905 ... | 87,446 | 163,296 | 75,850 | 25,283 |
| 1906 ... | 91,952 | 164,508 | 72,556 | 24,185 |
| 1907 ... | 113,516 | 167,439 | 53,923 | 18,307 |
| 1908 ... | 110,160 | 172,523 | 62,363 | 20,787 |

The total cost of construction to the 31st March, 1908, was £1,998,685, originally paid by Great Britain. The proportions of this cost payable by the other countries is to be paid off by 50 annual instalments. The total amount of the annuity paid to Great Britain during the year 1907-8 was £77,545, while the amount paid to the renewal fund was £32,000.

5. **New Zealand Cables.**—A submarine cable joining New Zealand to the Australian Continent was laid in 1876. The line is 1191 miles in length. The Australian shore-end of the cable is at Botany Bay while the New Zealand terminus is at Wakapuaka, near Nelson, in the Middle Island, from which place another cable, 109 miles in length, is laid to Wanganui, in the North Island. For a period of ten years after its opening the cable was subsidised by the New South Wales and New Zealand Governments, the total contributions amounting to £10,000 a year. The branch from Norfolk Island to New Zealand of the Pacific cable was opened on the 23rd April, 1902. The length of this cable is 597 miles, the New Zealand terminus being at Doubtless Bay in the north of the North Island.

6. **The New Caledonian Cable.**—In April, 1892, a French company, known as the Compagnie Française des Câbles Télégraphiques, entered into an agreement with the French, the New South Wales, and the Queensland Governments to lay down a submarine cable between New Caledonia and Queensland in return for guarantees by the

French Government to the extent of £8000, and by the Governments of New South Wales and Queensland to the amount of £2000 each annually for a period of thirty years. The cable was opened for use in October, 1893, the Australian shore-end being at Bundaberg. The Governments of New South Wales and Queensland are entitled to use the cable for the transmission of official messages up to the amount of their guarantees.

7. **Number of Cablegrams Received and Despatched in each State, 1905 to 1907.**—The subjoined table shows the number of cablegrams received and despatched in each State and in the Commonwealth from 1905 to 1907. Returns for previous years are not available:—

CABLEGRAMS RECEIVED AND DESPATCHED, 1905 to 1907.

| State. | Cablegrams Received. | | | Cablegrams Despatched. | | | Total Cablegrams Received and Despatched. | | |
|-----------------|----------------------|---------|---------|------------------------|---------|---------|---|---------|---------|
| | 1905. | 1906. | 1907. | 1905. | 1906. | 1907. | 1905. | 1906. | 1907. |
| New South Wales | 81,548 | 93,256 | 103,047 | 82,519 | 96,478 | 106,830 | 164,067 | 189,734 | 209,877 |
| Victoria ... | 55,749 | 67,194 | 72,200 | 59,279 | 70,315 | 75,518 | 115,028 | 137,509 | 147,718 |
| Queensland ... | 6,455 | 7,443 | 8,529 | 7,961 | 9,297 | 9,914 | 14,416 | 16,740 | 18,443 |
| South Australia | 17,436 | 16,610 | 17,419 | 13,084 | 15,006 | 16,057 | 30,520 | 31,616 | 33,476 |
| West. Australia | 10,446 | 9,258 | 12,042 | 14,504 | 12,406 | 15,553 | 24,950 | 21,664 | 27,595 |
| Tasmania * | 4,777 | 5,241 | 6,617 | 4,915 | 5,917 | 6,936 | 9,692 | 11,158 | 13,553 |
| Commonwealth | 176,411 | 199,002 | 219,854 | 182,262 | 209,419 | 230,808 | 358,673 | 408,421 | 450,662 |

* Exclusive of interstate cablegrams, which are classed as interstate telegrams (see above).

The following table shows the total number of cablegrams despatched and received in each State during each year from 1901 to 1907, inclusive:—

NUMBER OF CABLEGRAMS RECEIVED AND DESPATCHED, 1901 to 1907.

| State. | Cablegrams Despatched and Received. | | | | | | |
|--------------|-------------------------------------|---------|---------|---------|---------|---------|---------|
| | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
| N.S.W. ... | 104,590 | 159,031 | 152,814 | 144,936 | 164,067 | 189,734 | 209,877 |
| Victoria ... | 44,824 | 86,243 | 100,715 | 109,635 | 115,028 | 137,509 | 147,718 |
| Queensland | 9,723 | 8,260 | 12,749 | 12,741 | 14,416 | 16,740 | 18,443 |
| S. Australia | 29,431 | 29,472 | 21,823 | 29,373 | 30,520 | 31,616 | 33,476 |
| W. Australia | 30,268 | 30,313 | 34,216 | 25,873 | 24,950 | 21,664 | 27,595 |
| Tasmania.* | †6,289 | †7,077 | †8,276 | 18,679 | 9,692 | 11,158 | 13,553 |
| C'wealth | 225,125 | 320,396 | 330,593 | 341,237 | 358,673 | 408,421 | 450,662 |

* Exclusive of interstate cablegrams, which are classed as interstate telegrams (see page 783).
† Partly estimated.

From the first table given in this paragraph it may be seen that during each of the years specified the number of cablegrams despatched has exceeded the number received. During the year 1907, for example, the number despatched formed 51.21 per cent. on the total number received and despatched. From the second table it may be seen that the total number received and despatched annually has more than doubled since the year 1901.

8. **Lengths of Cable Routes.**—The following table gives the lengths of various cable routes:—

LENGTHS OF CABLE ROUTES.

| <i>Via Roebuck Bay.</i> | | <i>Via Port Darwin.</i> | | <i>Via South Africa.</i> | |
|---------------------------------|---------------|---------------------------------|---------------|--------------------------|---------------|
| | Miles. | | Miles. | | Miles. |

| Canada to Ireland ... | 2,450 | | |
| Total ... | 14,323 | Total ... | 17,932 |

9. **Cable Rates.**—In 1872 the cable rate to England was nine guineas for twenty words, but when word rates were brought into general use in 1875, the rate between Great Britain and Australia was fixed at ten shillings and sixpence, subsequently altered to ten shillings and eightpence. This remained the standard rate for eleven years, when the Eastern Extension Telegraph Company reduced it in 1886 to nine shillings and fourpence a word for ordinary messages, to seven shillings and a penny for Government messages, and to two shillings and eightpence a word for press messages. At a conference of the postal and telegraphic authorities held in March, 1891, the proposal to reduce the rates to four shillings a word for ordinary messages, three shillings and eightpence for Government, and one shilling and tenpence for press messages was agreed to, the States of New South Wales, Victoria, South Australia, Western Australia, and Tasmania undertaking to make good half the loss which the Eastern Company might suffer through such reductions. The States guaranteed to the company one-half of the amount of receipts short of the sum of £237,736—the amount received by the company in 1889 in respect of cable charges—the other half to be borne by the company. The Government of South Australia was also guaranteed by the other contracting States against any loss to the revenue which the lower cable rates might cause in the working of the overland lines. Queensland subsequently joined the other States in these guarantees. Owing to various circumstances the cable traffic did not respond to the reductions, and heavy losses were incurred. It was, therefore, decided at a conference held at Melbourne to increase the rates for ordinary messages to four shillings and ninepence per word. The new rates came into force on the 1st January, 1893, concurrently with an agreement under which New Zealand joined the guarantees to the company and to South Australia.

(i.) *Present Rates to Great Britain.* On the acceptance by three of the States of the terms offered by the Eastern Extension Telegraph Company for the construction of a cable *via* South Africa the rate for ordinary messages was reduced in May, 1900, to four shillings a word. It was further reduced to three shillings and sixpence in January, 1901, and to three shillings in January, 1902, at which amount the standard rate by all routes for cablegrams to Great Britain has since remained. The scale of reductions is governed by a revenue standard, and when the latter averages £330,000 per annum a further reduction to two shillings and sixpence will be made.

(ii.) *Rates to New Zealand.* As a result of the completion of the New Zealand branch of the Pacific cable in 1902, the rates charged for cablegrams between Australia and New Zealand, except to and from Tasmania, were uniformly reduced to fourpence-halfpenny per word. Between New Zealand and Tasmania the charge was fixed at fivepence-halfpenny a word, but it has since been reduced to fourpence-halfpenny. The charge for ordinary cablegrams from New Zealand to Great Britain was reduced from the 1st June, 1902, from five shillings and twopence to three shillings and fourpence a word, and has since been further reduced to three shillings a word.

10. **Cable Subsidies Paid by Each State, 1901 to 1907.**—The agreements between the State Governments and the Eastern Extension Telegraph Company expired on the 30th April, 1900. Since the year 1895 the amounts guaranteed—£237,736 to the company and £37,552 to South Australia—have been met by the receipts, and the contracting States have, therefore, not been called upon to contribute.

(a) The following table shews the total amounts paid by each State by way of cable subsidies for each calendar year from 1901 to 1907, inclusive:—

TOTAL AMOUNT OF CABLE SUBSIDIES PAID BY EACH STATE, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------|--------|-------|--------|--------|--------|--------|--------|
| | £ | £ | £ | £ | £ | £ | £ |
| New South Wales ... | 3,494 | 1,993 | 12,028 | 11,613 | 10,530 | 4,223 | 11,427 |
| Victoria ... | 1,505 | ... | 10,058 | 10,114 | 8,430 | 8,073 | 6,637 |
| Queensland ... | 2,519 | 2,513 | 11,770 | 11,984 | 12,000 | 8,501 | 8,573 |
| South Australia ... | 1,423 | ... | ... | ... | ... | ... | ... |
| Western Australia ... | 66 | 22 | ... | ... | ... | ... | ... |
| Tasmania ... | 4,200 | 4,200 | 4,200 | 4,200 | 4,200 | 4,200 | 4,200 |
| Commonwealth ... | 13,207 | 8,728 | 38,056 | 37,911 | 35,160 | 24,997 | 30,837 |

(b) The subjoined statement shews the amounts paid by each State in respect of each cable service during the year 1907:—

AMOUNTS PAID BY THE SEVERAL STATES IN RESPECT OF EACH SUBSIDISED CABLE SERVICE, 1907.

| State. | Tasmania-Victoria. | New Caledonia. | Pacific. | Total. |
|-----------------------|--------------------|----------------|----------|--------|
| | £ | £ | £ | £ |
| New South Wales ... | ... | 2,000 | 9,427 | 11,427 |
| Victoria ... | 525 | ... | 6,112 | 6,637 |
| Queensland ... | ... | 2,000 | 6,573 | 8,573 |
| South Australia ... | ... | ... | ... | ... |
| Western Australia ... | ... | ... | ... | ... |
| Tasmania ... | 4,200 | ... | ... | 4,200 |
| Commonwealth ... | 4,725 | 4,000 | 22,112 | 30,837 |

As the agreement in connection with the Tasmanian cable expires in 1909, and as new cables have been laid by the Commonwealth Government (see page 785 *ante*), the guarantees will, in the course of the year 1909, be reduced to those in connection with the New Caledonia cable and with the Pacific cable.

§ 4. Telephones.

1. **Development of Telephone Services.**—The Postal Departments of the several States have established telephone services in all the capital towns and in many of the important centres of population throughout the Commonwealth. Particulars as to the revenue from telephone services in each State for the years 1901 to 1907 are given on page 780 *ante*, while particulars of the expenditure on telephone works in each State for the year 1907 are given in a subsequent table on the same page. Telephone rates are at present charged under the toll system (see page 791 hereof); it is proposed, however, to shortly remodel the basis upon which such charges are made.

(i.) *Number of Telephone Exchanges, 1901 to 1907.* The following table shows the number of telephone exchanges in each State at the end of each year from 1901 to 1907, inclusive:—

NUMBER OF TELEPHONE EXCHANGES, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------|-------|-------|-------|-------|-------|-------|-------|
| New South Wales ... | 48 | 51 | 57 | 61 | 64 | 76 | 96 |
| Victoria ... | 20 | 20 | 20 | 22 | 24 | 31 | 40 |
| Queensland... | 15 | 15 | 15 | 19 | 19 | 24 | 31 |
| South Australia ... | 12 | 12 | 12 | 11 | 11 | 11 | 16 |
| Western Australia ... | 12 | 12 | 13 | 13 | 16 | 20 | 26 |
| Tasmania ... | 13 | 13 | 16 | 16 | 16 | 16 | 17 |
| Commonwealth ... | 120 | 123 | 133 | 142 | 150 | 178 | 226 |

(ii.) *Number of Telephone Connections.* The subjoined table shows the number of telephone connections to the various exchanges in each State at the end of each year from 1901 to 1907, inclusive:—

NUMBER OF TELEPHONE CONNECTIONS, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------|--------|--------|--------|--------|--------|--------|--------|
| New South Wales ... | 9,864 | 11,079 | 12,091 | 13,138 | 14,224 | 15,453 | 18,989 |
| Victoria ... | 6,049 | 6,847 | 7,610 | 8,429 | 9,259 | 10,424 | 12,935 |

* Estimated.

(iii.) *Length of Telephone Wire, 1901 to 1907.* The subjoined table shows the length of telephone wire, exclusive of telegraph and railway telephone wire, available for use in each State at the end of each year from 1901 to 1907, inclusive:—

**LENGTH OF TELEPHONE WIRE, EXCLUSIVE OF TELEGRAPH AND RAILWAY
TELEPHONE WIRE, 1901 to 1907.**

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------|--------|--------|--------|--------|--------|--------|---------|
| New South Wales ... | 15,885 | 17,727 | 19,479 | 20,853 | 22,111 | 23,403 | 48,971 |
| Victoria ... | 17,354 | 20,894 | 22,577 | 25,073 | 28,638 | 30,984 | 39,368 |
| Queensland ... | 4,360 | 4,911 | 5,613 | 6,309 | 7,697 | 9,758 | 11,812 |
| South Australia ... | 3,935 | 4,244 | 4,572 | 4,972 | 5,384 | 6,034 | 7,209 |
| Western Australia ... | 4,944 | 4,947 | 5,431 | 6,016 | 6,494 | 6,957 | 9,842 |
| Tasmania ... | 1,239 | 1,199 | 1,300 | 1,236 | 1,371 | 1,502 | 1,850 |
| Commonwealth ... | 47,717 | 53,922 | 58,972 | 64,459 | 71,695 | 78,638 | 119,052 |

2. **Telephone Rates.**—On the 31st January, 1907, a uniform toll rate was established throughout the Commonwealth. Subscribers at the time at which this rate was introduced were allowed the option of continuing their subscriptions under the old flat rates, which differed in the several States, or of coming in on the basis of the new rates. The charges made to all new subscribers, or for transferred or extended services, are on the basis of the new rates. The rate charged under the toll system varies according to the population of the area over which the telephone service extends, and also according to whether the person connected subscribes to an exclusive, a two-party, or a three-party service. The following table gives particulars of the rates under the toll system :—

TELEPHONE TOLL SYSTEM.—UNIFORM CHARGES FOR ALL STATES.

| In Telephone Networks having a Population of— | Radius of Network with Main Exchange as Centre. | Minimum Annual Charge— | | |
|--|---|---------------------------------|---|---|
| | | For an Exclusive Service. | For each Sub- scriber or In- strument on a Two-party Service. | For each Sub- scriber or In- strument on a Three-party Service. |
| From 1 to 10,000 ... | Miles. 5 | £ s. d. 4 0 0 | £ s. d. 3 0 0 | £ s. d. 2 10 0 |
| „ 10,001 to 100,000 ... | 10 | 4 10 0 | 3 7 6 | 2 15 0 |
| „ 100,001 upwards ... | 10 | 5 0 0 | 3 15 0 | 3 0 0 |

For the foregoing charges the Postal Department provides and maintains all necessary exchange equipment, subscribers' lines not exceeding one mile in length radially, and one telephone wall-set for each subscriber, and allows 1000 effective calls to be originated by each subscriber in each half-year.

(i.) *Charges for Extra Calls.* For all effective calls beyond 1000 half-yearly the subscriber is charged as follows :—

For calls above 1000 and not exceeding 2000 half-yearly, two calls for one penny.

For calls above 2000 and not exceeding 3000 half-yearly, three calls for one penny.

For calls above 3000 calls half-yearly, four calls for one penny.

(ii.) *Charges for Extra Mileage.* When the radial length of any line exceeds one mile the following charges are made :—

| | Exclusive Services. | Two-party Services. | Three or More Party Services. |
|------------------------------------|------------------------|--|---|
| For each half-mile or part thereof | £1 per annum. | Ten shillings per annum per subscriber or instrument | Five shillings per annum per subscriber or instrument |

(iii.) *Proposed Alteration in Rates.* It is now proposed to abolish the system of rates, on the previous page, and to charge a fixed annual rental, and in addition, a certain sum for each effective call.

3. **Miscellaneous Particulars, 1907.**—The following table gives various interesting particulars of the operation of the telephone services in each State for the year 1907 :—

PARTICULARS OF OPERATION OF TELEPHONE SERVICES, 1907.

SECTION XIX.

COMMONWEALTH FINANCE.

§ 1. General.

1. **Financial Provisions of the Constitution.**—The main provisions of the Constitution relating to the initiation and development of the financial system of the Commonwealth are those contained in Chapter IV., "Finance and Trade," being sections 81 to 105 of the Constitution Act. Two other sections which have a most important bearing on questions of Commonwealth finance are sections 69 and 51.

2. **Departments Transferred or Transferable under Constitution.**—In section 69 it is provided that the Departments of Customs and Excise in each State should become transferred to the Commonwealth on its establishment, and that on a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments should become transferred:—

- (i.) Posts, telegraphs, and telephones.
- (ii.) Naval and military defence.
- (iii.) Lighthouses, lightships, beacons and buoys.
- (iv.) Quarantine.

Under proclamation dated 12th February, 1901, and published in the Commonwealth *Gazette* of the 14th of that month, the Departments of Posts, Telegraphs, and Telephones in each State became transferred to the Commonwealth as from the 1st March, 1901, while under a similar proclamation dated 19th February, 1901, and gazetted on the 20th, the Departments of Naval and Military Defence in each State also became transferred to the Commonwealth as from 1st March, 1901.

As the requisite proclamation of transfer has not yet been made in the case of departments dealing with "Lighthouses, light-ships, beacons, and buoys," nor in the case of those concerned in matters of "quarantine," these departments still remain under State control.

3. **Departments Transferable by Means of Commonwealth Legislation.**—In addition to the departments here mentioned which pass to the Commonwealth either automatically or by proclamation, there are several others whose duties the Commonwealth is empowered to undertake after the passing by the Commonwealth of the legislation necessary to authorise the assumption of such duties. These are referred to in section 51 of the Constitution, which contains a statement of all matters respecting which power is (subject to the Constitution) conferred on Parliament "to make laws for the peace, order and good government of the Commonwealth." The matters contained in this section include those already mentioned as being covered by section 69. The principal

matters involving for the due performance of the duties connected therewith the creation or transfer of departments of the Public Service are:—

- (i.) Trade and commerce.
- (ii.) Taxation.
- (iii.) Bounties on production or export of goods.
- (iv.) Postal, telegraphic, telephonic, and other like services.
- (v.) Naval and military defence.
- (vi.) Lighthouses, lightships, beacons, and buoys.
- (vii.) Astronomical and meteorological.
- (viii.) Quarantine.
- (ix.) Census and statistics.
- (x.) Bankruptcy and insolvency.
- (xi.) Copyrights, patents, and trade marks.
- (xii.) Naturalisation and aliens.
- (xiii.) Marriage.
- (xiv.) Divorce and matrimonial causes.
- (xv.) Invalid and old-age pensions.
- (xvi.) Immigration and emigration.
- (xvii.) Conciliation and arbitration.

4. **Commonwealth Departments.**—As a result of legislation passed from time to time, in accordance with section 51, various departments and sub-departments have been transferred from the States to the Commonwealth, whilst other departments necessary for the due performance of the Commonwealth functions have been brought into existence. In the former class are such departments as those of Patents, Trade Marks, Copyrights, Designs, Naturalisation and Meteorology, while in the latter are the Ministerial Departments of External Affairs, Home Affairs, Treasury, Trade and Customs, Defence, Attorney-General and Postmaster-General, as well as such general departments as Public Service Commissioner's Office, Treasury, Audit, Crown Law Department and Census and Statistics. It may, therefore, be said that, so far as its financial aspect is concerned, the effect of Federation up to the present time has been the transfer from States to Commonwealth of the revenue obtainable from the great revenue-producing Departments of Customs and Excise, and of the expenditure connected with various departments whose number is gradually increasing, and that, in addition, the various functions of the Commonwealth have necessitated further new expenditure.

5. **Adjustment of Accounts between Commonwealth and States.**—The fact that the Departments of Customs and Excise were responsible in the several States for the production of a very large proportion of the total revenues of the States, and that the financial relief afforded to the States by means of the transfer of expenditure to the Commonwealth would not, at least initially, be at all commensurate with this transfer of revenue, naturally led to the inclusion in the Constitution of a provision for the repayment to the States of surplus Commonwealth revenue. The means to be adopted for securing an equitable allocation of such repayment amongst the several States received very extensive consideration at the several conventions at which the framing of the Constitution took place, and the basis ultimately agreed upon was that involving for at least ten years after the establishment of the Commonwealth the provisions of what is generally known as the Braddon clause (section 87) and for at least five years after the imposition of uniform duties of Customs, the scheme of allocation which has become known as the "*book-keeping system.*" (Sections 89 and 93.)

6. **The "Braddon" Clause.**—This clause (section 87 of the Constitution) is so called after Sir Edward Braddon, a Tasmanian delegate to the Federal Convention of 1897 and 1898, by whom it was introduced. In its original form the clause provided that for all time the Commonwealth should return to the States not less than three-fourths of the

net revenue of the Commonwealth from duties of Customs and Excise, not prescribing, however, what should be returned to *each State*. At the Melbourne session of the Federal Convention, held in 1898, provision was made that surplus revenue, instead of being returned to a State, might be applied towards the payment of interest on debts of that State taken over by the Commonwealth, and at the Premiers' Conference, held in Melbourne in 1899, a further amendment of the clause was effected by limiting its operations to a "period of ten years after the establishment of the Commonwealth, and thereafter until Parliament otherwise provides." The provisions of this clause *per se* are complied with, so it would appear, if the total amount returned to the States as a whole is not less than three-fourths of the total net revenue from Customs and Excise, and the Commonwealth is not under an obligation to return to each State three-fourths of the net Customs and Excise revenue collected in respect thereof. Thus, since the establishment of Federation, although the total amount of surplus Commonwealth revenue distributed amongst the States has in every year except 1907-8 largely exceeded three-fourths of the total net revenue from Customs and Excise, the amount paid to one of the States, viz., Queensland, has in several of these years fallen short of three-fourths of the net Customs and Excise revenue collected in respect of that State.¹ This occurred in the years 1901-2, 1903-4, 1904-5, and 1907-8, and was due in a large measure to the heavy expense involved in working the Commonwealth departments in that State. The amount returned to Tasmania for 1907-8, also fell short of three-fourths of the net Customs and Excise Revenue collected in respect of that State.

7. The "Book-keeping System."—The scheme set forth in the Constitution for determining the amount to be paid to the several States is contained in sections 89 and 93, the former of which relates to the period prior to the imposition of uniform duties of Customs, the latter to the first five years after the imposition of such duties, and thereafter until Parliament otherwise provides. The principle involved in this scheme is that of crediting each State with the Commonwealth revenue collected in respect of that State, and of debiting it with the expenditure incurred on its behalf in connection with transferred departments, as well as its share on a *per capita* basis of the new expenditure of the Commonwealth. On this account the method of allocation provided by the Constitution has become very generally known as the "*book-keeping system*." As the imposition of uniform duties of Customs and Excise took place throughout the Commonwealth on 9th October, 1901, the five years provided for in section 93 expired on 8th October, 1906, and consequently the "*book-keeping system*," which is still in force, may be changed at any time by the Commonwealth Parliament. In section 93 provision is made that the duties chargeable on goods imported into one State and consumed in another should be credited to the consuming State, the evident intention being that of safeguarding the interests of such States by allowing to each the revenue which its citizens actually contribute, since presumably the duty ultimately falls upon the consumer. The balance in favour of any State is paid monthly by the Commonwealth.

8. Western Australian Sliding Scale.—Owing to the exceptional circumstances of Western Australia, and the fact that the immediate introduction of interstate freetrade would seriously interfere with the development of the State, through the diminution in the funds at the disposal of its Treasurer, provision was made in section 95 of the Constitution for the retention of interstate duties by Western Australia during the five years after the imposition of uniform duties, such duties to be collected by the Commonwealth. It was stipulated that during the first of these years the duty so imposed on any goods should not exceed the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and that during the succeeding years the amount imposed should not exceed four-fifths, three-fifths, two-fifths, and one-fifth respectively, and should cease at the expiration of the fifth year. This special concession to Western Australia, known as the "*Western Australian special tariff*," came to an end on 8th October, 1906, since when trade between all the States has been

1. See report of Treasurers' Conference, 5th to 12th February, 1904, pp. 3 *et seq.*

free. The amount collected under this special tariff during the five years of its operation from 9th October, 1901, to 8th October, 1906, was as follows:—

DUTY COLLECTED UNDER W.A. SPECIAL TARIFF, 1901-2 to 1906-7.

| Year | ... | ... | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | Total. |
|--------|-----|-----|---------|---------|---------|---------|---------|---------|---------|
| Amount | ... | £ | 201,569 | 233,467 | 196,936 | 142,549 | 77,666 | 16,776 | 868,963 |

9. **Special Assistance.**—A clause (section 96 of the Constitution) which has a very important bearing on the financial relations of the States and the Commonwealth was inserted by the Premiers' Conference of 1899. This clause provides that the Commonwealth Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit. It is said to have been introduced with the object of rendering the Constitution more elastic in the matter of aid to the States than would be possible if the Braddon clause and the book-keeping system were rigidly adhered to. No claim for such special assistance has yet been made on the part of any of the States, although it appears that the framers of the clause anticipated that it might be required during the early years of Federation.

10. **Transfer and Consolidation of State Debts.**—Under section 105 of the Constitution power is given to the Commonwealth Parliament to take over from the States either the whole of the public debts of the States as existing at the establishment of the Commonwealth, or a proportion of that debt calculated on a population basis, and to defray the interest payable in respect of such debts from the portions of the surplus revenue of the Commonwealth payable to the several States. The prospective savings in the matter of interest to be effected by means of the consolidation of the State debts formed a strong argument in pre-federal days for those supporting the federal movement. Since the establishment of the Commonwealth, however, the individual States do not appear to have become willing to accept a Commonwealth control of State indebtedness.

11. **Disadvantages of the Present System.**—Under the book-keeping system of regulating the financial relations of the States and Commonwealth an endeavour is made to distribute the surplus revenue in the exact proportion in which it has been contributed by the several States. If these be regarded as States which have merely transferred some of their ordinary functions to the Commonwealth, the crediting each with the revenue received in respect to itself, and debiting it with the expenditure which the administration of Commonwealth affairs on its behalf has occasioned, might be deemed to be as equitable as any method that could be suggested. There are, however, certain practical objections to such a system, which may be summarised as follows:—

- (i.) The trouble and expense which the necessary record entails.
- (ii.) The practical impossibility of ensuring that in every case a consuming State will be duly credited with revenue collected on its behalf in a distributing State.
- (iii.) The difficulty involved in equitably determining the amount to be debited to the several States in respect of general Commonwealth expenses.
- (iv.) The uncertainty on the part of the State Governments as to the amount which will become available.
- (v.) The impossibility of securing independent State and Commonwealth finance.

12. **Proposa to modify present System.**—Various proposals have from time to time been made for modifying the present "book-keeping" system in such a manner as

to obviate certain of the disadvantages inherent therein. The principal of these proposals are those which may be classified under the following heads :—

- (i.) A *per capita* distribution of surplus.
- (ii.) Payment of a fixed annual sum.
- (iii.) Payment of a fixed annual amount per head.
- (iv.) Increase in liability transferred to Commonwealth.

Some of the proposals that have been made involve features of more than one of the systems here specified, and in certain cases combine them with those of the book-keeping system. A dissertation on the merits and demerits of any of the proposals would be beyond the scope of the present publication, but it may be noted that the scheme put forward by Sir George Turner when Commonwealth Treasurer was based on an increase in the liability transferred to the Commonwealth, while that of Sir John Forrest and that of Sir William Lyne were based mainly on the payment of a fixed annual sum.

13. **Interstate Conferences.**—Since the establishment of the Commonwealth, conferences of State Ministers have been held from time to time, at which proposals for adjusting the financial relations between the States and the Commonwealth have been considered. At the conference held in Melbourne in October, 1906, and that held in Brisbane in May, 1907, the scheme put forward by Sir John Forrest was very fully discussed, and in so far as the proposals for the allocation of surplus Commonwealth revenue are concerned was, with some minor amendments, agreed to. The proposals made by Sir John Forrest for the transfer of State debts did not, however, meet with the approval of the conferences. After the retirement of Sir John Forrest from the Commonwealth Ministry, his scheme was abandoned by the Commonwealth Government. A fresh proposal by Sir William Lyne was substituted for it, and was considered by the Conference of Premiers held in Melbourne in 1908, who expressed their dissent from its provisions. Numerous other schemes have been advanced, but none has yet received general approval.

§ 2. Consolidated Revenue Fund.

(A) Nature of Fund.

The provisions made for the formation of a Commonwealth Consolidated Revenue Fund, and the means to be adopted for operating on that fund, are contained in sections 81, 82, and 83 of the Constitution. In section 81 it is provided that "All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution." A strictly literal interpretation of this section would appear to require all loan and trust moneys received by the Commonwealth Executive to be paid to Consolidated Revenue. It is, however, held by Quick and Garran, in their "Annotated Constitution," that the "generic word *moneys* must be controlled by the preceding specific word *revenues*, and limited to moneys in the nature of revenue." This is the view of the matter which has been adopted by the Commonwealth Treasury in the preparation of its accounts. At present the Commonwealth has no Loan Account, but certain moneys received, which are not of the nature of revenue, are paid to Trust Account. As regards expenditure from the Consolidated Revenue Fund, section 82 provides that the costs, charges, and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund should form the first charge thereon, while section 83 stipulates that "no money shall be drawn from the Treasury of the Commonwealth except under appropriation made by law." Such appropriations are either special, and as such are provided for by means of a permanent Act, or are annual, and provided for in an annual Appropriation Act.

(B) Revenue.

1. **Total Collections.**—Particulars concerning the total amount of revenue collected by the Commonwealth Government and credited to the several States from 1st January, 1901, to 30th June, 1908, are contained in the following table:—

CONSOLIDATED REVENUE OF THE COMMONWEALTH, 1901 to 1907-8.

| State to which Credited. | Half-year to 30th June, 1901. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |

| Tasmania ... | 253,108 | 475,081 | 455,337 | 447,171 | 446,404 | 448,955 | 476,165 | 544,442 |
| C'wealth ... | 4,895,756 | 11,296,985 | 12,105,937 | 11,630,998 | 11,465,593 | 11,881,924 | 12,832,891 | 15,019,034 |

The revenue collected by the Commonwealth during the financial year 1907-8 was, in all the States except Western Australia, higher than in any preceding year, the large increase being mainly due to the additional revenue collected in connection with the new tariff introduced on the 8th August, 1907. In the case of Western Australia the year in which the maximum collection of Commonwealth revenue took place was 1902-3, a continuous decline having been experienced from that year until 1906-7, and a slight rise for 1907-8.

2. **Collections per Head.**—In the table given hereunder particulars are furnished of the amount of Commonwealth revenue per head of population collected in respect of each State since the establishment of the Commonwealth:—

COMMONWEALTH REVENUE PER HEAD OF POPULATION, 1901 to 1907-8.

| State to which Credited. | Half-Year to 30th June, 1901. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|--------------------------|-------------------------------|---------|---------|---------|---------|---------|---------|---------|
| | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. |
| N.S.W. ... | 0 19 2 | 2 13 9 | 3 2 7 | 2 18 5 | 2 15 2 | 2 17 10 | 3 2 8 | 3 14 2 |
| Victoria ... | 1 5 7 | 2 9 2 | 2 11 8 | 2 11 4 | 2 12 7 | 2 14 1 | 2 17 5 | 3 5 1 |
| Queensland | 1 12 5 | 3 3 8 | 3 1 3 | 2 16 7 | 2 14 10 | 2 18 9 | 3 3 10 | 3 12 8 |
| South Aust. | 1 4 5 | 2 13 6 | 2 11 8 | 2 12 3 | 2 11 2 | 2 12 3 | 2 18 0 | 3 9 1 |
| West. Aust. | 3 0 9 | 8 0 11 | 7 12 1 | 6 11 8 | 5 18 2 | 5 1 0 | 4 12 11 | 4 17 2 |
| Tasmania | 1 9 4 | 2 14 6 | 2 11 4 | 2 9 10 | 2 9 7 | 2 9 7 | 2 12 10 | 2 19 2 |
| C'wealth ... | 1 5 11 | 2 19 1 | 3 2 4 | 2 19 3 | 2 17 11 | 2 18 8 | 3 2 4 | 3 11 7 |

It is remarkable that the revenue per head for the Commonwealth, and also that for New South Wales, were practically identical for the year 1902-3 and for 1906-7, and were also sensibly the same for those years (about £3 2s. 6d.). It will also be noticed that for the past six years the Commonwealth revenue per head has differed very slightly from that of New South Wales.

In all the States except Western Australia the Commonwealth revenue per head was higher for 1907-8 than for any previous year. In Western Australia, owing in part to the

special circumstances of that State as regards its general conditions, and also in part to the provision made under section 95 of the Constitution permitting the imposition in Western Australia of interstate Customs duties on a sliding scale, the revenue per head in 1901-2 reached the abnormal sum of £8 Os. 11d., or nearly three times the Commonwealth average for the year. A rapid decline has since been in evidence, but notwithstanding this the revenue per head for 1907-8 was £4 17s. 2d., or nearly 36 per cent. more than the average for the Commonwealth. For 1907-8 three of the States (New South Wales, Queensland, and Western Australia) exceeded the Commonwealth average per head, the other three falling short of it.

3. Proportions Collected in respect of the several States.—In the following table particulars are given of the percentage which each State's contribution for the several years was on the total Commonwealth revenue:—

PROPORTION OF REVENUE COLLECTED IN RESPECT OF EACH STATE,

1901 TO 1907-8.

| State. | Half-year to 30th June, 1901. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|--------------|-------------------------------|---------|---------|---------|---------|---------|---------|---------|
| | % | % | % | % | % | % | % | % |
| N.S.W. ... | 26.49 | 32.70 | 36.27 | 35.82 | 35.07 | 36.31 | 37.26 | 38.73 |
| Victoria ... | 31.39 | 26.35 | 25.83 | 26.67 | 27.75 | 27.71 | 27.57 | 27.06 |
| Queensland | 16.48 | 14.26 | 12.92 | 12.54 | 12.48 | 13.05 | 13.30 | 19.10 |
| S. Australia | 9.05 | 8.66 | 7.82 | 8.28 | 8.32 | 8.32 | 8.68 | 9.03 |
| W. Australia | 11.42 | 13.82 | 13.40 | 12.84 | 12.49 | 10.83 | 9.48 | 8.46 |
| Tasmania ... | 5.17 | 4.21 | 3.76 | 3.85 | 3.89 | 3.78 | 3.71 | 3.62 |
| C'wealth... | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 |

A comparison of the percentages for 1907-8 with those for 1901-2 reveals the fact that, whilst the proportion of the Commonwealth revenue contributed by New South Wales has during the six years increased considerably, and that contributed by Victoria and South Australia has increased moderately, those for Western Australia, Queensland, and Tasmania exhibit decreases, the extent of the decrease being most marked in the case of Western Australia, where a fall in percentage took place from 13.82 in 1901-2 to 8.46 in 1907-8. This rapid decline in Western Australia is due to a variety of causes, the three most important being:—(i.) The abolition of interstate duties, (ii.) the increase in interstate trade, and (iii.) the gradual tendency to equalisation of conditions with those existing in the eastern States.

In view of the various proposals for adjusting the financial relations of the Commonwealth and the States on a *per capita* basis, a comparison of the proportion of Commonwealth revenue collected in respect of each State with that State's proportion of the total Commonwealth population is of considerable interest:—

COMPARISON OF REVENUE AND POPULATION PROPORTIONS, 1907-8.

| Particulars. | N.S.W. | Vic. | Q'land. | S.A. | W.A. | Tas. | Cwlth. |
|------------------------------------|--------|-------|---------|------|------|------|--------|
| | % | % | % | % | % | % | % |
| Percentage on Commonwealth revenue | 38.73 | 27.06 | 13.10 | 9.03 | 8.46 | 3.62 | 100.00 |
| „ „ „ population | 37.38 | 29.74 | 12.91 | 9.36 | 6.23 | 4.38 | 100.00 |

In the case of New South Wales, Queensland, and Western Australia the revenue percentage is higher than the population percentage, while in Victoria, South Australia,

and Tasmania the population percentage is the higher. The most extensive proportionate divergence occurs in the case of Western Australia.

4. **Details of Revenue, 1907-8.**—The principal revenue-producing departments of the Commonwealth are the Customs, Excise, and Postal, the Customs collections for 1907-8 representing more than 62 per cent. of the total revenue, Excise about 15½ per cent., and Postal nearly 22 per cent. Details of the Commonwealth revenue collected in respect of each State for the year 1907-8 are given in the following table:—

COMMONWEALTH REVENUE, 1907-8.

| Source of Revenue. | Revenue Collected in respect of— | | | | | | Total Revenue Collected by C'wealth Govt. |
|-----------------------------------|----------------------------------|------------------|------------------|------------------|------------------|----------------|---|

| Miscellaneous | 4,633 | 1,115 | 862 | 266 | 1,102 | 128 | 8,106 |
| Total ... | 5,816,755 | 4,063,736 | 1,967,618 | 1,355,751 | 1,270,732 | 544,442 | 15,019,034 |

5. **Sources of Revenue.**—The following table furnishes particulars concerning the Commonwealth revenue derived from each source since the establishment of Federation:—

SOURCES OF COMMONWEALTH REVENUE, 1901 to 1907-8.

| Sources of Revenue. | Half-year to 30th June, 1901. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|-----------------------------------|-------------------------------|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|
| | £ | £ | £ | £ | £ | £ | £ | £ |
| Customs ... | 3,602,194 | 7,669,970 | 8,213,448 | 7,577,734 | 6,992,592 | 7,089,379 | 7,660,874 | 9,341,108 |
| Excise ... | 548,395 | 1,224,349 | 1,471,607 | 1,528,024 | 1,806,938 | 1,910,106 | 1,987,652 | 2,304,244 |
| Postal ... | 740,665 | 2,372,881 | 2,404,730 | 2,510,203 | 2,632,551 | 2,824,348 | 3,128,574 | 3,300,096 |
| Defence ... | 3,304 | 10,657 | 9,329 | 3,885 | 7,465 | 8,106 | 5,112 | 13,565 |
| Patents ... | ... | ... | ... | ... | 10,559 | 23,936 | 18,017 | 17,421 |
| Trade Marks, Copyrights & Designs | ... | ... | ... | ... | ... | ... | 6,890 | 8,657 |
| New Revenue | 25 | 2,775 | 4,710 | 5,100 | 7,355 | 11,854 | 12,529 | 25,837 |
| M'cellaneous | 1,173 | 16,373 | 2,113 | 6,052 | 8,138 | 14,196 | 13,713 | 8,106 |
| Total ... | 4,895,756 | 11,296,985 | 12,105,937 | 11,630,998 | 11,465,598 | 11,881,925 | 12,832,891 | 15,019,034 |

The maximum annual collection of Customs revenue during the period was the total of £9,341,108 obtained during 1907-8, the nearest approach to this figure being that of £8,213,448 obtained during the financial year 1902-3. The Customs revenue for 1906-7 was practically identical with that for 1901-2. The minimum annual collection was £6,992,592 in 1904-5. In the case of Excise and Postal revenue the amounts collected have increased continuously from year to year, the Excise revenue for 1907-8 exceeding that for 1901-2 by no less than 88 per cent., while the 1907-8 Postal revenue shewed an advance of 39 per cent. on that for 1901-2.

6. **Customs.**—As already noted, several of the provisions of the Constitution have been made dependent for their date of commencement on the imposition of uniform duties of Customs. Thus the book-keeping system and the Western Australian special tariff provisions both hinged upon the date on which the uniform duties of Customs were imposed. The Bill to provide for the collection of such duties was introduced in the Commonwealth House of Representatives on 9th October, 1901, and, in accordance with the usual practice, a resolution to protect the revenue and provide for the collection forthwith of the duties specified in the Bill, was duly carried. This date, 9th October, 1901, is consequently that on which the uniform duties of Customs are considered as having been imposed. A reference to the various enactments of the Commonwealth Legislature relative to the imposition of Customs duties will be found in Section XV., "Commerce," pages 593 to 596.

7. **Customs Revenue, 1907-8.**—The Customs revenue, after deduction of drawbacks and refunds, collected in respect of the several States during the year 1907-8, is given hereunder, details being furnished for the principal classes of dutiable articles imported :—

COMMONWEALTH CUSTOMS REVENUE, 1907-8.

| Wood, wicker, and cane ... | 192,835 | 202,466 | 204,686 | 187,482 | 219,433 | 360,699 |
| Jewellery, etc. ... | 164,433 | 162,163 | 168,238 | 173,428 | 210,818 | 256,835 |
| Leather, etc. ... | 177,870 | 163,275 | 162,228 | 154,038 | 172,459 | 218,918 |
| Paper and stationery ... | 108,012 | 106,230 | 108,184 | 112,052 | 145,241 | 193,813 |
| Vehicles ... | 65,273 | 72,380 | 81,648 | 77,590 | 101,782 | 148,003 |
| Musical instruments ... | 41,504 | 46,827 | 47,712 | 50,672 | 60,117 | 90,905 |
| Miscellaneous articles ... | 78,542 | 81,173 | 85,624 | 80,112 | 97,403 | 191,782 |
| Other receipts ... | 55,731 | 47,063 | 39,557 | 35,782 | 30,759 | 35,193 |
| Total Customs ... | 8,213,448 | 7,577,734 | 6,992,592 | 7,089,379 | 7,660,874 | 9,341,108 |

It will be seen that throughout the period here dealt with the Customs revenue from stimulants and narcotics has represented, approximately, 40 per cent. of the total Customs revenue. The other principal articles from which Customs revenue was derived were "apparel and textiles," "agricultural products," and "metals and machinery." The most marked increase in the amount of duty collected is in the class of "apparel and textiles" the revenue under this head for 1907-8 exceeding that for 1902-3 by £788,352. The most marked decreases took place in the case of "agricultural products" and "sugar," the former declining during the period by £764,197 and the latter by £467,952. The former of these decreases is to a large extent due to the fact that the figures for 1902-3 were somewhat abnormal owing to the extraordinary importations of these commodities necessitated by the drought of 1902, while the latter has resulted in large measure from the increased local production of sugar, which the Commonwealth Government has aimed at encouraging.

9. **Excise.**—The commodities on which Excise duties are levied are beer, spirits, starch, sugar, and tobacco, whilst the department also obtains a small revenue from the granting of licenses for the manufacture of stimulants and narcotics.

The revenue collected in respect of each State during 1907-8, under each of these heads, is shewn in the following table:—

COMMONWEALTH EXCISE REVENUE, 1907-8.

| Starch ... | 9,216 | 9,238 | 2,907 | 1,835 | 1,828 | 893 | 25,917 |
| Sugar ... | 266,876 | 226,638 | 103,272 | 63,788 | 46,238 | 35,116 | 741,928 |
| Tobacco ... | 265,128 | 163,937 | 70,233 | 48,100 | 53,129 | 18,072 | 618,599 |
| Licenses ... | 2,542 | 2,750 | 2,895 | 1,132 | 806 | 125 | 10,250 |
| Agric. machinery ... | ... | 41 | ... | 26 | ... | ... | 67 |
| Total Excise ... | 842,590 | 704,434 | 309,637 | 199,989 | 168,925 | 78,669 | 2,304,244 |

Of the total Excise revenue collected, beer, spirits, and tobacco were responsible for rather more than 66 per cent. The figures given in this table are those obtained after deducting drawbacks and refunds and making the necessary adjustments between the States in connection with goods produced or manufactured in one State and consumed in another.

The amount of £67 shewn in the above table under the head of agricultural machinery was collected under the provisions of Act No. 16 of 1906, which imposed Excise duties on agricultural machinery but provided that the Act should not apply to goods manufactured under certain conditions of remuneration of labour. In June, 1908, a judgment was delivered by the High Court to the effect that the Act was not authorised by the Constitution, and instructions were then issued that moneys collected under the Act may be refunded.

10. **Excise Collections, 1901 to 1907-8.**—Particulars concerning the amount of Excise collected under each head from the inauguration of Federation to 30th June, 1908, are given hereunder:—

COMMONWEALTH EXCISE REVENUE, 1901 to 1907-8.

| Particulars. | Half-Yr. to 30th June, 1901. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|---------------------|------------------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|
| | £ | £ | £ | £ | £ | £ | £ | £ |
| Beer ... | 83,120 | 519,790 | 500,464 | 483,351 | 491,492 | 502,399 | 513,473 | 555,720 |
| Spirits | 4,742 | 198,055 | 225,712 | 249,717 | 262,035 | 276,516 | 285,295 | 351,763 |
| Starch | ... | 1,766 | 18,937 | 21,206 | 22,471 | 24,597 | 27,321 | 25,917 |
| Sugar | ... | 189,545 | 261,517 | 272,117 | 503,627 | 536,079 | 546,590 | 741,928 |
| Tobacco | 110,374 | 304,954 | 453,171 | 491,434 | 516,761 | 560,409 | 604,960 | 618,599 |
| Licenses | 760 | 10,239 | 11,806 | 10,199 | 10,552 | 10,106 | 10,043 | 10,250 |
| Agric. mach'y | ... | ... | ... | ... | ... | ... | ... | 67 |
| Total Excise | 198,996 | 1,224,349 | 1,471,607 | 1,528,024 | 1,806,938 | 1,910,106 | 1,987,682 | 2,304,244 |

Comparing the Excise collections for 1907-8 with those for 1901-2 it will be seen that whilst the revenue obtained from spirits, sugar, and tobacco increased rapidly during the period, that derived from beer and from starch increased moderately, while the revenue from licenses was practically the same in 1907-8 as in 1901-2.

11. **Commonwealth Taxation.**—Under section 51, sub-section (ii.) of the Constitution, power is given to the Commonwealth Parliament to make laws with respect to taxation, but so as not to discriminate between States or parts of States. Section 90 of the Constitution makes the power of the Commonwealth Parliament to impose Customs and Excise duties an exclusive one, but it would appear that as regards all other forms of taxation the States and Commonwealth possess concurrent powers. The question of the imposition by the Commonwealth Parliament of direct taxes such as land and income taxes is one which has been the subject of considerable discussion, and the opinion has been expressed that the intention of the framers of the Constitution was that of restricting the taxation powers of the Commonwealth to the imposition of Customs and Excise duties except in cases of great national peril. Whatever the intention of the framers may have been in this matter, the Constitution itself contains no such provision, and the Commonwealth Parliament is given an absolutely free hand in the imposition of taxation. Up to the present time the only taxes so levied have been those of Customs and Excise, referred to in detail in the foregoing paragraphs. The total amounts obtained from these two sources in respect of each of the States since the inauguration of Federation are given hereunder:—

COMMONWEALTH TAXATION, 1901 to 1907-8.

| Year. | Customs and Excise Revenue Collected in respect of— | | | | | | Total for Commonwealth. |
|----------------------|---|-----------|-----------|-----------|-----------|-----------|-------------------------|
| | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tasmania. | |

| 1907-8 ... | 2 17 7 | 2 11 6 | 2 15 4 | 2 11 6 | 3 16 5 | 2 4 6 | 2 15 6 |

13. **Postal Revenue.**—Besides the Department of Trade and Customs the only large revenue-earning Commonwealth department is that under the control of the Postmaster-General, comprising the three branches of Post, Telegraph, and Telephone. This department was taken over by the Commonwealth on 1st March, 1901, and consequently contributed only four months' revenue to the Commonwealth total for the financial period ended 30th June, 1901. Particulars relative to the net postal revenue collected in respect of the several States since the federalisation of the department are given hereunder:—

COMMONWEALTH POSTAL REVENUE, 1901 to 1907-8.

| Year. | Postal Revenue Collected in respect of— | | | | | | Total for Commonwealth. |
|-----------------------|---|-----------|---------|----------|----------|---------|-------------------------|
| | N.S.W. | Victoria. | Qld. | S. Aust. | W. Aust. | Tas. | |
| Four mths. to 30/6/01 | £ | £ | £ | £ | £ | £ | £ |
| 1901-2 ... | 276,936 | 177,931 | 95,586 | 90,703 | 67,735 | 31,774 | 740,665 |
| 1902-3 ... | 873,312 | 591,470 | 312,905 | 277,812 | 225,752 | 91,610 | 2,372,861 |
| 1903-4 ... | 906,798 | 622,700 | 300,737 | 255,214 | 225,244 | 94,037 | 2,404,730 |
| 1904-5 ... | 941,529 | 650,583 | 324,013 | 258,461 | 230,858 | 104,759 | 2,510,203 |
| 1905-6 ... | 980,151 | 683,480 | 331,774 | 266,719 | 257,503 | 112,924 | 2,632,551 |
| 1906-7 ... | 1,065,633 | 735,563 | 359,752 | 291,929 | 252,741 | 118,730 | 2,824,348 |
| 1907-8 ... | 1,191,489 | 797,972 | 422,346 | 327,269 | 259,688 | 129,810 | 3,128,574 |
| 1907-8 ... | 1,278,107 | 834,367 | 451,075 | 338,193 | 266,510 | 131,844 | 3,300,096 |

A comparison of the figures for 1907-8 with those for 1901-2 indicates a substantial increase in the postal revenue of all the States, ranging from 46 per cent. in the case of New South Wales to 18 per cent. in that of Western Australia for the period of six years, and representing for the whole Commonwealth an increase of 39 per cent.

14. **Postal Revenue per Head.**—The postal revenue per head of population varies considerably in the several States, being highest in the case of Western Australia and lowest in that of Victoria. Particulars for the seven complete financial years since Federation are as follows:—

COMMONWEALTH POSTAL REVENUE PER HEAD, 1901-2 to 1907-8.

| Year. | Postal Revenue per Head of Population Collected in respect of— | | | | | | Total for Commonwealth. |
|------------|--|-----------|---------|----------|----------|---------|-------------------------|
| | N.S.W. | Victoria. | Qld. | S. Aust. | W. Aust. | Tas. | |

| 1906-7 ... | 0 15 7 | 0 13 0 | 0 15 9 | 0 17 1 | 0 19 10 | 0 14 5 | 0 15 2 |
| 1907-8 ... | 0 16 4 | 0 13 4 | 0 16 8 | 0 17 3 | 1 0 5 | 0 14 4 | 0 15 9 |

15. **Details of Postal Revenue, 1907-8.**—Particulars relative to postal revenue are, in the Treasury statements, now classified under six heads:—(i.) private boxes and bags; (ii.) commission on money orders and postal notes; (iii.) telegraphs; (iv.) telephones; (v.) postage, and (vi.) miscellaneous. Details under these heads concerning the revenue collected in respect of the several States for the year ended 30th June, 1908, are given hereunder:—

COMMONWEALTH POSTAL REVENUE, 1907-8.

| Particulars. | Postal Revenue Collected in respect of— | | | | | | Total for Commonwealth. |
|--|---|----------------|----------------|----------------|----------------|----------------|-------------------------|
| | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | |
| | £ | £ | £ | £ | £ | £ | £ |
| Private boxes and bags ... | 6,561 | 2,960 | 2,723 | 1,245 | 1,592 | 787 | 15,863 |
| Commission—Money orders and postal notes ... | 39,008 | 23,915 | 11,067 | 6,093 | 9,991 | 4,550 | 94,624 |

| Total ... | 1,278,107 | 834,367 | 451,075 | 333,193 | 266,510 | 131,344 | 3,300,096 |

16. **Details of Postal Revenue, 1901 to 1907-8.**—Particulars concerning the postal revenue of the Commonwealth for each of the years which have elapsed since the date of Federation are contained in the following table. Owing to the change in classification of postal revenue, which took place in 1903-4, full details for the earlier years are not available:—

COMMONWEALTH POSTAL REVENUE, 1901 to 1907-8.

| Particulars. | 1st March to 30th June, 1901. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|---|--|------------------|------------------|------------------|------------------|------------------|------------------|------------------|
| | £ | £ | £ | £ | £ | £ | £ | £ |
| Private boxes and bags ... | 2,647 | 17,904 | 16,517 | 15,491 | 15,791 | 14,975 | 15,933 | 15,868 |
| Commission— Money orders and postal notes | 24,860 | 83,759 | 78,624 | 81,456 | 84,891 | 88,868 | 92,240 | 94,624 |
| Telegraphs ... | 708,037 | 2,208,346 | 2,264,262 | 498,957 | 525,054 | 565,422 | 598,167 | 650,426 |
| Telephones ... | | | | 284,327 | 312,320 | 332,214 | 388,226 | 410,741 |
| Postage ... | 5,121 | 62,852 | 45,327 | 1,556,362 | 1,620,465 | 1,754,790 | 1,968,950 | 2,043,777 |
| Miscellaneous ... | | | | 71,610 | 74,430 | 48,079 | 75,058 | 84,660 |
| Total ... | 740,665 | 2,372,861 | 2,404,730 | 2,510,203 | 2,632,551 | 2,824,348 | 3,128,574 | 3,300,096 |

17. **Revenue from Patents.**—Under the Commonwealth Patents Act 1903, which was assented to on 22nd October, 1903, and came into force on 1st June, 1904, the complete control of the Patents administration of Australia passed from the several State Governments to that of the Commonwealth, which, under section 19 (a) of the Act mentioned, was authorised to collect for each State the fees to which it was entitled under the State Act in respect of proceedings then pending.

The revenue collected in respect of each of the States since the Act came into force is shewn in the following table:—

COMMONWEALTH PATENTS REVENUE, 1903-4 to 1907-8.

| Year. | Patents Revenue Credited to— | | | | | | Total for Common- wealth. |
|------------------------|------------------------------|-----------|---------|----------|----------|-------|---------------------------------|
| | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | |
| | £ | £ | £ | £ | £ | £ | |
| 1903-4 (June only) ... | 436 | 432 | 226 | 170 | 120 | 134 | 1,518 |
| 1904-5 ... | 2,035 | 2,899 | 1,621 | 1,244 | 1,129 | 1,631 | 10,559 |
| 1905-6 ... | 6,532 | 6,609 | 3,803 | 2,407 | 2,318 | 2,767 | 23,936 |
| 1906-7 ... | 4,976 | 4,702 | 2,908 | 1,772 | 1,997 | 1,662 | 18,017 |
| 1907-8 ... | 5,424 | 4,631 | 2,590 | 1,607 | 1,755 | 1,414 | 17,421 |

It may be noted that, in their financial statement for 1903-4, the Commonwealth Treasury have credited the patents revenue for that year partly to "Miscellaneous Receipts" and partly to "New Revenue."

18. **Revenue from Trade Marks, etc.**—Under the several Acts of the Commonwealth Legislature relating to trade marks, copyrights, and designs, the Commonwealth Government has assumed the exclusive administration of such matters, and now collects all revenue accruing therefrom. The financial year 1906-7 was the first in which this item appeared in the Commonwealth accounts, the total amount received being £6390, credited as follows:—New South Wales, £2305; Victoria, £1896; Queensland, £955; South Australia, £594; Western Australia, £437; and Tasmania, £303. For the year 1907-8 the figures were:—New South Wales, £3242; Victoria, £2568; Queensland, £1112; South Australia, £807; Western Australia, £546; Tasmania, £382; total for Commonwealth, £8657.

19. **Defence Revenue.**—The revenue appearing under the head of "Defence" comprises the receipts derived from the sale of stores and clothing, from fines, etc., and for 1907-8 amounted to only £13,565.

20. **New Revenue.**—Under this head are included receipts in connection with exemption certificates under the Immigration Restriction Act, High Court fees, industrial fees, examination fees, forfeited electoral deposits, etc. The Surplus Revenue Act passed in 1908 defines the term "New Revenue," and authorises the Treasurer to decide what items of revenue should be carried to this head. This revenue is divided amongst the States *per capita*. The total revenue of this nature collected during 1907-8 was £25,837.

(C) **Expenditure.**

1. **Nature of Commonwealth Expenditure.**—The disbursements by the Commonwealth Government of the revenue collected by it fall naturally, under the "book-keeping" system, into three classes, viz.:—

- a) Expenditure on transferred services.
- (b) Expenditure on new services.
- (c) Payment to States of surplus revenue.

Of these three, only the two first are actual expenditure, the last being merely a transfer, the actual expenditure being incurred by the States. In accordance with the provisions of the Constitution the expenditure on transferred services is debited to the several States in respect of which such expenditure has been incurred, while the expenditure on new services is distributed *per capita*. Surplus Commonwealth revenue is paid to the States monthly. During the earlier years of Federation, viz., until the end of the year 1903-4, new works, etc., for transferred departments were treated as transferred expenditure, and were charged to the States on whose behalf the expenditure had been incurred. In subsequent years all such expenditure has been regarded as expenditure on new services and has been distributed amongst the States *per capita*.

2. **Expenditure Debited to the Several States.**—The total expenditure by the Commonwealth Government during the period 1901 to 1907-8 and the amounts debited to the several States are shewn in the following table:—

COMMONWEALTH EXPENDITURE, 1901 to 1907-8.

| State to which Debited. | Half-year to 30/6/1901. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |

| Tas. ... | 77,051 | 158,982 | 154,521 | 184,248 | 185,452 | 193,426 | 215,122 | 264,383 |
| Cwth. | 1,296,053 | 3,932,746 | 3,901,371 | 4,252,519 | 4,322,829 | 4,497,542 | 4,987,317 | 6,162,129 |

In all the States the expenditure for 1907-8 was higher than that for any preceding year, and was considerably higher than the expenditure for 1901-2. New South Wales, with an advance of £886,749, exhibited the largest numerical and also the largest proportional increase, the latter amounting to no less than 67½ per cent. Tasmania, whose expenditure increased by £105,401, had the next highest proportional increase, viz., 66 per cent.

3. **Expenditure per Head.**—Particulars concerning the Commonwealth expenditure per head in the several States are furnished hereunder:—

COMMONWEALTH EXPENDITURE PER HEAD, 1901 to 1907-8.

| State. | Half-year to 30/6/1901. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|-----------|----------------------------|---------|---------|---------|---------|---------|---------|---------|
| | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. |

4. Details of Expenditure.—Details of the expenditure of the Commonwealth Government since the inauguration of Federation are given hereunder:—

COMMONWEALTH EXPENDITURE, 1901 to 1907-8.

| Heads of Expenditure. | Half-Year to 30th June, 1901. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|--|-------------------------------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
| | £ | £ | £ | £ | £ | £ | £ | £ |
| Transferred expenditure (incl. new works, etc.)— | | | | | | | | |
| Trade & Customs | 121,444 | 260,322 | 272,622 | 264,617 | 258,331 | 262,058 | 263,625 | 286,113 |
| Defence ... | 233,515 | 934,646 | 746,526 | 635,936 | 907,827 | 949,595 | 1,010,013 | 1,306,598 |
| Postal ... | 809,839 | 2,461,916 | 2,563,617 | 2,692,305 | 2,694,244 | 2,776,940 | 2,948,785 | 3,313,565 |
| Sundry depts. ... | ... | ... | ... | ... | ... | ... | ... | 52 |
| Refds & Advances | ... | ... | 3,042 | 30 | 118 | 25 | 778 | 15,689 |
| "Other" expenditure (excl. new works, etc.)— | 131,255 | 275,862 | 315,564 | 459,571 | 462,309 | 508,924 | 764,116 | 1,240,112 |
| Total ... | 1,296,053 | 3,932,746 | 3,901,371 | 4,252,519 | 4,322,829 | 4,497,542 | 4,987,317 | 6,162,129 |

During the six years between 1901-2 and 1907-8 the total cost of the several departments increased from £3,932,746 to £6,162,129, an increase of £2,229,383, or about 57 per cent. The expenditure in the Department of Trade and Customs increased during the period by only £25,791, or about 10 per cent., but the advances under the other heads were very extensive, amounting to £361,952, or 39 per cent. in the case of Defence; £851,701, or 35 per cent., in that of the Postal Department; and no less than £964,250, or 350 per cent., in the case of "other" expenditure, exclusive of new works, etc. It should be noted in this connection, however, that the increase of £851,701 in the postal expenditure was accompanied by an increase of £927,235 in the postal revenue, and that a very considerable portion of the increase in "other" expenditure was due to the payment of sugar bounties, which amounted to £584,622 in 1907-8, as against *nil* in 1901-2, and to the provision of £193,621 towards the Old Age Pension scheme to come into force on 1st July, 1909.

5. New Works, etc.—As previously mentioned the Commonwealth expenditure on new works, etc., for transferred departments was, prior to 1904-5, included under the head of "transferred" expenditure, but in that and subsequent years has been treated as "other" expenditure and debited to the States *per capita*. For convenience of comparison this expenditure has, in the foregoing table, been shown under the department for which it was incurred. Particulars of the expenditure in each year on new works, etc., are given in the following table:—

COMMONWEALTH EXPENDITURE ON "NEW WORKS, ETC.," 1901-2 to 1907-8.

| Departments. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|-------------------|---------------|----------------|----------------|----------------|----------------|----------------|----------------|
| | £ | £ | £ | £ | £ | £ | £ |
| Trade & Customs | 150 | 53 | 3,467 | 1,980 | 1,814 | 1,162 | 8,972 |
| Defence ... | 57,265 | 22,064 | 113,243 | 200,259 | 171,633 | 195,159 | 440,918 |
| Postal ... | 37,149 | 135,699 | 187,809 | 131,829 | 146,575 | 275,737 | 427,006 |
| Sundry depts. ... | ... | ... | ... | ... | ... | ... | 52 |
| Total ... | 94,564 | 157,816 | 304,519 | 334,068 | 320,022 | 472,058 | 876,948 |

It will be seen that the Commonwealth expenditure under this head has increased rapidly in recent years, the total for 1907-8 being nearly five and a-half times as great as that for 1902-3.

6. "Other" Expenditure.—In accordance with sections 89 and 93 of the Constitution, all expenditure of the Commonwealth other than that incurred solely for the maintenance or continuance as at the time of transfer of any department transferred from the State to the Commonwealth, is required to be apportioned to the several States, each being debited "according to the number of its people." In consequence of this provision all expenditure in connection with transferred departments on account of central office staffs is charged as "other" or new expenditure, and not as "transferred" expenditure. The effect of this is that the ordinary statement in which division is made into "transferred" and "other" expenditure does not, for the purpose of comparison, furnish such complete information as could be desired. It has therefore been deemed expedient to rearrange the items so as to obtain a more accurate statement of the cost of the several branches of the Commonwealth service. In this rearrangement the figures given for 1901-2 represent the cost of service actually rendered in that year, while those for 1902-3 and subsequent years represent in each case the payments made in the respective years. This has been done in order that a fair comparison might be instituted with succeeding years, 1901-2 having borne the very heavy arrears of the initial six months of Federation, and those attaching to the transferred departments at the date of transfer.

7. Cost of Departments, etc.—Prepared in the manner indicated in the preceding paragraph, the cost of the several branches of the Commonwealth service for the years 1901-2 to 1907-8 was as follows:—

COST OF COMMONWEALTH DEPARTMENTS, ETC., 1901-2 to 1907-8.

| Departments, etc. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|-----------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|
| | £ | £ | £ | £ | £ | £ | £ |
| Governor-General ... | 23,185 | 14,832 | 16,793 | 17,170 | 23,759 | 18,612 | 18,927 |
| Parliament ... | 122,796 | 103,939 | 192,354 | 149,934 | 132,527 | 177,061 | 153,414 |
| External Affairs ... | 32,876 | 34,518 | 31,953 | 36,516 | 39,484 | 67,241 | 55,061 |
| Attorney-General ... | 2,680 | 2,627 | 16,347 | 18,583 | 20,894 | 27,609 | 32,216 |
| Home Affairs... | 12,232 | 32,967 | 32,613 | 35,013 | 35,643 | 41,385 | 61,590 |
| Treasury ... | 10,466 | 14,111 | 14,625 | 15,993 | 17,528 | 17,768 | 20,413 |
| Trade and Customs ... | 262,503 | 339,633 | 370,368 | 406,041 | 442,614 | 634,328 | 914,973 |
| Defence ... | 861,218 | 766,880 | 855,764 | 934,593 | 970,345 | 1,035,795 | 1,334,744 |
| Postmaster-General... | 2,389,815 | 2,568,846 | 2,697,454 | 2,699,667 | 2,784,664 | 2,966,098 | 3,359,290 |
| All other Expenditure | 15,397 | 18,018 | 24,248 | 9,514 | 30,094 | 1,420 | 211,511 |
| Total ... | 3,733,218 | 3,901,371 | 4,252,519 | 4,322,829 | 4,497,542 | 4,987,317 | 6,162,129 |

The largeness of the expenditure under the head of Parliament in the years 1903-4 and 1906-7 was in great measure due to the fact that the general elections were held in these years, while the expenditure in connection with the sugar bounties is

mainly responsible for the rapid increase which has taken place in the cost of the Department of Trade and Customs. More detailed reference to the items included under the above general heads is furnished in the succeeding paragraphs.

8. **Governor-General.**—In section 3 of the Constitution it is enacted that, until the Commonwealth Parliament otherwise provides, there shall be payable out of the Consolidated Revenue Fund for the salary of the Governor-General an annual sum of ten thousand pounds, and a proviso is made that the salary of the Governor-General shall not be altered during his continuance in office. The total expenditure in connection with the Governor-General and his establishment for the seven years 1901-2 to 1907-8 is as follows:—

EXPENDITURE, GOVERNOR-GENERAL AND ESTABLISHMENT, 1901-2 to 1907-8.

| Details. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|--------------------------------|---------|---------|---------|---------|---------|---------|---------|
| | £ | £ | £ | £ | £ | £ | £ |
| Salary ... | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 |
| Royal visit ... | 10,000 | — | — | — | — | — | — |
| Repairs, etc., Govt. Houses | 2,553 | 2,405 | 5,991 | 5,869 | 5,625 | 6,232 | 6,034 |
| Contingencies | 6,632 | 2,427 | 802 | 1,301 | 8,134 | 2,380 | 1,893 |
| Total ... | 29,185 | 14,832 | 16,793 | 17,170 | 23,759 | 18,612 | 18,927 |

The expenses connected with the Royal visit were responsible for the largeness of this item in 1901-2, while the heavy charge under the head of Contingencies in 1905-6 was to some extent due to payment of arrears of travelling expenses.

9. **Parliament.**—Under this head have been grouped all the items of expenditure connected with the Parliamentary Government of the Commonwealth, including the salaries of the Ministers and the allowances to senators and members of the House of Representatives. Details for the seven years 1901-2 to 1907-8 are furnished in the table given hereunder:—

EXPENDITURE, COMMONWEALTH PARLIAMENT, 1901-2 to 1907-8.

| Details. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|--|---------|---------|---------|---------|---------|---------|---------|
| | £ | £ | £ | £ | £ | £ | £ |
| Salaries of Ministers ... | 12,000 | 12,000 | 11,929 | 12,000 | 12,000 | 11,947 | 12,000 |
| Allowances to Senators ... | 14,437 | 14,344 | 14,263 | 14,400 | 14,400 | 14,367 | 19,446 |
| Allowances to Members of House of Representatives | 29,918 | 30,000 | 28,259 | 30,025 | 30,000 | 27,389 | 41,231 |
| Officers, staff, contingencies, etc. ... | 30,317 | 27,878 | 28,236 | 28,964 | 29,309 | 27,745 | 32,273 |
| Repairs, maintenance, etc. | 1,983 | 200 | 782 | 991 | 170 | 846 | 672 |
| Printing ... | 22,621 | 13,332 | 14,891 | 14,306 | 16,615 | 12,346 | 19,139 |
| Travelling expenses of Members and others ... | 8,659 | 7,553 | 8,966 | 8,548 | 8,425 | 9,373 | 8,982 |
| Insurance ... | 312 | 337 | 342 | 342 | 342 | 342 | 342 |
| Electoral Office ... | 773 | 1,207 | 3,638 | 3,581 | 2,934 | 5,085 | 5,824 |
| Election expenses ... | 1,776 | 522 | 47,388 | 2,555 | 1,925 | 36,113 | 4,080 |
| Referendum ... | ... | ... | ... | ... | ... | 793 | ... |
| Administration of Electoral Act ... | ... | 1,566 | 33,660 | 34,222 | 16,408 | 30,715 | 9,425 |
| Total ... | 122,796 | 108,939 | 192,354 | 149,934 | 132,528 | 177,061 | 153,414 |

In section 66 of the Constitution provision is made that there shall be payable out of the Consolidated Revenue Fund of the Commonwealth, for the salaries of Ministers of State, an annual sum which, until Parliament otherwise provides, shall not exceed £12,000. This provision is still in force. Allowances to senators and members of the House of Representatives are also provided for in the Constitution, section 48 of which specifies that until Parliament otherwise provides each such allowance shall consist of £400 a year, reckoned from the day on which the member takes his seat. During the second session of the Commonwealth Parliament in 1907 the question of allowances to members was under consideration, and an Act was passed raising the annual allowance from £400 to £600, such increase to date from 1st July, 1907.

10. **External Affairs.**—Since the establishment of the Commonwealth the portfolio taken by the Prime Minister has, with two exceptions, been that of Minister of State for External Affairs. Under the control of this department is placed the expenditure in connection with the Executive Council, the London Office, and Papua: Particulars for the seven years 1901-2 to 1907-8 are as follows:—

EXPENDITURE, EXTERNAL AFFAIRS DEPARTMENT, 1901-2 to 1907-8.

| Details. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|---------------------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|
| | £ | £ | £ | £ | £ | £ | £ |
| Chief Office ... | 7,718 | 9,491 | 8,308 | 7,500 | 7,500 | 9,248 | 9,172 |
| Executive Council | 1,263 | 1,477 | 1,103 | 830 | 836 | 887 | 870 |
| London Office ... | ... | ... | ... | ... | 673 | 1,559 | 2,215 |
| Papua ... | 20,000 | 20,000 | 20,000 | 21,003 | 20,000 | 23,626 | 25,084 |
| Rents, repairs, &c. | 1,732 | 377 | 142 | 191 | 437 | 498 | 469 |
| Miscellaneous ... | 2,163 | 3,173 | 2,400 | 6,992 | 10,038 | 31,423 | 17,251 |
| Total ... | 32,876 | 34,518 | 31,953 | 36,516 | 39,484 | 67,241 | 55,061 |

11. **Papua.**—The sums shewn in the above table as expenditure in connection with Papua represent the Commonwealth grants towards the cost of administering that territory, as well as certain additional amounts expended in 1904-5, 1906-7, and 1907-8. The ordinary revenue and expenditure of Papua are kept distinct from those of the Commonwealth. Apart from the Commonwealth contribution the principal source of revenue is the Custom House. Details for the seven years 1901-2 to 1907-8 are as follows:—

PAPUAN REVENUE, 1901-2 to 1907-8.

| Details. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|-------------------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|
| | £ | £ | £ | £ | £ | £ | £ |
| Customs dues ... | 13,161 | 13,420 | 17,911 | 15,692 | 15,990 | 15,924 | 18,206 |
| Other collections | 3,707 | 5,687 | 4,316 | 3,582 | 4,246 | 5,889 | 7,813 |
| C'wealth grant | 20,000 | 20,000 | 20,000 | 20,000 | 20,000 | 20,000 | 25,000 |
| Total ... | 36,868 | 39,107 | 42,227 | 39,274 | 40,236 | 41,813 | 51,019 |

One of the largest items of Papuan expenditure is the maintenance, etc., of vessels and boats, including the steam yacht "Merrie England," the total outlay under this head for 1907-8 being no less than £10,072. The expenditure on public justice for 1907-8 totalled £10,364, comprising "magistrates, etc.," £4782; "armed native constabulary," £3405, and gaols, £2177. The total expenditure for each of the seven years 1901-2 to 1907-8 was as follows:—

PAPUAN EXPENDITURE, 1901-2 to 1907-8.

| Particulars. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|-------------------|---------|---------|---------|---------|---------|---------|---------|
| | £ | £ | £ | £ | £ | £ | £ |
| Total expenditure | 38,467 | 37,577 | 35,492 | 36,217 | 41,804 | 45,336 | 48,525 |

12. **Attorney-General's Department.**—The rapid growth during recent years in the expenditure connected with this Department has been brought about in large measure by the creation and subsequent extension of the Federal High Court, the total cost of which for the year 1907-8 amounted to £22,522. Details for the seven years 1901-2 to 1907-8 are furnished hereunder:—

EXPENDITURE, ATTORNEY-GENERAL'S DEPARTMENT, 1901-2 to 1907-8.

| Details. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|---|---------|---------|---------|---------|---------|---------|---------|
| | £ | £ | £ | £ | £ | £ | £ |
| Attorney-General's Office | 2,575 | 2,475 | 2,443 | 2,626 | 3,219 | 3,540 | 4,286 |
| Crown Solicitor's Office... | ... | ... | 1,687 | 1,816 | 1,922 | 2,613 | 2,993 |
| Salaries of Justices of High Court ... | ... | ... | 7,023 | 9,500 | 9,500 | 18,815 | 15,500 |
| High Court expenses ... | ... | ... | 3,791 | 4,078 | 5,697 | 6,063 | 7,022 |
| Court of Conciliation and Arbitration ... | ... | ... | ... | 23 | 75 | 505 | 708 |
| Rent, repairs, etc. ... | 30 | 77 | 1,403 | 540 | 469 | 1,073 | 1,707 |

| Total ... | 2,680 | 2,627 | 16,347 | 18,583 | 20,882 | 27,609 | 32,216 |

13. **Home Affairs Department.**—The creation of new departments such as the Bureau of Census and Statistics, and the Meteorological Bureau, and the extension of the field of operations of the Public Works branch, all of which are grouped for general administrative purposes under the Department of Home Affairs, have led to a considerable increase in the expenditure. Particulars for the seven years 1901-2 to 1907-8 are as follows:—

EXPENDITURE, HOME AFFAIRS DEPARTMENT, 1901-2 to 1907-8.

| Details. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|--------------------------|---------|---------|---------|---------|---------|---------|---------|

14. **Treasurer's Department.**—The sub-departments under the control of the Commonwealth Treasurer are the Treasury and the Audit Office. Details of the expenditure of this department for each of the seven years 1901-2 to 1907-8 are furnished hereunder:—

EXPENDITURE, TREASURER'S DEPARTMENT, 1901-2 to 1907-8.

| Details. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|--------------------------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|
| | £ | £ | £ | £ | £ | £ | £ |
| Treasury ... | 4,592 | 7,024 | 7,387 | 7,710 | 8,464 | 8,960 | 10,259 |

| Total ... | 10,466 | 14,111 | 14,625 | 15,993 | 17,528 | 17,768 | 20,418 |

15. **Trade and Customs.**—Under this head have been included the expenditure of all the sub-departments under the control of the Minister of Trade and Customs, as well as the amounts payable as sugar bounties and the expenses in connection therewith. The large increase in the total expenditure which these figures exhibit for recent years has been due in a large measure to the increased amount payable in respect of sugar bounties. Particulars for the seven years 1901-2 to 1907-8 are given in the following table:—

EXPENDITURE, TRADE AND CUSTOMS, 1901-2 to 1907-8.

| Details. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|--------------------------------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|

| New works, etc. ... | 150 | 53 | 3,467 | 1,980 | 1,814 | 1,162 | 8,972 |
| Miscellaneous ... | 93 | 381 | 170 | 3,677 | 7,264 | 11,821 | 13,437 |
| Total ... | 262,503 | 339,633 | 370,368 | 406,041 | 442,614 | 634,328 | 914,972 |

16. **Cost of Collection.**—Excluding from the above the expenditure incurred in connection with Patents, Trade Marks, Copyrights, Quarantine and Sugar and other Bounties, the balance may be considered as representing approximately the cost entailed by the collection of the Customs and Excise revenue of the Commonwealth. Details for the seven years 1901-2 to 1907-8 are as follows:—

COST OF CUSTOMS AND EXCISE COLLECTION, 1901-2 to 1907-8.

| Particulars. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|--|------------------|------------------|------------------|------------------|------------------|------------------|-------------------|
| | £ | £ | £ | £ | £ | £ | £ |
| Gross Customs & Excise revenue | 8,894,319 | 9,635,055 | 9,105,758 | 8,799,530 | 8,999,485 | 9,643,556 | 11,645,352 |
| Cost of collection ... | 262,503 | 273,806 | 271,834 | 269,312 | 277,589 | 284,397 | 312,207 |
| Net revenue ... | 8,631,816 | 9,406,249 | 8,833,924 | 8,529,718 | 8,721,896 | 9,364,159 | 11,333,145 |
| Percentage of cost of collection on gross revenue ... | 2.95% | 2.88% | 2.99% | 3.07% | 3.08% | 2.95% | 2.68% |

It will be seen that throughout the period the cost of collecting the Customs and Excise revenue has been approximately 3 per cent. of the revenue collected, varying only between 2.68 per cent. in 1907-8 and 3.08 per cent. in 1905-6.

17. **Defence.**—The Commonwealth expenditure in connection with Defence, which in 1901-2 amounted to £861,218, had by 1907-8 grown to £1,334,744, the principal factors of this increase being the expenditure in connection with naval matters and that on new works, rifles, etc. Particulars for the seven years 1901-2 to 1907-8 are as follows:—

EXPENDITURE, DEFENCE, 1901-2 to 1907-8.

| Details. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |

| Total ... | 861,218 | 766,880 | 855,764 | 934,598 | 970,345 | 1,035,795 | 1,334,744 |

18. **Postal.**—From a total of £2,383,815 in 1901-2 the cost of the department under the control of the Postmaster-General advanced to £3,345,840 in 1907-8, an increase of £962,025. Of this increase the ordinary cost of working the department was responsible for £530,057, while the expenditure on new works, etc., advanced by £389,857. Details for the seven years 1901-2 to 1907-8 are furnished hereunder:—

EXPENDITURE, POSTAL DEPARTMENT, 1901-2 to 1907-8.

| Details. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |

| Miscellaneous ... | 767 | 2,416 | 5,361 | 3,674 | 2,322 | 1,467 | 3,763 |
| Total ... | 2,383,815 | 2,568,846 | 2,697,454 | 2,699,667 | 2,784,664 | 2,966,098 | 3,359,290 |

19. **Miscellaneous.**—In addition to the foregoing there are certain items which do not come under any of the heads enumerated. For 1907-8 these comprised an expen-

diture of £1104 on machinery and plant for the printing office; £689 as refund of fines under the Immigration Restriction Act; £176 for bounties other than sugar; £15,000 as advance for money order purposes; £1044 towards survey of transcontinental railway route; and a provision of £193,621 towards the payment of old-age pensions.

) Surplus Revenue Paid to States.

1. **Net Revenue.**—As mentioned in sub-section 1 of this section, the Constitution provides under sections 87, 93 and 95 for the payment to the States of all surplus revenue of the Commonwealth, such payment to amount in the aggregate during the continuation of the Braddon clause to not less than three-fourths of the net revenue from Customs and Excise. The expression “net revenue” used in section 87 has been taken to mean the gross revenue less drawbacks and refunds, and in addition cost of collection. This view, adopted by the Commonwealth Government, is that indicated by Quick and Garran in their “Annotated Constitution of the Australian Commonwealth,” in which they say: “The net revenue from duties of Customs and Excise is the total receipts from these sources after deducting the cost of collection. No attempt is made in the Constitution to define the deductions which may be made in order to arrive at the net revenue; this is a matter of book-keeping, which is left wholly to the Executive Government.” In actual practice the statutory three-fourths of net Customs and Excise revenue is ascertained by the Commonwealth Treasury by deducting from the total Customs and Excise revenue (less drawbacks and refunds) the “transferred” expenditure of the Department of Trade and Customs and the expenditure on new works for that department, and taking three-fourths of the result.

2. **Actual Payments of Surplus.**—In the following table a comparison is made between the amounts actually paid to the several States since the inauguration of Federation, and the amounts which, in accordance with the preceding paragraph, the Commonwealth was constitutionally bound to pay. It should be noted that the payments here shewn for any year are those made on account of that year although actually paid after its close:—

PAYMENTS OF SURPLUS REVENUE, 1901 to 1907-8.

| Year. | Payment on Account of Period. | Three-fourths of Net Customs and Excise Revenue. | Amount Paid to States out of the one-fourth retainable by Commonwealth. |
|----------------------------------|-------------------------------|--|---|
| | £ | £ | £ |
| Half-year to 30th June, 1901 ... | 3,599,702 | 3,021,857 | 577,845 |
| 1901-2 ... | 7,364,236 | 6,475,495 | 888,741 |
| 1902-3 ... | 8,204,563 | 7,059,329 | 1,145,234 |
| 1903-4 ... | 7,373,479 | 6,633,147 | 745,332 |
| 1904-5 ... | 7,142,769 | 6,407,483 | 735,286 |
| 1905-6 ... | 7,384,383 | 6,554,473 | 829,910 |
| 1906-7 ... | 7,845,574 | 7,039,573 | 806,001 |
| 1907-8 ... | 8,856,905 | 8,526,165 | 330,740 |
| Total ... | 57,776,611 | 51,717,522 | 6,059,089 |

It will be seen from the foregoing table that during the seven and a-half years which elapsed since the foundation of the Commonwealth the surplus revenue returned to the States exceeded the statutory requirements by no less a sum than £6,059,089; in other words, the Commonwealth, during the period, returned to the States surplus revenue to the extent of about 84 per cent. of the net revenue from Customs and Excise instead of the 75 per cent. required under the Constitution.

3. **Payments to the Several States.**—In the following table are furnished particulars relative to the amounts actually paid to the several States on account of the half-year ended 30th June, 1901, and of each of the financial years 1901-2 to 1907-8:—

SURPLUS COMMONWEALTH REVENUE PAID TO STATES FOR 1901 to 1907-8.

| State. | Half-y'ar to 30th June, 1901. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. | Aggre- gate, 1901-8. |
|------------------|--|-----------|-----------|-----------|-----------|-----------|-----------|-----------|----------------------------|
| | £ | £ | £ | £ | £ | £ | £ | £ | £ |
| N.S.W. ... | 887,573 | 2,381,735 | 3,048,091 | 2,691,287 | 2,532,156 | 2,741,929 | 3,025,187 | 3,617,472 | 20,925,378 |
| Victoria ... | 1,176,784 | 1,919,729 | 2,108,291 | 2,002,605 | 2,010,502 | 2,094,593 | 2,201,013 | 2,377,708 | 15,891,135 |
| Queensland ... | 582,688 | 904,891 | 911,129 | 804,325 | 755,705 | 858,462 | 938,935 | 1,088,267 | 6,794,402 |
| S. Australia ... | 331,671 | 619,838 | 579,316 | 551,710 | 553,295 | 562,000 | 644,564 | 791,664 | 4,634,058 |
| W. Australia ... | 444,929 | 1,221,948 | 1,256,924 | 1,064,035 | 1,031,223 | 871,960 | 774,382 | 751,735 | 7,417,636 |
| Tasmania ... | 176,057 | 316,100 | 300,815 | 264,517 | 250,888 | 255,529 | 261,043 | 280,059 | 2,114,008 |
| Total ... | 3,599,702 | 7,364,239 | 8,204,566 | 7,378,479 | 7,142,769 | 7,384,383 | 7,845,574 | 8,856,905 | 57,776,617 |

The surplus Commonwealth revenue paid on account of the year 1907-8 was higher than that paid on account of 1906-7 in the case of every State except Western Australia, where a decline of £23,147 was experienced. The payments on account of 1907-8 to New South Wales, Victoria, Queensland, and South Australia were the highest on record for those States, while Western Australia received its highest payments in 1902-3 and Tasmania in 1901-2. The largeness of the amount returned by the Commonwealth to the States in respect of 1907-8 was in great measure due to the increased Customs and Excise revenue collected under the new tariff of that year. Prior to 1907-8 the year 1902-3 was that on account of which the aggregate payment by the Commonwealth to the States was highest, caused to a great extent by the large amount collected in grain duties during that year.

4. **The Commonwealth Fourth of Net Customs and Excise Revenue.**—As noted in paragraph number two above, the Commonwealth has in each financial year paid to the States a considerable portion of the one-fourth of net Customs and Excise revenue which it was entitled under the Constitution to spend for its own purposes. The manner in which this extra payment was distributed amongst the several States from 1901 to 1907-8 is exhibited in the following table:—

PAYMENT TO STATES FROM COMMONWEALTH FOURTH OF NET CUSTOMS AND EXCISE REVENUE, 1901 to 1907-8.

| State. | Half-y'ar to 30th June, 1901. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. | Aggre- gate, 1901-8. |
|--------------|--|---------|-----------|---------|---------|---------|---------|----------|----------------------------|
| | £ | £ | £ | £ | £ | £ | £ | £ | £ |
| N.S.W. ... | 145,070 | 319,771 | 491,859 | 327,337 | 306,166 | 371,023 | 400,937 | 292,121 | 2,654,284 |
| Victoria ... | 184,195 | 185,195 | 282,008 | 217,289 | 197,665 | 241,594 | 209,543 | 19,058 | 1,537,147 |
| Q'land ... | 70,525 | 20,188* | 15,077 | 2,455* | 28,811* | 8,639 | 18,812 | 44,114* | 17,485 |
| S. Aust. ... | 76,449 | 115,742 | 81,369 | 42,812 | 63,397 | 65,970 | 81,890 | 55,783 | 583,362 |
| W. Aust. ... | 87,904 | 244,232 | 235,977 | 144,890 | 177,628 | 124,922 | 84,521 | 27,573 | 1,127,647 |
| Tasmania ... | 13,702 | 43,989 | 38,344 | 15,459 | 19,241 | 17,762 | 10,298 | —19,631* | 139,164 |
| Total ... | 577,845 | 888,741 | 1,145,234 | 745,332 | 735,286 | 829,910 | 806,001 | 330,740 | 6,059,989 |

* Amount retained by Commonwealth in addition to one-fourth of the State's net revenue from Customs and Excise.

It will be seen that although the States as a whole received in each year more than three-fourths the net revenue from Customs and Excise, there were four occasions, viz., in 1901-2, 1903-4, 1904-5 and 1907-8 on which the amount returned to Queensland fell short of three-fourths of that State's net revenue from Customs and Excise, and one, viz., in 1907-8, on which the amount returned to Tasmania also exhibited a shortage.

For the whole period of seven and a-half years, however, each State received more than three-fourths of its net revenue from Customs and Excise, the largest aggregate excess being £2,654,284 in the case of New South Wales, and the smallest, £17,485, in that of Queensland.

5. **Proportion Actually Paid.**—For the period of seven and a half years from the 1st January, 1901, to 30th June, 1908, the percentage of net revenue from Customs and Excise duties paid to the several States was as follows:—New South Wales, 86 per cent.; Victoria, 83 per cent.; Queensland, 75 per cent.; South Australia, 86 per cent.; Western Australia, 88½ per cent.; Tasmania, 80 per cent.

(E) **Interstate Customs and Excise Adjustments.**

1. **Reason for Adjustments.**—In order that the duties of Customs and Excise should, during the continuance of the "book-keeping system" of Commonwealth and State finance, be credited to that State in which the goods subject to such duties have been consumed, provision is made in section 93 of the Constitution that "during the first five years after the imposition of uniform duties of Customs, and thereafter until the Parliament otherwise provides, the duties of Customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of Excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former but in the latter State." In the ordinary course duties collected in any State will be credited to that State, and compliance with the above provisions necessitates the debiting of the State with the duty collected when the goods paying such duty pass for consumption into another State, the latter being credited with the amount. Returns shewing such credits and debits thus furnish an indication of the relative positions of the several States as distributors of dutiable goods. States in which the adjustment results in a net debit may be looked upon as distributing States, while those in which the result is a net credit are consuming States.

2. **Interstate Adjustments for 1907-8.**—Particulars for each of the States for the year ended 30th June, 1908; are furnished hereunder:—

INTERSTATE ADJUSTMENTS, 1907-8.

| Total ... | 1,140,331 | 1,140,331 | 343,239 | 343,239 | 1,483,570 | 1,483,570 | — |

3. **Net Results, 1901-2 to 1907-8.**—The net results of the interstate Customs and Excise adjustments for each of the seven years 1901-2 to 1907-8, since the imposition of uniform duties of Customs, are given in the following table.

It will be seen that Victoria and New South Wales are the principal distributing States, Victoria occupying the leading position, while Queensland, Western Australia, and Tasmania are the principal consuming States. South Australia occupies what may

be considered as a middle position, being both a distributor and a consumer on a large scale, though rather more of the latter than the former. The growth of Victoria as a distributing centre for the Commonwealth has been both continuous and rapid:—

INTERSTATE ADJUSTMENTS, 1901-2 to 1907-8.

§ 3. Trust Fund.

1. **Trust Accounts.**—The Trust Fund credit balance on 30th June, 1908, amounted to £669,260, as compared with £158,141 for the corresponding date in the preceding year. Details concerning the various trust accounts contributing to this amount are as follows:—

COMMONWEALTH TRUST FUND, 30th JUNE, 1908.

| Trust Accounts. | Balance at 30th June, 1908. | Trust Accounts. | Balance at 30th June, 1908. |
|---------------------------------------|-----------------------------|-----------------------------------|-----------------------------|
| | £ | | £ |
| Harbour & Coastal Defence (naval) | 250,000 | Papua | 287 |
| Commonwealth Ammunition Material | 39 | Officers' Assurance | 258 |
| Small Arms Ammunition | 21,550 | Defalcations | 271 |
| Defence Clothing Material | 7,166 | Guarantee Fund | 8,691 |
| Deferred Pay—military | 989 | Other Trust Moneys— | |
| Small Arms | 8,062 | Home Affairs | 451 |
| Unclaimed Militia Pay—military | 1,279 | Customs | 53,054 |
| " " naval | 361 | Patents | 118 |
| Customs Officers' Overtime | 625 | Defence | 2,252 |
| Money Order | 40,000 | Post Office | 40,678 |
| Internat'n'l Postal & Money Order | 5,563 | Naval Agreement Act | 219 |
| Pacific Cable Board | 43 | Repatriation of Pacific Islanders | 160 |
| Government Printer | 5,892 | Treasury | 78 |
| Pensions, Departmental | 27,553 | | |
| Invalid and Old Age Pensions | 193,621 | Total | 669,260 |

An interesting feature of the balances at 30th June, 1908, is the inclusion of £250,000 set apart for naval purposes, and £193,621 for invalid and old age pensions. The constitutional right of the Commonwealth to treat moneys so allocated as part of the expenditure for the year, and consequently to exclude them from the surplus revenue returnable to the States, was contested in the High Court at the instance of the States, the verdict of the Court being in favour of the Commonwealth.

2. **Distribution.**—The amounts to credit of Trust Fund in the several States on 30th June, 1908, were as follows:—New South Wales, £297,159; Victoria, £166,613; Queensland, £120,161; South Australia, £38,523; Western Australia, £33,443, and Tasmania, £13,361. The total credit balance of £669,260 was held in the following manner:—On fixed deposit, £53,000; Savings Bank deposit, £31; advances to Postal Department, £40,002; held in London, £150; on current account, £572,328.

SECTION XX.

STATE FINANCE.

§ 1. General.

1. Functions of State Governments.—In any comparison of the finances of the several States due recognition must be made of the actual functions assumed by the respective Governments, and also of the local conditions and requirements in each case. Direct comparisons of public expenditure are thus rendered difficult, owing to the fact that functions which in one State are assumed by the Central Government are in another State relegated to local governing bodies, and further by the fact that costly developmental work may, under certain conditions, be not only economically justifiable, but may be an essential of progress, whilst parsimonious expenditure may be a serious economic blunder. A large expenditure may, therefore, be an indication either of gross extravagance and bad economy on the one hand or healthy and vigorous progress and good economy on the other, and an accurate appreciation of the relative positions of the several States requires a careful survey of their respective local circumstances and conditions.

Similarly as regards revenue, imposts which in some States are levied by the Central Government are in others considered as matters to be dealt with locally. Under these circumstances care is needed in instituting comparisons between the several States, and the particulars contained in this section should be read in connection with those contained in Section XXVI., dealing with Local Government. It should also be noted that in many ways the budgets of the Australian Governments differ materially from those of most European countries, owing to the inclusion therein of the revenue and expenditure of departments concerned in rendering public services, such for instance as railways, tramways, water supply, etc., which, in the other countries referred to, are often left to private enterprise.

2. Accounts of State Governments.—The various financial transactions of the States are in each case concerned with one or other of three Funds—the “Consolidated Revenue Fund,” the “Trust Funds,” and the “Loan Funds.” All revenue collected by the State is placed to the credit of its Consolidated Revenue Fund, from which payments are made under the authority of an Annual Appropriation Act passed by the Legislature, or by a permanent appropriation under a special Act. The hypothecation of the revenue from a specific tax to the payment for some special service is not practised in Australia, all statutory appropriations ranking on an equality as charges on the Consolidated Revenue Fund. The Trust Funds comprise all moneys held in trust by the Government, and include such items as savings bank funds, sinking funds, insurance companies’ deposits, etc. The Loan Funds are credited with all loan moneys raised by the State, and debited with the expenditure therefrom for public works or other purposes.

3. Inter-relation of Commonwealth and State Finance.—The principal alteration in State finance, brought about by Federation, has been that the States have transferred to the Commonwealth the large revenue received by the Customs and Postal Departments, and have been relieved of the expenditure connected with these and the Defence Departments, while, on the other hand, a new item of State revenue has been introduced, viz., the payment to the States of the surplus revenue of the Commonwealth. Provision for

the taking over by the Commonwealth of certain of the public debts of the States is made in section 105 of the Constitution, but up to the present no definite arrangements have been made for any such transfer.

§ 2. State Consolidated Revenue Funds.

(A) Receipts.

1. Sources of Revenue.—The principal sources of State revenue are:—

- (a) Taxation.
- (b) The public works and services controlled by the State Governments.
- (c) Sale of and rental from Crown lands.
- (d) The surplus Commonwealth revenue returned to the States.
- (e) Miscellaneous sources, comprising fines, fees, interest, etc.

Of these sources that yielding the largest revenue for the States as a whole is the group of public works and services, the principal contributor being the Government railways and tramways. Next in magnitude comes the payment of surplus revenue by the Commonwealth, followed in order by Taxation and Land Revenue.

2. Amount Collected.—The following table furnishes particulars of the total amount of consolidated revenue received by the several States during the seven years 1901-2 to 1907-8:—

STATE REVENUES, 1901-2 to 1907-8.

| Year. | N.S.W. | Victoria. | Queensland | S. Aust. | W. Aust. | Tas. | Total. |
|------------|------------|-----------|------------|-----------|-----------|-----------|------------|
| | £ | £ | £ | £ | £ | £ | £ |
| 1901-2 ... | 11,007,356 | 6,997,792 | 3,535,062 | 2,477,431 | 3,354,123 | 826,163 | 28,197,927 |
| 1902-3 ... | 11,296,069 | 6,954,619 | 3,526,465 | 2,530,568 | 3,630,238 | 734,663 | 28,672,622 |
| 1903-4 ... | 11,248,328 | 7,319,949 | 3,595,440 | 2,568,100 | 3,550,016 | 857,668 | 29,139,501 |
| 1904-5 ... | 11,336,918 | 7,515,742 | 3,595,399 | 2,798,849 | 3,615,340 | 852,681 | 29,714,929 |
| 1905-6 ... | 12,283,032 | 7,811,475 | 3,853,523 | 2,864,209 | 3,558,939 | 900,657 | 31,271,885 |
| 1906-7 ... | 13,392,435 | 8,345,534 | 4,307,912 | 3,252,705 | 3,401,354 | 970,843 | 33,670,783 |
| 1907-8 ... | 13,960,763 | 8,314,480 | 4,488,298 | 3,722,090 | 3,376,641 | 1,005,274 | 34,867,646 |

The figures given in this table relate in each instance to the financial year ended 30th June, except in the case of Tasmania, where the figures shewn for 1901-2, 1902-3, and 1903-4 relate respectively to the years ended 31st December, 1901, 1902, and 1903.

During the six years from 1901-2 to 1907-8 the aggregate revenues of the States increased by no less a sum than £6,669,719, or little short of 24 per cent. Increases were in evidence in all the States, the largest being that of £2,953,407 in New South Wales, and the smallest an increase of £22,518 in the case of Western Australia.

3. Revenue per Head.—Details concerning the revenue per head of population, collected in the several States of the Commonwealth during the seven years 1901-2 to 1907-8, are furnished in the table given hereunder. It will be seen that throughout the period Western Australia has received by far the largest amount per head, and that Tasmania has received the least:—

STATE REVENUE PER HEAD OF POPULATION, 1901-2 to 1907-8.

| Year. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tasmania. | All States. |
|------------|---------|-----------|---------|----------|----------|-----------|-------------|
| | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. |
| 1901-2 ... | 8 0 1 | 5 15 7 | 6 19 9 | 6 15 6 | 17 5 7 | 4 16 3 | 7 7 5 |
| 1902-3 ... | 8 1 0 | 5 14 10 | 6 18 1 | 6 18 0 | 17 0 4 | 4 5 0 | 7 8 6 |
| 1903-4 ... | 7 17 7 | 6 1 1 | 6 19 6 | 6 19 3 | 15 12 10 | 4 16 11 | 7 8 5 |
| 1904-5 ... | 7 15 7 | 6 4 2 | 6 17 10 | 7 10 2 | 14 18 5 | 4 14 8 | 7 9 2 |
| 1905-6 ... | 8 4 8 | 6 8 2 | 7 5 11 | 7 11 6 | 13 19 4 | 4 19 6 | 7 14 4 |
| 1906-7 ... | 8 15 5 | 6 15 6 | 8 1 0 | 8 9 6 | 12 19 11 | 5 7 9 | 8 3 6 |
| 1907-8 ... | 8 18 0 | 6 13 3 | 8 5 8 | 9 9 7 | 12 18 2 | 5 9 3 | 8 6 2 |

One of the most noticeable features of the figures here given is the low percentage for "public works and services" and the high percentage for "taxation" in the case of Tasmania. In New South Wales and Queensland land revenue is an important item, while in Queensland the revenue from "public works and services" falls considerably below the Commonwealth average.

7. State Taxation.—(a) *Details, 1907-8.* Prior to the inauguration of Federation the principal source of revenue from taxation was the imposition of duties of Customs and Excise. At the present time the most productive form of State taxation is the income tax, which is now imposed in all the States, Western Australia, the last of the States to adopt this method of taxation, having passed the necessary legislation during the Parliamentary session of 1907. Stamp duties rank next to the income tax in importance. For 1907-8 probate and succession duties occupied third place. In addition to these a land tax is now collected in all the States except Queensland, and license fees of various kinds are collected in all the States, while a dividend tax is collected in Western Australia, and an "ability" tax¹ in Tasmania. The total revenue from taxation collected by the States during the year 1907-8 was £3,601,450, details of which are set forth in the table given hereunder:—

STATE REVENUE FROM TAXATION, 1907-8.

| Taxation. | N.S.W. | Victoria. | Q'land. | S. Aust. | W.A. | Tas. | All States |
|-----------------------------------|------------------|----------------|----------------|----------------|----------------|----------------|------------------|
| | £ | £ | £ | £ | £ | £ | £ |
| Probate and succession duties ... | 310,704 | 304,830 | 42,788 | 70,227 | 41,688 | 33,087 | 802,324 |
| Other stamp duties ... | 254,538 | 240,535 | 142,573 | 79,547 | 59,617 | 58,832 | 835,642 |
| Land tax ... | 178,889 | 89,496 | ... | 93,762 | 11,140 | 57,742 | 431,029 |
| Income tax ... | 215,283 | 317,354 | 271,299 | 212,643 | 5,933 | 87,916 | 1,090,428 |
| Dividend tax ... | ... | ... | ... | ... | 108,034 | ... | 108,034 |
| Ability tax ... | ... | ... | ... | ... | ... | 33,517 | 33,517 |
| Licenses ... | 118,120 | 19,851 | 57,871 | 21,458 | 43,134 | 14,001 | 274,435 |
| Other taxation ... | ... | 5,554 | 11,009 | ... | 7,917 | 1,561 | 26,041 |
| Total ... | 1,077,534 | 977,620 | 525,540 | 477,637 | 277,463 | 265,656 | 3,601,450 |

The most productive forms of taxation in the several States during the year 1907-8 were as follows:—New South Wales, land tax; Victoria, Queensland, South Australia, and Tasmania, income tax; and Western Australia, dividend tax. Land and income taxes are levied in Western Australia, but as they only came into force on 1st January, 1908, the amounts shewn above as collected in that State in the year 1907-8 represent only a fraction of the annual amounts payable.

(b) *Summary, 1901-2 to 1907-8.* The total amount raised by means of taxation by the several State Governments during the seven years 1901-2 to 1907-8 is given in the following table:—

STATE REVENUE FROM TAXATION, 1901-2 to 1907-8.

| Year. | New South Wales. | Victoria. | Queensland. | S. Australia. | W. Aust. | Tasmania. | All States. |
|--------|------------------|-----------|-------------|---------------|----------|-----------|-------------|
| | £ | £ | £ | £ | £ | £ | £ |
| 1901-2 | 1,108,770 | 748,216 | 276,771 | 267,791 | 173,582 | 111,515 | 2,686,645 |
| 1902-3 | 1,108,781 | 878,591 | 415,688 | 398,941 | 221,247 | 105,402 | 3,128,650 |
| 1903-4 | 1,100,193 | 938,147 | 475,184 | 353,432 | 235,114 | 150,091 | 3,252,161 |
| 1904-5 | 1,114,408 | 897,870 | 454,574 | 442,030 | 221,738 | 216,953 | 3,347,573 |
| 1905-6 | 1,297,776 | 990,735 | 494,165 | 369,756 | 260,609 | 248,799 | 3,661,840 |
| 1906-7 | 1,381,305 | 1,110,411 | 540,737 | 411,867 | 266,152 | 276,450 | 3,936,922 |
| 1907-8 | 1,077,534 | 977,620 | 525,540 | 477,637 | 277,463 | 265,656 | 3,601,450 |

1. The "ability" tax is based upon the annual value of the house occupied by the taxpayer, or upon the amount payable by him for board and lodging.

During the five years between 1901-2 and 1906-7 the aggregate State revenue from taxation increased by 48 per cent., the increase varying considerably in the several States. Thus while New South Wales shewed an increase of 25 per cent. and Victoria one of 48 per cent., the Queensland revenue advanced by 95 per cent., and that of Tasmania by no less than 148 per cent. The year 1907-8, however, witnessed a falling-off in taxation in New South Wales, Victoria, Queensland, and Tasmania, and an increase in South Australia and Western Australia. The total decrease in State taxation for the year amounted to no less a sum than £385,472, of which New South Wales was responsible for £303,771.

The revenue from State taxation per head of population, collected in the several States during each of the years 1901-2 to 1907-8, was as follows:—

STATE TAXATION PER HEAD, 1901-2 to 1907-8.

| Year. | New South Wales. | Victoria. | Queensland. | S. Australia. | W. Aust. | Tasmania. | All States. |
|--------|------------------|-----------|-------------|---------------|----------|-----------|-------------|
| | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. |
| 1901-2 | 0 16 1 | 0 12 4 | 0 10 11 | 0 14 8 | 0 17 11 | 0 13 0 | 0 14 1 |
| 1902-3 | 0 15 10 | 0 14 6 | 0 16 3 | 1 1 9 | 1 0 9 | 0 12 2 | 0 16 1 |
| 1903-4 | 0 15 5 | 0 15 6 | 0 18 5 | 0 19 2 | 1 0 9 | 0 17 0 | 0 16 7 |
| 1904-5 | 0 15 4 | 0 14 10 | 0 17 5 | 1 3 9 | 0 18 4 | 1 4 1 | 0 16 10 |
| 1905-6 | 0 17 5 | 0 16 3 | 0 18 9 | 0 19 7 | 1 0 5 | 1 7 6 | 0 18 1 |
| 1906-7 | 0 18 1 | 0 18 0 | 1 0 2 | 1 1 6 | 1 0 4 | 1 10 9 | 0 19 4 |
| 1907-8 | 0 13 9 | 0 15 8 | 0 19 5 | 1 4 4 | 1 1 3 | 1 8 10 | 0 17 2 |

Taking the States as a whole the State taxation increased by three shillings and a penny per head during the six years from 1901-2 to 1907-8, the most marked increase being that of fifteen shillings and tenpence per head in the case of Tasmania. In Queensland the increase amounted to eight shillings and sixpence, in South Australia to nine shillings and eightpence, in Victoria and in Western Australia to three shillings and fourpence, while in New South Wales a decline of two shillings and fourpence took place, owing in large measure to the reductions made in that State in the imposition of income tax and stamp duties. State taxation per head is at present highest in Tasmania and lowest in Victoria.

8. **Commonwealth and State Taxation.**—For the purpose of obtaining an accurate view of the extent of taxation imposed on the people of the Commonwealth by the central governing authorities it is necessary to add together the Commonwealth and State collections. This has been done in the table given hereunder, which contains particulars concerning the total taxation for each of the years 1901-2 to 1907-8, as well as the amount per head of population:—

COMMONWEALTH AND STATE TAXATION, 1901-2 to 1907-8.

| Particulars. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|--------------------|------------|------------|------------|------------|------------|------------|------------|
| | £ | £ | £ | £ | £ | £ | £ |
| C'wealth taxation | 8,894,319 | 9,685,055 | 9,105,758 | 8,799,530 | 8,999,485 | 9,648,556 | 11,645,352 |
| State taxation ... | 2,686,645 | 3,128,650 | 3,252,161 | 3,347,573 | 3,861,840 | 3,986,922 | 3,601,450 |
| Total ... | 11,580,964 | 12,813,705 | 12,357,919 | 12,147,103 | 12,861,325 | 13,635,478 | 15,246,802 |
| Taxation per head | £3 0 6 | £3 6 0 | £3 2 11 | £3 1 0 | £3 2 6 | £3 6 2 | £3 12 8 |

Whilst the Commonwealth taxation increased during the six years by £2,751,033, the State taxation advanced by £914,805, the aggregate increase being £3,665,838. The amount has, however, fluctuated considerably during the period, and has ranged between a minimum of £3 Os. 6d. per head in 1901-2 and a maximum of £3 12s. 8d. per head in 1907-8.

9. **Public Works and Services.**—A very large proportion of the revenue of all the States of the Commonwealth is made up of the receipts from the various public works and services under the control of the several Governments. The principal of these are railways and tramways, harbour works, and water supply and sewerage, while in addition, State batteries for the treatment of auriferous ores exist in Western Australia, and various minor revenue-producing services are rendered by the Governments of all the States. For the year 1907-8 the aggregate revenue from this source totalled £17,511,959, or more than 50 per cent. of the revenue from all sources. Details of revenue from public works and services for the year 1907-8 are as follows :—

STATE REVENUE FROM PUBLIC WORKS AND SERVICES, 1907-8.

| Particulars. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | All States. |
|-------------------------------|------------------|------------------|------------------|------------------|------------------|----------------|-------------------|
| | £. | £. | £. | £. | £. | £. | £. |

| Total ... | 7,158,989 | 4,054,540 | 2,012,648 | 2,068,703 | 1,894,045 | 323,034 | 17,511,959 |

10. **Land Revenue.**—The revenue derived by the States from the sale and rental of Crown lands has, with few exceptions, been treated from the earliest times as forming part of their respective Consolidated Revenue Funds, and has been applied to meet ordinary current expenses. Where the rentals received are for lands held for pastoral or for residential purposes, such application of the revenue appears perfectly justifiable. On the other hand, where the rentals are those of mineral and timber lands, and in all cases of sales of lands, such a proceeding is essentially a disposal of capital in order to defray current expenses. As a matter of financial procedure such a course is open to a very obvious criticism. In the following table particulars of revenue derived from sales and rental of Crown lands are given for the year 1907-8.

STATE LAND REVENUE, 1907-8.

| Particulars. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tasmania. | All States. |
|------------------|------------------|----------------|----------------|----------------|----------------|---------------|------------------|
| | £. | £. | £. | £. | £. | £. | £. |
| Sales ... | 1,016,527 | 205,393 | 150,012 | 117,299 | 147,891 | 55,422 | 1,692,544 |
| Rentals ... | 767,867 | 122,911 | 500,744 | 144,052 | 110,322 | 37,547 | 1,683,443 |
| Total ... | 1,784,394 | 328,304 | 650,756 | 261,351 | 258,213 | 92,969 | 3,375,987 |

11. **Surplus Commonwealth Revenue.**—The payments to the States of surplus Commonwealth revenue represent in each instance a considerable proportion of the State's revenue, and for the year 1907-8 aggregated £8,859,596. The percentage which the surplus revenue paid to each State for 1907-8 was of the total collected by the Commonwealth in respect of that State is shewn in the following table :—

SURPLUS COMMONWEALTH REVENUE PAID TO STATES DURING 1907-8.

| Particulars. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | All States. |
|---|------------|------------|------------|------------|------------|------------|-------------|
| | £ | £ | £ | £ | £ | £ | £ |
| Surplus Commonwealth revenue paid to each State ... | 3,566,371 | 2,449,243 | 1,003,527 | 792,686 | 753,510 | 294,259 | 8,859,596 |
| Total Commonwealth revenue in respect of each State | 5,816,755 | 4,063,736 | 1,967,618 | 1,355,751 | 1,270,732 | 544,442 | 15,019,034 |
| Percentage of surplus on total Commonwealth revenue in respect of State ... | % 61.32 | % 60.28 | % 51.00 | % 58.47 | % 59.80 | % 54.20 | % 58.99 |

It will be seen from the foregoing table that the surplus Commonwealth revenue which the States received for 1907-8 represented about 59 per cent. of the total Commonwealth collections for that year, the balance, 41 per cent., being absorbed in defraying the expenses of the various transferred and new departments under the control of the Commonwealth Government. The largest percentage returned was 61½ per cent., in the case of New South Wales, and the smallest 51 per cent., in the case of Queensland. The percentage for Western Australia differed but slightly from that for the whole Commonwealth.

12. *Miscellaneous Items of Revenue.*—In addition to the foregoing sources of revenue there are in each State several miscellaneous ones, including such items as interest, fines, fees, etc., which for the year 1907-8 aggregated £1,493,654.

(B) Disbursements.

1. *Heads of Expenditure.*—The principal heads of State expenditure from Consolidated Revenue Funds are:—

- (a) Interest and sinking funds in connection with public debt.
- (b) Working expenses of railways and tramways.
- (c) Other public works.
- (d) Police.
- (e) Education.
- (f) Medical and charitable.
- (g) Miscellaneous heads.

Of these items that of interest and sinking fund in connection with public debt is the most important, and for the year 1907-8 represented about 30 per cent. of the aggregate State expenditure from Consolidated Revenue Funds. Next in order for that year was the item of working expenses of railways and tramways, then education, medical and charitable, public works and police in the order named.

2. *Total Expenditure.*—The total expenditure from Consolidated Revenue Funds in the several States during each of the years 1901-2 to 1907-8 is furnished in the table given hereunder:—

STATE EXPENDITURE FROM CONSOLIDATED REVENUE FUNDS, 1901-2 to 1907-8.

| Year. | N.S. Wales. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | All States. |
|------------|-------------|-----------|-----------|-----------|-----------|---------|-------------|
| | £ | £ | £ | £ | £ | £ | £ |
| 1901-2 ... | 11,020,105 | 7,398,832 | 3,967,001 | 2,823,578 | 3,151,427 | 870,442 | 29,231,385 |
| 1902-3 ... | 11,467,235 | 6,759,960 | 3,717,806 | 2,641,789 | 3,521,763 | 850,685 | 28,959,238 |
| 1903-4 ... | 11,319,888 | 7,339,608 | 3,607,864 | 2,707,254 | 3,698,312 | 879,356 | 29,552,282 |
| 1904-5 ... | 11,195,075 | 7,343,742 | 3,581,403 | 3,710,369 | 3,745,224 | 840,184 | 30,415,997 |
| 1905-6 ... | 11,386,864 | 7,261,475 | 3,725,712 | 3,005,499 | 3,632,318 | 853,147 | 29,865,015 |
| 1906-7 ... | 11,876,657 | 7,679,143 | 3,911,797 | 3,396,499 | 3,490,182 | 913,762 | 31,268,040 |
| 1907-8 ... | 12,095,593 | 7,862,246 | 4,373,097 | 3,448,213 | 3,379,006 | 929,885 | 32,088,040 |

As in the case of the table previously given for revenue, the above figures relate to the year ended 30th June, except in the cases of 1901-2, 1902-3, 1903-4, which contain Tasmanian figures for the years ended 31st December, 1901, 1902, and 1903 respectively.

3. **Expenditure per Head.**—Owing to the varying conditions of the several States and the extent to which the different functions of Government are distributed therein between central and local governing authorities, the expenditure per head from Consolidated Revenue Funds differs materially in the several States, being highest in the case of Western Australia and lowest in that of Tasmania. Four of the States, viz., Western Australia, South Australia, Queensland and New South Wales, are above the Commonwealth average per head, and the other two States below. The expenditure per head of population for each State for the years 1901-2 to 1907-8 is as follows:

STATE EXPENDITURE PER HEAD, 1901-2 to 1907-8.

| Year. | N.S.W. | | | Victoria. | | | Q'land. | | | S. Aust. | | | W. Aust. | | | Tas. | | | All States. | | |
|------------|--------|----|----|-----------|----|----|---------|----|----|----------|----|----|----------|----|----|------|----|----|-------------|----|----|
| | £ | s. | d. | £ | s. | d. | £ | s. | d. | £ | s. | d. | £ | s. | d. | £ | s. | d. | £ | s. | d. |
| 1901-2 ... | 8 | 0 | 3 | 6 | 2 | 2 | 7 | 16 | 10 | 7 | 14 | 5 | 16 | 4 | 8 | 5 | 1 | 5 | 7 | 12 | 10 |
| 1902-3 ... | 8 | 3 | 5 | 5 | 11 | 7 | 7 | 5 | 7 | 7 | 4 | 1 | 16 | 10 | 2 | 4 | 18 | 5 | 7 | 9 | 2 |
| 1903-4 ... | 7 | 18 | 7 | 6 | 1 | 5 | 7 | 0 | 0 | 7 | 6 | 10 | 16 | 5 | 11 | 4 | 19 | 5 | 7 | 10 | 6 |
| 1904-5 ... | 7 | 13 | 8 | 6 | 1 | 4 | 6 | 17 | 4 | 9 | 19 | 1 | 15 | 9 | 2 | 4 | 13 | 3 | 7 | 12 | 8 |
| 1905-6 ... | 7 | 12 | 8 | 5 | 19 | 2 | 7 | 1 | 1 | 7 | 18 | 11 | 14 | 5 | 1 | 4 | 14 | 3 | 7 | 7 | 5 |
| 1906-7 ... | 7 | 15 | 7 | 6 | 4 | 8 | 7 | 6 | 2 | 8 | 17 | 0 | 13 | 6 | 8 | 5 | 1 | 5 | 7 | 11 | 10 |
| 1907-8 ... | 7 | 14 | 2 | 6 | 6 | 0 | 8 | 1 | 5 | 8 | 15 | 8 | 12 | 18 | 4 | 5 | 1 | 1 | 7 | 12 | 11 |

In New South Wales, South Australia, Western Australia, and Tasmania decreases in the expenditure per head took place during the year, while in Victoria and Queensland increases were experienced. In the case of Tasmania the expenditure per head in 1907-8 was practically identical with that in 1901-2.

4. **Details of Expenditure for 1907-8.**—The following table furnishes for the year 1907-8 particulars as to the expenditure of the several States under each of the principal heads:—

DETAILS OF STATE EXPENDITURE, 1907-8.

| Particulars. | N.S.W. | | Vic. | | Q'land. | | S. Aust. | | W. Aust. | | Tas. | | All States. | |
|---------------------------------------|-------------------|------------------|------------------|------------------|------------------|----------------|-------------------|---|----------|---|------|---|-------------|---|
| | £ | £ | £ | £ | £ | £ | £ | £ | £ | £ | £ | £ | £ | £ |
| Public debt (int., sinking fund, &c.) | 3,419,773 | 2,092,718 | 1,551,256 | 1,250,579 | 913,954 | 405,746 | 9,634,026 | | | | | | | |
| Rllys. & tramways (working exps.) | 3,503,905 | 2,284,749 | 1,051,736 | 1,051,088 | 1,024,585 | 201,817 | 9,117,850 | | | | | | | |
| Other public works | 215,445 | 479,644 | 104,015 | 214,448 | 167,186 | 30,440 | 1,211,178 | | | | | | | |
| Police | 463,353 | 281,751 | 202,184 | 87,333 | 120,582 | 37,122 | 1,192,330 | | | | | | | |
| Education | 1,037,424 | 781,083 | 348,753 | 198,542 | 189,800 | 71,204 | 2,621,791 | | | | | | | |
| Medical and charitable | 467,739 | 364,162 | 260,718 | 112,520 | 161,868 | 49,444 | 1,416,451 | | | | | | | |
| Miscellaneous | 2,987,949 | 1,578,154 | 856,435 | 583,703 | 801,031 | 134,112 | 6,891,384 | | | | | | | |
| Total | 12,095,593 | 7,862,246 | 4,373,097 | 3,448,213 | 3,379,006 | 929,885 | 32,088,040 | | | | | | | |

5. **Expenditure per Head, 1907-8.**—The expenditure per head of population of the several States for the year 1907-8, under each of the principal items, is given hereunder:—

STATE EXPENDITURE PER HEAD, 1907-8.

| Particulars | N.S.W. | | Victoria. | | Q'land. | | S. Aust. | | W. Aust. | | Tas. | | All States. | | | | | | | | |
|--|----------|-----------|-----------|----------|----------|----------|----------|----------|----------|----------|-----------|----------|-------------|-----------|----------|----------|----------|----------|----------|-----------|-----------|
| | £ | s. | d. | £ | s. | d. | £ | s. | d. | £ | s. | d. | £ | s. | d. | | | | | | |
| Public debt, (interest, sinking fund, &c.) | 2 | 3 | 7 | 1 | 13 | 7 | 2 | 17 | 4 | 3 | 3 | 8 | 3 | 9 | 11 | 2 | 4 | 1 | 2 | 5 | 11 |
| Railways and tramways (working expenses) | 2 | 4 | 7 | 1 | 16 | 7 | 1 | 13 | 10 | 2 | 13 | 7 | 3 | 18 | 4 | 1 | 1 | 11 | 2 | 3 | 6 |
| Other public works | 0 | 2 | 9 | 0 | 7 | 8 | 0 | 3 | 10 | 0 | 10 | 11 | 0 | 12 | 9 | 0 | 3 | 4 | 0 | 5 | 9 |
| Police | 0 | 5 | 10 | 0 | 4 | 6 | 0 | 7 | 6 | 0 | 4 | 6 | 0 | 9 | 3 | 0 | 4 | 0 | 0 | 5 | 8 |
| Education | 0 | 13 | 3 | 0 | 12 | 6 | 0 | 12 | 9 | 0 | 10 | 1 | 0 | 14 | 6 | 0 | 7 | 9 | 0 | 12 | 6 |
| Medical and charitable | 0 | 5 | 11 | 0 | 5 | 10 | 0 | 9 | 7 | 0 | 5 | 9 | 0 | 12 | 4 | 0 | 5 | 5 | 0 | 6 | 9 |
| Miscellaneous | 1 | 18 | 1 | 1 | 5 | 4 | 1 | 11 | 7 | 1 | 7 | 2 | 3 | 1 | 3 | 0 | 14 | 7 | 1 | 12 | 10 |
| Total | 7 | 14 | 0 | 6 | 6 | 0 | 8 | 1 | 5 | 8 | 15 | 8 | 12 | 13 | 4 | 5 | 1 | 1 | 7 | 12 | 11 |

In three of the States, viz., Western Australia, South Australia, and New South Wales, the average State expenditure per head exceeded that for the Commonwealth as a whole, falling short of it in the other three States.

6. Relative Importance.—The relative importance of the items of expenditure enumerated above varies considerably in the several States. This will readily be seen from the following table, giving for each State the percentage of the expenditure under the various items, on the total expenditure for the State :—

PERCENTAGE ON TOTAL STATE EXPENDITURE, 1907-8.

| Particulars. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | All States. |
|---|---------------|---------------|---------------|---------------|---------------|---------------|---------------|
| | % | % | % | % | % | % | % |
| Public Debt (interest, sinking fund, &c.) ... | 28.27 | 26.62 | 35.47 | 36.27 | 27.05 | 48.63 | 30.03 |
| Railways and tramways (working expenses) ... | 28.97 | 29.06 | 24.05 | 30.48 | 30.32 | 21.70 | 28.42 |
| Other public works ... | 1.78 | 6.10 | 2.38 | 6.22 | 4.95 | 3.28 | 3.77 |
| Police ... | 3.83 | 3.58 | 4.62 | 2.53 | 3.57 | 3.99 | 3.72 |
| Education ... | 8.58 | 9.94 | 7.93 | 5.76 | 5.62 | 7.66 | 8.18 |
| Medical and charitable ... | 3.87 | 4.63 | 5.96 | 3.26 | 4.79 | 5.32 | 4.41 |
| Miscellaneous ... | 24.70 | 20.07 | 19.59 | 15.43 | 23.70 | 14.42 | 21.43 |
| Total ... | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 |

Taken together, the interest and sinking fund on the public debt, and the working expenses of the railways and tramways, represented for the year 1907-8 nearly 58½ per cent. of the aggregate State expenditure.

(c) Balances.

1. Position on 30th June, 1908.—On various occasions in each of the States the revenue collected for a financial year has failed to provide the funds requisite for defraying the expenditure incurred during that year, the consequence being a deficit which is usually liquidated either by cash obtained from trust funds, or by the issue of Treasury bills. In some of the States a number of such deficits have occurred, interspersed with occasional surpluses, the result being an accumulating overdraft, which in certain instances assumed very large proportions. Thus during the period of financial stress resultant upon the crisis of 1893 and the drought conditions of succeeding years, the accumulated overdrafts of several of the States grew very rapidly. The very favourable financial conditions of recent years have enabled the various Treasurers to considerably reduce such liabilities from time to time, and at 30th June, 1908, the position of the balances of the several Consolidated Revenue Funds were as set forth in the table hereunder :—

STATE CONSOLIDATED REVENUE FUND BALANCES, 30th JUNE, 1908.

| State. | Cash Credit Balances. | Debit Balance. | | Net Result. |
|-----------------------|-----------------------|-----------------|--|--------------------|
| | | Cash Overdraft. | Overdraft liquidated by Treasury Bills | |
| | £ | £ | £ | £ |
| New South Wales ... | 1,676,924 | ... | 1,214,516 | Cr. 462,408 |

* South Australia proper. † Northern Territory.

(D) Principal State Taxes.**(a) Probate and Succession Duties.**

1. **General.**—Excepting in Western Australia, probate duties have been levied for a considerable time in each State. In the State mentioned such taxation originated in 1895, under the Duties on Deceased Persons' Estates Act. From the provisions of the several State Acts governing the payment of duty which are outlined hereunder, it will be seen that both the ordinary rates and those which apply to special beneficiaries differ widely in several cases. In the following table the amount under which the estates of deceased persons were sworn, is shewn for the years 1901 to 1907 :—

VALUE OF ESTATES OF DECEASED PERSONS, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905 | 1906. | 1907. |
|----------------|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|
| | £ | £ | £ | £ | £ | £ | £ |

* Approximate. † Calendar years 1901, 1902, and 1903 respectively.

2. **New South Wales.**—(i.) *Legislation.* The Acts relative to probate and succession duties at present in force in New South Wales are, in chronological order, as follows :—

- (a) Wills, Probate and Administration Act 1898.
- (b) Stamp Duties Act 1898.
- (c) Probate Duties (Amendment) Act 1899.
- (d) Administration (Validating) Act 1900.
- (e) Stamp Duties Amendment Act 1904.
- (f) Administration Amending Act 1906.

The first-named Act, assented to on 27th July, 1898, repealed, amongst others, the Probate Act of 1890 (two sections excepted), and also the Probate Amendment Act of the same year. On the same day, 27th July, assent was also given to the Stamp Duties

Act, the rates of duty contained in which were in force until the passing of the Probate Duties (Amendment) Act on 22nd December, 1899, when its schedule was repealed and a new rate of duty was imposed.

The Administration (Validating) Act of 1900 was passed in order to validate certain orders of the Supreme Court giving power or leave to sell, mortgage or lease, the real estate of deceased persons.

(ii.) *Rates of Duty.* In lieu of the duties payable on probate and letters of administration as provided for by the Stamp Duties Act of 1898, the following rates are now payable on the total value of the estate of a deceased person after the deduction of all debts, as enacted by the Amending Act of 1899, viz.—Up to £1000, nil; above £1000 and up to £5000, 2 per cent.; then up to £6000, 3 per cent.; then increasing $\frac{1}{2}$ per cent. for each £1000 up to £10,000, for each £2000 up to £40,000, and for each £4000 up to £100,000, the last group, £96,000 to £100,000, being subject to $9\frac{1}{2}$ per cent. Above £100,000 the duty is 10 per cent. Property left by the deceased to his widow or children is subject to half the foregoing rates, if the total value of the estate, after the deduction of all debts, does not exceed £50,000.

3. *Victoria.*—(i.) *Legislation.* The Acts contained in the subjoined list regulate the probate and succession duties of Victoria :—

(a) No. 1060, Administration and Probate Act 1890, with its amendments, No. 1238 of 1891, 1261 of 1892, 1599 of 1898, 1815 of 1903, and 2120 of 1907.

(b) No. 1419, Intestate Estates Act 1896.

(c) No. 1827, Probate Charges Act 1903, and its amendment No. 1970 of 1905.

(d) No. 1862, Administration and Probate Duties Act 1903, with its amendments, No. 1935 of 1904, 1984 of 1905, 2032 of 1906, and 2089 of 1907.

The principal Act, the Administration and Probate Act 1890, was assented to on 10th July, 1890, and came into force on 1st August of the same year. It repealed Acts Nos. 338, 403, 427, 523, 900, 928, 1035 and 1053, and enacted a scale of duties which was enforced until 1st January, 1903, when the Administration and Probate Act of 1903 came into force.

(ii.) *Rates of Duty.* The last-mentioned Act provides for the following scale of duties, as amended by Act No. 1862, on the estate, real and personal, of deceased persons, after the deduction of all debts, viz. :—Less than £200, nil; above £200 and up to £300, $1\frac{1}{2}$ per cent.; then increasing $\frac{1}{2}$ per cent. for each £100 up to £600; then increasing $\frac{1}{2}$ per cent. for each £200 up to £1000; above £1000 and up to £1500, 4 per cent.; then increasing $\frac{1}{2}$ per cent. for each £500 up to £6000; then increasing $\frac{1}{2}$ per cent. for each £1000 up to £19,000; with the exception of the two stages £10,000 to £11,000 and £14,000 to £15,000, which involve an increase of $\frac{2}{3}$ per cent. and whose rates are respectively $7\frac{1}{2}$ and $8\frac{1}{2}$ per cent.; over £19,000 and up to £20,000, $9\frac{1}{2}$ per cent.; and over £20,000, 10 per cent. is charged.

The rates of duty as shewn above also apply to all settlements of property, both real and personal, where the person taking the property is a brother or sister, or descendant of a brother or sister, or by any other person in any other degree of collateral consanguinity to the settlor, but duty at the rate of 10 per cent. is payable on the value of property taken by a stranger in blood to the settlor or donor.

(iii.) *Special Rates.* Property left by the deceased to his widow, children or grandchildren, is subject to the following rates, except that in cases where the total value of the estate after payment of all debts does not exceed £2000 half these rates only are charged :—Up to £500, nil; over £500 and up to £1000, 1 per cent.; over £1000 and up to £2000, 3 per cent.; then increasing by $\frac{1}{2}$ per cent. for each £1000 up to £5000, and by $\frac{1}{2}$ per cent. for each £1000 up to £8000; over £8000 and up to £10,000, 5 per cent.; increasing then by $\frac{1}{2}$ per cent. for each £2000 up to £24,000, for each £4000 up to £80,000, and for each £5000 up to £100,000, the last group £96,000 to £100,000 being subject to $9\frac{1}{2}$ per cent.; over £100,000, the amount payable is 10 per cent.

4. **Queensland.**—(i.) *Legislation.* The collection of probate and succession duties in Queensland is governed by the following Acts:—

- (a) The Succession and Probate Duties Act 1892.
- (b) The Succession Act Amendment Act 1895.
- (c) The Succession and Probate Duties Amendment Act 1895.
- (d) The Succession and Probate Duties Act 1904.
- (e) The Succession Act 1906.
- (f) The Succession and Probate Amendment Act 1906.

The principal Act, the Succession and Probate Duties Act of 1892, which was assented to on 4th October, 1892, and taken as coming into force on 7th September previous, repealed the Succession Duties Act of 1886, and enacted a scale of duties which is still levied.

(ii.) *Rates of Succession Duty.* If the whole succession or successions derived from the same predecessor, and passing upon death to any person, amount in money or principal value to less than £200, no duty is payable; where the value is £200 and less than £1000, 2 per cent. is due; £1000 and less than £2500, 3 per cent.; £2500 and less than £5000, 4 per cent.; £5000 and less than £10,000, 6 per cent.; £10,000 and less than £20,000, 8 per cent.; and when the value is £20,000 or upwards, 10 per cent. is charged.

(iii.) *Special Rates.* Duty at one-half of the above rates is payable when the successor is the wife or husband, or the lineal issue of the predecessor; and at double the rates if the successor is a stranger in blood to the settlor.

(iv.) *Probate and Administration.* In addition to the foregoing succession duties a probate duty of 1 per cent. is payable on all estates having a net value of £300 or over. When the net value of the property of a deceased person does not amount to £300 it is exempt from duty.

(v.) *Exemptions.* Bequests for educational and charitable purposes in Queensland, are exempt from taxation.

5. **South Australia.**—(i.) *Legislation.* Under the four Acts given hereunder the probate and succession duties are collected in South Australia:—

- (a) No. 537, The Administration and Probate Act 1891.
- (b) No. 567, The Succession Duties Act 1893.
- (c) No. 819, The Administration and Probate Act 1903.
- (d) No. 854, The Administration and Probate Amendment Act 1904.

On 25th October, 1893, the Succession Duties Act was assented to, and by it the Probate and Succession Duty Act of 1876, and its two amendments, Nos. 225 of 1881 and 361 of 1885, were repealed.

(ii.) *Rates of Duty.* On the property derived by any beneficiary the duties are assessed on the net value, and the following scale applies where the person taking the property is the widow, widower, descendant or ancestor of the deceased; and likewise where the property is given or accrues to any of the above-mentioned persons under a settlement or deed of gift:—Under £500, *nil*; over £500 and up to £700, 1½ per cent.; over £700 and up to £1000, 2 per cent.; over £1000 and up to £2000, 3 per cent.; over £2000 and up to £3000, 3½ per cent.; increasing then by ½ per cent. for each £2000 up to £7000; over £7000 and up to £10,000, 5 per cent.; increasing then by ½ per cent. for each £5000 up to £20,000, for each £10,000 up to £40,000, for each £20,000 up to £100,000, and for each £50,000 up to £200,000, the duty from £150,000 to £200,000 being 9½ per cent.; above £200,000 the duty is 10 per cent.

Where the person taking the property is a brother, sister, descendant of a brother or sister, or any person in any other degree of collateral consanguinity to the deceased person, or where the property is given or accrues to any of the aforesaid persons under a settlement or deed of gift, the duty is reckoned on the net present value of such property, and is payable at the rates shewn hereunder:—Under £200, 1 per cent.; up to £300, 1½ per cent.; up to £400, 2 per cent.; up to £700, 3 per cent.; up to £1000, 3½ per cent.; up to £2000, 4 per cent.; then increasing 1 per cent. up to each of the following amounts:—£3000, £5000, £10,000, £15,000, and £20,000; above £20,000 10 per cent. is payable.

If the person taking the property, either by will or under a settlement or deed of gift, is a stranger in blood to the deceased or the settlor or donor, as the case may be, duty is charged at the rate of 10 per cent. on the net present value of the property.

(iii.) *Special Rates.* Duty at one-half the rates shewn above is levied when the person who takes is the child under twenty-one years of age or the widow of the deceased or the settlor or donor, provided that the net value of the whole estate be under £2000.

6. **Western Australia.**—(i.) *Legislation.* The only Act relating to probate and succession duties at present in force in Western Australia is the Administration Act of 1903, which was assented to on 31st December, 1903. It repealed a number of Acts, including the Real Estates Administration Act 1893 and the Duties on Deceased Persons' Estates Act 1895, and levied a new scale of duties.

(ii.) *Rates of Duty.* When the total value of the estate, real or personal, of a deceased person, or of the property given or accruing to any person under a settlement or deed of gift, does not, after the deduction of all debts, exceed £1000, duty is payable at the rate of 1 per cent.; where the value exceeds £1000 and does not exceed £3500, 2 per cent. is charged; £3500 and under £5000, 3 per cent.; £5000 and under £7500, 4 per cent.; £7500 and under £10,000, 5 per cent.; £10,000 and under £15,000, 6 per cent.; £15,000 and under £20,000, 7 per cent.; £20,000 and under £30,000, 8 per cent.; £30,000 and under £50,000, 9 per cent.; £50,000 and over, 10 per cent.

(iii.) *Special Rates.* Half the above rates are charged the parent, issue, husband, wife, and issue of husband or wife, who are *bona-fide* residents of, and domiciled in, Western Australia.

7. **Tasmania.**—(i.) *Legislation.* The duties imposed in connection with probates and letters of administration in Tasmania are provided for by the following Acts:—

- (a) The Deceased Persons' Estates Act of 1874 and 1881.
- (b) The Probate (Foreign) Act 1893.
- (c) The Probate Act 1893, with amendment in 1906.
- (d) The Deceased Persons' Estate Management Act 1903.
- (e) The Deceased Persons' Estates Duties Act 1904.

The Probate Duties Act of 1868 levied a scale of rates which remained in force until the passing of the Deceased Persons' Estates Duties Act in 1904, when the former Act was repealed and a new schedule came into operation.

(ii.) *Rates of Duty.* Duty at the rates given below is payable on the property derived from a deceased person, or comprised in a settlement or deed of gift in so far as it includes, or is a portion of—

- (a) His real and personal property in Tasmania, including that over which he had a general power of appointment, exercised by his will, or by the settlement or deed of gift, if the deceased was, at the time of his death, domiciled in Tasmania.
- (b) His personal property, as above, including all debts, money, etc., recoverable in action by the executor in Tasmania, if the deceased was, at time of death, domiciled elsewhere than in Tasmania; and
- (c) Property accruing to any husband by virtue of his right as husband on the decease of his wife.

When the value of the property of the deceased person, settlor, or donor, as the case may be, at the time of his death exceeds £500, and does not exceed £1000, 2 per cent. is payable; exceeding £1000 and not exceeding £2000, 2½ per cent.; £2000 and not over £5000, 3 per cent.; £5000 and not over £20,000, 4 per cent.; £20,000 and not over £100,000, 5 per cent.; and over £100,000, 10 per cent.

(iii.) *Special Rates.* Double the above rates are charged when the property is derived by, or given or accrues to a brother or sister, or the child of a brother or sister of the deceased person, settlor, or donor, but in no case is a duty of more than 10 per cent. payable. When the property is derived by a stranger in blood to the deceased person, settlor, or donor, or accrues to any collateral relation beyond the third degree, the duty is 10 per cent. on the value of the property of any value whatever. No duty is payable in respect of any money which is payable to any person by a friendly society upon the death of a member or his wife or child.

(b) Stamp Duties.

1. **Legislation in the Several States.**—The principal Acts at present in force in the several States relating to stamp duties are as follows:—

- (a) *New South Wales.* Stamp Duties Act 1878, with amendments in 1900, 1904, and 1907.
- (b) *Victoria.* Stamps Act 1890, with amendments in 1892, 1900, and 1904.
- (c) *Queensland.* Stamp Act 1894, with amendment in 1904.
- (d) *South Australia.* Stamp Act 1886, with amendment in 1902.
- (e) *Western Australia.* Stamp Act 1882, with amendments in 1905 and 1906.
- (f) *Tasmania.* Stamp Duties Act 1882, with amendments in 1886, 1888, 1892, 1900 and 1904.

These Acts provide for the payment of duty on bank notes, bills of exchange, and promissory notes, deeds, leases, policies, receipts, transfers, and so forth, all of which with the exception of bank notes are required to be stamped either by an impressed or adhesive stamp, as the case may be.

The revenue derived by the several States of the Commonwealth from the imposition of stamp duties for the years 1901-2 to 1907-8 is shewn in the accompanying table:—

STAMP REVENUE (EXCLUSIVE OF PROBATE AND SUCCESSION DUTIES), 1901-2 TO 1907-8.

| State. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|----------|---------|---------|---------|---------|---------|---------|---------|
| | £ | £ | £ | £ | £ | £ | £ |
| N.S.W. | 250,964 | 240,200 | 252,081 | 268,343 | 299,165 | 343,666 | 254,538 |
| Vic. ... | 195,015 | 192,071 | 194,172 | 199,690 | 222,697 | 240,373 | 240,535 |
| Q'land | 98,580 | 96,358 | 92,079 | 73,554 | 99,631 | 119,397 | 142,573 |
| S. Aust. | 29,776 | 55,589 | 61,899 | 60,894 | 66,480 | 75,034 | 79,547 |
| W. Aust. | 44,433 | 53,500 | 55,768 | 55,064 | 59,200 | 63,634 | 59,617 |
| Tas. ... | 23,455* | 27,364* | 42,093* | 46,048 | 54,080 | 57,198 | 58,832 |
| C'w'lth | 642,223 | 665,082 | 698,092 | 703,593 | 801,253 | 899,302 | 835,642 |

* Calendar years 1901, 1902, and 1903 respectively.

2. **Bank Notes.**—Promissory notes issued by any bank are not required to bear a duty stamp either impressed or adhesive, and may be reissued as often as thought fit. An annual composition has, however, to be paid in lieu of stamp duty. This composition is payable quarterly, and is the same in all States, being at the rate of £2 per annum on every £100 or part thereof of the average annual amount of bank notes in circulation.

On 2nd June, 1893, the Treasury Notes Act of Queensland was assented to, by which the issue of Treasury notes payable on demand was authorised. These notes are now used exclusively by the banks in that State.

3. Bills of Exchange and Promissory Notes.—(i.) *Rates.* In all the States except New South Wales, when a bill of exchange or promissory note is payable on demand, the rate charged is one penny. When the bill was not payable on demand the duty levied in New South Wales, until the Amendment Act of 1907 came into force on 1st January, 1908, was sixpence for every £25 or part thereof, but under this Act no duty is now payable on bills of exchange or promissory notes in that State. The rate in Victoria is sixpence for every £25* up to £100, and one shilling for every £50 over £100. One shilling is charged in Queensland for every £50. For every £25 the duty in South Australia is sixpence if the bill is negotiable in the Commonwealth, but when a bill is drawn in South Australia and payable in any place beyond the Commonwealth, one shilling is charged for every £100, in which case an adhesive stamp only is to be used. In Western Australia, when the amount of the bill does not exceed £25 the duty payable is sixpence, when it exceeds £25 the duty is increased by sixpence for every £25 up to £100, and when it exceeds £100, one shilling for every £50 is charged. An amount of threepence is levied in Tasmania for a bill not exceeding £5; sixpence for one exceeding £5 and under £25; and an additional sixpence for every succeeding £25.

(ii.) *Exemptions.* The chief classes of bills which are exempt from taxation are Government debentures, Treasury notes, drafts on account of Public Service, drafts by banker on banker, letters of credit in the State, on His Majesty's Service, etc.

4. Bills of Lading.—(i.) *Rates.* The charge made for a bill of lading or copy thereof is sixpence in four of the States, viz., New South Wales, Victoria, South Australia, and Tasmania. In Queensland the rate is one shilling, and for a receipt of a bill of lading sixpence, whilst in Western Australia the duty is threepence if the goods do not exceed half a ton in weight or measurement, and sixpence if the goods exceed that quantity. The Acts provide that no bill of lading is to be stamped after its execution.

5. Receipts.—(i.) *Rates.* The duty payable on receipts given on payment of the amount of £2 or upwards in the States of Victoria, South Australia and Western Australia is one penny. Under the provisions of the Stamp Duties Act of 1898 the rate in New South Wales was twopence for £2 or over, but this was repealed by the Stamp Duties Amendment Act of 1907, and no duty is now payable on receipts in that State. Acknowledgments for payment of £1 or upwards were taxed one penny in Queensland under the 1894 Act, but by Amendment Acts of 1901, 1903 and 1904, the first two of which have since been repealed, it was provided that amounts of £1 and less than £2 were to be taxed one penny; £2 and less than £50, twopence; £50 and less than £100, threepence; and £100 or over, sixpence for every £100 or part thereof. By the 1904 Amendment Act of Tasmania, receipts for sums amounting to £2 and not over £5 are subject to a duty of one penny, and when the amount exceeds £5, one penny is charged for every additional £10 or part thereof, provided that the maximum duty on any receipt is fourpence.

(ii.) *Exemptions.* The exemptions from payment of duty on receipts vary considerably in the several States, and amongst others may be mentioned the following:—On His Majesty's Service, banker's receipt for bill of exchange or promissory note, current accounts, savings bank accounts, municipal rates, money orders and postal notes, wages received by labourers, workmen, menial servants, etc.

(c) Land Tax.

1. General.—Queensland is the only State in the Commonwealth in which a land tax is not levied, although it was not until as recently as 1907 that the first tax on land was imposed in Western Australia. In all of the other States the tax dates back to a much earlier period.

* "Or fractional part thereof" is to be understood after all amounts mentioned.

The following table shews the amount collected by means of such taxes in the States in which a land tax was imposed during the financial years 1901-2 to 1907-8:—

LAND TAX COLLECTIONS, 1901-2 to 1907-8.

| State. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|-----------------------|---------|---------|---------|---------|---------|---------|---------|
| | £ | £ | £ | £ | £ | £ | £ |
| New South Wales ... | 306,298 | 320,653 | 335,223 | 332,530 | 336,785 | 345,497 | 178,889 |
| Victoria ... | 97,862 | 92,867 | 106,445 | 97,840 | 103,536 | 92,438 | 89,496 |
| South Australia ... | 76,352 | 105,024 | 77,371 | 115,033 | 94,601 | 90,200 | 93,762 |
| Western Australia ... | ... | ... | ... | ... | ... | ... | 11,140 |
| Tasmania ... | *42,209 | 41,862 | *50,881 | 54,151 | 54,776 | 56,065 | 57,742 |
| Commonwealth ... | 522,721 | 560,406 | 569,920 | 599,554 | 589,698 | 584,200 | 431,029 |

* Calendar years 1901, 1902, and 1903 respectively.

2. **New South Wales.**—(i.) *Legislation.* The following Acts relating to the levying, assessment, and collection of land tax are at present in force in New South Wales:—

- (a) Land and Income Tax Assessment Act 1895, with amendments in 1896, 1897, 1898, and 1904.
- (b) Land Tax Act 1895, with amendments in 1899, 1900, and 1902.
- (c) Local Government Act 1906.

The principal Act, the Land and Income Tax Assessment Act of 1895, which was enacted for the purpose of establishing a system of direct taxation by means of a tax on land, as well as for other objects, was assented to on 12th December of that year. The Land Tax Act of 1895, assented to on the same day as the above-mentioned Act, provided for a tax which was amended in respect of certain leased lands by the amending Act of 1902, and suspended in cases, which will hereinafter be referred to, by the Local Government Act of 1906.

(ii.) *Rates.* Under the provisions of the principal Act a tax is levied on the unimproved value of all land after the deduction of £240, which deduction is only made once in the case of an owner of more estates than one. Land that is subject to mortgage is liable to a deduction each year from the tax on the unimproved value of a sum equal to the income tax leviable for that year on the interest derivable from the whole mortgage on the land, improvements included. A tax of one penny in the £ of the unimproved value was declared by the Land Tax Act of 1895. The Act of 1902, which only applies to land while it is subject to a lease from the owner which was current at the end of the year 1902, and of which not less than thirty years were at such time unexpired, and land that is subject to a lease from the owner made after the commencement of the Act for a term of not less than thirty years, provided for a similar tax to be paid conjointly by owners and lessees, according to an adjustment made by the Commissioners. Under the Local Government Act of 1906 the operation of the land tax is suspended in the case where a shire or municipality has levied a tax on the unimproved capital value of the rateable land within its boundaries.

(iii.) *Exemptions.* Some of the principal lands on which no taxation is payable are as follows:—

- (a) Crown lands which are not liable to right of purchase, and lands held by way of conditional or special lease and homestead selections under any Crown Lands Act.
- (b) Lands vested in His Majesty or in any person for or on behalf of His Majesty.
- (c) Lands vested in the Railway Commissioners.
- (d) Public roads and thoroughfares; reserves for health, recreation or enjoyment, parks, cemeteries, etc.

- (e) Lands occupied or used exclusively for public hospitals, benevolent and charitable institutions, churches, universities, affiliated colleges, mechanics' institutes, etc., and lands on which are erected public markets, town halls, etc., and land vested in any council, municipality, hospital, or affiliated college.
- (f) Land vested in trustees for the use of agricultural, horticultural, pastoral or zoological show purposes.
- (g) Land used exclusively for the site of a residence of a minister of religion ministering at some place of public worship, and land used as a site for a school attached to, or connected with, any place of public worship.

3. **Victoria.**—(i.) *Legislation.* The Land Tax Act of 1890 (No. 1107), which was assented to on 10th July, 1890, and which repealed the Act of 1877, is the only Act now in force in Victoria. Under this Act every "landed" estate, which is taken to mean land of upwards of 640 acres in extent, forming one area or separate areas not more than five miles apart and valued at over £2500, is subject to taxation.

(ii.) *Rates.* The owner of one or more "landed" estates is taxed every year at the rate of $1\frac{1}{4}$ per cent. on the capital value of his estate above the sum of £2500. The Act provides for the appointment of officers, whose duty it is to estimate the grazing capabilities of the land in every "landed" estate and to classify such under one of the following four divisions, viz.:—

- (a) Land capable of carrying two or more sheep to the acre to be returned as first-class and valued at £4 per acre.
- (b) Land carrying three sheep to two acres, and less than two sheep to the acre, second-class, and valued at £3 per acre.
- (c) Land carrying one sheep to the acre, and less than three sheep to two acres, third-class, and valued at £2 per acre.
- (d) Land which is not capable of grazing one sheep to the acre, fourth-class, and valued at £1 per acre.

4. **South Australia.**—(i.) *Legislation.* The administration of the land tax in South Australia is governed by the following Acts:—

- (a) Taxation Act 1884, with amendments in 1885, 1887, 1894, 1900, 1902, 1903, 1904, and 1905.
- (b) Increase of Taxes Act 1902.

On 14th November, 1884, the principal Act, viz., the Taxation Act, was assented to. It provided for a tax to be paid on the unimproved value of any land in the State of South Australia, but the rate was increased by subsequent Acts, as will be shewn below.

(ii.) *Rates.* The principal Act declared a tax of one half-penny for every £1 sterling in the amount of the taxable value, and the amending Act of 1894 imposed an additional tax of one half-penny for every £1 exceeding the amount of £5000 of the total assessed unimproved value owned by any party. Under the provisions of the Increase of Taxes Act of 1902 the general rate was augmented by one farthing in the £1, and a still further charge of one farthing was made by the 1904 amendment, making a total general rate now payable of one penny in the £1. The last-mentioned Act also increased by one farthing the tax payable on land valued over £5000, as provided in the Act of 1894, the present rate payable on property exceeding £5000 in value being, therefore, one penny three farthings for every £1 of the total assessed unimproved value over that amount. In the case of absentees an addition of 20 per cent. to these rates is provided for under the Amending Act of 1894. Under this Act absenteeism consisted of absence from the State of South Australia for the period of two years prior to the date on which the tax became due, but the duration of absence was reduced to twelve months by the amendment Act of 1904.

(iii.) *Exemptions.* The subjoined is a list of lands that are free from taxation:—

- (a) Land of the Crown which, for the time being, is not subject to any agreement for sale or right of purchase.
- (b) Park lands, public roads, cemeteries, and reserves.
- (c) Land used solely for religious or charitable purposes, or by any public institute.

5. *Western Australia.*—(i.) *Legislation.* The Land and Income Tax Assessment Act of 1907—the first Act relating to the payment of a tax on land in Western Australia—was assented to on 20th December, and came into force on 1st January following. A tax on the unimproved value of land was imposed by the Land Tax and Income Tax Act, which received assent and came into force on the same day as the above-mentioned Act.

(ii.) *Rates.* A tax at the rate of one penny for every pound sterling of the unimproved value of land is charged, provided that the aggregate value of the land held exceeds £50. A rebate of one half of the tax levied is allowed to every owner of improved land.

(iii.) *Exemptions.* The lands specified below are exempt from assessment for taxation:—

- (a) All lands owned by or on behalf of His Majesty.
- (b) Public roads and thoroughfares, public reserves for health, recreation, or enjoyment, and public parks, university endowments, cemeteries and commons.
- (c) Land used in connection with any public hospital, benevolent, charitable or religious institution, mechanics' institute, school of art, etc., and land on which is erected any State market, town hall, or municipal chambers.
- (d) All lands held as mining tenements, and lands dedicated to, or vested in trustees, and used for zoological, agricultural, pastoral, or horticultural show purposes, or other public scientific purposes.
- (e) Land, the unimproved value of which does not exceed £50.

6. *Tasmania.*—(i.) *Legislation.* The Land Tax Act of 1905, which was assented to on 30th September, and amended later on in the same year, consolidated the laws relating to land tax in Tasmania. It repealed the Act of 1888 (which was, until then, the principal Act), and also its eight amendments.

(ii.) *Rates.* When the total value of all the land of any taxpayer is under £5000, the rate of tax on such total capital value is one-halfpenny in the £1 sterling; when the value is £5000 and under £15,000, five-eighths of a penny is payable; £15,000 and under £40,000, three farthings; £40,000 and under £80,000, seven-eighths of a penny; and when the value is £80,000 and over, the rate charged is one penny in the £1 sterling. The owner of any land subject to mortgage, etc., may furnish to the Commissioner such particulars as may be required, and is entitled to deduct from the tax demanded of him, one-sixth of a penny for every £1 of the total amount advanced on such mortgage.

(iii.) *Exemptions.* The number of exemptions as contained in the principal Act is too lengthy to be given in detail, and a few of the most important only are herewith appended:—

- (a) Lands of the Crown which, for the time being, are not subject to lease, sale etc., and land, the property of and occupied by or on behalf of His Majesty.
- (b) Botanical gardens at Hobart and Launceston.
- (c) Public roads, cemeteries, reserves, and recreation grounds.
- (d) Land on which is built any public library, museum, hospital or any building used solely for charitable or religious purposes, or State Schools.
- (e) Any land owned by any local authority, or any local governing or statutory public body.

(d) Income Tax.

1. **General.**—A duty on the income of persons, whether it be derived from personal exertion or from the produce of property, is now imposed in all the States of the Commonwealth. As will be seen in dealing with the different States, the rates, exemptions, etc., are widely divergent, but the general principle of the several Acts is strikingly consistent. The Dividend Duties Acts of Queensland and Western Australia—the former of which is now repealed—supplied to a certain extent the place of an income tax in those States in former years, but, with the increasing demands upon the State Treasury, the levying of a direct income tax has been resorted to.

In the following table particulars are furnished concerning the total amount collected in the several States during the years 1901-2 to 1907-8. In the case of Queensland and Western Australia the amount of dividend duty collected is included, as is also the amount of ability tax in Tasmania, these taxes being closely allied to the income-tax:—

INCOME, DIVIDEND, AND ABILITY TAXES, 1901-2 to 1907-8.

| State. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|--------------|---------|-----------|-----------|-----------|-----------|-----------|-----------|
| | £ | £ | £ | £ | £ | £ | £ |
| N.S.W. ... | 211,871 | 224,306 | 216,655 | 231,442 | 276,299 | 283,422 | 215,283 |
| Victoria ... | 220,645 | 415,353 | 311,178 | 317,290 | 318,233 | 355,148 | 317,354 |
| Queensland | 66,204 | 222,149 | 222,343 | 253,918 | 264,957 | 284,476 | 271,299 |
| S. Aust. ... | 80,893 | 114,720 | 121,469 | 136,866 | 128,756 | 166,582 | 212,643 |

| C'wealth ... | 685,706 | 1,119,078 | 1,034,245 | 1,147,132 | 1,224,051 | 1,323,493 | 1,231,979 |

* Calendar years 1901, 1902, and 1903 respectively.

2. **New South Wales.**—(i.) *Legislation.* The Acts under which the administration of the income tax is carried out in New South Wales are as follows:—

- (a) Land and Income Tax Assessment Act 1895, with amendments in 1896, 1897, 1898, and 1904.
- (b) Income Tax Act 1895, with amendment in 1907.
- (c) Taxation Amending Act 1905 and 1906.

The Land and Income Tax Assessment Act, which was assented to on 12th December, 1895, and came into force on the first day of the following year, is the principal Act. Under this Act the amount of taxable income from all sources for the year immediately preceding the year of assessment is the amount on which tax is payable, except in the case of income earned outside the State of New South Wales, which is not subject to taxation. The 1898 Act declared that for the purposes of taxation, the extracting from the soil, winning, producing, or manufacturing in the State of any product, commodity or substance and its export, is part of the carrying on of such trade in New South Wales, and the value of such product, etc., when exported is income earned in the said State.

(ii.) *Rates.* Under the Income Tax Act of 1895 the rate payable in New South Wales is sixpence in the pound on the amount of all incomes which exceed £200 per annum.

(iii.) *Exemptions.* The subjoined is a list of incomes, revenues, and funds which are exempt from the payment of income tax:—

- (a) Income not exceeding £200 per annum.
- (b) Revenues of municipal corporations or other local authorities.

- (c) Incomes of mutual life assurance societies, and of other companies or societies not carrying on business for purposes of profit or gain.
- (d) Dividends and profits of the Savings Bank of New South Wales, the Post-office Savings Bank, and the income of registered friendly societies.
- (e) Incomes and revenues of all ecclesiastical, charitable, and educational institutions of a public character.
- (f) Income derived from the ownership, use, or cultivation of land subject to land tax.

The exemptions declared in sub-sections (b) to (e) above do not extend to the salaries and wages of persons-employed by such corporations, companies, etc.

iv.) *Deductions.* In the case of a company the person liable to taxation in respect of an income exceeding £200 was, under the principal Act, entitled to a deduction of £200 in the assessment of such income, but by the Amendment Act of 1907, which came into force on 1st January, 1908, it has been provided that the deduction is in the first place to be made from so much of the income as is derived from personal exertion. The latter Act also provides—(a) that where the income derived from personal exertion is less than £200 the deduction is to be made to the extent of such income, and any part of the £200 not applied in such deduction is to be taken from the income derived from the produce of property; and (b) when the income of any person, not being a company, which is obtained by personal exertion, exceeds £200, he is entitled to a further deduction of the amount by which such income exceeds £200, provided that the total deductions do not, in any case, exceed £1000.

In addition to the above, deductions are allowed on account of losses, repairs, cost of earning incomes, etc., and also on account of expenditure not exceeding £50 per annum on life insurance.

3. *Victoria.*—(i.) *Legislation.* The principal Act in Victoria, the Income Tax Act of 1895, was assented to on 29th January of that year. On the 24th December following the Income Tax Rate Act received assent, and since then, with one exception, an Act has been passed each year declaring rates for the year ending 31st December following the date on which the Act came into force. The first scale of taxation was provided for by the Income Tax Rate Act 1895, and remained in force until 1st January, 1903, when the first amendment of 1903 came into force. The rates contained in the latter Act were superseded when the second amendment of 1903 came into operation, and were further altered by the 1904 Act, the rates of which are in force at present.

(ii.) *Rates.* Under the provisions of the last-mentioned Act a person, not being a company, is subject to the following rates of duty on the amount of his income from personal exertion, viz.—For every £1 up to £500, threepence; over £500 and up to £1000, fourpence; £1000 and up to £1500, fivepence; and over £1500, sixpence; with double these rates if the income be derived from property. An exemption of £156 was allowed under the above Act, but this was increased to £200 by the Act of 1906, and that sum is still exempt from taxation. The Act of 1907 provides that the amount of income tax, computed on the above basis, to be payable by a person, not being a company, for the year ending 31st December, 1908, shall be reduced by 20 per cent. Land used as a residence by the owner is deemed to return 4 per cent. on its actual capital value.

(iii.) *Special Rates.* (a) A tax of sevenpence is levied on the income of any company liable to tax, not being a life assurance company, for every pound sterling of the taxable amount thereof, and a similar tax of eightpence on a company which carries on in Victoria the business of life assurance; and (b) a tax of five pounds on every £100 of the amount payable to him for the carriage of passengers, live stock, mails, or goods shipped in Victoria, is imposed on every owner or charterer of a ship whose principal place of business is out of Victoria.

(iv.) *Exemptions.* Some of the most important exemptions from taxation are as follows:—

- (a) Persons whose income does not exceed £200.
- (b) Income of the Governor, a Minister of the Crown, Board of Land and Works, Railway Commissioners, Harbour Trust, Board of Works, Fire Brigades, Savings Bank, University, Working Men's College, or any Public College affiliated to the University.
- (c) Income of religious bodies, registered friendly, provident, building and trade union societies.
- (d) Trust societies, associations, etc., not carrying on business for purposes of gain to members; mutual fire insurance companies and fire or marine insurance companies, licensed under the Stamps Acts, whose head office is in Australia, and mining companies.
- (e) Interest accruing to any person not resident in Victoria from stock, debentures or Treasury bonds of the Government of Victoria, or issued by any public or municipal trust, body or corporation.

(v.) *Deductions.* Expenditure incurred in Victoria by any taxpayer in the production of his income, and all taxes payable by him (income tax excepted) are allowed to be deducted from the gross amount of his income; as is also a sum not exceeding £50 from the amount of premiums paid for life assurance; but no deduction by way of exemption from income tax is permitted to a person who has been out of the State for six consecutive months in the year during which the income was received; or for any sum expended on repairs of premises, implements, etc., used for the purpose of trade, or for bad debts and the maintenance of the families of taxpayers.

4. *Queensland.*—(i.) *Legislation.* The laws under which the income tax of Queensland is regulated are contained in the Income Tax Act of 1902, and its amendments of 1902, 1904, 1905, 1906, and 1907. The first-named, which is the principal Act, was assented to on 1st December, 1902. The Dividend Duty Act of 1890, which imposed a tax on the dividends declared by public companies having their head office or place of business in Queensland, was repealed by the Income Tax Amendment Act of 1904, and in lieu thereof the rates that are shewn in (c) below are enforced.

(ii.) *Rates.* The present rates of duty as laid down in the Amendment Acts of 1906 and 1907 are as follows, provided that the total income of a person, not being a company or an absentee, exceeds £200:—

- (a) On the income derived from personal exertion:—Where the total income does not exceed £500 the tax levied is sixpence for every pound; where it exceeds £500 and does not exceed £1000, sixpence for every pound of the first £500 and sevenpence for every pound over £500; where it exceeds £1000 and does not exceed £1500, sevenpence for every pound of the first £1000 and eightpence for every pound over £1000; and when the income exceeds £1500, eightpence for every pound is payable.
- (b) On the income derived from the produce of property the rate is ninepence for every pound.
- (c) On the income of all companies, or of an absentee, that is, a person not domiciled in Australia, one shilling in the pound is charged, provided that in the case of a company whose head office is in Queensland, the income is assessed at not less than the amount of dividends declared during the year, and if the profits remain undistributed amongst the shareholders, only sixpence in the pound is payable upon such undistributed profits. In the case of foreign companies, that is, companies whose head office is outside Queensland, special rules are given in the Act for determining the taxable amount of income.

(iii.) *Exemptions.* Included in the list of exemptions are the following incomes which are free from taxation :—

- (a) Income of a person, not being a company, which does not exceed £200.
- (b) Income of the Governor of Queensland, and the revenues of local bodies derived for purposes of local self-government.
- (c) Incomes of societies and institutions not carrying on business for purposes of profit or gain, and of any registered friendly societies.
- (d) Incomes and revenues of religious, charitable, and educational institutions of a public character.
- (e) Incomes arising or accruing from debentures, stock or Treasury bills issued by the Government of Queensland, or derived as dividends from any company which has paid in Queensland income tax on the profits from which such dividends are paid.

(iv.) *Deductions.* When the income of a person, not being a company or an absentee, exceeds £200 per annum, the deduction of £200 is, in the first place, made from the income, if any, derived from personal exertion. The amount of all premiums not exceeding £50 paid by a taxpayer in respect of life assurance policies, or into any super-annuation fund, etc., and all losses and outgoings actually incurred in Queensland by him in production of his income, are also amongst the deductions which are allowed.

5. **South Australia.**—(i.) *Legislation.* Under the Acts given herewith the income tax of South Australia is collected :—

- (a) Taxation Act 1884, with amendments in 1885, 1887, 1894, 1900, 1902, 1903, 1904, and 1905.
- (b) Additional Income Tax Act 1893.
- (c) Income Tax Continuance Act 1893, with amendments in 1897 and 1898.
- (d) Increase of Taxes Act 1902.

On the 14th November, 1884, the principal Act, the Taxation Act, was assented to. The rates of duty enforced thereby were superseded in order by the Additional Income Tax Act of 1893, the Amendment Act of 1894, the Increase of Taxes Act of 1902, and the Amendment Act of 1903; the scale enacted by the latter Act still remaining in operation.

(ii.) *Rates.* Under the last-mentioned Act the income of every person of the value of £150 or over is subject to a tax of fourpence half-penny for every pound up to and inclusive of £800, and sevenpence for every pound above that amount if the income be derived from personal exertion; but if the income consist of the produce of property, the rate is ninepence for every pound up to and inclusive of £800, and thirteence half-penny for every pound above the sum of £800.

(iii.) *Exemptions.* The following incomes are not subject to the payment of income tax :—

- (a) Income of every person under the value of £150.
- (b) Income of municipal corporations and district councils.
- (c) Income of companies, public bodies and societies, not carrying on business for the purpose of gain to be divided among the shareholders, and the income of all friendly societies.
- (d) Income derived from land on which land tax is payable, provided that such income does not exceed 5 per cent. of the actual value thereof.
- (e) Income derived from land and produced by personal exertion where the land does not exceed £1000 in unimproved value.

(iv.) *Deductions.* All expenses, etc., actually incurred by a taxpayer in the production of his income are deducted from the gross amount of his income. If he has been out of South Australia for twelve consecutive months prior to the date on which the tax

falls due, or if his net income from all sources exceeds £400, no deduction of any kind is allowed. In the case of an income which exceeds £150, that sum is deducted from the net amount of income derived from the produce of property, but if such income does not amount to £150, the difference is taken from that derived from personal exertion. No deductions are allowed for (a) cost of maintenance of a taxpayer and his family or establishment; (b) cost of implements, etc., for purposes of the trade, except renewals for wear and tear; or (c) domestic and private expenses.

6. **Western Australia.**—(i.) *Legislation.* On 20th December, 1907, the first Income Tax Act of Western Australia received assent under the title of the Land and Income Tax Assessment Act 1907, and on the same day the Land Tax and Income Tax Act was passed, declaring rates for the year ending 30th June, 1908. The first-named Act provides that when the amount due from taxation exceeds the sum of twenty shillings, the same is payable in two equal half-yearly instalments. Under the second Act only half the tax levied for 1907-8 is required to be collected and is to be paid in one sum. The two Acts thus practically came into force on 1st January, 1908.

(ii.) *Rates.* A tax of fourpence in the pound is levied on the annual amount of all incomes exceeding £200 per annum. An additional 50 per cent. is payable on the income of any person who has not been resident in the Commonwealth of Australia during any part of the year preceding the year of assessment, provided that he has not been absent on public service.

(iii.) *Exemptions.* The following are the most important cases of incomes, revenues, and funds exempt from income tax:—

- (a) Incomes not exceeding £200 per annum.
- (b) Revenues of municipal corporations, road boards, or other statutory public bodies.
- (c) Incomes of life assurance companies and of companies or societies not carrying on business for the purposes of profit or gain.
- (d) Dividends and profits of companies subject to duty under the Dividend Duties Act, and of the Government Savings Bank and Agricultural Bank.
- (e) Income of the Governor of Western Australia, and of all ecclesiastical, charitable and educational institutions of a public character.
- (f) Incomes arising or accruing to any person from Western Australian Government debentures, inscribed stock, and Treasury Bills.
- (g) Income derived from land on which land tax is payable.

(iv.) *Deductions.* Sums expended by a taxpayer for repairs of premises, and expenses, etc., incurred in the production of his income are deducted from the amount on which duty is payable; as are also sums not exceeding £50 in the aggregate which are paid as life assurance premiums or in connection with fidelity guarantees or bonds. The amount paid to a taxpayer's sons and daughters, over the age of sixteen years, employed in his trade or occupation; and a sum representing ten pounds for each child under the age of sixteen residing with, and dependent on him, are also allowed to be deducted from his income.

(v.) *Dividend Duties Act in Western Australia.* This Act was passed in order to impose a tax on the dividends or profits of incorporated companies and repealed the Company Duties Act passed in 1899. The Dividend Duties Act was passed on 20th December, 1902, and an amendment was assented to on 14th December, 1906. The principal Act provides that within seven days after the declaration of a dividend by a company carrying on business in Western Australia such company shall pay to the Colonial Treasurer a duty equal to one shilling for every pound of the amount or value of such dividend. A company that carries on in the State any insurance or assurance business exclusively (not being a life assurance company) is required to pay, on or before

1st March in each year, a sum equal to twenty shillings for every £100 of premiums, and a proportionate sum for every fraction of £100 of such premiums. The rates payable by shipping companies are 5 per cent. of 5 per cent. on all inward or outward traffic, including passenger fares, and 5 per cent. of the profits on sales of coal or other goods, or of the profit of vessels trading exclusively within the State.

7. *Tasmania.*—(i.) *Legislation.* The Income Tax Act of 1902, which received assent on 20th December, 1902, and came into force on the following 1st January, and its amendment of 1904, are the Acts which govern this form of taxation in Tasmania. The first-named Act repealed the Real and Personal Estates Duties Act of 1880 and five of its amendments.

(ii.) *Rates.* The duty levied by the principal Act as amended by the 1904 Act is one shilling for every pound sterling of the taxable amount derived either from personal exertion or from the produce of property, provided that the income is £100 or over per annum. The same scale also applies to the income of any company except those that are specially mentioned below, and to dividends. Special rules for determining the taxable income of certain foreign companies are given in the Act.

(iii.) *Exemptions.* The exemptions from taxation in this State comprise the following:—

- (a) Income of any person, not being a company, under £100 per annum, provided that such income is not received as a prize in any lottery authorised by law in Tasmania.
- (b) Revenues of Municipal Corporations, Road Trusts, Town and Marine Boards, Water Trusts and local government bodies.
- (c) Incomes of companies, societies, etc., not carrying on business for the purposes of gain to the shareholders, and registered friendly societies.
- (d) Income of the Governor of Tasmania.
- (e) Income derived as rent for the use and occupation of land that is subject to land tax.
- (f) Income of every person arriving in Tasmania for a period of six months after his arrival.

(iv.) *Deductions.* When a person's income is £100 and under £400 the following deductions are allowed:—If it be £100 and less than £110, a deduction of £80; £110 and under £120, £70; £120 and under £150, £60; then for every increase of £50 in the income the deduction is reduced by £10. On incomes amounting to £400 or more no deduction is permitted. When the income is derived partly from personal exertion and partly from the produce of property the deduction is made from the part derived from personal exertion, and if such part of the income is insufficient to allow the full benefit of such deduction, then the balance is made up from the part of the income derived from property. Losses, outgoings, etc., and rent paid by a tenant of land and buildings occupied and used for carrying on his business are not deducted, except the rent of such portion as is used for the residence of the occupier. This also applies in the case of the owner of property.

(v.) *Ability Tax in Tasmania.* The Taxation Act of 1904 provides for the levying of a tax upon persons in proportion to their means or ability. It was assented to on 1st November, 1904, and an amending Act was passed on 30th November, 1906. The assessment of the taxable amount is determined according to the annual value of the property occupied or the amount paid for board and lodging, as the case may be, and varies in the case of property from one penny to sixpence in the pound of annual value, with a minimum of two shillings and sixpence, and in the case of board and lodging from three halfpence to sixpence in the pound on the amount payable annually for board and lodging.

8. **Taxation of Commonwealth Salaries and Allowances.**—On 8th October, 1907, the Commonwealth Salaries Act, passed by the Federal Parliament, received the Governor-General's assent. By this Act it is declared that salaries and allowances paid by the Commonwealth are liable to taxation by the States. The tax is payable in the State in which the officer resides and the salary is earned, and in the case of a member of the Parliament of the Commonwealth, in the State in which he was elected. The only exemption from taxation is the salary of the Governor-General. This Act was the outcome of considerable litigation, brought about by the refusal of persons in receipt of Federal salaries and allowances to pay income tax in respect thereof.

§ 3. Trust Funds.

1. **Nature.**—In addition to the moneys received by the several State Governments as revenue, and paid to the credit of their respective Consolidated Revenue Funds, considerable sums are held by the Governments in trust for various purposes. One of the chief sources of these trust funds is the State Savings Bank, which exists in each State, either as a Government department or under the control of a Board acting under Government supervision or Government guarantee. In most of the States also, sinking funds for the redemption of public debt are provided, and the moneys accruing thereto are paid to the credit of the appropriate trust funds. A similar course is followed in the case of municipal sinking funds placed in the hands of the Government. In all the States except New South Wales, life assurance companies carrying on business are required to deposit a substantial sum in cash or approved securities with the Government, and these deposits go to further swell the trust funds. Various other deposit accounts, superannuation funds, suspense accounts, etc., find a place in these funds. The trust funds have at various times enabled the several State Treasurers to tide over awkward financial positions, but the propriety of allowing deficits to be frequently liquidated in this manner is worthy of very serious consideration.

2. **Extent of Funds.**—The amount of such funds held by the several State Governments on 30th June, 1908, was as follows:—

TRUST FUNDS ON 30th JUNE, 1908.

| Particulars. | N S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tasmania. | All States. |
|-----------------------|-----------|-----------|-----------|----------|-----------|-----------|-------------|
| | £ | £ | £ | £ | £ | £ | £ |
| Amount of trust funds | 1,867,442 | 5,822,293 | 4,543,424 | 1206,426 | 5,837,710 | 1,016,102 | 20,293,397 |

§ 4. Loan Funds.

1. **Nature.**—As early in the history of Australia as 1842 it was deemed expedient to supplement the revenue collections by means of borrowed moneys, the earliest of the loans so raised being obtained by New South Wales for the purpose of assisting immigration, at rates of interest varying from 2½d. to 5½d. per £100 per diem, or approximately from 4½ per cent. to 8 per cent. per annum. The principal reason for Australian public borrowing, however, has been the fact that the Governments of the several States have, in addition to ordinary administrative duties, undertaken the performance of many functions which, in other countries, are usually entrusted to local authorities, or left to the initiative of private enterprise. Principal amongst these have been the construction of railways and the control of the railway systems of the several States, while the

assumption by the State Governments of responsibilities in connection with improvements to harbours and rivers, and the erection of lighthouses, as well as the construction of works for the purposes of water supply and sewerage, have materially swelled the amounts which it has been considered expedient to obtain by means of loans. The Australian loan expenditure and public debt thus differ very materially from those of most European countries, where such expenditure is very largely incurred for purposes of defence, or absorbed in the prosecution of war. The debt of Australia, on the other hand, consists in the main of moneys raised and expended with the object of assisting the development of the resources of the Commonwealth, and is, to a very large extent, represented by tangible assets such as railways, tramways, waterworks, etc.

2. **Loan Expenditure, 1907-8.**—During the year ended 30th June, 1908, the actual expenditure of the Australian States from loan funds amounted to £5,237,170, New South Wales with a total of £1,965,329 being the principal contributor to this amount, while Queensland, whose expenditure amounted to £1,033,676, ranked second. The chief item of expenditure for the year was that of railways and tramways, which represented a total of £2,898,284; water supply and sewerage works to the amount of £899,024; land purchases for settlement, £368,323; and the expenditure on harbours, rivers, etc., totalling £306,314, were the most important of the remaining items. Details for the year for each State are given in the following table:—

AUSTRALIAN LOAN EXPENDITURE, 1907-8.

| Heads of Expenditure. | N.S.W. | Vic. | Qld. | S. Aust. | W. Aust. | Tas. | All States. |
|-------------------------------------|------------------|----------------|------------------|----------------|----------------|----------------|------------------|
| | £ | £ | £ | £ | £ | £ | £ |

| Other public works and purposes ... | ... | 2,453 | 2,674 | 39,056 | 29,345 | 22,755 | 96,583 |
| Total ... | 1,965,329 | 783,533 | 1,033,676 | 495,928 | 733,745 | 224,954 | 5,237,170 |

3. **Aggregate Loan Expenditure.**—The total loan expenditure of the Australian States from the initiation of the borrowing system to the 30th June, 1908, has amounted to no less a sum than £237,999,605. The manner in which this sum has been spent in the several States is furnished in the following table:—

AGGREGATE AUSTRALIAN LOAN EXPENDITURE to 30th JUNE, 1908.

| Heads of Expenditure. | N.S.W. | Vic. | Qld. | S. Aust. | W. Aust. | Tas. | All States. |
|-----------------------------------|-------------------|-------------------|-------------------|-------------------|-------------------|------------------|--------------------|

| Land purchases for settlement ... | 139,000 | 1,579,015 | ... | 949,523 | 300,000 | ... | 2,967,598 |
| Loans to local bodies ... | ... | ... | 1,946,019 | ... | ... | 527,727 | 2,473,746 |
| Rabbit-proof fences ... | ... | ... | ... | 344,785 | 300,457 | ... | 645,242 |
| Other pub. works and purposes ... | 49,856 | 3,392,856 | 1,674,843 | 2,189,961 | 248,376 | 611,313 | 8,167,205 |
| Total ... | 85,195,499 | 56,676,596 | 39,333,350 | 28,570,234 | 18,469,959 | 9,753,887 | 237,999,605 |

It must be noted that the figures furnished in this table represent the amounts actually spent, and consequently differ somewhat from those given later in the statements relating to the public debt, which represent amount of loans still unpaid at given date. The loan expenditure statement includes all such expenditure, whether the loans by means of which the necessary funds were raised have been repaid or are still in existence. On the other hand, in the public debt statement loans repaid are excluded, but in the case of loans still outstanding each is shown according to the amount repayable at maturity, not according to the amount originally available for expenditure.

4. **Relative Importance of Loan Items.**—The relative importance of the different items of loan expenditure given in the foregoing table varies considerably in the several States, but in each instance the expenditure on railways and tramways predominates, the percentage of this item on total expenditure ranging between the limits of 49 per cent. in the case of South Australia and 69 per cent. in that of Victoria. The following table gives for the several States the percentage of each item on the total loan expenditure of that State to 30th June, 1908:—

**PERCENTAGE OF EACH ITEM ON TOTAL LOAN EXPENDITURE OF THE STATES
to 30th JUNE, 1908.**

| Heads of Expenditure. | N.S.W. | Vic. | Q'land. | S. Aust. | W. Aust. | Tas. | All States. |

5. **Loan Expenditure in Successive Years.**—In the following table are given particulars relative to the loan expenditure of the several States during each of the years 1901-2 to 1907-8:—

AUSTRALIAN LOAN EXPENDITURE, 1901-2 to 1907-8.

| Year. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tasmania. | All States. |
|------------|-----------|-----------|-----------|----------|-----------|-----------|-------------|
| | £ | £ | £ | £ | £ | £ | £ |
| 1901-2 ... | 4,939,241 | 910,833 | 1,161,689 | 566,079 | 1,545,823 | 341,994 | 9,465,659 |
| 1902-3 ... | 4,713,386 | 756,404 | 1,022,405 | 465,554 | 1,665,901 | 238,631 | 8,862,281 |
| 1903-4 ... | 2,288,742 | 447,244 | 603,805 | 415,723 | 710,629 | 167,123 | 4,633,271 |
| 1904-5 ... | 1,571,257 | 373,191 | 225,466 | 449,214 | 654,353 | 150,994 | 3,424,475 |
| 1905-6 ... | 1,367,022 | 932,966 | 297,624 | 449,930 | 372,442 | 136,971 | 3,556,955 |
| 1906-7 ... | 1,058,553 | 583,179 | 683,570 | 494,714 | 900,964 | 156,945 | 3,832,925 |
| 1907-8 ... | 1,965,329 | 783,538 | 1,033,676 | 495,928 | 733,745 | 224,954 | 5,237,170 |

Throughout the seven years under review the loan expenditure of New South Wales exceeded that of any other of the States, and for the years 1901-2 and 1902-3 represented more than half of the aggregate loan expenditure of Australia. The amount so spent in

New South Wales, however, continuously declined from £4,939,241 in 1901-2 to £1,058,553 in 1906-7, but rose again in 1907-8 to £1,965,329. In South Australia the annual loan expenditure during the past six years has varied but little from £450,000. In Tasmania the loan expenditure continuously declined from £341,994 in 1901-2 to £136,971 in 1905-6, but advanced again in 1906-7 and 1907-8, reaching £224,954 in the latter year. In the three remaining States marked fluctuations have been in evidence; thus, Victoria had a minimum loan expenditure for the period in 1904-5 and a maximum in 1905-6, the figures being, respectively, £373,191 and £932,966; Queensland had a minimum of £225,466 in 1904-5 and a maximum of £1,161,689 in 1901-2; while Western Australia had a minimum of £372,442 in 1905-6 and a maximum of £1,665,901 in 1902-3. The large loan expenditure of New South Wales in 1901-2 and 1902-3 was incurred chiefly in connection with railway construction and the resumption of the foreshores and adjoining properties of Darling Harbour. In Victoria the large expenditure of 1901-2 was in great part due to railway construction, while that of 1905-6 resulted in large measure from the purchase of lands for closer settlement. In the case of the large loan expenditure of Queensland in 1901-2 and 1902-3, as well as that of 1906-7 and 1907-8, railway construction was the principal contributing item. In Western Australia the heavy loan expenditure of 1901-2 and 1902-3 was principally in connection with railway construction and water supply.

6. Loan Expenditure per Head.—The loan expenditure per head of population varies materially in the different States and in different years, reaching its highest point for the seven years under review in Western Australia in 1901-2 with £7 19s. 3d. per head, and its lowest in Victoria in 1904-5 with 6s. 2d. per head. Particulars concerning the loan expenditure per head for the seven years 1901-2 to 1907-8 are given hereunder:—

LOAN EXPENDITURE PER HEAD, 1901-2 to 1907-8.

| Year. | N.S.W. | | | Victoria. | | | Q'land. | | | S. Aust. | | | W. Aust. | | | Tasmania. | | | All States. | | |

§ 5. Public Debt.

1. The Initiation of Public Borrowing.—The earliest of the loans raised in Australia for Government purposes was that obtained by New South Wales in 1842. This and nine other loans raised prior to 1855 were all procured locally. In the last-mentioned year Australia's first appearance on the London market occurred, the occasion being the placing of the first instalment of the New South Wales 5 per cent. loan for £683,300. Victoria first appeared as a borrower in 1854, and made its first appearance on the London market in 1859. In the remaining States the first public loans were raised in the following years:—Queensland 1861, South Australia 1854, Western Australia 1845, and Tasmania 1867.

2. Nature of Securities.—All the earlier loans raised by the Australian States were obtained by the issue of debentures, some of which were repayable at fixed dates, and others by annual or other periodical drawings. In more recent years, however, the issue of debentures has given place to a great extent to that of inscribed stock, the inscription in the case of local issues being carried out by the State Treasuries, and in the cases of

loans floated in London being mainly performed by the Bank of England and the London and Westminster Bank. The issue of debentures has not, however, been entirely discontinued, for within the last six years debentures to the amount of upwards of £2,000,000 were placed on the market by the Government of New South Wales. In other States also, recent issues of debentures have taken place, the occasions usually being those in which the term of the loan is less than that ordinarily attaching to issues of inscribed stock. Another form of security is that variously known as the Treasury bill or Treasury bond. This is really neither more nor less than a short term debenture having a currency in most instances of from three to five years. These are issued in certain cases to liquidate deficiencies in revenue, and in others to obtain moneys for the purpose of carrying on public works at a time when it is deemed inexpedient to place a permanent loan on the market. The amount of the public debt of the several States held in each of these forms of security is furnished in the table hereunder:—

PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1908.

| State. | Debentures. | Inscribed Stock. | Treasury Bills. | | Total Amount Outstanding. |
|-----------------------|-------------|------------------|--------------------------------|--------------------|---------------------------|
| | | | For Public Works and Services. | In aid of Revenue. | |
| | £ | £ | £ | £ | £ |
| New South Wales ... | 8,308,350 | 76,206,560 | 1,906,400 | 1,214,516 | 87,635,826 |
| Victoria ... | 5,397,699 | 41,500,928 | 6,281,860 | 125,000 | 53,305,487 |
| Queensland ... | 13,980,580 | 26,653,887 | ... | 1,130,000 | 41,764,467 |
| South Australia ... | 6,045,200 | 19,600,308 | 3,149,350 | 1,191,000 | 29,985,858 |
| Western Australia ... | 419,200 | 19,374,268 | 700,150 | ... | 20,493,618 |
| Tasmania ... | 3,014,250 | 7,041,872 | 94,111 | ... | 10,150,233 |
| Total ... | 37,165,279 | 190,377,823 | 12,131,871 | 3,660,516 | 243,335,489 |

The manner in which the amount of public debt of the Australian States held under these various forms of security has grown during the past seven years will be seen from the following table:—

PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1901 to 1908.

| Date. | Debentures. | Inscribed Stock. | Treasury Bills. | | Total Amount Outstanding. |
|-----------------|-------------|------------------|--------------------------------|--------------------|---------------------------|
| | | | For Public Works and Services. | In aid of Revenue. | |
| | £ | £ | £ | £ | £ |
| 30th June, 1901 | 44,060,320 | 151,140,371 | 5,914,000 | 2,403,584 | 203,518,275 |
| „ 1902 | 44,191,825 | 161,673,758 | 4,006,500 | 4,383,126 | 214,255,209 |
| „ 1903 | 43,639,525 | 168,388,889 | 6,046,775 | 4,796,576 | 222,871,765 |
| „ 1904 | 37,741,025 | 172,796,361 | 12,493,650 | 4,716,576 | 227,747,612 |
| „ 1905 | 39,153,744 | 175,047,336 | 12,045,100 | 4,487,491 | 230,738,671 |
| „ 1906 | 39,587,224 | 181,279,045 | 12,194,464 | 5,367,087 | 238,427,820 |
| „ 1907 | 38,061,799 | 184,157,771 | 13,571,985 | 4,358,172 | 240,149,727 |
| „ 1908 | 37,165,279 | 190,377,823 | 12,131,871 | 3,660,516 | 243,335,489 |

During the seven years between 30th June, 1901, and 30th June, 1908, the public debt of the States increased by £39,817,214, or at the rate of £5,700,000 per annum. The amount of debentures comprised in the total debt diminished by £6,900,000 during the period, while the amount held as inscribed stock increased by £39,200,000, and as Treasury bills by about £7,500,000.

3. Increase in Indebtedness of the Several States.—The table given hereunder furnishes particulars of the increase which has taken place during the past seven years in the public debts of the several States:—

PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1901 to 1908.

* On 31st December, 1900, 1901, and 1902 respectively.

The States in which the greatest increase in indebtedness was experienced during the period are New South Wales and Western Australia, the former advancing by more than £20,000,000, the latter by £7,800,000. On the other hand the public debt of Tasmania increased by little more than £1,600,000.

4. **Indebtedness per Head.**—The indebtedness per head of population varies considerably in the several States, being highest in the case of Queensland and South Australia, and lowest in that of Victoria. Details for the period from 30th June, 1901, to 30th June, 1908, are as follows:—

AUSTRALIAN INDEBTEDNESS PER HEAD, 30th JUNE, 1901 to 1908.

* On 31st December, 1900, 1901, and 1902 respectively.

5. **Flotation of Loans.**—The early loans of the Australian States, usually for comparatively small amounts, were raised locally, but, with the increasing demand for loan funds and the more favourable terms offering in the London than in the local money market, the practice of placing Australian public loans in London came into vogue, and for many years local flotations, except for short terms or small amounts, were comparatively infrequent. In more recent years, however, the accumulating stocks of money in Australia seeking investment have led to the placing of various redemption and other loans locally, with very satisfactory results. In the following table are given particulars of loans of the several States outstanding on 30th June, 1908, which had been floated in London and Australia respectively:—

PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1908.

| State. | Floated in London | | Floated in Australia. | | Total Public Debt. |
|---------------------|-------------------|---------------------------|-----------------------|---------------------------|--------------------|
| | Amount. | Percentage on Total Debt. | Amount. | Percentage on Total Debt. | |
| | £ | % | £ | % | £ |
| New South Wales | 64,692,250 | 73.82 | 22,943,576 | 26.18 | 87,635,826 |
| Victoria... | 37,533,136 | 70.41 | 15,772,351 | 29.59 | 53,305,487 |
| Queensland ... | 35,409,347 | 84.78 | 6,355,120 | 15.22 | 41,764,467 |
| South Australia ... | 20,232,320 | 67.47 | 9,753,538 | 32.53 | 29,985,858 |
| Western Australia | 17,424,153 | 85.02 | 3,069,465 | 14.98 | 20,493,618 |
| Tasmania ... | 8,030,050 | 79.11 | 2,120,183 | 20.89 | 10,150,233 |
| Total ... | 183,321,256 | 75.34 | 60,014,233 | 24.66 | 243,335,489 |

The following table, giving corresponding particulars for the aggregate indebtedness of the Australian States at the end of each of the financial years 1900-1 to 1907-8, furnishes an indication of the rapidity with which the local holdings of Australian securities have grown in recent years:—

PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1901 to 1908.

| Date. | Floated in London. | | Floated in Australia. | | Total Public Debt. |
|---------------------|--------------------|---------------------------|-----------------------|---------------------------|--------------------|
| | Amount. | Percentage on Total Debt. | Amount. | Percentage on Total Debt. | |
| | £ | % | £ | % | £ |
| 30th June, 1901 ... | 174,810,377 | 85.89 | 28,707,898 | 14.11 | 203,518,275 |
| " 1902 ... | 181,493,170 | 84.71 | 32,762,089 | 15.29 | 214,255,209 |
| " 1903 ... | 186,507,721 | 83.68 | 36,364,044 | 16.32 | 222,871,765 |
| " 1904 ... | 188,165,495 | 82.62 | 39,582,117 | 17.38 | 227,747,612 |
| " 1905 ... | 188,918,820 | 81.88 | 41,819,851 | 18.12 | 230,738,671 |
| " 1906 ... | 190,887,001 | 80.06 | 47,540,819 | 19.94 | 238,427,820 |
| " 1907 ... | 185,579,389 | 77.28 | 54,570,338 | 22.72 | 240,149,727 |
| " 1908 ... | 183,321,256 | 75.34 | 60,014,233 | 24.66 | 243,335,489 |

It will be seen that in the course of seven years the London indebtedness of the States has increased by £8,510,879, while the local indebtedness has increased by no less than £31,306,335. In other words, whilst on 30th June, 1901, the Australian portion of the debt represented only about 14 per cent. of the total, the proportion had on 30th June, 1908, grown to nearly 25 per cent.

6. Rates of Interest.—As mentioned above, the rate of interest paid in connection with the earliest Australian public loan was fivepence farthing per £100 per diem or, approximately, 8 per cent. per annum. At the present time the three principal rates of interest payable on Australian public securities are 4 per cent., 3½ per cent., and 3 per cent., most of the loans raised during the last six years bearing interest at the rate of 3½ per cent. The average rate payable on the aggregate indebtedness of the Australian States is approximately 3½ per cent. For the separate States the average rate payable varies considerably, being lowest in the case of Western Australia and highest in that of South Australia; the difference between the two average rates is somewhat more than ½ per cent. In the table given hereunder are furnished particulars of the rates of interest payable on the public debt of the several States of the Commonwealth on 30th June, 1908:—

RATES OF INTEREST PAYABLE ON AUSTRALIAN PUBLIC DEBT, 30th JUNE, 1908.

| Rate of Interest. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | Total. |

| 3½ | ... | 125,000 | ... | ... | ... | 24,718 | 149,718 |
| 3 | 18,024,698 | 10,449,423 | 5,489,383 | 5,962,345 | 7,356,000 | 666,202 | 47,948,051 |
| Not bearing interest | 5,550 | 1,000 | ... | 6,200 | ... | ... | 12,750 |
| Total public debt ... | 37,635,823 | 53,305,487 | 41,764,467 | 29,985,858 | 20,493,618 | 10,150,233 | 243,335,489 |
| Average rate per cent. payable ... | £3 10 8 | £3 11 3 | £3 14 1 | £3 14 2 | £3 8 9 | £3 13 4 | £3 11 9 |

The rapid increase which has taken place in recent years in the amount of Australian Government securities, bearing interest at 3½ per cent., is clearly shewn in the table hereunder, which gives particulars concerning the aggregate amount of the Australian indebtedness, at the several rates of interest, on 30th June in each of the years 1901 to 1908:—

**RATES OF INTEREST PAYABLE ON AUSTRALIAN PUBLIC DEBT,
30th JUNE, 1901 to 1908.**

| Rate of Interest. | 30th June, 1901. | 30th June, 1902. | 30th June, 1903. | 30th June, 1904. | 30th June, 1905. | 30th June, 1908. | 30th June, 1907. | 30th June, 1908. |
|--------------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|
| % | £ | £ | £ | £ | £ | £ | £ | £ |
| 6 | 804,000 | 549,300 | 471,200 | 433,700 | 383,900 | 346,400 | 308,900 | 297,900 |

| 3½ | ... | ... | 1,500,000 | 1,825,000 | 1,825,000 | 2,045,000 | 2,513,500 | 3,131,760 |
| 3½ | 65,726,655 | 70,697,678 | 71,972,094 | 76,671,477 | 74,794,616 | 84,045,885 | 93,522,109 | 104,101,583 |
| 3½ | 275,000 | 299,918 | 279,418 | 255,700 | 289,100 | 290,300 | 174,718 | 149,718 |
| 3 | 36,733,505 | 45,213,398 | 49,412,900 | 49,492,114 | 49,181,523 | 48,596,333 | 48,292,112 | 47,948,051 |
| Not bearing interest ... | 5,650 | 8,150 | 6,650 | 8,550 | 10,250 | 11,650 | 61,900 | 12,750 |
| Total public debt ... | 203,518,275 | 214,255,209 | 222,871,765 | 227,747,612 | 230,738,671 | 238,427,820 | 240,149,727 | 243,335,489 |
| Average rate % payable | £3 13 8 | £3 12 10 | £3 12 8 | £3 12 4 | £3 12 6 | £3 12 5 | £3 12 1 | £3 11 9 |

During the six years between 30th June, 1901, and 30th June, 1908, the Australian Government 4 per cent. securities decreased by £6,277,488, while the 3½ per cents. advanced by £38,374,878, and the 3 per cents. by £11,214,546. During the same period the total amount at other rates than the three here mentioned declined by more than £3,500,000, from £7,388,250 to £3,893,528.

7. Interest Payable per Head.—The relative burden of the debts of the several States in respect of interest payments will be seen from the following table, which gives for the 30th June, 1908, the amount of interest payable annually on the debt of each State as outstanding at that date, and also the corresponding amount per head of population:—

**ANNUAL INTEREST PAYABLE ON PUBLIC DEBT OUTSTANDING AT
30th JUNE, 1908.**

| Particulars. | N.S.W. | Vic. | Q'land. | S. Aust. | W. Aust. | Tas. | All States. |
|-----------------------------------|-----------|-----------|-----------|-----------|----------|---------|-------------|
| | £ | £ | £ | £ | £ | £ | £ |
| Total annual interest payable ... | 3,097,176 | 1,899,416 | 1,546,881 | 1,112,322 | 704,860 | 371,992 | 8,732,647 |
| Annual interest payable per head | £1 19 3 | £1 10 3 | £2 16 1 | £2 15 10 | £2 13 1 | £2 1 3 | £2 1 3 |

8. Dates of Maturity.—An important point in which the securities of the Australian Governments, whether in the form of inscribed stock, debentures, or Treasury bills, differ from such a well-known form of security as British consols, consists in the fact that whereas the latter are interminable, the Australian Government securities have in almost all cases a fixed date for repayment, the only exception being the State of New South Wales, which includes in its public debt an amount representing interminable securities totalling on 30th June, 1908, £532,890. The terms of the loans raised by the issue of debentures and inscribed stock have varied considerably in the different States, ranging between fifteen and fifty years, while loans obtained by means of Treasury bills have usually been for such short terms as from one to five years. In the case of the majority of the loans the arrival of the date of maturity means that arrangements for renewal are necessary in respect of the greater portion of the loan, as it is only in exceptional cases that due provision for redemption has been made. The condition of the money market at the date of maturity has an important bearing on the success or otherwise with which the renewal arrangements can be effected, and consequently, in order to obviate the necessity for making an application to the market at an unfavourable time, several of the States have now adopted the practice of specifying a period of from ten to twenty years.

prior to the date of maturity within which the Government, on giving twelve, or in some cases six, months' notice, has the option of redeeming the loan. By such means advantage may be taken by the Government during the period of opportunities that may offer for favourable renewals. Particulars concerning the due dates of the loans of the several States outstanding on 30th June, 1908, are given in the following table:—

**DUE DATES OF THE PUBLIC DEBTS OF THE SEVERAL STATES OF THE
COMMONWEALTH OUTSTANDING ON 30th JUNE, 1908.**

| Indefinite ... | ... | 3,870,509 | ... | 5,122,845 | ... | ... | 8,993,354 |
| Total ... | 87,635,826 | 53,305,487 | 41,764,467 | 29,985,858 | 20,493,618 | 10,150,233 | 243,335,489 |

In the above table those loans, in the case of which the Government has the option of redemption during a specified period, have been in each instance classified according to the latest date of maturity. During the fifteen years from 1910 to 1924, inclusive, the amount falling due represents a total of no less than £127,949,843, or more than 52 per cent. of the total outstanding at 30th June, 1908.

9. **Sinking Funds.**—The practice of providing for the ultimate extinction of the public debt by means of the creation of sinking funds, receiving definite annual contributions from Consolidated Revenue, and accumulating at compound interest, has only been consistently adopted in the case of Western Australia. This State has established, in connection with each of its loans, sinking funds varying from 1 per cent. to 3 per cent. per annum of the nominal amount of the loan. These funds are placed in the hands of

trustees in London, by whom they are invested in the securities of the British, Indian, and Colonial Governments, and applied from time to time in the redemption of loans falling due. In the remaining States the sinking fund provision made is varied, consisting in certain instances of the revenues from specified sources, in others of the Consolidated Revenue Fund surplus, and in others again of fixed annual amounts. In the following table are given particulars of the sinking funds of each State, and the net indebtedness of each after allowance for sinking fund has been made, the details given being those for 30th June, 1908 :—

SINKING FUNDS AND NET INDEBTEDNESS, 30th JUNE, 1908.

| State. | Gross Indebtedness. | Sinking Fund. | Net Indebtedness. | Net Indebtedness per head. |
|-----------------------|---------------------|---------------|-------------------|----------------------------|
| | £ | £ | £ | £ s. d. |
| New South Wales ... | 87,635,826 | 223,001 | 87,412,825 | 55 7 8 |
| Victoria ... | 53,305,487 | 629,490 | 52,675,997 | 41 18 11 |
| Queensland ... | 41,764,467 | ... | 41,764,467 | 75 13 5 |
| South Australia ... | 29,985,858 | 1,050,812 | 28,935,046 | 72 13 1 |
| Western Australia ... | 20,493,618 | 1,904,433 | 18,589,185 | 70 0 0 |
| Tasmania ... | 10,150,233 | 304,633 | 9,845,600 | 54 11 6 |
| Total... .. | 243,335,489 | 4,112,369 | 239,223,120 | 56 11 0 |

10. **London Prices of Australian Stocks.**—In examining the prices quoted for Australian Government securities, particularly if the examination is made with the object of comparing the prices at a given time of different stocks, or the prices at different times of the same stock, several points in connection with the securities need to be kept in view; the principal of these are—(a) the rate of interest payable, (b) the date of maturity, and (c) the date at which interest is payable.

In the following tables particulars are given of the London prices of some of the principal $3\frac{1}{2}$ per cent. stocks of the several States during 1908. The quotations given are the middle prices, taken from the *Economist*, and are for the last Friday in each quarter :—

LONDON QUOTATIONS FOR AUSTRALIAN $3\frac{1}{2}$ PER CENT. STOCKS DURING 1908.

| State. | Rate of Interest Payable. | Year of Maturity. | Months in which Interest is Payable. | London Prices (cum dividend) on | | | |
|---------------------|---------------------------|-------------------|--------------------------------------|---------------------------------|-------------------|------------------|------------------|
| | | | | 27th Mar. 1908. | 26th June 1908. | 25th Sept. 1908. | 25th Dec. 1908. |
| New South Wales | $3\frac{1}{2}$ | 1918 | Mar.—Sept. | 99 $\frac{1}{2}$ | 100 $\frac{1}{2}$ | 99 | 99 |
| Victoria ... | $3\frac{1}{2}$ | 1923 | Jan.—July | 100 | 99 $\frac{3}{4}$ | 100 | 98 $\frac{1}{2}$ |
| Queensland ... | $3\frac{1}{2}$ | 1924-30 | Jan.—July | 100 | 99 | 100 | 99 |
| South Australia ... | $3\frac{1}{2}$ | 1939 | Jan.—July | 100 | 99 $\frac{1}{4}$ | 99 | 99 |
| West. Australia ... | $3\frac{1}{2}$ | 1915-35 | May—Nov. | 98 $\frac{1}{2}$ | 98 $\frac{1}{2}$ | 99 $\frac{1}{2}$ | 97 $\frac{1}{2}$ |
| Tasmania ... | $3\frac{1}{2}$ | 1920-40 | Jan.—July | 100 | 99 | 99 | 97 $\frac{1}{2}$ |

Throughout the year the prices of Australian $3\frac{1}{2}$ per cent. stocks on the London market were higher than for the corresponding periods of the preceding year, the average advance being about $1\frac{1}{4}$. Prices in the latter portion of the year 1907 had, however, been somewhat seriously affected by the American financial crisis.

SECTION XXI.

PRIVATE FINANCE.

§ 1. Currency.

1. **The Three Australian Mints.**—Soon after the discovery of gold in Australia steps were taken for the establishment of a branch of the Royal Mint in Sydney. The formal opening took place on the 14th May, 1855, the mint being located in the southern part of the building once known as the "rum hospital," where it has remained up to the present. It is now proposed, however, to erect more suitable buildings for its accommodation in some other part of the city. The Melbourne branch of the Royal Mint was opened on the 12th June, 1872, and the Perth branch on the 20th June, 1899. The States of New South Wales, Victoria, and Western Australia provide an annual endowment, in return for which the mint receipts are paid into the respective State Treasuries, and it may be said that, apart from expenditure on buildings, new machinery, etc., the amounts paid into the Treasuries fairly balance the mint annuities.

2. **Receipts and Issues in 1907.**—(i.) *Assay of Deposits Received.* The number of deposits received during 1907 at the Sydney Mint was 1717, of a gross weight of 760,482 ozs.; at the Melbourne Mint, 4467, of a gross weight of 938,169 ozs.; and at the Perth Mint, 6583, of a gross weight of 1,507,878 ozs. The average composition of these deposits in Sydney was, gold 888.9, silver 74.7, base 36.4 in every 1000 parts; Melbourne, gold 914.8, silver 46.7, base 38.5 in every 1000 parts; and Perth, gold 845.1, silver 103.1, base 51.8 in every 1000 parts. As many parcels have, however, undergone some sort of refining process before being received at the mint, the average assay for gold shows higher in these figures than for gold as it naturally occurs.

(ii.) *Receipts.* Practically all the gold coined at the Australian mints is the produce of either the Commonwealth or of the Dominion of New Zealand. The Sydney Mint, however, receives small parcels from Papua, and some gold produced in Madagascar has been sent to Perth for coinage. The following table shews the origin of the gold received at the three mints during 1907:—

ORIGIN OF GOLD RECEIVED DURING 1907.

| Origin of Gold. | Sydney Mint. | Melbourne Mint. | Perth Mint. |
|--|--------------|-----------------|--------------|
| | ozs. | ozs. | ozs. |
| New South Wales | 179,489.32 | 4,022.41 | ... |
| Victoria | 15.52 | 754,809.80 | 1.00 |
| Queensland... .. | 326,839.74 | 212.21 | ... |
| South Australia | 65.54 | 14,808.10 | 1.00 |
| Western Australia | 1,722.14 | 20,771.97 | 1,507,249.00 |
| Tasmania | 1,299.65 | 30,425.83 | ... |
| New Zealand | 250,831.43 | 103,764.04 | ... |
| Other countries, origin not stated, and light gold coin | 218.32 | 9,354.96 | 627.00 |
| Total | 760,481.66 | 938,169.32 | 1,507,878.00 |

It will be seen that practically all gold produced in New South Wales and Queensland, about five-sevenths of that produced in New Zealand, and a small part of the Tasmanian produce, found its way to the Sydney Mint, while the Melbourne Mint received all Victorian and South Australian gold, together with almost the whole of the Tasmanian and two-sevenths of the New Zealand production, and the Perth Mint coined practically all Western Australian gold with the exception of a small portion sent to Sydney and Melbourne.

(iii.) *Issues.* The Australian mints, besides issuing gold coin in the shape of sovereigns and half-sovereigns, also issue gold bullion, partly for the use of local manufacturers (jewellers and dentists), and partly for export, India taking annually a considerable quantity of gold cast into 10-oz. bars. The issues during 1907 are shewn in the table below:—

ISSUES OF GOLD DURING 1907.

| Mint. | Coin. | | | Bullion. | Total. |
|---------------|-------------|------------------|-------------|-----------|-------------|
| | Sovereigns. | Half-sovereigns. | Total. | | |
| Sydney ... | £ 2,539,000 | £ ... | £ 2,539,000 | £ 337,421 | £ 2,876,421 |
| Melbourne ... | 3,332,691 | ... | 3,332,691 | 314,022 | 3,646,713 |
| Perth ... | 4,972,289 | ... | 4,972,289 | 436,479 | 5,408,768 |
| Total ... | 10,843,980 | ... | 10,843,980 | 1,087,922 | 11,931,902 |

In addition to the issue of gold the Sydney and Melbourne Mints are also charged with the issue of silver and bronze coin struck in London. The total value of silver coin issued in 1907 was £286,200, viz.—£98,800 in half-crowns, £80,200 in florins, £56,000 in shillings, £28,400 in sixpences, and £22,800 in threepences. The value of bronze coin issued was £16,955, viz., £12,400 in pence and £4555 in halfpence.

(iv.) *Withdrawals of Worn Coin.* The mints receive light and worn coin for recoinage, gold being coined locally, while silver is forwarded to London. The value of gold coin so received in 1907 amounted to only £742, viz.—Sydney, £443; Melbourne, £239; and Perth, £60. The value of worn silver coins received during 1907 was £12,550, viz.—Sydney, £9331; Melbourne, £3219.

3. Total Receipts and Issues. (i.) *Receipts.* The total quantities of gold received at the three mints since their establishment are stated in the gross as follows:—Sydney, 32,387,221 ozs.; Melbourne, 30,954,107 ozs.; and Perth, 10,299,426 ozs. As the mints pay for standard gold (22 carats) at the rate of £3 17s. 10½d. per oz., which corresponds to a value of £4 4s. 11½d. per oz. fine (24 carats), it is possible to arrive at the number of fine ounces received from the amounts paid for the gold received. These amounts were:—Sydney, £119,644,987; Melbourne, £121,998,191; Perth, £36,544,784; corresponding to—Sydney, 28,191,964 ozs. fine; Melbourne, 28,746,450 ozs. fine; and Perth, 8,611,052 ozs. fine. Silver found in assaying is paid for if it exceeds 8 per cent.; in Sydney it has been paid for at the rate of one shilling and sixpence per oz. fine since 12th May, 1902; in Melbourne the price is fixed monthly by the Deputy-master of the Mint; and in the Perth accounts it has been taken at one shilling per oz.

(ii.) *Issues.* The total values of gold coin and bullion issued by the three mints were as shewn in the table on page 855. It may be said that about one-half of the total gold production of Australasia has passed through the three Australian mints, the production of the Commonwealth States to the end of 1907 being valued at £488,428,156, and that of New Zealand at £71,528,978, or a total of £559,957,134:—

TOTAL ISSUES OF GOLD.

| Mint. | Coin. | | | Bullion. | Total. |
|---------------|-------------|------------------|-------------|------------|-------------|
| | Sovereigns. | Half-sovereigns. | Total. | | |
| | £ | £ | £ | £ | £ |
| Sydney ... | 110,402,500 | 3,179,000 | 113,581,500 | 5,846,811 | 119,428,311 |
| Melbourne ... | 112,147,399 | 588,384 | 112,735,783 | 9,259,765 | 121,995,548 |
| Perth ... | 33,615,374 | 89,703 | 33,705,077 | 2,830,208 | 36,535,285 |
| Total ... | 256,165,273 | 3,857,087 | 260,022,360 | 17,936,784 | 277,959,144 |

The total issues of silver coins to the end of 1907 were £2,248,200, viz.:—Crowns, £3500; double florins, £4585; half-crowns, £690,200; florins, £488,815; shillings, £566,600; sixpences, £226,420; and threepences, £268,080.

Bronze coins to the value of £142,505 were issued, viz.:—Pence, £99,440; halfpence, £42,965; and farthings, £100.

(iii.) *Withdrawals of Worn Coin.* Complete figures as to the withdrawal of gold coin can only be given for the Sydney Mint, where they amounted to £828,838; at the Melbourne Mint the coins withdrawn since 1890 were worth £44,601, and no figures are given for Perth.

Withdrawals of worn silver coin amounted to £246,101 in Sydney, and to £324,994 in Melbourne.

4. *Standard Weight and Fineness of Coinage.*—The coinage of the Commonwealth is the same as that of the United Kingdom, and the same provisions as to legal tender hold good, viz., while gold coins are legal tender to any amount, silver coins are only so for an amount not exceeding forty shillings, and bronze coins up to one shilling. As will be seen from the table below, the standard weights of the sovereign and half-sovereign are respectively 123.27447 grains and 61.63723 grains, but these coins will pass current if they do not fall below 122.5 grains and 61.125 grains respectively.

STANDARD WEIGHT AND FINENESS.

| Denomination. | Standard Weight. | Standard Fineness. |
|--------------------|------------------|---|
| GOLD— | | |
| | Grains. | |
| Sovereign ... | 123.27447 | Eleven-twelfths fine gold, viz.:— Gold ... 0.91667 } 1.00000 Alloy ... 0.08333 } |
| Half-sovereign ... | 61.63723 | |
| SILVER— | | |
| Crown ... | 436.36363 | Thirty-seven-fortieths fine silver, viz.:— Silver ... 0.925 } 1.000 Alloy ... 0.075 } |
| Double florin ... | 349.09090 | |
| Half-crown ... | 218.18181 | |
| Florin ... | 174.54545 | |
| Shilling ... | 87.27272 | |
| Sixpence ... | 43.63636 | |
| Threepence ... | 21.81818 | |
| BRONZE— | | |
| Penny ... | 145.83333 | Mixed metal, viz.:— Copper ... 0.95 } 1.00 Tin ... 0.04 Zinc ... 0.01 } |
| Half-penny ... | 87.50000 | |
| Farthing ... | 43.75000 | |
| | | |

5. *Prices of Silver and Australian Coinage.*—(i.) *Prices of Silver.* The value of silver has greatly decreased since its demonetisation and restricted coinage in almost the whole of Europe. Its average price in the London market is shewn in the subjoined table:—

AVERAGE PRICE OF SILVER IN LONDON MARKET, 1873 to 1907.

| Year. | Price per Standard Oz. | Year. | Price per Standard Oz. | Year. | Price per Standard Oz. |
|----------|------------------------|----------|------------------------|----------|------------------------|
| | d. | | d. | | d. |
| 1873 ... | 59.2500 | 1885 ... | 48.6250 | 1897 ... | 27.5625 |
| 1874 ... | 58.3125 | 1886 ... | 45.3750 | 1893 ... | 26.9375 |
| 1875 ... | 56.8125 | 1887 ... | 44.6250 | 1899 ... | 27.5000 |
| 1876 ... | 53.0000 | 1888 ... | 42.8750 | 1900 ... | 28.3125 |
| 1877 ... | 54.7500 | 1889 ... | 42.6875 | 1901 ... | 27.2500 |
| 1878 ... | 52.5625 | 1890 ... | 47.7500 | 1902 ... | 24.1250 |
| 1879 ... | 51.1875 | 1891 ... | 45.0625 | 1903 ... | 24.7500 |
| 1880 ... | 52.2500 | 1892 ... | 39.8125 | 1904 ... | 26.3750 |
| 1881 ... | 51.7500 | 1893 ... | 35.6250 | 1905 ... | 27.8125 |
| 1882 ... | 51.8125 | 1894 ... | 29.0000 | 1906 ... | 30.8750 |
| 1883 ... | 50.5625 | 1895 ... | 29.8750 | 1907 ... | 30.1875 |
| 1884 ... | 50.6875 | 1896 ... | 30.7500 | | |

The monthly fluctuations during the year 1907 were as follows:—

AVERAGE PRICE OF SILVER IN LONDON MARKET, 1907.

| Month. | Price per Standard Oz. | Month. | Price per Standard Oz. | Month. | Price per Standard Oz. |
|--------------|------------------------|------------|------------------------|---------------|------------------------|
| | d. | | d. | | d. |
| January ... | 31.7500 | May ... | 30.4375 | September ... | 31.3125 |
| February ... | 31.8125 | June ... | 30.8750 | October ... | 28.8125 |
| March ... | 31.3125 | July ... | 31.3125 | November ... | 27.1250 |
| April ... | 30.2500 | August ... | 31.6250 | December ... | 25.3750 |

(ii.) *Profits on Coinage of Silver.* As sixty-six shillings are coined out of one pound troy of standard silver, the silver required to produce £3 6s. of coin was only worth £1 10s. 2½d. during 1907; the difference of £1 15s. 9¾d. represents, therefore, the gross profit or seigniorage made on the coinage of every £3 6s. This gross profit is equivalent to over 54 per cent., but from it the expenses of coining (including interest on cost of machinery) and of withdrawals of worn coin must be deducted. Still, given a large annual demand for new silver coin, even the net profit amounts to a considerable sum. Negotiations, therefore, took place for a number of years between the Imperial authorities and the Governments of New South Wales and Victoria, which in 1898 resulted in permission being granted to the two Governments named to coin silver and bronze coin at the Sydney and Melbourne Mints for circulation in Australia. No steps were, however, taken in the matter, and as section 51 of the Commonwealth Constitution makes legislation concerning "currency, coinage, and legal tender" a federal matter, the question remained in abeyance until the latter part of 1908, when the Commonwealth Treasurer announced his intention of initiating the coinage of silver in the near future.

6. Decimal Coinage.—Considered apart from the cognate subject of decimal weights and measures, the introduction of a decimal coinage would present no great difficulties. Of the various systems that have been advocated from time to time, the one that appears to meet with most favour and presents the maximum advantage, would retain the sovereign as the unit, but would divide it into a thousand parts instead of the present 960 farthings. In such a system there would be the following coins (adopting the name of "cent" for the hundredth part of the sovereign):—Sovereign=100c. (gold); half-sovereign=50c. (gold), 20c.=4s. (gold or silver); 10c.=2s. (silver); 5c.=1s. (silver); 2c.=4.8d. (silver); 1c.=2.4d. (silver or nickel); 0.5c. or 5 mils.=1.2d. (nickel or bronze); 0.2c. or 2 mils.=0.48d. (nickel or bronze); 0.1c. or 1 mil.=0.24d. (bronze). As only the subdivisions of the present shilling would be altered, such a system could be introduced with less disturbing effects on the arrangements of trade than other proposals, e.g., one which would make the present farthing its unit.

7. Circulation of Specie.—Many conflicting estimates have from time to time been made as to the amount of coin in private hands. In 1892 the general manager of one

of the Sydney banks estimated the coin in private hands in New South Wales at only £725,000, while the estimate of the Deputy-master of the Mint for the same period was £4,416,000, the truth lying, no doubt, somewhere between those two estimates. In 1906 the Deputy-master of the Perth Mint conducted an enquiry with the object of obtaining information on the condition of the currency in Australia. His estimate was—sovereigns, £2,500,000; half-sovereigns, £500,000; silver and bronze coin, £1,200,000. This estimate appears, however, very low, amounting only to a little over £1 per head of population. The question will shortly have to be considered whether it would not be possible to obtain accurate information by means of a question on the census schedule to be used in 1911. The coin in private hands amounts, however, only to a comparatively small part of the total coin in the country, the value of coin held by the banks during the quarter ended 30th June, 1908, being £23,578,293, of which amount, according to returns embracing more than three-fourths of the banks, it may be said that £22,349,000 was held in gold, £1,192,000 in silver, and £97,000 in bronze. To the active currency must be added the notes in circulation, which for the same period amounted to £3,536,227, exclusive of Queensland Treasury notes, £1,530,982, viz., £812,773 held by banks, and £718,209 in circulation.

8. **Imports and Exports of Coin and Bullion.**—A table is appended shewing the imports into, and exports from, the Commonwealth of coin and bullion during the year 1907, distinguishing the countries of import and export:—

IMPORTS AND EXPORTS OF COIN AND BULLION, 1907.

| Countries from which Imported and to which Exported. | Coin. | | | | Bullion. | | | Total Coin and Bullion. |

1. Bullion and gold contained in matte. 2. Bullion and silver contained in matte.
3. Approximately £5,411,572 Australian produce and £1,446,266 other produce. The net value of gold bullion and gold ore of foreign origin introduced (by transfer or importation) into the minting States of the Commonwealth, with the addition of the imports of foreign coin, has been taken to represent the value of the exports of coin of other than Australian origin. 4. Other produce. 5. Australian produce. 6. Australian produce, £1,191,907; other produce, £1249.

§ 2. Banking.

1. **Banking Facilities.**—(i.) *Head Offices of Banks.* Of the twenty-one banks trading in the Commonwealth, four have their head offices in London, viz., the Bank of Australasia; the Union Bank of Australia Limited; the English, Scottish, and Australian Bank Limited; and the London Bank of Australia Limited. The head offices of the following four banks are in Sydney—The Bank of New South Wales; the Commercial Banking Company of Sydney Limited; the Australian Joint Stock Bank Limited; and the City Bank of Sydney. Five banks have their head offices in Melbourne, viz., the National Bank of Australasia Limited; the Commercial Bank of Australia Limited; the Bank of Victoria Limited; the Colonial Bank of Australasia Limited; and the Royal Bank of Australia Limited. Brisbane is the headquarters of three banks, viz., the Queensland National Bank Limited; the Royal Bank of Queensland Limited; and the Bank of North Queensland Limited. Only one bank has at present its head office in Adelaide, viz., the Bank of Adelaide; and one in Perth, viz., the Western Australian Bank. Of the two Tasmanian banks the Commercial Bank of Tasmania Limited has its head office in Hobart, and the National Bank of Tasmania Limited in Launceston. The remaining bank, the Bank of New Zealand, has its headquarters in Wellington. It is proposed, in the few instances where the banks are referred to by name, to arrange them in the order just given.

(ii.) *Establishments in Different States.* Only three of the banks have establishments in all six States of the Commonwealth, the total number of their branches and sub-branches being 386. One bank with a total of 193 branches is trading in five States, and two with 267 branches are established in four States. One bank has fifty-six branches distributed over three States, while five banks with a total of 327 branches confine their operations to two States. The remaining nine banks, with 373 branches, trade only within the State where their head offices are located. Of this total of 1602 banking establishments, New South Wales contains 504; Victoria, 552; Queensland, 211; South Australia, 163; Western Australia, 122; and Tasmania, 50. In addition to the branches in the Commonwealth, four of the banks have a total of 208 establishments in New Zealand, while fourteen have each an office in London. Only two of the banks are established in the Pacific Islands, with a total of three branches. The total for the Commonwealth amounts to about one bank to every 2650 inhabitants, which does not appear out of proportion when the general sparseness of the Australian population is taken into consideration. There is, however, a difference between the various States which is not easy of explanation, but which seems to be due chiefly to the desire of a few of the banks to open up branches wherever there is a prospect of a small amount of business, while other banks are more conservative in this respect. Thus the proportion in New South Wales is about 3150 inhabitants per bank, while in Victoria it is only 2275. In Western Australia, where the proportion is lowest and amounts to one in 2175, there are, of course, exceptional circumstances which explain this apparent disproportion.

2. **Banking Legislation.**—Under section 51 of the Commonwealth Constitution Act the Commonwealth Parliament has power to legislate with respect to "Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money." Up to the present no Commonwealth banking legislation has, however, been passed, and the various State laws under which the banks transact business are in most cases so old as to be quite unsuitable to modern methods of banking. Under the existing laws banks are required to furnish quarterly statements of their average assets and liabilities, but these statements are not equally complete in all the States. Until the close of 1907 these quarterly statements, together with the periodical balance-sheets of the banks (generally half-yearly, but in a few cases yearly), were the only information available in regard to banking business. During the year 1908 the Commonwealth Statistician, under the provisions of the Census and Statistics Act, asked the banks for quarterly returns giving slightly more detailed information than had previously been obtained. As, however, a few of the banks found it

impossible to give all the particulars required during the year 1908, while promising to do so in 1909, the returns for the former year have been practically left in the same condition as those for 1907 and previous years.

The Acts under which the various banks are incorporated are numerous, but it may be stated that while most of the older banks were incorporated by special Acts, *e.g.*, the Bank of New South Wales, by Act of Council 1817; the Bank of Australasia, by Royal Charter; the Bank of Adelaide, by Act of the South Australian Parliament; and the Bank of New Zealand, by Act of the General Assembly of New Zealand; the newer banks are generally registered under a "Companies Act," or some equivalent Act. This is also the case with those banks which, after the crisis of 1893, were reconstructed.

3. Capital Resources of Banks.—The paid-up capital of the twenty-one banks, together with their reserve funds, and the rate per cent. and the amount of their last dividends, is shewn in the table hereunder. The information relates to the balance-sheet last preceding the 30th June, 1908. In regard to the reserve funds it must be stated that in the case of some of the banks these are invested in Government securities, while in other cases they are used in the ordinary business of the banks, and in a few instances they are partly invested and partly used in business:—

CAPITAL RESOURCES OF BANKS.

| Bank. | Paid-up Capital. | Rate per cent. per annum of last Dividend and Bonus. | Amou't of last $\frac{1}{2}$ -yrlly. Dividend & Bonus. | Reserve Fund. |

1. £171,930 preferential, £376,085 ordinary. 2. £305,730 preferential, £1,192,440 ordinary. 3. £2,117,350 preferential, £95,519 ordinary. 4. £416,760 preferential, £1,061,250 ordinary. 5. After deducting £46,865 paid on forfeited shares. 6. £500,000 preference shares issued to the Crown under the "Bank of New Zealand Act 1903." £500,000 ordinary shares, and £1,000,000 guaranteed stock. 7. For 12 months. 8. For 3 months.

4. Liabilities and Assets of Banks.—(i.) *Liabilities of Banks for Quarter ended 30th June, 1908.* As already stated, the banks transacting business in any State are obliged, under the existing State laws, to furnish a quarterly statement of their assets and liabilities, which contains the averages of the weekly statements prepared by the bank for that purpose, and have, during the year 1908, furnished quarterly statements to the Commonwealth Statistician. As all other financial returns in this work embrace, so far as possible, a period ended 30th June, 1908, it seems advisable to give the banking figures for the quarter ended on that date, and, where they are shewn for a series of years, similarly to use the figures for the June quarter of each year. The liabilities are liabilities to the general public, and are exclusive of the banks' liabilities to their shareholders, which are shewn in the preceding table:—

**AVERAGE LIABILITIES OF BANKS IN EACH STATE OF THE COMMONWEALTH FOR
THE QUARTER ENDED 30th JUNE, 1908.**

| State. | Notes in Circulation, not bearing interest. | Bills in Circulation, not bearing interest. | Balances Due to other Banks. | Deposits. | | | Total Liabilities. |

| Tas. ... | 739,374 | 116 | 215,800 | 97,723 | 11,071 | 51,425 | 2,792,437 | 3,907,946 |
| Cw'ith. | 23,578,293 | 1,353,267 | 3,454,715 | 4,938,212 | 1,692,402 | 1,131,612 | 97,389,304 | 133,537,805 |

(iii.) *Liabilities of Banks for June Quarter, 1901 to 1908.* In the subjoined table, which shows the average liabilities of the banks for the quarters ended 30th June, 1901 to 1908, for the Commonwealth as a whole, it will be seen that the growth in total liabilities is almost entirely due to an increase in the deposits, and that deposits not bearing interest and deposits bearing interest have shared in that increase very equally:—

**AVERAGE LIABILITIES OF BANKS IN THE COMMONWEALTH FOR THE QUARTER
ENDED 30th JUNE, IN THE YEARS 1901 TO 1908.**

| Year. | Notes in Circulation not Bearing Interest. | Bills in Circulation not Bearing Interest. | Balances due to other Banks. | Deposits. | | | Total Liabilities. |
|-------|--|--|------------------------------|-----------------------|-------------------|-------------|--------------------|
| | | | | Not Bearing Interest. | Bearing Interest. | Total. | |
| | £ | £ | £ | £ | £ | £ | £ |
| 1901 | 3,399,462 | 525,958 | 376,972 | 37,457,960 | 54,029,188 | 91,487,148 | 95,789,540 |
| 1902 | 3,305,135 | 518,504 | 459,255 | 37,727,861 | 55,708,373 | 93,436,234 | 97,719,128 |
| 1903 | 3,315,747 | 539,132 | 407,947 | 37,056,187 | 54,701,047 | 91,757,234 | 96,020,060 |
| 1904 | 3,133,288 | 521,287 | 290,411 | 35,630,255 | 55,917,848 | 91,548,103 | 95,493,079 |
| 1905 | 3,036,879 | 553,256 | 446,555 | 36,847,610 | 61,295,775 | 98,143,385 | 102,182,075 |
| 1906 | 3,244,256 | 584,670 | 577,094 | 41,036,116 | 65,470,150 | 106,515,266 | 110,905,288 |
| 1907 | 3,563,181 | 801,878 | 444,460 | 46,781,234 | 65,916,735 | 112,697,969 | 117,507,488 |
| 1908 | 3,536,227 | 707,903 | 706,447 | 46,015,448 | 67,678,940 | 113,694,388 | 118,734,965 |

(iv.) *Asse of Banks for June Quarter, 1901 to 1908.* A similar table shewing the average assets of the banks for the June quarters of each of the years 1901 to 1908 is shewn below. Bullion, in the case of the Tasmanian banks, is included with coin in the years 1901 to 1907:—

AVERAGE ASSETS OF BANKS IN THE COMMONWEALTH FOR THE QUARTER ENDED 30th JUNE IN THE YEARS 1901 to 1908.

| Year. | Coined Gold and Silver and other Metals. | Gold and Silver in Bullion or Bars. | Landed and other Property. | Notes and Bills of other Banks. | Balances Due from other Banks. | All other Debts Due to the Banks. | Total Assets. |
|-------|--|-------------------------------------|----------------------------|---------------------------------|--------------------------------|-----------------------------------|---------------|
| | £ | £ | £ | £ | £ | £ | £ |
| 1901 | 18,581,224 | 1,199,304 | 6,145,742 | 695,676 | 1,215,701 | 93,710,166 | 121,547,813. |
| 1902 | 19,744,914 | 1,330,304 | 5,337,277 | 656,302 | 1,152,534 | 94,015,098 | 122,236,429. |
| 1903 | 18,513,784 | 1,507,825 | 5,289,440 | 741,977 | 1,115,369 | 93,301,160 | 120,469,555. |
| 1904 | 17,910,771 | 1,447,698 | 5,245,312 | 692,688 | 781,368 | 87,705,222 | 113,783,059. |
| 1905 | 19,988,465 | 1,501,890 | 5,212,799 | 705,089 | 809,929 | 85,766,259 | 113,984,431 |
| 1906 | 21,268,679 | 1,412,763 | 5,160,875 | 802,225 | 1,234,921 | 87,889,121 | 117,768,584 |
| 1907 | 22,420,395 | 1,291,033 | 5,023,379 | 840,217 | 1,170,276 | 94,990,435 | 125,740,735. |
| 1908 | 23,578,293 | 1,353,267 | 4,938,212 | 1,692,402 | 1,131,612 | 100,844,019* | 133,537,805 |

* Including £3,454,715 Government and municipal securities.

The figures do not call for much comment. As the table shews, the increase in the total amount of assets is mainly due to an increase in the amount of specie held by the banks against liabilities at call and advances.

5. **Percentage of Coin and Bullion to Liabilities at Call.**—(i.) *Commonwealth.* Although it is not strictly correct to assume that the division of deposits into those bearing interest and not bearing interest would in every case coincide with a division into fixed deposits and current accounts, the division, in default of a better one, must be adopted, and in the following table "liabilities at call" are therefore understood to include the note circulation of the banks and the deposits not bearing interest:—

PERCENTAGE OF COIN AND BULLION TO LIABILITIES AT CALL, COMMONWEALTH, 1901 TO 1908.

| Year. | Liabilities at Call. | | | Coin and Bullion. | | | Percentage of Coin and Bullion to Liabilities at Call. |
|----------|-----------------------|--------------------------------|------------|-------------------|-----------|------------|--|

| 1904 ... | 3,133,747 | 35,630,255 | 38,764,002 | 17,910,771 | 1,447,698 | 19,358,469 | 49.94 |
| 1905 ... | 3,036,879 | 36,847,610 | 39,884,489 | 19,988,465 | 1,501,890 | 21,490,355 | 53.88 |
| 1906 ... | 3,244,256 | 41,036,116 | 44,280,372 | 21,268,679 | 1,412,763 | 22,681,442 | 51.22 |
| 1907 ... | 3,563,181 | 46,781,234 | 50,344,415 | 22,420,395 | 1,291,033 | 23,711,428 | 47.10 |
| 1908 ... | 3,536,227 | 46,015,448 | 49,551,675 | 23,578,293 | 1,353,267 | 24,931,560 | 50.31 |

It would appear from the figures just given that the banks generally consider it advisable to hold about half the amount of liabilities at call in coin and bullion. The drop to 47.10 per cent. in 1907 was due to the very large increase in the amount of deposits during the year, with which the increase in the coin and bullion held, considerable though it was, did not keep pace.

(ii.) *Queensland Treasury Notes.* No bank-notes are issued by any of the banks in Queensland, where a Treasury note has taken the place of bank-notes since 1893. These Treasury notes are disregarded in the quarterly statements of the banks; according to Treasury returns the amount outstanding on 30th June, 1908, was £1,530,982, of which £718,209 was in circulation, while the balance of £812,773 was held by the banks.

(iii.) *States.* The proportion of coin and bullion to liabilities at call varies considerably in the different States, and is generally highest in Western Australia, and lowest in Queensland and Tasmania. A table is appended shewing the percentages for each State for the quarter ended 30th June, 1901 to 1908:—

PERCENTAGE OF COIN AND BULLION TO LIABILITIES AT CALL, STATES AND COMMONWEALTH, 1901 to 1908.*

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | 1908. |
|--------------|-------|-------|-------|-------|-------|-------|-------|-------|
| | % | % | % | % | % | % | % | % |
| N.S.W. ... | 45.96 | 46.97 | 47.47 | 48.67 | 50.51 | 48.49 | 44.81 | 47.70 |
| Victoria ... | 47.82 | 51.91 | 50.58 | 52.92 | 58.01 | 53.55 | 49.17 | 54.68 |

| Tasmania ... | 37.49 | 35.12 | 42.20 | 46.41 | 44.25 | 42.39 | 39.84 | 40.06 |
| C'wealth... | 48.41 | 51.36 | 49.59 | 49.94 | 53.88 | 51.22 | 47.10 | 50.31 |

6. *Deposits and Advances.*—(i.) *Total Deposits.* The total amount of deposits held by the banks shews a steady advance during the period under review, although the totals for 1903 and 1904, when the country was slowly recovering from the effects of the drought, were slightly below those for 1902:—

TOTAL DEPOSITS IN BANKS, STATES AND COMMONWEALTH, 1901 to 1908.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | 1908. |

| Tasmania | 3,178,846 | 3,462,966 | 3,693,420 | 3,573,181 | 3,649,416 | 3,826,631 | 3,737,463 | 3,671,641 |
| C'wealth | 91,487,148 | 93,436,234 | 91,757,234 | 91,548,103 | 98,143,385 | 106,515,266 | 112,697,969 | 113,694,388 |

(ii.) *Deposits per Head of Population.* To shew the extent to which the population makes use of the banking facilities afforded to it, a table is given hereunder shewing the amount of total deposits per head of mean population for each of the years 1901 to 1908. The figures must not be taken to shew part of the savings of the people, as a large proportion of the deposits is non-interest-bearing and therefore presumably used in the business of the banks' customers, together with a small part of the interest-bearing deposits:—

DEPOSITS PER HEAD OF POPULATION, STATES AND COMMONWEALTH, 1901 TO 1908.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | 1908. |
|-----------------------|---------|---------|---------|---------|---------|----------|---------|----------|
| | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. |
| New South Wales ... | 24 6 5 | 24 14 4 | 23 10 7 | 22 18 8 | 24 8 1 | 25 17 11 | 27 1 2 | 27 12 10 |
| Victoria ... | 25 14 9 | 25 9 8 | 25 8 7 | 25 17 2 | 27 15 7 | 30 1 3 | 30 0 19 | 29 18 4 |
| Queensland | 26 18 8 | 27 0 5 | 24 13 3 | 24 5 8 | 24 13 6 | 25 11 10 | 27 7 9 | 27 19 2 |

(iii.) *Total Advances.* In the quarterly statements furnished by the banks the column headed "all other debts due to the banks," which averages from 75 to 80 per cent. of the total assets, is made up of such miscellaneous items as bills discounted, promissory notes discounted, overdrafts on personal security, overdrafts secured by deposit of deeds or by mortgage, etc. The quarterly returns furnished to the Commonwealth Statistician in 1908 provided for a division of the amounts contained under this heading into a number of sub-headings, but all the banks were not in a position to make the necessary division, so that under present circumstances it is impossible to separate these items, and the total amounts contained in the column must, therefore, be treated as advances. The following table shews the totals for each State during the years 1901 to 1908:—

ADVANCES BY BANKS, STATES AND COMMONWEALTH, 1901 to 1908.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | 1908. |

| Victoria ... | 30,953,245 | 30,446,032 | 29,905,949 | 29,426,052 | 28,593,201 | 29,699,683 | 31,394,070 | 33,254,780 |
| Queensland ... | 13,563,589 | 13,633,376 | 14,082,725 | 13,974,233 | 13,590,333 | 13,850,921 | 15,078,455 | 15,245,537 |
| South Aust. | 4,332,730 | 4,434,031 | 4,428,983 | 4,401,991 | 4,793,936 | 5,053,184 | 5,545,346 | 5,805,575 |
| West. Aust. | 3,117,818 | 3,276,409 | 3,633,451 | 3,955,108 | 4,172,953 | 4,635,624 | 5,140,911 | 5,581,001 |
| Tasmania ... | 2,538,442 | 2,397,290 | 2,541,487 | 2,710,083 | 2,650,789 | 2,592,517 | 2,872,660 | 3,008,237 |
| C'wealth | 93,710,166 | 93,985,098 | 93,301,160 | 87,705,222 | 85,766,259 | 87,889,121 | 94,990,435 | 100,844,019 |

(iv.) *Proportion of Advances to Deposits.* The percentage borne by advances to total deposits shews to what extent the needs of one State have to be supplied by the resources of another State, and where the percentage for the Commonwealth as a whole exceeds 100, as it did in 1901, 1902, and 1903, the banks must have supplied the deficiency from their own resources, or from deposits obtained outside the Commonwealth. The figures shew, however, that the banking business of the Commonwealth has been practically self-contained during the period under review:—

PERCENTAGE OF ADVANCES TO TOTAL DEPOSITS, STATES AND COMMONWEALTH, 1901 TO 1908.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | 1908. |
|----------------|--------|--------|--------|--------|--------|--------|--------|--------|
| | % | % | % | % | % | % | % | % |
| N.S.W. ... | 118.34 | 115.75 | 116.06 | 100.54 | 88.86 | 81.99 | 82.11 | 87.00 |
| Victoria ... | 99.89 | 98.72 | 97.35 | 94.35 | 84.99 | 80.78 | 83.07 | 88.59 |
| Queensland ... | 100.32 | 98.82 | 111.36 | 110.68 | 104.64 | 101.36 | 101.51 | 99.46 |
| South Aust. | 69.10 | 71.37 | 67.07 | 69.05 | 69.56 | 67.25 | 67.24 | 67.16 |
| West. Aust. | 70.82 | 69.08 | 76.97 | 83.69 | 83.47 | 82.11 | 93.47 | 114.00 |
| Tasmania ... | 79.85 | 69.23 | 68.81 | 75.85 | 72.64 | 67.75 | 76.86 | 81.93 |
| C'wealth | 102.43 | 100.59 | 101.68 | 95.80 | 87.39 | 82.51 | 84.29 | 88.70 |

7. Clearing Houses. The Sydney Banks' Exchange Settlement and the Melbourne Clearing House, at which two institutions settlements are effected daily between the banks doing business in New South Wales and Victoria respectively, publish figures of the weekly clearances effected. From these figures it appears that in 1908 the total clearances in Sydney amounted to £227,736,000, and in Melbourne to £221,354,000. These figures represent in both cases a decrease on those for 1907, the decrease in Sydney amounting to £6,433,000, and in Melbourne to £15,240,000. Owing to the different distribution of the banking business in the two cities these figures do not, however, afford a fair comparison of the volume of banking business transacted in Sydney and Melbourne.

§ 3. Companies.

1. **General.**—Returns in regard to registered companies are defective, and with few exceptions are not available for Tasmania. They embrace (1) Returns relating to Trustees, Executors, and Agency Companies; (2) Returns relating to Registered Building and Investment Societies; and (3) Returns relating to Registered Co-operative Societies.

2. **Trustees, Executors, and Agency Companies.**—Returns are available of seven Victorian, two New South Wales, one Queensland, one South Australian, one Western Australian, and two Tasmanian companies. The paid-up capital of these fourteen companies amounted to £404,422; reserve funds and undivided profits to £234,888; other liabilities, £81,030; total liabilities, £720,340. Among the assets are included:—Deposits with Governments, £162,500; other investments in public securities, fixed deposits, etc., £102,027; loans on mortgage, £151,495; property owned, £187,032; other assets, £117,286. The net profits for the year were £58,690, and the amount of dividends and bonus £31,597. Returns as to the amount at credit of estates represented by assets are only available for seven companies, viz.:—Two Victorian, two New South Wales, one Queensland, one South Australian, and one Western Australian. They amount to the following large sums:—

| | | | | | |
|-----------------|-----|------------|-------------------|-----|--------------------|
| Victoria | ... | £9,949,782 | South Australia | ... | £2,083,930 |
| New South Wales | ... | 9,495,542 | Western Australia | ... | 1,146,546 |
| Queensland | ... | 1,528,345 | Commonwealth | ... | <u>£24,204,145</u> |

Probably £8,000,000 would at the least have to be added to this amount for the remaining seven companies, so that the total amount is probably not far short of £32,000,000. None of these companies receive deposits, and advances are only made under exceptional circumstances, and to a very limited extent, the total so shewn in the last balance-sheets being only £57,417.

3. **Registered Building and Investment Societies.**—Returns have been received of a total of 142 societies, viz., 62 in New South Wales, 30 in Victoria, 17 in Queensland, 24 in South Australia, and 9 in Western Australia. The balance-sheets cover various periods ended during the second half of 1907 and the first half of 1908, so that the returns may be assumed to roughly correspond to the financial year 1907-8. The liabilities of the 142 societies are stated as follows:—

LIABILITIES OF REGISTERED BUILDING AND INVESTMENT SOCIETIES.

| State. | Paid-up Capital or Subscriptions. | Reserve Funds. | Deposits. | Bank Over-drafts and other Liabilities. | Total Liabilities. |
|-------------------|-----------------------------------|----------------|-----------|---|--------------------|
| | £ | £ | £ | £ | £ |
| New South Wales | 434,479 | 62,413 | 406,680 | 73,279 | 976,851 |
| Victoria | 1,311,813 | 195,186 | 694,095 | 463,689 | 2,664,783 |
| Queensland | 351,631 | 23,168 | ... | 12,881 | 387,680 |
| South Australia | 296,400 | 3,111 | 995 | 4,150 | 304,656 |
| Western Australia | 86,686 | ... | 13,687 | 15,971 | 116,344 |
| Commonwealth* ... | 2,481,009 | 283,878 | 1,115,457 | 569,970 | 4,450,314 |

* Exclusive of Tasmania.

The assets of the companies for the same period were as follows:—

ASSETS OF REGISTERED BUILDING AND INVESTMENT SOCIETIES.

| State. | Advances on Mortgage. | Landed and House Property, Furniture, etc. | Cash in Hand and on Deposit and other Assets. | Total Assets. |
|-----------------------|-----------------------|--|---|---------------|
| | £ | £ | £ | £ |
| New South Wales ... | 837,713 | 70,363 | 68,775 | 976,851 |
| Victoria ... | 1,296,772 | 1,266,681 | 75,960 | 2,639,413 |
| Queensland ... | 352,724 | 387 | 44,245 | 397,356 |
| South Australia ... | 274,115 | 20,096 | 17,547 | 311,758 |
| Western Australia ... | 112,467 | ... | 6,509 | 118,976 |
| Commonwealth* | 2,873,791 | 1,357,527 | 213,036 | 4,444,354 |

* Exclusive of Tasmania.

4. **Registered Co-operative Societies.**—Returns are available of 78 societies, of which 34 were in New South Wales, 27 in Victoria, 5 in Queensland, 8 in South Australia, and 4 in Western Australia. As in the case of Building and Investment Societies, so in the case of Co-operative Societies do the balance-sheets cover various periods ended during the financial year 1907-8. The liabilities of the 78 societies are shewn in the following table:—

LIABILITIES OF REGISTERED CO-OPERATIVE SOCIETIES.

| State. | Paid-up Capital. | Reserve Funds. | Bank Over-drafts and Sundry Creditors. | Other Liabilities, Profit and Loss Account, &c. | Total Liabilities. |
|-----------------------|------------------|----------------|--|---|--------------------|
| | £ | £ | £ | £ | £ |
| New South Wales ... | 74,882 | 35,471 | 42,355 | 35,548 | 188,256 |
| Victoria ... | 97,173 | 6,274 | 115,795 | 5,032 | 224,274 |
| Queensland ... | 5,488 | 1,816 | 1,001 | ... | 8,305 |
| South Australia ... | 65,887 | 6,367 | 26,725 | 30 | 99,009 |
| Western Australia ... | 6,417 | 1,046 | 5,731 | 1,669 | 14,863 |
| Commonwealth* | 249,847 | 50,974 | 191,607 | 42,279 | 534,707 |

* Exclusive of Tasmania.

The assets of the societies are shewn hereunder:—

ASSETS OF REGISTERED CO-OPERATIVE SOCIETIES.

| State. | Stock and Fittings. | Cash in Hand and Sundry Debtors. | Freehold and other Property and other Assets. | Total Assets. |
|-----------------------|---------------------|----------------------------------|---|---------------|
| | £ | £ | £ | £ |
| New South Wales ... | 96,759 | 50,861 | 40,636 | 188,256 |
| Victoria ... | 175,165 | 57,104 | 1,524 | 233,793 |
| Queensland ... | 4,575 | 2,972 | ... | 7,547 |
| South Australia ... | 72,404 | 22,794 | 7,645 | 102,843 |
| Western Australia ... | 14,437 | 5,108 | 25 | 19,570 |
| Commonwealth* | 363,340 | 138,839 | 49,830 | 552,009 |

* Exclusive of Tasmania.

§ 4. Savings Banks.

1. **General.**—The total number of savings banks, with their branches and agencies, in the Commonwealth, closely approximates to that of banks of issue, and was at the middle of 1908, 1717, distributed as follows:—New South Wales, 635; Victoria, 389; Queensland, 203; South Australia, 216; Western Australia, 137 (exclusive of 70 school penny savings banks); and Tasmania, 137.

In the following tables the figures for Victoria, Queensland, South Australia and Western Australia refer to financial years ended 30th June, and those of New South Wales to calendar years ended 31st December next preceding. In the case of Tasmania figures for the two joint-stock savings banks are made up to the last day of February in each year, and those for the Government Savings Bank to the 31st December, except in 1906-7 and 1907-8, where they relate to the year ended 30th June.

2. **Depositors.**—The total number of depositors, *i.e.*, of persons having accounts open, not of those making deposits, in each of the last eight years is shewn in the following table:—

NUMBER OF DEPOSITORS IN SAVINGS BANKS, 1900-1 to 1907-8.

| State. | 1900-1. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|----------|---------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
| N.S.W. | 282,643 | 306,311 | 323,212 | 331,956 | 355,824 | 364,039 | 392,050 | 421,928 |
| Victoria | 393,026 | 410,126 | 418,511 | 432,867 | 447,382 | 466,752 | 491,318 | 511,581 |
| Q'land | 81,025 | 84,685 | 80,043 | 80,959 | 84,165 | 83,026 | 92,912 | 100,324 |
| S.A. ... | 126,032 | 132,084 | 137,147 | 141,572 | 146,366 | 152,487 | 161,855 | 172,278 |
| W.A.... | 39,318 | 45,108 | 48,008 | 54,873 | 59,764 | 63,573 | 66,737 | *72,178 |
| Tas. ... | 42,509 | 44,527 | 46,451 | 47,904 | 49,438 | 50,731 | 53,817 | 55,620 |
| Cwlth. | 964,553 | 1,022,841 | 1,053,372 | 1,090,131 | 1,142,939 | 1,185,608 | 1,258,689 | 1,333,909 |

* Inclusive of 2645 depositors in school penny savings banks.

The subjoined table shews the above figures in relation to the population of the States; it must, of course, be borne in mind that savings bank accounts are not restricted to the adult population, but that it is, on the contrary, a very usual practice to open accounts in the name of children. Even so, the proportion is a large one, amounting to three-tenths of the total population of the Commonwealth, and rising both in Victoria and in South Australia to more than two-fifths:—

DEPOSITORS IN SAVINGS BANKS PER THOUSAND OF POPULATION,

1900-1 TO 1907-8.

| State. | 1900-1. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |

3. **Deposits.**—The total amount of deposits in the savings banks of the six States reaches the large sum of forty-six million pounds, and would no doubt be even larger if the banks did not restrict interest-bearing deposits to certain limits. It must be remembered that though not granting him facilities to draw cheques, the Australian savings banks practically afford the small tradesman all the advantages of a current account, in addition to which they also allow him interest on his minimum monthly balance, instead of charging him a small fee for keeping his account, as the banks of issue do. The rates of interest allowed, and the limits of interest-bearing deposits, from 1st January, 1909, are as follows:—New South Wales, Government Savings Bank, 3 per cent. up to £500; Savings Bank of New South Wales, 3½ per cent. up to £200; Victoria, 3¼ per cent. on first £100, and 3 per cent. on excess from £101 to £250; Queensland, 3 per cent. up to £200; South Australia, 3¼ per cent. up to £250; Western Australia, 3 per cent. up to £1000; Tasmania, Government Savings Bank, 3 per cent. up to £250; Hobart Trustees' Savings Bank, 3¼ per cent. up to £150; Launceston Trustees' Savings Bank, 3¼ per cent. up to £150. The savings banks of four of the States—New South Wales (Government Savings Bank), Victoria, South Australia, and Western Australia—have, for the further benefit of depositors, entered into a reciprocity arrangement, under which money deposited in one State may be drawn out in another State, and even by telegraph.

The table below shews the total amounts at credit of depositors in each of the last eight years:—

DEPOSITS IN SAVINGS BANKS, 1901 to 1907-8.

| State. | 1900-1. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|---------------------|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|
| | £ | £ | £ | £ | £ | £ | £ | £ |
| N.S. Wales... | 10,901,382 | 11,808,710 | 12,425,464 | 12,344,623 | 12,982,648 | 13,963,735 | 15,320,532 | 17,530,157 |
| Victoria ... | 9,662,006 | 10,131,604 | 10,341,857 | 10,532,808 | 10,896,741 | 11,764,179 | 12,702,580 | 13,423,676 |
| Queensland ... | 3,896,170 | 4,118,337 | 3,772,686 | 3,741,967 | 3,875,197 | 4,142,791 | 4,543,104 | 4,621,881 |
| South Aus. ... | 3,795,631 | 3,988,649 | 4,187,590 | 4,217,836 | 4,398,041 | 4,706,007 | 5,320,872 | 5,820,161 |
| West. Aus. ... | 1,618,359 | 1,889,082 | 1,985,624 | 2,079,763 | 2,207,296 | 2,316,161 | 2,633,135 | 2,885,463 |
| Tasmania ... | 1,009,097 | 1,092,047 | 1,194,157 | 1,249,760 | 1,263,542 | 1,332,546 | 1,488,056 | 1,560,951 |
| C'wealth ... | 30,882,645 | 33,023,429 | 33,910,378 | 34,216,757 | 35,623,465 | 38,286,219 | 42,098,239 | 46,147,289 |

A comparison between the tables shewing the number of depositors and the amount of deposits reveals the fact that the average amounts to the credit of each depositor are considerably larger in one State than in another; in other words, that in one State a comparatively larger proportion of the population make use of the savings banks, and that the natural result is a smaller amount to the credit of the individual depositor. Within the same State there is little variation in the figures from year to year:—

AVERAGE AMOUNTS PER DEPOSITOR IN AUSTRALIAN SAVINGS BANKS,

1900-1 TO 1907-8.

| State. | 1900-1. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|-------------------------|---------------|----------------|----------------|---------------|---------------|----------------|----------------|-----------------|
| | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. |
| New South Wales ... | 38 11 5 | 38 11 0 | 38 8 10 | 37 3 9 | 36 9 9 | 38 7 2 | 39 1 7 | 41 10 11 |
| Victoria ... | 24 11 8 | 24 14 1 | 24 14 3 | 24 9 0 | 24 7 2 | 25 4 1 | 26 0 9 | 26 5 0 |

| South Australia ... | 30 2 4 | 30 3 11 | 30 10 8 | 29 15 10 | 30 1 0 | 31 5 3 | 32 17 6 | 33 15 8 |
| Western Australia ... | 41 3 3 | 41 17 7 | 41 8 5 | 37 18 0 | 36 18 8 | 36 8 8 | 39 9 1 | 39 19 6 |
| Tasmania ... | 23 14 9 | 24 10 6 | 25 14 2 | 26 1 9 | 25 11 2 | 26 5 4 | 27 13 0 | 28 1 4 |
| Commonwealth ... | 32 0 4 | 32 5 10 | 32 3 10 | 31 7 9 | 31 8 4 | 32 5 10 | 33 8 11 | 34 11 11 |

The average amount deposited per head of population shows a satisfactory increase during the period under review. In 1900-1 it ranged from £10 10s. in South Australia to £5 16s. 9d. in Tasmania, while in 1907-8 the amount in South Australia had risen to £14 12s. 3d., and in Tasmania to £8 13s. 1d. Tasmania's average in 1906-7 was higher than that of Queensland, which, nevertheless, rose from £7 15s. 2d. to £8 7s. 6d. during the seven years. In 1907-8 the average for Queensland was again 1s. 3d. higher than that for Tasmania. The following table gives the figures for each year:—

SAVINGS BANKS DEPOSITS PER HEAD OF POPULATION, 1900-1 to 1907-8.

| State. | 1900-1. | | | 1901-2. | | | 1902-3. | | | 1903-4. | | | 1904-5. | | | 1905-6. | | | 1906-7. | | | 1907-8. | | |

4. **Annual Business.**—The annual volume of business transacted by the Australian savings banks is very large when compared with the total amount of deposits. This is mainly due to the fact already pointed out of many accounts being used as convenient current accounts. Thus, during the last year of the period under review, the total amount deposited and withdrawn (exclusive of interest added) amounted to more than 129 per cent. of the total amount of deposits at the end of the previous year, while the amount at credit of depositors (inclusive of interest added) increased by less than 10 per cent. during the same year. The following table shews the business transacted during the year 1907-8:—

TRANSACTIONS DURING THE YEAR 1907-8.

| State. | Total Deposits at End of Year 1906-7. | Amounts Deposited during Year 1907-8. | Interest Added during Year 1907-8. | Total. | Amounts Withdrawn during Year 1907-8. | Total Deposits at End of Year 1907-8. |
|-----------------|---------------------------------------|---------------------------------------|------------------------------------|------------|---------------------------------------|---------------------------------------|

§ 5. Life Assurance.

1. **General.**—Under section 51 of the Commonwealth Constitution Act, the Commonwealth Parliament is empowered to legislate in regard to “insurance, other than State insurance; also State insurance extending beyond the limits of the State concerned.” With the exception of Act No. 12 of 1905, “an Act relating to assurance on the lives of children by life assurance companies or societies,” no legislation relating to insurance has been passed by the Commonwealth Parliament, and life assurance companies carry on their business under State laws where such laws are in existence, or otherwise under the provisions of various companies or special Acts. A Royal Commission was, however, appointed in 1908, consisting of the Honourable J. H. Hood, one of the judges of the Supreme Court of Victoria, and G. H. Knibbs, Esquire, Commonwealth Statistician, “to inquire into and report upon the law relating to and the methods of operating Fire, Life, Industrial, and other Insurance in Australia.” The Commission is required to report the result of its inquiry before the 30th June, 1909. On this result future Commonwealth legislation will probably be based.

Returns for the year 1907 have been directly collected from life assurance societies by the Commonwealth Statistician, with results which are in the main satisfactory. From two of the foreign companies returns have not yet been received, and in their case 1906 figures had, therefore, to be repeated in the following tables. Unlike previous returns, figures for 1907 refer to business in the Commonwealth only, and omit New Zealand business.

2. **Companies Transacting Business in the Commonwealth.**—The total number of companies at present established in the Commonwealth is twenty, of which the following eight have their head offices in New South Wales:—The Australian Mutual Provident Society, the Mutual Life Association of Australasia, the City Mutual Life Assurance Society Limited, the Citizens' Life Assurance Company Limited, the Standard Life Association Limited, the Australian Metropolitan Life Assurance Company Limited, the People's Prudential Assurance Company Limited, and the Phoenix Mutual Provident Society Limited. Of these companies the Mutual Life Association of Australasia and the Citizens' Life Assurance Company Limited have during 1908 amalgamated. Six companies have their head offices in Victoria, viz.—The Australian Alliance Assurance Company, the National Mutual Life Association of Australasia Limited, the Australian Widows' Fund Life Assurance Society Limited, the Victoria Insurance Company Limited, the Colonial Mutual Life Assurance Society Limited, and the Australasian Temperance and General Mutual Life Assurance Society Limited. The head office of the Provident Life Assurance Company is in New Zealand, and that of the Liverpool and London and Globe Insurance Company in England. The Independent Order of Foresters is a Canadian institution, while the remaining three societies belong to the United States, viz.—The Equitable Life Insurance Society of the United States, the Mutual Life Insurance Company of New York, and the New York Life Insurance Company.

Most of the Australian companies are purely mutual; the Victoria (which takes no new life business), the Citizens', the Standard, the Metropolitan, and the Prudential, are the only companies which are partly proprietary, the shareholders' capital amounting to £40,000, £20,000, £12,500, £10,632 and £4785 respectively. Of foreign companies transacting business in the Commonwealth, the Provident and the Equitable are partly proprietary, the shareholders' capital amounting to £5250 and £20,550 respectively. No returns are available of the Liverpool and London and Globe Insurance Company.

3. **Ordinary and Industrial Business.**—Of the societies enumerated in the preceding paragraph the following five transact both ordinary and industrial business:—

The Australian Mutual Provident Society, the Citizens' Life Assurance Company Limited, the Australasian Temperance and General Mutual Life Assurance Society Limited, the Standard Life Association Limited, and the Australian Metropolitan Life Assurance Company Limited.

The People's Prudential Assurance Company Limited, the Phoenix Mutual Provident Society Limited and the Provident Life Assurance Company restrict their operations to industrial business, the first in addition having a medical benefit branch.

The remaining twelve societies transact ordinary life assurance business only, with the exception of those companies which have fire and accident branches, etc.

It has been attempted in this section to keep returns relating to ordinary and to industrial business apart, so far as it is possible to do so, and figures relating to companies whose head offices are in Europe or America refer to the Australian business of those companies only.

4. Ordinary Business: Australian Business in Force, 1907.—The subjoined table shows the ordinary life business in force at the latest dates available in the seventeen societies conducting operations in the Commonwealth and in New Zealand:—

ORDINARY LIFE ASSURANCE.—AUSTRALIAN BUSINESS IN FORCE, 1907.

| Society. | Policies in force, exclusive of Annuities. | Amount Assured, exclusive of Bonus Addition, etc. | Annual Premium Income. |
|---|--|---|------------------------|
| | No. | £ | £ |
| Australian Mutual Provident Society | 177,038 | 49,318,807 | 1,849,160 |
| Mutual Life Association of Australasia | 17,056 | 4,148,483 | 151,802 |
| City Mutual Life Assurance Society | 13,323 | 1,714,127 | 64,758 |
| Citizens' Life Assurance Company | 41,239 | 5,662,769 | 203,994 |
| Standard Life Association | 4,808 | 632,631 | 22,806 |
| Australian Metropolitan Life Assurance Company | 1,788 | 149,151 | 6,713 |
| Australian Alliance Assurance Company | 648 | 221,713 | 6,222 |
| National Mutual Life Association of Australasia | 53,936 | 11,600,088 | 410,325 |
| Australian Widows' Fund Life Assurance Society | 23,247 | 4,736,261 | 166,459 |
| Victoria Insurance Company | 163 | 79,650 | 2,264 |
| Colonial Mutual Life Assurance Society | 16,490 | 3,574,626 | 121,608 |
| Australasian Temperance and General Mut. Life Ass. Socy. | 19,355 | 2,177,459 | 79,727 |
| Liverpool and London and Globe Insurance Company | 414 | 194,483 | 5,427 |
| *Independent Order of Foresters | 1,448 | 246,700 | 4,877 |
| Equitable Life Assurance Society of United States | 8,782 | 3,180,791 | 157,876 |
| *Mutual Life Insurance Company of New York | 5,305 | 2,169,155 | 83,403 |
| New York Life Insurance Company | 6,647 | 2,514,637 | 98,216 |

* Returns for 1906.

5. Industrial Business: Australian Business in Force, 1907.—Similar information in regard to the industrial business of the eight societies transacting that kind of business is given in the following table:—

INDUSTRIAL LIFE ASSURANCE.—AUSTRALIAN BUSINESS IN FORCE, 1907.

| Society. | Policies in Force. | Amount Assured. | Annual Premium Income. |
|--|--------------------|-----------------|------------------------|
| | No. | £ | £ |
| Australian Mutual Provident Society | 20,348 | 589,496 | 28,038 |
| Citizens' Life Assurance Company | 183,137 | 3,604,232 | 167,353 |
| Standard Life Association | 24,611 | 666,745 | 26,143 |
| Australian Metropolitan Life Assurance Company | 12,318 | 411,820 | 17,582 |
| People's Prudential Assurance Company | 6,266 | 178,996 | 15,348 |
| * Phoenix Mutual Provident Society | 442 | 18,516 | 3,473 |
| Aust. Temperance and General Mutual Life Ass. Society | 88,604 | 1,701,817 | 104,815 |
| Provident Life Assurance Company | 1,739 | 45,881 | 2,134 |

* Returns for 1906.

6. Receipts and Expenditure of Australasian Societies, 1907.—(i.) *Ordinary Business.* The following returns refer only to those companies whose head offices are in the Commonwealth and in New Zealand. The People's Prudential Assurance Company, whose accounts do not distinguish between revenue and expenditure on account of ordinary and industrial business, has been included among the companies doing industrial business:—

ORDINARY LIFE ASSURANCE.—RECEIPTS AND EXPENDITURE, 1907.

| Society. | Receipts. | Expenditure. | Excess Receipts (Addition to Funds). |
|--|-----------|--------------|--------------------------------------|
| | £ | £ | £ |
| Australian Mutual Provident Society | 2,565,540 | 1,753,752 | 806,788 |
| Mutual Life Association of Australasia | 228,668 | 185,804 | 42,864 |
| City Mutual Life Assurance Society | 82,763 | 54,306 | 28,457 |
| Citizens' Life Assurance Company | 257,054 | 107,264 | 149,790 |

| Provident Life Assurance Company | 2,134 | 1,820 | 314 |
| Total | 422,174 | 276,102 | 146,072 |

* Decrease. † Returns not available.

7. **Expenses of Management of Australasian Societies, 1907.**—(i.) *Ordinary Business.* In the following table the expenses of management (including commission, expenses of management, license fees, and taxes) of the several Australasian societies transacting ordinary life business are shown, together with the proportion these expenses bear to premium income and to gross receipts. The People's Prudential company is included amongst the industrial companies in a subsequent table, as that company transacts mainly industrial business, and as its returns include both ordinary and industrial business:—

ORDINARY LIFE ASSURANCE.—EXPENSES OF MANAGEMENT, 1907.

| Society. | Expenses of Management. | Proportion to Premium Receipts. | Proportion to Gross Receipts. |
|---|-------------------------|---------------------------------|-------------------------------|
| | £ | % | % |

| Victoria Insurance Company | 1,307 | 57.73 | 11.36 |
| Colonial Mutual Life Assurance Society | 48,810 | 40.14 | 24.24 |
| Australasian Temperance and General Mut. Life Ass. Soc. | 18,313 | 22.97 | 18.39 |

(ii.) *Industrial Business.* The Australasian assurance societies have, in common with assurance societies elsewhere, made the experience that industrial business is much more expensive than ordinary business. This is, of course, principally due to the great expenses in connection with collection and commission. The subjoined table shows particulars so far as they are available, the figures again including commission, expenses of management, license fees, and taxes:—

INDUSTRIAL LIFE ASSURANCE.—EXPENSES OF MANAGEMENT, 1907.

| Society. | Expenses of Management. | Proportion to Premium Receipts. | Proportion to Gross Receipts. |
|---|-------------------------|---------------------------------|-------------------------------|
| | £ | % | % |
| Australian Mutual Provident Society | 25,206 | 89.90 | 89.37 |
| Citizens' Life Assurance Company | 71,980 | 43.01 | 33.26 |
| Standard Life Association | 19,263 | 73.68 | 71.17 |
| Australian Metropolitan Life Assurance Company | 11,388 | 64.77 | 55.98 |

* Including ordinary business.

† Returns not available.

8. **Liabilities and Assets of Australasian Societies, 1907.**—The liabilities of the Australasian societies consist mainly of their assurance funds; as already mentioned, only six of the societies are partly proprietary, viz., the Citizens', with a paid-up capital of £20,000; the Standard, with a paid-up capital of £12,500; the Metropolitan, with a paid-up capital of £10,632; the Prudential, with a paid-up capital of £4785; the Victoria, with a paid-up capital of £40,000; and the Provident, with a paid-up capital of £5250. With the exception of the Victoria, this paid-up capital belongs in every case to the industrial branch of the respective societies. In the following table these amounts are included with the assurance funds. The assets consist mainly in loans on mortgage and policies, in Government, municipal, and similar securities, shares, freehold property, etc. Loans on personal security are only granted by very few of the Australian societies:—

(i.) *Ordinary Business.* The following table shews the liabilities and assets of the Australasian societies transacting ordinary life business:—

ORDINARY LIFE ASSURANCE.—LIABILITIES AND ASSETS, 1907.

* Including industrial business. As the business of these two societies is mainly ordinary life business they have been included in this table.

(ii.) *Industrial Business.* As stated in the footnote to the preceding table, the Australian Mutual Provident Society and the Australasian Temperance and General Mutual Life Assurance Society, which transact a certain amount of industrial business, but whose business is mainly ordinary life business, have been included with those societies doing only ordinary life business. On the other hand, the People's Prudential Assurance Company, in whose case industrial business greatly predominates over ordinary life business, has been included in the following table. Incomplete as the table is, it shews that the funds appropriated to industrial business are very insignificant in comparison with those pertaining to ordinary life business. Taking the table in conjunction with the statements of revenue and expenditure, the question may well be asked whether in the case of some of the societies industrial business is worth catering for at all:—

* Including ordinary business. † Returns not available. ‡ Not separable from New Zealand business.

§ 6. Other Insurance.

1. **General.**—Returns as to fire insurance are very defective, and only for Sydney and Melbourne and the country districts of Victoria have some figures been given which are worth reproducing. The Royal Commission mentioned above under "Life Assurance" is inquiring into fire insurance matters, and Commonwealth legislation may, therefore, be expected at an early date.

2. **Sydney.**—Under the Fire Brigades Act 1902 the cost of the Metropolitan Fire Brigade is defrayed by equal payments on the part of the Colonial Treasurer, the municipal councils within the area under the jurisdiction of the Fire Brigades Board, and the insurance companies represented in Sydney. The companies divide their share proportionately to the amount held at risk. Under this arrangement the amount payable by the companies for the year 1908 was £17,400, divided amongst sixty companies, of which not more than five had their head office in Sydney. The amounts thus held at risk at the close of the last three years for which returns are available were, in 1905, £78,108,749; in 1906, £81,364,129; and in 1907, £86,563,304. As the total capital value of all ratable property in Sydney and suburbs is over £102,000,000, and the unimproved value £44,000,000, the value of buildings and other improvements on ratable property amounts to £58,000,000, and it appears, therefore, that in addition to the value of buildings, represented by this £58,000,000, furniture, stocks in warehouses, machinery, etc., must be insured for over £28,000,000.

3. **Melbourne.**—In Melbourne the Metropolitan Fire Brigades Board assesses the amount payable by the insurance companies on the amount of premiums returned. These premiums for the last three years averaged about £300,000 per annum, while the contributions paid by the companies amounted to about £13,000, or about £4 6s. 8d. for every £100 of premiums. It may be said, therefore, that the companies have to devote about 4½ per cent. of their premium income from metropolitan insurances to the maintenance of the fire brigade.

The annual value of ratable property is nearly £5,000,000, and the amounts contributed by the municipalities—as in the case of the insurance companies, one-third of the amount required by the Fire Brigades Board, the remaining one-third being contributed by the State Treasurer—are equal to about ¾d. per £1 of ratable value. In addition to this contribution insurance companies doing business in Victoria have to take out an annual license at a cost of 1½ per cent. of their gross premium income, which is probably equal to about 1¾ per cent. on net income.

4. **Country Districts of Victoria.**—The country districts are divided into nine areas for fire insurance purposes, and the contributions to be paid vary in these areas according to the actual requirements of the Country Fire Brigades Board. The annual values of ratable property were returned as follows:—In 1905, £1,393,770; in 1906, £1,400,568; and in 1907, £1,440,270. The premium income of the insurance companies from country business during the same three years averaged about £150,000, and the contributions of the companies £3700, equal to nearly 2½ per cent. of the premium income.

5. **Brisbane.**—A similar arrangement holds good in Brisbane, under which the cost of the Fire Brigade Board, amounting to about £6000 per annum, is paid in equal shares by the Government, the Brisbane City Council, and the insurance companies.

6. **Australian Insurance Business.**—Returns are available shewing the revenue and expenditure, assets and liabilities, and investments of sixteen insurance companies having their head offices either in the Commonwealth or in New Zealand. These companies are:—(a) with head-office in Sydney—the Australian Mutual Fire Insurance Company, the City Mutual Fire Insurance Company, the Mercantile Mutual Fire Insurance Company, the Queensland Insurance Company Limited, and the United Insurance Company; (b) with head office in Melbourne—the Australian Alliance Assurance Company, the Colonial Mutual Fire Insurance Company, the Commonwealth Insurance Company Limited, the Victoria Insurance Company, and the Victoria General Insurance and Guarantee Company Limited; (c) with head-office in Hobart—the Derwent and Tamar Fire and Marine Assurance Company Limited; (d) with head-office in Launceston—the Mutual Fire Insurance Company of Tasmania; (e) with head-office in Auckland—the New Zealand Insurance Company, and the South British Fire and Marine Insurance Company of New Zealand; and (f) with head-office in Dunedin—the National Fire and Marine Insurance Company of New Zealand, and the Standard Fire and Marine Insurance Company of New Zealand. As their names imply, the majority of these companies transact marine insurance and in some cases guarantee and other business in addition to fire insurance business, and the returns relating to the latter cannot be separated from the former.

The accounts cover two periods of one year, the second year ending at various dates from 31st August, 1907, to 30th June, 1908. The figures for the first year are put in brackets.

The premiums, less reinsurances and returns, amounted to £1,781,653 (£1,656,173); losses were £1,060,768 (£1,158,819). Expenses and commission came to £544,315 (£499,511), and there was, therefore, a profit on trade operations of £176,570 (loss, £2157, chiefly on account of losses experienced by one of the New Zealand companies in connection with the earthquake and fire in San Francisco). As, however, interest, rent, fees, etc., amounted to £134,267 (£132,589), the total profit was £310,837 (£130,432). Dividends and bonuses came to £175,591 (£163,782). The ratio to premium income of losses was, therefore, 59.54 per cent. (69.97 per cent.), ranging from 17.26 per cent. to 75.01 per cent.; and of expenses and commissions, 30.55 per cent. (30.16 per cent.). The resulting ratio of trade surplus to premium income was 9.91 per cent. (loss ratio, 0.13 per cent.).

The paid-up capital of the sixteen companies was £1,295,347 (£1,261,597); reserve and reinsurance funds, £1,877,166 (£1,733,605); undivided profits, £154,275 (£170,581). The total paid-up capital and reserves were, therefore, £3,326,788 (£3,165,783). In addition to these liabilities there were others, viz.:—Unsettled losses, £256,627 (£243,763); sundry creditors, £110,308 (£134,582); dividend to pay, £121,538 (£119,283); and, in the case of one company, a life assurance fund, £219,797 (£242,013), thus bringing the total liabilities to shareholders and to the general public up to £4,035,058 (£3,905,424).

The corresponding amount of assets is made up of investments, £3,513,308 (£3,389,058), viz.:—Loans on mortgage, £927,899 (£814,198); Government securities,

debentures, shares, etc., £1,034,848 (£954,935); landed and other property, including furniture, £727,308 (£669,556); fixed deposits, £540,089 (£582,589); in the case of one company doing a mixed business—loans on its own life policies, etc., £20,937 (£21,945); other investments, £262,177 (£345,785). The balance of assets consisted of cash in bank, on hand, and bills receivable, £146,036 (£173,339); and sundry debtors, etc., £375,664 (£343,027).

The financial position of the companies is undoubtedly a strong one, owing to the steady accumulation of reserves, and the high ratio (186.7 per cent.) borne by capital and reserves to premium income must be a cause of satisfaction to policyholders.

§ 7. Friendly Societies.

1. **General.**—Friendly societies are an important factor in the social life of the community, as probably nearly one-third of the total population of the Commonwealth comes either directly or indirectly under their influence. Their total membership is nearly 360,000, but as certain benefits, such as medical attendance and free medicine and in many cases funeral expenses, are granted to members' families as well as to members themselves, this figure must, even when due allowance is made for young and unmarried members, be multiplied by four at the least to arrive at the total number of persons more or less connected with these societies. Legislation has conferred certain privileges on friendly societies, but, on the other hand, it insists on their registration, and it is the duty of the Registrars in the various States, prior to registering a new society, to see that its rules are conformable to the law, and that the scale of contributions is sufficiently high to enable the promised benefits to be conferred on members. Societies are obliged to forward annual returns as to their membership and their finances to the Registrar, and elaborate reports are published in most of the States dealing with the returns thus received.

In the following tables the figures for New South Wales, Victoria, and Western Australia refer to the year 1907, those for Queensland and South Australia to the year 1906, and those for Tasmania to the year 1905.

2. **Number of Societies, Lodges, and Members.**—The total number of societies registered in New South Wales is 62; in Victoria, 27; in Queensland, 20; in South Australia, 16; in Western Australia, 17; and in Tasmania, 16. No total is given of these figures for the Commonwealth, as the societies shewn in one State are in most cases represented in all the other States. The number of different lodges, the total number of benefit members at the end of the year, and their average number during the year are shewn in the following table:—

NUMBER OF LODGES AND MEMBERS, 31st DECEMBER, 1907.*

| State | Number of Lodges. | Benefit Members at End of Year. | Benefit Average No. of Members during Year. |
|-------------------|-------------------|---------------------------------|---|
| New South Wales | 1,333 | 116,985 | 101,521 |
| Victoria | 1,376 | 123,443 | 120,002 |
| Queensland | 410 | 33,717 | 32,950 |
| South Australia | 506 | 52,165 | 51,226 |
| Western Australia | 251 | 15,482 | 15,056 |
| Tasmania | 152 | 17,035 | 15,507 |
| Commonwealth | 4,028 | 358,827 | 336,262 |

* See, however, paragraph 1.

3. **Sickness and Death.**—Sick pay is generally granted for a number of months at full rates, then for a period at half rates, and in some societies is finally reduced to quarter rates. The following table shows the total number of members who received sick pay during the year, the number of weeks for which they received pay in the aggregate, and the average per member sick, and further the number of benefit members who died during the year, together with the proportion of deaths per thousand average members :—

SICKNESS AND DEATH, 1907.*

| State. | Number of Members who received Sick Pay. | Total Number of weeks Sick Pay granted. | Average Num- of weeks per Member sick. | Deaths of Benefit Members and Wives. | Proportion of Deaths to 1000 average Benefit Members. |
|---------------------|--|---|--|--------------------------------------|---|
| New South Wales | 22,504 | 123,971 | 5.51 | 733 | 7.32 |
| Victoria ... | 24,456 | 190,702 | 7.80 | 1,499 | 12.49 |
| Queensland ... | 6,202 | 32,552 | 5.25 | 219 | 6.65 |
| South Australia ... | 8,851 | 84,707 | 9.57 | 698 | 13.63 |
| Western Australia | 1,880 | 10,079 | 5.36 | 102 | 6.77 |
| Tasmania ... | 3,176 | 17,600 | 5.54 | 120 | 7.73 |
| Commonwealth | 67,069 | 459,611 | 6.85 | 3,371 | 10.02 |

* See, however, paragraph 1.

4. **Revenue and Expenditure.**—The financial returns are not made up in the same way in each State, but an attempt has been made in the subjoined table to group the revenue under the main headings :—

REVENUE, 1907.*

| State. | Entrance Fees. | Members' Contributions. | Levies. | Interest, Dividends, and Rents.. | All other Income. | Total Revenue. |
|---------------------|----------------|-------------------------|---------|----------------------------------|-------------------|----------------|
| | £ | £ | £ | £ | £ | £ |
| New South Wales | 2,303 | 333,601 | — | 42,706 | 55,390 | 434,000 |
| Victoria ... | † | 353,242 | † | 68,499 | 30,582 | 452,323 |
| Queensland ... | † | 110,030 | † | § | 13,534 | 123,564 |
| South Australia ... | 1,535 | 122,643 | § | 29,464 | 59,227 | 212,869 |
| Western Australia | 1,544 | 37,743 | 548 | 5,245 | 20,734 | 65,814 |
| Tasmania ... | † | 52,035 | † | 4,993 | 7,591 | 64,619 |
| Commonwealth | † | 1,015,224 | † | § | 337,965 | 1,353,189 |

* See, however, paragraph 1. † Included under "Members' contributions." § Included under "All other income."

The returns relating to expenditure are more complete than those relating to revenue, and can be shewn in full for every State. The figures shew that the excess of revenue, amounting in the aggregate of £284,231, was divided amongst the six States as follows:—New South Wales, £112,519; Victoria, £84,840; Queensland, £33,935; South Australia, £33,101; Western Australia, £10,271; and Tasmania, £9,565. The revenue exceeded the expenditure by about seventeen shillings per average benefit member, a margin which cannot be called very large :—

EXPENDITURE, 1907.*

| State. | Sick Pay. | Medical Attendance and Medicine. | Sums Paid at Death of Members & Members' Wives. | Adminis-tration. | All other Expendi-ture. | Total Expendi-ture. |
|---------------------|-----------|----------------------------------|---|------------------|-------------------------|---------------------|
| | £ | £ | £ | £ | £ | £ |
| New South Wales | 96,240 | 110,895 | 24,338 | 44,378 | 45,630 | 321,481 |
| Victoria ... | 128,868 | 126,445 | 26,562 | 60,860 | 24,748 | 367,483 |
| Queensland ... | 24,729 | 38,774 | 8,520 | 17,606 | † | 89,629 |
| South Australia ... | 49,370 | 27,130 | 24,325 | 23,545 | 55,398 | 179,768 |
| Western Australia | 8,521 | 13,354 | 1,921 | 10,876 | 20,871 | 55,543 |
| Tasmania ... | 14,491 | 14,727 | 5,943 | 7,017 | 12,876 | 55,054 |
| Commonwealth | 322,219 | 331,325 | 91,609 | 164,282 | 159,523 | 1,068,958 |

* See, however, paragraph 1. † Included in "Administration."

It appears from the above figures that sick pay averaged about fourteen shillings per week, but, as the returns include pay at half and quarter rates, and as the proportion of these to full rates is not stated, the average given must be taken for what it is worth. Medical attendance and medicine came to nineteen shillings and eightpence per average benefit member, or to nearly £5 per member who received sick pay during the year. Funeral expenses averaged £27 3s. 6d. per death of a member or wife of a member during the year, but this average also must be taken for what it is worth, as the funeral expenses allowed in the case of the death of a member are generally much higher than those allowed in the case of the death of a member's wife.

5. **Funds.**—The two foregoing tables shew that the surplus of revenue over expenditure amounted to £284,231 for the year, and a small surplus must, of course, result annually in every society which levies adequate contributions to enable it to meet all possible claims. These accumulations of profits are generally invested, and the subjoined table shews for five out of the six States the division into invested and uninvested funds, and in the case of Tasmania the total amount of funds:—

FUNDS, 31st DECEMBER, 1907.*

| State. | Invested Funds. | Uninvested Funds. | Total Funds. |
|-----------------------|-----------------|-------------------|--------------|
| | £ | £ | £ |
| New South Wales ... | 1,104,685 | 66,658 | 1,171,343 |
| Victoria ... | 1,715,366 | 77,820 | 1,793,186 |
| Queensland ... | 369,807 | 22,516 | 392,323 |
| South Australia ... | 714,719 | 29,076 | 743,795 |
| Western Australia ... | 103,018 | 21,050 | 124,068 |
| Tasmania... | † | † | 143,577 |
| Commonwealth ... | †4,007,595 | †217,120 | 4,368,292 |

* See, however, paragraph 1. † Returns not available. ‡ Exclusive of Tasmania.

The total funds amounted, therefore, to nearly £12 3s. 6d. per member at the close of the year under review.

§ 8. Probates.

1. **Number of Probates and Letters of Administration and Value of Estates.**—The value of the estates left by deceased persons gives a fair view of the distribution of property among the general population. There occurred in 1907 the deaths of 30,554 adult persons, while the total number of probates and letters of administration granted during the same period was 10,222. It would therefore appear that about one in every three adults who died during the year was possessed of sufficient property to necessitate the taking out of probate. The details for each State are shewn in the table hereunder:—

PROBATES AND LETTERS OF ADMINISTRATION, 1907.

| State. | Number of Estates. | | | Value of Estates. | | |
|-------------------|--------------------|----------------------------|--------|-------------------|----------------------------|------------|
| | Probates. | Letters of Administration. | Total. | Probate. | Letters of Administration. | Total. |
| | | | | £ | £ | £ |
| New South Wales | 2,045 | 1,039 | 3,084 | 6,835,381 | 728,118 | 7,563,499 |
| Victoria | 2,859 | 1,297 | 4,156 | 6,351,166 | 508,977 | 6,860,143 |
| Queensland | 650 | 510 | 1,160 | 1,529,112 | 141,072 | 1,670,184 |
| South Australia | 769 | 206 | 975 | 1,764,995 | 158,959 | 1,923,954 |
| Western Australia | 229 | 204 | 433 | 1,051,437 | 102,689 | 1,154,126 |
| Tasmania | 322 | 92 | 414 | 754,637 | 86,590 | 841,227 |
| Commonwealth | 6,874 | 3,348 | 10,222 | 18,286,728 | 1,726,405 | 20,013,133 |

This would make the average value of each estate £1958, and the average value of property left by each adult who died in 1907, £655.

2. **Private Wealth.**—The probate figures have sometimes been used as a means for estimating the private wealth of a country. There are, however, many reasons why no reliance can be placed on such estimates. Generally, estates under a certain minimum value do not require to pass through the probate office. Settlements and deeds of gift, although liable to probate duty, occasionally evade detection. The falling in of several, or even of one very large estate, may vitiate the figures not only of one year but of a series of years. All these errors can, however, be more or less guarded against, while the assumption that each adult living is possessed of the same average amount of property as each adult who died during the year or during a series of years, an assumption on which the whole calculation is based, remains. But as it is certain that the accumulated wealth of an individual generally advances with age, and is probably in most cases greater at death than at any previous period, it will be seen that the results obtained by such a calculation must be unduly inflated. If the calculation were made for the Commonwealth and based on the figures of 1907 it would shew the average property of each adult to be £655, and of the 2,224,000 adults, which were approximately included in the population of the Commonwealth at the end of 1907, about £1,457,000,000, an estimate probably considerably in excess of the truth.

SECTION XXII.

PUBLIC INSTRUCTION.

§ 1. Early History of Primary Education in Australia.

1. **Primary System of New South Wales.**—(i.) *Place of New South Wales in Australian Education.* The first settlement in Australia being in New South Wales, it is but natural that Australian education should have its beginnings in that State. In the evolution of educational method and system in Australia, New South Wales also has played a leading part, and had practically a dominating influence. For that reason a sketch of the evolution of education in New South Wales contains, as it were, the key to the understanding at the Australian attitude to this question.

(ii.) *Early Difficulties.*¹ Although the instructions issued to Governor Phillip, under whose supervision the first settlement in Australia was founded, contained the direction that 200 acres near every township should be reserved for the maintenance of a schoolmaster, and there were many children in the "First Fleet," no teacher was sent with that fleet, and it was not until 1792, four years after the foundation of the colony, that any interest in the well-being of the children was manifested. The first chaplain, the Rev. R. Johnson, lamenting the neglected condition of the children, suggested that educated persons might be found to undertake the duties of teachers, if means were provided to pay them. With this object he appealed to the Society for the Promotion of the Gospel in Foreign Parts, and that body granted the sum of £40—£10 for each of the four teachers.

The first building used as a school-house was that built as a church for the Rev. R. Johnson, and was wilfully burnt down. Governor Phillip states that in this building from 150 to 200 children were educated under the immediate superintendence of the clergyman. Governor Hunter seems to have been concerned about the juveniles of his charge, for, in his despatch dated August, 1796, he wrote that a "public school for the care and education of the children is much wanted to save them from certain ruin." Though the Ministry of the day turned a deaf ear to his appeals, the Church Society in London resolved to extend assistance to the new settlement, and to begin with holding out encouragement to schoolmasters and schoolmistresses as the most likely means of effecting a reformation. Very little, however, was done; and in March, 1802, Governor King reported "the children numbered 1002, and finer or more neglected children are not to be met with in any part of the world."

(iii.) *Voluntary Effort.* The first voluntary effort to establish a school was made at the Hawkesbury, the leading farming centre of the population. The settlers not having the means to erect a school-house, the Governor had it built at the expense of the Crown, and obtained from the settlers signatures to an instrument, engaging themselves and their heirs, etc., for the term of fourteen years to pay the annual sum of 2d. per acre for all lands granted by the Crown and held by them, for the purpose of providing a maintenance for such persons as might be appointed to teach the children. This is the first instance of a "school-rate" in Australia, and was imposed before a similar rate was thought of in England.

1. The following sketch (paragraph ii. to viii.) is contributed by P. Board, M.A., Under-Secretary of Public Instruction, and Director of Education, New South Wales.

Governor Bligh appears to have shewn great interest in the education of youth. Writing in February, 1807, he refers to the work of regulating schools in the towns and watching over the rising generation, and states: "At present we are doing all in our power to educate the children, having nearly 400 of them under tuition in the different parts of the colony."

(iv.) *State Grants.* From 1810 schools were generally established by the various churches by means of grants from the State. This aid was derived from certain Customs duties called the "Orphan Dues," because the first charge upon them was for the maintenance and education of orphan children. The money was applied chiefly to the payment of teachers' salaries. Each school was wholly independent of others; there was no system or general aim prescribed by a competent authority. Religious instruction, including the Church Catechism, was universally given without regard to the denomination of the pupils; in point of fact, the schools were almost entirely Church of England institutions.

(v.) *Denominational Education.* In 1831 Sir Richard Bourke became Governor, and in his first address to the Legislative Council he recommended a liberal provision for the religious instruction and education of the people, and in 1836 he advised that the "Irish National System of Education" be introduced into the colony. Though the proposal was approved by the Home Government, and was warmly supported by Sir George Gipps, who succeeded Bourke, it was opposed so strongly that for several years nothing was accomplished except that the National System was brought under the notice of the colonists and its principles made familiar to them.

(a) *Advantage of a General System over a Denominational one.* In June, 1884, Mr. Robert Lowe, afterwards Lord Sherbrooke, carried a resolution in the Legislative Council appointing a Select Committee to inquire into and report upon the state of education in the colony, and to devise means of placing the education of youth upon a basis suited to the wants and wishes of the community. In August following, the Committee reported that the state of education was extremely deficient. There were 25,676 children between the ages of 4 and 14, of whom 7642 received instruction in the State-aided denominational schools, and 4865 in private schools, leaving about 13,000 children who received no education at all. The report stated that the Committee were convinced of the superiority of a general over a denominational system, and therefore recommended that one uniform system be established for the whole of the colony, and that an adherence to that system should be made an indispensable condition under which alone aid should be granted. In support of these views, resolutions were carried in the Council, but only by a majority of one—"That it is advisable to introduce Lord Stanley's System of National Education"; "that in order to introduce this system, His Excellency the Governor be requested to appoint a Board of persons favourable to the introduction of Lord Stanley's National System of Education, and belonging to the different religious denominations: this Board to be invested with a very wide discretion as to the arrangements necessary for carrying the system into effect, and all funds to be henceforth applied for the purpose of education to be administered by them. The leading principle by which the Board of Education shall be guided is to afford the same facilities for education to all classes of professing Christians, without attempt to interfere with the peculiar religious opinions of any, or to countenance proselytism; and that the Board be incorporated."

(b) *Board of Denominational Education.* The supporters of the denominational system were strong enough to maintain the *status quo* till 1848, when the Board of National Education was incorporated, and to secure aid for their own schools. A Board of Denominational Education, consisting of one representative each from the Church of England, and the Roman Catholic, Presbyterian, and Wesleyan Churches, was appointed to distribute the sums voted for the maintenance of denominational schools. The management of these schools was thus practically left to the heads of the denominations mentioned.

At this time the denominational schools were attended by 11,725 children, and the grant from State funds for the year 1847 was £8450. It should, of course, be borne in mind that New South Wales then included the territories known as Victoria and Queensland.

(vi.) *Inception of the National System.* The "National System" may therefore be said to have commenced in 1848, and by the end of that year four schools were under the supervision of the Board. In 1849 the number had increased to twenty-five. In 1850, the year before the colony of Victoria was formed, the returns were: National schools, 43 in operation, and 52 in course of formation; pupils enrolled, 2725; expenditure, £7300. In this expenditure a large balance brought forward from the previous year was included. Denominational schools, 184; pupils enrolled, 11,581; expenditure from State funds, £8350.

(a) *Rivalry of Systems.* For eighteen years these two educational bodies co-existed, created by the same authority and supplied with funds from the same source—the public Treasury. Each was of necessity the rival of the other, and in numerous instances competed for the same pupils. The progress of the one was secured at the expense of the other; and instead of mutual help and co-operation in the important work of education, jealousy of each other's success and division and consequent waste of means were the inevitable results. Numerous applications were made to the National Board for the establishment of schools, but as an indispensable condition was that one-third of the cost of building and equipment was to be contributed by the applicants, it can be easily understood that schools did not increase with great rapidity. In 1857 regulations for the establishment of non-vested schools, or schools not erected by or belonging to the Board, were introduced. These non-vested schools were instrumental in bringing the means of education into places where none would have otherwise existed, and met with such favour that, during the first year of their existence, sixty-six applications for aid were made. This marked increase brought the National System more widely before the public, and virtually decided the question that further legislation was necessary, and that the anomaly of dual Boards supported by State funds could no longer be continued. Several attempts to introduce a general system were made, but as the proposals tended to maintain to some extent the denominational system, they received little support either from the legislature or the public.

(vii.) *The New South Wales Public Schools Act of 1867.* It was not until 1866, when Mr. (afterwards Sir Henry) Parkes introduced the "Public Schools Act,"¹ or "an Act to make better provision for Public Education," that the long desired change was effected. This Act came into operation in January, 1867, and introduced very important changes. By its provisions the administration of primary education was committed to a single governing body, thus ensuring a greater measure of consistency in educational policy. A Board of Education, consisting of five members, under the designation of the Council of Education, was incorporated, and entrusted with the expenditure of all moneys appropriated by Parliament for primary education. It was, moreover, empowered to make regulations having the force of law, unless disallowed by express resolution of both Houses within one month of the date of their being submitted to Parliament. These great powers enabled the Council of Education to carry on the work of instruction without restrictions from any quarter except those imposed by law.

(a) *Classes of Schools.*¹ The Public Schools Act recognised four classes of schools. Authority was expressly conferred upon the Council to establish and maintain public schools¹ in localities where twenty-five children would regularly attend; and it was also provided that such schools should, whenever practicable, take precedence of all others supported by Parliamentary grants. Secondly, the Council was permitted to grant aid to denominational schools under certain restrictions as to the number of pupils, the conditions of the buildings, and the distance of public schools from those on behalf of

1. The term "public school" in New South Wales denotes a State school of primary grade.

which assistance was sought; they were required to follow the course of instruction prescribed for public schools, and to be open to inspection in the same manner; and the Council was empowered to withdraw certificates, and therefore aid, in case these conditions were infringed. Thirdly, provisional schools were to be established in places where a sufficient number of children for a public school could not be secured. Fourthly, a class of schools was instituted where the teacher divided his time between two small schools, with about ten or twelve pupils at each, called "half-time schools." The Public Schools Act provided that the instruction to be given in all these schools should consist of two parts, secular and religious, secular instruction, however, being held to include *general* religious teaching, as distinguished from polemical or dogmatic theology, and from the tenets of particular denominations. In the denominational schools the ordinary teachers were permitted to give the special religious teaching, while in the other schools that duty was handed over to the clergy or to other duly accredited religious teachers.

(b) *National Education Boards.* The local oversight of schools was provided for by the appointment of Boards of not less than three members appointed by the Governor on the recommendation of the Council of Education, but such Boards had nothing to do with the appointment or dismissal of teachers, although in the case of denominational schools they were consulted.

(c) *Work of the Council of Education.* The benefits conferred upon the colony by the Council of Education were very great. Under its auspices school buildings of modern type as regards position, shape, size, and equipment were introduced, effective discipline was enforced, and systematic and progressive instruction arranged for. That Board also instituted the appointment and training of "pupil teachers," the training, examination and classification of teachers, and a liberal scale of remuneration, together with a comprehensive system of inspection.

The Council of Education took over 259 national schools, attended by 19,641 pupils, and 310 denominational schools, attended by 27,986 pupils, a total of 569 schools and 47,627 pupils.

(viii.) *The New South Wales Public Instruction Act of 1880.* The Public Schools Act continued in force until 1880; and though the system established by it was essentially one of transition, education made good progress during the thirteen years it was in force, especially after 1875, when the Legislative Assembly passed a resolution abolishing the provision that one-third of the cost of school buildings should be contributed locally, and directing that in future the entire cost of public schools should be defrayed by the public funds.

The principle of granting aid to denominational schools was, however, repugnant to the feelings of the majority of the people, who felt that the work of public instruction, being of such magnitude and involving so large an expenditure from the public funds, ought to become a department of the Government and be placed in the hands of a Minister directly responsible to Parliament. Accordingly, in 1880, an Act embodying these principles was introduced under the auspices of Sir Henry Parkes, and the "Public Instruction Act," now in operation, became law. The Council of Education handed over to the Minister of Public Instruction:—

| Items. | Public. | Provisional. | Half-time. | Denomi- national. | Total. |
|-----------------------|---------|--------------|------------|----------------------|---------|
| Number of schools ... | 705 | 313 | 97 | 105 | 1,220 |
| Number of pupils ... | 68,823 | 8,312 | 1,683 | 22,716 | 101,534 |

(a) *Essential Features of the Act of 1880.* The most important provisions of the Public Instruction Act are:—(1) Primary school education is placed under the sole

direction and control of a responsible Minister ; (2) Teachers are made civil servants, and are paid exclusively from the public funds ; (3) The system is wholly undenominational : all aid to denominational schools ceased on 31st December, 1882 ; (4) Attendance at school is made obligatory upon children between the ages of six and fourteen years, who reside within two miles of the school, for seventy days in each half-year, unless just cause of exemption can be shewn ; (5) The teaching is strictly secular, but the words "secular instruction" are held to include general religious teaching as distinguished from dogmatic and polemical theology : the History of England and Australia must form part of the course of secular instruction ; (6) High schools for boys and girls may be established, in which the instruction shall be of such a character as to complete the public school curriculum and prepare the pupils for the University ; (7) Provision is made for constituting Public School Districts and for the appointment of School Boards with defined powers and duties ; (8) School children are allowed to travel free by rail to the nearest public school ; (9) Four hours during each day must be devoted to secular instruction, and one hour set apart for special religious instruction to be given in a separate class-room, if procurable, or in a separate part of the school-room, by a clergyman or religious teacher of any denomination to children of the same denomination whose parents have no objection to their receiving such religious instruction ; if no religious teacher attends the full five hours must be devoted to the ordinary secular instruction.

(b) *The Question of School Fees.* Prior to the passing of the "Public Instruction Act of 1880" there were varying scales of school fees, and the fees were then retained by the teachers as part of their emoluments. The Act of 1880, however, readjusted teachers' salaries, and a fixed fee of threepence per week was charged, and the amount thus derived was paid into the Consolidated Revenue of the State. These payments amounted in late years to upwards of £80,000 per annum.

In 1906 Parliament passed an Act to abolish the payment of fees in primary and superior public schools of New South Wales, taking effect as from the 8th October of that year.

2. Primary System of Victoria.—This State, originally known as Port Phillip, was separated from the parent State of New South Wales in 1851. The system of dual control of educational matters, alluded to in the preceding section, was also in force in Victoria up to the year 1862, when the "Common Schools Act" dissolved the two Boards, and appointed instead a Board of Education consisting of five laymen. Up to this time, and until the passing of the Act of 1872, school fees, varying from 6d. to 2s. 6d. weekly, were charged, except in the case of those children whose parents were in necessitous circumstances. The Act of 1862 was not found to work with entire satisfaction, chiefly on account of its failure to provide anything like an equal distribution of educational facilities, and it was superseded by the Education Act of 1872, which came into operation on the 1st January, 1873. Under this Act the Board was abolished, and a Department of Education established, and placed under the control of a Minister of Public Instruction, while the principle of "free, secular, and compulsory education" was instituted. Boards of Advice were empowered to decide whether religious instruction should or should not be given out of school hours. Free instruction was given in the following subjects :—Reading, writing, arithmetic, grammar, geography, gymnastics (where practicable), and needlework for girls. Teachers were paid, in addition to fixed salaries, an amount as "results," not exceeding 50 per cent. of their fixed salaries, and determined by the percentage of marks gained at the annual examinations. Amending Acts were passed in October, 1876, and November, 1889, while the Education Act of 1890 consolidated the whole of the legislation dealing with the subject. Under the Education Act of 1901 the system of payment by "results" was abolished. The Act also provided for a permanent head of the department with the title of "Director." Provision was made for more regular attendance of scholars by enacting that the minimum attendance of children of the school age of six to thirteen years was to be raised

from forty school days per quarter to 75 per cent. of the whole number of half-days on which the school was open. Regulations were also made for the establishment of continuation and kindergarten schools. The minimum age of exemption from school attendance was fixed at twelve years. The subjects of free instruction in the primary schools were defined to be reading, writing, arithmetic, grammar, geography, history, drill, singing, drawing, elementary science, manual training, gymnastics, and swimming (where practicable), lessons in health and temperance (in case of children over nine years of age); sewing, cooking, and domestic economy for girls.

The Education Act of 1905, also known as the "Truancy Act," provides, amongst other things, that the limit of school age shall be fourteen instead of thirteen years. The minimum attendance was fixed at eight times in any week on which the school is open ten times, six times when the school is open eight times, and four times when the school is open six times, the word "times" meaning school half-days. Some important provisions in regard to the classification and emoluments of teachers were embodied in the Teachers Act of 1905, which came into force on the 1st January, 1906.

During the period of depression which followed the financial crisis of 1893 a number of schools were temporarily closed in Victoria, while, in the case of schools in closely-populated centres, a principle of amalgamation was put in force under which certain schools became what was termed "adjuncts" to others. A main school and its adjunct were both placed under the control of one principal, but the attendance at the adjunct was restricted to children in the first, second, and third classes. The number of schools at first made into adjuncts was sixty-nine, but the total was later on reduced until in 1907 there were only twenty institutions in this class.

Improvement was made in Victorian educational methods consequent on the Report of the Royal Commission of 1899. Inclusive of those already mentioned which were made the subject of legislative action, the training of teachers was placed on a more systematic basis, by discouraging the employment of pupil teachers and providing better for the proper tuition, in suitably-equipped institutions, of recruits to the ranks of the service. Allusion to the question of training teachers will be made in a later section. Further, the kindergarten teaching was systematised, and an expert was engaged to instruct infant teachers in approved methods, while special attention was given to the subjects of hand and eye work and natural science, in order to obtain the best practical results from the teaching.

Woodwork, cardboard modelling, and paperwork were introduced in 1900, and in 1907 there were twenty single centres for woodwork, each accommodating 200 boys, and one double centre, accommodating 400 boys. Additional teachers are also being trained, and Sloyd classes will be established in some of the smaller country towns. Attention is being given to the subjects of domestic economy and cooking. Twelve cooking centres are now open, giving instruction to 1556 girls. A College of Domestic Economy was opened in Melbourne in 1906, with an enrolment of eighty students. The Teachers' Registration Board, which is to some extent concerned with primary as well as with secondary education, will be referred to under the latter heading.

3. Primary System of Queensland.—From the date of its separation from New South Wales on the 10th December, 1859, up to the 30th September, 1860, primary education in Queensland was under the control of a Board of National Education, appointed by the Governor-in-Council. When the Board took office there were only two national schools in the colony. The Act of 1860 placed the control in the hands of what was termed the "Board of General Education," which consisted of five members, presided over by a Minister of the Crown. The duties of the Board were to superintend the formation and management of primary schools within the colony, and to administer the funds granted for this purpose by the Act. The scheme of operation followed in general principles the Irish National system. There were two classes of schools, vested and non-vested, the vested being unsectarian in character. The non-vested belonged to the

Anglican or Roman Catholic Churches, who provided the buildings and appointed the teachers, the board aiding by granting teachers' salaries and supplying school material. The Act of 1860 was superseded by the State Education Act of 1875, which came into operation in January, 1876, and is still in force. By the Act of 1876 the Board of Education was abolished, and its functions transferred to the Department of Public Instruction, under the official control of a Minister of the Crown, with the title of Secretary for Public Instruction. State aid to non-vested schools was withdrawn from the 31st December, 1880.

The Act in force provides for two classes of schools, State and provisional, State schools to include schools conducted in buildings erected on land vested in the Department of Public Instruction, and the provisional schools to be schools in which temporary provision is made for the primary instruction of children. As pointed out by the Director in a recent report, however, the term "provisional" is in many cases a misnomer, as the buildings are well and solidly built, and likely to fulfil all educational requirements in their districts for a considerable time. Half-time schools are provided in thinly-peopled areas, and itinerant teachers visit families in the remoter districts. One-fifth of the cost of State school buildings is provided by local voluntary subscriptions, the Department supplying the balance of the funds. The State defrays the whole cost of primary instruction, no school fees being charged. In the earlier years of the State's educational history fees were charged ranging from sixpence to one shilling and sixpence per week for each scholar, but these were abolished at the beginning of 1870. The curriculum prescribed by the Act embraced the following subjects:—Reading, writing, arithmetic, English grammar, geography, history, elementary mechanics, object lessons, drill and gymnastics, vocal music and needlework for girls. Drawing was added to the curriculum in 1894, while, by an Amending Act passed in 1897, one or more subjects may be omitted in schools taught by one teacher only, and in other cases additional subjects may be added. Attendance at State schools is compulsory for at least sixty days in each half-year in the case of children not less than six nor more than twelve years of age, except under certain well-defined circumstances. No religious instruction is allowed to be given in school during school hours, but persons desirous of undertaking this work can do so after hours on obtaining the permission of the Minister of Education.

In 1907 evening continuation classes were established for the purpose of (a) enabling pupils to continue their education who had left school before they had been educated up to the standard required by the Education Act, (b) assisting persons to obtain instruction in special subjects relating to their employment, and (c) preparing students for the Technical Colleges.

4. Primary System of South Australia.—The history of public primary education in South Australia may be said to begin with the appointment of the Council of Education in 1875. Prior to that year the educational activity of the State was confined mainly to subsidising private institutions. In 1878 the powers of the Council were vested in the Minister of Education, and a permanent head was appointed. The Act of 1875 provided for the establishment of schools, and the training, classification, and remuneration of teachers, and made the attendance of children between the ages of seven and thirteen living within two miles of a school compulsory, until a certain standard of competency in reading, writing, and arithmetic was reached. Fees were charged, varying in amount at different periods from fourpence to sixpence a week, until in 1891 they were abolished, and education up to the compulsory standard was made free, children over thirteen years of age who remained at school after reaching this standard being charged a fee of one shilling per week. This charge was abolished in 1898; and any child above the age of five years may attend a State school without payment. In 1896, control of primary education was vested in a "Board of Inspectors." In 1902 an Inspector-General was appointed, his deputy being styled Assistant-Inspector-General. In 1906 the permanent head of the Department was styled Director of Education.

The primary schools are divided into two classes,—public schools, taught by certificated teachers, and provisional schools, taught by uncertificated teachers, who have undergone a special examination and served for a certain time in an efficient school so as to gain a knowledge of practical work. Generally speaking, public schools must have an average of twenty or more pupils, while the provisional schools contain less than that number. The public schools are divided into twelve classes, and the salaries paid to the principals in general depend on the class of the school. For male head teachers the salaries range from £110 to £450, and for females from £80. to £156. In schools of the first class the sexes are, as a rule, taught separately, except in the case of infant schools.

Provisional schools are of four classes, and the salaries of the teachers range from £66 to £108 per annum, and in a few cases to £120. The maximum salary for a female provisional teacher is £84.

Wherever practicable, schools are visited by inspectors at least twice each year, the first visit being devoted chiefly to observation of general organisation, while a detailed examination is conducted on the second occasion. Individual examination is applied only in the subjects of arithmetic and spelling, the inspector judging of the success of the teacher's methods in other subjects by a general inspection.

The course of instruction to be given in all schools is decided on by the Director, subject to Ministerial approval. A detailed scheme is drawn up for all classes so as to secure general uniformity of effort throughout the State. The curriculum is, however, not an unelastic one, as teachers are, with the approval of the inspectors, allowed to make variations to suit peculiar circumstances, and considerable freedom of choice is allowed in dealing with such subjects as elementary science, agriculture, horticulture, and various kinds of manual work. The subjects taught include reading, writing, spelling, arithmetic, English, geography, English history, poetry, drawing, singing, nature study, moral lessons, manual work, drill, and needlework for girls. In a few schools the elements of Latin, German, Algebra and Euclid are taught. Books and school materials are supplied to the children at cost price, and are given free to those unable to pay for them. Compulsory attendance is in force, the scholars in or near corporate towns being required to attend for at least four-fifths of the time during which the school is open. Outside these limits, the compulsory attendance for children within three miles of a school is thirty-five days per quarter. The percentage of irregular attendance at present is small, and shews signs of still further decreasing.

5. Primary System of Western Australia.—The Elementary Education Act of 1871 provided for two distinct classes of schools in this State. In the first class were comprised the Government schools, established and supported by the Government, and controlled by a Central Board of Education. Teachers were appointed by a District Board, subject to the approval of the Central Board. The second class comprised the assisted schools. In the establishment of these the Government took no part, but paid a yearly grant towards their upkeep. Under the 1871 Act education was compulsory, but was not free except in cases of absolute poverty. The Elementary Education Act Amendment Act of 1893 abolished the Central Board, and transferred its powers to the Minister of Education, and inspectors and teachers were appointed by the Governor. Provision was made by this Act for the right of entry by clergymen or other religious teachers into all Government schools for the purpose of instructing pupils who desired it in the tenets of their particular faith. The period allowed for this special instruction was not to exceed half an hour each school day. "Secular" instruction was also given by the regular teachers, and was described as including general religious teaching as distinguished from dogmatic or polemical theology. Attendance at general religious instruction was not compulsory. These provisions are still in force, and work quite satisfactorily.

In 1895 the Assisted Schools Abolition Act was passed, a sum of £15,000 being paid to the schools formerly assisted by the Government.

By the Public Education Act of 1899 school fees were abolished in public elementary schools in the case of children between six and fourteen years of age. For scholars over

fourteen a fee may be charged, but so far the only fees charged have been sixpence per week for those over sixteen. Daily attendance is compulsory for children between six and fourteen, the compulsory radius being three miles for children over nine, and two miles for those under that age. Non-Government schools must be declared "efficient" by the Education Department if attendance at them is to be recognised as fulfilling the requirements of the law. The registers of these schools must be open to the inspection of compulsory officers of the Education Department. Under the Education Act Amendment Act of 1905 proprietors or teachers of private schools are required to send monthly and quarterly returns of attendance to the Education Department in order that the compulsory officers may ascertain that no children are evading the law. The curriculum of the primary schools includes English (under which heading are grouped reading, recitation, spelling, grammar, composition and literature), writing and drawing, arithmetic, Scripture, history, geography, nature study, lessons on the laws of health and temperance, manual work, drill and singing. In the upper classes of the larger schools the boys take a course of elementary geometry, algebra, and mensuration, and both boys and girls take a course of elementary science. Certain other subjects may be taken by permission of the Department in the sixth and seventh standards. As is the case in most of the other States, inspectors visit the schools at least twice in the course of each year, the first visit being for observation of methods of teaching and general organisation, and the second being devoted to estimation of the actual results of the teaching.

6. Primary System of Tasmania.—There are no official records conveniently available for tracing the history of public education in Tasmania prior to the year 1839, but it appears that some sort of denominational system was previously in existence. In January, 1839, there were twenty-two schools in operation with an enrolment of 758 scholars receiving Government aid to the amount of about £2000 per annum. Shortly afterwards a Board of Education nominated by the Government assumed control of State education, and considerably widened its scope. Only undenominational religious teaching was allowed in the schools, but clergymen had the right of giving instruction in their particular tenets at stated periods. About the year 1846 the system of subsidising denominational schools at the rate of a penny a day for each child present was introduced. This charge had the effect of withdrawing half the schools from the control of the Board and brought about the resignation of that body in 1848. The system was carried on under direct Government control until 1853, when another Board of Education was created, which continued till 1857, when two Boards—a Northern and Southern—were appointed. This arrangement lasted until 1863, when a reversion was made to a single Board with headquarters in Hobart. This administration continued till 1884, when the control again passed direct to the Chief Secretary until the coming into operation of the Education Act of 1885, which created an Education Department under the control of a Minister of the Crown, assisted by a professional head styled "Director of Education." This method of administration is still in existence. School fees were abolished in Tasmania in 1908. Prior to the Act of 1885 the cost of buildings was borne partly by the people, but the Act provides for meeting such expenditure entirely from the State funds. In the year 1904, owing to a feeling that public education in Tasmania was lagging behind that of the other States, the Government decided to have an investigation made by an independent expert. In consequence of the report received, the Ministry decided on a complete reorganisation. The chief improvements entered upon—and now at different stages of advancement—are as follows:—Classification of schools, regulation of salaries, provision for more up-to-date buildings, reorganisation of teaching and inspection methods, initiation of schools of instruction for teachers, and abolition of pupil-teacher system. Generally speaking, the educational system of Tasmania may be said to be organised very much on the lines of the leading systems of the mainland, although such subjects as manual work, nature study, and drawing have as yet been little developed. Attendance at school is compulsory for children between the ages of seven and thirteen. District Boards of Advice are in existence, but under the Local Government Act—to come into force at the end of 1907—their functions will be assumed by the new municipal councils.

§ 2. State Schools.

1. **Enrolment and Attendance.**—The following table shews the number of State schools, together with the teachers employed and the enrolment and "average attendance" in each State during the year 1907:—

STATE SCHOOLS, TEACHERS, AND SCHOLARS, 1907.

| State. | Schools. | Teachers.* | Enrolment. | Average Attendance. |
|--------------------------|----------|------------|------------|---------------------|
| New South Wales | 3,050 | 5,648 | 213,709 | 152,607 |
| Victoria | 1,974 | 4,681 | 203,782 | 147,270 |
| Queensland | 1,067 | 2,393 | 87,098 | 66,849 |
| South Australia | 707 | 1,278 | 54,560 | 37,861 |
| Western Australia | 381 | 830 | 29,679 | 24,950 |
| Tasmania | 350 | 584 | 23,162 | 14,464 |
| Commonwealth | 7,529 | 15,414 | 611,990 | 444,001 |

* Exclusive of sewing teachers.

Unfortunately, the scheme of enrolment and of the computation of "average attendance" is not identical in each State, so that the comparisons are imperfect. That the educational statistics of each State of the Commonwealth should be made up in the same way is much to be desired.

The enrolment and average attendance at the State schools in the Commonwealth are given below for the year 1891, and for each year of the period 1897 to 1907:—

ENROLMENT AND ATTENDANCE AT STATE SCHOOLS, 1891 to 1907.

| Year. | Total Population. | Enrolment. | Average Attendance. | Year. | Total Population. | Enrolment. | Average Attendance. |
|-------|-------------------|------------|---------------------|-------|-------------------|------------|---------------------|
| 1891 | 3,240 | 561,153 | 350,773 | 1902 | 3,883 | 636,888 | 455,482 |
| 1897 | 3,618 | 586,037 | 411,913 | 1903 | 3,927 | 629,269 | 446,539 |
| 1898 | 3,665 | 594,916 | 397,027 | 1904 | 3,984 | 625,594 | 445,709 |
| 1899 | 3,716 | 608,431 | 424,214 | 1905 | 4,052 | 621,534 | 442,808 |
| 1900 | 3,765 | 623,707 | 441,924 | 1906 | 4,119 | 609,592 | 442,440 |
| 1901 | 3,826 | 638,478 | 450,246 | 1907 | 4,197 | 611,990 | 444,001 |

1. In thousands.

It will be seen from the above table that, despite the increase of population, there has been a considerable decline both in official figures of enrolment and average attendance at the State schools of the Commonwealth during the last five years. An examination of the graphs on pages 258 to 260, shewing birth-rate, will make it apparent that this is at least in part due to the diminished birth-rate of past years.

2. **Births and School Attendance.**—The table below gives the total births in each State and in the Commonwealth during each of the eight-year periods 1890-97, 1891-98, 1892-99, 1893-1900, 1894-1901, and the average attendance at State Schools for each year from 1903 to 1907:—

COMPARISON OF BIRTHS AND SCHOOL ATTENDANCE.

| Year. | New South Wales. | Victoria. | Q'land. | South Australia. | Western Australia. | Tasmania. | Commonwealth. |
|------------------------------|------------------|-----------|---------|------------------|--------------------|-----------|---------------|
| TOTAL BIRTHS. | | | | | | | |
| 1890-97 ... | 310,279 | 281,918 | 116,600 | 83,068 | 18,606 | 38,894 | 849,365 |
| 1891-98 ... | 307,541 | 274,512 | 115,126 | 81,674 | 22,013 | 38,661 | 839,527 |
| 1892-99 ... | 304,544 | 267,015 | 114,310 | 80,344 | 25,401 | 38,364 | 829,978 |
| 1893-1900 | 301,649 | 259,963 | 114,208 | 78,951 | 29,007 | 38,263 | 822,041 |
| 1894-1901 | 299,182 | 254,419 | 114,117 | 77,356 | 32,613 | 37,977 | 815,664 |
| ATTENDANCE AT STATE SCHOOLS. | | | | | | | |
| 1903 ... | 154,382 | 145,500 | 69,759 | 42,752 | 20,283 | 13,863 | 446,539 |
| 1904 ... | 153,260 | 145,122 | 68,661 | 42,234 | 22,111 | 14,321 | 445,709 |
| 1905 ... | 151,033 | 143,362 | 68,780 | 41,807 | 23,703 | 14,123 | 442,808 |
| 1906 ... | 151,261 | 142,216 | 69,771 | 40,489 | 24,973 | 13,730 | 442,440 |
| 1907 ... | 152,607 | 147,270 | 66,849 | 37,861 | 24,950 | 14,464 | 444,001 |

Although the returns of school attendance shew a slight improvement in 1907, the position disclosed by the two sets of figures given above is sufficiently serious to call for earnest consideration. With the exception of Western Australia, Victoria, and Tasmania the States and the Commonwealth as a whole all shew a decreased school attendance consequent on a falling birth-rate over the period dealt with. Moreover, as explained by the Director of Education, the sudden increase in school attendance shewn by Victoria is the result of a more stringent Education Act (No. 2005), while the increase in Tasmania is largely due to keener enforcement of the requirements of the Act in the island State. In explanation of the connection between the two sets of figures it may be noted that the children at school in 1907 will naturally consist chiefly of those born in the period 1894-1901, the attendance for 1906 will be composed principally of the births of the period 1893-1900, and so on.

3. Centralisation of Schools.—The question of centralisation of schools adopted so successfully in America is receiving some attention in the Commonwealth, and particularly in New South Wales. It is recognised that a single adequately-staffed and well-equipped central institution can give more efficient teaching than a congeries of small scattered schools in the hands of less highly-trained teachers, and the small schools in some districts were therefore closed and the children conveyed to the central institution. The principle was first adopted in New South Wales in 1904, when the conveyance of pupils was authorised in the case of twelve schools.

4. Education in Sparsely-settled Districts.—It has always been the aim of the State to carry the benefits of education into the remotest and most sparsely-settled districts. This is effected in various ways. (i.) By the establishment of provisional schools, *i.e.*, small schools in which the attendance does not amount to more than about a dozen pupils, these institutions merging into the ordinary public school list when the attendance exceeds the minimum. (ii.) When there are not enough children to form a provisional school what are known as half-time schools are formed, the teacher visiting them on alternate days. In still more sparsely-peopled districts an itinerant teacher goes from house to house within a certain radius. In New South Wales parents in the thinly-peopled areas are also allowed to club together and build a school, which receives aid from the Government in the form of a yearly subsidy and grant of school material. An experiment on the part of New South Wales, the result of which will be watched with some interest, is the establishment of a "travelling" school. A van has been built, in which the teacher will travel and carry with him a tent for himself and one

to be used as a school, together with such books and apparatus as are required in a primary school.

5. **Higher State Schools.**—(i.) In *New South Wales* public schools, in which the subjects taught embrace, in addition to the ordinary course, such others as will enable the pupils to compete at the Senior and Junior University Examinations, are classed as *Superior Schools*. There were 142 of these schools in existence at the end of 1907. There are also five *High Schools* in the State—two for boys, two for girls, and one for boys and girls. These had an enrolment in 1907 of 739 pupils, with an average attendance of 669. In twenty country centres the superior public schools practically correspond to the high schools, and the educational standards and instructional staff have been so arranged as to prepare for the University matriculation. It is intended also to adapt the teaching in these institutions to the special needs of the districts in which they are situated. Further, these high schools and district schools will be used as preparatory Schools for the training of young persons who wish to become teachers. In order to provide teachers of agriculture, provision is made for ten teacher-students annually to attend the second year's training at the Hawkesbury Agricultural College.

(ii.) In *Victoria*, what are termed "*Continuation Schools*" have been established at Melbourne, Ballarat, and Bendigo for the purpose of giving preliminary training to young people who propose to join the ranks of the teaching service, and it is hoped that ere long the supply from this source will preclude the necessity for the employment of inexperienced pupil teachers. It is expected that these schools will shortly be able to supply the 300 junior teachers annually needed by the Department.

(iii.) *Queensland* does not possess any distinctly secondary schools under State control, although it is proposed to establish high schools in the more important centres at an early date. There are, however, ten grammar schools—six for boys, and four for girls, each of which receives an annual subsidy from the State. Further reference to these will be found later on.

(iv.) *South Australia*. During 1907 continuation classes for higher primary work were established in country centres. These classes are conducted in connection with the chief district schools, and under the supervision of their head teachers. It is probable that they will ultimately be merged in higher primary schools. The Advanced School for Girls was founded in 1879, and in addition to providing for winners of bursaries, receives paying pupils. From its foundation the school has taken a high rank, its pupils being very successful at the various University examinations. The average attendance during the year was eighty-four. During 1907 the total State expenditure on secondary education was £2810, of which the Advanced School for Girls absorbed £1189.

(v.) *Western Australia*. With the exception of the technical schools and the normal school referred to elsewhere, there is no distinctly secondary school under the control of the State in Western Australia. It is proposed to establish shortly a large higher grade or Continuation school in Perth, in which the normal school may be merged, and to establish similar institutions later on in other large centres of population. Evening Schools are held in various parts of the State, but the work carried on is mainly primary. The Perth High School for Boys is subsidised by the State to the extent of £1000 annually.

(vi.) *Tasmania*. No direct provision has hitherto been made by Tasmania for public education of a standard intermediate between that of the State school and the University, but a few pupils are prepared in the ordinary state Schools for the Junior Public Examination of the University. It is intended to encourage this work in future, and the scheme of scholarships, which was discontinued for many years, has recently been revived. For a period of thirty years, from 1860 to 1890, there was in force in Tasmania a system under which the State, without actually providing educational agencies, did much to foster education within the range of the generally accepted high school curriculum, for the Council of Education during this period conducted public examinations of various grades, at which scholarships for juniors to "superior" schools were awarded, as well as

exhibitions to British Universities. The Council also granted the degree of "Associate of Arts" in imitation of the similar Oxford title. Later on the Council of Education evolved and expanded into the University of Tasmania.

6. Agricultural Training in State Schools.—The question of agricultural training in ordinary schools has received considerable attention in *New South Wales*. In 1905 a teacher of school agriculture was appointed to visit schools and districts for the purpose of giving instruction to teachers and scholars in the subject, the officer selected possessing the dual qualifications of a thorough acquaintance with agricultural work and school methods. Under the direction of a capable head master, a college has also been opened at Hurlstone, near Sydney, at which practical lessons will be given in elementary agriculture, and the institution may serve as a stepping-stone to the Hawkesbury Agricultural College.

The question of agricultural colleges and experimental farms is discussed in the section dealing with Agriculture.

In addition to the regular courses of instruction given in the schools, the practice of carrying on "rural camps," where city schoolboys may gain some insight into the conditions of country life, has for some time been in successful operation.

In *Victoria* arrangements have been completed for opening what are termed agricultural high schools at Warrnambool and Sale. Pupils must be at least fourteen years of age, and have obtained a certificate of merit from the local school, or else be able to afford satisfactory proof that they are qualified to profit by the instruction offered. A local council is to be appointed for each school, and will exercise a general oversight over its operations.

Although *Queensland* possesses an Agricultural College and several experimental farms, there is no agricultural institution directly connected with the Education Department. The Government, however, provides a small grant to encourage the study of agriculture, horticulture, and kindred subjects in the State schools, while experts from the Agricultural College and State farms periodically visit the schools in which elementary agriculture is taught, and give instruction to teachers and pupils. A large number of teachers have gained a practical knowledge of milk and cream testing, and the subject is now added to the programme of instruction in several of the dairying districts.

In *South Australia* the Public Schools' Floral and Industrial Society, founded in 1880, holds annual exhibitions of school work from all parts of the State. In addition, it has for some years undertaken the distribution of flower seeds among school children at a very cheap rate, and has thus fostered the love of horticulture with remarkable success.

Beyond encouragement in the direction of making gardens in the school grounds little has been done in the way of practical agricultural training in the schools of *Western Australia* and *Tasmania*.

7. Teachers in State Schools.—The distribution of the teaching staff in the State schools during the year 1907 was as follows:—

TEACHING STAFF IN STATE SCHOOLS, 1907.

| State. | Principal Teachers. | | Assistants. | | Pupil or Junior Teachers. | | Sewing Mistresses. | Total. | | |
|-------------------|---------------------|-------|-------------|-------|---------------------------|-------|--------------------|--------|-------|--------|
| | Males. | Fem. | Males. | Fem. | Males. | Fem. | | Males. | Fem. | Total. |
| New South Wales | 2,187 | 534 | 776 | 1,517 | 251 | 383 | 97 | 3,214 | 2,531 | 5,745 |
| Victoria | 1,425 | 559 | 214 | 823 | 370 | 1,260 | 430 | 2,009 | 3,102 | 5,111 |
| Queensland | 646 | 418 | 355 | 616 | 127 | 231 | — | 1,123 | 1,265 | 2,388 |
| South Australia | 302 | 396 | 50 | 275 | 67 | 188 | 111 | 419 | 970 | 1,389 |
| Western Australia | 240 | 128 | 79 | 297 | 14 | 72 | 56 | 333 | 553 | 886 |
| Tasmania | 164 | 185 | 24 | 110 | 20 | 81 | — | 208 | 376 | 584 |
| Commonwealth | 4,964 | 2,250 | 1,498 | 3,638 | 949 | 2,215 | 694 | 7,311 | 8,797 | 16,108 |

It will be observed that there is a fairly large number of junior teachers, or pupil-teachers, as they are called in most of the States. The pupil-teachers will, however, in time disappear, and their places will be filled by young people who have undergone a course of training in schools specially provided for the purpose. Allusion to the methods of training will be found in the next paragraph.

8. Training Colleges and their Development.—(i.) *New South Wales.* Up to the year 1905 the teachers in New South Wales State schools, generally speaking, commenced their career between the ages of fourteen and sixteen years, when they were known as "pupil-teachers." As such, they were held responsible for the instruction of a certain number of children, and, in return for their services, received payment partly in the form of a small salary, and partly in teaching and advice from the principals of the schools wherein they were employed. *After serving about four years, and subject to passing various examinations designed to test progress in pædagogics and ordinary book learning, a limited number of the pupil teachers was admitted to a course of training in a training college if successful in passing the qualifying examination.* On emerging from this institution, after a course of from one to three years, the teacher became known as an "assistant," and later on became master or mistress of a school. Pupil-teachers who did not enter the Training College were placed in charge of small country schools or appointed "assistants," and later on were allowed to compete in the examinations with the trained teachers; in fact, it was found temporarily to the advantage of teachers not to enter the college. Such was the career of the "trained" teacher; but there was in addition—a considerable body of untrained teachers who had commenced teaching in small country schools, and many of whom by perseverance and natural aptitude had gained positions of considerable importance in the Department.

Within the last few years, however, it has come to be recognised that the logical place of a scheme of training is antecedent to employment as a teacher, and with this end in view it has been decided to abolish the so-called pupil-teacher, and to establish continuation schools from which, as well as from the high schools, the future supply of young teachers is to be drawn. It is hoped that the pupil-teacher as such will be extinct in a few years. In the meanwhile there were still as many as 634 employed at the end of 1907. Unfortunately, many of the smaller country schools will still have to be supplied by appointments of untrained persons; but it is hoped that under the new system of inspection the inspectors themselves will be able to devote a fair amount of time to instructing the teachers in correct methods. During vacations the country teachers will also have some opportunities of forming acquaintances with up-to-date ideas by attending Summer Schools, Rural Camp-schools, etc.

The old Fort-street Training College for males and the Hurlstone College for females were closed in 1905, and pending the erection of a properly-equipped institution in the University grounds the teachers are being trained at the Blackfriars Public School, Redfern. During 1907 there were 299 students in the institution.

(ii.) *Victoria.* The teachers in this State are trained by means of what is known as the "junior-teacher" system, *i.e.*, training of junior-teachers in the State schools by the head masters, or by a two years' course in a junior training college—otherwise known as a continuation school—supplemented by a course of training for two years in the Senior Training College at Melbourne. The junior teacher is, of course, not sensibly different from the pupil-teacher of New South Wales. In January, 1907, 160 students who had completed a two years' course at the Melbourne Continuation School were appointed as junior-teachers at State schools of the third class. At the end of two years in these schools they may qualify for entrance to the Senior Training College for a further period of two years, at the end of which time they will be appointed to sixth-class positions as State school teachers at an annual salary of £120 16s. for men, and £90 to £100 for women.

The Melbourne Continuation School had in May, 1907, an enrolment of 221 first-year students, and 204 in their second year of training. Continuation schools were

opened in 1907 at Ballarat and Bendigo, and it is anticipated that there will shortly be a sufficient number of students in the continuation schools alone to meet the demands of the teaching service. The present junior-teaching system will then be modified to the extent that all candidates for the teaching profession will be required to graduate in one of the continuation schools.

The present Training College dates back to 1874, but during the retrenchment period it was closed, viz., from 1893 to 1900. The institution was reopened in February, 1900, with an enrolment of fifty-seven students. By the 31st August, 1907, the number had increased to 123. Since its reopening the college has also given attention to the training of kindergarten teachers, and the course of study prescribed for infant teachers has received the sanction of the Education Department and also of the Kindergarten Association. Of the students in 1907, 106 were working for the trained teachers' certificate, 19 senior and 26 junior women students and 12 senior men students were working for first year infant teachers' certificate, and 17 students were working for first year diploma of education.

(iii.) *Queensland.* There is no training college in Queensland at the present time, but it is hoped ere long to establish one at Brisbane. Young people of both sexes are admitted to the service as pupil-teachers at the age of fourteen years, the only training received being that given by the principals of the schools to which they are appointed.

(iv.) *South Australia.* In this State young persons of both sexes who shew aptitude for teaching are required to demonstrate their fitness by serving as "monitors" for one year. After signing an agreement for service they are then admitted to the pupil-teachers' schools for two years' study, during which time they receive a small maintenance allowance. The next two years are spent in teaching in the schools. At the expiration of this time they are admitted to the University Training College, where the course of study is for two years. As the college is not a residential institution the State grants maintenance allowance of £30 to £50 per annum. On the conclusion of this period of training, which includes lectures in pedagogy and method, as well as a certain amount of practical teaching, the students are appointed as assistants. Salaries for males begin at £100 per annum, rising in six years to £150. Female assistants receive £72, rising to £124. The whole work of training teachers is undertaken by the University free of cost to the State.

(v.) *Western Australia.* A training college for teachers was opened at Claremont in 1902. The building provides accommodation for over sixty students, the number in training during 1907 being sixty-two, including forty-one women. Central classes for "monitors" (i.e., pupil-teachers) were established at Perth in 1903, and monitors outside the metropolitan area are instructed by correspondence. A normal school was established in Perth in 1907 for the purpose of providing a two years' course of higher instruction for a limited number of children who had completed the State school course and intended to become teachers. The pupils in attendance during 1907 numbered sixty-four, of whom thirty-seven were girls. At the close of the year the bulk of the senior students were appointed as monitors at schools in and around Perth. It may be observed here that the normal school does not aim at giving instruction in the principles and practice of pedagogy, this being left to the teachers to whose schools the students are drafted. To assist teachers of small schools to gain some experience of the best method of school management, a model school has been established at Gosnell's, and arrangements have been made for intending teachers, as well as those actually in charge of small schools, to spend a portion of their time at this institution. The course in the training college lasts two years.

(vi.) *Tasmania.* The system of training adopted in Tasmania is as follows:—(a) The candidate is selected at fourteen years of age by a head teacher, and assists as a "monitor" for about a year, during which period he must give proof of suitability for training. (b) At the end of this period there is a two years' course of training in the training college. (c) The candidate then returns to his own school and teaches there for two years, the head teacher being responsible for his training in practical work, while

the training college authorities give lessons by correspondence. (d) The last stage is a final year in the training college as a senior student. Some of the more advanced are granted a second year's training, and it is proposed to allow at least one each year to proceed to the Diploma of Education at the Melbourne Training College.

At present there is room in the Tasmanian Training College for about sixty students, the number in attendance in 1907 being fifty-three.

9. **Expenditure on State Schools.**—The net expenditure in each State on primary education during each year of the period 1901 to 1907 is shewn below. The figures do not include expenditure on buildings, which is shewn separately in a later table.

EXPENDITURE ON MAINTENANCE, STATE SCHOOLS, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
| | £ | £ | £ | £ | £ | £ | £ |
| N.S.W. | 623,734 | 652,860 | 677,683 | 693,954 | 699,789 | 727,471 | 818,947 |
| Victoria | 656,907 | 681,282 | 669,376 | 670,182 | 663,580 | 663,302 | 677,701 |
| Q'land | 256,245 | 261,317 | 256,325 | 261,583 | 278,972 | 286,629 | 297,210 |
| S.A. ... | 152,006 | 151,462 | 147,297 | 147,842 | 151,242 | 152,713 | 152,400 |
| W.A. ... | 89,694 | 103,898 | 122,016 | 134,064 | 139,043 | 153,010 | 160,823 |
| Tas. ... | 37,710 | 48,161 | 48,300 | 50,018 | 44,974 | 45,683 | 52,830 |
| Cwth. | 1,816,296 | 1,898,980 | 1,920,997 | 1,957,643 | 1,977,600 | 2,028,808 | 2,159,911 |

The above figures are equivalent to an expenditure per head of average attendance as follows:—

COST PER HEAD OF AVERAGE ATTENDANCE, STATE SCHOOLS, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|----------|---------|---------|---------|---------|---------|---------|---------|
| | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. | £ s. d. |
| N.S.W. | 4 0 10 | 4 3 9 | 4 7 10 | 4 10 7 | 4 12 8 | 4 16 2 | 5 7 4 |
| Victoria | 4 7 0 | 4 10 8 | 4 12 0 | 4 12 4 | 4 12 7 | 4 13 3 | 4 12 0 |
| Q'land | 3 12 9 | 3 11 9 | 3 13 6 | 3 16 2 | 4 1 2 | 4 2 2 | 4 8 11 |

Expenditure on school buildings in each of the years quoted was as follows:—

EXPENDITURE ON STATE SCHOOL BUILDINGS, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------|---------|---------|---------|---------|---------|---------|---------|
| | £ | £ | £ | £ | £ | £ | £ |
| N.S.W. | 57,663 | 76,793 | 100,955 | 72,051 | 58,820 | 89,975 | 103,348 |
| Victoria | 36,040 | 81,946 | 39,369 | 19,502 | 32,041 | 39,184 | 68,416 |
| Q'land ... | 33,421 | 9,443 | 9,006 | 14,489 | 14,187 | 24,896 | 30,840 |
| S.A. ... | 13,656 | 11,250 | 11,805 | 9,056 | 9,094 | 13,340 | 15,839 |
| W.A. ... | 49,073 | 32,660 | 35,953 | 32,892 | 35,925 | 39,390 | 39,927 |
| Tas. ... | 7,762 | 11,931 | 6,710 | 4,427 | 4,809 | 3,456 | 7,216 |
| Cwth. ... | 197,615 | 224,032 | 203,798 | 152,417 | 154,876 | 210,241 | 265,586 |

The total net cost and the net cost per scholar in average attendance during the year 1907 were as follows:—

NET TOTAL COST PRIMARY EDUCATION, 1907.

| Item. | N.S.W. | Vic. | Q'land. | S. Aust. | W. A. | Tas. | C'wlth. | N.Z. |
|--|-----------|-----------|-----------|-----------|-----------|----------|-------------|-----------|
| Net cost of primary education, including buildings ... | £ 922,295 | £ 746,117 | £ 328,050 | £ 168,239 | £ 200,750 | £ 60,046 | £ 2,425,497 | £ 686,090 |
| Per scholar in average attendance ... | £6 8/11 | £5 1/4 | £4 18/2 | £4 8/10 | £3 0/11 | £4 3/- | £5 9/3 | £5 16/- |

The average for the Commonwealth in 1901 was £4 9s. 3d. per scholar in average attendance.

§ 3. Private Schools.

1. **School Teachers, etc., in 1907.**—The following table shews the number of private schools, together with the teachers engaged therein, and the enrolment and average attendance in 1907 for each State except Tasmania, where 1906 returns were the latest available:—

PRIVATE SCHOOLS, 1907.

| State. | Schools. | Teachers. | Scholars Enrolled. | Average Attendance |
|-----------------------|----------|-----------|--------------------|--------------------|
| New South Wales ... | 806 | 3,524 | †57,440 | 46,697 |
| Victoria ... | 751 | 2,313 | 53,371 | *42,000 |
| Queensland ... | 173 | 753 | 15,385 | 12,897 |
| South Australia ... | 190 | 580 | 9,369 | 7,860 |
| Western Australia ... | 112 | 389 | 7,639 | 6,358 |
| Tasmania, 1906 ... | 204 | 612 | 8,833 | 7,066 |
| Commonwealth ... | 2,236 | 8,171 | 152,037 | 122,878 |

* Estimated. † December quarter.

2. **Growth of Private Schools.**—The enrolment and average attendance at private schools during 1891 and in each year of the period 1897 to 1907 is shewn below:—

ENROLMENT AND ATTENDANCE AT PRIVATE SCHOOLS, 1891 to 1907.

| Year. | Enrolment. | Average Attendance. | Year. | Enrolment. | Average Attendance. |
|----------|------------|---------------------|----------|------------|---------------------|
| 1891 ... | 124,485 | 99,588 | 1902 ... | 144,437 | 117,293 |
| 1897 ... | 139,175 | 112,813 | 1903 ... | 147,135 | 120,193 |
| 1898 ... | 145,434 | 116,341 | 1904 ... | 146,339 | 119,915 |
| 1899 ... | 151,803 | 122,188 | 1905 ... | 145,143 | 118,627 |
| 1900 ... | 153,433 | 124,313 | 1906 ... | 152,058 | 124,510 |
| 1901 ... | 148,659 | 120,742 | 1907 ... | 152,037 | 122,878 |

* Tasmanian figures not available.

As the table shews, there was a continued increase in enrolment and average attendance up to the end of the year 1900, while from the latter year onwards there was

a more or less persistent decline, although an upward movement is manifested in 1906. This falling-off was principally due to the decrease in the birth-rate during the period 1889 to 1900, a matter to which more extended reference has been made in previous pages.

3. Defects in Returns of Private Schools.—Throughout Australia, until quite recently, no administrative machinery existed by means of which supervision could be exercised over the course of education carried out under other ægis than that of the Departments of Education themselves. These departments were without authority over the qualifications of the teaching staff, the equipments, the curricula, or general circumstances of private or denominational schools. With the exception of Western Australia, Victoria, and Tasmania this state of things continues to the present time.

Without a thorough system of registration of all schools (public or private) the certainty of the operation of the compulsory clause of Public Instruction Acts must necessarily be insecure. Proper statistical information, moreover, cannot be obtained without imposing upon all schools the duty of rendering complete and prompt returns in regard to enrolment, attendance, teaching staff, equipment, etc.

Recent educational criticism has led, not only to a better training of teachers in State schools, and, to some extent, in private schools, but also to a better recognition of the importance of accurate information as to the progress of educational events. It is understood that in New South Wales steps will be taken shortly to secure more adequate information as to the condition of schools generally.

In Victoria up to the year 1906 no attempt had been made to bring private schools under general administrative control; but the Registration of Teachers and Schools Act of 1906 established a registration scheme under a special Board. This Board has now registered the private schools and teachers in the State, excepting, however, teachers of special subjects. The prime object of the Act is that after a lapse of a definite period there shall be no school of any kind in the State which does not comply with reasonable demands and requirements concerning the nature of its building, its equipment, and the qualifications of its teachers. The teachers who have registered belong to the following classes:—Sub-primary, 2357; primary, 4815; secondary, 1657; and 3280 teachers of special subjects. Some teachers have registered under two or three grades, and the number of individual teachers is given as about 8200. The teaching staff of the Department of Public Instruction itself is not subject to the Registration Board. Registered private schools of all kinds number 773. The only control which the Government has on the scholars in private schools is provided by the law as to compulsory attendance, "efficient and regular instruction" in a private school being counted as adequate excuse for not attending the requisite number of days at a State school.

In Queensland there is practically no control over the private schools, beyond the fact that they may submit themselves to inspection if so desired, and there is apparently no provision in South Australia for any Government supervision over private school affairs.

In Western Australia, however, non-Government schools must be declared efficient by the Education Department if attendance at them is to be recognised as fulfilling the requirements of the law, and the school registers must be open to the inspection of the compulsory officers of the Department.

In Tasmania the Education Act requires the teachers of other than State schools "to furnish during January of each year returns shewing attendances at such schools." Despite the fact that penalties are prescribed for non-compliance with the law, nevertheless many teachers neglect to return the forms sent out. Provision has been made for registration of private teachers and schools very much on the lines adopted in Victoria. The Act declares that all persons who were employed in a *bonâ fide* manner for at least three months before 25th October, 1903, are entitled to be registered as teachers without submitting proof of professional qualifications. No person can be registered as a private teacher after July, 1907, unless the Board has been satisfied as to his fitness for the work.

§ 4. Universities.

1. **Sydney University.**—The movement for the establishment of the University of Sydney may be said to have originated as far back as 1825 with the institution of the old Sydney Grammar School, whose first head master, the Rev. Dr. Halloran, is credited with being "the founder of anything like the means of obtaining a classical education in Sydney." The original school was not, however, very successful, and it was succeeded in 1830 by a trustee institution known as the Sydney Public Free Grammar School. By way of endowment a sum of £10,000 was raised in £50 shares, each of which entitled the holder or his executors to the right in perpetuity of having one boy a student at the college. The building was opened for the reception of students in 1835, and was located on the site of the present Sydney Grammar School. In 1849 the proprietors of the institution presented a petition to the Legislative Council, having for its object the conversion of the College into a University. Upon the presentation of this petition the following motion was brought forward by Mr. W. C. Wentworth—"That a select committee be appointed to inquire into *the matters contained in the petition of the proprietors of the Sydney College*, and report upon the best means of instituting a University for the promotion of literature and science, to be endowed at the public expense." The motion was agreed to, with the omission of the words in italics, in order that the committee might have an absolutely free hand in dealing with the matter. The motion was presented on the 6th September, and the committee brought down its report on the 21st of the same month. It recommended the establishment of a University without delay, and suggested an endowment of £5000 a year with £30,000 for a building fund. An important provision in the report was that which specified that the University must belong to no religious denomination and require no religious test. With regard to the first Senate, it was proposed that there should be three *ex officio* members—the Chief Justice, the Colonial Secretary, and the Attorney-General—and nine others to be nominated by the Legislative Council, that there should be a Provost and Vice-Provost, and that the other members should be termed Fellows, that until there should be a hundred graduates, any vacancy in the body should be filled by the surviving or continuing members, but afterwards by election by the graduates.

In its original form the Bill met with considerable opposition, particularly in regard to the proposed absence of religious formularies. It was reintroduced to the Legislative Council in August, 1850, and the second reading was carried on the 11th September. The nomination of the first Senate was left to the Executive Council, and the number of Senators was raised to sixteen. The Act of Incorporation received the assent of the Governor on the 1st October, 1850, and the first Senate was appointed on the 24th December of that year. Mr. Edward Hamilton, M.A., was elected Provost, and Sir Charles Nicholson, M.D., Vice-Provost. Professorships were soon instituted in classics, mathematics, and chemistry and experimental philosophy, and the gentlemen selected to fill these posts arrived in Sydney in 1852. The first matriculation examination was held in October of this year, and twenty-four candidates succeeded in passing the test. The formal inauguration ceremony was held on the 11th October in the large hall of the Sydney College building. Originally it was intended to purchase this college from the trustees, but later on it was deemed essential to secure a larger area of ground, and to erect more commodious premises, and the Government in 1855 granted 128 acres at Grose Farm, where the existing University and Colleges are situated. A sum of £50,000 was also granted for the erection of buildings, on consideration that not more than £10,000 should be spent in any one year. Chiefly through the exertions of Sir Charles Nicholson a Royal Charter was granted to the University on the 27th February, 1858. This document, amongst other things, declared that "the degrees of Bachelor of Arts, etc., already granted or conferred, or hereafter to be granted or conferred by the Senate of the said University of Sydney, shall be recognised as academic distinctions and rewards of merit,

and be entitled to rank, precedence, and consideration in the United Kingdom and in our colonies and possessions throughout the world as fully as if the said Degrees had been granted by the University of the said United Kingdom."

The present main University building was commenced in 1854 and finished in 1860, at a cost of £80,000. The Great Hall, which has a length of 135 feet, by a breadth of 45 feet, is considered by competent judges to be a masterpiece of architectural art. Classes were first held in the completed portion of the building in 1857. Under the original deed of grant of lands for University purposes provision was made for sub-grants for the erection of colleges in connection with the Church of England, Roman Catholic, Presbyterian, and Wesleyan Methodist Churches. St. Paul's College was incorporated by an Act passed in December, 1854, and the building in an incomplete form was opened in 1858. The Act of Incorporation of St. John's was dated 15th September, 1857, while St. Andrew's was incorporated under Act 31 Vic. The right of the Wesleyan body to a grant lapsed in 1860, and efforts to revive it have not been successful. The Women's College was opened in 1892, women being admitted as students of the University in 1881. Prince Alfred Hospital, incorporated in 1873, and erected at a cost of upwards of £180,000, is also situated in the University grounds.

Under an Act passed in 1881 graduates from other recognised Universities were admitted to the rights and privileges of members of the Sydney University, and the same Act also provided for an extension of the academic franchise to B.A.'s of three years' standing. Similar privileges were conferred on Bachelors in the other faculties by the Act of 1884.

As previously stated, there were only three professorships at the inception of the University. Up to 1880 the endowment stood at £5000 per annum, and, practically, the whole of this sum was absorbed in providing for the Chairs of Classics, Mathematics, Chemistry and Physics, and Geology and Mineralogy. The endowment was increased by £1000 in 1880, and it is from this year that the real expansion of the University began, its growth being largely assisted by the munificent Challis bequest, which originally amounted to about £190,000, and is now valued at £268,224. The Chair of Law was established in 1890, although prior to that time lectures in various branches of law were delivered by several lecturers.

The present fine Medical School started from very humble beginnings. Pending its erection a Chair of Anatomy and Physiology was established in 1883, and lecturers were appointed in various medical subjects, the teachers and students being accommodated in the main building until the Medical School, which cost £80,000, was completed.

A separate Faculty of Science was established in 1882, and the Chair of Natural History was divided into the three professorships of geology, physical geography, and biology. The teaching of engineering commenced in 1882 with a lectureship, but in 1884 the position was elevated to a professorship.

The School of Mines was established in 1892.

The progress of the engineering section of the University was greatly assisted by a donation in 1896 of £50,000 from Sir (then Mr.) Peter Nicol Russell, which he most generously supplemented by a second donation of £50,000, making £100,000 in all, in 1904.

Pharmacy students were admitted to the prescribed University courses in 1899, and a Dental School was opened in 1901.

At the present time there are altogether ninety-four teachers engaged in the Sydney University, of whom fifteen are professors, seventy-four lecturers and demonstrators, and five honorary teachers.

2. University of Melbourne.—The University of Melbourne was established by an Act of the Parliament of Victoria, which received the Royal assent on the 22nd January, 1853, and its first Council was appointed by proclamation dated the 11th April of that

year. The foundation stone of the main building was laid on the 3rd July, 1854, and the University was formally opened on the 13th April, 1855. Letters Patent recognising its degrees as entitled to rank with those of any University in the United Kingdom were granted in 1859.

The original Act was subjected to various amendments, and, by a measure passed on the 10th July, 1890, the law relating to the University was consolidated. The principal provisions of this measure were as follows:—By section 4 the University is declared to consist of a Council and of a Senate, and is proclaimed to be a body corporate and politic under the name of "The University of Melbourne," by which title it is to have perpetual succession and a Common Seal, etc. Section 6 declares that the Council shall be elected by the Senate, and shall consist of twenty male members. Teachers in the University may be represented on the Council, but the number of such members is not to exceed three. This Council is to have the entire management of the University, subject to statutes and regulations to be from time to time adopted by Council and Senate. By section 23 it is expressly provided that no religious test is to be applied in order to entitle persons to be admitted as students to the University. The endowment was fixed at the sum of £9000 per annum. It is provided by section 25 that the Council may grant degrees in any faculty except Divinity, its powers in regard to all diplomas being the same as those of any University in the United Kingdom. The provisions of the Act apply equally to both sexes, but the Council may, if it thinks fit, exclude females from attendance at any lectures, but not from any examination in the University. Further amendments were introduced by the Acts of 1903 and 1904, the latter Act providing for three additional members of the University Council, to be appointed by the Governor-in-Council. Provision was also made for increasing the University endowment during the ten years commencing in July, 1904, by additional annual grants of £11,000, on condition that the University would (a) afford increased facilities for carrying on scientific and laboratory training in mining and agriculture; (b) co-operate with schools of mines and agricultural colleges throughout the State in order to ensure a wider sphere of usefulness for these institutions; and (c) provide for the admission of students for diplomas in mining and agriculture without their having passed the full matriculation examination. Provision was made for a further grant of £1000 in case the University provided evening lectures in mining, agriculture, and education.

At present the University grants degrees in Arts, Law, Science, Medicine, Surgery, Dental Surgery, Civil, Mining, and Mechanical Engineering, Agriculture and Music. Diplomas are granted for shorter courses in Education, Public Health, Architecture, Mining, Metallurgy, and Analytical Chemistry. Including that of Music, there are altogether sixteen professorships in the University, twenty-eight lecturers, six lecturers and demonstrators, thirteen demonstrators, and seventeen assistant demonstrators.

There are three Colleges affiliated to the University, and built in adjoining grounds, which provide residence and tuition for University students. They have been founded by, and are under the administration of different religious denominations, but are open to all students without distinction of creed.

Trinity College, opened in 1872, was the first University College established in Victoria, and was founded under the auspices of the Church of England. Attached to the College is a hostel for women students, which was opened in 1886. The College staff consists of a warden, vice-warden, and nine lecturers.

Ormond College, founded by the Presbyterian body, was opened in March, 1881. The lectures of the Theological Hall of the Presbyterian Church of Victoria are delivered by a special staff. The general staff consists of a master, five resident tutors, and ten lecturers and visiting tutors. The college is named after Mr. Francis Ormond, whose benefactions to it amounted to over £100,000.

Queen's College, founded by the Wesleyan Church, was opened in 1888. Its teaching staff consists of a master and six tutors.

The Australian College of Dentistry was affiliated in 1906, the University obtaining certain rights in regard to the control of the college, and undertaking to recognise the professional teaching given therein in connection with the degree of Dental Surgery.

The University Conservatorium of Music was founded in 1892 to provide practical training in connection with the Chair of Music endowed by Mr. Francis Ormond. It has a staff of 18 teachers, and was attended in 1907 by 94 students.

3. University of Adelaide.—This University was established by Act of Parliament in 1874, and by Letters Patent granted in 1881 its degrees were recognised as on the same footing as those granted in any University in the United Kingdom. The foundation of the University was rendered practicable by the munificent gifts of Sir Walter Hughes and Sir Thomas Elder, each of whom contributed £20,000 towards its establishment. The University Act of 1874 also provided for an annual grant equal to five per cent. on the funds possessed by the institution, but stipulated that the total endowment thus given was not to exceed £10,000 in any single year. The Act also provided an endowment of 50,000 acres of land, and a grant of five acres for a site in the city of Adelaide.

When first constituted there were only four professorships in the University—(1) Classics and Comparative Philology and Literature; (2) English Language and Literature, Mental and Moral Philosophy; (3) Mathematics; (4) Natural Science; the endowments for these being provided for by the gifts of Sir Walter Hughes and Sir Thomas Elder.

Lectures commenced in March, 1876, with a total of sixty students, of whom only eight were matriculants. The foundation-stone of the University buildings was, however, not laid until 30th July, 1879, and the formal opening of the institution took place in April, 1882. The total cost up to date was about £38,000. The munificence of Sir Thomas Elder also rendered possible the establishment of a School of Medicine, for as early as 1883 he made a further donation to the University funds of a sum of £10,000. Arrangements for a complete medical curriculum were perfected in 1886. The Angas Professorship of Chemistry, inaugurated in 1885, owes its origin to the munificence of the Hon. J. H. Angas, who provided a sum of £6000 for its endowment. The Chair of Music was established in 1884, and this was also largely assisted by Sir Thomas Elder, who contributed a sum of £300 annually to its upkeep. In 1890 the lectureship in Law, which had existed since 1883, was raised to a professorship. Considerable additions were made to the University library consequent on the gift since 1892 of upwards of £7500 by Mr. Robert Barr Smith. At present it contains about 19,000 volumes.

Sir Thomas Elder, who died in 1897, bequeathed to the University a sum of £65,000, the total donations of this public-spirited citizen amounting to nearly £100,000. According to the terms of his will £20,000 was apportioned to the School of Medicine, £20,000 to the School of Music, and the balance was made available for the general purposes of the University. The Elder Conservatorium of Music was, therefore, established in 1898, the building being finally completed in 1900. Considerable additions were made to the Engineering and Science Schools in 1901 and to the Medical School in 1902.

In 1903 an arrangement was entered into by the University Council with the Council of the South Australian School of Mines and Industries whereby the two institutions, to some extent, combine their resources in the provision of courses of instruction in mining engineering, metallurgy, mechanical engineering, and electrical engineering, and the allied bodies hold examinations and grant diplomas in various branches of Applied Science. The University also practically controls the Training College for public school teachers.

The University grants degrees in Arts, Science, Law, Medicine and Music, and diplomas in various branches of Applied Science and in Music.

It is believed that the Adelaide University was the first Australian University to grant degrees to women, the power to do so being conferred by an Act of Parliament passed in 1880.

4. **University of Tasmania.**—The University of Tasmania was established by Act of Parliament assented to on the 5th December, 1889, the preamble stating that it was intended to supply to all classes without distinction encouragement for pursuing a regular and liberal course of education. A Council and Senate were provided for, to form, when duly constituted, a body politic and corporate, with perpetual succession and a Common Seal, and having the usual powers and privileges attached to such bodies. The Senate was to consist of male graduates of the University with the degree of Master or Doctor, and of all other male graduates of three years' standing, together with certain other persons, but until the number of Senators reached fifty the Council was to administer the affairs of the University. Provision was made for the granting of degrees in Arts, Science, Law, Medicine, Music and any other specified subjects excepting Theology and Divinity, and also for the conferring of "*ad eundem*" degrees. The Council was empowered to make statutes for the affiliation or connection with the University of technical colleges and schools. It was expressly stated that no religious test was to be applied to persons desirous of joining the University. Appropriations from the Consolidated Fund of sums of £3000 in each of the years 1890 and 1891 were authorised for the endowment of the University. For 1892 and subsequent years the appropriation was fixed at £4000.

By an Amending Act passed in 1890 the number of Councillors was fixed at eighteen of whom nine were to be elected by the Senate, and eight by members of both Houses of Parliament, while the remaining member was to be the Minister of Education. The University is housed in a building which was formerly a proprietary high school, and was acquired for University purposes by Act of Parliament dated 21st December, 1892.

By statute dated April 13th, 1905, the Zeehan School of Mines and Metallurgy became affiliated to the University. At the present time there are professorships in classics and English literature, mathematics and physics, and law and modern history, and lectureships in modern languages, chemistry and geology, mechanical engineering, applied mechanics, mechanical drawing and physics, classics, modern history, mental and moral science, and surveying, and an assistant-lectureship in geology.

5. **Teachers and Students at Universities.**—The following table shews the number of professors and lecturers and the students in attendance at each of the Commonwealth Universities during the year 1907:—

| University. | Professors. | Lecturers. | Students attending Lectures. | | |
|--------------------------|-------------|------------|------------------------------|-------------------|--------|
| | | | Matriculated. | Non-matriculated. | Total. |
| Sydney | 15 | 74 | 871 | 307 | 1178* |
| Melbourne | 15 | 64 | 636 | 258 | 894† |
| Adelaide | 10 | 26 | 378 | 266 | 644‡ |
| Tasmania (Hobart) | 3 | 5 | ... | ... | 101 |

* Including 136 females. † Including females, but excluding 98 attending postgraduate courses and 94 music students. ‡ Exclusive of 10 matriculated and 336 non-matriculated music students.

6. **University Revenues.**—The income of the Universities from all sources during the year 1907 was as follows:—

| University. | Government Grants. | Fees. | Other. | Total. |
|--------------------------|--------------------|---------|--------|--------|
| | £ | £ | £ | £ |
| Sydney | 13,750 | 17,220 | 16,713 | 47,683 |
| Melbourne | 21,000 | *18,839 | 3,914 | 43,753 |
| Adelaide | 6,990 | 9,075 | 7,352 | 23,417 |
| Tasmania (Hobart) | 4,000 | 869 | 151 | 5,020 |

* Exclusive of Conservatorium of Music, £2282; Music Examination Board, £1055; Bacteriological Laboratory, £1087.

The column "Other" includes the receipts from private foundations. In the case of the Sydney University these were considerable, the Challis bequest alone representing property to the value of £268,224.

7. University Extension.—Under a statute of the Senate of Sydney University, approved of in 1892, a Board was appointed, which was empowered from time to time to recommend to the Senate the names of suitable persons for giving courses of lectures, and to hold examinations in the subjects of the lectures. The Board receives and considers applications from country centres, and makes provision for engaging lecturers and managing the entire business connected with the various courses. The project has only met with fair success, no lectures having been given in some years, but lately there appears to be an awakening of interest in the matter. The Board also arranges for courses of lectures in Queensland. In 1907 there were eleven courses of lectures given in New South Wales, and attended by 819 students.

University extension lectures in Victoria date from the year 1891, when a Board was appointed by the Melbourne University for the purpose of appointing lecturers and holding classes and examinations at such places and on such subjects as it might think fit. Interest in University extension is apparently on the wane in Victoria, as lectures were delivered in five centres only in 1905 and 1906, as against eight centres in 1904.

The Adelaide University has also instituted short courses of extension lectures in Arts and Science, to which students are admitted on payment of a nominal fee. Public intimation of these lectures is made from time to time during the session. For 1907 a course of eleven lectures was provided—two in Chemistry, three in Science, three in Literature, and three in Law. The Hobart University provides for courses of lecture at Launceston, the lectures being delivered weekly by members of the University teaching staff.

§ 5. Technical Education.

1. General.—Although provision has been made in some of the States in respect to many necessary branches of technical education, the total provision made would imply that this branch of education has not been regarded as of great importance. As will be seen later on, the expenditure on technical education for the whole of Australasia is comparatively insignificant.

2. New South Wales.—The present organisation of technical education in this State dates from the year 1883, when a Technical Education Board was appointed as a result of suggestions made at the Technological Conference held in 1879. This Board continued its functions till November, 1889, when it was dissolved, and the work has thenceforward been carried on as a branch of the Public Instruction Department. The chief centre of activity is, of course, in Sydney, where the Technical College and Technological Museum are situated, the college having been opened for the reception of students early in 1892. Colleges have also been erected in some of the chief country towns, and classes in various subjects are held at a large number of public schools. As mentioned elsewhere, higher technical training is afforded at the Schools of Mines and Engineering in connection with the University. References to the agricultural colleges will be found in the section dealing with Agriculture.

3. Victoria.—Technical instruction in mining has for many years received considerable attention in Victoria, the Ballarat School of Mines, which was established as far back as 1870, having achieved an Australasian reputation. The general scheme of instruction, however, lacked cohesion, and it was not until after the publication of the Report of the Royal Commission on Technical Education, which was appointed in 1899, that many defects were remedied. Science and Art classes have also been established at some of the larger State schools.

4. Queensland.—Previous to 1902 technical colleges were carried on in connection with Schools of Art in many of the towns, under the control of local committees, by whom regulations were framed and the colleges administered. The aid granted by the

State was £1 for every £1 raised locally, but no grant was to exceed the amount voted annually by Parliament. In 1902 a Board of Technical Education was formed, and held office from September of that year till the 27th May, 1905, and during this time devoted much energy towards the improvement of technical education in Queensland. The control, however, was removed from the Board in July, 1905, and vested in the Minister of Education, who appointed an officer of his Department to the position of Inspector of Technical Colleges. This officer reports on technical education generally, inspects the colleges, sees that the grants to the various colleges are spent to the best advantage, and so on. Examinations of students at the colleges were conducted by the Education Department, for the first time, in 1905, the papers being set by local experts, and, in some instances, by experts beyond the State. A differential scheme of endowment came into operation in 1906, the distribution being based on the general and practical utility of the subjects taught, and the subsidy ranging from ten shillings to £3 for every £1 of fees collected according to importance of subject and amount of apparatus required.

5. **South Australia.**—A considerable amount of attention has been given to technical education in South Australia, particularly in connection with the mining industry. The School of Mines and Industries in Adelaide was founded in 1889. There are also Schools of Mines at Moonta, Port Pirie, Kapunda, and Gawler. There is also a School of Design Painting and Technical Arts in Adelaide, with branches at Port Adelaide and Gawler.

6. **Western Australia.**—A technical school was established at Perth in 1900, and since its opening has progressed rapidly. The institution is affiliated with the Adelaide University, and it is hoped that the students will shortly be allowed to take the degree of B.Sc. without leaving the school. Branches have been established at Fremantle and Midland Junction. There are also successful schools at Boulder and Coolgardie, and classes are held at Kalgoorlie and Menzies. The schools are all under the control of the Education Department, the officer entrusted with their supervision being styled Director of Technical Education. The Director also supervises the School of Mines at Kalgoorlie, which is controlled by the Mines Department.

7. **Tasmania.**—In this State provision for technical education dates from the year 1888. At the present time the most important technical institution is the School of Mines and Metallurgy at Zeehan. Courses of instruction are given in metal mining and in metallurgical chemistry and assaying, the diploma in metal mining entitling the holder to the Government certificate of competency as a mine manager. The institution is affiliated to the University of Tasmania. There are also two other schools under the control of the Education Department, each managed by a committee appointed by the Governor-in-Council. Tasmanian technical schools naturally devote their chief attention to mining and mineralogy.

The table hereunder shews the enrolment and attendance at technical schools and classes in the Commonwealth during 1907:—

ATTENDANCE AT TECHNICAL SCHOOLS, 1907.

| State. | No. of Technical Schools. | Enrolment | Average Attendance | Other Technical Classes. | | | |
|------------------|---------------------------|-----------|--------------------|--------------------------|-------------|-----------------------|-------------|
| | | | | At State Schools. | | Schools of Arts, etc. | |
| | | | | Enrolment | Av. Attend. | Enrolment | Av. Attend. |
| N.S.W. ... | 92 | 13,404 | 8,616 | 4,258 | 2,644 | 360 | 310 |
| Victoria ... | 13 | *12,500 | 7,916 | ‡ | ‡ | *139 | 93 |
| Queensland ... | 19 | 11,376 | 2,634 | ... | ... | ... | ... |
| S. Australia ... | 6 | 2,585 | 2,112 | ... | ... | ... | ... |
| W. Australia... | 9 | 1,225 | ‡ | ... | ... | ... | ... |
| Tasmania ... | ‡ | ‡ | ‡ | ... | ... | ... | ... |

* Estimated. ‡ Not available.

8. **Expenditure on Technical Education.**—The expenditure on technical education in each State during the period 1901 to 1907 is shown below :—

EXPENDITURE ON TECHNICAL EDUCATION IN AUSTRALIA, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|
| | £ | £ | £ | £ | £ | £ | £ |
| N.S.W. | 23,154 | 25,540 | 26,459 | 25,762 | 25,262 | 26,764 | 33,568 |
| Victoria | 26,225 | 22,958 | 16,430 | 16,278 | 17,117 | 21,444 | 22,322 |
| Q'land... | 10,397 | 11,728 | 7,294 | 6,395 | 5,055 | 6,803 | 9,610 |
| S. Aust. | 15,815 | 17,525 | 17,978 | 7,756 | 7,481 | 7,663 | 8,006 |
| W. Aust. | 1,432 | 3,231 | 4,052 | 5,528 | 7,205 | 7,931 | 7,940 |
| Tas. ... | 2,288 | 2,488 | 2,465 | 1,359 | 2,650 | 2,650 | 2,418 |
| C'wealth | 79,311 | 83,470 | 74,678 | 63,078 | 64,770 | 73,255 | 83,864 |

The figures in the preceding table represent an expenditure of a little over 4d. per head of the population of the Commonwealth, as compared with 11s. 3d. per head spent on primary education, and clearly shew that technical education has not attained its proper place in the educational organisation of Australia.

§ 6. Diffusion of Education.

1. **General Education.**—A rough indication of the state of education of the people is obtained at each Census under the three headings, "read and write," "read only," and "cannot read." The grouping of the whole population, exclusive of aborigines, in these three divisions is given at each Census since 1861 :—

EDUCATION AT CENSUS PERIODS, 1861 to 1901.

| State. | | 1861. | 1871. | 1881. | 1891. | 1901. |
|-----------------|---------------|---------|-----------|-----------|-----------|-----------|
| N.S. Wales ... | (Read & write | 188,543 | 296,741 | 507,067 | 835,562 | 1,071,935 |
| | Read only... | 46,024 | 56,391 | 49,372 | 43,539 | 29,728 |
| | (Cannot read | 116,293 | 149,866 | 193,386 | 244,853 | 253,183 |
| Victoria ... | (Read & write | 328,362 | 478,464 | 653,346 | 908,490 | 998,010 |
| | Read only... | 57,351 | 70,953 | 47,950 | 32,794 | 21,852 |
| | (Cannot read | 152,915 | 180,781 | 160,270 | 198,556 | 181,208 |

| Tasmania ... | (Read & write | 48,282 | 55,941 | 74,966 | 103,138 | 133,579 |
| | Read only... | 13,136 | 13,946 | 9,606 | 6,287 | 3,907 |
| | (Cannot read | 28,559 | 29,441 | 31,133 | 37,242 | 34,989 |
| Commonwealth | (Read & write | 662,212 | 1,037,601 | 1,591,556 | 2,394,339 | 3,020,665 |
| | Read only... | 140,027 | 177,596 | 138,282 | 108,870 | 78,614 |
| | (Cannot read | 348,952 | 447,842 | 520,356 | 671,183 | 674,522 |

The proportion in the Commonwealth of the various classes per 10,000 of the population is shewn below for each Census period:—

PROPORTION OF EDUCATED AND ILLITERATE PER 10,000 PERSONS, 1861 to 1901.

| Division. | 1861. | 1871. | 1881. | 1891. | 1901. |
|--------------------|-------|-------|-------|-------|-------|
| Read and write ... | 5,752 | 6,239 | 7,073 | 7,543 | 8,004 |
| Read only ... | 1,217 | 1,068 | 615 | 343 | 208 |
| Cannot read ... | 3,031 | 2,693 | 2,312 | 2,114 | 1,788 |

2. **Education of Children.**—The figures in the preceding tables refer to the entire population of the Commonwealth, and as the age constitution of those dwelling in the various portions of Australia underwent considerable modifications during the period dealt with, a far more reliable test of the diffusion of education will be obtained by a comparison of the Census returns in regard to children of school age. For comparative purposes this has been taken to include all children in the group over five and under fifteen years of age, and the degree of education of these at each Census will be found below:—

EDUCATION OF CHILDREN AT CENSUS PERIODS, 1861 to 1901.

| State. | 1861. | 1871. | 1881. | 1891. | 1901. | |
|-----------------|---------------|---------|---------|---------|---------|---------|
| N.S. Wales ... | Read & write | 34,040 | 68,776 | 121,735 | 196,240 | 251,187 |
| | Read only ... | 20,345 | 26,886 | 25,100 | 21,375 | 15,934 |
| | Cannot read | 25,472 | 32,924 | 41,663 | 48,580 | 60,734 |

| | Cannot read | 6,907 | 10,074 | 12,483 | 17,988 | 15,480 |
| West. Australia | Read & write | 1,333 | 3,218 | 4,418 | 6,910 | 25,326 |
| | Read only ... | 226 | 617 | 1,260 | 933 | 1,815 |
| | Cannot read | 1,015 | 1,795 | 1,593 | 2,348 | 5,431 |
| Tasmania ... | Read & write | 11,919 | 17,335 | 17,188 | 24,007 | 32,890 |
| | Read only ... | 2,848 | 4,143 | 4,108 | 2,974 | 1,795 |
| | Cannot read | 4,581 | 6,663 | 6,606 | 8,829 | 8,475 |
| Commonwealth | Read & write | 107,201 | 255,374 | 394,001 | 549,049 | 711,004 |
| | Read only ... | 59,219 | 89,818 | 70,662 | 53,136 | 42,856 |
| | Cannot read | 58,945 | 86,961 | 93,381 | 121,443 | 136,712 |

In the case of Tasmania full details for the years 1861 and 1871 are not available, and the figures for those years are approximate. The variation in degree of education will be more readily seen by reducing the foregoing figures to the basis of proportion per 10,000, and the results so obtained are embodied in the following table, a glance at which is sufficient to demonstrate the remarkable strides that at least the lower branches of education have made since 1861. In that year only 45 per cent. of the children of school age could read and write, while 30 per cent. were illiterate. The returns for 1901 shew

that the proportion of those who could read and write had increased to over 80 per cent., while the totally ignorant had declined by fully one-half:—

**EDUCATION OF CHILDREN (AGES 5 TO 15) PER 10,000 AT CENSUS PERIODS,
1861 TO 1901.**

| State. | | 1861. | 1871. | 1881. | 1891. | 1901. |
|-----------------|----------------|-------|-------|-------|-------|-------|
| N.S. Wales | { Read & write | 4,263 | 5,349 | 6,458 | 7,372 | 7,662 |
| | { Read only... | 2,547 | 2,091 | 1,332 | 803 | 486 |
| | { Cannot read | 3,190 | 2,560 | 2,210 | 1,825 | 1,852 |

| Commonwealth | { Read & write | 4,757 | 5,910 | 7,061 | 7,588 | 7,984 |
| | { Read only... | 2,628 | 2,078 | 1,266 | 734 | 481 |
| | { Cannot read | 2,615 | 2,012 | 1,673 | 1,678 | 1,535 |

3. Education as shewn by Marriage Registers.—Another common method of testing the spread of education is to compare the number of mark signatures with the total number of persons married during each year of a series. The percentage of males and females signing with a mark to the total persons married in the Census years 1861 to 1901, and during each of the last six years, was as follows. The figures refer to marriages in the Commonwealth in respect of which information was obtainable:—

ILLITERACY AS SHEWN BY MARRIAGE SIGNATURES, 1861 to 1907.

| Year. | Proportion Signing with Marks of Total Persons Married. | | | | | | |
|----------|---|-----------|-----------|----------|-----------|-----------|-----------|
| | Males. | Females. | Total. | Year. | Males. | Females. | Total. |
| | per cent. | per cent. | per cent. | | per cent. | per cent. | per cent. |
| 1861 ... | 18.50 | 30.69 | 24.60 | 1903 ... | 1.17 | 1.02 | 1.10 |
| 1871 ... | 10.55 | 16.40 | 13.49 | 1904 ... | 0.95 | 0.91 | 0.93 |
| 1881 ... | 4.34 | 6.78 | 5.56 | 1905 ... | 0.91 | 0.93 | 0.92 |
| 1891 ... | 2.27 | 2.40 | 2.34 | 1906 ... | 0.92 | 0.86 | 0.89 |
| 1901 ... | 1.35 | 1.29 | 1.32 | 1907 ... | 0.81 | 0.70 | 0.76 |
| 1902 ... | 1.21 | 1.11 | 1.16 | | | | |

The table shews that there has been a large diminution in illiteracy, and judging from the figures for the last few years the proportion bids fair to practically disappear. Up to 1891 there was a higher proportion of illiteracy amongst females, but from 1901 onwards, generally speaking, the opposite condition prevailed.

§ 7. Miscellaneous.

1. **Scientific Societies.**—(a) *Royal Societies.* Despite the trials and struggles incidental to the earlier years of the history of Australia, higher education and scientific advancement was not lost sight of. Thus the origin of the Royal Society of New South Wales dates as far back as 1821, when it was founded under the name of the Australian Philosophical Society, Sir Thomas Brisbane being its first president. In 1856 it was known as the Philosophical Society of New South Wales. Its present title dates from 1866. Some of the papers of the old Philosophical Society were published in 1825 under the title of "Geographical Memoirs of New South Wales," and contain much that is interesting in regard to the early history of Australia. The first volume of the Transactions of the Royal Society of New South Wales was issued in 1867, the title of the series being altered to Journal in 1876. Up to the end of 1907 forty-one volumes had been published. The exchange list comprises 432 kindred societies. At the present time the library contains about 20,000 volumes and pamphlets, valued at £500. Since 1874 the receipts from subscriptions reached nearly £20,000. Government grants since 1877 totalled about £12,000. In 1907 the receipts were £912, including Government endowment of £400.

The Royal Society of Victoria dates from 1854, in which year the Victorian Institute for the Advancement of Science and the Philosophical Society of Victoria were founded. These were amalgamated in the following year under the title of the Philosophical Institute of Victoria, while the society received its present title in 1860. The first volume of its publications dates from 1855. The earlier publications dealt largely with Physics, later on Biology became prominent, while at present the greater number of papers deal with Geology. Up to 1907 forty-three volumes of publications had been issued. The society exchanges with 318 kindred bodies. The constitution of the society states that it was founded for the promotion of art, literature, and science, but for many years past science has monopolised its energies. Since its inception the society has received about £11,000 in annual subscriptions, while Government aid has been given to the amount of about £9500.

The inaugural meeting of the Royal Society of Queensland was held on the 8th January, 1884, under the presidency of the late Sir A. C. Gregory. The society was formed "for the furtherance of the natural and applied sciences, especially by means of original research." Shortly after its formation it received an accession to its ranks by the amalgamation with it of the Queensland Philosophical Society, which was started at the time when Queensland became a separate colony. Up to 1908 total subscriptions reached about £1600. In 1903 the Government grant was 100, but thereafter was discontinued. The society has issued thirty-five publications and exchanges with 120 societies.

The present Royal Society of South Australia grew out of the Adelaide Philosophical Society, which was founded in 1853, its object being the discussion of all subjects connected with science, literature, and art. Despite this programme, the tendency of the papers was distinctly scientific, or of a practical or industrial nature. With the advent of the late Professor Tate the sphere of activity of the society was considerably enlarged. Permission to assume the title of "Royal" was obtained in 1879, the society thenceforward being known as "The Royal Society of South Australia." In 1903 the society was incorporated. Receipts in 1907 were £374, the Government endowment being £234. Up to 1907 the society had issued thirty-one volumes of proceedings and two volumes of memoirs. The exchange list numbers about 170.

The Royal Society of Tasmania, for horticulture, botany, and the advancement of science, dates from 14th October, 1843, although Sir John Franklin had started a scientific society as early as 1838. The names of Captains Ross and Crozier, of H.M.S. *Erebus* and *Terror*, appear in the list of the first corresponding members. The society,

which up to the present has published thirty volumes of proceeding, exchanges with seventy kindred bodies.

(b) *Other Scientific Societies.* The Australasian Association for the Advancement of Science, founded in 1888, has its headquarters in Sydney. Its receipts to date were about £10,000, including Government aid to the amount of £3500. The library contains 4000 volumes valued at £400. Up to date ten volumes of proceedings have been issued. The exchange list numbers 285. The Linnean Society of New South Wales, with headquarters in Sydney, founded in 1875, possesses a library of 9000 volumes valued at £5000. Up to date thirty-two volumes of proceedings have been issued. Exchanges number 175. This society maintains four investigators engaged in research work, and owes its development almost entirely to the benefactions of Sir William Macleay. The British Astronomical Association has a branch in Sydney, and in some of the States the British Medical Association has branches.

The principal scientific society in Western Australia is the West Australian Natural History Society, with which is incorporated the Mueller Botanic Society, founded in July, 1897. The objects of this association are the study of natural history, promoted by periodical meetings, field excursions, and the issue of reports of proceedings. Government aid in 1906 amounted to £75, and in 1907 to £15. Since its establishment the society has issued sixteen journals of proceedings. The exchange list numbers forty-one.

In addition to the societies enumerated above, there are various others in each State devoted to branches of scientific investigation, particulars respecting which are not at present available.

2. **Libraries.**—As far as can be ascertained the total number of libraries in the Commonwealth at the latest available date was about 1500, and the number of books contained therein is estimated at two and a half millions. In each of the capital cities there is a well-equipped Public Library, the Melbourne institution especially comparing very favourably with similar institutions in other parts of the world. The following statement gives the number of volumes in the Public Library of each city:—

METROPOLITAN PUBLIC LIBRARIES.

| City. | Number of Volumes in— | | | Total. |
|------------------|-----------------------|--------------------------|-------------------------|---------|
| | Reference Branch. | Ordinary Lending Branch. | Country Lending Branch. | |
| Sydney | 148,259 | 29,612 | 8,195 | 186,066 |
| Melbourne | 174,647 | 24,651 | * | 199,298 |
| Brisbane | 33,631 | * | * | 33,631 |
| Adelaide | 60,655 | 23,776 | * | 84,431 |
| Perth | 68,652 | * | 4,214 | 72,866 |
| Hobart | 11,839 | * | * | 11,839 |

* Information not available, 19/3/09.

The Launceston Institute in Tasmania possesses a library of 24,640 volumes.

The number of libraries in receipt of State or municipal aid, together with the estimated number of books contained therein, is given below for each State.

| | State. | | | | | |
|--|---------|---------|---------|----------|----------|---------|
| | N.S.W. | Vic. | Q'land. | S. Aust. | W. Aust. | Tas. |
| Number of suburban and country libraries ... | 304 | 463 | 183 | 176 | 208 | 39 |
| Estimated number of books | 427,256 | 941,176 | 266,026 | 405,505 | 90,224 | 104,221 |

The figures in the above table can be taken only as approximations, as in many instances returns were not received from various institutions.

3. Museums.—The Australian Museum in Sydney, founded in 1836, is the oldest institution of its kind in Australia. In addition to possessing a fine collection of the usual objects to be met with in kindred institutions, the Museum contains a very valuable and complete set of specimens of Australian fauna. The cost of construction of the building was £59,000. The number of visitors to the institution last year was 172,450, and the average attendance on week-days 528, and on Sundays 638. The expenditure for 1907 amounted to £8337, of which £5560 was absorbed by salaries and allowances, and £2777 by purchases and miscellaneous. There is a valuable library attached to the Museum. Representative collections, illustrative of the natural wealth of the country, are to be found in the Agricultural and Forestry Museum, and the Mining and Geological Museum. The latter institution prepares collections of specimens to be used as teaching aids in country schools. The "Nicholson" Museum of Antiquities, and the "Macleay" Museum of Natural History, connected with the University, are also accessible to the public. There is a fine Technological Museum in Sydney, with branches in five country centres, the metropolitan institution containing over 99,000 specimens. Valuable research work has been undertaken by the scientific staff in connection with oil and other products of the eucalyptus. The average attendance of the public at the Technological Museums during the last five years was well over 200,000.

The National Museum at Melbourne, devoted to Natural History, Geology, and Ethnology, is located in the Public Library building. The expenditure for specimens, furniture, etc., in 1907 was £1550, and salaries and wages £2920. The Industrial and Technological Museum, opened in 1870, contains upwards of 55,000 specimens. There is a fine Museum of Botany and Plant Products in the Melbourne Botanic Gardens. Well equipped museums of mining and geological specimens are established in connection with the Schools of Mines in the chief mining districts.

The Queensland Museum dates from the year 1871, but the present building was opened in January, 1901. Since its inauguration the Government has expended on the institution a sum of £67,443, of which buildings absorbed £16,566, purchases £21,429, and salaries £29,448. The number of visitors during the year was 60,027, of whom 21,598 visited the institution on Sundays. The Queensland Geological Survey Museum has branches in Townsville, opened in 1886, and Brisbane, opened in 1892. The visitors during the year numbered 17,516. The total expenditure on the institution up to the end of 1907 was £5548, of which £2830 was absorbed by buildings.

Under the Public Library Act of 1884 the South Australian Institute ceased to exist, and the books contained therein were divided amongst the Museum, Public Library, and Art Gallery of South Australia, and the Adelaide Circulating Library. The Museum was attended by 80,230 visitors in 1907.

The latest available returns shew that the Western Australian Museum contains altogether 51,000 specimens of an estimated value of £50,000. The Museum is housed in the same building as the Art Gallery, and the visitors to the combined institutions during the year numbered 142,000. The expenditure totalled £4358, of which salaries absorbed £1785.

There are two museums in Tasmania—The Tasmanian Museum at Hobart, and the Victoria Museum and Art Gallery at Launceston, both of which contain valuable collections of botanical and mineral products. The Tasmanian Museum received aid from the Government during last year to the extent of £650.

4. Art Galleries.—Information regarding the State collections of objects of art in the various capitals is in some cases very meagre, while the method of presentation does not admit of any detailed comparisons being made. The Art Gallery of New South Wales originated in the Academy of Art founded in 1871. Up to July, 1908, the cost of construction of the present building was £86,000. The contents, which are valued at

£130,000, comprise 356 oil paintings, 365 water colours, 509 black and white, 150 statuary and bronzes, and 309 ceramics, works in metal and miscellaneous. During 1907 the average attendance on week days was 532, and on Sundays 1830. The expenditure in 1907 amounted to £6800.

The National Gallery at Melbourne at the end of 1907 contained 505 oil paintings, 3530 objects of statuary, and 13,729 water-colour drawings, engravings, and photographs. The Gallery is situated in the same building as the Museum and Public Library, the total cost of construction being £229,000.

The Art Gallery at Adelaide dates from 1880, when the Government expended £2000 in the purchase of pictures, which were exhibited in the Public Library building in 1882. The liberality of private citizens caused the Gallery to rapidly outgrow the accommodation provided for it in 1889, at the Exhibition Building, and on the receipt of a bequest of £25,000 from the late Sir T. Elder, the Government erected the present building, which was opened in April, 1900. The Gallery also received a bequest of £16,500 in 1903 from the estate of Dr. Morgan Thomas. At the latest available date there were in the Gallery 195 oil paintings, 108 water colours, 157 black and white, 74 etchings, 23 statuary and numerous miscellaneous works in metal, etc., the whole being valued at £47,000. Building and site are valued at £31,000. Average attendance was 260 on week days and 270 on Sundays.

The foundation stone of the present Art Gallery at Perth in Western Australia was laid in 1901, the building and site being valued at £60,000. The collection comprises 80 oil paintings, 32 water colours, 117 engravings and black and white, 227 statuary, and miscellaneous metal works, etc., of a total value of £12,000. During last year the visitors averaged 137 on week days and 329 on Sundays.

In Tasmania the Art Gallery at Hobart was opened in 1887. Its present contents consist of 96 paintings and 81 etchings and black and white drawings. Buildings and site are valued at £30,000. The number of visitors during the year on week days averages 62,000, and on Sundays 30,000.

The Art Gallery at Launceston was erected in 1888 at a cost of £5000, and opened on the 2nd April, 1901. Only a small proportion of the contents belongs to the Gallery, the bulk of the pictures being obtained on loan. At latest date there were on view 80 oil paintings and 44 water colours valued at £5000. The total value of buildings and site is estimated at £12,100. The average annual attendance is 36,000, and for Sundays 10,000.

5. **State Expenditure on all Forms of Educational Effort.**—The expenditure from the Consolidated Revenue in each State on all forms of educational and scientific activity during each of the last six financial years was as follows:—

EXPENDITURE ON EDUCATION, SCIENCE, AND ART, 1901 to 1907.

| State. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
| | £ | £ | £ | £ | £ | £ | £ |
| N.S.W. | 874,977 | 905,439 | 908,229 | 916,046 | 934,634 | 941,654 | 1,055,197 |
| Victoria | 864,295 | 782,049 | 764,967 | 787,836 | 810,850 | 842,071 | 872,655 |
| Q'land... | 343,870 | 317,916 | 319,799 | 324,502 | 338,426 | 366,635 | 399,291 |
| S. Aust. | 210,441 | 203,305 | 191,929 | 195,648 | 199,628 | 193,346 | 210,712 |
| W. Aust. | 168,770 | 200,204 | 209,573 | 214,733 | 230,573 | 217,036 | 219,176 |
| Tas. ... | 60,759 | 73,300 | 72,129 | 72,435 | 68,163 | 68,777 | 73,242 |
| C'wealth | 2,523,112 | 2,482,213 | 2,466,626 | 2,511,200 | 2,582,274 | 2,629,519 | 2,830,273 |

The expenditure for 1906-7 is equivalent to about 13s. 7d. per head of population in the Commonwealth.

§ 8. Free Kindergarten Movement in Australia.¹

1. **First Kindergarten in Australasia.**—The first free kindergarten south of the equator was opened in Dunedin, New Zealand, some twenty years ago, under the charge of a teacher from the "Golden Gate Free Kindergarten Association" of California. No organised attempt was, however, made either then or later to extend the movement into other parts of the Dominion, although one or two schools have since been opened by private promoters.

2. **History of Kindergarten in New South Wales.**—The inception of free kindergartens in New South Wales dates from 1895, when, as the result of a private meeting, followed by a public meeting at the Town Hall, Sydney, the Kindergarten Union of New South Wales was formed. Its original enrolment of fourteen members has since increased to upwards of 1200.

(i.) *Opening of First Free Kindergarten.* In January, 1896, with the sum of £50 in hand, collected from private sources, the first free kindergarten was opened in a hall in Sussex-street, Sydney. Within a month a fresh trial had to be made in a small terrace house in Charles-street, Woolloomooloo. At the end of a year there were seventy-six children from two to six years of age under the care of one teacher and two trained assistants. Lack of accommodation led to the removal of the school in February, 1897, to its present quarters in Dowling-street.

(ii.) *Opening of Second Metropolitan Free Kindergarten.* A second free kindergarten was opened in Newtown in 1898, and a branch committee, the first of many now in existence, was formed to care for its maintenance. This branch was instrumental in erecting the first building in Australia designed and constructed purely for kindergarten purposes. The institution cost £793, and was officially opened in March, 1907, by Her Excellency Lady Northcote. This kindergarten will be the centre of similar work to that carried on by the Social Settlements in the large cities of England and America.

(iii.) *Present Position of Free Kindergarten in Sydney.* At the latest available date there were eight free kindergartens in the metropolis, situated in the poorest localities and attended by about 500 children.

(iv.) *Extension of Movement beyond the Metropolis.* A free kindergarten was established in 1902 at Newcastle, where there are now two successful institutions. The unions at Newcastle and North Sydney were originally independent bodies, but the difficulty of securing effective staffs led them to place themselves under the direction of the Sydney union.

(v.) *Basis and Aims of the Kindergarten Union.* The Kindergarten Union of New South Wales, founded on a strictly non-political and unsectarian basis, aims at :—(a) The promotion of knowledge of kindergarten principles in New South Wales. (b) The training of teachers in the theory and practice of the kindergarten system. (c) The establishment of free kindergartens in poor neighbourhoods.

(vi.) *Sources of Maintenance.* The kindergartens are dependent for support upon funds raised by the branch committees, and upon government grants. State aid was first received in 1899 to the extent of £100. In each succeeding year an increased grant was given, according as the work grew, until in 1902 the amount had reached £500. For the year 1908 the grant was £1000, of which 150 was paid into the funds of the Newcastle Free Kindergarten Association, this particular association having been the recipient of State aid prior to its affiliation with the parent union. It is gratifying to note, moreover,

1. This article has been condensed from a very full contribution by Mrs. Jeanie Grahame Dane.

that although the schools are free, the parents of the children attending them contribute in many practical ways towards their support. Aid is frequently given by the men in carpentering and gardening, while, besides assisting in various other directions, the united efforts of the women at times result in substantial sums of money being added to the funds.

(vii.) *Kindergarten Training College.* The necessity for a supply of adequately-trained teachers to meet the growing demands of the free kindergarten led to the establishment of the Sydney Kindergarten Training College. In 1897 the union entered into a three years' contract with a graduate of the Normal Training School of Chicago, who at once systematised the teaching and instituted a course of training for teachers and one for children's nurses. The latter section was, however, discontinued after two years. Classes were regularly held in the kindergarten room at Woolloomooloo, and during the first year eight students were admitted for training. Owing to the development of the work additional accommodation became necessary, and in May, 1900, a residential training centre was established at Roslyn Gardens, Darlinghurst. For two years teachers were boarded at a nominal cost and received free training in return for services in the kindergarten. This centre proved the germinating ground for several educational and philanthropic schemes, including the Child Study Association (later known as the Parents' and Teachers' Union), the Kindergarten Club, and the movement to establish day nurseries in connection with kindergarten. In 1902 the scope of the work was enlarged and the training course revised.

The system of training pursued resolves itself into three courses—(a) A regular professional course, covering a period of two years; (b) a sub-primary—also a two years' course—consisting of one year of kindergarten and one year of primary work, and designed for those intending to teach children beyond the kindergarten stage; (c) a post-graduate course for those who wish to become training teachers. In addition to these there is a preparatory course of one year for students who are not quite up to the standard required for admission to the regular kindergarten course.

All teachers in training are required to spend a certain proportion of their mornings in the different free kindergartens for the purposes of observation and practice, and to attend afternoon classes at the college. At present there are fifty students, of whom eleven are resident.

Educational matters in connection with the college are controlled by a council composed of representatives of the Sydney University, Department of Public Instruction, Teachers' Association, the Women's College, and the Kindergarten Union. The college and the private kindergarten and primary school are entirely self-supporting, the money being obtained from the fees charged for the training classes and the tuition of the children attending the kindergarten.

3. Extension of Free Kindergarten in other States.—South Australia was the first of the other Commonwealth States to develop free kindergarten, an association being formed in Adelaide in 1905. At present there are two free schools in operation. A Kindergarten Union was opened in Brisbane, Queensland, in 1906, and a school established. A kindergarten union was formed in Melbourne in 1909. The council includes representatives of the existing kindergarten committees, children's charities, educational bodies—including the State Education Department, the Medical Society, and the Board of Health. In addition to equipping a central kindergarten, the union proposes to establish schools in the more densely populated suburbs. At the present time there are four privately supported kindergartens in Melbourne.

4. Adoption of Kindergarten in State Schools.—No very great attention appears to have been devoted to kindergarten methods in the State schools of New South Wales prior to 1899. In that year instructions issued regarding the qualifications of infant schoolmistresses led to a large number of teachers visiting the free kindergarten, where the union instituted a course of free Saturday morning lectures combined with practical demonstrations. The

Education Department has also considerably enlarged the scope of its own kindergarten at Fort-street, Sydney.

Prior to the report of the first Royal Commission on Education in Victoria some of the chief metropolitan schools possessed kindergarten classes, but comparatively little systematic training had been accomplished. The publication of this report, however, led to an entire remodelling of the plan of infant teaching. At the present time there are fifteen well-equipped schools with kindergarten methods in use, and the kindergarten at Brunswick serves as a training school for students of this system. The course of training extends over two years, one of which is devoted to kindergarten, and one to sub-primary work. Teachers from South Australia and Tasmania visit this institution.

In Western Australia some progress has been made in kindergarten teaching based on English methods.

5. Practical Results of Kindergarten Teaching.—The establishment of the free kindergartens has had a very wholesome effect on both children and parents in the localities where the schools have been placed. Habits of industry, alertness, and self-respect spread from children to parents. The teachers who work in the kindergarten acquire an insight into the psychology of the child mind, and the tolerance, kindness, and self-restraint which they must necessarily possess react for good on the surrounding community. Children from the kindergartens are said to possess greater mental keenness, and to be more responsive to ordinary primary teaching than those who have not attended these institutions.

SECTION XXIII.

PUBLIC JUSTICE.

§ 1. Police.

1. **Introductory.**—It was originally intended to give some account in this chapter of the origin and development of the police forces of Australia, and most of the officers administering the police departments in the various States very kindly supplied the necessary materials. Limitations of space, however, preclude the possibility of publishing “*in extenso*” the valuable store of information thus acquired, but it is hoped to be able to embody it in a later Year Book, or in a still more comprehensive publication.

The following brief notes refer to the evolution of the force in Australia up to the passing of the Police Act of 1862 (25 Vic. No. 16) in New South Wales :—

The first Act of Parliament specially mentioning the establishment of a police force in Australia was passed in 1833 (4 Wm. IV. No. 7), the settlement from 1788 to that year having been under military rule. The Act provided for the appointment of two or more magistrates for the town and port of Sydney, empowered to select a certain number of suitable men for a police force. This force was at first restricted to the capital and its environs, but in 1838 a further Act was passed (2 Vic. No. 2) providing for the establishment and control of police in the chief country districts. About nine years later the prevalence of cases of horse and cattle stealing led to the formation of mounted patrols along the Great Western, Southern, and Northern roads, a central detachment being located in Sydney. The mounted police consisted principally of old soldiers. With the discovery of the goldfields in the early fifties, another branch of the force known as “gold police,” also chiefly old soldiers, was established, and the various divisions were commanded by military officers styled “gold commissioners.” While a large number of the members of the early force were actuated with the desire to carry out their duties honestly and efficiently, there were others who were totally unfitted for the service, and the general lack of cohesion and co-operation was reflected in the high criminal returns. A complete reorganisation was, however, effected by the Police Act of 1862 (25 Vic. No. 16), which placed the entire control in the hands of an inspector-general, who, through the Chief Secretary, was made responsible to Parliament for the general efficiency of the system.

At the present time the police forces of Australia may be said to be satisfactory both in regard to physique and general intelligence; while as regards methods of prevention and detection of crime it is believed that the system in vogue here compares very favourably with those of the older-settled countries of the world.

2. **Strength of Police Force.**—The strength of the police force in each State during the seven years ended 1907 was as follows :—

POLICE FORCES, 1901 to 1907.

| State. | Area of State in Sq. Miles. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------|-----------------------------------|-------|-------|-------|-------|-------|-------|-------|
| N.S.W. | 310,372 | 2,172 | 2,222 | 2,270 | 2,310 | 2,342 | 2,342 | 2,381 |
| Victoria | 87,884 | 1,466 | 1,515 | 1,495 | 1,495 | 1,495 | 1,518 | 1,546 |
| Q'land ... | 670,500 | 1,010 | 962 | 949 | 888 | 911 | 952 | 998 |
| S.A. ... | 903,690 | 406 | 412 | 411 | 414 | 420 | 422 | 444 |
| W.A. ... | 975,920 | 519 | 512 | 500 | 491 | 492 | 507 | 488 |
| Tas. ... | 26,215 | 255 | 245 | 235 | 234 | 234 | 229 | 226 |
| C'wealth | 2,974,581 | 5,828 | 5,868 | 5,860 | 5,832 | 5,894 | 5,970 | 6,083 |

The figures for New South Wales are exclusive of sixty-four "black trackers," *i.e.*, natives employed in detection of offenders in outlying districts, and five female searchers. There are also sixty-five "black trackers" in Western Australia and three female searchers not included in the table.

(i.) *Average Number of Inhabitants to each Police Officer.* The average number of inhabitants to each officer in each State during the same period is shewn below. In considering these figures allowance must, of course, be made for the unequal area and unequal distribution of the population of the various States:—

INHABITANTS TO EACH POLICE OFFICER, 1901 to 1907.

| State. | No. of Persons per Sq. Mile, 1901 Census. | Inhabitants to each Police Officer. | | | | | | |
|------------|--|-------------------------------------|-------|-------|-------|-------|-------|-------|
| | | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
| N.S.W. | 4.37 | 633 | 632 | 629 | 631 | 637 | 633 | 659 |
| Victoria | 13.67 | 826 | 800 | 809 | 810 | 815 | 812 | 807 |
| Q'land ... | 0.74 | 501 | 531 | 543 | 587 | 580 | 562 | 543 |
| S.A. ... | 0.40 | 901 | 890 | 897 | 900 | 900 | 910 | 884 |
| W.A. ... | 0.19 | 374 | 417 | 454 | 493 | 518 | 516 | 536 |
| Tas. ... | 6.58 | 694 | 724 | 764 | 770 | 774 | 787 | 814 |
| C'wealth | 1.27 | 657 | 662 | 671 | 683 | 688 | 682 | 690 |

The above figures naturally shew a great disparity in the relative numbers of the population protected by each police officer in the various States, and also in the relative area of territory to each officer. Western Australia and South Australia exhibit the largest figures in the latter respect, this, of course, being due to the fact that extensive areas in each State are as yet unpeopled by white settlers.

3. *Duties of the Police.*—In addition to the ordinary employment attaching to their office, the police are called upon to perform many duties which in other countries are carried out by other functionaries. As far as the Statistician is concerned, it is found that the expert local knowledge possessed by the police renders their services in the collection of such returns as those relating to the agricultural, pastoral, and manufacturing industries, private schools, etc., more than ordinarily valuable. Then, again,

the fact that their services are enlisted by such widely different departments as those dealing with mines, stock, agriculture, elections, registrations of births, deaths, and marriages, forestry, fisheries, explosives, old-age pensions, lunacy, public works, labour, etc., greatly enhances their general alertness by widening the range of their experience. Occasionally the objection is heard in some quarters that these special tasks involve some degree of sacrifice of ordinary routine duties, but that the general intelligence of the Australian police is adequate to the obligation to perform these tasks, besides being most creditable, results in a great saving of the public money.

4. **Cost of Police Forces.**—The expenditure from Consolidated Revenue on the police forces in each State during the seven years 1901 to 1907 is shewn in the following table. Cost of buildings has been excluded from the return:—

COST OF POLICE FORCES, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
| | £ | £ | £ | £ | £ | £ | £ |
| N.S.W. | 383,332 | 401,269 | 416,542 | 428,374 | 435,577 | 434,934 | 442,804 |
| Vic. ... | 287,630 | 293,998 | 311,693 | 311,927 | 313,649 | 312,941 | 306,130 |
| Q'land | 183,143 | 184,873 | 172,913 | 161,510 | 159,464 | 176,086 | 202,184 |
| S.A. ... | 83,697 | 84,874 | 84,109 | 85,090 | 82,419 | 85,016 | 87,374 |
| W.A. ... | 119,310 | 123,924 | 130,312 | 128,628 | 126,661 | 126,276 | 125,440 |
| Tas. ... | 38,412 | 39,222 | 37,833 | 36,720 | 36,537 | 35,086 | 37,152 |
| Cwlth. | 1,095,524 | 1,128,160 | 1,153,402 | 1,152,249 | 1,154,307 | 1,170,339 | 1,201,084 |

The figures for Victoria include the sums paid each year to make up the deficiency in the Police Superannuation Fund. Queensland returns for 1907 include a grant of £20,000 in aid of this fund. The cost per head of the population in each State for the period 1901 to 1907 was as follows:—

COST OF POLICE PER INHABITANT, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------|-------|-------|-------|-------|-------|-------|-------|
| | s. d. | s. d. | s. d. | s. d. | s. d. | s. d. | s. d. |
| New South Wales ... | 5 7 | 5 9 | 5 11 | 5 11 | 5 11 | 5 9 | 5 9 |

The relatively high cost per head in Queensland and Western Australia is due to the fact that there are in those States extensive areas of sparsely settled country, in which mounted patrols have to be maintained.

§ 2. Lower (Magistrates') Courts.

1. Introductory. - In considering the criminal returns of the various States due allowance must be made on account of several factors, such as the relative powers of the courts, both lower and higher, etc. In the case of lower courts, the actual number of laws in each State, the breach of which renders a person liable to fine or imprisonment, must be taken into account. Again, the attitude of the magistracy and police towards certain classes of offences is a factor, for in the case of liquor laws, or laws connected with vagrancy or gaming, the views of magistrates, and instructions issued to the police, may be responsible for considerable variations in the returns. The strength and distribution of the police forces and the age constitution and distribution of the State's population also influence the results. In any consideration of criminal returns, due weight should also be given to the prevalence of undetected crime, but information on this point can only be obtained for the State of Victoria.

2. Powers of the Magistrates.—In New South Wales there is no general limit to the powers of the magistrates in regard to offences punished summarily, their authority depending in each case on the statute which creates the offence and gives them jurisdiction. Except in the case of a very few statutes, and excluding cumulative sentences, the power of sentence is limited to six months. Imprisonment in default of payment of fine is regulated by a scale limiting the maximum period according to the sum ordered to be paid, but in no case exceeding twelve months. Actions for debt and damage within certain limits also come within magisterial jurisdiction. In cases of debts, liquidated or unliquidated, the amount recoverable is not exceeding £50 before a court constituted of a stipendiary or police magistrate at certain authorised places, and not exceeding £30 at any other place before a court constituted of a stipendiary or police magistrate or two or more justices of the peace. The amount in actions of damage is limited to £10, but may extend to £30 by consent of parties.

In Victoria the civil jurisdiction of magistrates is restricted to what may be designated ordinary debts, damages for assault, restitution of goods, etc., where the amount in dispute does not exceed £50. No definite limit is fixed to the powers of the magistrates on the criminal side, and for some offences sentences up to two years may be imposed. The proportion of long sentences is, however, comparatively small, the total punishments of one year and upwards in 1906 comprising only eighty-six out of 16,463 sentenced.

In Queensland, generally speaking, the maximum term of imprisonment which justices can inflict is six months, but in certain exceptional cases, such as offences against sections 233 and 445 of the criminal code (betting-houses and illegally using animals), sentences of twelve months may be imposed. No limit exists as to the extent to which cumulative sentences may be applied, but in practice the term is never very lengthy.

In South Australia, under the Minor Offences Act, magistrates can impose sentences up to six months, and under the Summary Convictions Act up to three months. The Police Act of 1869 gives power to sentence up to one year, with hard labour, in the case of incorrigible rogues, while under the Quarantine Act of 1877, and the Lottery and Gaming Act of 1875, sentences of two years may be imposed.

Under the Petty Sessions Act of 1867, in Tasmania, any person charged with having committed, or with having aided or abetted in the commission of an offence in regard to property of a value not exceeding £10, may, on conviction, for a first offence, before two or more justices in Petty Sessions, be imprisoned for any term not exceeding one year, and for a term not exceeding two years for a second or subsequent offence.

3. **Persons Charged at Magistrates' Courts.**—The total number of persons who were charged before magistrates in each State is given below for the seven years 1901 to 1907:—

PERSONS CHARGED BEFORE MAGISTRATES, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

* Not available.

In explanation of the large increase shewn by Victoria for the year 1907 it is stated that the returns of summons were inflated by prosecutions under the new Licensing and Pure Food Acts and the Amending Education Act.

The figures given in the tabulation above include, of course, a number of people who were wrongly charged, and statistically are not of great importance. The actual number of convictions in connection with the persons who appeared before the lower courts in each year of the period 1901 to 1907 is, therefore, also given. A separate line is added shewing the committals to higher courts.

CONVICTIONS AND COMMITTALS AT MAGISTRATES' COURTS, 1901 to 1907.

4. **Convictions for Serious Crime.**—While the figures given in the preceding table refer to the entire body of convictions, the fact must not be lost sight of that they include a large proportion of offences of a technical nature, many of them unwittingly committed, against various Acts of Parliaments. Cases of drunkenness and minor breaches of good order which, if they can be said to come within the category of crime at all, at least do so in a very different sense to some other offences, also help to swell the list. The following table has, therefore, been prepared for the purpose of shewing the convictions at magistrates' courts for what may be regarded as the more serious offences,

i.e., against the person and property, either separately or conjointly, and forgery and offences against the currency:—

CONVICTIONS FOR SERIOUS CRIME AT MAGISTRATES' COURTS, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

| Tas. ... | 604 | 536 | 508 | 563 | 660 | 522 | † |
| Cwth. | 11,027 | 12,849 | 12,463 | 11,468 | 12,116 | 12,059 | ... |

* Arrests only. Summons cases not available. † Not available, 19/3/09.

Owing to a reclassification adopted by Queensland in 1907, a large number of offences have been transferred from the class "Offences against the Person" to "Offences against Good Order," hence the falling-off shewn by the table.

Compared with the population the above figures give the following results per 10,000 inhabitants:—

CONVICTIONS PER 10,000 INHABITANTS, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|----------|-------|-------|-------|-------|-------|-------|-------|
| N.S.W. | 34.1 | 37.3 | 37.3 | 32.9 | 31.5 | 32.9 | 31.0 |
| Vic. ... | 17.2 | 25.7 | 25.3 | 21.1 | 24.3 | 23.5 | 21.6 |
| Q'land. | 46.2 | 48.0 | 39.9 | 39.8 | 41.4 | 38.2 | 24.8 |
| S. Aust. | 15.9 | 16.8 | 17.0 | 12.7 | 11.8 | 11.5 | 12.9 |

| Cwth. | 29.1 | 33.3 | 31.9 | 29.0 | 30.1 | 29.5 | ... |

* Not available, 19/3/09.

5. **Decrease in Crime.**—The figures quoted in the preceding table show that there has been a considerable decrease in crime during the last six years, while if the comparison be carried back to 1881 the position is seen to be still more satisfactory. The rate of convictions at magistrates' courts per 10,000 of the population is given below for each of the years 1881, 1891, 1901, and 1906. Only the more serious offences, particularised in the preceding paragraph, have been taken into consideration:—

RATE OF CONVICTIONS FOR SERIOUS CRIME IN THE COMMONWEALTH.

| Year. | Convictions per 10,000 Persons. | |
|---|---------------------------------------|------|
| 1881 | ... | 69.3 |
| 1891 | ... | 44.8 |
| 1901 | ... | 29.1 |
| 1906 (Complete 1907 figures not available, 19/3/09) | ... | 29.5 |

6. **Need of Statistic of Distinct Persons.**—The figures already quoted refer to total convictions, and in respect of individuals necessarily involve a considerable amount of duplication, especially in minor offences, such as drunkenness, petty larcenies, etc., in which

the same offender appears before the court many times in the course of the year. In a few of the States it is possible to obtain the number of distinct persons arrested, but there are no means of arriving at the total distinct persons convicted before the magistrates in any State. The forms submitted to and adopted by the Conference of Statisticians in 1906 provide for information as to separate persons convicted, irrespective of whether they were arrested or summoned, and thus the statistical tabulations will, it is hoped, possess in future greater comparative value.

7. Causes of Decrease in Crime.—The statistics given show that there has been a considerable decrease in crime throughout Australia. The results so far quoted are restricted entirely to the lower or magistrates' courts. There has also been a gratifying decrease in regard to offences tried at the higher courts, as will be seen later.

Attempts have been made to account for this decline: e.g., advance in education, enlightened penological methods, etc. Much depends upon what is meant by education. Many classed in census statistics as "educated" can barely read and write. In this connection, moreover, it ought not to be forgotten that collaterally with the introduction of ordinary intellectual education certain people have departed from their pristine virtues.

The deterrent effect of punishment, in respect of many offences, notably drunkenness, vagrancy, petty larcenies, etc., appears to be almost negligible. In general, punishment has declined in brutality and severity, and has improved in respect of being based to a greater extent upon a scientific penological system, though in this latter respect there is yet much to be desired. Recent advances in penological methods will be referred to in a subsequent section. Here it will be sufficient to remark that under the old régime, a prisoner on completion of a sentence in gaol was simply turned adrift on society, and in many cases sought his criminal friends, and speedily qualified for readmission to the penitentiary. Frequently he was goaded to this by mistaken zeal on the part of the police, who took pains to inform employers of the fact of a man having served a sentence in gaol. For a long time any assistance to discharged prisoners was in the hands of private organisations, such as the Salvation Army Prison Gate Brigade, but in some of the States, and notably in New South Wales, the authorities themselves look after the welfare of discharged prisoners in the way of finding work, providing tools, etc.

Improvements in the means of communication and identification have been responsible for some of the falling-off noticeable in the criminal returns, the introduction of the Bertillon system having contributed to certainty of identification. Part of the improvement may no doubt be referred also to the general amelioration in social condition that has taken place during the last fifty years.

8. Drunkenness.—The number of cases of drunkenness and the convictions recorded in connection therewith during the period 1901 to 1907 will be found in the following table:—

CASES AND CONVICTIONS—DRUNKENNESS.

| State. | 1901. | | 1902. | | 1903. | | 1904. | | 1905. | | 1906. | | 1907. | |

| Cwth. | 57,212 | 50,375 | 53,514 | 48,019 | 50,961 | 46,543 | 50,363 | 45,490 | 51,841 | 46,240 | 53,451 | 48,674 | ... | ... |

* Arrests only. Summons cases not available.

† Not available, 19/3/09.

The number of convictions is, as might naturally be expected, almost identical with the number of cases. Victoria, however, is an exception, but in this State it is explained that offenders are generally discharged on a first appearance, and no conviction is recorded, a similar procedure being also adopted in the case of those arrested on Saturday and detained in custody till Monday. The logic of excluding these cases from the list of convictions is certainly open to doubt.

The convictions for drunkenness per 10,000 of the population during each of the years from 1901 to 1907 are given hereunder :—

CONVICTIONS FOR DRUNKENNESS PER 10,000 INHABITANTS.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

* Not available, 19/3/09.

The convictions for drunkenness taken by themselves are not an altogether satisfactory-test of the relative sobriety of the inhabitants of each State, forasmuch as several important factors must be taken into consideration. The age constitution, for example, of the people is by no means identical in each State, Western Australia having by far the largest proportion of adult males. The avocations of the people affect the result, since persons engaged in strenuous callings are, on the whole, more likely to indulge in alcoholic stimulants than those employed in less arduous ones. The distribution of the population is also a factor, the likelihood of arrest or summons for drunkenness obviously being greater in the more densely populated regions, and lastly, allowance must be made for the attitude of the police and public generally in regard to the offence.

It is not unusual to supplement statistics of drunkenness by furnishing also the relative consumption of alcoholic beverages. Deductions drawn therefrom will be very misleading if they fail to take into account also the consumption of non-intoxicating beverages such as tea and coffee and the general habit of the people. Throughout the greater part of Europe tea and coffee are consumed but sparingly, while Australia, as is well known, is one of the greatest tea-drinking countries of the world.

The following table shewing the consumption of spirits, wine, and beer per head of the population has, with the exception of the figures relating to spirits and beer for the States of the Commonwealth, been compiled from returns prepared by the British Board of Trade for the period 1902-6. The figures quoted for the Commonwealth States in respect of spirits and beer refer to the year 1907. It is believed that the returns hitherto given by the Board of Trade regarding the consumption of wine in Australia do not in all cases furnish satisfactory results, and the subject is at present being investigated in this Bureau. Figures based on a combination of returns of production and net export cannot be regarded as giving a true statement of the case in regard to wine, as the production in any year does not necessarily enter into consumption in the same year, while allowance must also be made for the conversion of portion of it into brandy or vinegar.

CONSUMPTION OF ALCOHOLIC BEVERAGES IN VARIOUS COUNTRIES, 1902 to 1906.

9. **Treatment of Drunkenness as Crime.**—Though the problem of the correct method of dealing with dipsomania is by no means an easy one, it seems fairly clear that the present plan of bringing offenders before magistrates, and subjecting them to the penalty of imprisonment or fine, has little deterrent effect, as the same offenders are constantly reappearing before the courts. Further, the casting of an inebriate into prison, and placing him in his weakened mental state in the company of professional malefactors, doubtless tends to swell the ranks of criminals and certainly tends to lower his self-respect, while examination of the prison records in New South Wales some years ago disclosed the fact that over 40 per cent. of the gaol population had commenced their criminal career with a charge of drunkenness. During the last few years the dangers of moral contamination in this way have been more accurately appreciated, and a system of classification of prisoners has been adopted whereby the petty offender is as far as possible kept from association with the more evil-disposed. With regard to drunkards, however, Captain Neitenstein, the Comptroller of Prisons in New South Wales, advocates the entire abandonment of the system of repeated fine or imprisonment in favour of a course of hospital treatment. The Comptroller-General of Prisons in Queensland states in his report for the year 1907 that "the drunken habit in many cases is merely one of many symptoms which jointly indicate the existence of a graver condition than simple habitual drunkenness."

10. **Treatment of Habitual Offenders.**—In New South Wales the Habitual Criminals Act of 1905 gives judges the power of declaring a prisoner, after a certain number of sentences, to be an habitual criminal, and as such to be detained until, in the opinion of the authorities, he is fit to be at large. Similar enactments were passed in Victoria and New Zealand during the last two years. Naturally it will be some time before the effect of the measures on the prevalence of crime can be estimated.

11. **Treatment of First Offenders.**—In all the States and New Zealand statutes dealing with first offenders have been in force for some years, the dates of passing the Acts being as follows:—New South Wales, 1894; Victoria, 1890; Queensland and South Australia, 1887; Western Australia, 1892; Tasmania and New Zealand, 1886. The method of procedure is practically the same in all cases, *i.e.*, with regard to most first offenders the magistrate or judge is empowered to allow the offender to go free on recognisances being entered into for his good behaviour for a certain period. In practice this humane law has been found to work excellently, very few of those to whom its provisions have been extended having been found to relapse into crime.

12. **Children's Courts.**—Special courts for the trial of juvenile offenders have been established in New South Wales, Victoria, and New Zealand within the last few years, while children's courts, although not under that name, are practically provided for by the State Children's Acts of 1895 and 1900 in South Australia. The object of these courts is to avoid, as far as possible, the unpleasant surroundings of the ordinary police court.

13. **Committals to Superior Courts.**—In a previous section it has been pointed out that comparisons of criminality based on a consideration of the total returns from magistrates' courts are somewhat inadequate, seeing that the figures include numbers of cases which are merely technical breaches of laws having in some instances a purely local significance. The committals to higher courts give a better basis of comparison, although even in this connection allowance must be made for the want of uniformity in jurisdiction. The table below gives the number of committals in each year from 1901 to 1907, with the proportion of such committals per 10,000 of the population. The rates are shewn on a separate line:—

COMMITTALS TO SUPERIOR COURTS, 1901 to 1907.

| State. | | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------|--------|-------|-------|-------|-------|-------|-------|-------|
| N.S.W. | { No. | 1,287 | 1,296 | 1,437 | 1,587 | 1,486 | 1,334 | 1,172 |
| | { Rate | 9.4 | 9.3 | 10.2 | 11.0 | 10.1 | 8.8 | 7.2 |
| Victoria | { No. | 700 | 641 | 631 | 564 | 652 | 584 | 561 |
| | { Rate | 5.8 | 5.3 | 5.2 | 4.7 | 5.4 | 4.8 | 4.5 |
| Queensland | { No. | 503 | 489 | 508 | 460 | 495 | 440 | 464 |
| | { Rate | 10.0 | 9.6 | 9.9 | 8.9 | 9.4 | 8.3 | 8.6 |
| South Australia | { No. | 212 | 209 | 198 | 127 | 152 | 168 | 105 |
| | { Rate | 5.8 | 5.7 | 5.3 | 3.4 | 4.1 | 4.4 | 2.1 |
| West. Australia | { No. | 241 | 335 | 317 | 266 | 235 | 182 | 193 |
| | { Rate | 12.8 | 16.3 | 14.3 | 11.2 | 9.4 | 7.0 | 7.4 |
| Tasmania | { No. | 76 | 65 | 79 | 51 | 59 | 55 | * |
| | { Rate | 4.4 | 3.7 | 4.5 | 2.9 | 3.3 | 3.1 | * |
| Commonwealth | { No. | 3,019 | 3,035 | 3,165 | 3,055 | 3,079 | 2,763 | ... |
| | { Rate | 8.0 | 7.9 | 8.1 | 7.7 | 7.7 | 6.8 | ... |

* Not available, 19/3/09.

The above figures shew that there has been a decrease in serious crime, and, if the comparison be carried farther back, it will be found that the improvement has been considerable. This will be evident from an examination of the following figures, which shew the rate of committals per 10,000 persons in Australia at various periods since 1861:—

RATE OF COMMITTALS IN AUSTRALIA, 1861 to 1907.

| Year ... | ... | ... | ... | ... | 1861. | 1871. | 1881. | 1891. | 1901. | 1907. |
|-----------------------------------|-----|-----|-----|-----|-------|-------|-------|-------|-------|-------|
| Committals per 10,000 inhabitants | ... | ... | ... | ... | 22 | 14 | 12 | 11 | 8 | 6 |

In calculating the rate for 1907 it has been assumed that there has not been any change in the Tasmanian proportion since the year 1906.

The decline in proportion to population since 1861 has therefore been about 73 per cent.

§ 3. Superior Courts.

1. **Convictions at Superior Courts.**—The total number of convictions at superior courts, together with the rate per 10,000 of the population, is shown below for each of the years 1901 to 1907 :—

CONVICTIONS AT SUPERIOR COURTS, 1901 to 1907.

| State. | | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------------|--------|-------|-------|-------|-------|-------|-------|-------|
| N.S.W. ... | { No. | 730 | 775 | 896 | 890 | 819 | 707 | 629 |
| | { Rate | 5.4 | 5.6 | 6.3 | 6.2 | 5.6 | 4.7 | 4.0 |
| Victoria ... | { No. | 393 | 381 | 371 | 338 | 382 | 339 | 368 |
| | { Rate | 3.3 | 3.1 | 3.1 | 2.8 | 3.2 | 2.8 | 3.0 |
| Queensland | { No. | 281 | 249 | 269 | 242 | 288 | 249 | 248 |
| | { Rate | 5.6 | 4.9 | 5.2 | 4.7 | 5.5 | 4.7 | 4.6 |
| S. Australia ... | { No. | 98 | 80 | 100 | 109 | 85 | 92 | 74 |
| | { Rate | 2.7 | 2.2 | 2.7 | 2.9 | 2.3 | 2.4 | 1.9 |
| W. Australia | { No. | 151 | 132 | 191 | 182 | 161 | 150 | 176 |
| | { Rate | 8.0 | 6.4 | 8.6 | 7.7 | 6.4 | 5.8 | 6.7 |
| Tasmania ... | { No. | 39 | 28 | 51 | 26 | 24 | 32 | * |
| | { Rate | 2.3 | 1.6 | 2.9 | 1.5 | 1.3 | 1.8 | * |
| C'wealth ... | { No. | 1,692 | 1,645 | 1,878 | 1,787 | 1,759 | 1,569 | ... |
| | { Rate | 4.5 | 4.3 | 4.8 | 4.5 | 4.4 | 3.8 | ... |

* Not available, 19/3/09.

In considering the above figures allowance must be made for the various factors enumerated in a preceding paragraph. Only when this is done will the comparatively unenviable pre-eminence of Western Australia in regard to serious crime be explained. Tasmania, it will be noted, shews by far the smallest proportion of serious crime, while a reference to a preceding table discloses the fact that the island State is relatively the smallest consumer of alcoholic beverages. That a definite causal relation exists between the figures shewn by the respective tables is not, however, obvious.

2. **Offences for which Convictions were Recorded at Superior Courts.**—In the following table will be found a classification of the principal offences for which persons were convicted at the higher courts during each year of the period 1901 to 1906. Owing to lack of uniformity in the presentation of the returns for the several States the information is confined to the chief offences against the person only. The figures quoted refer to convictions in the Commonwealth during the period dealt with :—

CONVICTIONS FOR SERIOUS CRIME, SUPERIOR COURTS, 1901 to 1906.

| Offences. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. |
|---------------------------------------|-------|-------|-------|-------|-------|-------|
| Murder and attempts at ... | 24 | 31 | 32 | 34 | 32 | 35 |
| Manslaughter ... | 21 | 16 | 19 | 24 | 14 | 21 |
| Rape and crimes of lust ... | 113 | 92 | 90 | 97 | 96 | 70 |
| Other offences against the person ... | 274 | 243 | 244 | 225 | 256 | 239 |

The comparison necessarily closes with the year 1906, owing to non-receipt of returns from Tasmania for 1907.

While there has been no diminution in the convictions for murder and manslaughter there has been a considerable falling-off in the case of crimes of lust. The general total of convictions for all offences against the person shews a decline since 1901 of about 16 per cent.

3. **Capital Punishment.**—The table below gives the number of executions in each State during the period 1901 to 1907:—

EXECUTIONS, 1901 to 1907.

| State. | 1901. | 1902. | 1903 | 1904. | 1905. | 1906 | 1907. |
|-----------------------|-------|-------|------|-------|-------|------|-------|
| New South Wales ... | 3 | ... | 3 | 1 | ... | 1 | 3 |
| Victoria ... | ... | 2 | ... | 1 | ... | ... | ... |
| Queensland... | 5 | ... | 2 | ... | 2 | 3 | 1 |
| South Australia ... | ... | ... | ... | 1 | 1 | 1 | ... |
| Western Australia ... | ... | ... | ... | ... | 3 | 1 | 1 |
| Tasmania ... | ... | ... | ... | ... | ... | ... | ... |
| Commonwealth ... | 8 | 2 | 5 | 3 | 6 | 6 | 5 |

In the early days of the history of Australia the penalty of death was attached to a large number of offences, many of which at the present time would be dealt with in the lower or magistrates' courts. With the growth of settlement, and the general amelioration in social and moral conditions, the list was, however, considerably curtailed, and the existing tendency is practically to restrict death sentences to cases of murder. It may be remarked that in cases of rape, which is a capital offence in the Australian States, the penalty has been but sparingly inflicted during the last few years. Juries are reputed to be loth to convict on this charge, owing to the uncertainty whether sentence of death will be pronounced.

During the period 1861 to 1880 the average number of executions in the Commonwealth was nine, from 1881 to 1900 the average was six, while for the period 1901 to 1907 the figure stood at five.

§ 4. Prisons.

1. **Prison Accommodation and Prisoners in Gaol.**—The table below shews the number of prisons in each State and the accommodation therein at the end of 1907:—

PRISONS AND PRISON ACCOMMODATION, 1907.

| State. | Number of Prisons. | Accommodation in— | | Greatest No. in Confinement during Year. | Prisoners at End of Year. |
|-----------------------|--------------------|-------------------|--------|--|---------------------------|
| | | Separate Cells. | Wards. | | |
| New South Wales ... | 52 | 2,334 | 126 | 2,135 | 1,437 |
| Victoria ... | 16 | 1,515 | 984 | 1,170 | 916 |
| Queensland ... | 13 | 559 | 416 | * | 501 |
| South Australia ... | 11 | 810 | 271 | 314 | 255 |
| Western Australia ... | 28 | 647 | 195 | * | 502 |
| Tasmania ... | 2 | 261 | 25 | ... | 89 |
| Commonwealth ... | 122 | 6,126 | 2,017 | ... | 3,700 |

* Information not available.

The number of prisoners in gaol, exclusive of debtors, at the 31st December in each of the years 1901 to 1907, is given below. A separate line is added in each instance shewing the proportion per 10,000 of the population:—

PRISONERS IN GAOLS, 1901 to 1907.

| State. | | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------|--------------|-------|-------|-------|-------|-------|-------|-------|
| N.S.W. | { Number | 1,812 | 1,835 | 1,816 | 1,877 | 1,678 | 1,519 | 1,437 |
| | { Proportion | 13.3 | 13.2 | 12.8 | 13.0 | 11.4 | 10.1 | 9.3 |
| Victoria | { Number | 1,150 | 1,071 | 978 | 1,062 | 990 | 927 | 916 |
| | { Proportion | 9.6 | 8.8 | 8.1 | 8.8 | 8.2 | 7.6 | 7.4 |
| Q'land | { Number | 574 | 547 | 508 | 561 | 535 | 507 | 501 |
| | { Proportion | 11.5 | 10.7 | 9.9 | 10.8 | 10.2 | 9.5 | 9.3 |
| S. Aust. | { Number | 238 | 274 | 261 | 267 | 259 | 237 | 255 |
| | { Proportion | 6.6 | 7.5 | 7.1 | 7.2 | 6.9 | 6.2 | 6.6 |
| W. Aust. | { Number | 360 | 397 | 512 | 475 | 465 | 402 | 502 |
| | { Proportion | 19.1 | 19.3 | 23.1 | 20.1 | 18.6 | 15.5 | 19.1 |
| Tas. ... 30th June | { Number | 117 | 80 | 110 | 103 | 92 | 89 | 89 |
| | { Proportion | 6.8 | 4.6 | 6.2 | 5.8 | 5.1 | 5.0 | 5.0 |
| C'wealth. | { Number | 4,251 | 4,204 | 4,185 | 4,345 | 4,019 | 3,681 | 3,700 |
| | { Proportion | 11.2 | 10.9 | 10.7 | 11.0 | 10.0 | 9.0 | 8.9 |

From the preceding table it will be seen that the proportion to population of prisoners in gaol has fallen considerably during the last seven years, while, if the comparison be carried further back, the position is seen to be still more favourable, the prisoners in gaol in the Commonwealth numbering as much as sixteen per 10,000 of the population in 1891.

2. Improvement in Pænological Methods.—During recent years Australia, in common with most other civilised countries, has introduced considerable modifications and improvements in methods of prison management. Under the old régime punishment partook more or less of the character of reprisal for wrongdoing, and the idea of constituting the prison as a reformatory agency was in the background. But of recent years there has been an earnest attempt at effecting a moral reformation in the unfortunates who lapse into crime. This aspect of prison management has been specially prominent in New South Wales. As pointed out by the Comptroller-General of Prisons of that State, there are, however, certain directions in which improvements can be made. The danger and absurdity of sending drunkards to gaol has already been alluded to in a previous section, while present methods of dealing with vagrancy, and particularly with prostitution, have proved quite inadequate.

The general reorganisation of the New South Wales prison system may be said to date from the year 1896. Briefly stated, the chief reforms which have been introduced are as follows:—(a) Prevention of contamination consequent on evil association by the adoption of the "restricted association" scheme, under which prisoners are allowed to have as little intercourse with each other as possible, each prisoner having a separate cell, and mingling with other prisoners only at exercise or at work, and then under close supervision. (b) Careful classification of prisoners to avoid contact of minor or first offenders with the more hardened. (c) Better prison fare. (d) Abolition of solitary confinement in dark cells. (e) Lighting cells up to a reasonable hour at night and allowing well-conducted prisoners the privilege of reading interesting books. (f) Abolition of the practice of sending young children to gaol. (g) Attempt at scientific treatment of the habitual offender. (h) Provision for helping prisoners on leaving gaol to find work through the agency of the Discharged Prisoners' Aid Society.

In 1902 the system of finger-print identification of criminals was introduced, and by the year 1903 bureaux had been established in the various States for the exchange of records.

Space will not permit of more than a passing reference to the improvements brought about in prison management in the other States. In Victoria there is an excellent system of classification and allocation of prisoners to different gaols, while at the important penal establishment at Pentridge a careful segregation into no less than five distinct classes is carried out. In common with the other States the latest humane methods of accommodation and prison treatment have for some time been employed.

Queensland prisons have been considerably modernised during the last few years. The prison for females at Brisbane has been built on the radiating plan, and embodies the latest ideas in penological methods. Classification of prisoners has been fully carried out in the male and female divisions of Brisbane prison, and at the Stewart's Creek penal establishment. The construction of the buildings does not however permit of the plan being adopted in its entirety in all Queensland prisons.

Unusual circumstances have combined to keep crime at a low point in South Australia. In the first place there was never any transportation of criminals to the State, while in the earlier years of its history South Australian lawbreakers were transported elsewhere. The present system was drafted mainly on English and European lines by the late W. R. Boothby, C.M.G., and under his directions and that of his successor has been found to work admirably.

There is no special information available with regard to the prison systems of Western Australia and Tasmania.

§ 5. Civil Courts.

1. **Lower Courts.**—The transactions of the lower courts on the civil side during each of the last seven years are given in the table hereunder. As pointed out previously, the jurisdiction of the courts is by no means uniform in the various States. The figures, however, possess a certain value as indicating that resort to litigation is on the decline in Australasia:—

LOWER COURTS.—CIVIL CASES, 1901 to 1907.

| State. | | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

* Not available. † Exclusive of New South Wales. ‡ Not available, 19/3/09.

The figures just given represent the returns from Petty Sessions Courts in New South Wales and Victoria, the Petty Debts Cases in Queensland, the Local Courts of South Australia and Western Australia, and the Court of Requests in Tasmania.

2. **Superior Courts.**—In the next table will be found the transactions on the civil side in the Superior Courts during each of the years 1901 to 1907.

The New South Wales returns are to some extent defective, as the figures quoted for amount of judgments include in the case of the Common Law jurisdiction of the Supreme Court the total judgment signed, while in the case of the other States the figures refer to sums actually adjudged after trial. For New South Wales, also, the transactions of district courts refer to the total amounts sued for, and not the sums actually awarded after trial. Statistically the chief importance of the table consists in the fact that it shews a marked decline in litigiousness in Australia:—

SUPERIOR COURTS—CIVIL CASES, 1901 to 1907.

| State. | | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

* Not available, 19/3/09.

The average annual number of divorces and judicial separations in the Commonwealth at decennial periods from 1871 to 1900 and for the six years 1901 to 1906 is given hereunder:—

DIVORCES AND JUDICIAL SEPARATIONS, 1871 to 1906.

| | 1871-1880. | 1881-90. | 1891-1900. | 1901-6. |
|---------------------|------------|----------|------------|---------|
| Commonwealth | 29 | 70 | 358 | 376 |

The bulk of the divorces and judicial separations refer, as the table shews, to New South Wales and Victoria, the Acts of 1892 and 1889 in the respective States making the separation of the marriage tie comparatively easy. In some statistical works it is customary to compare the divorces in any year with the marriages in the same year. The comparison is, however, quite valueless, as there is no necessary connection between the figures. Some value would attach to a comparison of the number of divorces with the number of married people living, but the latter information cannot be obtained with accuracy except at Census periods.

4. **Probates.**—The number of probates and letters of administration granted, together with the value of the estates concerned, is shewn below for each State for the period 1901 to 1907:—

PROBATES AND LETTERS OF ADMINISTRATION, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------|---------|------------|------------|------------|------------|------------|------------|
| N.S.W. ... | Number | 2,657 | 2,782 | 2,767 | 2,850 | 2,804 | 2,852 |
| | Value £ | 7,033,459 | 5,807,620 | 7,179,832 | 6,155,963 | 7,714,416 | 7,529,437 |
| Victoria | Number | 3,846 | 3,976 | 3,884 | 3,827 | 3,853 | 3,982 |
| | Value £ | 6,527,235 | 7,571,482 | 6,074,077 | 5,762,084 | 6,003,478 | 6,424,738 |
| Q'land | Number | 594 | 627 | 710 | 588 | 584 | 602 |
| | Value £ | 1,594,425 | 1,078,931 | 2,617,348 | 1,513,237 | 1,016,495 | 1,794,742 |
| S. Aust. | Number | 927 | 913 | 919 | 964 | 902 | 1,020 |
| | Value £ | 1,457,376 | 1,790,102 | 2,464,011 | 2,056,612 | 1,294,963 | 2,041,280 |
| W. Aust. | Number | 313 | 347 | 399 | 367 | 406 | 476 |
| | Value £ | 615,729 | 458,037 | 703,071 | 422,515 | 676,920 | 544,245 |
| Tasmania | Number | 229 | 280 | 256 | 295 | 270 | 343 |
| | Value £ | 402,157 | 299,408 | 253,107 | 905,204 | 504,196 | 862,222 |
| C'wealth | Number | 8,566 | 8,875 | 8,935 | 8,891 | 8,819 | 9,275 |
| | Value £ | 17,630,381 | 17,035,500 | 19,291,556 | 16,815,615 | 17,210,473 | 19,196,664 |

As may naturally be expected, the figures in the above table giving the value of property left each year, shew considerable variations.

5. **Bankruptcies.**—The returns in bankruptcy during each of the last seven years are given hereunder.

For several reasons comparisons drawn from the figures in the following table are of little value. In the first place, the statements of assets and liabilities are notably unsatisfactory, particularly in regard to the former. Then, again, there is wide dissimilarity in regard to the laws in force in the various States and the method of procedure thereunder in connection with bankruptcy. Further, there are no means of knowing how many persons in each State who were in a bankrupt condition made private arrangements with their creditors either personally or by intervention of a solicitor. The figures quoted in the table exclude the private arrangements in Victoria and South Australia, and the liquidations in Queensland and Tasmania. The Tasmanian statements for the years 1901 and 1903 are defective, inasmuch as they do not include the whole of the assets and liabilities.

BANKRUPTCIES, 1901 to 1907.

* Not available, 19/3/09.

6. **High Court of Australia.**—Under the provisions of section 71 of the Commonwealth Constitution Act, the judicial power of the Commonwealth is vested in a Federal Supreme Court, called the High Court of Australia, and in such other courts as the Parliament creates or invests with federal jurisdiction. The Federal High Court possesses both original and appellate jurisdiction, but so far its activities have been confined principally to the latter form. The powers of the court are defined in Chapter III. of the Constitution Act and in the Judiciary Act of 1903. At present the court consists of a Chief Justice and four other judges. Sittings of the court are held in the capitals of the various States as occasion may require. The following statement shews the transactions of the High Court from October, 1903, to 31st December, 1908:—

HIGH COURT.—TRANSACTIONS, 1903 to 1908.

| Items. | 1903. | 1904. | 1905. | 1906. | 1907. | 1908. |

| Amount in each year ... | £58 | £450 | £523 | £566 | £523 | £558 |

§ 6. Cost of Administration of Justice.

The table below shews the expenditure from Consolidated Revenue during each of the last seven years in connection with the administration of justice in each of the States. Expenditure on police and prisons has been separately shewn. With regard to the figures quoted for "other" expenditure, a slight allowance has to be made for the fact that some extraneous expenditure has been included which it was found impossible to disentangle from the total, but the amount is in no instance large. Cost of buildings has been excluded from the return:—

EXPENDITURE ON JUSTICE, 1901 to 1907.

The total expenditure in the Commonwealth in connection with the administration of justice has, therefore, fallen from ten shillings per inhabitant in 1901 to nine shillings and fivepence in 1907. Police expenditure works out to exactly the same average for the two years in question, the average for gaols is about twopence per head less, while the expenditure on courts and the remaining machinery of justice has fallen by fivepence per head.

SECTION XXIV.

PUBLIC BENEVOLENCE.

§ 1. Introductory.

1. **General.**—Charity and charitable effort in Australia may be classified under three headings, viz.:—(1) State; (2) public; (3) private. To the first belong all institutions wholly provided for by the State; examples are the lunatic asylums in the various States, the Government hospitals in Western Australia, and the Government asylums for infirm in New South Wales. The second class includes public institutions of two kinds, viz.:—(i.) Institutions partially subsidised by the State or State endowed, but receiving also private aid, and (ii.) those wholly dependent upon private aid. To the former division belong such institutions as the Melbourne and other large metropolitan hospitals. Of the latter examples are institutions established and endowed by individuals for the benefit of the needy generally. To the third class belong all charitable movements of a private or special character.

A more or less accurate statistical account is possible in classes (i.) and (ii.), but in regard to (iii.) it may be said that, for obvious reasons, no tabulation is possible. Public response to special appeals and summary relief in kind, often considerable, is nevertheless not statistically recorded. Hospitals, orphanages, homes, benevolent asylums, etc., form, of course, the main channels in which the current of charity flows. There are, nevertheless, numerous other and minor charities, perhaps less definitely established and less frequently noticed, which mark the course and measure the amount of a considerable volume of private beneficence. In institutions which receive Government aid management and finance are usually relegated to executive bodies, ordinarily elected on a democratic basis.

The distribution of wealth in the Australian Commonwealth, and the generally favourable condition of Australia as regards scope for the exercise of natural ability, operate to prevent the development of a permanent pauper class, and at the same time lessen in a dual way the burden of charity. It does this latter by increasing, on the one hand, the number of people whose prosperity enables them to relieve the indigent and unfortunate, and by reducing, on the other, the number who need assistance. Enactments of States Legislatures have decreed short hours and a liberal holiday allowance for large numbers of persons engaged in industrial and other pursuits, and, even in occupations not covered by Act of Parliament, the general conditions of employment often provide a considerable amount of leisure. This, and an equable climate, enable the community to spend much of its time in the open air, thus reducing the ravages of disease and the scourge of epidemic. No poor-rate is levied in Australia, and Government aid without return is required only for the aged and disabled. The only States which have had an old-age pension system are New South Wales and Victoria; but in June, 1908, legislation by the Commonwealth Parliament (Invalid and Old Age Pensions Act, No. 17 of 1908) provided for the payment of old-age pensions throughout the Commonwealth as from the 1st July, 1909, or such earlier date as may be enacted, and the Old Age Pensions Appropriation Act (No. 18 of 1908) appropriated £750,000 for invalid and old-age pensions.

To meet temporary conditions, or rather what ought to be temporary conditions, various relief works have been started from time to time, in which the able-bodied who may be forced to seek official relief are required to make some return for the assistance afforded. In the past, attempts to relieve the unemployed have led to large expenditures, but at the present time the entire scheme of such relief is on an altogether more satisfactory footing.

In each of the States the care of the insane is undertaken by the Government. Their condition has been steadily ameliorated by progress in psychiatry.

Young children deprived of parental training and control are cared for and educated in "orphanages" and "industrial schools," and those who have been guilty of some specific offence, or who are beyond adequate parental control, are committed to "reformatories."

In common with other civilised communities, relief funds have from time to time been organised for famine-stricken territories (*e.g.*, China, India, etc.), or for places where plague, flood, fire, or earthquake has shewn the need of urgent relief. Proper statistical records of these, however, are not available.

Not uncommonly the Daily Press accepts the duties of collectorship in charity appeals.

2. Charity Reforms.—Lately, the evident overlapping of charitable effort has led to discussion regarding the methods of collection and distribution. The proportion absorbed in expenses, alleged to be unduly large, has also given rise to a desire for improved administration. An important conference of representatives of the charitable associations was held in Melbourne in September, 1908. It was the initiation of an effort to systematically digest the experiences of the committees of management of the various hospitals and kindred institutions. These obtain their revenue from State and municipal subsidies, from proceeds of concerts, entertainments, etc., from organised public collection, from private contributions and bequests, and from patients. Collectors are in some cases paid, in others not. Frequently, institutions similar in character enter into competition for subscriptions. The result is overlapping, both in organisation and expenditure. It has been officially stated that far too small a proportion of the money which the generosity of subscribers furnishes benefits the real sufferers. The public eleemosynary impulse is probably also prejudiced by the utilisation of institutions for the poor or destitute by classes who can afford to pay for medical or surgical treatment, as in the case, for example, of hospitals. Organisation and co-ordination would make available for the sick and needy large sums which are now spent in the upkeep of redundant buildings and the maintenance of unnecessary officers and servants. Societies have accordingly been formed to prevent overlapping.

Other proposed reforms take into account the origins of poverty and crime, seeking to remedy the underlying causes. It is becoming widely recognised that better houses and workrooms and improved sanitation do much to ameliorate the condition of the lower strata of society. Legislative measures by States and municipalities enforce, to some extent, cleanliness and healthy modes of life. By Factories Legislation, Pure Food and Health Acts, provisions for safeguarding dangerous machinery and permitting only competent persons to be employed thereon, it is hoped to secure such improvement of social conditions as will root out the causes of poverty and crime.

3. Difficulties of General Tabulation.—State differences in the organisation of charities necessitate the separate treatment of each State, but certain of the larger features of the statistics of benevolence may be combined for the whole Commonwealth. Combinations for the whole of Australia for the seven years ended 1907 are given for hospitals, benevolent asylums, orphanages, and hospitals for the insane. Satisfactory tabulation for other charities is not yet possible. Where the combination has been for dissimilar periods the nearest years have been taken.

§ 2. The Larger Charities of Australia.

1. **Hospitals.**—Most of the State capitals have several large and well-equipped hospitals, and there is at least one in every important town. In large centres there are hospitals for "specials"—consumptives, women, children, infectious diseases, incurables, etc. The hospitals in Australia, with the admissions, patients treated, deaths, and expenditure, are shewn in the following table; but the figures include (except number of hospitals) for 1901, 1902, 1903, and 1904, only the Adelaide Hospital among South Australian institutions:—

AUSTRALIAN HOSPITALS, 1901 to 1907.

| Particulars. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------------|----------|---------|---------|---------|---------|---------|---------|
| Number of institutions ... | 285 | 293 | 302 | 304 | 308 | 313 | 322 |
| Number of beds ... | 10,526 | 10,808 | 11,084 | 11,384 | 11,778 | 12,108 | 12,613 |
| Admissions during year ... | 84,993 | 87,449 | 89,991 | 89,650 | 94,117 | 99,308 | 107,438 |
| Indoor patients treated ... | 91,147 | 98,412 | 96,608 | 96,748 | 101,200 | 106,488 | 114,848 |
| Deaths ... | 7,114 | 7,489 | 7,581 | 6,967 | 7,476 | 7,627 | 8,291 |
| Expenditure ... | £538,920 | 571,167 | 595,689 | 582,761 | 602,394 | 612,628 | 702,228 |

In addition to those admitted to the institutions there are large numbers of out-patients. The exact number of these cannot be given, but 250,000 would be a rough estimate of distinct cases for 1907.

The leading facts regarding hospitals in the States are summarised in the tables which follow:—

HOSPITALS IN NEW SOUTH WALES, 1901 to 1907.

| Particulars. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

2. **Benevolent and Destitute Asylums.**—In some of the institutions for the relief of the destitute, persons of all ages are admitted, as in the case of the Adelaide Destitute Asylum, but there is in general a well-marked division, orphanages being provided for the young, and benevolent asylums for the aged. In the summaries which follow, only the larger institutions which come wholly or chiefly under one or other of these heads are included:—

BENEVOLENT AND DESTITUTE ASYLUMS, COMMONWEALTH, 1901 to 1907.

| Particulars. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

* One of these institutions includes a lying-in department.

3. **Orphanages, Industrial Schools, etc.**—The organisation of charitable effort varies greatly in regard to orphans and waifs. In many institutions shelter and some form of industrial training is offered to destitute children of all classes, whether orphans or not, while some of those styled orphanages do not confine their relief to orphans strictly so called. The figures in the next table are those for institutions where, it is believed, the principal effort is on behalf of those who are really orphans:—

There are three reformatory institutions—the Carpentarian State Reformatory and the "Sobraon" State Training Ship for boys, the enrolment for 1907 being 121 and 413 respectively; and the Girls' State Industrial School, where for the same year the enrolment was 149.

The Training Ship has attained very satisfactory results. In forty years more than 5000 boys have been dealt with, and the records shew that 98 per cent. of these have developed into good citizens. Attached to the "Sobraon" is the steam and sailing schooner "Dart," where the boys are taught seamanship. The boys subjected to a course of training are, at the expiration of their term, apprenticed to approved persons. To the Carpentarian Reformatory are sent boys who have been convicted in the courts, whom it is desired to keep apart from other prisoners, and who are taught useful trades.

4. **Lepers.** Lazarets for the treatment of lepers have been established in New South Wales (Little Bay); Queensland (Stradbroke Island, near Brisbane, and Dayman Island, Torres Straits); and the Northern Territory of South Australia (Mud Island). Quarantine and isolation stations have also been used for the segregation of patients. A great deal of information concerning the beginning and progress of leprosy in Australia has been collected and published by Dr. J. Ashburton Thompson, Chief Government Medical Officer and President of the Board of Health, New South Wales, from whose reports the following table has been compiled:—

CASES OF LEPROSY RECORDED IN AUSTRALIA, 1855 to 1907.

| State. | Prior to 1901. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | Total. |

* In addition, some Chinese.

† In addition, many Kanakas.

5. **Hospitals for the Insane.**—The method of compiling insanity statistics has been fairly uniform throughout the States, but the various methods of observing the early stages of the development of insanity introduce an element of uncertainty which considerably reduces the value of comparison. In the summary given below licensed houses (except as regards expenditure) are included for New South Wales, and for Victoria in 1907; but not reception houses and observation wards in gaols, figures for which are given under the statistics of the States:—

HOSPITALS FOR INSANE, COMMONWEALTH, 1901 to 1907.

| Particulars. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907.* |
|--|----------|---------|---------|---------|---------|---------|---------|
| Number of institutions ... | 25 | 24 | 25 | 28 | 27 | 27 | 32 |
| Number of beds ... | 12,189 | 12,586 | 12,716 | 13,109 | 13,144 | 13,507 | 13,743 |
| Admissions ... | 2,569 | 2,490 | 2,616 | 2,640 | 2,593 | 2,839 | 2,730 |
| Total number under treatment... | 14,791 | 15,513 | 15,876 | 16,164 | 16,462 | 16,803 | 17,653 |
| Discharged as recovered, relieved, or improved ... | 1,157 | 1,190 | 1,181 | 1,300 | 1,183 | 1,258 | 1,271 |
| Deaths ... | 861 | 899 | 1,032 | 986 | 966 | 1,003 | 1,032 |
| Expenditure ... | £249,730 | 387,137 | 392,005 | 386,534 | 387,395 | 404,354 | 424,275 |

* Includes for the first time five licensed houses for insane in Victoria.

The proportion of insane, as well as the total number under treatment, as returned, is gradually rising. In the next table the number of insane under official care in Australia is compared to the total population:—

PROPORTION OF INSANITY IN HOSPITALS FOR INSANE, COMMONWEALTH, 1901-7.

| | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-------------------------------|--------|--------|--------|--------|--------|--------|--------|
| Lunatics at end of year ... | 12,427 | 12,770 | 13,142 | 13,443 | 13,851 | 14,349 | 14,870 |
| Per 100,000 of population ... | 325 | 329 | 334 | 337 | 342 | 348 | 354 |

Increase in the number of recorded cases of insanity does not necessarily imply an actual increase, and does not here imply an equivalent increase. Consequent upon the development of a more rational attitude to the treatment of mental cases there is growing up a greater willingness to submit necessary cases to treatment at an earlier stage than formerly. It is important to bear this in mind, because the small progressive increase in the preceding table is probably to be attributed largely, if not solely, to this circumstance:—

GOVERNMENT HOSPITALS FOR INSANE, NEW SOUTH WALES, 1901 to 1907.

* The figures include lunacy wards at hospitals.

There were at the end of 1907 five private licensed houses for the insane in Victoria. The admissions during the year were 32 males and 58 females. The total number under treatment, 52 males, 117 females; 21 males and 34 females were discharged, and 5 males and 4 females died. Of those discharged 10 males and 21 females were discharged as recovered, making a percentage recovery rate of 34.4 on the admissions; but as many of the cases admitted were of long standing and transfers from the hospitals for insane, the work, so far as the recovery of patients is concerned, was much better than the figures indicate. At the end of the year there remained on the books of the licensed houses 26 males and 79 females.

* The expenditure on reception houses is included with that on hospitals for insane, given in *supra*.

The Reception Houses for the Insane act as depôts to which patients are sent to see whether their mental illness is of a merely temporary character, readily to be relieved, or whether it is of such a nature as to need further treatment at the hospital at Goodna, which is the largest of the Queensland Hospitals for Insane.

| 1907 ... | 585 | 434 | 1,019 | 2.86 | 2.39 | 2.64 |

In South Australia, for the past thirty years the admissions have averaged a little over 200, and the discharges a little over 100, the figures for the whole period showing little variation. In 1907, for the first time, the total number of patients at the end of the year exceeded 1000. In 1895 the number first reached 900, so that it has taken twelve years to add another 100 to what may be looked on as the permanent number.

| 1907 | 252 | 250 | 502 | 2.72 | 2.88 | 2.80 |

6. **Protection of Aborigines.**—For the protection of the aboriginal Australian race there are institutions, under the supervision of Aborigines Boards, where the blacks are housed and encouraged to work, the children receiving elementary education. The work is usually carried on at mission stations, but many of the natives are nomadic in habit of life, and receive food and clothing when they call, whilst others but rarely come under the notice of the boards. The native race is extinct in Tasmania. The expenditure on maintenance, etc., for 1906 was—New South Wales, £13,184; Victoria, £4,325; Queensland, £10,570; South Australia, £12,902; Western Australia, £15,125; total for Commonwealth, £56,106. The figures given for 1907 are—New South Wales, £13,490; Victoria, £4,078; Queensland, £9,498; South Australia, £19,117.

7. **Other Charitable Institutions.**—Owing to variety of name and function of other charitable institutions it has been found impracticable to give detailed results. The aid given in kind—food, clothing, tools of trade, etc.—is considerable, whilst the shelter and treatment afforded ranges from a bed for a night for casual callers in establishments ministering minor charity, to indoor treatment over long periods for those that exist for the relief of the aged and infirm. The institutions not so particularised include asylums for the deaf, dumb, and blind, lock hospitals, maternity institutions and infant homes, homes for the destitute and aged poor, industrial colonies, night shelters, crèches, homes of hope, rescue homes, free kindergarten and ragged schools, auxiliary medical charities, free dispensaries, benevolent societies, charity organisation, ambulance and health societies, boys' brigades, humane and animals' protection societies, prisoners' aid associations, bush fires and mining accident relief funds.

8. **State Expenditure on Charities.**—The table below gives the amount expended by Government on charities. In some of the States amounts have been included for

minor items, which in other States are charged to other heads. The figures are for financial years in New South Wales, Victoria, and Queensland up to 1907, for calendar years in South Australia, and Western Australia, and in Tasmania for calendar years from 1901 to 1904, and financial years 1905-6 and 1906-7. The last column gives the amount in the calendar year 1907 :—

STATE EXPENDITURE ON CHARITIES, 1901 to 1907.

| State. | Year. | Amnt. | Year. | Amnt. | Year. | Amnt. | Year. | Amnt. | Year. | Amnt. | Year. | Amnt. | Amnt. in 1907. |
|-----------|--------|---------|--------|---------|--------|---------|--------|---------|--------|---------|--------|---------|----------------------|
| | | £ | | £ | | £ | | £ | | £ | | £ | £ |
| N.S.W. | 1901-2 | 504,301 | 1902-3 | 572,696 | 1903-4 | 515,152 | 1904-5 | 494,818 | 1905-6 | 528,281 | 1906-7 | 493,605 | 440,360 |
| Vic. ... | " | 313,735 | " | 300,821 | " | 292,914 | " | 294,483 | " | 292,454 | " | 304,151 | 361,498 |
| Q'land | " | 183,531 | " | 189,832 | " | 181,868 | " | 174,379 | " | 169,336 | " | 193,721 | 206,881 |
| S.A. | 1901 | 106,223 | 1902 | 105,612 | 1903 | 103,426 | 1904 | 98,635 | 1905 | 99,194 | 1906 | 101,023 | 113,345 |
| W.A. | " | 100,647 | " | 108,605 | " | 100,992 | " | 103,891 | " | 108,122 | " | 112,376 | 146,685 |
| Tas. | " | 50,530 | " | 51,908 | " | 66,975 | " | 46,843 | 1905-6 | 44,671 | 1906-7 | 48,911 | 47,537 |

The average annual State expenditure for the first six years given was—New South Wales, £518,142; Victoria, £399,760; Queensland, £182,112; South Australia, £102,352; Western Australia, £105,772; Tasmania, £51,640; Commonwealth, £1,259,778. The total in 1907 was £1,316,306.

9. **Total Charitable Expenditure.**—The expenditure in the Commonwealth in money on hospitals, charities, and all forms of relief publicly given, comprising the amounts furnished by Government and those raised by public subscription, etc., but excluding old-age pensions, is estimated at £1,700,000 for the year 1907.

SECTION XXV.

GENERAL GOVERNMENT.

§ 1. Scheme of Parliamentary Government.

1. **General.**—The legislative power of the Commonwealth is vested in the Federal Parliament, which consists of the Sovereign, the Senate, and the House of Representatives. The Sovereign is represented throughout the Commonwealth by the Governor-General, who, subject to the Constitution of the Commonwealth, has such powers and functions as the Sovereign is pleased to assign to him. In each State there is a State Governor, who is the representative of the Sovereign for the State, and who exercises such powers within the State as are conferred upon him by the Letters Patent which constitute his office, and by the instructions, which inform him in detail of the manner in which his duties are to be fulfilled. The Legislature in each State is also bi-cameral, and consists of (a) a Legislative Council and (b) a Legislative Assembly, or House of Assembly, the legislative powers of these chambers being delimited by the Commonwealth and the State Constitutions. The latter chamber, which is the larger, is always elective; the qualification for the franchise varies in character. The former chamber is, in the case of New South Wales and Queensland, nominated by the Governor-in-Council, but in the other States it is also elective, the constituencies being differently arranged and some property qualification for the electorate being required. In the Federal Parliament, however, the qualifications for the franchise are identical for both Houses. A brief account of the constitutional history of each of the States has been given in Section II., § 5, hereof. (See pp. 39 to 43).

2. **Number of Members of the Legislatures.**—The following table shows the number of members in each of the legislative chambers in the Commonwealth and in each State in March, 1909:—

PARLIAMENTS OF AUSTRALIA, 1909.

| Members in— | C'wealth. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | Total. |
|-------------|-----------|--------|-----------|---------|----------|----------|------|--------|
| Upper House | 36 | 61 | 34 | 44 | 18 | 30 | 18 | 241 |
| Lower House | 75 | 90 | 65 | 72 | 42 | 50 | 35 | 429 |
| Total ... | 111 | 151 | 99 | 116 | 60 | 80 | 53 | 670 |

The use of the expressions "Upper House" and "Lower House" in the above statement, though not justified constitutionally, is convenient, inasmuch as the legislative chambers are known by different names in the Commonwealth and in some of the States.

In the Commonwealth Parliament the Upper House is known as the Senate, and in the State Parliaments as the Legislative Council. The Lower House is known as

follows:—In the Commonwealth Parliament as the House of Representatives, in the State Parliaments of New South Wales, Victoria, Queensland, and Western Australia as the Legislative Assembly, and in the State Parliaments of South Australia and Tasmania as the House of Assembly.

3. The Cabinet and Executive Government.—A précis of the sections of the Commonwealth Constitution Act dealing with the Executive Government is given on pp. 50-1 herebefore. In both the Commonwealth and the State Legislatures the forms of Government have been founded on their prototype, the Imperial Government, and the relations established between the Ministry and the representatives of the people are in accordance with those prevailing in Great Britain. The executive powers in the Commonwealth and in the State Governments are vested in the Governor-in-Council. The Executive Council in the Commonwealth and in the majority of the States is co-extensive with a group of departmental chiefs who are usually spoken of as the Cabinet, and who change with the rise and fall of party majorities. In Victoria and Tasmania, however, the Cabinet on leaving office remain members of the Executive Council, though they no longer attend its meetings, and it is in fact an essential feature of the Cabinet system of Government that they should not do so, except to assist the Governor in transacting purely formal business, or to advise on non-political questions.

(i.) *The Executive Council.* This body is composed of the Governor and Ministers appointed by the Governor as shewn hereinafter. They are sworn both as Executive Councillors and as Ministers controlling the administrative departments. The meetings are official in character; they are presided over by the Governor-General (or Governor) and are attended by the clerk, who keeps a formal record of its proceedings. At these meetings the decisions of the Cabinet are put into official form and made effective, appointments are confirmed, resignations accepted, proceedings ordered, and notices and regulations published.

In March, 1909, the Executive Council was composed of the following members:—

THE EXECUTIVE COUNCIL OF THE COMMONWEALTH, 1909.

| | |
|--|-------------------------------|
| <i>Prime Minister and Treasurer</i> ... | ... The Hon. ANDREW FISHER. |
| <i>Attorney-General</i> ... | ... The Hon. W. M. HUGHES. |
| <i>Minister of State for External Affairs</i> ... | ... The Hon. E. L. BATCHELOR. |
| <i>Minister of State for Home Affairs</i> ... | ... The Hon. H. MAHON. |
| <i>Postmaster-General</i> ... | ... The Hon. J. THOMAS. |
| <i>Minister of State for Defence</i> ... | ... The Hon. G. F. PEARCE. |
| <i>Minister of State for Trade and Customs</i> ... | ... The Hon. F. G. TUDOR. |
| <i>Vice-President of Executive Council</i> ... | ... The Hon. G. MCGREGOR. |
| <i>Honorary Minister</i> ... | ... The Hon. J. HUTCHISON. |

Particulars of previous Commonwealth Ministries are given on pages 55-6 herebefore, and on page 957 following.

(ii.) *The Cabinet.* The meetings of this body are private and deliberative. No one is admitted but the actual Ministry of the day, no records of the meetings transpire, and no official notice is taken of the proceedings. The members of the Cabinet being the leaders of the party in power in Parliament, control the bent of legislation and must retain the confidence of the people and also of the Governor-General (or Governor), to whom they act as an advising body. They also in effect wield, by virtue of their seats on the Executive Council, the whole executive force of the community. In summoning, proroguing, or dissolving Parliament the Governor-General (or Governor) is usually guided by the advice tendered him by the Cabinet, though legally he is in no way bound to do so. The following statement gives the names of the Ministries of State for the Commonwealth, who have held office since the inauguration of the Commonwealth Government:—

(iii.) *Constitution of Ministries.* The subjoined table shews the constitution of the Ministries in the Commonwealth and the State Governments in March, 1909:—

CONSTITUTION OF MINISTRIES, 1909.

| Ministers with Seats in— | C'wealth. | N.S.W. | Vic. | Q'land. | S.A. | W.A. | Tas. | Total. |
|--------------------------|-----------|--------|------|---------|------|------|------|--------|
| The Upper House ... | 2 | 2 | 2 | 2 | 2 | 1 | 1 | 12 |
| The Lower House ... | 7 | 8 | 8 | 6 | 4 | 6 | 3 | 42 |
| Total ... | 9 | 10 | 10 | 8 | 6 | 7 | 4 | 54 |

The names of the members of the Ministries in each State in March, 1909, are shown in the following statement:—

MEMBERS OF STATE GOVERNMENT MINISTRIES, 1909.

NEW SOUTH WALES—MINISTRY.

| | |
|---|--|
| <i>Premier, Attorney-Gen., and Min. of Justice</i> HON. C. G. WADE, K.C. | <i>Minister for Agriculture—</i> HON. J. PERRY. |
| <i>Colonial Treasurer—</i> HON. T. WADDELL. | <i>Minister of Public Instruction and Minister for Labour and Industry—</i> HON. J. A. HOGUE. |
| <i>Colonial Secretary and Secretary for Mines</i> HON. W. H. WOOD. | <i>Vice-President of the Executive Council—</i> HON. J. HUGHES, M.L.C. |
| <i>Secretary for Lands—</i> HON. S. W. MOORE. | <i>Members of Ex. Council (without portfolio)</i> HON. J. ASHTON, M.L.C. |
| <i>Secretary for Public Works—</i> HON. C. A. LEE. | HON. C. W. OAKES. |

VICTORIA—MINISTRY.

| | |
|---|--|
| <i>Premier, Chief Sec., and Min. for Labour—</i> HON. J. MURRAY. | <i>Commissioner of Crown Lands and Survey, and Pres. of Board of Land and Works—</i> HON. H. MACKENZIE. |
| <i>Min. of Water Supply and Min. of Agricul.</i> HON. G. GRAHAM. | <i>Min. of Pub. Instruction and Min. of Rlys.—</i> HON. A. A. BILLSON. |
| <i>Treasurer—</i> HON. W. A. WATT. | <i>Minister of Mines and Forests—</i> HON. P. MCBRIDE. |
| <i>Attorney-General and Solicitor-General—</i> HON. J. D. BROWN, M.L.C. | <i>Ministers without Office—</i> HON. J. CAMERON. |
| <i>Minister of Public Health and Commis- sioner of Public Works—</i> HON. W. L. BAILLIEU, M.L.C. | HON. J. THOMSON. |

QUEENSLAND—MINISTRY.

| | |
|--|---|
| <i>Vice-Pres. of Ex. Council and Chief Sec.—</i> HON. W. KIDSTON. | <i>Sec. for Mines and Sec. for Public Works—</i> HON. J. G. APPEL. |
| <i>Home Secretary—</i> HON. J. T. BELL. | <i>Sec. for Railways and Sec. for Agriculture—</i> HON. W. T. PAGET. |
| <i>Secretary for Public Lands—</i> HON. D. F. DENHAM. | <i>Secretary for Public Instruction—</i> HON. A. H. BARLOW, M.L.C. |
| <i>Treasurer—</i> HON. A. G. C. HAWTHORN. | <i>Attorney-General—</i> HON. T. O'SULLIVAN, M.L.C. |

SOUTH AUSTRALIA—MINISTRY.

| | |
|---|---|
| <i>Commissioner of Public Works—</i> HON. T. PRICE. | <i>Treasurer and Attorney-General—</i> HON. A. H. PEAKE. |
| <i>Chief Secretary and Minister of Industry—</i> HON. A. A. KIRKPATRICK, M.L.C. | <i>Minister of Education—</i> HON. F. W. CONEYBEER. |
| <i>Commissioner of Crown Lands and Immigration, Minister of Agriculture—</i> HON. L. O'LOUGHLIN. | <i>Minister of Water Supply and Minister Controlling Northern Territory—</i> HON. J. G. BICE, M.L.C. |

WESTERN AUSTRALIA—MINISTRY.

| | |
|--|---|
| <i>Premier and Minister for Lands—</i> HON. N. J. MOORE, C.M.G. | |
| <i>Colonial Treas. and Min. for Agriculture.—</i> HON. F. WILSON. | <i>Minister for Works—</i> HON. J. PRICE. |
| <i>Minister for Mines and Railways—</i> HON. H. GREGORY. | <i>Colonial Secretary—</i> HON. J. D. CONNOLLY, M.L.C. |
| <i>Attorney-General—</i> HON. N. KEENAN. | <i>Minister without Portfolio—</i> HON. J. MITCHELL. |

TASMANIA—MINISTRY.

| | |
|--|--|
| <i>Premier and Chief Secretary—</i> HON. J. W. EVANS, C.M.G. | <i>Treasurer and Minister for Mines—</i> HON. D. C. URQUHART. |
| <i>Attorney-General and Min. of Education—</i> HON. W. P. PROPSTING, M.L.C. | <i>Minister of Lands and Works—</i> HON. A. HEAN. |

4. **The Appointment of Ministers and of Executive Councillors.**¹—Although it is technically possible for the Governor to make and unmake cabinets at his pleasure, under all ordinary circumstances his apparent liberty in choosing his Executive Council is virtually restricted by the operation of constitutional machinery. When a Ministry is defeated in Parliament or at the polls the procedure both in the Commonwealth and the State Parliaments generally, though not invariably, follows that prevailing in the Imperial Parliament. The members of the Ministry tender their resignations to the Governor-General or Governor, whose duty it is to announce his intention of accepting them. The resignations are not actually accepted at once, for in that case the offices.

1. See Jenks' "Government of Victoria," pp. 269 *et seq.*

would become vacant and business would be at a standstill. The outgoing Premier usually suggests to the Governor the name of the most prominent member of the Opposition, and the Governor thereupon "sends for" the person suggested; and if the latter accepts the responsibility he endeavours to form a Ministry; if he fails he informs the Governor, who applies to some other person. The distribution of portfolios is first arranged by the proposed Ministers themselves and is then submitted to the Governor for approval, which is given as a matter of course unless the list contains the name of any person against whom serious objections exist. Before appointing the persons named to the various offices the Governor accepts the resignations of the outgoing Ministers, and also appoints to seats in the Executive Council such members of the new Ministry as do not already hold them. Their seats in Parliament being ordinarily vacated by acceptance of office the new Ministers must go before their constituencies, and the result of these by-elections usually decides the attitude of the Opposition. In the Commonwealth Parliament, however, seats are not vacated by the acceptance of office. It may be seen from what has been stated above that only certain persons can in practice be chosen as members of a Ministry. The Cabinet must be chosen so that the following conditions are fulfilled:—(a) The members must belong to one or other of the Legislative Chambers and also to the same political party; (b) that party must possess a majority in the House of Representatives or in the Legislative Assembly or House of Assembly as the case may be; (c) the Ministers must carry out a concerted policy; (d) they must acknowledge the leadership of one chief Minister; and (e) must be under a joint responsibility, signified by resignation *en bloc* in the event of Parliamentary censure.

5. **The Resignation of Ministers.**—A Ministry is bound to resign either when it fails to command a majority in the House of Representatives, the Legislative Assembly, or the House of Assembly, as the case may be, or when a want of confidence has been clearly shewn, either (a) by a vote of censure, (b) by a declaration of want of confidence, or (c) by a vote disapproving of some act of the Government. In such cases the Ministry must either resign or must appeal to the country.

6. **Enactments of the Parliament.**—In the Commonwealth all laws are enacted in the name of the Sovereign, the Senate, and the House of Representatives. The subjects with respect to which the Commonwealth Parliament is empowered to make laws are enumerated in the Constitution Act (see pp. 48-9 hereinbefore). In the States laws are enacted in the name of the Sovereign by and with the consent of the Legislative Council and Legislative Assembly or House of Assembly. The Governor-General or the State Governor acts as Viceroy as regards giving the Royal Assent to or vetoing Bills passed by the Legislatures, or reserving them for the special consideration of the Sovereign. In the States the Councils and Assemblies are empowered generally, subject to the Commonwealth Constitution, to make laws in and for their respective States in all cases whatsoever. Subject to certain limitations, they may alter, repeal, or vary their Constitution. Where a law of a State is inconsistent with a law of the Commonwealth the latter prevails, and the former is, to the extent of the inconsistency, invalid.

7. **Powers and Functions of the Governor-General and of the Governors.**—The Governor-General and the State Governors act under the authority of the commissions by which they are appointed and of Letters Patent under the Great Seal of the United Kingdom, and according to instructions issued by the Colonial Office and passed under the Royal Sign Manual and Signet.

(i.) *The Governor-General.* The office of Governor-General and Commander-in-Chief of the Commonwealth was constituted by Letters Patent issued on the 29th October, 1900, in pursuance of the provisions of the Commonwealth Constitution Act. The powers and duties of the Governor-General were further defined by Royal instructions passed on the same date. The principal and most important of his functions, legislative, as well

as executive, are expressly conferred upon him by the terms of the Constitution itself. He is the custodian of the Great Seal of the Commonwealth, and has the appointment of political officers to administer Departments of State of the Commonwealth.

- (a) His legislative functions are exercised with respect to proposed laws as finally passed by the Federal Houses of Parliament. Such Bills are presented to the Governor-General for his assent in the King's name, on receiving which they become law throughout the Commonwealth. The Governor-General may, however, withhold his assent, or may reserve any Bill for the King's pleasure. He may return to the House in which it originated any proposed law with suggested amendments. The King may disallow any law within one year from the date on which it was assented to by the Governor-General.
- (b) The Governor-General's executive functions are, under ordinary circumstances, exercised on the advice of his responsible Ministers. Various specific powers are vested in him by the Constitution; he may summon or prorogue Parliament and may dissolve the House of Representatives. He is the Commander-in-Chief of the military and naval forces of the Commonwealth, and is invested by the Crown with the prerogative of mercy in case of offences committed against the laws of the Commonwealth.
- (c) The Governor-General is also invested with authority in certain matters of Imperial interest, such as the control of the naval and military forces of the Commonwealth; the observance of the relations of foreign States to Great Britain, so far as they may be affected by the indirect relations of such States to the Commonwealth; and the treatment of neutral and belligerent ships in Commonwealth waters in time of war.

The Governor-General may not leave the Commonwealth without having first obtained leave from the Imperial Government, to whom he is alone responsible for his official acts. The present Governor-General is the Right Honourable William Humble, Earl of Dudley, P.C., G.C.M.G., G.C.V.O., etc. He assumed office on the 9th September, 1908. (Particulars of previous Governors-General are given on p. 55 hereinbefore.)

(ii.) *The State Governors.* The powers and functions of the State Governors are, within their respective States, very similar to those exercised by the Governor-General for the Commonwealth, and are defined by the terms of their Commissions and by the Royal instructions accompanying the same. A State Governor is the official head of the State Legislature, and assents in the name of the Crown to all Bills passed by the Parliament, reserving for the Royal Assent certain classes of Bills, which are regulated by the Constitution Acts and by the instructions issued by the Imperial Government. The Governors are, under ordinary circumstances, guided by their Executive Councils, the chief matters in which the exercise of discretion is required being the granting or withholding of a dissolution of Parliament when requested by a Premier; the appointment of a new Ministry; or the assenting to, vetoing, or receiving of Bills passed by the legislative chambers. The Governors are authorised, under certain restrictions, to administer the prerogative of mercy by the reprieve or pardon of criminal offenders within their jurisdiction, and to remit fines and penalties due to the Crown. All moneys to be expended for the public service are issued from the Treasury under the Governor's warrant.

8. Cost of Parliamentary Government.—The following statement shews the cost of parliamentary government in the Commonwealth and in each State, as well as in the whole of Australia, for the year ended the 30th June, 1908 :—

COST OF PARLIAMENTARY GOVERNMENT, 1907-8.

* Information not available, 23/3/09. † Exclusive of New South Wales.

§ 2. Parliaments and Elections.

1. *Qualifications for Membership and for Franchise.*—The summary on pages 964-5 gives particulars as to the legislative chambers in the Commonwealth and State Parliaments, and shews concisely the qualifications necessary for membership and for the franchise in each House. Persons who are otherwise eligible, either as members or voters, are generally disqualified on the usual grounds of being of unsound mind or attainted of treason, being convicted of certain offences, and, as regards membership, on

the grounds of holding a place of profit under the Crown, being pecuniarily interested in Government contracts, or being an undischarged bankrupt.

2. **The Federal Parliament.**—The Senate consists of thirty-six members, six being returned by each of the original federating States. Members of this chamber are elected for a term of six years, but by a provision in the Constitution a certain number retire at the end of every third year, although they are eligible for re-election. In accordance with the Constitution the total number of members of the House of Representatives must be as nearly as possible double that of the Senate. In the House of Representatives the States are represented on a population basis, and the numbers stand at present as follows:—New South Wales, 27; Victoria, 22; Queensland, 9; South Australia, 7; Western Australia, 5; Tasmania, 5—total, 75. The Constitution provides for a minimum of five members in each original State. Members of the House of Representatives are elected for the duration of the Parliament, which is limited to three years. In elections for Senators each State is counted as a single electorate, but an elaborate scheme of subdivision had to be undertaken in order to provide workable electorates in each State for members of the House of Representatives. Members of both Houses are paid at the rate of £600 per annum.

(i.) *Particulars of Elections.* Since the establishment of the Commonwealth there have been three elections for the Senate and for the House of Representatives. Further information as to the Commonwealth Parliaments since their inception is given on page 957 hereinbefore. Particulars regarding the number of electors enrolled and the number of electors to whom ballot-papers were issued at the last two elections may be found in the tables given hereunder:—

FEDERAL ELECTIONS OF 16th DECEMBER, 1903, AND 12th DECEMBER, 1906.

| State. | Electors Enrolled.* | | | Electors to whom Ballot Papers were Issued. | | | Percentage of Voters to Electors Enrolled. | | | |

* For the House of Representatives the number of electors enrolled in contested divisions only is given.

PARLIAMENTS AND ELECTORATES.

| Particulars. | Commonwealth. | New South Wales. | Victoria. |
|--|---|---|--|
| 1. Senate and Legislative Councils. | | | |
| <i>Number of Members</i> ... | 36 | 61. May not be less than 21 | 34 |
| <i>Qualification for Membership</i> ... | Adult British subjects natural-born or naturalised for 5 years, if (a) eligible to vote at the elections for the Senate, and (b) resident for at least 3 years within the Commonwealth | Male adult natural-born or naturalised British subjects | Male natural-born or naturalised British subjects of the age of 30 years or upwards, (a) if possessed of a freehold property of the annual value of at least £50 for one year previous to the election, and (b) in the case of naturalised subjects if a resident of the State for 10 years |
| <i>Period for which elected or nominated</i> ... | 6 years | For life | 6 years |
| <i>Allowance to Members</i> ... | £600 each per annum | None | None |
| <i>Qualification for Franchise</i> | Adult British subjects of either sex who have lived in Australia for 6 months continuously. Aboriginal natives of Australia, Asia, Africa, or the islands of the Pacific, except New Zealand, cannot vote at federal elections unless they have acquired a right to vote at elections for the Lower House of a State Parliament | (Nominated) | Male adult British subjects, if either (a) the owner of a freehold of the annual value of £10 or of a leasehold of property rated at £15, or (b) a graduate of a British university, matriculated students of Melbourne University, qualified legal and medical practitioners, ministers of religion, certificated schoolmasters, and naval and military officers. Naturalised subjects must be of 3 years' standing, and must have resided in the State for 12 months |
| 2. House of Representatives, Legislative Assemblies, etc. | | | |
| <i>Number of Members</i> ... | 75 | 90 | 65 |
| <i>Qualification for Membership</i> ... | The same as for the Upper House | Male adult British subjects if qualified to vote at an election of members of the Legislative Assembly, unless disqualified under the Constitution Acts or the Federal Elections Act 1900 | Male adult natural-born British subjects or aliens naturalised for the period of 5 years, if resident in the State for not less than 2 years |
| <i>Period for which elected</i> ... | Duration of Parliament, which is limited to 3 years | Duration of Parliament, which is limited to 3 years | Duration of Parliament, which is limited to 3 years |
| <i>Allowance to Members</i> ... | £600 each per annum | £300 each per annum | £300 each per annum |
| <i>Qualification for Franchise</i> | The same as for the Upper House | Adult naturalised subjects of either sex, who have resided in the State continuously for one year after naturalisation, and adult natural-born subjects who have resided in the State for a continuous period of 1 year | *Male adult natural-born subjects or naturalised for 1 year prior to the 1st January or the 1st July in any year, if (a) enrolled as ratepayer, or (b) if holding an elector's right and enrolled on the general or supplementary roll |

* The Bill extending the franchise to females had not been assented to on the 22nd March, 1909.

SUMMARY, 1908.

| Queensland. | South Australia. | Western Australia. | Tasmania. |
|--|--|--|---|
| 44 | 18 | 30 | 18 |
| <p>Male adult natural-born or naturalised British subjects</p> <p>For life</p> <p>None</p> <p>(Nominated)</p> | <p>Male natural-born or naturalised British subjects if (a) of the age of 30 years or upwards, and (b) if resident in the State for 3 years</p> <p>6 years</p> <p>£200 each per annum</p> | <p>Male natural-born or naturalised British subjects of the age of 30 years or upwards, if (a) in the case of natural-born subjects, resident in the State for 2 years, and (b) in the case of naturalised subjects, if naturalised for 5 years previous to the election and resident in the State during that period</p> <p>6 years</p> <p>£200 each per annum</p> | <p>Male natural-born or naturalised British subjects of the age of 30 years or upwards, if qualified to vote at the election for the Legislative Council</p> <p>6 years</p> <p>£100 each per annum</p> |
| <p>Adult British subjects of either sex who are either (a) owners of a freehold of the clear value of £50, (b) owners of a leasehold of the clear annual value of £17, with at least 3 years to run or containing a right of purchase, (c) occupiers of a dwelling-house of the clear annual value of £25, (d) registered proprietors of a Crown lease on which there are improvements to the value of at least £50. Voters must have been enrolled for 6 months prior to the election</p> | <p>Adult British subjects of either sex who have resided in the State for 6 months, and who either (a) own a freehold estate to the value of £100, (b) occupy a house or own leasehold property rated at £25, (c) hold Crown leases or licenses to the value of not less than £10 per annum, or (d) are on the electoral list of a municipality or road-board district in respect of property of the annual value of £25. Aboriginal natives may only acquire the franchise in respect of a freehold qualification</p> | <p>Adult British subjects of either sex who have resided in the State for 12 months, if either (a) possessing freehold to the annual value of £10 or leasehold to the value of £30, or (b) graduates of a British university, qualified legal or medical practitioners, or naval or military officers</p> | <p>Adult British subjects of either sex who have resided in the State for 12 months, if either (a) possessing freehold to the annual value of £10 or leasehold to the value of £30, or (b) graduates of a British university, qualified legal or medical practitioners, or naval or military officers</p> |
| 72 | 42 | 150 | 35 |
| <p>All persons qualified and registered to vote at the election of members of the Legislative Assembly are eligible as members.</p> <p>Duration of Parliament, which is limited to 3 years</p> <p>£300 each per annum</p> | <p>Any person qualified for the franchise of the House of Assembly is eligible for membership</p> <p>Duration of Parliament, which is limited to 3 years</p> <p>£200 each per annum</p> | <p>Male adult British subjects, if resident in the State for 12 months. Naturalised subjects must have been naturalised for 5 years and have resided in the State for 2 years previous to the election</p> <p>Duration of Parliament, which is limited to 3 years</p> <p>£200 each per annum</p> | <p>Adult British subjects of either sex if (a) they have resided in the State for 6 months continuously and (b) they are enrolled on the electoral lists</p> <p>Duration of Parliament, which is limited to 3 years</p> <p>£100 each per annum</p> |
| <p>Adult British subjects of either sex who either (a) have resided in Queensland for 12 months continuously and whose names are on the electoral roll, (b) own freehold estate of the value of £100, (c) have occupied a house of the annual value of £10 for at least 6 months, or (d) have a leasehold estate in possession of the annual value of £20 with not less than 18 months to run. Aboriginal natives may vote only under the freehold qualification</p> | <p>Adult British subjects of either sex who have been registered on the electoral roll for 6 months. In the Northern Territory only natural-born British subjects and naturalised Europeans or Americans may vote</p> | <p>Adult British subjects of either sex who have resided in the State for 6 months, and who either (a) own freehold to the value of £50, (b) hold a household or leasehold property to the value of £10 per annum, (c) hold a pastoral, agricultural, occupation, or mining lease or license from the Crown to the value of £5 per annum, or (d) are registered on the roll of a municipality or roads board. Aboriginals may only be registered in respect of freehold property</p> | <p>Adult British subjects of either sex who have resided in the State for 12 months</p> |

In the Senate the figures for the year 1906 shew that ballot-papers were issued to a little more than half the electorate, and are a slight improvement on those for the year 1903, when only about 47 per cent. of the electors visited the polls. Allowing for the various causes which may have prevented those qualified from recording their votes, it cannot be said that the electors of the Commonwealth have, so far, set a high value on the privilege of the franchise. In the elections for the House of Representatives the figures for both years shew an improvement in percentage of voters as compared with the returns for the Senate; nevertheless they cannot be looked upon as satisfactory. In every instance the percentage of female voters is very far below that of the males.

3. The Parliament of New South Wales.—The Legislative Council is in this State a nominee chamber, the Legislative Assembly being an elective body. Theoretically the Legislative Council may contain an unlimited number of members, but in practice the number is restricted to about sixty, the members at the latest available date being sixty-one. Members are appointed by the Governor, acting on the advice of the Executive Council. The tenure of the seat is for life; four-fifths of the members must be persons not holding any paid office under the Crown, but this is not held to include officers of His Majesty's sea or land forces on full or half pay, or retired officers on pensions. The Legislative Assembly consists of ninety members, who hold their seats during the existence of the Parliament to which they are elected. The duration of any single Parliament is limited to three years.

(i.) *Particulars of Elections.* Since the introduction of responsible government in New South Wales there have been twenty complete Parliaments, the first of which opened on the 22nd May, 1856, and was dissolved on the 19th December, 1857, while the twentieth opened on the 23rd August, 1904, and closed on the 12th July, 1907. The average duration of the Parliaments was two years and five months. The first session of the twenty-first Parliament was opened on the 30th September, 1907.

Particulars of voting at the last six elections are given below:—

LEGISLATIVE ASSEMBLY ELECTIONS, NEW SOUTH WALES.

| Date of Opening of Parliament. | Electors upon the Roll. | Members Returned. | Members Unopposed. | Contested Electorates. | | | | |
|--------------------------------|-------------------------|-------------------|--------------------|-------------------------|-----------------|-------------------------------|-------------------------------|------|
| | | | | Electors upon the Roll. | Votes Recorded. | Percentage of Votes Recorded. | Percentage of Informal Votes. | |
| 7th August, 1894 | 298,817 | 125 | 1 | 254,105 | 204,246 | 80.38 | 1.62 | |
| 13th „ 1895 | 267,458 | 125 | 8 | 233,233 | 153,034 | 64.24 | 0.88 | |
| 16th „ 1898 | 324,339 | 125 | 3 | 294,481 | 178,717 | 60.69 | 0.92 | |
| 23rd July, 1901 | 346,184 | 125 | 13 | 270,861 | 195,359 | 72.13 | 0.79 | |
| 23rd August, 1904 | Males | 363,062 | 90 | 2 | 304,396 | 226,057 | 74.26 | 0.59 |
| | Females | 326,428 | | | 262,433 | 174,538 | 66.51 | |
| 10th September, 1907 | Males | 392,845 | 90 | 5 | 370,715 | 267,301 | 72.10 | * |
| | Females | 353,055 | | | 336,680 | 204,650 | 60.78 | * |

* Not available.

The franchise was extended to women in 1902, and was exercised for the first time at a State election in 1904.

4. The Parliament of Victoria.—Both of the Victorian legislative chambers are elective bodies, but there is a considerable difference in the number of members of each House, as well as in the qualifications necessary for members and electors. In the Legislative Council the tenure of the seat is for six years, but one member for each province retires every third year, except in the case of a dissolution, when one half of the

newly elected members hold their seats for three years only. Members of the Legislative Assembly are elected for the duration of Parliament, which is limited to three years. An elector for the Legislative Assembly may only vote once, plurality of voting having been abolished in 1899; an elector, however, qualified in more than one district, may select that for which he desires to record his vote.

(i.) *Particulars of Elections.* Since the introduction of responsible government in Victoria there have been twenty-one complete Parliaments, the first of which was opened on the 21st November, 1856, and closed on the 9th August, 1859, while the twenty-first opened on the 9th July, 1907, and closed on the 3rd December, 1908. The first session of the twenty-second Parliament opened on the 9th February, 1909.

Statistics regarding the last four elections will be found below:—

PARTICULARS OF VICTORIAN ELECTIONS, 1902 to 1908.

| Year. | Legislative Council. | | | | Legislative Assembly. | | | |
|----------|----------------------|----------------------------------|-------------------------------|--------------|-----------------------|----------------------------------|--------------------------------|--------------|
| | Electors on Roll. | Electors in Contested Districts. | Voters in Contested Districts | Per-centage. | Electors on Roll. | Electors in Contested Districts. | Voters in Contested Districts. | Per-centage. |
| 1902 ... | 134,087 | * | * | * | 290,241 | 216,063 | 141,471 | 65.47 |
| 1904 ... | 172,495 | 104,843 | 61,382 | 58.54 | 264,709 | 223,600 | 140,127 | 62.66 |
| 1907 ... | 180,738 | 78,512 | 27,152 | 34.58 | 260,787 | 191,131 | 117,098 | 61.26 |
| 1908 ... | 185,234 | * | * | * | 263,876 | 164,919 | 88,461 | 53.64 |

* Not contested.

As the table shews, the proportion of voters for the Legislative Council is considerably less than that for the Legislative Assembly. The number of persons who voted by post at the elections for the Legislative Assembly in 1908 was 3790.

5. The Parliament of Queensland.—No limit is set by the Constitution Act to the number of members of the Legislative Council of Queensland, the total at the latest available date being forty-four. Members are appointed by the State Governor, and it is provided that not less than four-fifths of the members must consist of persons not holding any office under the Crown, except officers of His Majesty's sea or land forces on full or half-pay, or retired officers on pensions. The members are nominated for life. The Legislative Assembly is composed of seventy-two members, returned from sixty-one electorates, eleven electorates returning two members each, the others being single electorates.

(i.) *Particulars of Elections.* Since the establishment of responsible government in Queensland there have been sixteen complete Parliaments, the first of which opened on the 29th May, 1860, and dissolved on the 20th May, 1863, while the sixteenth Parliament opened on the 23rd July, 1907, and closed on the 10th December, 1907. The seventeenth Parliament is now in session. Statistics regarding the elections of 1902, 1904, and 1907 are given below:—

ELECTIONS FOR QUEENSLAND LEGISLATIVE ASSEMBLY.

| Year. | Number of Seats. | Number of Candidates Nominated. | Candidates sent to the Poll. | Electors Enrolled. | | | Electors who Voted. | | | Percentage of Electors Voting in Contested Electorates. | | |
|-------|------------------|---------------------------------|------------------------------|--------------------|---------|---------|---------------------|---------|---------|---|---------|--------|
| | | | | Males. | Females | Total. | Males. | Females | Total. | Males. | Females | Total. |
| | | | | 1902 | 72 | 159 | 154 | 108,548 | — | 108,548 | 80,076 | — |
| 1904 | 72 | 140 | 117 | 103,943 | — | 103,943 | 60,265 | — | 60,265 | 74.16 | — | 74.16 |
| 1907 | 72 | 185 | 179 | 125,140 | 95,049 | 220,189 | — | — | 152,049 | 73.42 | 63.64 | 71.61 |

The election of 1907 was the first State election in Queensland at which women voted, the privilege being conferred under Act 5 Edw. VII., No. 1. Some of the returns

did not separate the sexes in the figures respecting the number of electors who voted, and the percentage of males and females was therefore calculated on the total returns where the subdivision was made.

6. Parliament of South Australia.—In this State there is a Legislative Council composed of eighteen members and a House of Assembly with forty-two members, both chambers being elective. Under the Constitution Amendment Act, 1908, the State of South Australia (including the Northern Territory) is divided into four Council Districts, of which one returns six members, and the other three return four members each, to the Legislative Council. For the purpose of electing members of the House of Assembly the State (exclusive of the Northern Territory) is divided into twelve electoral districts, and the Northern Territory remains, as before, an electoral district returning two members. One of the electoral districts (Torrens) returns five members; two (Adelaide and Alexandra) four members each; and the others return three members each.

(i.) *Particulars of Elections.* Since the inauguration of responsible government in South Australia there have been eighteen complete Parliaments, the first of which was opened on the 22nd April, 1857, and dissolved on the 1st September, 1859, while the eighteenth was opened on the 20th July, 1905, and terminated on the 10th October, 1906. The first session of the nineteenth Parliament opened on the 30th November, 1906. Particulars of voting at the last three elections are given below:—

PARLIAMENTARY ELECTIONS IN SOUTH AUSTRALIA.

| Year. | Electors on Rolls. | | | Electors Who Voted. | | | Percentage of Electors Voting. | |
|------------------------------|--------------------|----------|---------|---------------------|----------|---------|--------------------------------|----------|
| | Males. | Females. | Total. | Males. | Females. | Total. | Males. | Females. |
| LEGISLATIVE COUNCIL. | | | | | | | | |
| 1900 ... | 38,688 | 9,854 | 48,542 | 21,403 | 3,907 | 25,310 | 55.32 | 39.65 |
| 1902 ... | 38,413 | 13,496 | 51,909 | 29,978 | 7,940 | 37,918 | 78.04 | 58.83 |
| 1905 ... | 39,011 | 13,873 | 52,884 | 28,820 | 8,328 | 37,148 | 73.88 | 60.03 |
| LEGISLATIVE ASSEMBLY. | | | | | | | | |
| 1902 ... | 77,147 | 72,080 | 149,177 | 53,471 | 36,545 | 90,016 | 62.14 | 49.22 |
| 1905 ... | 95,396 | 92,249 | 187,645 | 64,330 | 50,246 | 114,576 | 67.43 | 54.47 |
| 1906 ... | 96,724 | 93,438 | 190,162 | 60,109 | 45,997 | 106,106 | 69.31 | 50.73 |

The proportions of votes recorded to total persons entitled to vote in each of the three years given above were as follows:—Legislative Council, 52.14, 73.05, and 70.24 per cent.; and Legislative Assembly, 55.80, 61.06, and 60.34 per cent.

It is interesting to note that South Australia was the first of the States to grant women's suffrage (under Act No. 16 of 1894), the franchise being exercised for the first time at the Legislative Assembly election on the 25th April, 1896.

7. Parliament of Western Australia.—In this State both chambers are elective. For the Legislative Council there are thirty members, each of the ten electorates returning three members, while the Legislative Assembly is composed of fifty members, one member being returned by each of the fifty electoral divisions. At the expiration of two years from the date of election to a seat in the Legislative Council, and every two years thereafter, the senior member for the time being for each province retires. Seniority is determined (a) by date of election, (b) if two or more members are elected in the same day, then the senior is the one who polled the least number of votes, (c) if the election be uncontested, or in case of an equality of votes, then the seniority is determined by the alphabetical precedence of surnames and, if necessary, Christian names. Members of the Legislative Assembly are elected for three years.

(i.) *Particulars of Elections.* Since the establishment of responsible government in Western Australia there have been five complete Parliaments, the first of which was opened on the 30th December, 1890, and was dissolved on the 22nd March, 1893, while the sixth Parliament was opened on the 23rd November, 1905, and closed on the 12th August, 1908. The first session of the seventh Parliament commenced on the 10th November, 1908. Particulars relating to the last four parliamentary elections are given in the table below. The figures refer to electors for the Assembly only, no returns being published with regard to voting at Council elections :—

ELECTIONS FOR LEGISLATIVE ASSEMBLY, WESTERN AUSTRALIA.

| Year. | Electors on the Roll. | | | In Contested Districts. | | | Votes Recorded. | | | Percentage of Electors Voting. | | |
|-------|-----------------------|----------|---------|-------------------------|----------|---------|-----------------|----------|--------|--------------------------------|----------|--------|
| | Males. | Females. | Total. | Males. | Females. | Total. | Males. | Females. | Total. | Males. | Females. | Total. |
| 1901 | 74,874 | 16,648 | 91,522 | 67,967 | 14,775 | 82,742 | 29,832 | 8,255 | 38,077 | 44 | 56 | 46 |
| 1904 | 108,861 | 54,965 | 163,826 | 88,524 | 49,791 | 138,315 | 45,285 | 23,500 | 66,785 | 49 | 47 | 48 |
| 1905 | 79,025 | 42,697 | 121,722 | 65,296 | 36,706 | 102,002 | 33,482 | 19,435 | 52,917 | 51 | 53 | 52 |
| 1908 | 83,060 | 52,919 | 135,979 | 69,277 | 44,804 | 114,081 | 46,411 | 29,412 | 75,823 | 67 | 66 | 66 |

8. **Parliament of Tasmania.**—In Tasmania there are two legislative chambers—the Legislative Council and the House of Assembly, both bodies being elective. The Council consists of eighteen members, returned from fifteen districts, Hobart returning three, Launceston two, and the remaining thirteen districts sending one member each. For the Parliament which expired in March, 1909, there were thirty-five House of Assembly districts, each district returning one member, but, in accordance with the Constitution Amendment Act of 1906, upon the expiration of the last Assembly, either by dissolution or by effluxion of time, there are to be five House of Assembly districts, viz., the Commonwealth electoral districts, each district returning six members. The existing electoral system will remain in force until the elections of 1909, when the provisions of the Electoral Act 1907 come into force.

(i.) *Particulars of Elections.* Particulars of the voting at the last three elections are given hereunder.

* Manhood suffrage, Act 64 Vic., No. 5. † Universal adult suffrage, Act 3 Edward VII., No. 13.

It is proposed to give, in a future issue of this book, particulars of the systems of preferential voting in force in certain of the States of the Commonwealth.

§ 3. Administrative Government.

In each State, as well as in the Commonwealth, the Government is administered by a number of chief departments, on lines similar to those on which administrative government is carried on in the United Kingdom. Reference has already been made to the creation of the Commonwealth Departments (see pages 793-4). In the States the

number and functions of the administrative departments vary considerably. This matter has also been referred to hereinbefore (see page 819). In many cases more than one department is under the control of a single Minister. The tabular statement given on this page and on the following pages shews the sub-departments, branches, etc., of each Ministerial Department in each State and in the Commonwealth, together with the Acts administered and other more important matters dealt with.

COMMONWEALTH—ADMINISTRATIVE GOVERNMENT, 1909.

| Departments, Sub-departments, Branches, etc. | Acts Administered. | Matters dealt with or under Control. |
|--|---|--|
| 1. External Affairs— | Contract Immigrants, Extradition, Immigration Restriction, Naturalisation, Pacific Island Labourers, Papua, Royal Commissions. | Commonwealth Gazette, Communications with the States, Consular appointments, Federal Executive Council, external affairs, extra territorial fisheries, High Commissioner, immigration and emigration, aliens and naturalisation, officers of Parliament, passports, relations with Pacific Islands, Royal Commissions, and territories of the Commonwealth. |

SECTION XXVI.

LOCAL GOVERNMENT.

§ 1. Introduction.

1. **Systems of Local Government.**—In all civilised nations, whatever the previous course of their constitutional history, the persistent and rapid growth of the functions of the central Government, with repeated assumptions of new and onerous duties and responsibilities, have rendered some attempts at decentralisation and some form of local government essential. Without such a relief national administration could be carried on with success only with great difficulty, if at all. Experience, ancient and modern alike, has demonstrated that a completely centralised bureaucracy—that is, a body of officials working from a single centre and responsible only to itself—cannot carry on indefinitely the administration of a large country; such a body tends to ignore the varieties of local conditions, to become stereotyped in its ideas and methods, and sooner or later breakdown is inevitable. There are two possible policies which a Legislature may adopt towards local authorities apart from the imposition of compulsory duties upon them. There is first (*a*) the grant of general power to all local bodies of a particular class—that is, the Legislature may establish a set of authorities and empower them to do anything which in their judgment will tend to promote the satisfactory administration and general well-being of the areas under their control, so long as any particular powers which they propose to use are not expressly prohibited or reserved to other authorities. But as this liberty might easily in some cases be abused, there is necessarily the restriction, of greater or less extent according to the country and the nature of the authorities in question, that the actual exercise of these general powers shall be subject to the approval of an administrative department of the central Government. Or, on the other hand, the Legislature may (*b*) grant only specific powers to local bodies—that is, may give them permission to do all or any of a number of enumerated things, with or without the approval of the central departments, and in this case nothing further can be done by the local body unless permitted by fresh legislative enactments. In a general way it may be said that legislation on the continent of Europe has ordinarily followed the first of these two methods, and has given to the local self-governing communities power to do anything for which they can get administrative approval; while in the Commonwealth, as well as in Great Britain and in the United States, the practice has been the opposite one—local authorities are empowered to do only specified things; but in order, in spite of this, to allow free play to local initiative and enterprise, parliamentary procedure permits of local authorities being able to obtain additional powers for particular works or undertakings by means of special Acts. This difference between the Australian or British and continental systems has two important results.

(i.) *Difference between Australian and Continental Systems.* (*a*) The first important result of this difference is that in Australia, England and the United States the enterprise and activity of local authorities depend upon the temper and ideas of Parliament—that is to say, upon the elected representatives of the nation; whilst throughout a large part of the continent of Europe the controlling influence is ordinarily exercised by a bureaucracy whose opinion upon the matters in question may or may not be coincident with the majority of the electorate. The result is that in Australia it is the business of

the State Parliaments to determine what powers are to be conferred upon local authorities, while, ordinarily, under the continental systems the administrative bodies have to regulate what the local authorities may or may not do. The efficiency of such continental systems depends almost entirely upon the character of the controlling bureaucracy, although it is true that the legal powers of a municipality under that system might be very much wider than those of a municipal council in Australia. If the bureaucracy is enterprising and ready to encourage and aid in every way the growth of local action and experiment—as it is in Prussia—then there is the largest scope for municipal development; but if, as in France, the bureaucracy is conservative in its ideas and slow to move, the action of local authorities remains cramped and limited.

(b) The second important result of the difference between the Australian and continental systems is that in all matters entrusted to them local authorities in Australia consider that their duty is to carry out the law according to the will of, and in the manner desired by the ratepayers of their local areas, subject generally to the supervision of the central Government, whereas on the continent of Europe local authorities regard themselves normally as bodies appointed to carry out, within their respective localities, the will of the central Government, even in such matters as are of purely local importance. Local authorities under the continental systems are responsible to the central Government and are subject to administrative control, whilst in Australia municipal councils, so long as they do not infringe the Acts under which they are constituted, or which they have to administer, are responsible only to the ratepayers of their respective localities.

(ii.) *Various Systems in the Several States of the Commonwealth.* In all the States of the Commonwealth Acts have now been passed providing for comprehensive schemes for the decentralisation of power by the constitution of various forms of local authorities to deal with a large variety of subjects and matters. The general policy of the Legislatures towards local authorities in Australia has already been pointed out. Generally speaking, these authorities exercise their powers under enactments of two kinds. (a) There are, first, what may be called constituent Acts, which create the various classes of local bodies and arm them with the powers necessary for the fulfilment of the duties intended to be discharged by them, and there are, secondly (b) general Acts dealing with one subject, or group of subjects, of administration—such as the Public Health Acts—and giving power to the local authorities for that particular service. Although the Acts controlling local government in the several States vary considerably in detail, especially as regards the election of councillors and presiding officers, method of valuation, and rating powers, there is a great similarity between the powers and duties conferred and imposed upon local authorities in the various States; these powers and duties are many and varied. As a rule the municipal council is the highway authority, being responsible for all the roads within its area and the up-keep of all bridges; it is a public health authority; it supervises the sanitary work, the water supply, and the lighting of its area, and for these and for other purposes may appoint officers; it administers the Acts relating to the sale of foods and drugs, the slaughter and diseases of animals, weights and measures, and river pollution; it may establish hospitals, public recreation grounds, libraries, and museums, and may provide asylums and support charitable institutions; it may make provision for preventing fires and floods; it administers the municipal property, makes by-laws with regard to a large variety of things and matters, and may acquire other powers by petition to the Governor. The councils are elected by the ratepayers, and seek only to carry out the wishes of the electorate, subject to the general supervision of the central Governments.

(iii.) *Systems on the Continent of Europe.* On the continent of Europe a careful distinction is generally drawn between those internal affairs in which the central Government is thought to be directly concerned and those which are held to be primarily of only local interest. In Prussia, for instance, the former includes, besides the army, State taxes and domains, ecclesiastical affairs, police, and the general supervision of local

authorities, while to the localities are left roads, poor relief, and a number of miscellaneous matters. The work of the central Government is deconcentrated, that is to say, the country is divided into districts, in each of which there is a delegation of the central authority, doing its work and thereby decreasing the pressure upon the head offices. The executive agents in each locality are elected by the inhabitants, but they are also the representatives of the central Government, and as such they are members of the bureaucracy and are under its control, with the consequence that they look to the central Government for guidance and direction in regard to local affairs. Local government is in fact weak; it is not so much the exercise of the will of a locality by the central power, as the exercise of the will of the latter by the locality. The system of deconcentrated centralised control as carried out in Prussia has, however, some distinct advantages.

- (a) In the first place the duties of supervising the actions of a large number of local authorities do not rest only upon a comparatively small number of officials at the seat of Government, but are carried out by delegations in all parts of the country, which are able to acquire a more intimate knowledge of local requirements and conditions.
- (b) Secondly, the supervision is not only by Government officials, but by responsible and experienced persons elected by the inhabitants and who command local confidence. The general results are that, firstly, the staff at the central offices is relieved of much detailed work, and, secondly, that the control of the localities is rendered much less bureaucratic.

2. Early History of Local Government in Australia.—Before the more comprehensive systems of self-government were first provided for in the several States various enactments had from time to time been passed and amended in order to satisfy the growing demand for local government which asserted itself as one of the primary results of the spread of education and increase of population. In the latter part of the year 1839 the first municipal law was passed in South Australia, which was thus the birth-place of local government in the Commonwealth. On 31st October, 1840, the principles of self-government were practically adopted in Adelaide by the election of a mayor and council. In 1842 the Sydney City Incorporation Act was passed by the New South Wales Government; under this Act the city was divided into six wards, and resident occupiers or owners of houses, warehouses, or shops within a radius of seven miles were duly enrolled as citizens and entitled to vote at the elections of councillors, the number of which was fixed at twenty-four. A city fund was established and rates levied. The duties of the council were to construct and maintain streets, sewers, and waterworks, to light the streets, and to make by-laws for the general good rule and government of the city. In the same year, 1842, Melbourne was incorporated as a town by special Act, and as a city in 1847, while Geelong was incorporated in 1849. The Acts by which Sydney and Melbourne were incorporated contained no provision for the extension of the municipal principle to other localities, but in 1842 an Imperial Act was passed under which the Governor of New South Wales was empowered to incorporate by Letters Patent every county or any part of a county to form districts for the purpose of local government. In the following year the districts of Appin, Campbelltown, Camden, Narellan, and Picton, in New South Wales, were incorporated under one county district council, while later in the same year Appin and Campbelltown were constituted as a separate district under the control of six councillors. In 1844 the Sydney City Incorporation Act was amended; by this time the number of county district councils had increased to eight, and these, in conjunction with the municipal council of Sydney and the Road Trusts, which were generally created by special Acts, constituted the whole of the local government system in New South Wales prior to 1858. The Imperial Act of 1850, under which the State of Victoria was granted responsible government, provided for the division of the State into districts under the government of local councils. In all the States of the Commonwealth systems of local government have been provided for; in some of the States, such as Victoria, practically the whole area of the State has for some

years been divided into districts for the purposes of self-government, while in others, more especially in New South Wales, a general system of extending the advantages of local government throughout the more settled parts of the country has only recently been provided. In other States systems of local government which have been in force for some years have, as is only to be expected, made comparatively slow progress owing to the small population scattered over such large areas. Taking, however, into consideration the benefits which must accrue, especially in a country of great distances, from the establishment of suitable systems of local government, and judging by the success of similar institutions in other countries, there is every reason to expect that, as population increases and settlement progresses, the people of Australia will take fuller advantage of the systems provided.

§ 2. New South Wales.

1. Development of Local Government Systems.—In the year 1858 the Municipalities Act, the first important measure with regard to general local government in New South Wales, was passed. Under this Act provision was made for the incorporation of any town or rural district as a municipality upon presentation to the Governor of a petition signed by at least fifty of the respective ratepayers, and containing a larger number of signatures than those attached to any counter petition. The members of the council were elected by the ratepayers, and the chairman was chosen by the councillors from their own number. The duties of the council were to abate and remove nuisances; to make by-laws for the regulation of their own proceedings and for the general good government of the town; to control all roads, bridges, ferries, and wharves; to establish hospitals, asylums, libraries, and gardens; and to establish tolls and rents for the use of markets, bridges, wharves, and jetties within and belonging to the municipality. The general rate was not to exceed one shilling in the pound, but a special rate for water supply, sewerage, and street lighting could be levied. Government endowment was provided for, by way of subsidies on the amount collected from rates, over a period of fifteen years. In all thirty-five districts were incorporated under this Act, and these districts, with the exception of Cook, which was united to Camperdown in 1870, and East St. Leonards, subsequently joined to St. Leonards, still exist, though the boundaries of most of them have since been changed.

(i.) *The Municipalities Act 1867.* The Act of 1858 was repealed in 1867 by the Municipalities Act of that year. Under the provisions of the latter Act the thirty-five existing municipalities were to continue their existence under the designation of boroughs, and all municipalities created in the future were to be classified either as (a) boroughs, or (b) municipal districts.

(a) *Boroughs* could consist of any city, town, or suburb of the metropolis, or of any populous country district, but every borough had to have a population of not less than 1000 and had to contain an area of not more than nine square miles, of which no part was more than six miles distant from any other part.

(b) *Municipal Districts* could comprise any part of the colony not containing a borough, but had to include an area of not more than fifty square miles, with a population of not less than 500 souls.

The duties and powers of the councils were extended and defined, while the maximum rate remained as before. This Act still left it optional for any district to become constituted as a municipality, with the consequence that only a small proportion of the State was incorporated under its provisions.

(ii.) *Division of the State into Shires, 1905.* The Act of 1867 was amended from time to time during the succeeding thirty years until the whole of the Acts—sixteen in number—were repealed by the consolidating Act of 1897. This Act did not alter the

chief features of previous Acts, and still retained the voluntary principle of incorporation, which was not conducive to the adoption of a general system of local government. because so long as the central Government continued to construct and pay for local works, it was natural that the inhabitants benefited would be willing to deny themselves the advantages of self-government. The law on the subject remained in an admittedly unsatisfactory condition for several years, and, though various measures were introduced into Parliament for its amendment, it was not until the year 1905, when the Shires Act was passed, that a comprehensive scheme of local government was extended to the greater part of the State.

- (a) *The Shires Act 1905* divides the whole State, with the exception of existing municipalities, the western division, Lord Howe Island, the islands in Port Jackson, and the Quarantine Station of Port Jackson, into shires, which were themselves subdivided into ridings, each riding having equal representation in the council, and were classified according to their extent and probable revenue and expenditure. A sum of not less than £150,000 was made payable annually out of the consolidated revenue for the endowment of the shires, the amount payable to each shire being apportioned according to the class to which it belonged and to the proceeds of the general rates received during the next preceding year. An important feature of the Act was that the rates were to be charged on the unimproved value of the land, instead of on the annual rental; the rate to be levied was not to be less than one penny, nor more than twopence in the pound, and the minimum rate in respect of any portion of land was fixed at two shillings and sixpence. Another important provision of the Act was that as soon as a rate was imposed by a council, the operation of the Land Tax Act was suspended. The councils were vested with wide general powers and could acquire additional powers by resolution of a majority of the council followed by an application by the President on behalf of the council to the Governor.
- (b) *The Local Government Extension Act 1906* amended and consolidated the law relating to municipalities and extended the principles of the Shires Act to municipalities. Provision was also made whereby the Governor was authorised to proclaim as a city any municipality which had, during the previous five years, a population of at least 20,000 persons and a revenue of at least £20,000, and which formed an independent centre of population.
- (c) *The Local Government Act 1906*. Towards the close of the year 1906 the Local Government Act, which deals comprehensively with both shires and municipalities, was passed; by this Act both the Shires Act 1905 and the Local Government Extension Act 1906 are repealed, and their provisions are amended and consolidated.
- (d) *The Local Government (Loans) Act 1907*. In 1907 the Local Government (Loans) Act was passed in order to overcome certain difficulties at the inception of the new system, authorising the Governor to approve of municipal loans in special cases, without going through the procedure required by the Local Government Act.

2. Local Government Systems now in Operation.—The law relating to local government in New South Wales is now contained in the Act of 1906 referred to above. The Local Government Commissioners issued an *interim* report in July, 1905, proposing to divide the State into 132 shires, the unimproved value of which was £67,131,466; by the final report, issued in January, 1906, the establishment of 134 shires was recommended. This recommendation has since been carried into effect.

(i.) *Areas Incorporated*. Prior to the year 1907 the total area incorporated formed a very small part of the whole area of the State, as may be seen in the following statement:—

AREAS INCORPORATED IN NEW SOUTH WALES, 1860 to 1906.

| | | | | | | | | | |
|-----------------------------|-----|-----|-----|-------|-------|-------|-------|-------|-------|
| Year | ... | ... | ... | 1860. | 1870. | 1880. | 1890. | 1900. | 1906. |
| Area incorporated—Sq. miles | ... | 409 | 649 | 1,482 | 2,387 | 2,763 | 2,830 | | |

Total area of State (exclusive of Lord Howe Island), 310,367 square miles.

The areas incorporated in 1906 in each of the three territorial divisions of the State were as follows :

DISTRIBUTION OF INCORPORATED AREAS, 1906.

| Division. | Incorporated Area. | Unincorporated Area. | Total Area. |
|--------------------------|--------------------|----------------------|-------------|
| Eastern Sq. miles | 1,977 | 93,742 | 95,719 |
| Central " | 571 | 88,579 | 89,150 |
| Western " | 282 | 125,216 | 125,498 |
| Total | 2,830 | 307,537 | *310,367 |

* Total area of State, exclusive of Lord Howe Island, the area of which is 5 square miles.

Under the Shires Act 1905 and the Local Government Extension Act 1906 the whole of the eastern and central divisions, amounting in all to 184,869 square miles, were incorporated, either as shires or as municipalities, which are now administered under the Local Government Act of 1906. The provision of the Shires Act as to the incorporation of cities is retained, and under this provision the municipality of Broken Hill was proclaimed a city in 1907.

(i.) *General.* This Act came into operation on the 1st January, 1907; it provided for the continuation of existing shires and municipalities, for the creation of new ones, and for their reconstitution by uniting, dividing, altering, or converting areas. Each shire is divided into three ridings, and each municipality may be divided into wards by petition of the council or of a majority of the ratepayers to the Governor. The councils consist in the case of shires of either six or nine councillors, and in the case of municipalities of from six to twelve aldermen, except in the case of the union of two or more municipalities, when the Governor may determine that the council of the united areas shall consist of any number from twelve to eighteen aldermen. All occupiers of ratable property of a yearly value of at least £5 who have been in occupation for at least three months, of either sex, who are either natural-born or naturalised British subjects, of the age of twenty-one years and upwards, are entitled to be registered on the electors' roll, and any male person so enrolled is qualified to be elected as a councillor or alderman, unless he is otherwise ineligible.

(ii.) *Functions of Councils.* The general scheme of the Act was that councils, on their constitution, should start with a limited number of powers of a primary nature, and that, as their needs develop, they should from time to time acquire additional powers on following the prescribed procedure. On the constitution of a shire or municipality the councils may exercise any of the following powers :—The construction and maintenance of all public places, except those vested in the Railway Commissioners or other public bodies or trustees, and except national works; lighting of, and controlling the traffic in streets and roads; prevention of fires and floods; the administration of the Public Watering Places Act 1900 and the Impounding Act 1898, and certain parts of the Police Offences Act 1901, the Public Health Act 1902, and the Cattle Slaughtering and Diseased Animals and Meat Act 1902. Other powers and duties, such as the construction of drainage and water supply systems without reticulation, the care and management of parks and

commons, and the licensing of hawkers and public vehicles, are conferred and imposed upon municipal councils, while these same powers and duties may be acquired by shire councils by resolution of the council followed by application to the Governor.

(a) *Acquisition of Further Powers.* Further powers may also be acquired either by shires or by municipalities if the council decide that they are necessary for the good government of the locality; these are the administration of the Public Gates Act 1901, and the Native Dog Destruction Act 1901; water supply by reticulation; the maintenance of passenger ferries, of fire brigades, of municipal buildings, of cattle-yards and abattoirs, of markets, parks, and recreation grounds, of refuse destructors, of cemeteries and public baths; the manufacture and supply of gas, electricity, and hydraulic or other power; the regulation and control of theatres, public halls, and lodging houses; the establishment and management of public libraries, art galleries, museums, and public bands; the regulation and supervision of buildings and balconies; of the sale of fish and meat, and the suppression of nuisances caused by the emission of smoke or vapour. These powers may be acquired by a resolution passed by an absolute majority of the council followed by an application in the prescribed form to the Governor. On receipt of a petition signed by not less than fifty, or if there be less than 300 ratepayers on the roll, by one-sixth of the ratepayers, the Governor may direct that a poll be taken as to whether all or any of the powers applied for shall be conferred on the council.

(b) *Appointment of Executive Officers.* Provision is made in the Act for the appointment of officers and servants, such as shire engineers, municipal clerks, and sanitary inspectors, and also for the acquisition by councils of land or buildings either by agreement or compulsorily, for which purpose the provisions of the Public Works Act 1900 are incorporated.

(iii.) *Rates and Ratable Property.* All land is ratable except the following:—Commons, public parks, and public reserves not held under lease or license; cemeteries, public hospitals, benevolent institutions, and buildings used exclusively for public charitable purposes; churches and free public libraries; unoccupied Crown lands; lands vested in the University of Sydney occupied and used solely for the purposes of education; and vested in the Chief Commissioner for Railways and Tramways and actually used for the purposes of the Government railways or tramways. Rates levied by a council may be of four kinds, namely, general, special, local, or loan rates.

(a) *General Rates* are levied on the unimproved value at a rate of not less than one penny nor more than twopence per pound, but if the minimum rate be more than sufficient to meet the requirements of the council, it may be further reduced at the discretion of the Governor. A council of a municipality which has levied a general rate of not less than one penny on the unimproved value may impose such additional rate as may be required either on the improved or the unimproved value.

(b) *Special, Local, and Loan Rates* may also be imposed either on the improved or the unimproved value at the option of the council, but in the case of special and local rates a poll may be demanded by the ratepayers as to whether the rate shall be imposed or not. Rates on the unimproved value of land may also be levied for the purposes of the Country Towns Water Supply and Sewerage Acts 1880-1905, which provide for the construction by the Government of waterworks and sewerage systems in municipalities which are outside the areas served by the Metropolitan and Hunter River Boards. The cost becomes a charge against the municipality, carrying interest at a rate of 4 per cent., and repayable by annual instalments over a period of not more than 100 years.

(iv.) *Endowment.* The amount of and the conditions as to the endowment of shires are similar to those of the Shires Act. (See para. 1. ii. (a) above). It is also enacted that all municipalities not receiving statutory endowment under any Act thereby repealed shall, upon the result of investigations made into their administration and financial necessities, be entitled to a sum not exceeding three shillings and fourpence in the pound on the general rate collected; but if the revenues are sufficient to meet the reasonable requirements of the corporations under proper management no endowment will be paid.

(v.) *Borrowing Powers and other Provisions.* A council of a municipality is authorised to borrow up to 10 per cent. of the unimproved capital value, and all money so borrowed is a charge upon the revenue of the council. If a council desire that any proposed loan should be guaranteed by the Government application must be made to the Treasurer, who may either refuse or recommend the guarantee. Both shires and municipalities may temporarily borrow in any year an amount not exceeding one-third of the estimated revenue to be received from rates if the consent of the Minister shall have been first obtained. Auditors are appointed by the councils, and Government examiners are appointed to inspect the accounts of the councils. A defaulting area is defined to be an area in which a sufficient number of councillors have not been elected to form a quorum, or in which the requirements of the Act as to the levying of a general rate have not been carried out, or in which the council has ceased for six months to exercise its functions. The Governor is authorised to appoint an administrator for a defaulting area.

3. Shires, 1907.—The total area of the 134 shires constituted under the new system was 179,130 square miles, and the approximate population at the end of the year 1907 was 542,800. During the year ended the 31st December, 1907, the total revenue of these shires, excluding £76,572 received for temporary loans and £11,864 for trust account, was £535,659, of which the general rates amounted to £287,635, and Government endowment and other grants to £235,794. During the same year the total expenditure, exclusive of repayments and temporary loans (£59,078) and trust account (£6783), amounted to £385,605, of which £100,435 was spent on administrative expenses, and £249,868 on public works (roads, streets, bridges, ferries, etc.). The unimproved capital value for the year ended 31st December 1907, was £81,526,814.

4. Annual and Capital Improved Value of Ratable Property, 1901 to 1908.—The following table shews the annual and capital improved values of ratable property in municipalities for each year from 1901 to 1908, inclusive:—

NEW SOUTH WALES—RATABLE PROPERTY IN MUNICIPALITIES, ANNUAL AND CAPITAL IMPROVED VALUES, 1901 to 1908.

| Year ended February.* | Sydney and Suburbs. | | Country. | | Total. | |
|-----------------------|---------------------|----------------|---------------|----------------|---------------|----------------|
| | Annual Value. | Capital Value. | Annual Value. | Capital Value. | Annual Value. | Capital Value. |

* See footnote to preceding table. † Census, March, 1901. ‡ Not available.

The following table gives particulars, for the years 1907 and 1908, of the improved and unimproved capital values in Sydney, in the suburbs, and in the country:—

NEW SOUTH WALES—IMPROVED AND UNIMPROVED CAPITAL VALUES, 1907 AND 1908.

| Particulars. | 1907. | | 1908. | |
|-----------------------------------|-------------|-------------|-------------|-------------|
| | * Improved. | Unimproved. | Improved. | Unimproved. |
| | £ | £ | £ | £ |
| METROPOLITAN— | | | | |
| * City of Sydney ... | 45,749,800 | 20,207,812 | 45,749,800 | 20,207,812 |
| Suburban Municipalities ... | 56,288,100 | 19,583,598 | £7,578,400 | †23,835,688 |
| Total Metropolitan ... | 102,037,900 | 39,791,410 | 103,328,200 | 44,043,500 |
| COUNTRY MUNICIPALITIES ... | 89,417,000 | 14,875,612 | 41,668,300 | 21,583,928 |
| Grand Total ... | 141,454,900 | 54,667,022 | 144,996,500 | 65,627,428 |

* For year ended the 31st December, 1907. † As per valuation notices, subject to reduction on appeal.

The unimproved capital value for shires at the end of the year 1907 was £81,526,814 (see para. 3). The total unimproved capital value of districts under the operation of the Act of 1906 was therefore £147,154,242.

6. **Revenue and Expenditure, Assets and Liabilities of Municipalities, 1901 to 1908.**—The subjoined table shews the total revenue and disbursements, and also the total assets and liabilities of the municipalities for the years 1901 to 1908, inclusive. As regards revenue and expenditure, the figures given are exclusive of proceeds and repayments of loans:—

**NEW SOUTH WALES.—REVENUE AND EXPENDITURE AND ASSETS AND LIABILITIES
OF MUNICIPALITIES, 1901 to 1908.**

| Year ended Feb.* | Sydney and Suburbs. | | | | Country. | | | |

* See footnote to preceding table but one.

7. **Expenditure by General Government on Local Works, 1860 to 1907.**—Since the year 1860 the Government of New South Wales has expended £41,068,700 on works of a purely local character, not including the amount spent on school buildings and on works of national importance. The new arrangements introduced by the Local Government Act 1906 will not necessarily put an end to the direct expenditure on works of local interest by the central Government. The subjoined table shews the total amount so expended and the amount per head of population during each financial year from 1901 to 1907, inclusive, as well as the total amount up to the 30th June, 1900 :—

EXPENDITURE BY CENTRAL GOVERNMENT ON LOCAL WORKS, 1860 to 1907.

| Year ended 30th June— | Country Districts. | | Metropolitan District. | | Total. | |
|-----------------------|--------------------|-----------------------------------|------------------------|-----------------------------------|--------------|-----------------------------------|

| Total ... | †26,806,500 | ... | †13,374,500 | ... | 41,068,700 | ... |

* Separate returns for metropolitan and country districts are not available. † Including expenditure from Public Works Fund. ‡ To the 30th June, 1906.

Out of the total expenditure £9,821,000 was spent on tramways, water supply, and sewerage works, which are sources of revenue.

8. **Sydney Metropolitan Board of Water Supply and Sewerage.**—Prior to the year 1888 the main water supply and sewerage systems of Sydney and suburbs were under the control of the City Corporation, while several of the suburban councils had constructed local systems. For some years, however, it had been recognised that owing to the great increase in the population and size of the metropolitan area the water supply was inadequate and the sewerage system antiquated and inefficient. In 1867 a Royal Commission had been appointed to enquire into and report upon various schemes for supplying water to the city and suburbs, and in 1869 a report was sent in recommending the adoption of what is known as the "Upper Nepean Scheme." Another commission was appointed in 1875 to investigate different proposed sewerage systems, and two years later a report was presented containing certain recommendations which form the basis of the present system. After considerable discussion and further investigation an Act was passed in 1880 autho-

rising the schemes recommended by the two commissions being carried out. In the year 1888 the works had so far progressed that the Government, with the object of placing the administration of both water supply and sewerage systems throughout the county of Cumberland under the control of an independent body, passed an Act authorising the establishment of the Metropolitan Board of Water Supply and Sewerage. This Board consists of seven members, three of whom are appointed by the Government, two by the City Council, and two by the suburban and country municipalities in the county of Cumberland. The Board is under the general supervision of the Minister for Works—a provision considered necessary since the loan expenditure of the Board forms part of the public debt of the State.

9. **Metropolitan Water Supply.**—In the year 1850 authority was given by the Legislative Council to the City Corporation to construct water and sewerage works. Under this authority a water supply scheme was adopted and carried out, at a cost of nearly £1,750,000, by which the waters of the streams draining into Botany Bay were intercepted and pumped into three reservoirs. This system has now been superseded by the "Upper Nepean Scheme" referred to above, the management of which was transferred to the Metropolitan Board of Water Supply and Sewerage in May, 1888.

(i.) *The Cataract and Prospect Dams.* A work of great importance and magnitude in connection with the Sydney water supply—the Cataract Dam—was completed in 1907. Prior to the construction of this dam, the system had been weak in the matter of storage, the only reservoir of any importance being that at Prospect, which was formed by the construction of an earthen dam completed in 1890, and which contains a supply available by gravitation of 5,446,000,000 gallons of water. The Prospect reservoir is supplied from the unstored waters of the Nepean, Cataract, and Cordeaux rivers by means of tunnels and conduits capable of carrying 150,000,000 gallons a day; the combined catchment area of the three rivers extends to an area of 354 square miles, and is favourably situated with regard to the coastal rainfall. The whole of this area has been acquired by the Crown, and every precaution is exercised to guard against pollution of the supply. It was found, however, in 1902—almost the driest year on record—that the Prospect reservoir was insufficient for the needs of the increasing population of Sydney and suburbs during a dry period. The Government, therefore, decided to construct additional reservoirs on the rivers forming the sources of supply, in which would be stored as much of the flood water from the available catchment area of 345 square miles as would be necessary to meet the constantly increasing requirements of the metropolis.

The first of this series of reservoirs is the Cataract dam, which was completed in 1907, and of which the catchment area above the impounding dam is about fifty-four square miles. The water released from this reservoir flows down the bed of the Cataract River to a diversion weir at Broughton's Pass, where it enters the previously existing tunnel, and is conveyed thence by a system of open canals to the Prospect reservoir. In traversing the steep and rocky bed of Cataract River the water is thoroughly aerated. The total distance travelled by the water from Cataract to Sydney *via* Prospect is 66½ miles, of which 21½ miles represents the distance from Prospect to Sydney.

The principal dimensions of the Cataract and Prospect dams are given below:—

CATARACT AND PROSPECT DAMS.

| Dam. | Height above Foundation. | Width at Top. | Thickness at Bottom. | Length. | Area of Reservoir. | Capacity of Reservoir. |
|--------------|--------------------------|---------------|----------------------|---------|--------------------|------------------------|
| | Feet. | Feet. | Feet. | Feet. | Acres. | Gallons. |
| Cataract ... | 192 | 16½ | 150 | 811 | 2,400 | 21,411,500,000 |
| Prospect ... | 85½ | 30 | * | 7,300 | 1,266½ | 11,029,200,000† |

* Not available. † Of which 5,527,000,000 gallons are available by gravitation.

The present population of Sydney and suburbs supplied with water from these works is estimated at 620,400. The winter consumption of water ranges from twenty to twenty

two million gallons a day, while the summer consumption and evaporation together approximate to thirty million gallons a day. As the combined available capacity of the Cataract and Prospect reservoirs amounts to nearly 32,500,000,000 gallons, the storage available represents a supply for about 1000 days without rainfall.

(ii.) *Aqueducts and Mains.* The water is drawn off from the Prospect reservoir through a valve tower by cast-iron pipes and thence proceeds by canal, five miles in length, to the Pipe Head Basin, situated $16\frac{1}{2}$ miles from Sydney. It is then conveyed for a further distance of five miles by two wrought-iron pipes, each six feet in diameter, to Potts' Hill reservoir, which has a capacity of 100,000,000 gallons, covers twenty-four and a half acres, and is designed to tide the city over any interruption of supply from Prospect, and to prevent fluctuation of pressure. A by-pass is laid along the floor of the reservoir to enable both six-feet mains to deliver water to Sydney direct. At Potts' Hill the water passes through a screening tank constructed of copper-gauze screens, and thence proceeds towards the city in two 48-inch cast-iron mains. The first laid main is 48-inch as far as Petersham, where it bifurcates, one branch (48-inch) leading to Petersham reservoir, the other (42-inch) to Crown Street reservoir, where the main pumping station is situated. The new 48-inch main, completed in 1893, continues of the same diameter direct to Crown Street. The main pumping plant consists of three pairs of compound high-duty pumping engines. The first set is capable of raising 400,000 gallons per hour to the Centennial Park reservoir, a height of 104 feet above the pumps, at which place a new covered reservoir, of a capacity of 17,000,000 gallons, has been constructed for the purpose of ensuring a larger bulk of water within the city limits; the second set is capable of raising 210,000 gallons per hour to the Woollahra reservoir, a height of 140 feet, and also of raising 200,000 gallons per hour to Waverley, a height of 220 feet above the pumps; while the third set is capable of raising 100,000 gallons per hour to the Waverley tanks.

(iii.) *Storage Reservoirs.* In connection with the water supply there are in all twenty-nine service reservoirs, with a total maximum capacity of 47,216,000 gallons. An auxiliary pumping station at Ryde has been erected for the supply of North Sydney. The station receives its supply either from Potts' Hill reservoir, through a 24-inch diameter pipe, or through a new 32-inch steel main from the Pipe Head Basin. Both these mains discharge into a reservoir, from which the water is pumped to a 1,000,000-gallon tank at Ryde, 234 feet above high-water mark, and by a continuation of the same main into two other tanks at Chatswood, at an elevation of 370 feet above high-water mark, and having a joint capacity of 3,000,000 gallons. A 9-inch main extends over the Parramatta and Iron Cove bridges to supply the heights of Balmain.

(iv.) *Revenue, Expenditure, and Capital Cost of Sydney Waterworks.* The following table gives particulars as to the revenue, expenditure, and capital cost of the metropolitan waterworks for each financial year from 1901 to 1908 :—

SYDNEY WATERWORKS.—REVENUE, EXPENDITURE, AND CAPITAL COST, 1901 to 1908.

| Year Ended 30th June. | Revenue. | Working Expenses. | Total Capital Cost. | Capital Cost exclusive of Items on which Interest is not charged. | Percentage of Working Expenses to Revenue. | Percentage of Revenue to Capital Cost. | Interest Payable on Capital Cost. | Net Profit after Working Expenses and Interest. |

* Not available.

Graphs relating to the water supply of Sydney for the past ten years may be found on page 999 hereinafter.

(vi.) *Other Water Supply Systems under the Metropolitan Board.* In addition to the main metropolitan water supply system there are certain other systems within the County of Cumberland managed by the Metropolitan Board. (a) The Richmond waterworks are entirely unconnected with the Sydney supply. The system consists of a small pumping station on the left bank of the Hawkesbury River, just below the confluence of the Grose and Nepean, a 6-inch supply main, four miles in length, and five and one-eighth miles of 3-inch and 4-inch reticulation mains. (b) The Wollongong waterworks are also unconnected with the Sydney supply. The source of supply is the Cordeaux River and the catchment area is 2400 acres in extent. The total capacity of the reservoir is 173,000,000 gallons and the total length of the main about nineteen miles. The town, of which the population is about 3700, is well reticulated with 4-inch and 3-inch pipes. (c) The Manly waterworks are supplied by a special catchment area of about 1300 acres, and are also connected with the metropolitan system by a 10-inch main from Mosman, crossing Middle Harbour, with ball and socket pipes. There are two horizontal compound duplex pumps, each having a capacity of 1,000,000 gallons in seventeen hours. (d) The water-supply for the districts of Campbelltown, Camden and Narellan, and Liverpool is not drawn from the main Sydney supply through Potts' Hill, but is received by gravitation from the upper canal at Prospect.

10. Metropolitan Sewerage System.—The system which is now under the control of the Metropolitan Board of Water Supply and Sewerage comprises the old and new systems. The old system was initiated by the City Commissioners in 1853, and continued by their successors, the present City Council, since their incorporation in 1857. The old system was designed on the principles of what is known as the "combined system," and comprises four main outfalls, with subsidiary sewers along the principal streets; these, in turn, receive the reticulation sewers of the minor thoroughfares. The four main outfalls discharged directly into the harbour, and the consequent pollution of the water and menace to public health led to the appointment of a commission to enquire into the best means of diverting the sewage from the harbour, and of disposing of it when thus diverted. The new intercepting system is the outcome of the labours of that commission. At the time of the transfer, in 1889, of the original sewerage works to the Metropolitan Board there were 70½ miles of old city sewers in existence. The new system

adopted is on the lines of the partially "separate system," and intercepts all sewage from the gravitation zone—*i.e.*, from above a contour line about forty feet above high-water mark; while the sewage from the low level areas—*i.e.*, from below that contour line, is eventually pumped into the gravitation sewers. The new scheme provides for two main outfalls, (a) the northern, and (b) the southern.

(i.) *The Northern System* discharges into the Pacific Ocean, and will, when the low-level systems are complete, take all sewage previously discharged into the harbour. The discharge is near Bondi, and at this place a large chamber has been constructed in the sandstone rock. From this chamber two channels bifurcate, so as to ensure a free discharge during either northerly, easterly, or southerly gales, while above the chamber a shaft has been erected for ventilation and escape of air when the sea breaks into the discharge tunnels. The northern system receives sewage from the City, Waverley, Bondi, Woollahra, Paddington, Elizabeth Bay, Double Bay, Darling Point, Rushcutters' Bay, the Glebe, and portions of Annandale, Leichhardt, and Balmain. Stormwater channels have also been constructed at various points to carry off the superfluous water after heavy rainfalls. The work in connection with the whole of the northern system was carried through varying formations; in some instances the stratum was indurated sandstone, in others shale, clay, and water-charged driftsand. Concrete enters largely into the constructional works, the lining of rock tunnels being principally bluestone concrete rendered with cement mortar, and wherever the outfall sewer crossed natural creeks or water-courses offlet and scour valves have been provided.

(ii.) *The Southern System* has its discharge into the sewage farm near Botany Bay, and passes from the main outfall into the screening chambers of the inlet house. The chambers, which intercept all extraneous matter before the sewage passes to the syphon-well, are in duplicate and controlled by valves, so that when one series is in use the other is being cleared out. The silt caught on the screens is forced through a pipe by means of compressed air into a wrought-iron silt tank, from which it is distributed over the farm in trucks drawn by a small locomotive, while the sewage flows from the syphon-well along a main carrier, and is distributed by means of valves over the irrigation beds and settling tanks. A portion of the area of the sewage farm has been cultivated, and fair crops have been grown, but it is stated that some course of treatment is necessary for this particular class of sewage, which contains a large amount of grease from the boiling-down establishments, before it can be utilised for agricultural purposes. The southern main outfall receives the drainage from Alexandria, Waterloo, Erskineville, Newtown, and parts of the Surry Hills district.

(iii.) *The Western System.* In addition to the two main outfalls already mentioned a subsidiary outfall called the western outfall has recently been constructed to deal with the sewage of the western suburbs. This starts at a receiving chamber at one end of the sewage farm, and runs in an open channel across portion of the sewage farm to another receiving chamber. From this chamber it continues in 6 ft. circular triplicate sewers to a penstock chamber in Premier-street, Marrickville, being carried on aqueducts over low-lying ground. The latter chamber receives the sewage from the eastern, northern, and western branch sewers, and drains part of Marrickville, Petersham, Stanmore, Newtown, Leichhardt, Annandale, Camperdown, Summer Hill, Ashfield, Enfield, Burwood, Five Dock, and Concord.

(iv.) *Other Systems.* Another branch outfall has been constructed at Coogee, which discharges into the ocean and serves the districts of Randwick, Kensington, and Coogee. On the northern side of the city extensive works have been completed, and in the borough of North Sydney septic tanks were built in 1899 to deal with the sewage, while at Middle Harbour, Mosman, and Manly ample provision has been made for the sanitation of the districts.

(v.) *Revenue, Expenditure, and Capital Cost of Sydney Sewerage Systems.* The following table gives particulars as to the revenue, expenditure, and capital cost of the metropolitan sewerage systems during each year from 1901 to 1908:—

**SYDNEY SEWERAGE SYSTEMS.—REVENUE, EXPENDITURE, AND CAPITAL COST,
1901 TO 1908.**

| Year ended the 30th June. | Revenue. | Working Expenses. | Capital Cost. | Capital Cost, exclusive of Items on which Interest is not Charged. | Percentage of Expenditure to Revenue. | Percentage of Revenue on Capital Cost. | Interest Payable on Capital Cost. | Profit or Loss after Payment of Working Expenses and Interest. |

| 1908 ... | 94,735 | 470,000 | 724.37 | 46.94 | 286,000 | 684.0 |

11. *The Hunter District Water Supply.*—The waterworks of the Lower Hunter were constructed by the Government under the provisions of the Country Towns Water Supply and Sewerage Act of 1880. In 1892 a special Act was passed establishing an independent Board to control the works. This Board consists of seven members, of whom three are nominated by the Governor, one elected by the Newcastle Municipal Council, two by the adjacent municipalities, and one by the municipalities of East and West Maitland and Morpeth. The following municipalities and incorporated areas are within the area of the Board's jurisdiction:—

Newcastle Division.—Adamstown, Argenton, Ash Island, Boolaroo, Carrington, Hamilton, Hexham, Holmesville, Lambton, Merewether, Minmi, Newcastle, Plattsburg, Wallsend, Waratah, and Wickham.

Maitland Division.—Abermain, Bolwarra, East Greta, Heddon Greta, Hinton, Homeville, Kurri Kurri, Lorn, East and West Maitland, Morpeth, Oakhampton, Pelaw Main, Rutherford, Stanford Merthyr, Telarah, and Weston.

(i.) *Description of Waterworks.* The water supply is pumped up from the Hunter River about a mile and a half from West Maitland, the engines being situated above

flood level on a hill about forty-four chains from the river. At the pumping station there is a settling tank of 1,390,500 gallons capacity, four filter beds, a clear water tank holding 589,500 gallons, and a storage reservoir of 172,408,100 gallons capacity. The filtered water is pumped from the clear water tank into two summit reservoirs, one of which is connected by a 10-inch cast-iron main $4\frac{1}{2}$ miles in length, and supplies East and West Maitland, Morpeth, and Maitland, while the other is fed by two rising mains, one riveted steel pipe 20 $\frac{1}{2}$ in. diameter, and a 15-inch cast-iron main, 5 $\frac{1}{2}$ miles long, and supplies the other districts under the control of the Board. In seven of these districts reservoirs having a total capacity of nearly 4,000,000 gallons are supplied by gravitation. On the hill at Newcastle there is also a high-level iron tank with a capacity of 20,000 gallons, which is supplied by a small pumping engine on the roof of the Newcastle reservoir.

(ii.) *Capital Cost, Revenue, and Expenditure, 1901 to 1907.* By the Act of 1892 referred to above and an Amending Act of 1894 the capital debt of the Board was to be liquidated by annual instalments distributed over 100 years with interest at 3 $\frac{1}{2}$ per cent. By a further amending Act of 1897 the repayment of expenditure on permanent works was abrogated, and the annual instalments were to be paid in liquidation of the cost of renewable works to be fixed by the Government from year to year. In the subjoined table particulars are given as to the capital cost, revenue, and expenditure, and also as to the number of houses and population supplied for each financial year from 1901 to 1907, inclusive:—

THE HUNTER DISTRICT WATER SUPPLY BOARD, CAPITAL COST, REVENUE, EXPENDITURE, NUMBER OF HOUSES, AND POPULATION SERVED, 1901 to 1907.

| Year ended 30th June. | Revenue. | Working Expenses (including Interest). | Capital Cost. | Houses Supplied. | Estimated Population Served. | Supply. | |
|-----------------------|----------|--|---------------|------------------|------------------------------|----------------|---------------|
| | | | | | | Daily Average. | Total. |
| | £ | £ | £ | No. | No. | 1000 Gallons. | 1000 Gallons. |
| 1901 ... | 27,405 | 30,948 | 485,835 | 9,086 | 45,400 | 1,005 | 366,889 |
| 1902 ... | 29,558 | 32,109 | 494,644 | 9,875 | 49,400 | 1,119 | 408,508 |
| 1903 ... | 31,102 | 32,217 | 500,784 | 10,522 | 52,600 | 1,113 | 406,172 |
| 1904 ... | 31,360 | 32,361 | 515,565 | 11,100 | 55,500 | 1,093 | 399,954 |

| 1906 ... | 40,801 | 34,801 | 544,798 | 12,968 | 64,800 | 1,479 | 539,655 |
| 1907 ... | 41,776 | 2 | 544,798 | 13,569 | 67,845 | 1,479 | 539,965 |

1. Based upon statement referred by the Minister for Works to the Board for report. The debt has not yet been finally determined. 2. Not available.

The average daily consumption of water for all purposes per inhabitant was 21.80 gallons during the year 1907, as against 22.80 gallons during the previous year.

The operations of the Hunter District Board are at present entirely confined to water supply, but a sewerage scheme is in course of construction by the Public Works Department, and when completed will be handed over to the Board.

12. *Water Supply and Sewerage in Country Towns.*—With the object of assisting municipalities to construct systems of water supply and sewerage, the Country Towns Water Supply and Sewerage Act of 1880 was passed. Under this Act the amount for carrying out the works is advanced by the State, and the municipality has the option of undertaking the construction of the works, failing which the Government undertakes the duty. Municipalities which avail themselves of the provisions of the Act are empowered to levy a rate for each service not exceeding a maximum of 5 per cent. on the assessed value of land and tenements, in addition to the ordinary municipal rates. The original Act, as amended in 1894 and in 1905, provides that the sum advanced, with interest at 4 per cent. per annum, must be repaid by a maximum number of 100 yearly repayments, and also provides for the issue of licenses to workmen, for the recovery of rates and for making by-laws for the assessment of lands and other purposes.

(i.) *Waterworks.* Up to the 30th June, 1908, forty country municipalities had availed themselves of the privileges of the Act as regards waterworks, all of which at that date had been completed and handed over by the Government. The total amount expended on these works was £726,898, and the total of the sums payable annually for a period of 100 years was £26,637, including interest at the rate of $3\frac{1}{2}$ per cent., the first repayments having become due at various dates ranging from the end of the year 1893 to the end of 1904. In the calculation of these repayments the interest on the expenditure has been added, and any payments by the councils, as well as sums remitted under the authority of the Act, have been deducted.

(a) Fifteen municipalities have constructed works out of their own resources, and of these seven have also new works constructed by the Government. The estimated values of the works constructed by the municipalities on the 6th February, 1908, were £73,712.

(b) The waterworks at Broken Hill and Silverton were constructed by a private company under a Special Act of Parliament passed in 1888, but a scheme for the supply of Broken Hill is now being carried out by the Government.

(ii.) *Sewerage Works.* Up to February, 1908, twenty-three municipalities had constructed sewerage works. Two of these municipal works (Ashfield and Strathfield) are now under the control of the Metropolitan Board; the value of the remaining twenty-one works was £54,169 in February, 1908.

13. Gas and Electric Lighting Works.—Under the old Municipalities Acts municipal councils were authorised to construct works for public lighting, and were empowered to provide private consumers with gas, but electric lighting schemes could not be carried out excepting under the authority of a special Act. Under the Local Government Act 1906 the duty of lighting streets, roads, and public places is imposed on the councils, who may, if they desire, acquire power to construct and maintain works for the supply of electricity. In February, 1908, there were twenty-eight municipal gas-works in New South Wales, the value of the plant being £197,344; of these three were acetylene gas plants valued at £480. At the same date seven municipalities—Sydney, Redfern, Broken Hill, Newcastle, Penrith, Tamworth, and Young—had erected electric-lighting plants, the total value of which was £499,402. Of this sum £421,702 had been spent on the city of Sydney electric-light plant, further particulars of which are given below.

(i.) *Gas Lighting.* There are three private companies which supply gas for public and private lighting within the metropolitan area of Sydney, viz., the Australian Gas Light Company, the North Shore Gas Company, and the Manly Gas, Light, and Coal Company. Returns for the North Shore Company are not available. Gas was first used for public lighting in Sydney in 1841.

The following statement gives particulars of the supply of gas for lighting purposes (exclusive of the North Shore Company) for the year 1907:—

SYDNEY.—PUBLIC LIGHTING, GAS, 1907.

| | | | | |
|---------------------|----------|---------------|---------------------------|----------------|
| Coal used* | Tons | 206,319 | <i>Capital Cost</i> — | |
| Gas manufactured | cub. ft. | 2,319,498,000 | Land and buildings | ... £321,871 |

| | | | Total | ... £495,122 |
| | | | <i>Expenditure</i> | ... £372,370 |

* Including shale-oil equivalent to tons of coal.

(ii. *Electric Lighting.* In Sydney there are a number of electric light and power undertakings under the control of various authorities, viz., the Commissioners for Railways and Tramways, local authorities, and private companies.

(a) *Railways and Tramways Electric Power and Lighting Plants.* There are three central stations under the control of the Commissioners. The supply of current for public and private lighting is, however, only on a comparatively small scale, and is incidental to the business of the Railway Department or the maintenance of its buildings. The supply of current for motive power purposes is on a large scale, but is confined to public departments, of which the largest consumer is the Board of Water Supply and Sewerage, to whom current has been supplied since 1898. Among the services for which current is generated and supplied by the Commissioners are the following:—Tramways and tramway buildings, railway and tramway workshop motors, lighting Sydney station and yard, coal and grain elevators, sewerage pumping, operating swing bridges, lighting coaling wharves and other places. *The Ultimo Power House* is used chiefly for the supply of power to the city and to portion of the suburban tramway systems (see pp. 742-4 *ante*). The direct current plant consists of four generators of 850-kilowatt capacity, supplying current at 600 volts; the alternating current plant consists of four 1500-kilowatt generators and one 1500-kilowatt turbo-alternator, 3-phase system, 25 cycles, 6600 volts. The high-tension current is transformed to 375 volts 3-phase alternating current, which is converted to direct current at 600 volts by means of rotary converters. Current was first supplied in December, 1898. *The Bullock Island Electric Light Plant* has a capacity of 40 kilowatts (125 volt) direct current, and 150 kilowatts (3-phase, 50 cycles, 2000 volts) alternating current. *The Clyde Railway Yards Plant* has a capacity of 36 kilowatts direct current.

(b) *The City of Sydney Electricity Supply Undertaking* is under the control of the City Council. The central power house is in Pymont and the plant installed generates 3-phase alternating current, which is transmitted at 5000 volts to sub-stations. The total capacity of the generators is 3500 kilowatts. The current for lighting the centre portion of the city is converted at two sub-stations to continuous current at 240 and 480 volts on a three-wire network, and for lighting the outlying districts is transformed at other sub-stations for distribution on a four-wire 3-phase alternating current network of 240 and 415 volts, the periodicity being 50 complete cycles per second. The districts served comprise the city, Paddington, Oxford-street area, Glenmore-road area, Camperdown, Missenden-road and Bridge-road areas. There are altogether nearly 86 miles of feeders and distributors. Current was first supplied in July, 1904, since which time great progress has been made and electric lights have been installed in all the public parks and the more important streets and roads.

(c) *The Redfern Electrical Works* are operated by the Municipal Council of Redfern. The total capacity of the plant is 550 kilowatts (single phase, alternating current) at 1100 volts, which is transformed to 110 volts for lighting. Current was first supplied in 1892 for lighting, and in 1905 for motive purposes.

(d) *The Sydney Harbour Trust* run electric light stations at Circular Quay, Napoleon-street, and Cowper Wharf. The total capacity of the generators is 80 kilowatts; there are about eleven miles of overhead direct current cable and two miles of submarine cable. The district supplied comprises the Circular Quay, Darling Harbour, and Woolloomooloo. Current was first supplied in February, 1901.

- (e) *The Oxford Street Electric Lighting Station* is worked by a private company and has a capacity of 320 kilowatts. Direct current is generated and was first supplied in 1898.

The subjoined statement gives particulars, so far as available, for the year 1907. Particulars of works under the control of the Railway and Tramway Commissioners are not included in this statement.

SYDNEY ELECTRIC LIGHT STATIONS, 1907.*

| | | | | | |

* Exclusive of works under the control of the Commissioners for Railways and Tramways.
 † Exclusive of units supplied by the Redfern works. ‡ Exclusive of private lamps connected with City Council's supply.

14. **Fire Brigade Boards.**—Under the provisions of the Fire Brigades Act of 1902, which repealed the Act of 1884, a Metropolitan Fire Brigade Board and forty-one country boards have been established. The expense incurred in maintaining the metropolitan brigade is shared equally by the Government, the municipalities within the metropolitan area, and the various fire insurance companies. The country boards also are subsidised by the Government, the municipalities interested, and the insurance companies.

(i.) *The Metropolitan Fire Brigade Board* consists of six members, viz.—the chairman, appointed by the Government, and five elected members, one of whom is appointed by the Municipal Council of Sydney, one by the other municipalities within the proclaimed area, two by the fire insurance companies, and one by the volunteer fire companies. The municipalities contribute *pro rata* to the assessed value of ratable property in their respective districts, and the fire insurance companies proportionately to the net risks held on properties within the metropolitan district. During the year 1907 the marine insurance companies were for the first time required to contribute on account of the risks in connection with their marine policies. Sydney Harbour is outside the jurisdiction of the Board, but by an agreement entered into in October, 1905, between the Harbour Trust and the Fire Brigades Board it is provided that in all cases of fire occurring on board any vessel in the port, the Trust's brigade shall work under the direction of the superintendent of fire brigades. The Trust possesses two vessels fitted with fire-fighting appliances; these vessels are always under steam, and in readiness for any emergency. There are nineteen stations belonging to the metropolitan brigade, employing in all 192 firemen; telephones connected with these stations are placed in fire-alarm boxes in the important localities of the city and suburbs. At the end of the year 1907 there were 309 telephone fire alarms. There are also twenty-one volunteer fire companies within the metropolitan area, having 196 firemen on their rolls; these companies are registered at the offices of the Board and subject to the inspection and orders of the superintendent of the metropolitan brigade. During the year 1907 there were 757 fire alarms recorded by the Metropolitan Brigade; false alarms accounted for 108 calls, chimney fires 13, and other fires 636.

(ii.) *Receipts and Disbursements of Metropolitan Board with Total Amounts at Risk, 1902 to 1907.* The subjoined table shews the actual receipts and disbursements of the Metropolitan Board, and also the total amounts of risks held by the insurance companies within the metropolitan area for each year from 1902 to 1907, inclusive :—

SYDNEY METROPOLITAN FIRE BRIGADES BOARD.—RECEIPTS AND DISBURSEMENTS, ALSO TOTAL AMOUNTS AT RISK, 1902 to 1907.

| 1907 ... | 15,650 | 15,646 | 15,700 | 2,722 | 49,718 | 50,193 | 86,563,300 |

(iii.) *Country Fire Brigade Boards.* Forty-one country Boards have been established under the Act. These Boards are entitled to receive subsidies from the Government. Owing to an ambiguous clause in the statute the insurance companies and municipalities do not always consider themselves called upon to contribute to the expense of maintenance of the brigades as defined by the Act. In addition to the Boards constituted under the Act there were at the end of the year 1906 seventy-six country fire brigades in existence, towards the support of which the several municipalities generally contribute. In many country districts volunteer fire brigades have been established for the purpose of dealing with bush fires.

15. **Sydney Harbour Trust.**—The establishment of this Trust was the direct outcome of the outbreak of bubonic plague in the port of Sydney in the early part of the year 1900. It was proved that this disease was due to the introduction of plague-stricken rats in vessels arriving from ports in which the disease had made its appearance. As a consequence the whole of the foreshores of the harbour, together with certain adjoining wharves, stores, dwelling houses, and other properties, were vested in a body of trustees. The Trust was established by an Act which came into force on the 11th February, 1901. Under this Act an independent body of three Commissioners was created for the purpose of administering the affairs of the harbour and of fostering its interests, each commissioner being entitled to hold office for seven years, subject to certain conditions. This Board of Commissioners is invested with the exclusive control of the port and shipping, lighthouses, beacons, buoys, wharves, and docks (with the exception of wharves and docks constructed on land which has been alienated from the Crown), in Sydney Harbour, and is empowered to levy certain tolls, dues, rates, rents, and charges, and to resume or purchase lands and buildings. Prior to the establishment of the Trust, the extensive foreshores of the port offered opportunities to private individuals of acquiring water frontages, which enabled them to participate in the revenue to be derived from the wharfage and tonnage rates as prescribed by the various Acts. This alienation of the water frontages was in return for comparatively small payments. In effect this deprived the Crown of an annual revenue which, under other circumstances, might have been applied to the maintenance of the port. One of the greatest changes made by the Sydney Harbour Trust Act was the alteration of the basis upon which wharfage is charged, so that goods which do not use the wharf, but are lightered overside, are subject to wharfage. The Act embodied the wharfage schedule appended to the Wharfage and Tonnage Rates Act of 1880, by which the inward rates were fixed at one shilling and eightpence per ton, and the outward at tenpence; but it did not provide for any reduced rate for transhipment goods arriving from oversea as had previously been allowed,

although it gave the Commissioners power to make or to recommend certain exemptions and to increase the inward wharfage to three shillings per ton measurement, or to four shillings per ton dead-weight. During the year 1901 the Commissioners recommended the Government to increase the inward rates to two shillings and sixpence per ton and to abolish outward wharfage, and these recommendations were duly endorsed by the Executive Council. Liberal concessions were also made with regard to transhipment goods arriving from overseas. All goods produced or manufactured within the State of New South Wales were exempt from wharfage rates until the Sydney Harbour Rates Act 1904 was passed. Under this Act a schedule of wharfage charges was provided for, a small charge of fivepence per ton being imposed on all goods transhipped; important amendments were also made in the old tonnage rates charges (which had been in existence since 1880), with the result that many vessels which previously escaped payment have now to pay a fair charge for the use made of the wharfage accommodation provided by the Trust. Considerable improvements have been made by the Commissioners in the wharfage accommodation of the port and in the sanitary condition of the area vested in the Trust by the construction of new jetties, sheds, offices, and waiting rooms; by dredging and by preventing the pollution of the waters of the port; by opening up new roads; and by taking means to prevent rats and other vermin from finding a harbourage in the produce stores and in the vicinity of the wharves.

(i.) *Revenue, Expenditure, and Capital Cost.* The subjoined table gives particulars of the revenue and expenditure of the Trust, and also shews the total capital debt for properties, etc., vested in the Commissioners, the amount of interest payable on the debt, and the balance of revenue after deducting expenditure, interest, and the amount of the Commissioners' salaries.

**SYDNEY HARBOUR TRUST.—REVENUE, EXPENDITURE, CAPITAL DEBT, INTEREST,

* For the period from 11th February to the 30th June, 1901. † Not determined until the year 1904. ‡ The amount of interest has been computed by taking the rate of interest on the total capital debt of the State. § After deducting expenditure, interest, and also £4000 per annum for Commissioners' salaries. || Represents a loss.

The revenue for the year 1907-8 shews an increase of £29,583, equal to 9.95 per cent., and is the highest attained since the formation of the Trust. After allowing for Commissioners' salaries, etc., the net revenue was £236,491, which is equivalent to a return of £4 12s. per cent. on the interest-bearing portion of the capital debt, namely, £5,145,324.

(ii.) *Dredging and Towing.* The subjoined statement gives particulars of the dredging and towing done by the five dredges and the six tug boats owned by the Trust:—

GRAPHS SHEWING CONSUMPTION OF WATER IN METROPOLITAN AREAS.—
MELBOURNE, SYDNEY, BRISBANE, AND PERTH, 1897 TO 1908.

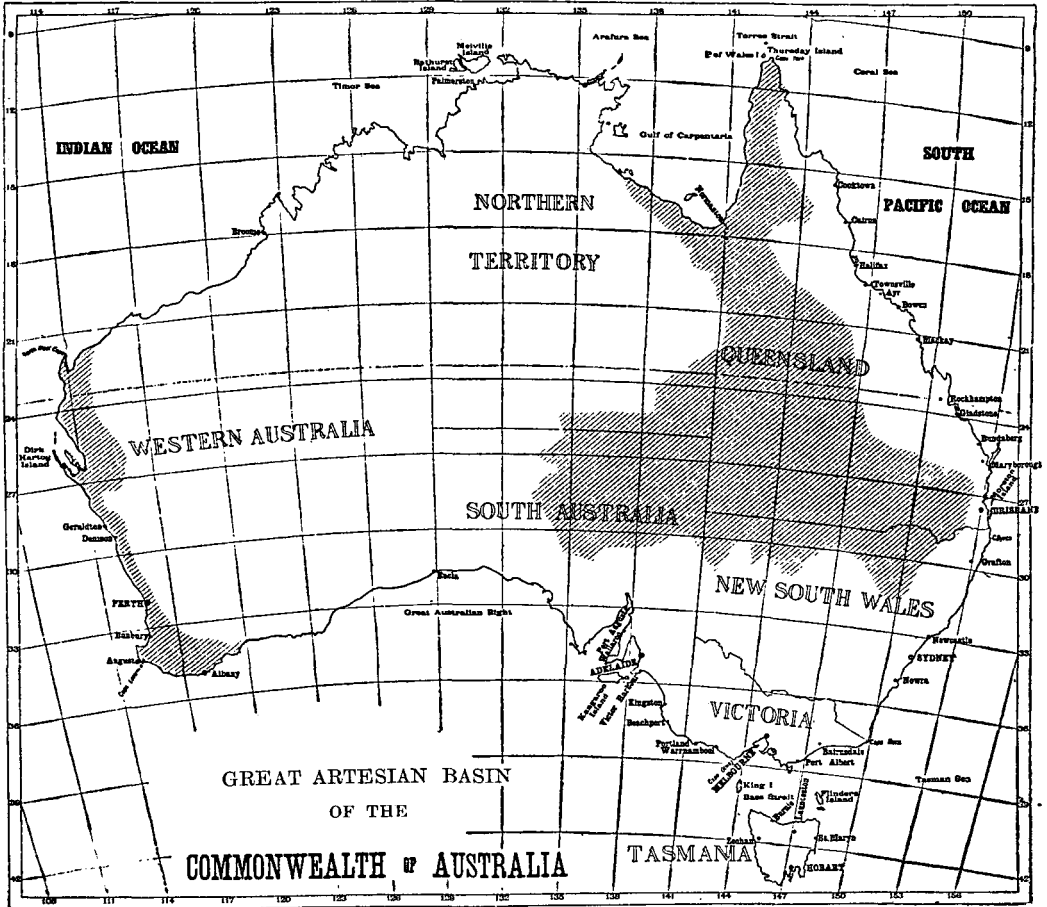

EXPLANATION OF GRAPHS.—No. 1.—Total annual consumption of water in metropolitan area, 1897 to periods shown on graph. In the Adelaide water districts there are no governing meters; the quantities shown are as recorded by gaugings taken at the reservoirs and include evaporation and absorption. The base of each small rectangle represents an interval of one year, and the vertical height represents 400,000,000 gallons.

No. 2.—Average daily consumption of water in metropolitan area during each month of the year. (Mean of period 1897 to 1908.) The base of each small rectangle represents an interval of one month, and the vertical height represents 2,000,000 gallons.

No. 3.—Average daily consumption of water per head of population in metropolitan area, 1897 to 1908. The base of each small rectangle represents an interval of one year, and the vertical height represents 4 gallons.

No. 4.—Average daily consumption of water per head of population in metropolitan area during each month of the year. (Mean of period 1897 to 1903.) The base of each small rectangle represents an interval of one month, and the vertical height represents 4 gallons.

MAP SHEWING THE POSITION AND EXTENT OF THE "GREAT AUSTRALIAN ARTESIAN BASIN."

The area occupied by this basin, coloured chocolate on map, is approximately 644,000 square miles, of which 376,000 square miles are in Queensland, 110,000 square miles in South Australia, 83,000 square miles in New South Wales, and 75,000 square miles in Western Australia.

§ 3. Victoria.

1. **Development of Types of Local Authorities.**—In Victoria there are now two types of municipal institutions, (a) boroughs, including cities and towns, and (b) shires, and although they are now dealt with by the same Act their origin was distinct, and in the early days of their development they were provided for by independent enactments. Melbourne and Geelong, the latter of which was for many years the second largest town in the State, having been incorporated under special statutes prior to the establishment of a general system of local government, are not subject to the provisions of the Local Government Acts except in a few comparatively unimportant details. Melbourne was incorporated as a town in 1842, and as a city in 1847; Geelong was incorporated as a town in 1849.

(i.) *Institution of Road Districts.* The Imperial Act of 1842, under which the Governor of New South Wales was authorised to form districts for the purpose of self-government, has already been referred to. This Act was succeeded by the Act of 1850, under which the district of Port Phillip was separated from New South Wales, and which provided that the proclamation of districts (under the Act of 1842) which had not been followed by an election of councillors should be void, and where councillors had been elected the Letters Patent forming such districts could be revoked by petition. For the future such districts were only to be incorporated upon petition of the inhabitants to the Governor, who was authorised to establish elective district councils, with power to frame by-laws for making and maintaining roads and bridges, establishing schools, and levying local tolls and rates. The necessity for a more comprehensive scheme of local government soon became apparent, owing to the increase of settlement on the land which followed the excitement of the gold rush, and in 1852 two committees of the Legislative Council were appointed, one to enquire into the operations of district councils which had been established, the other to report generally upon the condition of the roads and bridges in the State, and as to how the funds for their construction and maintenance could be best expended. The report of the latter committee was of considerable value, because it formed the basis of the first Victorian Act which provided a scheme for the local government of country districts, namely the Roads Act of 1853. Under this Act a distinction was made between main roads and parish or cross roads. The Governor was authorised to declare any part of the colony to be a road district; main roads were placed under the

care of a central Road Board with an Inspector-General and staff, while parish roads were to be made and maintained by the district councils, who were empowered to levy rates for the purpose.

(ii.) *Establishment of Shires and Extinction of Road Districts.* The Act of 1853 continued in force for ten years, when it was repealed, and its provisions amended and consolidated in the Road Districts and Shires Act 1863. By this Act the central Road Board was abolished, and the establishment of shires and shire councils was authorised. Any district having an area of not less than 100 square miles and a revenue from general rates of not less than £1000 might be incorporated as a shire, the duties and powers of which were the same as those of the districts, but additional privileges, such as power to raise loans and to grant licenses, were conferred upon the shires. Provision was also made for the regulation of the proceedings of shire councils, the preparation of voters' lists, elections, accounts, revenue, rates, auditors, and other matters, and these provisions have been substantially continued in later Acts. The result of the Act of 1863 was that the road districts were gradually developed into or were absorbed by the shires, and the next important measure which was passed, the Shires Statute Act of 1869, recognised only the latter, and with respect to shires retained the principal features of the preceding Act.

(iii.) *Constitution of Urban Municipal Districts and Boroughs.* In the meantime suburban districts and country towns were growing up, and in the year 1854 an Act was passed for the establishment of municipal boroughs in Victoria. Provision was made whereby any district having an area of not more than nine square miles, no part of which was more than six miles from any other part, and having a population of not less than 300, might, on petition, be constituted a municipal district. This Act, which thus originated those municipalities now known as boroughs (including cities and towns), was amended and repealed by the Municipal Institutions Consolidating and Amendment Act 1863, which re-enacted the principal features of the previous Act. These features are practically the same as those which now prevail with regard to boroughs. The Act of 1863 was in turn amended from time to time, and the law relating to boroughs was consolidated in 1869 by the Boroughs Statute Act.

(iv.) *Legislation applying to all Types of Municipalities.* Both the Shires Statute Act and the Boroughs Statute Act of 1869 were repealed and their provisions amended and consolidated by the Local Government Act 1874, which, after further improvements and extensions, was in turn consolidated by the Local Government Act 1890, which was itself amended from time to time. In 1899 a select committee of the Legislative Assembly was appointed to enquire into and to report upon the working of the Act of 1890 and to suggest amendments required in the law relating to local government. This committee was subsequently constituted a Royal Commission, and in 1902 issued a report to which was appended the draft bill which became the Local Government Act 1903, the provisions of which now regulate the working of municipalities in the State.

2. Local Government Systems now in Operation.—Local government is now administered under the Act of 1903 throughout the whole of the State, with the exception of about 600 square miles in the mountainous parts of the county of Wonnangatta, and the whole of French Island.

(i.) *Constitution of Municipalities.* Provision is made for the continuation of municipalities established under previous Acts and for the constitution of new ones.

- (a) *Shires.* Any part of the State containing ratable property yielding, upon a rate not exceeding one shilling in the pound, a sum of £1500 may be constituted a shire upon petition of at least fifty inhabitants.
- (b) *Boroughs.* Any part of the State, not exceeding in area nine square miles, and having no point distant more than six miles from any other point, and containing a population of not less than 500 and ratable property yielding, upon

a rate not exceeding one shilling in the pound, a sum of £300, may be constituted a borough upon petition of at least 250 resident householders. Any borough having during the preceding financial year a revenue of £10,000 may be declared a town, or having a revenue of £20,000 may be declared a city upon petition under the common seal of such borough. Provision is also made for severing any part of a municipality and annexing the same to an adjoining municipality; for dividing municipalities into any number of subdivisions not exceeding eight; and for uniting two or more boroughs which form one continuous area so as to form one borough.

(c) *Townships.* Upon petition signed by not less than twenty-five ratepayers resident in any portion not exceeding three square miles in extent of any shire and distant more than ten miles from the boundaries of the city of Melbourne, the Governor may with the consent of the municipal council proclaim such portion a township.

(ii.) *The Municipal Council.* It is provided by the Act of 1903 that, in the case of existing municipalities, the council shall consist of the number of members assigned to it at the commencement of the Act, but, when the number of members is determined under the Act, such number shall be, in case the district is not subdivided, some multiple of three, not less than six nor more than twenty-four, and, in case such district is subdivided, the number produced by the return of three councillors for every subdivision. Every person liable to be rated in respect of property in the municipal district of the ratable value of £20 at the least is qualified to hold the office of councillor in any municipality, provided that no female, nor any undischarged bankrupt, nor a person attainted of treason or convicted of felony shall be so qualified. Other persons may also be disqualified on the ground of interest. Provision is made for the retirement of one-third of the councillors annually in rotation, and for the election and privileges of the chairman, who is styled the mayor of a borough and the president of a shire.

(ii.) *The Municipal Electorate.* Every person who on the 10th June in any year has attained the age of twenty-one years, and is liable to be rated in respect of property within a municipal district, in respect of which all rates made before the 10th March of the year have been paid, is entitled to be enrolled as a voter, but no person may be enrolled in respect of property rated under £5 a year, unless there is a house on the property, and he resides there. The occupier and the owner of any ratable property may not be both enrolled in respect thereof, the former having the right to be enrolled instead of the latter. Corporations liable to be rated may appoint not more than three persons to be enrolled in their place. Joint occupiers and owners, not exceeding three, are each entitled to be enrolled, and in case more than three persons are rated in respect of any property, those whose names stand first in order upon the rate last made or upon the last valuation and return are so entitled. All persons who are not entitled to be enrolled by reason solely of non-payment of rates may be placed on a separate voters' list, and for the purpose of enabling them to vote at elections of members for the State Parliament they may be included in the rolls of ratepaying electors therefor if duly qualified in other respects. Plurality of votes is allowed on the scale shewn in the following statement:—

VICTORIA.—PROPERTY QUALIFICATIONS FOR ENROLMENT AS MUNICIPAL VOTER.

| Number of Votes. | Annual Ratable Value of Property. | |
|------------------|--|------------------|
| | Boroughs (including Cities and Towns). | Shires. |
| 1 | Under £50. | Under £25. |
| 2 | From £50 to £100. | From £25 to £75. |
| 3 | £100 and upwards. | £75 and upwards. |

Voters' lists are prepared annually by collectors appointed for the purpose; provision is made for the revision of the lists, for the time and place of holding elections, for the nomination of candidates, for the application of the Voting by Post Act 1900; for the appointment of officers, and for the meetings and proceedings of councils.

(iv.) *Powers and Functions of Councils.* Municipal councils are empowered to make by-laws for a great number and variety of purposes, of which the most important are as follow:—The control and regulation of roads and streets, buildings, wharves, and public places, of nuisances, passenger vehicles, carters, boatmen, and porters; the regulation and maintenance of water-supply, sewerage, drainage, and lighting; the establishment and control of fairs and public sales, labour marts and offices; the preservation and management of commons and public reserves; the regulation of traffic and hoardings; the public health and the prevention of contagious or infectious diseases, and generally for maintaining the good rule and government of the municipality. Councils are authorised to undertake the supply of light, heat, or motive power for public or private purposes; they may construct and maintain tanks, dams, and reservoirs, and may provide public baths, markets, weigh-bridges, pounds, abattoirs, places of public recreation, and charitable institutions. One of the principal functions of the councils is to construct and maintain public highways, streets, bridges, ferries, and jetties within their respective localities. At the request of the council the provisions of the Act as to the maximum weight which it is permissible to carry on vehicles on any public road within the municipality may be made to apply by proclamation.

(v.) *Ratable Property.* All land, including buildings and improvements thereon, within a municipality, is ratable property, except the following:—Crown lands unoccupied or used for public purposes; land used exclusively for commons, mines, public worship, mechanics' institutes, public libraries, cemeteries, free primary schools, and charitable purposes; land vested in, in the occupation of, held in trust for, or under the control of any municipality, local governing body, or commissioners under the Rates Act; land vested in the Railway Commissioners, in the Minister of Public Instruction, in the Board of Land and Works, in the Commissioners of the Melbourne Harbour Trust, and in the Melbourne and Metropolitan Board of Works. The valuation of all property is computed at its net annual value, that is to say, at the rent at which the same might reasonably be expected to let from year to year, free of all usual tenants' rates, taxes, and cost of insurance, but no ratable property may be computed as of an annual value of less than 5 per cent. upon the fair capital value of the fee-simple thereof.

(vi.) *Rates.* The municipal councils are empowered to levy rates, which, together with grants and subsidies received from the Government, license fees, market dues, rents, tolls, and sanitary charges, form their chief sources of income. The rates which may be levied are of three kinds, namely—general, extra and separate rates.

(a) *General Rates* are levied at least once in every year, and must not exceed two shillings and sixpence in the pound of the net annual value, nor be less than sixpence in the pound of such value. Every general rate must be made for one year or half a year or such other period less than a year, but not less than three months, as the council thinks fit, and must be levied on the occupier of the property rated, or if there be no occupier, or if the occupier be the Crown or the Minister of Public Instruction, or a public or local body, then upon the owner of the property.

(b) *Extra Rates* may be levied in any municipal district which is subdivided equally in respect of all the ratable property within any one or more of the subdivisions, but cannot be levied except in accordance with the requisition of not less than two-thirds of the councillors returned by such sub-division. The amount of general and extra rates levied in any year must not exceed two shillings and sixpence in the pound of the net annual value.

- c) *Separate Rates* may be levied where it appears to the council that any works or undertakings authorised by the Act are for the special benefit of any particular portion of the municipal district, but may be made only upon petition signed by a majority of the occupiers and by at least one-third of the owners of the properties affected, and must be confirmed by order of the Governor-in-Council. Separate rates may be levied equally on all properties affected, or may be differential according to the benefits to be received by different properties, and the amount of the rate must be such as will, in the opinion of the council, suffice to provide for the payment of interest and periodical repayments of, or sinking fund for, the money borrowed on the security of such rate.

(vii.) *Borrowing Powers.* The council of every municipality may borrow money upon the credit of such municipality by the sale of debentures, either for the purpose of liquidating previous loans or for the purpose of constructing certain specified permanent works or undertakings, such as the construction, alteration, or enlargement of streets, roads, bridges, ferries, sewers, and drains; the construction and purchase of waterworks, electric light or gas works, abattoirs, markets, baths, pleasure grounds, libraries, museums, and places of public resort and recreation; the establishment of hospitals, asylums, and other buildings for charitable purposes; the destruction and disposal of refuse, and the purchase of land or any easement, term, right, or privilege in, over, or affecting land. The amount of money so borrowed at any time for permanent works must not exceed ten times the average income of the municipality for the three preceding years, and the amount borrowed in the case of any municipality already indebted must not exceed the difference obtained by subtracting from ten times such average income the balance remaining unpaid of any previous loans. The question as to whether any loan for the purpose of permanent works shall be incurred must be submitted to a poll of the ratepayers upon demand signed by any twenty persons whose names are inscribed on the municipal roll. The council of any municipality may, in addition to the borrowing powers mentioned above, borrow money for permanent works or undertakings on the security of its income, but not upon the credit of the municipality, by the issue of debentures or by a mortgage over such income. The amount of money so borrowed must not at any time exceed five times the average income of the municipality for the three preceding years. The income referred to does not include moneys derived from general, separate, or extra rates, special improvement charges, publicans' licenses, or endowment from the consolidated revenue fund. Temporary advances by way of overdraft of the current account may also be obtained, but must not at any time exceed one-half the prior year's revenue.

(viii.) *Endowment.* Under the Local Government Act 1874 an annual endowment of £310,000 was provided for the municipalities. This amount ceased to be payable in 1879, but a subsidy, amounting to £310,000, was voted by Parliament annually, and was increased year by year, until £450,000 was granted in 1889-90 and 1890-91. The Local Government Act 1891 authorised the payment of an annual endowment of £450,000, but this amount was reduced year by year to £50,000 in 1902, but was increased to £75,000 for the year 1906-7, and to £100,000 from the 1st July, 1907. For the purpose of distributing the endowment the shires are classified. Under the Municipal Endowment and Reclassification of Shires Act 1907, a new classification was adopted under which the amount of the endowment is to be allocated. In addition to the endowment of £75,000 (increased to £100,000 from the 1st July, 1907) the municipalities received from the Government during the financial year 1906-7 a sum of £87,804 out of the Licensing Act Fund as the equivalent for (a) fees for licenses, (b) fees for the registration of brewers and spirit merchants, and (c) fines, penalties, and forfeitures incurred under the Licensing Act 1876. Under the Act of 1907 the endowment of £100,000 is payable in equal moieties in March and September of each year. No city or town is entitled to receive any part of the endowment. The distribution

amongst the boroughs and shires is based on the amount of general and extra rates received in the twelve months ending on the preceding 30th September according to the following scale:—

VICTORIA.—ENDOWMENT OF BOROUGHS AND SHIRES, 1907-8.

| | |
|---|--|
| To every Borough or 1st Class Shire, 3s. in the £ | To every 4th Class Shire, 8s. in the £ |
| „ „ 2nd Class Shire 5s. „ „ | „ 5th „ 10s. „ „ |
| „ „ 3rd „ „ 6s. „ „ | „ 6th „ 12s. „ „ |

3. Boroughs and Shires.—Number, Population, and Value of Ratable Property, 1901 to 1908.—The following table shews the number of cities, towns, boroughs, and shires, their estimated population, the number of ratepayers and dwellings, and the value of ratable property for the years 1901 to 1908, inclusive:—

VICTORIA.—PARTICULARS OF MUNICIPALITIES, 1901 to 1908.

7. **The Melbourne and Metropolitan Board of Works.**—This Board was established by an Act passed at the end of the year 1890, and entered upon its duties in June, 1891. The Board consists of forty members, one of whom is a chairman elected every four years by the other members, the retiring chairman being eligible for re-election. Nine members are elected by the Melbourne City Council, four by the South Melbourne Council, three by the Prahran, two each by the Fitzroy, Richmond, St. Kilda, and Collingwood, and one each by the other suburban municipal councils. The district over which the Board exercises control consists of twenty cities, towns, and boroughs, and four shires, comprising a total area of 90,821 acres, and containing an estimated population on the 31st December, 1908, of 527,000. The waterworks for the supply of Melbourne and suburbs were originally carried out by the Government, which had for that purpose contracted loans amounting to £2,389,934; these works were vested in the Board in 1891. The primary object of the creation of the Board was not, however, to take over these works, but was to supply the long called for and pressing want of a sewerage system for the metropolis. The plans and estimates of the cost of the metropolitan sewerage were originally prepared by an expert civil engineer from England, and were furnished to the Board on its creation. The plan recommended by the designer and selected by the Board's engineer-in-chief was estimated to cost £5,030,000, but this plan was modified by the engineer-in-chief, with the concurrence and assistance of the Board, so as to reduce the estimated cost to £3,451,000, and plans were made and the work carried out accordingly. The original plan and estimate contemplated only the construction of the main sewers, but this was altered by Parliament, which added the duty of constructing branch sewers and of treating right-of-ways as streets and sewerage them likewise, an obligation which added considerably to the original estimate. To carry out its work the Board is authorised to borrow £8,750,000, exclusive of the loans contracted by the Government for the purpose of waterworks and taken over by the Board. The liability on Government loans on the 30th June, 1908, was £1,688,663, and for loans raised by the Board was £8,251,000. The Board is still empowered to borrow £1,000,271 before reaching the limit of its borrowing powers.

(i.) *Total Cost of Water Supply and Sewerage, 1853 to 1907-8.* The subjoined table shows the total expenditure on construction and maintenance of water supply and sewerage from 1853 to 1908. The figures given include proportion of salaries, law costs, advertising, travelling expenses, etc.:—

* Excess of Stock Distribution over Purchases.

8. *Melbourne Metropolitan Water Supply.*—From the year 1835 to 1857 the inhabitants of Melbourne depended for their water supply entirely upon rainwater caught in tanks, or upon water carts filled from the River Yarra above the falls. In 1848 the city council appointed a committee to enquire into and report generally upon the water supply and sewerage of the city; this committee recommended that a comprehensive system of sewerage should be carried out, and a rate levied for that purpose; the stringent enforcement of provisions as to slaughtering stock and as to the removal of refuse; that the space between Melbourne and the beach be cleared so as to allow the free access of pure sea air; that a Building Act should be passed and that the streets should henceforth be formed of a uniform width. Most of these recommendations were carried out. A Building Act was passed in 1849, and the filthy lanes in the city were formed and drained. In 1845 the first proposal was made to supply the city with water, by means of a water-wheel to be worked by the Yarra Falls. Five years later a small steam engine was erected to pump water into a tank situated in Flinders Street, from which water was drawn by carts, and in 1851 an elaborate report was issued by the city surveyor, recommending a plan for the city water supply which was soon afterwards adopted. The source from which it was proposed to conserve the water for the supply of Melbourne consisted of several creeks and springs which flow from Mount Disappointment, about thirty-two miles north of the metropolis, and which when united form the Plenty River; this scheme was adopted and has resulted in the Yan Yean Reservoir scheme. In 1853 the duty of supplying water to the metropolis was transferred from the city council to the Commissioners of Sewers and Water Supply, and towards the end of the same year the work of construction of the Yan Yean system was commenced. On the 31st December, 1857, the first water was turned on by Major-General McArthur, acting for the Governor, Sir Henry Barkly, K.C.B.

(i.) *Development of System, 1857 to 1908.* The following statement shews the development which has taken place in the water supply system of Melbourne during the first fifty years since its inception:—

MELBOURNE WATER SUPPLY SYSTEM, 1857 to 1908.

| Year. | Served Population. | Capital Cost. | 1000 Gallons, Charge per— | Rate in £ | Mains & Pipes, Mileage of— | Supply in Gallons, Average daily |
|----------|--------------------|---------------|---------------------------|-----------|----------------------------|----------------------------------|
| 1857 ... | 95,442 | £ 748,974 | 10/- and 6/- | 1/- | 104 | 3,250,000 |
| 1908 ... | 527,000 | 3,826,447 | 1/- | 7d. | 1,305 | 31,559,830 |

(ii.) *Proposed Extensions.* The water supply committee of the Metropolitan Board of Works has also recommended the augmentation of the catchment area by permanently reserving two areas amounting in all to 140 square miles—the one comprising the Upper Yarra watershed, eighty-one square miles in area; the other comprising the O'Shanassy River district, fifty-nine square miles in extent. A second service reservoir—having a capacity of 25,000,000 gallons—was completed at Preston in March, 1909, at a cost of £29,000.

(iv.) *Description of Water Supply Systems.* The water supply of Melbourne consists of two main systems—the Yan Yean and the Maroondah.

(a) *The Yan Yean System* is the main source of supply. It commences by collecting the water from the Silvery and Wallaby Creek valleys, to the north of Mount Disappointment, 2700 feet high, which forms one of the prominent heights of the main Dividing Range in Victoria. The waters of the Silvery Creek are brought by means of an aqueduct a little over eight miles long, constructed at a cost of £55,000, to a weir at the head of the Wallaby Creek aqueduct, which carries the combined waters of the two creeks for a distance of five and a quarter miles, and discharges over the crest of the Dividing Range at a height of 1694 feet above sea level, and then drops a height of 133 feet in 683 feet into Jack's Creek, one of the branches of the Plenty River. The Wallaby Creek aqueduct was constructed at a cost of £54,000. Its carrying capacity is 33,000,000 gallons a day, while the average daily flow of the combined Silvery and Wallaby Creeks is 12,000,000 gallons. From its drop into Jack's Creek the water follows the natural bed of the stream for about three miles to the Tourourrong reservoir, which is a small reservoir of about thirty-six acres in extent, and having a capacity of 60,000,000 gallons. From Tourourrong the clear water channel carries the water for a distance of four and three-quarter miles to the old Plenty inlet channel of the Yan Yean reservoir. This channel is 13 feet 6 inches wide and 4 feet 6 inches deep, the section being a quadrant of a circle of 4 feet 9 inches radius, with one to one side slopes. The fall of this channel is 7 feet 6 inches to the mile, with a carrying capacity of 12,000,000 gallons per day, constructed at a cost of £68,000. In it there are waterfalls, the heaviest of which is 17 feet. The water from the old Plenty channel enters the Yan Yean reservoir through a spur, forming its western bank, by means of a tunnel 1000 feet long. The Yan Yean reservoir, which is twenty-two miles from the city, is formed by the construction of an earthen bank 49 chains long, 30 feet high, 20 feet wide on top, with a slope next the water of three to one, and an outside slope of two to one. The bywash is five feet below the top of the embankment, at a level of 602 feet above low-water mark in Hobson's Bay. The reservoir, when full, covers an area of 1360 acres, with a maximum depth of 26 feet, and an average depth of 18 feet. Its total capacity is 6,400,000,000 gallons, of which 5,400,000,000 gallons are available for consumption. From the Yan Yean reservoir to the Pipe Head dam at Morang, a distance of seven miles, an open aqueduct capable of delivering 33,000,000 gallons a day has been constructed. From the Morang reservoir, the bywash of which is 485 feet above sea level, a 30-inch cast-iron main, 27-inch cast-iron and a 30-inch wrought-iron main carry the water a distance of seven miles to the storage reservoir within the metropolitan area, at Preston. The No. 1 Preston reservoir is constructed partly in excavation and partly in bank; it is 20 feet deep, and holds 16,000,000 gallons. The by-wash is 328 feet above the sea level, and the cost was £11,000. This is the main distributing reservoir of the central city supply.

(b) *Maroondah System.* The water for this system is obtained from the Maroondah River, a tributary of the Yarra. The waters of the Graceburn are picked up by a small weir 686 feet above sea level, and carried for a distance of three-quarters of a mile in a concrete-lined channel to a well near the main road leading from Healesville to Marysville. From this well an 18-inch wrought-iron pipe, one and a-quarter miles long, leads the water to the main Maroondah aqueduct. The completed Maroondah scheme involves a storage reservoir with a dam 105 feet high, calculated to store 2,000,000,000 gallons of water. This dam has not yet been constructed, as the natural flow of

the creeks, together with the storage in Yan Yean reservoir, has proved quite capable of providing all the water at present required for the metropolis. A temporary weir of Portland cement concrete has been constructed across the Maroondah River, from which point the water is led in an aqueduct forty-one miles long to the Preston reservoir, where it joins the water from the Yan Yean system. The channel, owing to recent improvements, is now capable of delivering 32,000,000 gallons daily, the cross section being a quadrant of three feet ten inches radius with one to one slopes and a fall of one foot to the mile. The valleys are crossed by wrought-iron syphons, and with the exception of the Plenty River, which is crossed on a wrought-iron girder bridge, all the syphons are laid under the beds of streams. Each syphon is provided with a scour pipe large enough to take the full flow of the aqueduct, enabling the water to be directed down any of the natural water courses when it becomes necessary to empty any length of the aqueduct for cleansing purposes. A scour main from the Preston reservoir was completed early in 1909 at a cost of £5000.

- (c) *High Level System.* Besides the Yan Yean and Maroondah systems, the high levels of the eastern suburbs of Melbourne are provided for by a direct main from the Yan Yean reservoir. This main is thirty-two inches in diameter, constructed of wrought-iron plates from $\frac{1}{4}$ inch to $\frac{7}{16}$ inch thick, $20\frac{1}{2}$ miles long, and cost £190,000. The discharge is about 9,000,000 gallons per day. There is a storage reservoir of 9,000,000 gallons capacity at Surrey Hills, the by-wash of which is 430 feet above sea-level.

(v.) *Catchment Areas, Reservoirs, and Aqueducts.* (a) *Drainage Areas.* The whole of the catchment areas are absolutely free from population or cultivation. The Government pursued the policy of gradually purchasing all private rights over the various water-sheds, which policy the Board has carried on and completed; the original owners have been bought out, while the township of Fernshaw, in the Maroondah system, was entirely purchased and obliterated. The present drainage areas from which the water is delivered cover the following areas:—

MELBOURNE WATER SUPPLY.—CATCHMENT AREAS, 1908.

| | Silver and Wallaby Creeks. | Plenty River and Jack's Ck. | Yan Yean Reservoir Catchment. | Maroondah Catchment. | Total. |
|---------------|-------------------------------|--------------------------------|----------------------------------|-------------------------|--------|
| Area in acres | 12,000 | 12,000 | 5,000 | 40,000 | 69,000 |

All the water is delivered by gravitation, no pumping being required in any portion of the area supplied.

- (b) *Storage Reservoirs.* Within the metropolitan area there are seven service reservoirs having a total capacity of 48,000,000 gallons. From the Preston reservoir a number of service mains lead into the reticulation system of the metropolis. The total daily quantity of water which can be sent into Melbourne is as follows:—

MELBOURNE WATER SUPPLY.—MAXIMUM DAILY SUPPLY WHICH CAN BE DELIVERED.

| System. | Yan Yean. | Maroondah. | High Level Main. | Total Supply. |
|-----------------|----------------|------------|------------------|---------------|
| Gallons per day | ... 33,000,000 | 32,000,000 | 9,000,000 | 74,000,000 |

- (c) *Aqueducts.* Up to the 31st December, 1908, about 190 miles of 12 inch to 48 inch mains and 1035 miles of reticulation mains, below 12 inch, had been laid, in addition to which there were eighty miles of aqueducts and syphons, or a total length of aqueducts, mains, and reticulation pipes of 1305 miles.

(vi.) *Quantity of Water, Number of Houses, and Population Supplied, 1901 to 1908.* The following table gives various particulars shewing the increase in the supply of water in Melbourne and suburbs from 1901 to 1908, inclusive:—

MELBOURNE WATERWORKS—NUMBER OF HOUSES, POPULATION, AND WATER SUPPLIED, 1901 to 1908.

| Year Ended 30th June. | Number of Houses Supplied. | Estimated Population Supplied. | Average Daily Supply. | Total Supply for the Year. | Average Daily Supply. | | Rate Levied. | Assessments of Tenements Served by Metropolitan Water Supply. |
|-----------------------|----------------------------|--------------------------------|-----------------------|----------------------------|-----------------------|-----------------------------------|----------------|---|
| | | | | | Per House. | Per Head of Estimated Population. | | |
| | No. | No. | ,000 Gallons. | ,000 Gallons. | Gallons. | Gallons. | | £ |
| 1901 ... | 103,818 | 483,230 | 28,722 | 10,483,680 | 59.44 | 276.66 | } 6d. in the £ | 3,479,721 |
| 1902 ... | 103,951 | 492,230 | 30,038 | 10,983,945 | 61.02 | 288.96 | | 3,650,573 |

1. Works commenced in 1853. 2. Revenue commences in 1854. 3. Returns for expenditure commence in 1859. 4. First interest paid in 1856.

Graphs relating to the water supply of Melbourne may be found on page 999 hereinafore.

9. *Melbourne Sewerage.*—As stated above, the chief object of the creation of the Melbourne and Metropolitan Board was to carry out an efficient system of sewerage. Old Melbourne used to be a city of cesspits, and it was not until the latter sixties that these were abolished, filled up, and the movable pan system gradually adopted throughout the whole metropolitan area with night removal. The cost of removal in 1894 was about £90,000, equal to a capital expenditure of £1,750,000. This objectionable system has been displaced by the water carriage system throughout a large portion of the metropolis,

and in other parts the work of reticulation is now proceeding. A considerable part of central Melbourne is below the 10 foot contour and was originally full of swamps, which were sources of danger to the public health. All these swamps have now been filled up, and the abolition of the accumulations of stagnant water has effected a very great improvement in the health of the city and suburbs. The sewerage system is designed to carry off all water used in water closets, lavatories, baths, and urinals, together with all chamber slops and water used in cooking, washing clothes and floors, and from sinks in kitchens and sculleries, drainage from stables and cow houses, together with all liquid refuse, which in the opinion of the Board will not prejudicially affect the sewers, the machinery, or the sewage farm. Rainfall from the streets flows into the river and is not taken into the sewers, which are designed to provide for 30 cubic feet per head per day from the assumed future population, calculated on the basis of a population of 1,000,000 people ultimately settled on the areas now capable of being connected with the pumping station.

(i.) *Description of Sewerage Systems.* The whole of the sewage of the metropolis is being gradually collected by means of two principal main sewers leading to the pumping station at Spotswood. The first house was connected in August, 1897, and on the 31st December, 1908, a total number of 96,930 tenements had been connected, while at the same date 1156 tenements were in process of connection. The 4-inch and 6-inch reticulation sewers in the rights-of-way join the 9-inch street reticulation pipes, which are gradually collected into 12-inch, 15-inch, and 18-inch stoneware pipes, and then again into brick and concrete branch sewers which join the mains and sub-mains. On the 31st December, 1908, the sewerage system, including mains, had been laid in the following districts:—Port Melbourne, South Melbourne, Melbourne, Richmond, Prahran, and Fitzroy, and nearly the whole of Footscray, St. Kilda, and Collingwood. A large portion of Essendon, Caulfield, Malvern, Kew, Camberwell, Hawthorn, Brunswick, Williamstown, and Brighton has been dealt with. Work is now proceeding in Caulfield, Malvern, and Northcote, and a considerable portion still remains to be done in Williamstown, Essendon, Northcote, Brunswick, Camberwell, Kew, Hawthorn, Malvern, Caulfield, and Brighton. A small portion has also to be done in Collingwood and Fitzroy. The two main systems are:—

- (a) *The South Yarra System*, which provides for Brighton, Caulfield, St. Kilda, Malvern, Prahran, Hawthorn, Kew, Richmond, Collingwood, South Melbourne, and Melbourne, except Carlton; and
- (b) *The North Yarra System*, which provides for Heidelberg, Preston, Northcote, Coburg, Brunswick, Fitzroy, Carlton, North Melbourne, Essendon, and Footscray.

When collected at Spotswood the two systems are dealt with in separate buildings, and are arranged to be worked either separately or unitedly. The sewage enters the pumping station through straining wells, one of which is established on each system; the wells are 22 feet internal diameter, and each contains two straining cages, one of which is always in position. The solid matter caught in them is transferred to a drier in the building over the wells, where it is subject to steam pressure and consequently to a high temperature, which renders the material innocuous. The material from the drier is of no manurial value and is destroyed in a furnace. The sewage is raised by the pumps about 125 feet to the head of the outfall sewer, through about two and three-quarter miles of 6-foot and 4-foot wrought-iron rising mains, whence it gravitates to the Werribee sewage farm, a distance of $15\frac{3}{4}$ miles, through a partly-open and partly-closed channel eleven feet in diameter, with a fall of about two feet to the mile. The full capacity of this outfall sewer is 18,000 cubic feet a minute.

(ii.) *Metropolitan Sewage Farm.* The farm contains 8847 acres, situated on the western side of the Werribee River. The price paid for the land was £17 10s. per acre. About £282,000 has been spent on the property in perfecting the arrangements for the distribution of sewage. The cost of the farm to the 30th June, 1908, was £437,443. About

22,000,000 gallons of sewage have to be disposed of every twenty-four hours in irrigating the fields. It is spread over properly-prepared blocks of land by a series of mains and lateral carriers. The effluent, after filtering through the land, is discharged into Port Phillip Bay in a clear and transparent condition, all the sewage held in suspension being left in the soil. The main supply channels for carrying the sewage on to the fields are about ten chains apart, and a good system of open drains to carry off the surplus water is provided. Many of these drainage channels are ten feet to twelve feet wide at the top and seven feet deep, and through them the water drained off from the subsoil is constantly flowing to the bay. The prepared blocks on the farm are laid down with prairie grass and lucerne, on which sheep are depastured. During the financial year 1907-8, 56,573 sheep were bought, at a cost of £35,063, other expenses amounting to £6473. During the same period the total receipts from the sale of wool, skins, and 60,054 sheep amounted to £39,132. The loss on sheep for the year amounted to £6247.

(iii.) *House Connections.* The work of house connections with the sewerage system is carried out under a carefully prepared by-law. Under the Amending Act of 1897, after a property has been declared to be a sewered property, the owner has several options.

a) He may submit a plan of his house connections for approval, and on approval being given, may agree to carry out the work within one month. (b) He may submit a plan, which, if approved of, he may ask for an estimate of the cost of carrying out. This the Board is bound to supply, and then the owner may either carry out the work himself or ask the Board to carry out the work, which it must do for the estimated price, whether the work costs less or more. (c) On default of the owner the Board may carry out the work, and at the request of the owner accept payment by forty quarterly instalments, bearing interest on such portion as from time to time remains unpaid at the rate of 5 per cent.

(iv.) *Number of Houses Connected, Capital Cost, Revenue and Expenditure, 1901 to 1908.* The following table gives particulars as to the number of houses connected to the sewerage system, the total capital cost, and the receipts and disbursements during each year from 1901 to 1908, inclusive:—

MELBOURNE SEWERAGE WORKS.—TENEMENTS CONNECTED, CAPITAL COST, RECEIPTS AND DISBURSEMENTS, 1901 to 1908.

| Year ended the 30th June. | Number of Houses Connected. | Capital Cost. | Receipts. | | | Maintenance and Working Expenses. |
|---------------------------|-----------------------------|---------------|-------------|----------------------|---------|-----------------------------------|
| | | | From Rates. | From other Sources * | Total. | |

* Excluding revenue from sale of sheep and from interest.

10. *Water Supply in Country Towns.*—By the Water Act 1905, which came into operation on the 1st May, 1906, the control and management of all Irrigation Trusts, with one exception, and of a number of waterworks and water supply districts were centralised, and their works and property vested in the State Rivers and Water Supply Commission, to whom many of the duties of the Water Supply Department were also handed over. Further information with regard to this Commission and to the works and districts under its control are given in the section in this book dealing with Irrigation and Water Supply. There are, however, in different parts of Victoria a number of other waterworks which

are concerned chiefly with domestic supply, and which are controlled by local authorities, *i.e.*, by Waterworks Trusts or by municipal corporations. These works are constructed out of moneys either granted or lent by the general Government. The following gives particulars as to the waterworks under the control of Trusts and municipal corporations for each year from 1901 to 1907, inclusive :—

VICTORIA.—COUNTRY WATERWORKS UNDER TRUSTS AND MUNICIPAL CORPORATIONS, 1901 to 1907.

* Particulars as to the receipts and expenditure in respect of waterworks under the control of municipal corporations are not available. † Returns not available.

Under the provisions of the Local Government Act 1903 municipal councils are authorised to construct and maintain tanks, dams, and reservoirs, and must maintain existing works for the gratuitous supply of water. They are also empowered to accept the management and control of new waterworks within their respective localities, and may, with the consent of the Governor, construct or purchase new works within or without their locality. Councils are also authorised to enter into contracts for the supply of water for any period not exceeding ten years with the owners of any waterworks. Every municipality may levy a special water rate for water supplied, or for the purpose of constructing waterworks or paying the interest on any loan contracted by the council for such purpose, but the amount of the rate must not exceed in any year the sum of two shillings in the pound, provided that a minimum sum of ten shillings may be fixed by the council to be paid in respect of any property at which water is supplied.

(i.) *Geelong Waterworks Trust.* The Geelong Municipal Waterworks Act 1907 provided for the constitution of a Municipal Waterworks Trust for the supply of water to Geelong and district. In January, 1908, the works were transferred to the Trust from the control of the State Rivers and Water Supply Commission, the amount paid by the Trust to the State being £265,000, which was raised by loan. The capital cost of the works at the date of transfer was £442,322. The available storage capacity of the reservoir is 642,207,000 gallons. The Trust is authorised to supply water to (a) the town of Geelong, (b) the suburbs thereof, including all places within five miles of the Geelong Post Office, and (c) any place within ten miles on either side of the main pipe from Stoney Creek to Geelong.

11. Fire Brigades.—Under the Fire Brigades Act of 1890 a metropolitan fire district and nine country fire districts were established, the former being placed under the control of a Metropolitan Fire Brigades Board, and the latter under the control of a Country Fire Brigades Board.

(i.) *Metropolitan Fire Brigades Board.* The metropolitan fire district originally comprised the area included in the several municipalities within a radius of ten miles from the Melbourne General Post Office, but this area has since been extended in certain directions so as to include the greater part of the Shire of Moorabbin and also the township of Mordialloc. The Board is composed of nine members, of whom three are

appointed by the Governor-in-Council, three by the municipal councils, and three by the insurance companies. On the 31st December, 1907, the Board had under its control 50 stations, 176 permanent men, 166 auxiliary firemen, 10 steam fire engines, 2 gasolene engines, 2 chemical engines (1 motor), 1 petrol motor fire engine, 95,128 feet of hose, and 114 fire-alarm circuits having 139 fire-alarm points and 413 fire-alarm and telephone points. The total length of wire in use outside stations for fire alarms and telephones is about 290 miles. During the year 1907, 1590 calls were received; of these, 674 were accounted for by false alarms.

(ii.) *The Country Fire Brigades Board.* This Board consists of nine members, of whom three are appointed by the Governor-in-Council, two are elected by the municipal councils of the districts where there are brigades registered under the Board, two by the fire insurance companies, and two by the registered fire brigades. At the end of the year 1907 there were eighty-nine municipal councils and fifty-five insurance companies included in the operations of the Act. All the brigades are volunteer brigades, but in the large towns permanent station-keepers and watchmen are employed. There were about 99 registered brigades and 1991 firemen at the end of the year 1907. At the same date the plant consisted chiefly of 5 steam engines, 62 manual engines, 10 horse brakes, 61 apparatus carriages, 3 fire escapes, and about 145,000 feet of canvas hose.

(iii.) *Financial Operations of both Boards.* The following table gives particulars as to the financial operations of both Boards during each year from 1901 to 1907, inclusive :—

12. *The Melbourne Harbour Trust.*—This Trust was constituted under an Act passed in 1876, as a result of public agitation and demands extending over a period of thirty-four years, to the effect that the cost of landing goods should be reduced, and the

delays in receiving goods should be abolished. Both demands arose from the fact that vessels of a draught greater than twelve feet had to discharge in the bay into lighters.

(i.) *Constitution of the Trust.* The Harbour Trust Act was drafted on the lines of similar institutions in Great Britain, such as the Thames Conservancy, the Mersey Harbour Board, and the Clyde Trust. Under the Act of 1876, as amended in 1883, the number of Commissioners is fixed at seventeen, nominated or elected as follows:—Five were nominated by the Governor-in-Council, three elected by merchants, three by ship-owners, two were elected by the City Council, and one each by the ratepayers of South Melbourne, Port Melbourne, Williamstown, and Footscray. The sum of £1700 per annum was set aside for the remuneration of the Commissioners.

(ii.) *Works Undertaken by Trust in the River and in the Port.* In 1879 a report dealing with various propositions for the improvement of the port and harbour was issued by Sir John Coode, an English engineer, who had been engaged by the Commissioners for the purpose. This report, which recommended (i.) the cutting of a new channel through the flats to the south of Fishermen's Bend, (ii.) the construction of a dock, and (iii.) the widening and deepening of the channel in the river, was adopted by the Commissioners, who were empowered in 1883 to borrow the amount of £1,000,000 for the purpose of carrying out the necessary works. In 1890 a consolidating Act was passed, and the borrowing powers of the Trust were increased to £2,000,000. The river was widened from Queen's Bridge to the bay from about 140 to about 300 feet, while the depth has been gradually increased until at the present time it is twenty-six feet at low water.

(a) *The Coode Canal.* In 1886 the canal across the flats below Fishermen's Bend was completed at a cost of £96,000. The length of the canal is 2602 yards, the distance from Queen's Bridge to the river entrance being thereby reduced from seven miles to five and three-quarter miles, and the navigation being greatly facilitated. At the present time this channel, which is called the Coode Canal, is being widened 100 feet, which will make its total width 408 feet, and its width at low water 366 feet.

(b) *The Victoria Dock.* This dock, opened in 1892, has an area of ninety-six acres and a depth of twenty-six feet at low water. There are 9000 feet of wharfage, and the total cost, including wharfs, sheds, and approaches thereto, was £416,038. The sheds have a total length of 12,000 feet, and cover an area of 568,070 square feet.

(iii.) *Works in the Bay.* Prior to 1889 all the mail steamers and vessels of heavy draught had to lie at anchor in the bay, and there discharge into lighters. One of the first works undertaken by the Commissioners was to make the railway piers at Williamstown available to these vessels. This work was completed at a cost of £256,160. In 1893 a channel over 8000 feet long and 600 feet wide was constructed, running in a southerly direction from Port Melbourne Railway Pier and having a navigable depth of twenty-eight feet. The cost of this work was £218,379.

(iv.) *Dredging.* The total amount of material raised by the dredging and excavation done in the improvement of the river and bay and the method in which the material has been disposed of are as follows:—

| Material Dredged. | Cubic Yards. | Material Disposed of. | Cubic Yards. |
|------------------------------|--------------|-----------------------------|--------------|
| From river and Victoria dock | 23,379,572 | Landed for reclamation ... | 10,491,849 |
| From bay | 13,426,985 | Deposited in deep water ... | 26,314,708 |
| Total | 36,806,557 | Total | 36,806,557 |

During the past ten years the average cost of dredging per cubic yard was 2.11 pence, and the cost of towing and depositing 3.17 pence, not allowing for depreciation of plant. The Trust has expended £224,970 in reclaiming land within its jurisdiction. The amount of material raised annually is now about 1,200,000 cubic yards.

(v.) *Financial Operations.* The revenue of the Trust is obtained from wharfages and quayage rates, rents and license fees from lands and ferries, and other license fees. One-fifth of the revenue of the Trust is paid to the consolidated revenue of Victoria. The following table gives particulars of the revenue and expenditure of the Trust from 1901 to 1907, inclusive :—

MELBOURNE HARBOUR TRUST.—REVENUE AND EXPENDITURE, 1901 to 1907.

13. **Public Lighting in Melbourne.**—In Melbourne the public lighting is partly carried on by local authorities and partly by private companies. As far as records are available, it would appear that gas was first in use amongst private consumers in Melbourne in the early part of January, 1856, and that the streets of the city were first illuminated by gas on the 10th August, 1857.

(i.) *Gas Lighting.* In the metropolitan area there are four private companies which supply gas for public and private lighting. These are the Metropolitan, Brighton, Footscray, and Williamstown Companies. The Heidelberg Gasworks are owned and worked by the Heidelberg Shire Council.

(a) *The Metropolitan Gas Company* was formed in 1878 by the amalgamation of three companies under the Metropolitan Gas Company's Act 1878. The company is authorised to supply gas to all places within a radius of eight

miles of the Melbourne Post Office, exclusive of the municipal districts of Brighton, Footscray, and Williamstown. The gas supplied by the company is manufactured and stored at three stations at West Melbourne, South Melbourne, and Fitzroy, and in addition there are holder stations at North Melbourne, Richmond, St. Kilda, and Malvern. There are about 800 miles of mains, varying in diameter from 3 inches to 36 inches.

- (b) *The Footscray Gas Company* first supplied gas for both public and private purposes in 1878. The works were enlarged in 1888, and towards the end of the year 1908 were again in process of being enlarged and extended. The district over which the operations of the company extend is about four square miles.
- (c) *The Williamstown Gas Company* supplies the districts of Williamstown, Newport, and Spotswood. The holders have a storage capacity of 300,000 cubic feet, and there are about fifty miles of mains. Gas was first supplied in the year 1866, and in February, 1909, there were about 1500 consumers.
- (d) *The Heidelberg Gasworks*, owned and worked by the shire council, supply the Fairfield, Ivanhoe, and Heidelberg ridings, having an area of about eight square miles. Gas was first supplied in the year 1900. The mains have a total length of about twelve miles.

The subjoined statement gives particulars of gas lighting in Melbourne for the year 1907, exclusive of the Williamstown and Brighton gas works, for which particulars are not available :—

MELBOURNE.—PUBLIC LIGHTING, GAS WORKS, 1907.

| | | | | | |

* Including shale-oil equivalent in tons of coal.

(ii.) *Electric Lighting.* In Melbourne there are three central stations for the supply of current for electric light and power purposes. One of these, viz., the City of Melbourne Electric Supply Undertaking, is owned and worked by the City Council; the other two, viz., the Electric Lighting and Traction Company's works at Richmond and the North Melbourne Electric Tramways and Lighting Company's works at Ascot Vale, are run by private companies.

- (a) *The City Council's Electric Supply Undertaking* supplies an approximate area of eleven and three-quarter square miles, including the City of Melbourne, North Melbourne, West Melbourne, Carlton, East Melbourne, and South Yarra. The supply for public lighting was commenced in 1894 and for private lighting and power purposes in 1897. The generation is divided into two systems, viz., direct current 460-520 volts, 3-wire system of distribution to the central portion of the city, and alternating current, 4000-4400 volts, single phase 50 cycles, to supply the outlying districts. The total capacity of the direct current plant is 3850 kilowatts, and of the alternating

current generators is 1650 kilowatts; the latter include two 750-kilowatt British-Westinghouse turbo-alternators, which have recently been installed. The alternating current feeders terminate in seventeen brick sub-stations, in which are transformers for private light and power and also constant potential transformers for the street arc lighting. The system comprises forty-two miles of direct current cables underground, seventeen miles of alternating high tension cables underground, and about 200 miles of overhead cables. The number of customers has increased during the years 1901 to 1907 from 964 to 2512; during the same period the number of units sold per annum has increased from 3,508,000 to 6,260,000, and the total load connected (16 candle-power lamp equivalent) has increased from 51,526 to 121,028.

(b) *The Electric Lighting and Traction Company of Australia Ltd.* This company commenced operations in 1901, having amalgamated two existing undertakings. Alternating current, single phase system of 50 periods, is generated, the total capacity of the generators being 3675 kilowatts, including a Curtis turbo-alternator of 1000 kilowatts, and a Brush-Parsons turbo-alternator of 1500 kilowatts. The high tension distributors (4000 volts) deliver into about eighty sub-stations, and the secondary distributing system is carried out on the 3-wire system. The district supplied covers about forty-one square miles and comprises parts of Fitzroy, Collingwood, Kew, Richmond, Prahran, Malvern, Caulfield, St. Kilda, South Melbourne, and the Harbour Trust territory south of the Yarra. The supply is available in about eighty-four miles of streets.

(c) *The North Melbourne Electric Tramways and Lighting Company.* This company supplies current for lighting purposes in connection with the North Melbourne tramway undertaking. Direct current is generated at 460 and 230 volts, and is distributed on the 3-wire system. The total capacity of the generators is 750 kilowatts; there are six miles of mains and thirty-four miles of distributing line.

The following statement gives particulars for the year 1907 of the three undertakings referred to:—

MELBOURNE.—ELECTRIC LIGHT STATIONS, 1907.

§ 4. Queensland.

1. **Development of Local Government Systems.**—The first step in the direction of local government in Queensland was the incorporation of Brisbane as a municipality by proclamation on the 6th September, 1859, about three months prior to the separation of that State from New South Wales. The provisions of the Municipalities Act, which was passed in the mother colony in 1858, and which has already been referred to, applied to settlement in the Moreton Bay district, and were amended by an Act of the Queensland Government in 1861. Three years later the provisions of these two Acts were amended and consolidated, and authority was given for the incorporation as a municipality of any city or town, or of any rural district, on petition to the Governor signed by at least 100 resident householders. The duties and powers of the councils were extended and additional privileges were conferred under this Act.

(i.) *Inauguration of General System of Local Government.* Various amendments were made in the law from time to time, without, however, altering the main features of the Act of 1864, until the year 1878, when the Local Government Act was passed, amplifying the powers of municipalities, and providing for the incorporation of rural areas as shires. The provisions of this Act, which was adopted from the then new Local Government Act of Victoria, were found to be unsuited to the requirements of a large and sparsely populated country like Queensland, and were not applied to any new area. The Act was therefore only of practical value to a few of the existing municipalities. In 1879 the Divisional Boards Act was passed. This Act was intended to provide for local government outside the boundaries of municipalities, and was applied simultaneously by the Executive to about 660,000 square miles of territory; which was divided, by proclamation, into seventy-two divisions, some of them of immense area and carrying only a very small population. The Act provided for a free grant to any division equal to one shilling in the pound of the annual value, and also for endowment to the amount of £2 for every £1 of rates collected for a period of five years. In case of the failure of the people of any division to elect the first members of their Board, the appointments were made by the Governor-in-Council. On the 30th April, 1880, a Gazette was issued first announcing the names of the elected Boards, and then appointing the members of the nominated Boards.

In 1881 and 1887 the Divisional Boards Act was amended, and by a further amending Act, passed in 1890, the rates thenceforward were to be charged on the unimproved capital value of the land, and this system has since been retained. In 1896 a commission was appointed to enquire into the working of the Local Government Acts and to recommend amendments which might be considered desirable; a report subsequently sent in by this commission recommended that increased powers of local government should be granted in certain matters, and to the report was appended a draft bill which, with certain alterations and curtailments, became the Local Authorities Act of 1902, the provisions of which, together with the amendments in 1903 and 1905, now regulate generally the working of local areas within the State.

(ii.) *The Local Authorities Act 1902.* Considered generally this Act comprises the Local Government Act 1878, and amending Acts, together with the Divisional Boards Act of 1887, the Valuation and Rating Act of 1890, and the Local Authorities (Joint Action) Act of 1886. It does not, however, comprise all the statutes relating to the powers and duties of local authorities, for certain Acts, such as the Tramways Acts and the Health Acts, while conferring powers upon these bodies, deal also with other subjects,

and are in the nature of general Acts upon these subjects. The Act of 1902 contains a number of provisions enlarging the powers of local bodies and rendering their duties more explicit; thus the jurisdiction of councils with respect to roads, bridges, wharves, ferries, and reserves is amplified, and provision is inserted for putting under their control, when circumstances warrant it, such public lands as cemeteries, commons, foreshores, and the like. They have enlarged powers as to traffic, the eradication of noxious weeds, the reclamation of lands, the destruction and prevention of pests, the construction of buildings, the prevention of fires, and the control of places of public resort and amusement. They are empowered to establish works for lighting, etc., and to construct tramways in districts and under circumstances to which the existing Tramways Acts are not readily applicable. The proper execution of all these matters requires additional rating, and provision is made therefor in the Act.

2. **Systems of Local Government now in Operation.**—The principal features of previous enactments as to the division of the State into local areas are retained in the Act of 1902, but such areas in the future are to be of two classes—(a) towns and (b) shires. All municipalities formerly constituted as boroughs become towns, except Brisbane, Rockhampton, and Townsville, which are declared to be cities, and all shires and divisions become shires. The Governor-in-Council may, after giving notice in the *Gazette*, constitute, unite, divide, or abolish areas for the purpose of forming new areas, and may by proclamation constitute a town a city.

(i.) *The Municipal Council.* All local areas are governed by councils, the members of which are called aldermen in the case of towns and councillors in the case of shires. *Town councils* are composed of either seven, nine, or eleven members, as declared by Order-in-Council, but, if the town has wards, three members are assigned to each ward. *Shire councils* are composed of five, seven, or nine members, as declared by Order-in-Council, but, if the shire is divided, the number cannot be more than three for each division, and need not be the same for every division.

(ii.) *Qualification of Aldermen and Councillors.* Every male ratepayer of the age of twenty-one years, if a natural-born or naturalised subject, is qualified to be elected as a member of a council, unless he is an uncertificated insolvent, is undergoing imprisonment, is financially interested in any contract with the council, or is insane. Provision is made for the election of the mayor or chairman, and for the retirement of members by rotation. The first council of a newly constituted town is elected, but that of a newly constituted shire is appointed by the Governor-in-Council, unless otherwise directed by the order constituting the shire.

(iii.) *Qualification of Voters.* Generally every person of either sex of the age of twenty-one, who is a natural-born or a naturalised subject, and is rated as an occupier or owner of ratable land, is entitled to vote. The number of votes depends upon the value of the land in the following scale:—

MUNICIPALITIES.—PLURALITY OF VOTES.

| | | | | |
|-----------------|-----|-----------------|---------------------|--------------------|
| Value of land | ... | Less than £500. | From £500 to £1000. | £1000 and upwards. |
| Number of votes | ... | 1 | 2 | 3 |

In case of joint owners or occupiers, each is to be considered the owner or occupier of land of a value equal to that of the whole divided by the number of owners or occupiers not exceeding three. If more than three persons are joint owners or occupiers, those whose names stand first on the rate book or valuation or return are to be taken. Companies may nominate their secretaries, managers, or directors for the purpose of voting.

(iv.) *Powers and Duties of Councils.* Generally the council is charged with the construction, maintenance, and management of all roads, streets, bridges, culverts, ferries, wharves, jetties, and other necessary public works, and is invested with powers to acquire land and buildings in connection with a variety of public works and for a number of public purposes. The council also has general power to make by-laws with a view to the good government of the local area under its management. Authority is given to the councils to establish markets and weighbridges and to fix dues for the use of the same; to undertake the manufacture or supply of light or hydraulic or other power; to destroy noxious weeds; and to control the erection of new buildings and the repair of dangerous or neglected ones. The council may also make by-laws with respect to a multitude of matters mentioned with great particularity in a schedule to the Act, and may also exercise various powers conferred by a number of Acts, set forth in the second schedule, such as the Tramways Act 1882, the Water Authorities Act 1891, the Electric Light and Power Act 1896, and the Health Act 1900.

(v.) *Valuation.* All land is ratable except the following:—Crown land unoccupied or used for public purposes; land in the occupation of the Crown, but this does not include lands rented in towns by the Crown; land used for public purposes; commons; cemeteries; and land not exceeding in area fifty acres and used exclusively for public worship, educational purposes, an orphanage, or library. Generally the value is estimated at the fair average value of unimproved land of the same quality held in fee-simple in the same neighbourhood. In the case of land held under gold-mining lease, or under lease from the Crown, the value is deemed to be a sum equal to twenty times the annual rent.

(vi.) *Rates* are levied on the unimproved capital value, and are of two kinds, general and special. *The general rate* must not be greater than threepence in the pound, nor less than a halfpenny, while *special rates* must not exceed threepence in the pound, but this provision does not include separate rates, special water rates, loan rates, cleansing rates, or tramway rates. Special rates may be levied for the purpose of constructing and maintaining permanent works, while separate rates may be declared for defraying expenses incurred in the execution of a work for the special benefit of any particular part of the area. A special rate may also be levied for the administration of the Health Acts.

(vii.) *Loans.* Money may be borrowed by local authorities either from the central Government, from outside sources by means of debentures, or by way of overdraft of current account. (a) *Government Loans.* The total amount that may be advanced by the Treasury, inclusive of sums owing, may not exceed a sum equal to five times the then ordinary annual revenue of the local authority, except in the case of loans for reproductive undertakings, for which special arrangements may be made by application to the Governor-in-Council. Notice of a proposed loan must be published, and, if demand be made by any ratepayers, having in the aggregate twenty votes, a poll must be taken to decide whether the money shall be borrowed or not. (b) *Debentures.* A local authority may apply to the Governor-in-Council for permission to borrow money by the sale of debentures, but application must only be made after a resolution for borrowing the money has been adopted and confirmed, and after an opportunity has been given for the taking of a poll on the question, and (if a poll has been taken) when the result is in favour of the loan. (c) *Temporary loans* from banks may be made by way of overdraft of the current account, but no such overdraft may exceed the ordinary revenue of the local authority in the year then last past.

(viii.) *Tramways.* Any ratepayers, having not less than one-third of all the votes of the ratepayers within any particular area, may by petition request the local authority to apply to the Governor-in-Council for the constitution of such area as a "tramway area."

After an opportunity for taking a poll on the question has been given, and (if a poll has been taken) when the result is in favour of the tramway, the petition may be granted by the Governor, who may authorise the issue of a Government loan for the purpose of constructing or purchasing the tramway. The total amount advanced for the purpose must not exceed £3000 for every mile constructed. As regards the repayment of tramway loans, the local authority may levy a tramway rate, and the provisions of the Local Works Loans Acts 1880 to 1889 are incorporated. Up to the end of the year 1907 tramways had been constructed under these provisions in seven shires, their total length being 161 miles. In some cases these lines are run by the Queensland Railway Commissioner on behalf of the constructing authority. Particulars as to the working of tramways run by local authorities are given in the section in this book on "Roads and Railways." (See pp. 736, 738-9, and 740 hereinbefore.)

3. Area, Population, Number of Dwellings, Rates, Assets and Liabilities of Cities, Towns, and Shires, 1903 to 1907.—The following table gives particulars of the area, population, number of inhabited tenements, assets and liabilities of cities and towns and of shires, for each year since the Act of 1902 came into operation:—

QUEENSLAND.—PARTICULARS OF CITIES AND TOWNS AND OF SHIRES,

1903 TO 1907.

| Year. | Municipality. | Area. | Population. | Number of Inhabited Dwellings. | Capital Value. | Assets. | Liabilities. | | |
|-------|------------------|---------|-------------|--------------------------------|----------------|-----------|-------------------|---------|-----------|
| | | | | | | | Government Loans. | Other. | Total. |
| 1903 | Cities and Towns | 361 | 207,334 | 39,077 | 14,546,208 | 1,261,850 | 338,192 | 632,394 | 970,586 |
| | Shires ... | 667,891 | 290,009 | 66,224 | 29,603,766 | 280,607 | 152,862 | 36,058 | 188,920 |
| | Total | 668,252 | 497,343 | 105,301 | 44,149,974 | 1,542,457 | 491,054 | 668,452 | 1,159,506 |
| 1904 | Cities and Towns | 354 | 222,397 | 41,931 | 14,865,198 | 1,252,764 | 309,713 | 634,674 | 944,387 |

5. Brisbane Water Supply.—The water supply of the city of Brisbane and suburbs is administered by a Board of five members, of whom the Secretary for Public Works for the time being is an *ex officio* member. The supply is derived from the upper reaches of the Brisbane River, and from two storage reservoirs, known respectively as the Enoggera and the Gold Creek reservoirs. For some years after the constitution of Brisbane as a municipality in 1859, the city supply was drawn from a chain of water-holes and sold to the residents. This scheme was later superseded by another under which water-carriers were licensed. Later, again, the Board of Water Supply was constituted, and the construction of the Enoggera reservoir by the damming of Ithaca Creek was commenced in 1864 and completed in August, 1866. This was followed in 1885 by the construction of the Gold Creek reservoir, which provided an improved service and better water. In April, 1892, the works at Mount Crosby, at the head of the Brisbane River, were completed. At these works the water is pumped to a reservoir 455 feet above Brisbane high-water mark, whence it is delivered to the city by gravitation. The water can also be diverted to Gold Creek, where the reservoir is kept filled, while a reservoir on Highgate Hill is also connected and fitted with aerating apparatus. The question of constructing an improved water supply system for Brisbane is now receiving attention.

(i.) *The Brisbane River Supply.* This is the principal source of supply, about 60 per cent. of the water used being taken from it. The catchment area above the pumping station is about 4000 square miles. The Mount Crosby service reservoir, into which the water is pumped from the river, is built in cement concrete, and is 267 feet long, 100 feet wide, and 15 feet deep from high-water line, which is 455 feet above high-water mark at Brisbane. The capacity is about 2,500,000 gallons. The outlet pipe is thirty-four inches in diameter, and leads through the valve-house to the gravitation main to

Brisbane, 17½ miles long and twenty-four inches in diameter. At Kenmore, eleven miles from Mount Crosby, a junction is effected between this 24-inch main and the 16-inch main from Gold Creek.

(ii.) *The Enoggera Reservoir.* The Enoggera are the oldest works now in use, and are distant from Brisbane about eight miles by road. The catchment area is nearly thirteen square miles in extent, and the reservoir, which is formed by an earthen dam, holds 1,000,000,000 gallons, of which 600,000,000 are available by gravitation. The greatest length of the reservoir is 2600 yards, and its greatest breadth 700 yards. There are three lines of pipes from the reservoir to Brisbane—sixteen inches, twelve inches, and eight inches in diameter. The total carrying capacity of these pipes is about 3,000,000 gallons a day.

(iii.) *The Gold Creek Reservoir.* This reservoir is situated in the upper waters of Gold Creek, a branch of Moggil Creek, distant from Brisbane by road about thirteen miles. The supply is drawn from a catchment area adjoining that of Enoggera, and comprising an area of nearly four square miles. The total capacity is about 406,000,000 gallons, of which 400,000,000 gallons are available. The diameter of the service main is sixteen inches, the distance from the valve house to Brisbane being 12½ miles. The greatest length of the reservoir is 1650 yards, and its greatest breadth 682 yards.

(iv.) *Highgate Hill Service Reservoir.* This reservoir was constructed in 1889 to supply parts of South Brisbane. Its capacity is 2,176,000 gallons. To fill this reservoir, and in order to ensure a good water supply to the south side generally, an inverted syphon, sixteen inches in diameter, was laid under the Brisbane River between Toowong and West End in 1889. The syphon is 800 feet long, and is connected both with the Mount Crosby and Gold Creek mains.

(v.) *Brisbane Waterworks: Cost, Revenue, Expenditure, and Interest, 1901 to 1907.* The subjoined table gives particulars as to the cost, the revenue and expenditure, and the amount of interest and loan redemption during each year from 1901 to 1907, inclusive:—

**BRISBANE WATERWORKS.—COST, REVENUE, EXPENDITURE, INTEREST AND
REDEMPTION OF LOANS, 1901 to 1907.**

| Year. | Capital Cost. | Revenue from Rates and Sales of Water. | Working Expenses. | New Work Construction. | Interest and Redemption of Loans. |
|-------------|---------------|--|-------------------|------------------------|-----------------------------------|
| | £ | £ | £ | £ | £ |
| 1901 | 694,973 | 60,120 | 17,462 | 7,535 | 42,426 |
| 1902 | 711,178 | 60,917 | 19,305 | 18,168 | 26,716 |
| 1903 | 727,311 | 62,435 | 18,917 | 17,429 | 26,716 |
| 1904 | 740,618 | 63,338 | 23,888 | 13,244 | 26,716 |
| 1905 | 751,477 | 65,584 | 25,606 | 10,860 | 26,716 |
| 1906 | 774,921 | 67,280 | 19,255 | 23,444 | 26,716 |
| 1907 | 792,264 | 69,709 | 20,025 | 17,343 | 26,716 |

* The book value of the works at the end of 1907 was £569,770, the difference being amounts written off for depreciation, losses through floods, or the removal of smaller mains.

(vi.) *Brisbane Waterworks: Length of Mains, Tenements and Population Served, and Water Consumption, 1901 to 1907.* The following table shews the length of mains, the number of tenements connected, the population supplied, the total quantity of water supplied, the average daily supply, and the average daily supply per head of population supplied during each year from 1901 to 1907, inclusive:—

BRISBANE WATERWORKS.—PARTICULARS, 1901 to 1907.

| Year. | Length of Reticulation Mains. | Number of Tenements Connected. | Estimated Population Supplied. | Quantity Supplied. | Average Daily Supply. | Average Daily Supply per Head of Estimated Population. |
|-------|-------------------------------|--------------------------------|--------------------------------|--------------------|-----------------------|--|
| | Miles. | No. | No. | ,000 Gallons. | Gallons. | Gallons. |
| 1901 | 198 | 15,652 | 78,260 | 1,536,260 | 4,208,931 | 55 |
| 1902 | 216 $\frac{3}{4}$ | 17,346 | 86,730 | 1,499,674 | 4,108,696 | 47 |
| 1903 | 229 $\frac{1}{4}$ | 17,435 | 87,175 | 1,413,722 | 3,873,211 | 44 |
| 1904 | 240 $\frac{1}{4}$ | 17,814 | 89,070 | 1,686,845 | 4,621,493 | 52 |
| 1905 | 250 $\frac{1}{2}$ | 18,855 | 94,275 | 1,749,820 | 4,794,028 | 51 |
| 1906 | 264 | 19,223 | 96,115 | 1,630,899 | 4,468,216 | 46 $\frac{1}{2}$ |
| 1907 | 280 $\frac{1}{4}$ | *21,513 | 100,250 | 1,777,333 | 4,869,406 | 48 $\frac{1}{2}$ |

* Excluding 4904 blocks of unimproved land.

The total length of the trunk mains is 52 $\frac{1}{2}$ miles.

Graphs relating to the water supply of Brisbane may be found on page 999 hereof. Particulars relating to the sewerage system of Brisbane are not available.

6. **Country Towns Water Supply, 1907.**—In addition to the city of Brisbane there were at the end of the year 1907 twenty-two towns in Queensland provided with water supply systems, constructed by municipalities chiefly from Government loans. The sub-joined statement gives particulars of all the water supply systems—exclusive of Brisbane—for the year 1907 :—

QUEENSLAND.—PARTICULARS OF COUNTRY WATER SUPPLY SYSTEMS, 1907.

| | | | | | | |
|--------------------------|-------|---------|-------------|-----------------------|---------|--------|
| Cost of construction | £ | 616,564 | Expenditure | Office and salaries | £ | 9,529 |
| Government loans | £ | 5,218 | | Construction | £ | 17,890 |
| Rates and sales of water | £ | 64,314 | | Maintenance | £ | 24,096 |
| Other | £ | 2,671 | | Interest & redemption | £ | 24,877 |
| Receipts | Total | £ | 72,203 | Total | £ | 76,392 |
| Assets | £ | 533,591 | Liabilities | £ | 433,738 | |

7. **Fire Brigades.**—In the year 1907 there were twenty-six fire brigades organised in various towns in Queensland. The revenue of these brigades is derived chiefly from grants from the Government, from municipalities, and from the insurance companies, generally in equal proportions. The following table gives particulars for the year 1907 for the seventeen fire brigades from which returns were received :—

QUEENSLAND.—FIRE BRIGADES, 1907.

| Receipts. | | Amount. | Expenditure. | | Amount. |
|-----------------------|---|---------|-------------------------------|---|---------|
| | | £ | | | £ |
| From Government | £ | 4,305 | Salaries and wages | £ | 6,755 |
| „ Municipalities | £ | 4,307 | Building, repairs, etc. | £ | 3,906 |
| „ Insurance companies | £ | 4,255 | Plant, stores, clothing, etc. | £ | 1,172 |
| „ Other sources | £ | 840 | Other | £ | 3,221 |
| Total | £ | 13,707 | Total | £ | 15,054 |

At the end of the year 1907 the fire brigades staffs comprised 38 permanent men, 321 partly paid, and 51 volunteers. The metropolitan brigade at Brisbane and the South Brisbane brigade protect an area of 9 $\frac{1}{2}$ square miles; their joint staffs comprise 41 men. They have three steam engines, seven hose carts, and about 15,250 feet of hose. There are 28 telephone fire alarms and 43 call points.

8. **Public Lighting in Brisbane.**—In the metropolitan area of Brisbane the supply of both gas and electricity for lighting purposes is in the hands of private companies.

(i.) *Gas Lighting.* There are two gas companies in the metropolitan area. (a) *The South Brisbane Gas and Light Company Limited.* The works belonging to this company are capable of an output of 500,000 cubic feet of gas per day. The company commenced operations in 1885, and in July, 1908, the length of mains was thirty-five miles and the number of customers 1826. The bye-products manufactured are coke, tar, and sulphate of ammonia. (b) *The Brisbane Gas Company Limited.* Particulars of this company (other than those included in the table below) are not available.

The following table gives particulars of the operations of the two companies specified for the year 1907:—

BRISBANE.—GAS WORKS, 1907.

| | | | |
|-------------------------------|-------------|------------------------------|----------|
| Average No. of hands employed | 158 | <i>Capital Value—</i> | |
| Cubic feet made | 242,209,000 | Machinery and plant ... | £179,580 |
| Cubic feet consumed | 212,446,000 | Land and buildings ... | 66,711 |
| Length of mains ... Miles | 129½ | Total | £246,291 |
| Gasometer capacity Cub. ft. | 2,286,000 | <i>Revenue—</i> | |
| Coal used... .. Tons | 24,074 | From sale of gas | £57,440 |
| Coke made Tons | 14,464 | From sale of by-products ... | 5,792 |
| | | Other | 2,302 |
| | | Total | £65,534 |
| | | <i>Expenditure...</i> | £34,387 |

(ii.) *Electric Lighting.* In Brisbane there are two private companies which supply electricity for public and private lighting. (a) *The City Electric Light Company's* station generates direct current (110-220 volts) which is distributed on the three-wire system. The generators have a total capacity of 750 kilowatts and include five Parsons' turbo-generators ranging from 50 to 200 kilowatts each. The area served comprises the business area of the city and the Valley area. Current was first supplied in 1887; there are about 26 miles of low tension cable. (b) *The Brisbane Tramways Company Limited* also supplies current from its power house in connection with its tramway system (see p. 747 ante). Both direct and alternating current are supplied, the capacity of the generators being 1400 kilowatts direct, and 75 kilowatts alternating. Inasmuch as the power is supplied directly from the tramway circuit, it is impossible to allocate capital cost to supply for lighting purposes only. The company supplies current in bulk to the Queensland Railway Commissioner to meet the requirements of the railways in the metropolitan area. Current was first supplied in 1900.

The following statement gives particulars, so far as available, of the supply of electricity for public and private lighting for the year 1907:—

§ 5. South Australia.

1. **Development of Local Government Systems.**—In the latter part of 1839 the first municipal law was passed in South Australia, which was thus the birthplace of municipal government in the Commonwealth. On the 31st October, 1840, the principles of self-government were practically adopted in Adelaide by the election of a mayor and council, consisting of nineteen members, and the system has since been extended throughout the settled parts of the State by the formation of district councils and municipal corporations, which are the two types of local authorities now in existence.

2. **District Councils.**—The first District Councils Act was passed in 1858, was amended in 1862, and was further amended and consolidated by the District Councils Act of 1876, which provided for the continuation of existing districts and for the establishment of new ones by proclamation on the petition of the ratepayers. The revenue of the councils consisted of rents, profits, and income from lands vested in the council or over which the council had the control and management; fines and penalties enforced under the Act; fees for licenses; and general and special rates and loans. Provision was made for the election of councillors, their number, qualification, and retirement; for the election of auditors; the meetings, powers and functions of councils; the appointment of constables; revenue and expenditure; assessment and rates; and for making by-laws for various purposes. The Act of 1876 was amended from time to time, and was finally amended and consolidated by the Act which is now in force, namely, the District Councils Act 1887, which has in turn been amended in the years 1890, 1893, 1897, and 1904.

(i.) *The District Councils Act 1887* provides for the continuation and amalgamation of existing districts and for the constitution as a new district of any part of the State containing ratable property capable of yielding upon a rate not exceeding one shilling in the pound the sum of £200. The Governor is authorised to alter the area or boundaries of any district by annexation or by subdivision. New districts are constituted upon petition to the Governor; every petition must be signed by fifty inhabitants of the part sought to be constituted, and if the proposed district comprises portion of a previously existing district, by a majority of the ratepayers of such portion.

(a) *Qualification of Councillors.* Every male ratepayer, if of full age, is qualified to be a councillor, unless he is a minister of religion, a stipendiary magistrate, an uncertificated insolvent, or is the treasurer or a paid official of the district council, or is interested in any contract, except for advertisements and printing, with the district council. The chairman is elected by the councillors from their own number.

(b) *Qualification of Electors.* Every person of either sex, if of the age of twenty-one years, whose name appears as a ratepayer in the assessment book is entitled to vote at the elections of councillors and auditors. In case of a joint tenancy or a tenancy in common, only one person is entitled to a vote for every £75 or part thereof at which the property is assessed.

(ii.) *Assessments and Rates.* Assessments are generally made at four-fifths of the gross annual rent at which the property would let for a term of seven years, or at 5 per cent. on the capital value, but in case of land within a township, not less than twenty acres in area, and not built on, used, or divided by roads, assessment is made at the rate of $2\frac{1}{2}$ per cent. on the value of the fee-simple. All other township land unbuilt on is assessed at 5 per cent. on the fee-simple value, and for lands held under mining lease from the Crown, the assessment may not exceed the annual rental. (a) *General Rates* may not be more than one shilling and sixpence nor less than threepence in the pound on the

assessed value. (b) *Special Rates* for the execution of permanent works may also be declared, provided that the general and special rates together do not exceed two shillings and sixpence in the pound. No special rate may be declared without the consent of the ratepayers to be obtained at a meeting called for the purpose, and any six ratepayers may demand a poll to be taken on the subject. The ratepayers of any portion of a district may memorialise the council for specific works for the benefit of such portion of the district, and if the council decide to comply with the memorial a *separate rate* may be levied in respect of property in the portion defined. Lighting rates may also be declared, but must not exceed fourpence in the pound.

(iii.) *Loans*. Any council may, for the execution of any works for which a special or separate rate has been declared, borrow on the security of such rate up to ten times the amount which at the time of borrowing would result from a rate of one shilling in the pound, but if demand be made by any twenty ratepayers, the question whether or not the proposed loan be incurred must be submitted to a poll of the ratepayers. The interest payable on any such loan must not exceed 6 per cent. By an amending Act passed in the year 1904, additional borrowing powers were conferred on the councils for the purpose of carrying out permanent works subject to the conditions that the total amount borrowed must not at any time exceed three times the amount which would result from a rate of one shilling in the pound, and that the principal sum and interest must be repaid by means of a sinking fund within forty-two years.

(iv.) *Revenue and Expenditure*. The revenue of the councils consists of rents, profits and income from property vested in the council or over which the council has control; the proceeds from the sale of such property; fines and penalties imposed under the Act; fees for licenses; rates; and main road subsidies. Under the District Councils and Corporation Subsidy Act 1890 provision is made for grants out of the general revenue to district councils and corporations in lieu of fees received under the Auctioneers Act 1862 and the Licensed Victuallers Act 1880. The amount of such grant is a sum equal to five shillings in the pound on the amount collected from general rates not exceeding one shilling in the pound declared during any one year. Revenue may be expended in carrying out any authorised works; in payment of salaries and professional fees; in subscriptions to charities; in payment of councillors' travelling expenses; in promoting bills before Parliament, and generally in carrying out the purposes of the Act.

(v.) *Powers and Duties of Councils*. A council may carry out certain permanent works which are defined in the Act, and which comprise the following:—The construction of new streets and roads, sewers, and drains; the construction or purchase of water-works, district offices, pounds, abattoirs, markets, baths, hospitals, and other charitable institutions; the providing of libraries, museums, and places of public recreation; and the construction of tramways and machinery for the treatment of refuse. The councils are invested with wide powers to make by-laws for the more effective exercise and discharge of their powers, duties, and liabilities, particularly in respect of the following matters:—The compulsory purchase of land; manufacturing districts; the public health; the sale of food and drugs; the management of unoccupied waste lands of the Crown; drainage; piers, jetties, and wharves; weights and measures; vermin destruction; game and fisheries; streets, roads, and public places; fire brigades; impounding; and for fixing penalties for breaches of such by-laws. Upon the district councils also is imposed the duty of administering the Health Acts, the Sale of Food and Drugs Acts, the Game and Fisheries Acts, the Vermin Acts, the Bush Fires Act, the Impounding Act, the Weights and Measures Act, and the Slaughter House Act.

3. **Municipalities** were first established under the Municipal Corporations Act of 1861, which, after providing for the extensions of the powers and duties of the Corporation of the City of Adelaide, authorised the Governor, on petition of a majority of not less than two-thirds of the property-owners, to incorporate any town, district, or place within the province, a municipality. This Act and its amendments were consolidated

in the Municipal Corporations Act of 1880, which was amended from time to time until the year 1890, when it was repealed and its provisions consolidated by the existing Act, the Municipal Corporations Act of 1890, which was in turn amended in 1903.

(i.) *The Municipal Corporations Act 1890.* After making provision for continuing existing corporations and by-laws the Act authorises the Governor to constitute new municipalities, or to alter the boundaries of existing ones, on petition of not less than two-fifths of the ratepayers or owners of ratable property within the land proposed to be incorporated, separated, or added; and also to rearrange, increase, or diminish the number of wards of a municipality on petition of not less than one-fifth of the ratepayers. Each council consists of a mayor, and of two councillors for each ward, and the provisions as to their qualifications are substantially the same as in the case of district councils referred to above. All persons of full age, if British subjects and not in receipt of public relief or alms, who are either owners or occupiers of any ratable property within a municipality are entitled to vote at the election of the mayor and councillors. Provision is made for the nomination and election of the mayor, councillors, and auditors, and for regulating the meetings of the councils.

(ii.) *Municipal Functions of Councils.* All public streets and roads are vested in the council of the municipality in which they lie, but no street can be declared a public street after the passing of the Act unless it is at least forty feet wide. Full powers are given as to opening, closing, or fencing public streets, and for supervising the formation and repair of private streets and lanes. Councils are further authorised to execute works for, or to contract for the lighting, sewerage, and drainage of municipalities; to take all measures requisite for the public health; to establish public baths, fountains, and parks; to grant licenses for slaughter-houses, hide and skin markets, for the depasturing of cattle, and for the removal of sand and gravel; to control the erection or pulling down and the maintenance of buildings and hoardings; to organise fire brigades, and to order the removal of inflammable buildings.

(iii.) *Assessments and Rates.* Owners and occupiers of ratable property in municipalities are assessed each year on the same basis as stated above in respect to ratable property within districts under the government of district councils. In addition to the rate authorised by the Public Health Act a *general rate*, not exceeding one shilling in the pound, may be declared; rates for lighting and for the improvement of parks and reserves may also be levied, the former being limited to fourpence and the latter to threepence in the pound. The council may also declare a rate for defraying the expense of watering streets, to be apportioned among the persons liable for the rates in respect of properties fronting such streets. *Special and separate rates* may also be levied in the same manner as by district councils, but, in the case of municipalities, the general and special rates together must not exceed two shillings in the pound.

(iv.) *Borrowing powers* of municipal corporations are substantially the same as those of district councils, and similar additional powers were given to municipalities as to districts by the Municipal Corporations Amendment Act 1903.

(v.) *Revenue, Expenditure, and Miscellaneous.* Other provisions as to the revenue and expenditure of municipalities, and their powers as regards permanent works, are the same as those in force under the District Councils Acts, referred to above, while very wide powers are given to municipal councils in respect of a variety of matters and things to provide by means of by-laws for the general good government of the municipalities.

4. Finances of District Councils and Corporations, 1901 to 1907.—The subjoined tables shew the amounts of assessment and the revenue and expenditure of district councils and of corporations for each financial year from 1901 to 1907, inclusive; the figures given are exclusive of the Main Roads Funds, particulars as to which may be found in the section of this book on "Roads and Bridges." (See pages 681-2 *ante*.)

* Up to and including the year 1903, the financial year for Corporations ended on the 31st December, but after that date ends on the 30th November. The financial year for district councils ends on the 30th June. † For eleven months ended the 30th November, 1904.

5. **Adelaide Water Supply System.**—The water supply system of Adelaide is under the control of the Public Works Department. The supply is obtained partly from the catchment areas of the rivers Onkaparinga, Torrens, and Sixth Creek, and partly from springs and pumping stations. There are three storage reservoirs, situated at Happy Valley, Hope Valley, and Thorndon Park, having an aggregate capacity of 3,895,000,000 gallons, while the tanks used in connection with the springs and pumping stations have a further capacity of 4,824,000 gallons. The total capital cost up to the 30th June, 1907, was £1,693,884, the total amount paid by way of interest on loans being £1,463,824, the total expenditure on maintenance £640,112, and the total revenue £2,191,789. The area served at the same date was 76,532 acres.

The following table gives various particulars relating to the water supply of Adelaide for the years 1904 to 1907, inclusive:—

ADELAIDE WATER SUPPLY.—LENGTH OF MAINS, REVENUE, EXPENDITURE, AND CONSUMPTION OF WATER, 1904 to 1907.

| Year Ended 30th June. | Length of Mains. | Gross Revenue. | Working Expenses. | Net Revenue. | Percentage of Net Revenue on Capital Cost. | Total Consumption of Water. ¹ |
|-----------------------|------------------|----------------|-------------------|--------------|--|--|
| | Miles. | £ | £ | £ | % | Million of Gals. |
| 1904 ... | 640 | 70,333 | 19,257 | 51,076 | 3.09 | 3,550 |
| 1905 ... | 647 | 72,471 | 20,002 | 52,469 | 3.16 | 3,650 |
| 1906 ... | 656½ | 72,976 | 22,298 | 50,678 | 3.02 | 3,550 |
| 1907 ... | 667½ | 74,727 | 19,703 | 55,023 | 3.24 | 3,350 |

1. In the Adelaide Water District there are no governing meters. The quantities shown above are as recorded by gaugings taken at the reservoirs, and include evaporation and absorption.

Graphs relating to Adelaide water supply may be found on page 999 *ante*.

6. **Adelaide Sewerage System.**—In connection with the sewerage system of Adelaide, which is also under the control of the Public Works Department, 247 miles of sewers had been laid in the city and suburbs up to the 30th June, 1907, the total number of premises connected being 24,393. The sewage is disposed of on a farm and filter-beds, the latter being used only during the winter months. The total cost of construction to the 30th June, 1907, was £625,309.

The following table gives particulars relating to the Adelaide sewerage system for the years 1904 to 1907, inclusive:—

ADELAIDE SEWERAGE SYSTEM.—REVENUE AND EXPENDITURE, 1904 to 1907.

| Year Ended the 30th June. | Revenue. | | | Expenditure. | | | Net Revenue. | |
|---------------------------|---------------------|-------------------------------------|--------|--------------|-------------------------------|--------|--------------|-----------------------------|

| 1906 ... | 32,530 | 7,006 | 39,536 | 5,921 | 5,901 | 11,822 | 27,714 | 4.45 |
| 1907 ... | 32,380 | 6,390 | 38,770 | 6,284 | 5,460 | 11,744 | 27,026 | 4.00 |

7. **Water Supply in Country Towns.**—In South Australia there are a number of country waterworks under the control of the Public Works Department. These works are partly used for irrigation purposes, and the most important of them have already been referred to in the section of this book dealing with the subject of "Irrigation." (See p. 589 *ante*.) In addition to the works mentioned in the section referred to, there are other country districts served by reticulations extending over 311 square miles. Detailed particulars of the various works are not available. The total extent of country for which reservoir water was available in 1907 was 4211 square miles, the reservoirs holding, in the aggregate, 7,370,000,000 gallons, and the main pipe-lines reaching 2177 miles. The capital cost of the works under the waterworks branch, as distinct from the water conservation branch, which deals with isolated and remote districts, was £4,016,000, and the net revenue in 1906-7 was £121,250, returning a net percentage of 2.13 on the cost of construction.

8. **Public Lighting in Adelaide.**—In the metropolitan area of Adelaide, public lighting—both by gas and electricity—is carried on by private companies.

(i.) *Gas Lighting.* The South Australian Gas Company supplies gas to the city of Adelaide, Port Adelaide, and Glenelg, and also to Port Pirie, Gawler, Kapunda, and Strathalbyn. The total length of mains is about 200 miles. The following table gives particulars as to the supply of gas in the places specified, separate particulars for the metropolitan area alone not being available:—

SOUTH AUSTRALIA.—PUBLIC LIGHTING, GASWORKS, 1907.

| | | | | |
|---------------------|----------|-------------|----------------------------|----------|
| Gas manufactured | Cub. ft. | 302,543,000 | <i>Capital cost</i> | £350,808 |
| Gas sold | Cub. ft. | 282,733,000 | <i>Revenue—</i> | |
| | | | From sale of gas | £82,437 |
| | | | " " by-products | £23,274 |
| Coal used | Tons ... | 28,850 | Other | £1,308 |
| Number of customers | ... | 13,178 | Total | £107,019 |
| Number of employés | ... | 284 | <i>Expenditure</i> | £67,727 |

(ii.) *Electric Lighting.* Current for public and private lighting in Adelaide is generated by the Adelaide Electric Supply Company Limited. Electricity is supplied from the power house in Grenfell-street by means of direct current generators for the central area of the district served; the suburban areas, as well as Port Adelaide, are supplied through the agency of direct current to alternating current motor generators. In July, 1908, the capacity of the direct current generators was 1050 kilowatts, and of the direct to alternating current motor generators was 150 kilowatts. Two 750-kilowatt continuous current generating sets were in course of erection. Within the city area proper the three-wire continuous current system was in use; in the suburbs alternating current of 50 periods at 2000 volts is supplied to transformer stations and is thence distributed on the three-wire system. The supply to Port Adelaide is transmitted by a feeder line $8\frac{1}{2}$ miles long at a pressure of 4000 volts, obtained by means of step-up transformers. The district served comprises the City of Adelaide, North Adelaide, Prospect, Walkerville, St. Peters, Kensington and Norwood, Burnside, Unley, Thebarton, Hindmarsh, Woodville, Alberton, and Port Adelaide, covering about 62 square miles. The length of street in which the supply is available amounts to 78 miles. There are $14\frac{1}{2}$ miles of high tension and $87\frac{1}{2}$ miles of low tension cable overhead, and $10\frac{1}{2}$ miles of high tension and $19\frac{1}{2}$ miles of low tension cable underground.

The following table gives particulars of the electric light supply in Adelaide for the year 1907:—

ADELAIDE.—ELECTRIC LIGHTING, 1907.

| | | | | |
|--|--------------------------------|--------|--------------------------|----------|
| Total Load connected (16 candle-power lamp equivalent) ... | ... | 51,378 | Total capital cost ... | £211,188 |
| Total motors connected | { H.P. 1,431 No. 390 | | Revenue— | |
| Total Arc lamps connected | { Public 63 Private 548 | | From sale of current ... | £21,932 |
| Total Glow lamps connected | { Public 340 Private 19,521 | | Other ... | £691 |
| Units sold during year | ... 1,384,178 | | Total ... | £22,623 |
| | | | Expenditure ... | £12,593 |
| | | | Number of employes ... | 94 |

It may be mentioned that in the private Act of the Adelaide Electric Supply Company Limited, the right is reserved to the Adelaide City Council to acquire the company's undertaking, and that the matter of securing these works is one which the City Council will consider in the near future.

§ 6. Western Australia.

1. *Types of Local Authorities.*—In this State there are three forms of local authorities, namely:—(i.) Municipalities, (ii.) Road Districts, and (iii.) Local Boards of Health. The first Municipalities Act was passed in 1871, but only a few districts were incorporated under it. In 1895 a more comprehensive measure, the Municipal Institutions Act, was passed, and after being amended from time to time was consolidated by the Municipal Institutions Acts 1902 and 1904. In 1906 the most recent enactment, the Municipal Corporations Act, was passed, repealing and consolidating previous enactments. The whole area of the State outside incorporated municipalities is divided into road districts, which are administered under the Roads Act 1902 and 1904. In municipalities the councils act as Health Boards for the purpose of administering the Public Health Act, while outside municipalities local Boards of Health may be formed. In 1904 another local government measure, the Water Boards Act, was passed, under which Boards may

be appointed for the control of waterworks, and rates may be levied for the purpose, the maximum being fixed at two shillings in the pound of ratable value.

2. **Municipalities** are now regulated by the Municipal Corporations Act, which came into force on the 1st January, 1907. Provision is made for the continuation of existing municipalities, and the Governor is authorised to constitute new municipalities on petition signed by at least fifty property-holders of the district proposed to be incorporated; to unite adjoining municipalities on petition under their common seals; to sever any portion from a municipality on petition signed by a majority of the ratepayers, and to annex such portion to a contiguous municipality or road district.

(i.) *Municipal Councils* consist of a mayor and councillors, the number of which depends upon the population of the municipality; if the population is less than 1000 there are six councillors, if from 1000 to 5000 there are nine councillors, and if the population is over 5000 there are twelve councillors, or three for each ward. Any male ratepayer of the age of twenty-one years, if a natural-born or naturalised subject, is eligible for election as mayor or councillor, except ministers of religion, uncertificated bankrupts, prisoners, and certain other persons who may be disqualified on the ground of interest.

(ii.) *Qualification of Voters.* Every ratepayer, if of twenty-one years of age or over, is entitled to vote at the municipal elections. In the case of joint owners or occupiers, each owner or occupier, if not exceeding two in number, is deemed to be the owner or occupier of half the property; if more than two in number the owners or occupiers may appoint two of their number to be registered in respect of the property. Corporations and companies may also nominate two persons to be registered as voters.

(iii.) *Powers and Duties of Councils.* The councils have power to make by-laws with respect to the usual matters pertaining to municipalities, and are also invested with the control and management of all public places, streets, roads, bridges, sewers, and drains within the municipality. They may contract for the lighting of any part of the municipality for a period not exceeding three years, and may levy a lighting rate; they may construct dams or reservoirs for water supply, may establish fire brigades and baths, and may provide places of recreation, pounds, abattoirs, markets, and weighbridges.

(iv.) *Valuation of Ratable Property.* All land is ratable property except the following:—Property of the Crown used for public purposes or unoccupied; property used for religious or charitable purposes; public libraries, museums, etc.; cemeteries; any land declared by the Governor to be exempt from municipal rates. Generally the annual value of improved or occupied land is the average rent obtainable, less 20 per cent., but in no case may the annual value be less than 4 per cent. of the fee-simple value. The annual value of unimproved or unoccupied land is taken to be not less than $7\frac{1}{2}$ per cent. on the capital value. No allotment of ratable land may be valued at an annual value of less than £2 10s.

(v.) *Rates.* General rates are levied annually, but may not exceed one shilling and sixpence in the pound on the annual value. Lighting rates and special rates for the repayment of debentures and interest may also be struck, but may not exceed the maximum rate allowed in the case of general rates.

(vi.) *Borrowing Powers.* The council of a municipality may borrow money on the credit of the municipality for permanent works, or for the purpose of liquidating the principal moneys owing on account of any previous loan. Permanent works may be the construction or alteration of any street, footway, road, bridge, culvert, wharf, or jetty; the construction of sewers and drains, and works connected with sewerage and drainage;

the construction or purchase of waterworks, tramways, municipal offices, pounds, abattoirs, markets, and baths; the improvement of endowment lands; providing places of public recreation; the construction of a general warehouse, or a theatre, or of refuse destructors; and the purchase of quarries or land. The amount borrowed at any time may not exceed ten times the average ordinary income of the municipality for the two years last preceding, and the amount borrowed to liquidate any loan must not exceed the balance of principal owing. A municipality may also overdraw on the amount of its current account, but the overdraft must not at any time exceed one-third of the ordinary revenue for the preceding year.

(vii.) *Government Subsidies.* Grants are made annually to municipalities by way of subsidies on the amounts of rates collected. To entitle any council to participate in the allocation of the annual Parliamentary vote the council must have levied a minimum general rate of one shilling in the pound, and must have collected not less than £300 from such rate. Newly-constituted municipalities are, during the first year of existence, dealt with apart from the provisions of the general scheme, and are allowed a subsidy of £2 for every £1 of general rate collected; in subsequent years they participate according to the general provisions. The following table shews the basis on which the municipalities are classified:—

WESTERN AUSTRALIA.—CLASSIFICATION OF MUNICIPALITIES.

| Income from General Rates. | From £20,000 to £30,000. | From £10,000 to £20,000. | From £5,000 to £10,000. | From £500 to £5,000. | Under £500. |
|----------------------------|--------------------------|--------------------------|-------------------------|----------------------|-------------|
| Class | 1st | 2nd | 3rd | 4th | 5th |

No subsidy is paid on income from general rates exceeding £3000.

3. Area, Population, etc., of Municipalities.—Returns regarding the area, population, and valuation of municipalities are defective. They are shewn in the table hereunder:—

WESTERN AUSTRALIA.—NUMBER, AREA, POPULATION, NUMBER OF DWELLINGS, AND VALUATION OF MUNICIPALITIES, 1901 to 1907.

| Year ended the 31st October. | Number of Municipalities. | Area | Population. | Dwellings. | | | Unimproved Capital Value of Freehold Land. | Amount Payable in respect of Rates. |

| 1907 ... | 39,414 | 553,873 | 125,742 | 55,430 | 774,459 | 730,994 | 47,131 | 778,125 |

* Including bank balance, cash in hand, and fixed deposit. † Incomplete.

‡ Exclusive of the municipality of Mount Morgans.

6. **Road Districts.**—The whole area of the State, outside incorporated municipalities, is divided into districts, the executive powers being vested in elective boards. These districts were originally formed solely for the purpose of controlling roads and bridges, but their powers and duties have been extended, so that at the present time they correspond closely to the shires of the other States of the Commonwealth. The enactments at present governing the administration of the Road Boards are the Roads Acts 1902 and 1904, the Parks and Reserves Act, the Cattle Trespassing Act, the Width of Tires Act, the Cart and Carriage Licenses Act, and the Dog Act. The general powers and duties of the Boards as regards roads and bridges are described in the chapter of this book entitled "Roads and Bridges." (See pages 682-3 *ante*.) In addition to these powers and duties the Boards have power to do everything necessary for the proper management of the property under their control, and may also construct and maintain tanks, wells, and dams, and bore for water for the purpose of supplying water along any road in the district. Subject to the provisions of the Roads Acts, the Board has also the control and management of any such public reserves, parks, commons, wells, dams, reservoirs, buildings, machines, etc., as the Governor may direct. The Board has also extensive powers for making, altering, and repealing by-laws.

7. **Boards of Health** may be established under the Public Health Act 1886, either within or outside of municipal boundaries. In the former case the Act is administered by the municipal councils, while in the latter case special Boards are elected by the ratepayers. The revenue of these Boards consists chiefly of moneys received from health rates and sanitary fees, and the largest item of expenditure is directly connected with the sanitary service. The following table shews particulars of the receipts and expenditure of the various Boards—both municipal and extra-municipal—during each year from 1901 to 1907, inclusive:—

**WESTERN AUSTRALIA.—RECEIPTS AND EXPENDITURE OF LOCAL HEALTH BOARDS,
1901 to 1907.**

| Year ended the 31st October. | Revenue. | | | Expenditure. | | |
|------------------------------------|-----------------------------|------------------------|--------|--------------------------|--------------------|--------|
| | From Public Health Rate. | From other Sources. | Total. | On Sanitary Services. | Other Expenses. | Total. |
| | £ | £ | £ | £ | £ | £ |
| 1901 | 15,230 | 17,477 | 32,707 | 18,787 | 12,992 | 31,779 |
| 1902 | 17,616 | 22,569 | 40,185 | 19,248 | 20,114 | 39,362 |
| 1903 | 21,884 | 22,610 | 44,494 | 22,872 | 21,184 | 44,056 |
| 1904 | 25,777 | 25,904 | 51,681 | 28,299 | 23,321 | 51,620 |
| 1905 | 26,003 | 30,864 | 56,867 | 30,724 | 28,061 | 58,785 |
| 1906 | *28,242 | 40,943 | 69,185 | 40,518 | 28,038 | 68,556 |
| 1907† | †33,289 | 35,285 | 68,574 | 39,419 | 31,697 | 71,116 |

* Including sanitary rates, £11,745. † Including sanitary rates, £16,564. ‡ Exclusive of particulars of twenty-one boards which did not furnish returns, and of five boards which were not active during the year, all outside municipalities. Particulars for previous years are also incomplete.

On the 31st October, 1907, there were forty-six Local Boards of Health within municipalities and fifty-five extra-municipal Boards.

8. **The Perth Metropolitan Waterworks.**—These works were first opened by a private company in October, 1890. Under the provisions of the Metropolitan Waterworks Act 1896, however, the works were purchased by the Government at a cost of £220,000, and were placed under the control of a Board, which was in the year 1904 superseded by the Minister for Works. The original Act was subsequently amended in 1898, 1902, and 1905. The supply of water is derived from three sources—(i.) the Victoria reservoir, (ii.) the Mundaring reservoir, and (iii.) from six artesian bores.

(i.) *The Victoria Reservoir.* This is the main source of supply. The reservoir has a capacity of 212,000,000 gallons, and has a catchment area of 10,000 acres on the Darling Ranges. The water gravitates from the Victoria reservoir to Perth through two mains which are respectively 21 inches and 12 inches in diameter, and 15½ and 17 miles in length. There are two service reservoirs—one of 2,413,000 gallons, and the other of 600,000 gallons capacity. The quantity of water drawn from this reservoir during the year ended the 30th June, 1907, was about 506,000,000 gallons.

(ii.) *The Mundaring Reservoir.* This reservoir is used as an emergency supply. It has a capacity of 4,650,000,000 gallons, but is only connected by one eight-inch main. During the last financial year about 12½ million gallons were drawn. This reservoir has a catchment area of 569 square miles, and was constructed in connection with the gold-fields water supply. (See p. 582 hereinbefore.)

(iii.) *Artesian Bores.* There are in all six artesian bores, the flow from which augments the main supply from the Victoria reservoir. The total flow is about 360,000,000 gallons during the season, which lasts approximately for six months.

(iv.) *Financial Operations of Board, 1901 to 1908.* The following table gives particulars of the financial operations of the Metropolitan Waterworks Board for each year ending the 30th June, from 1901 to 1908, inclusive:—

PERTH METROPOLITAN WATERWORKS BOARD.—PARTICULARS OF FINANCIAL OPERATIONS, 1901 to 1908.

| Year ended the 30th June. | Capital Cost of Works. | Depreciation. | Net Capital Cost. | Gross Revenue. | Cost of Maintenance and Management. | Interest Earned by Net Revenue on Net Capital Cost. | Percentage of Expenses on Gross Revenue. |

* In thousands of gallons.

Graphs relating to the water supply of Perth will be found on page 999 *ante*.

9. **Perth Metropolitan Drainage and Sewerage.**—In Perth systems for the disposal of sewage and storm water have recently been put in hand by the Public Works Department. The construction of septic tanks and filter beds was commenced in April, 1906, and has now been completed. The construction of the main sewers and drains is proceeding under the direction of the Public Works Department, while the City Council is engaged in the construction of subsidiary storm water drains. The work of reticulation had not been commenced at the end of the year 1908.

It has recently been urged that the construction and control of the drainage and sewerage works should be handed over to a Board, as has been done in Sydney and Melbourne.

10. **Fremantle Harbour Trust.**—Under the provisions of an Act passed in 1902 a Harbour Trust was constituted for the general administration of Fremantle harbour, and since January, 1903, the Trust has had full control of all the affairs of the harbour. The works, which were commenced in 1892, were designed with the object of forming a safe and commodious harbour within the mouth of the Swan River, so as to admit

vessels at all states of the tide, and thus enable cargo to be loaded and discharged at the quays and goods-sheds on the river banks. Two ocean moles have been thrown out from the north and south heads, the former being 3450 feet and the latter 2040 feet long. A channel, 450 feet wide and 30 feet deep at low water, has been blasted and dredged through the rock which formerly crossed the estuary to the river, and wharves and goods-sheds have been constructed along the reclaimed foreshore on the south side of the harbour. At the present time all the European mail boats, which make Fremantle the first and last port of call in Australia, are able to enter and leave the harbour in all weather and at all tides. For the year ended the 30th June, 1908, the total revenue of the Trust was £116,495, and the expenditure £105,047, of which £62,585 was interest on loans, redemptions, etc., paid to the State Government.

11. **Fire Brigades Boards.**—Fire brigades have been established in a number of the more important centres of population in the State. The brigades are under the control of local boards, and are in some cases municipal and in others volunteer. At the end of the year 1907 there were thirty-two such Boards in existence. The figures given below shew particulars of thirty of these Boards for the year 1907, two Boards having remained inactive during the year:—

WESTERN AUSTRALIA.—FIRE BRIGADE BOARDS, 1907.

| | | | |
|--------------------------|---------|-----------------------------------|----------|
| Number of firemen | 498* | Value of land, buildings, & plant | £31,703* |
| Receipts | £13,943 | Expenditure... .. | £13,524 |

* In 1906.

12. **Public Lighting in Perth.**—With the exception of the Subiaco Municipal Electric Lighting Plant the supply of both gas and electricity for public and private lighting in the metropolitan area of Perth is under the control of private companies. At present the streets of Perth are lighted almost entirely by gas, the number of incandescent gas lamps in the city alone being 1148 in November, 1908, and the number of electric lamps being only seven. The City Council in June, 1908, served on the Perth Gas Company notice of intention to exercise the powers conferred under the Perth Gas Company Act 1886, and to purchase the works and plant of the company; with the object of fixing the price to be paid a survey and valuation has recently been made.

(i.) *Gas Lighting.* The Perth Gas Company Limited commenced to supply gas for public and private lighting and for power in 1885. Though the company has the right to supply gas within a radius of five miles from the General Post Office, Perth, the present supply is limited to a radius of two miles, comprising the City of Perth, and parts of Subiaco, Leederville, and Mount Lawley. The works are capable of producing daily 250,000 cubic feet of coal gas and 120,000 cubic feet of oil gas. The length of the gas mains is about forty-five miles, ranging from 2 inches to 10 inches in diameter.

The following table gives particulars regarding the supply of gas for public and private lighting in the metropolitan area of Perth during the year 1907:—

PERTH.—PUBLIC LIGHTING, GASWORKS, 1907.

| | | | |
|----------------------------|---------------------|-------------------------------|--------|
| Gas manufactured | Cub. ft. 51,837,000 | <i>Capital Cost</i> — | |
| Gas sold | Cub. ft. 47,498,000 | Buildings* | £4,310 |
| Coal used | Tons 4,780 | Machinery, plant, etc. | 38,465 |
| Number of customers | 1,081 | Total... .. | 42,775 |
| Number of employes... .. | 57 | | |
| | | <i>Revenue</i> | 23,828 |
| | | <i>Expenditure</i> | 13,952 |

* Land is used conjointly in connection with both the gas and electricity supply undertakings of the company. The value of freehold property in 1908 was 222,568.

(ii.) *Electric Lighting.* (a) *The Perth Gas Company Ltd.* is empowered to supply electric light within a radius of five miles from the General Post Office, Perth. Particulars of the operations of the company in regard to electric lighting are not available. (b) *The South Perth Electric Supply and Power Company Ltd.* supplies current in the municipality of South Perth. Continuous current is generated and distributed on the 3-wire system, the length of cables (overhead) being about twenty-four miles. Current was first supplied in 1905. (c) *The Subiaco Municipal Electric Lighting Plant* supplies current over an area of about one and three-quarters miles in the Subiaco municipality, the length of streets wired (overhead) being thirteen and a-half miles. Continuous current is generated, the capacity of the generators being 200 kilowatts, and is distributed on the 3-wire system (440-220 volts). Current was first supplied in June, 1903. The capital cost at the end of the year 1907 was £15,451, exclusive of land; at the same date there were four motors, eighteen arc lamps, and 5386 glow lamps connected. During the year 1907 there were 133,136 units of current sold, the revenue therefrom being £4094, and the expenditure £2833.

Particulars regarding electric lighting for the metropolitan area are too incomplete for publication.

§ 7. Tasmania.

1. **Development of Local Areas.**—In this State the city of Hobart was incorporated by special Act in the year 1852, but it was not until 1858, when the Rural Municipalities Act was passed, that a general scheme for the establishment of municipalities was extended throughout the State. This Act was amended from time to time without, however, altering its chief characteristics. In 1869 a Roads Act was passed, and after being amended at various times was consolidated in 1884. Under the provisions of these Acts parts of the State were placed under the control of Town Boards and Road Trusts. The general rate under the Municipalities Acts was limited to one shilling and sixpence in the pound of annual value, while special rates could be levied in rural districts, provided that the general and special rates together did not exceed one shilling and sixpence in the pound. Road rates might also be imposed in addition to municipal rates under the Roads Acts, with reference to which further particulars are given in the chapter of this book on "Roads and Bridges."

2. **Acts now in Force.**—In 1906 the whole of the Acts dealing with local authorities were amended and consolidated by the Local Government Act of that year. The whole State, with the exception of the urban municipalities of Hobart and Launceston, is divided into municipal districts, and every Rural Municipality, Town Board, Main Road District, Road District, Local Health District, Fruit District, Rabbit District, School District, and Public Recreation Ground District included in any municipality established by the Act is abolished. Each district is incorporated and is under the control of a warden and councillors, who, in addition to the specific duties and powers imposed and conferred by the Act of 1906, are vested with powers and authorities under the following Acts:—The Codlin Moth Act 1888, the Rabbits Destruction Act 1889, the Public Health Act 1903, the Education Act 1885, the Roads Act 1884, the Rural Municipalities Act 1865, the Police Act 1905, the Town Boards Act 1896, the Public Recreation Grounds Act 1888, the Cemeteries Act 1865, and the Californian Thistle Act 1883. The Governor is authorised to unite, subdivide, or abolish municipalities or wards on petition, and may do so without petition if in any municipality there is at any time no council or an insufficient number of councillors to form a quorum. The Act of 1906 was amended in 1908.

(i.) *Formation of Councils.* In the case of municipalities not divided into wards the council is to consist of the number of members, being a multiple of three, assigned to it by the Governor, while the councils of municipalities which are subdivided consist of three councillors for each ward. Any resident elector is eligible to act as a councillor

unless he is disqualified as being an interested person, a bankrupt or convict, or as undergoing a sentence of imprisonment, or as insane. The warden is elected by the councillors from their own body.

(ii.) *Qualification of Electors.* Both owners and occupiers of property within a municipality are allowed plurality of votes according to the following scale:—

| | | | | | | |
|-----------------------------|------------|-------------|--------------|---------------|---------------|----------------------|
| Annual Value of Property | Under £30. | £30 to £80. | £80 to £160. | £160 to £240. | £240 to £360. | £360 and upwards. |
| Number of Votes | 1 | 2 | 3 | 4 | 5 | 6 |

In the case of joint owners or occupiers the number of votes according to the above scale is equally divided as far as possible, and the vote or votes which cannot be so divided may be given by such one of the joint owners or occupier as may be appointed by the others. The provisions of the Acts relating to voting by post at parliamentary elections may be made applicable to any municipal election on the petition of the council to the Governor.

(iii.) *Local Districts and Committees.* Any municipal council may by special resolution define a local district to be assigned to a local committee, and any district proclaimed under the Public Recreation Grounds Act 1888 may also be defined as a local district. A local committee may exercise any of the powers and functions conferred upon councils as may be declared to be within its province by special resolution.

(iv.) *Revenue and Rates.* The ordinary revenue of a council, which consists principally of (a) rates (other than special rates), tolls, ferry dues, market dues, fees, and other charges authorised by the Act, and (b) grants from the central Government, is carried to a general account called the municipal fund. Rates are of two kinds, namely, (a) general, and (b) special. (a) *General Road-Rates*, of not less than sixpence in the pound of the annual value of the whole of the ratable property in a municipality, must be levied at least once a year, but the total amount of all such rates levied in any one year must not exceed one shilling and threepence in the £. The proceeds of general road rates are carried to a separate account and are to be applied for the purposes of constructing and maintaining roads, streets, bridges, jetties, wharves, and tramways; at least three-fifths of all sums received in respect of property situate in a particular ward from the making of such a rate must be expended within such ward for the purposes mentioned. *General Health Rates* may be levied either prospectively or retrospectively in order to defray the expenses incurred in the execution of the Public Health Act 1903. (b) *Special Rates* may be made for the purpose of defraying the cost of constructing and maintaining works for sewerage or drainage, for the manufacture of gas, electricity, hydraulic or other power; watering or lighting roads; maintaining public recreation grounds; the destruction of rabbits; any of the purposes of the Public Health Acts; and of constructing and maintaining slaughter houses, abattoirs, or other works. A *Codlin Moth Tax* may be levied as prescribed by the Codlin Moth Act 1888, and when a council undertakes the removal of house refuse from premises the expense of such work is to be paid for by a *Special Cleansing Rate*. For defraying the expenses incurred in the execution of any work for the special benefit of a particular part of a municipality, the council may also levy a special rate called a *Separate Local Rate* upon all ratable property within such part, but the question as to whether any work is or is not for the special benefit of any particular part of the municipality must be referred to the Minister, who may direct, when such rate would exceed sixpence in the pound, that the question of levying the same be left to the decision of the electors of the defined part; whenever the expense to be incurred involves more than one yearly rate, the question must be referred to the electors.

(v.) *Ratable Property.* The council is not empowered to levy any rate or charge (except for water, prevention of fire, cleansing, drainage, or sewerage, or for light or power actually supplied, or for any service actually rendered) upon—Crown property; any property used solely for religious purposes; any portion of any premises used exclusively as a public library, museum, school of arts or mines, literary or scientific institution, or any cemetery; benevolent asylums or charitable institutions; or upon any building or place vested in trustees for an agricultural or pastoral society for the purposes of a show ground. The Crown has in any such case the right to commute its liability by payment of a sum agreed upon between the council and the Treasurer.

(vi.) *Borrowing Powers.* Power is given to the council to borrow money either—

- (a) By the sale of debentures under provisions of the Local Bodies Loans Act for the purpose of permanent works and undertakings, or for the purpose of liquidating the principal sum owing on account of a previous loan; or
- (b) By way of temporary advances against rates to an amount not exceeding one-half the expected total proceeds of such rate. Temporary advances must be paid off within twelve months of the date of borrowing.
- (c) Under the amending Act of 1908, councils may raise temporary loans by way of bank overdraft on the credit of the municipality to an amount not exceeding one half of the prior year's revenue, and in addition may overdraw to the extent of deposit receipts for money due by the bank.

(vii.) *General By-laws.* The councils have wide powers to make by-laws for the general purposes of the Act, and particularly in connection with the following matters:—The trespass and agistment of animals; the erection or demolition of buildings, awnings, and temporary structures; the prevention and extinction of fires; the granting of licenses; the regulation of markets and weighbridges and the establishment of rents and fees for the use thereof; the regulation or the prohibition of the introduction of any pest or anything affected by a pest; the control of public safety and the preservation of public decency; the control and management of roads and footways; the imposition and collection of tolls upon roads and bridges, and of rates and dues upon ferries, wharves, tramways, jetties, piers, and markets under the control of the council; the regulation of various trades and callings; the control of the general traffic in public places, boats and boatmen, vehicles, steam rollers and bicycles.

The councils are also vested with all powers which were conferred upon any of the local bodies mentioned above (see page 1042 *ante*, para. 2), and which were abolished by the Local Government Act 1906.

(viii.) *Water Districts.* Any number of municipalities, situated so as to be capable of taking advantage collectively of some common water system or catchment area, may by petition to the Governor be constituted a water district under the Act. In every case where a water district is proclaimed upon the joint petition of two or more municipal councils the management of such district is in the hands of a joint council consisting of such a number of members of each of the councils as the Governor may determine. This council is invested with borrowing and rating powers and may supply water within the district on such terms as it may fix, provided that no water may be supplied for irrigation until domestic and stock supply purposes have first been satisfied. Provision is also made in the Act for uniting municipalities for the purpose of carrying out sewerage, irrigation, or water conservation schemes for the common benefit of the municipalities, or for any other purpose authorised by the Act, such as, in the opinion of the Governor, is likely to be of permanent utility, and is best capable of being carried out by concerted action.

3. **Annual Value, Revenue, and Expenditure of Municipalities.**—The following table shews the annual value, total receipts, and expenditure of municipalities for the years 1901 to 1906, inclusive. Particulars of operations under the Act of 1906 are not yet available:—

TASMANIA.—ANNUAL VALUE, REVENUE, AND EXPENDITURE OF MUNICIPALITIES,
1901 TO 1906.

| Year. | Number of Municipalities. | Annual Value of Ratable Property. | Revenue. | | | | Expenditure. ² |
|----------|---------------------------|-----------------------------------|-------------|------------|----------------------------------|---------|---------------------------|
| | | | From Rates. | From Govt. | From other Sources. ¹ | Total. | |
| | | £ | £ | £ | £ | £ | £ |
| 1901 ... | 21 | 683,039 | 55,953 | 3,798 | 47,880 | 107,631 | 109,811 |
| 1902 ... | | 688,745 | 57,526 | 4,498 | 51,870 | 113,894 | 107,932 |
| 1903 ... | | 702,067 | 56,367 | 500 | 50,890 | 107,757 | 110,162 |
| 1904 ... | | 718,635 | 61,107 | ... | 85,045 | 146,152 | 141,202 |
| 1905 ... | | 739,005 | 60,097 | ... | 89,555 | 149,652 | 153,937 |
| 1906 ... | | 749,537 | 64,059 | 150 | 72,610 | 136,819 | 140,745 |

1. Including sums derived from loans. 2. Including repayments of loans.

4. **Annual Value, Revenue, and Expenditure of Town Boards, 1901 to 1906.**—The following table gives similar particulars to the above for town boards. These boards were abolished by the Act of 1906, but particulars of the new municipal districts are not yet available:—

TASMANIA.—ANNUAL VALUE, REVENUE, AND EXPENDITURE OF TOWN BOARDS,
1901 TO 1906.

| Year. | Number of Town Boards | Annual Value of Ratable Property. | Receipts. | | | | Expenditure. |
|----------|-----------------------|-----------------------------------|-------------|-------------------------|---------------------|--------|--------------|
| | | | From Rates. | From Govt. ¹ | From other Sources. | Total. | |
| | | £ | £ | £ | £ | £ | £ |
| 1901 ... | 20 | 154,101 | 16,014 | 9,073 | 3,847 | 28,934 | 28,851 |
| 1902 ... | 20 | 165,937 | 10,171 | 6,645 | 8,691 | 25,507 | 25,015 |
| 1903 ... | 22 | 172,905 | 10,321 | 4,758 | 10,077 | 25,156 | 24,302 |
| 1904 ... | 23 | 192,572 | 13,320 | 6,599 | 10,468 | 30,387 | 29,735 |
| 1905 ... | 23 | 194,878 | 13,328 | 5,278 | 14,962 | 33,568 | 32,193 |
| 1906 ... | 23 | 243,424 | 14,284 | 572 | 15,173 | 30,029 | 34,080 |

1. Including loans.

5. **Total Revenue and Expenditure of Local Bodies, 1901 to 1906.**—Particulars as to Road Boards and Road Trusts are given in the chapter of this book on "Roads and Bridges." In addition to the local authorities already mentioned, Marine Boards have been established at seven ports in Tasmania for the purposes of constructing and maintaining wharves and jetties and of controlling all matters relating to the shipping in the respective ports. Twenty water trusts and forty cemetery trusts have also been established in connection with municipal bodies. The subjoined statement shews the total revenue and expenditure for all local bodies, exclusive of all amounts contributed by the general Government, during each year from 1901 to 1906, inclusive. Particulars under the Act of 1906 are not yet available:—

TASMANIA.—REVENUE AND EXPENDITURE OF ALL LOCAL BODIES, EXCLUSIVE OF AMOUNTS CONTRIBUTED BY THE GENERAL GOVERNMENT, 1901 to 1906.

| Particulars. | 1901. | 1902. | 1903 | 1904. | 1905. | 1906. |
|-------------------------------|----------------|----------------|----------------|----------------|----------------|----------------|
| *REVENUE. | | | | | | |
| | £ | £ | £ | £ | £ | £ |
| Marine Boards and Lighthouses | 44,114 | 44,095 | 36,827 | 50,016 | 60,672 | 77,224 |
| Municipalities | 103,833 | 109,397 | 107,349 | 146,152 | 150,291 | 186,669 |
| Road and Bridge Trusts | 21,564 | 22,794 | 25,124 | 28,879 | 28,663 | 30,271 |
| Cemetery Trusts | 1,093 | 1,062 | 1,087 | 1,227 | 2,078 | 1,121 |
| Town Boards | 19,861 | 18,862 | 19,506 | 24,304 | 28,290 | 29,457 |
| Water Trusts | 6,794 | 8,378 | 8,427 | 9,318 | 12,623 | 12,363 |
| Total | 197,259 | 204,588 | 198,320 | 259,896 | 282,617 | 287,105 |
| †EXPENDITURE. | | | | | | |
| | £ | £ | £ | £ | £ | £ |
| Marine Boards and Lighthouses | 43,157 | 42,525 | 36,006 | 57,804 | 54,867 | 68,114 |
| Municipalities | 106,013 | 103,434 | 109,662 | 141,202 | 153,937 | 140,595 |
| Road and Bridge Trusts | 18,941 | 20,429 | 30,133 | 28,703 | 27,166 | 30,060 |
| Cemetery Trusts | 1,086 | 1,134 | 1,062 | 1,204 | 1,152 | 1,208 |
| Town Boards | 19,778 | 18,370 | 19,752 | 23,351 | 26,815 | 33,508 |
| Water Trusts | 6,891 | 8,451 | 8,967 | 6,697 | 12,593 | 12,446 |
| Total | 195,316 | 194,343 | 205,582 | 258,961 | 276,530 | 285,931 |

* Exclusive of amounts contributed by the general Government. † Exclusive of expenditure from Government contributions.

The total amount advanced by the general Government to local bodies for public works up to the 30th June, 1906, was £391,838, of which £78,350 had been advanced for the purpose of water supply, £10,700 for light, £6937 for buildings, £154,476 for harbour improvements, £15,100 for roads and streets, £3600 for the redemption of debentures, £83,334 for drainage, £2841 for cemeteries, £1500 for recreation grounds, and the remaining £35,000 for the lighting and water supply of Launceston.

6. **Hobart Water Supply.**—The original water supply of Hobart was obtained from a stream known as the Hobart Rivulet, flowing from Mount Wellington, the works being carried out in 1831 by the Imperial Government. These works consisted of an aqueduct and a line of cast-iron pipes, the water being distributed to several points known as “wells.” By an Act of the State Parliament passed in 1860 the works were transferred to the municipality. Under this Act certain additional streams flowing from Mount Wellington were acquired as sources of supply, and a storage reservoir containing 45,000,000 gallons was constructed. The catchment area on Mount Wellington at present comprises an area of 4200 acres, the sources of supply having been extended at various times as far as the North West Bay River, fifteen miles from Hobart.

(i.) *Storage Reservoirs.* There are two storage reservoirs about 2½ miles from the city. One contains 68,000,000 gallons and is 502 feet above sea-level, while the other contains 45,000,000 gallons and is 447 feet above sea-level. The whole of the supply is by gravitation. The water is brought from the various streams by means of stone aqueducts and cast-iron pipes to the reservoirs, and thence by three 10-inch cast-iron mains, of which two lead to the distributing reservoirs and one direct to the shipping and southern portion of the city.

(ii.) *Capital Cost, Tenements Connected, Length of Mains, Revenue and Expenditure, 1907.* The total capital cost to the end of 1907 was £186,692, but a considerable amount of reticulation work has been done out of revenue and not charged to capital account. The outstanding loans at the end of 1907 amounted to £160,750. At the same date the number of tenements supplied in the city and suburbs was 7301, the population at the last census in 1901 was 32,418, and the length of reticulation mains at the end of 1906 was seventy-four miles. The revenue and expenditure for the last eight years were as follows:—

HOBART WATERWORKS.—REVENUE AND EXPENDITURE, 1901 to 1908.

| Particulars. | 901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | 1908. |
|-----------------|--------|--------|--------|--------|--------|--------|--------|--------|
| | £ | £ | £ | £ | £ | £ | £ | £ |
| Revenue | 18,806 | 19,091 | 18,862 | 20,200 | 20,127 | 19,125 | 21,802 | 19,719 |
| Expenditure ... | 20,161 | 16,126 | 16,624 | 15,667 | 16,576 | 15,817 | 17,785 | 22,901 |

(iii.) *Proposed Extensions.* Parliamentary sanction to borrow £63,000 has been obtained for the purpose of improving the water supply of the city and suburbs of Hobart; £49,000 of this amount is to be spent on the construction of a new storage reservoir.

7. **Hobart Sewerage System.**—A scheme for the construction of a sewerage system in Hobart was adopted in 1903. The sewage is collected and treated in septic tanks and is then discharged into the estuary of the River Derwent. Up to the end of the year 1907 about twenty-six miles of sewers had been laid, and 1809 tenements, sewerage a population of 9045, had been connected at a cost of about £100,000. During the year 1907 the average quantity of sewage treated daily was 278,000 gallons, the revenue for the year being £3107. Extensions are in progress with a view to completing the sewerage of over 2000 acres so as to serve an estimated population of about 30,000 people.

8. **Public Lighting in Hobart.**—Gas is supplied for public and private lighting in the metropolitan district of Hobart by the Hobart Gas Company. The plant is capable of an output of 500,000 cubic feet of gas per day, the holder capacity being 660,000 cubic feet. The district served comprises the city of Hobart, New Town, and Queenborough. Gas was first supplied for public lighting in 1857. In September, 1908, there were about 51 miles of mains, ranging in diameter up to 18 inches.

The following statement gives particulars of public and private lighting in Hobart for the year 1907:—

HOBART.—PUBLIC LIGHTING, GASWORKS, 1907.

| | | | | | |
|------------------------|----------|------------|--------------------------|---------|--|
| Gas manufactured | Cub. ft. | 90,157,000 | <i>Revenue—</i> | | |
| Gas sold ... | Cub. ft. | 82,381,000 | | | |
| Coal used ... | Tons | 7,721 | From sale of gas ... | £25,124 | |
| Number of customers | ... | 3,610 | From sale of by-products | 4,299 | |
| Number of employes | ... | 80 | From other sources | 111 | |
| Capital cost— | | | Total ... | £29,534 | |
| Land and buildings | ... | £12,304 | <i>Expenditure</i> ... | £19,924 | |
| Machinery, plant, etc. | ... | 77,077 | | | |
| Total | ... | £89,381 | | | |

(ii) *Electric Lighting.* The Hobart Electric Tramway Company Limited supplies a small amount of current for lighting purposes; this supply is, however, only on a very small scale and is incidental to the business of the company or the maintenance of its tramways. (See p. 750 *ante*.)

SECTION XXVII.

INDUSTRIAL UNIONISM AND INDUSTRIAL LEGISLATION.

§ 1. Development of Trade Unions in Australia.

1. **General.**—In Australia, industrial unionism paved the way for industrial legislation. Conditions of employment were on the whole favourable to the investigation of industrial problems; and experimental legislation was possible because of the simplicity and directness of the aim of those engaged in industrial occupations. Moreover the non-existence of the complexity of the problems and of the organisation of older countries did not interpose difficulties which might otherwise have operated. Hence also rapid changes in laws regulating industry occur and are likely to occur. To a great extent the trades unions were responsible for these laws. They steadily and continuously urged an amelioration of the condition of the working man, and by organisation and discipline they presented a united front to opposing forces, and attained many advantages by a recognition of the principle that unity is strength. Their efforts have resulted in improved conditions, particularly short hours and a healthier mode of life. One great aim of present-day industrial legislation has been said to be, to extend “the reasonable comforts of a civilised community” to those engaged in every branch of industry. Large organisations have been able to attain their ends by force of numbers, and, in the case of the great bulk of the artisan and similar classes, through the solidarity of their unions. The smaller and less perfectly organised industries, unable to maintain an effectual struggle with hope of success, are now receiving, by legislative enactment, the benefits already accrued to the trades unions.

While the demands of the early unionists have almost in their entirety been conceded by the employer, unionism nevertheless continues. Industrial legislation has not yet reached the stage when the conflicts between employer and employes cease. A numerically strong union will sometimes attain its end by the threat—and sometimes by the fulfilment of the threat—of a strike.

Each State of the Commonwealth, it may be said, has enacted, with more or less elaboration, legislation respecting trade unions and respecting the regulation of the conditions of industrial life, particularly those of factory employment; and each State, except Tasmania, has regulated the hours of business for the great majority of shops. Some of the States have also established machinery for the regulation of wages, as well as of other matters connected with employment.

At the present time there is an obvious tendency to adjust such matters throughout Australia on uniform lines. The industrial condition of any State of the Commonwealth

naturally reacts quickly on any other State. This is one of the consequences of a unified tariff, and of the fact that the general economic conditions of any one part of the Commonwealth must necessarily affect very intimately any other part. An expression of the intimacy of these economic and industrial relations of different parts is seen, for example, in the refusal of an Arbitration Court in New South Wales to fix wages in the boot trade in that State at a higher rate than that fixed by the Wages Board in Victoria, because of the additional burden which such a rate would place on local manufacturers.

2. History of Unionism in Australasia.—(i.) *Commencement of Unionism: the Eight Hours' System.* The first trade union in Australia was the "Operative Masons' Society," established in Melbourne in 1850. In 1851 a branch of the "English Amalgamated Society of Engineers" was founded in Sydney. For many years the only unions existing were practically those formed by the several branches of the building trades. They were all subject to the English law prohibiting conspiracies and combinations in restraint of trade, though it does not appear that such law was ever put in force in Australia. The main object of the early unions in Australia was the limitation of the working week to forty-eight hours. The minor and friendly society benefits that were usual amongst the unions of older countries were also desired; but the chief aim was the establishment of the eight hours' principle, and that aim for many years was the chief link between the unions. It is difficult to obtain detailed information concerning the unions prior to trade union legislation, but their early history generally resolves itself into an account of the early efforts put forth by metropolitan operatives to secure the limitation of the working day to eight hours.

(ii.) *New Zealand.* The system was first put into practice in Australasia in 1848 by the "Otago Association," which purchased an area of land upon Port Chalmers, N.Z., and proceeded to build the town of Dunedin, under a system which recognised the eight hours' day, thus instituting, in the New World of the south, that period of toil as the limit of the working day. Thus the system began voluntarily in New Zealand long before the unions that demanded and acquired it in Australia had come into existence. But many years elapsed in the Dominion before trades unionism became an established fact. The first Congress of New Zealand Trades was held in 1885. In that year, too, the general celebration of the eight hours' principle by the combined trades was inaugurated.

(iii.) *New South Wales.* In New South Wales, the operative masons obtained the eight hours' concession in 1855, after a strike; but little development of the movement was noticeable until 1871, in which year four eight-hour trades—the brickmakers, stone-masons, labourers, and carpenters—inaugurated the annual celebration.

(iv.) *Victoria.* The first Melbourne Eight Hours' procession was held in 1856, the trades taking part being the masons, bricklayers, carpenters and joiners, plasterers, painters, and slaters. In the following year nine trades and about 700 men took part in the function; but the principle of the Eight Hours' Day had been recognised, and new unions were quickly established under the influence and guidance of the pioneers of the movement.

(v.) *Queensland.* After the fever of the gold rush to the Fitzroy River had subsided, settled conditions prevailed in the building industry, and the trades, being well established and organised in Queensland, celebrated their inaugural festival of the eight hours in 1866. In this Capital, as in Melbourne, the pioneer trade was the stonemasons.

(vi.) *South Australia.* In South Australia, the establishment of the eight hours' system by the unions was accomplished in 1873, the building trades, represented by the stone-cutters, painters, and carpenters, again being the leaders.

(vii.) *Western Australia.* The discovery of gold in Western Australia caused rapid development in the infant cities and towns of that State, and mechanics found abundant employment in the building trades. Unions were soon formed, and the eight hours became an established system in 1896.

(viii.) *Tasmania.* Trade unions were established in Tasmania in 1874, the shipwrights of Hobart being the pioneer society. Here, as on the mainland, the eight hours' day was the chief aim of the operatives, and here, as in Sydney, it was conceded only after a strike. Within a few years, the general system of trades unions was instituted. The inaugural celebration of the system was celebrated in 1890.

(ix.) *The System Universal throughout Australasia.* No provision for eight hours was made in the original documents which set out the conditions of labour under which the members of the Otago Association were to work in 1848. It was intended to insert a clause embodying the principle, but it was found that such a clause would be inoperative, as contracts to bind free settlers to serve under any conditions of labour beyond the seas were not provided for by any Imperial Statute. The system, however, was tacitly agreed to by both parties, and quietly and voluntarily the eight hours' day was established. Not so amicable were the methods by which it was acquired in the other colonies. There had to be unions of men and unions of trades, before the requisite forces were available to overbear opposition to the system, and, at any rate in two cases, the tradesmen resorted to strikes before the concession was granted. Generally it may be said that trades unions in the Commonwealth sprang out of the desire for an eight hours' day; and with the Western Australia celebration of 1896, trades unionism, with its eight hours' charter, completed its circuit of the Commonwealth. From 1880 to 1890 there was in the States where industry was systematised great activity in the organisation of labour, more particularly at the end of that period. In sympathy with the widespread industrial unrest in England the occurrence of similar unrest in Australia drew the wage-earners into the unions in large numbers: the return of industrial peace, however, was marked by a decrease in numbers.

(x.) *Organisation of Unions.* The first regular association of unions in Australia was the Trades Committee in Melbourne, formed in 1859, which afterwards became the present Trades and Labour Council. Similar councils now exist in all the States. Composed of delegates from the unions they exercise a general care over the interests of their members.

(xi.) *Union Acts.* The Trade Union Acts of England and the collateral Conspiracy and Protection of Property Act have been copied by the States, the Acts also providing for unions of employers. The latter provision has been but slightly utilised, however, as apparently it offers no well-defined inducement. South Australia adopted the Acts in 1876, New South Wales in 1881, Victoria in 1884, Queensland in 1886, Tasmania in 1889, and Western Australia in 1902.

The Acts referred to provide for the legal recognition of combinations which come under the definition of trade unions; the registration of unions of seven or more persons, the registration of councils or other bodies to which registered trade unions are affiliated; the vesting of union property in registered trustees, with penal provisions in respect of

defaulting officers. The registered unions are required to furnish annual returns of members and funds to a special department.

3. Operations and Organisation of Unions subsequent to the Acts.—(i.) *Unions.* Except as hereinafter mentioned, the unions do not avail themselves of the Trade Union Acts to any large extent. Information concerning them in some States is not at present available, since they do not publish information regarding their members and funds. The figures given for registered trade unions must not therefore be regarded as affording any criterion by which the present position of unionism may be judged. The discrepancy between the numbers of registered and unregistered unions in some States may be gauged by the fact that there are seventy-four unions affiliated with the Melbourne Trades Hall, thirteen with the Bendigo, and sixteen with the Ballarat Trades Hall, making a total of 103. In Victoria only seven, however, are registered, and some of the latter are not affiliated. In South Australia there are sixty-seven unions affiliated to the local Trades Council, but only twenty-four are registered. In Western Australia the number of unionists registered under the Industrial Arbitration Act is about 33 per cent. more than the number registered under the Trade Union Acts. In New South Wales the numbers are almost identical.

The failure to register under the Trade Union Acts does not deprive the unions of the privileges conferred by the Conspiracy Acts.

The largest individual union in Australia is the Australian Workers' Union, whose members are pastoral workers (shearers, etc.), and number more than 20,000. It has branches in Queensland, New South Wales, and Victoria, and the east centre of South Australia, covering the whole of the principal wool-growing districts of Australia. It maintains newspapers in Sydney and Brisbane, each of which is known as *The Worker*.

(ii.) *Workmen and Employers in Unions.* Available statistics at present do not shew what proportion of Australian workmen are members of trade unions, though a census of occupations would at least for some States enable an estimate to be made.

The Acts are but little availed of by employers.

(iii.) *Concerted Action.* The consummation of the eight hours' system, at which the early unions had aimed, was followed by demands for further concessions and privileges. An intercolonial congress of delegates of trades unions was first held in Sydney in 1879. At the second congress in Melbourne, in 1884, sixty-nine delegates from New South Wales, Victoria, and South Australia were present, representing forty-one unions, branches, or societies. Following the methods of European associations the Australian unions sought to achieve an improved condition for their members by the establishment of rules concerning minimum wage, limited hours of toil, the restriction of the number of apprentices and improvers, and the prohibition of the employment of non-union labour. Some of the unions refuse to admit to membership any but skilled journeymen, on the ground that their object is to encourage the attainment of proper skill.

(iv.) *Representation in Parliament.* It was during the decade 1880-1890 that the trade unions of Australia espoused direct legislative representation and advocated State interference between employer and employé. This policy has been called "new unionism." A resolution affirming the desirability of Parliamentary representation of labour being carried at the congress of 1884, a number of members representing the special interests of the wage-earners were elected to the Legislatures of some of the States, but the unions took no steps to obtain representation by men chosen from among their own ranks until after the great labour troubles of 1890-1892. In that period serious strikes occurred in the maritime, shearing, and mining industries, and it was then that the Labour party

proper was formed, though a certain amount of ameliorative legislation had already found its way into the statute books of the States. Since 1890 the party has considerably influenced Australian politics. In the year 1904 a Labour Government occupied the Commonwealth Treasury benches, and again in December, 1908, a second Labour Government took office. The second Deakin Ministry had the support of the Labour party. In South Australia the Premier is a direct Labour representative. In Queensland a third of the House of Representatives are Labour members. In New South Wales the election of 1907 strengthened the party, and it is now an important element in Parliament. Victoria and Western Australia have also elected a considerable number of direct Labour representatives.

Triennial federal conferences laid down a policy for the party, but at present there is no authoritative Commonwealth organisation, and the policy is not binding upon a State league. The Political Labour Council controls political and the Trades Hall Council trade union matters. The former consists of delegates from both unions and "branches." The branches are coterminous with State electoral districts, and nominate candidates for those districts. Candidates for the Commonwealth Senate are balloted for by all league members in the State, and for the Commonwealth House of Representatives by the branches in the constituency.

4. Registered Trade Unions and Industrial Associations.—(i.) *Unions of Employes.* The statistics of registered trade unions of employes not only do not represent the position of unionism, but, in addition, the statistics themselves for past years are so defective as to be practically valueless. The number, etc., of these unions is therefore no guide to the position of unionism in Australia. The figures for 1907 are as hereunder:—

REGISTERED TRADE UNIONS OF EMPLOYES, 1907.

| State. | No. of Unions. | No. of Members. | Receipts. | Expenditure. | Funds. |
|--------------------------|----------------|-----------------|-----------|--------------|---------|
| | | | £ | £ | £ |
| New South Wales | 136 | 92,230 | 96,038 | 91,929 | 90,605 |
| Victoria | 7 | 9,516 | 6,702 | 5,642 | 6,478 |
| Queensland | 25 | 11,236 | 11,458 | 9,674 | 6,992 |
| South Australia | 24 | 5,649 | 6,669 | 5,524 | 12,758 |
| Western Australia | 84 | 11,637 | 28,871 | 28,162 | 17,223 |
| Tasmania | 1 | 52 | 178 | 34 | 44 |
| Commonwealth | 277 | 130,320 | 149,916 | 140,965 | 134,100 |

(ii.) *Unions of Employers.* There are in New South Wales two unions of employers, with 1451 members; in Queensland three, with 133 members; and in Western Australia fifty-eight, with 552 members.

5. Registration under Industrial Arbitration Acts.—Western Australia, and New South Wales up to 30th June, 1908, were the only States with Industrial Arbitration Acts under which industrial associations could be, and actually were, registered. The development of such registered associations during the period 1901 to 1907, and a comparison with the development of trade unions for the period 1903 to 1907, are given in the tables hereunder. The Western Australian figures include councils and associations:—

§ 2. Laws Relating to Conditions of Labour.

1. **Tabular Statement of Statutes affecting Labour.**—The Statutes enacted in the several States of the Commonwealth, which, more or less directly, affect the general conditions of labour, are shewn in the table below. Where merely an incidental reference to labour conditions is made in a statute, as is the case with, *e.g.*, the Hawkers and Pedlars Act 1892 of Western Australia, or the Firms Registration Act 1899 of South Australia, the Act is not included in the table:—

2. Benefits sought to be Conferred by the Acts.—(i.) *General Provisions.* The legislation enacted has generally had for its object the shortening of hours, fixing of rates of payment, provision of sanitary accommodation, ventilation and cleansing of premises, and general amelioration of the conditions of labour, particularly that of females and children, in factories. The principal provisions of these statutes are set out in the tables hereinafter. It may be stated that Tasmania is now the only State where no adequate factories legislation is in force.

(ii.) *Historical.* The first Australian Factories Act was passed in 1873 in Victoria, and became law on 1st January, 1874. It was entitled "The Supervision of Workrooms and Factories Statute," and contained only six sections. The existing Victorian Act, passed in 1905, contained originally 163 sections, and is now extended by two amendments of 35 and 40 sections respectively. There are, moreover, numerous regulations in force under its authority. The three principal provisions in the Act of 1873 were (a) that any place in which not less than ten persons were engaged for hire in manufacturing goods should be constituted a factory b) that such factories as to building, sanitation, etc., should be subject to regulations made by the Central Board of Health; and (c) that no female should be employed for more than eight hours in any one day without the permission of the Chief Secretary. The administration of the Act was entrusted entirely to the local Boards of Health, and the system was found to be less effective than was hoped. The conditions which have given rise to trouble in the old world tended to reproduce themselves in the young and growing industries of the States. The advocacy of legislation to control the conditions of employment became pronounced in Victoria in 1880, and a strike of tailoresses in Melbourne in 1882 led to a recognition of the real state of affairs. As a result of unsatisfactory working under the local governing bodies, and on account of agitation of the operatives, a commission was appointed in 1883, and reported the necessity of legislation for the regulation of factories, and in particular

pointed out the fact that men were compelled to toil for as many as eighteen hours and women sixteen hours a day. It also shewed that the condition of out-workers was very undesirable, and that the apprenticeship system was frequently used to obtain labour without remuneration, apprentices being dismissed upon asking for payment at the end of their time. The Factories and Shops Act 1884, while providing for the suppression of many evils in respect of accommodation and lengthy hours, did not touch the two last mentioned. It provided for Government inspection, and also that six persons should constitute a factory if the premises were situated in a city, town or borough. In 1887 a short amending Act was brought in to remedy some defects that were found to exist. Its principal provision was that any place in which two or more Chinese were engaged should be deemed a factory. In 1893, a further enactment reduced the number of persons constituting a factory to four. Another Royal Commission sat in 1895, resulting in the Act of 1896, which dealt with the matters previously untouched, and the system of regulation was carried on by the Act of 1900 and the complete codification of the law in 1905.

Similar conditions were found to prevail in other States. New South Wales and Queensland adopted regulative measures in 1896 and subsequent years, and South Australia in 1894, 1900, and 1906; Western Australia followed suit in 1902 and 1904. Tasmania adopted the Victorian Act of 1873 in 1884, with a small extension in 1905, and a Royal Commission in 1907 reported the desirability of legislation.

The same remarks apply in a general way to the condition of employés in shops.

3. Limitation of Hours.—(i.) *Factories.* As already remarked, the adoption of the eight hours' system for adult males has generally been the outcome of the representations made by the trade unions. Except in New Zealand, there is no general legislation to enforce the principle, although there is now a general recognition of it. A week of forty-eight hours is the usual working week. The larger unions, however, have lately moved for a *net* day of eight hours, with Saturday half-holiday, no loading of other week days being permitted by way of compensating for the Saturday afternoon. Under this scheme there are, for five days, equal divisions for periods of labour, recreation, and rest, and four hours' work on Saturday, making a working week of forty-four hours. In the majority of occupations, forty-eight hours weekly is the recognised limit of work. On the establishment of Wages Boards and Arbitration Courts, in the States where those institutions exist, the authorities thus created adopted the rule as part of their determinations and awards wherever it seemed reasonably practicable. In some technical and specialist trades, a lower maximum has been fixed, such for example, as the type-setting machine operators in Victoria, for whom the maximum has been fixed by the Wages Board at forty-two hours weekly. Reasonable provision is made by Statute or award for work performed outside the scheduled hours. Organisations of employés, however, oppose overtime in any industry until all the operatives in that industry are working full time.

In the case of women and children there has been very general enactment in the States of the forty-eight hours' limit, and in addition, the maximum periods of continuous labour, and the intervals of cessation therefrom, have been prescribed in all the States. Tasmanian factories' legislation deals exclusively with females and young persons. New Zealand has fixed a weekly maximum of forty-five hours for females and boys under 16. The first enactment of the forty-eight hours' limit in Australia was in 1873, when the Parliament of Victoria fixed that period for women and girls in factories.

(ii.) *Shops.* All the States, excepting Tasmania, have statutes containing provisions respecting the hours during which shops may be kept open for business. These provisions, in effect, not only limit the hours during which shop-hands may be employed, but apply also where the shops are tended by the proprietor alone and by himself and family, with, however, certain exceptions, such as exist in the State of Victoria. In that State shops wherein not more than one assistant, whether paid or not, is employed, are per-

mitted to remain open for two hours a day longer than other shops of the same class. The object of this is to relieve the hardship which exists for such persons, for example, as widows who are wholly dependent for a livelihood upon the casual trade of small shops. In New South Wales, Victoria, Queensland, South Australia, and Western Australia the closing time of shops, except those specially exempted, is 6 p.m. on four days of the week, 10 p.m. on one day (except 9 p.m. in South Australia), and 1 p.m. on one day—thus establishing a weekly half-holiday. In Western Australia the opening hour is fixed at 8 a.m. In addition to fixing the closing hour, the total daily and weekly working hours are delimited in the case of women and children.

(iii.) *Hotels, etc.* Establishments, the opening of which in the evening is presumably necessary for public convenience—such as hotels, restaurants, chemists' shops, etc.—are required to remain open for longer hours or are permitted to do business during hours prohibited in other establishments.

(iv.) *Half-holidays.* The provisions of the early closing laws differ somewhat in each State, but the main objects, namely, the restriction of long hours of labour, are throughout identical. Formerly, in some of the States, there were, and there are still in others, provisions making the early closing of a business, or the selection of a day for a half-holiday, dependent upon the option of the majority of the business people concerned, or upon the local authority. The anomalous results of the system whereby shops on one side of the street bounding two municipalities were open, when those upon the other side were closed, led to the introduction of the compulsory system, whereby the hours of business are absolutely fixed by statute. In Queensland, the day of the weekly half-holiday is fixed for Saturday. In Victoria the Saturday half-holiday will become compulsory on 1st May, 1909, and there is a strong movement throughout the Commonwealth in favour of closing on the afternoon of that day. In Western Australia, nevertheless, the Government has lately abandoned the compulsory Saturday half-holiday in favour of an optional Wednesday or Saturday, as in other States.

(v.) *Exempted Trades.* The hours for shops exempted from the general provisions of the Acts are also prescribed, and special holidays are provided for carriers.

4. Other General Conditions of Labour.—Measures for the protection of life, health, and general well-being of the worker, tabulated hereunder, exist in most of the States. Though in some instances founded upon English legislation, they are also in many cases peculiar to Australia. Despite experience and continued amendment they have not even yet attained to a settled form. Of the Australian States, Victoria has the most complete system of industrial legislation, and other States are gradually adopting the Victorian statutes, either *en bloc* or with amendments suggested by local conditions. Western Australia has followed very closely the legislation of New Zealand, where also the measures for the amelioration of the industrial conditions are enforced by law.

5. Administration of Factories and Shops Acts.—The provisions of Factories and Shops Acts and of the Early Closing Acts in some of the States are consolidated under a single Act, but in others are separate enactments. The chief provisions of the principal Acts for registration, administration, record-keeping, etc., are set out in the following summary:—

- (a) Factories are defined to be places where a certain number of persons are employed in making or preparing goods for trade or sale, or in which steam or other power is employed. In some States the employment of a Chinese, in some of any Asiatic, constitutes the place a factory.
- (b) A Minister of the Crown administers the Act in conjunction with a Chief Inspector of Factories. Inspectors of both sexes visit the factories with full powers of entry at all reasonable hours by day or night, to inspect certifi-

cates, documents, records, etc., under the Acts, examine persons found there, and generally to ascertain if the provisions of the Acts are complied with.

- (c) Registration of factories before occupation is obligatory. Description of premises and statement of the work to be done must be supplied, and a certificate of suitability of premises obtained.
- (d) A record of all employés, giving the names, age, wages, and work of each under a certain age (18, 20, 21, etc.) must be kept and filed in the Chief Inspector's office.
- (e) Names and addresses of district inspectors and certifying medical practitioners must be posted; also the working hours, the holidays, and the name, etc., of the employer.
- (f) Records of out-work must be kept, containing the names and remuneration of workers, and stating the places where the work is done. Out-workers are required to register.
- (g) Places in which only the near kin of the occupier are employed are generally exempt from registration.
- (h) Meals may be prohibited in workrooms, etc. In some States occupiers are required to furnish suitable mealrooms.
- (i) The employment in factories of young children is forbidden, and medical certificates of fitness are required in the case of young persons under a certain age. Special permits, based on educational or other qualifications, may be issued for young persons of certain ages.
- (j) Guarantees of an employé's good behaviour are void unless made with the consent of the Minister.
- (k) Persons in charge of steam engines or boilers must hold certificates of service or competency.
- (l) Provision safeguarding against accident is made for the fencing off and proper care of machinery, vats, and other dangerous structures. Women and young persons are forbidden to clean machinery in motion or work between fixed and traversing parts of self-acting machinery while in motion. Notice of accidents must be sent to the district inspector. (Dangerous trades are generally under the administration of Boards of Health.)
- (m) Provision is made for the stamping of furniture, in order to disclose the manufacturer, and whether it is made by European or Chinese labour.
- (n) Minimum wage provisions are inserted. Premiums to employers are forbidden.
 - o Sanitation and ventilation must be attended to, and fresh drinking water supplied. Separate and adequate sanitary conveniences for each sex are required.
- (p) Shopkeepers are required to provide proper seating accommodation for female employés. (In some States this is the subject of special legislation.)
- (q) Wide powers of regulation are granted to the Executive and large penalties imposed, including a penalty by way of compensation to any person injured or the family of any person killed through failure to fence machinery and other dangerous structures.

6. **Registered Factories.**—The number of establishments registered under Factories Acts is shewn below, and is of interest as indicating the extent to which the Factories Acts apply:—

FACTORIES REGISTERED UNDER ACTS, 1907.

| State. | No. of Registered Factories. | Numbers Employed. | | |
|--------------------------|------------------------------|-------------------|----------|---------|
| | | Males. | Females. | Total. |
| New South Wales | 3,559 | 46,026 | 20,841 | 66,867 |
| Victoria | 5,003 | 42,457 | 29,511 | 71,968 |
| Queensland | 1,711 | 14,048 | 6,388 | 20,436 |
| South Australia | 1,557 | 15,748 | 5,147 | 20,895 |
| Western Australia | 596 | 5,615 | 1,853 | 7,468 |
| Tasmania | ... | ... | ... | ... |
| Commonwealth | 12,426 | 128,894 | 63,740 | 187,634 |

7. **Mining Acts.**—Mining Acts regulate the working of mines. The employment underground of females and of boys under fourteen years is prohibited. No boy under eighteen years may be employed as lander or bracceman at any plat or landing place; no lander, bracceman, underground worker, or man in charge of motive power may be employed more than eight hours a day. A large number of scientific provisions for the protection of the lives and health of miners are also inserted in the Acts. Engine-drivers must hold certificates of competency. Persons may be licensed to certify to the condition of boilers. Provision is made to enable injured persons or the relatives of persons killed to recover damages if the injury or death results from a breach of the regulations above referred to. Inspection of mines is fully provided for. Sunday labour is forbidden.

8. **Other Acts.**—The British *Employers' Liability Acts*, and in some States the *Workmen's Compensation Act 1897*, have been adopted. In some States the provisions of the former are extended to seamen. Other legislation regulating conditions of labour has been enacted by the States. The British *Conspiracy and Protection of Property Act (38 and 39 Vic., c. 86)* has been adopted. Servants' registry offices are placed under administrative control, and the rates of commission chargeable are fixed by regulation. Power is given to workmen to attach moneys due to a contractor who employs them in order to satisfy a claim for wages, such wages being made a first charge on moneys due to a contractor. Workmen are given a lien for wages over material whereon they are working, even if it becomes part of other property. This is in addition to the common law lien, which ceases when possession of the property is parted with. Workmen's wages are protected from attachment. In Victoria, provision is made for the compulsory resumption of suburban lands to provide workmen's homes.

9. **General Results of Industrial Legislation.**—The results of the legislation described must be sought in the Reports of the Inspectors of Factories of the several States. Generally speaking, the perusal of these reports and of the reports of Royal Commissions which have enquired into the working of the Acts, affords satisfactory evidence that they have, on the whole, effected their objects.

10. **Comparative Statement of Factories Law in Australia and New Zealand.**—The tables which follow shew at a glance the chief provisions of the Factories and Shops Acts in the Commonwealth and in New Zealand.

COMPARATIVE VIEW OF LEADING FEATURES OF THE LAW

§ 3. Legislative Regulation of Wages and Terms of Contract.

1. **General.**—Two systems, based upon different principles, exist in Australia for the regulation of wages and general terms of contracts of employment. A "Wages Board" system exists in New South Wales, Victoria, Queensland, and South Australia, and an Arbitration Court in Western Australia. In New South Wales, Industrial Arbitration Acts of 1901 and 1905 instituted an Arbitration Court. This court expired on 30th June, 1908, having delivered its last judgment on the previous day. Wages Boards were substituted under the Industrial Disputes Act 1908. There is also the Arbitration Court of the Commonwealth, which has power, however, to deal only with matters extending beyond the limits of a single State.

2. **Wages Boards.**—This system was introduced in Victoria by the Factories and Shops Act of 1896. The original Bill made provision only for the regulation of the wages of women and children, but was afterwards amended in Parliament to extend the system to adult operatives of both sexes.

The Act of 1896 made provision for the regulation of wages only in the clothing and furniture trades and the bread-making and butchering trades. By an Act of 1900 the operations of the Act were extended to include all persons employed either inside or outside a "factory" or workroom—see sec. 4, i. (a)—in any trade usually carried on therein. This section is now in the Act of 1905. An Act of 1907 extended the system to trades and businesses not connected in any way with factories, making provision for the appointment of Wages Boards for shop employes, carters and drivers, persons employed

in connection with buildings or quarrying, or the preparation of firewood for sale or the distribution of wood, coke, or coal. It is proposed to extend the system to mines, provision to do so being made in the Mines Bill introduced into Parliament.

The regulation is effected by a Board, called a Special Board, to distinguish it from the Board of Health. Boards for the regulation of wages in the trades specified in the Act of 1896 are appointed as a matter of course, and by the Executive other Boards are appointed only if a resolution for appointment be passed by both Houses of Parliament. A Board consists of from four to ten members, who must be or have been at a recent time prior to appointment engaged in the trade concerned. Employers and employes are equally represented. If one-fifth of the employers or employes object to a representative nominated for them they may elect a representative. Originally the Board was elected in the first instance, but the difficulty of compiling electoral rolls led to the adoption of the present system, which has proved satisfactory. The Furniture Board is nominated outright owing to the preponderance of Chinese. An independent chairman, nominated by the Board, is appointed by the Executive. A Board holds office for three years.

The Board has power to determine the lowest wages, prices, or rates to be paid to persons or classes of persons coming within the Act for wholly or partly preparing, manufacturing, or repairing articles, and for other services rendered, and may fix special rates for aged, infirm, and slow workers.

The Board fixes the hours of work and may limit the number of "improvers" to be employed (usually done by prescribing so many to each journeyman employed.) There is no power in Victoria to limit the number of apprentices employed. Such a power exists in South Australia. The Board fixes the wages of apprentices and improvers according

to age, sex, and experience, and may fix a graduated scale of rates calculated on the same basis. Apprentices bound for less than three years are improvers, unless the Minister sanctions a shorter period of apprenticeship on account of previous experience in the trade. The Minister may sanction the employment of an improver over twenty-one years of age at a rate proportionate to his experience. Out-workers in the clothing trade must be paid piece rates. Manufacturers may, by leave of the Board, fix their own piece rates, if calculated upon the average wages of time workers as fixed by the Board.

Licenses for twelve months to work at a fixed rate lower than the minimum rate may be granted by the Chief Inspector of Factories to persons unable to obtain employment by reason of age, slowness, or infirmity. Licenses are renewable.

Determinations remain in force till altered by a Board or the Court of Appeal. These determinations apply to all cities and towns and such boroughs as the Executive determines, and the Executive may also apply them to any shire within ten miles of a city or town, or beyond that distance, if the shire council petitions to that effect. (Similar provisions are in force in other States.)

The children of an employer are exempt from a determination.

The Executive may direct a Board to fix out-workers' rates and the rates payable in allied trades. Boards are given the power to fix wages to be paid to persons employed on repairs.

Penalties are fixed for the direct or indirect contravention of determinations, the obedience to which is ascertained by examination of the records of wages, etc. (Sec. 4, *i. a.*)

A Court of Appeal, consisting of a Supreme Court Judge, has power to review determinations of the Boards. The Court may appoint assessors to assist the Judge.

The Acts fix an absolute weekly minimum wage, and the evasion of this provision in the case of females employed in the clothing trade by charging an apprenticeship premium is prevented by the prohibition of all such premiums in that particular case. This absolute minimum provision does not exist in New South Wales.

South Australia adopted the Wages Board system in 1900, 1904, and 1906, but the first-mentioned Act was rendered inoperative owing to the disallowance by Parliament of the regulations necessary for carrying it into effect. The Act of 1904 revived the Wages Board system in respect to women and children employed in clothing and whitework trades. The action of this statute was paralysed by a decision, the effect of which was to prevent the fixing of a graduated scale of wages as is done by the Victorian Boards. The necessity for some protection to the persons intended to be benefited by these statutes was urged in the annual reports of the Chief Inspector of Factories, but, until 1906, without effect. Many employers, however, voluntarily complied with the Boards' determinations, though these were without legal force. The system has been brought into full operation by the Act of 1906, which preceded the Victorian Act of 1907, in extending the system to other than factory trades, and is of a still wider scope than the Victorian Act.

It may be noted that the Boards of Conciliation, appointed in England under the Conciliation Act 1897, appear to correspond to the Australian Wages Boards in a remarkable degree, and not in any way to the Arbitration Courts of Australia, inasmuch as they are appointed for each trade or calling, and not to adjudicate generally upon any cases which come before them.

3. The Arbitration Court System.—(i.) Acts in force. The following is a general account of the main features of the Compulsory Arbitration laws of Australia. A few important divergences between the Acts are noted. The New South Wales Acts expired on 30th June, 1908.

The Acts in force at the close of the year 1907 were as follows:—

South Australia: The Conciliation Act 1894.

Western Australia: The Industrial Conciliation and Arbitration Act 1902.

New South Wales: The Industrial Arbitration Acts 1901 and 1905.

Commonwealth: The Commonwealth Conciliation and Arbitration Act 1904.

(ii.) *Significance of Acts.* In Victoria in 1891, and in New South Wales in 1892, Acts were passed providing for the appointment of Boards of Conciliation, to which application might be made voluntarily by the contending parties. The awards of the Boards had not any binding force. Boards were applied for on but few occasions, their lack of power to enforce awards rendering them useless for the settlement of disputes.

The first Australian Act whereby one party could be summoned before, and, presumably, made subject as in proceedings of an ordinary court of law to the order of a court, was the South Australian Act of 1894. Its principles have been largely followed in other States, but it proved abortive in operation and in many respects is superseded by the Wages Board system already described. Western Australia passed an Act in 1900, repealed and re-enacted with amendments in 1902, New South Wales followed in 1901. A bill introduced into the Tasmanian Parliament in 1903 was rejected by the Upper Chamber. The Commonwealth Act, passed in 1904, applies only to industrial disputes extending beyond the limits of a single State.

(iii.) *Industrial Unions.* The Arbitration Act, made to encourage a system of collective bargaining and to facilitate applications to the court, and to assure to the worker such benefits as may be derived from organisation, virtually creates the Industrial Union. This, except in New South Wales, is quite distinct from the trades union; it is not a voluntary association, but rather an organisation necessary for the administration of the law. Industrial unions (or "organisations," as they are styled in the Commonwealth Act) may be formed by employers or employes. They must be registered, and must file annual returns of membership and funds. Unions of employers must have a minimum number of employes. In New South Wales and Western Australia the minimum is 50, under the Commonwealth Act 100. All unions of employes must possess the following qualifications:—In New South Wales the union must be a trade union of branch thereof, or be an association of unions; in Western Australia a membership of 15, and by the Commonwealth Act a membership of 100 is required. The union rules must contain provisions for the direction of business, and, in particular, for regulating the method of making applications or agreements authorised by the Acts. In Western Australia rules must be inserted prohibiting the election to the union of men who are not employers or workers in the trade, and the use of union funds for the support of strikes and lockouts; a rule must also be inserted requiring the unions to make use of the Act. *The Commonwealth Act forbids the employment of funds for political purposes.*

(iv.) *Industrial Agreements.* Employers and employes may settle disputes and conditions of labour by industrial agreements, which are registered and have the force of awards. They are enforceable against the parties and such other organisations and persons as signify their intention to be bound by an agreement.

Failing agreement, disputes are settled by reference to the court. This consists of a judge of the Supreme Court of the State, or, in the case of the Commonwealth, of the High Court. In the States, he is assisted by two "members," who are chosen by and are appointed to represent the employers and employes respectively. Technical assessors may be called in to sit with and to advise the court.

Cases are brought before the court either by employers or employes. The consent of a majority of a union voting at a specially summoned meeting is necessary to the institution of a case; the Commonwealth Act requires the certificate of the Registrar that it is a proper case for consideration.

The powers of the court are both numerous and varied; it hears and makes awards upon all matters concerning employers and employes. The breadth of its jurisdiction may be gathered from the Commonwealth definition of industrial matters. The definition includes the principal matters dealt with by the Acts in a concise form. "Industrial matters" includes all matters relating to work, pay, wages, reward, hours, privileges, rights, or duties of employers or employes, or the mode, terms, and conditions of employ.

ment or non-employment; and in particular, without limiting the general scope of this definition, includes all matters pertaining to the relations of employers and employes, and the employment, preferential employment, dismissal or non-employment of any particular persons, or of persons of any particular sex or age, or being or not being members of any organisation, association, or body, and any claim arising under an industrial agreement."

(v.) *Powers of Court.* The court may fix and enforce penalties for breaches of awards, restrain contraventions of the Acts, declare any practice or regulation to be a "common rule" of the trade, and define the limits of its observation (the Commonwealth Court has power to mitigate the hardships of the common rule), hear objections to it, and exercise all the usual powers of a court of law.

The court may prescribe a minimum rate of wage; it may also (except in Western Australia as regards employment) direct that preference of employment or service shall be given to members of unions. An opportunity is offered for objection to a preference order, and the court must be satisfied that preference is desired by a majority of the persons affected by the award who have interests in common with the applicants.

The Commonwealth Court is to bring about an amicable agreement, if possible, to conciliate and not to arbitrate, and such agreement may be made an award.

All parties represented are bound by the award, and also all parties within the ambit of a common rule or (in the case of Western Australia) giving adherence. The court possesses full powers for enforcement of awards.

In Western Australia there is also a system of Boards of Conciliation, consisting of representatives of employers and employes. They may make awards, which are binding if not challenged within a month after being filed. As a matter of fact, they are almost invariably appealed from, and the tendency is to go direct to the court.

The States have included their railway and tramway employes, and also the employes of certain other public bodies under the Acts; the section of the Commonwealth Act giving the Commonwealth Court power over State employes has been declared unconstitutional by the High Court.¹

(vi.) *Miscellaneous.* The Commonwealth and Western Australian Acts absolutely forbid strikes and lockouts. The New South Wales Act specifically forbids them prior to or during the pendency of a case, leaving events after the award to be dealt with by the court. Protection is afforded to officers and members of unions against dismissal merely on account of such officership or membership, or on account of their being entitled to the benefit of an award.

It has been settled by the High Court that an Arbitration Court cannot direct—

- (a) That non-unionists seeking employment shall, as a condition of obtaining it, agree to join a union within a specified time after engagement;
- (b) That an employer requiring labour shall, *ceteris paribus*, notify the secretary of the employes' union of the labour required.²

4. **The "New Protection."**—The wide difference between the development in the several States of the Commonwealth of the regulation by State institutions of the remuneration and conditions of the workers, has given rise to a desire on the part of the Commonwealth Government to secure uniformity throughout Australia by any suitable and constitutional action on the part of the Commonwealth. The provisions of States wages laws vary considerably. In New South Wales, Victoria, and Western Australia, some experience has been gained of their working. The Wages Board system

1. Federated Amalgamated Railway, etc., Employes v. N.S.W. Railway, etc., Employes (4 C.L.R. 488).

2. Trolly, etc., Union of Sydney and Suburbs v. Master Carriers' Association of New South Wales. (2 C.L.R. 509.)

is new in South Australia and Queensland. Tasmania is without legislation. The desirability of uniformity has, as already mentioned, been recognised by the New South Wales Arbitration Court, which (conversely to the last-mentioned cases) refused the Bootmakers' Union an award which would increase the wages of its members to amounts exceeding those paid in Victoria in the same trade, the express ground of the refusal being that New South Wales manufacturers would be handicapped by the payment of a higher rate of wage than that prevailing in Victoria. This attitude cannot be made effective by the Arbitration Court of the Commonwealth, which has jurisdiction only over industrial disputes extending beyond the limits of any one State.

The opinion has been expressed that a manufacturer who benefits by the Commonwealth protective tariff should charge a reasonable price for the goods which he manufactures, and should institute a fair and reasonable rate of wage and conditions of labour for his workmen.

The above view is known as the "New Protection," a phrase which, though novel, is already firmly established in Australian economic discussions; and the statutes referred to immediately hereinafter are the expression thereof.

By the Customs Tariff 1906, increased duties were imposed upon certain classes of agricultural machinery, notably the "stripper-harvester," a machine invented in Australia, which has, to a great extent, replaced the "reaper and binder and thrashing machine" in the harvesting of wheat. By the same Act it was enacted that the machines scheduled should not be sold at a higher cash price than was thereby fixed, and that if that price should be exceeded, the Commonwealth Executive should have power, by reducing the Customs duties imposed by the Act, to withdraw the tariff protection.

By the Excise Tariff Act 1906 (No. 16 of 1906), an excise of one-half the duty payable upon imported agricultural machinery was imposed upon similar machinery manufactured in Australia. But it was provided that the latter should be exempt from excise if the manufacturer thereof complied with the following condition, namely, that the goods be manufactured under conditions as to the remuneration of labour, which—

- (a) Are declared by resolution of both Houses of the Commonwealth Parliament to be fair and reasonable;
- (b) Are in accordance with the terms of an industrial award under the Commonwealth Conciliation and Arbitration Act 1904;
- (c) Are in accordance with the terms of an industrial agreement filed under the last-mentioned Act;
- (d) Are, on an application made for the purpose to the President of the Court, declared to be fair and reasonable by him or by a judge of a State court or a State industrial authority to whom he may refer the matter.

By the Excise Tariff Act 1906 (No. 20 of 1906), excise duties are imposed in respect of spirits, and it is provided that if any distiller (i.) does not, after the Act has been passed a year, pay his employes a fair and reasonable rate of wages per week of forty-eight hours or (ii.) employs more than a due proportion of boys to men engaged in the industry, the Executive may on the advice of Parliament impose an additional duty of one shilling per gallon on spirits distilled by that distiller.

Exemptions have been claimed by the manufacturers of agricultural machinery in South Australia, New South Wales, Victoria, and Tasmania. These were granted in the two first-mentioned States in consequence of an agreement entered into between the employers and employes. In Victoria, "this whole controversial problem with its grave social and economic bearings" (to quote the words of the President of the Court) was discussed in a lengthy case upon the application for exemption by Victorian manufacturers, now widely known as the "Harvester Case," and in the report of that case may be found the legal interpretation of the Acts under consideration. The exemptions claimed were refused, and the court after discussing the meaning of the words "fair and reasonable" defined them by laying down what it considered to be a scale of fair and reasonable wages.

The High Court has, however, pronounced that the legislation under these Excise Acts is unconstitutional as being an extension of Federal action beyond the powers granted, and a usurpation of the ground reserved to the States.

The Bounties Acts 1906 and 1907 make provision for the encouragement of certain Australian industries by the payment to producers of certain moneys allotted by the Act upon the production of the commodities specified. The Act also provides for the refusal or reduction of a bounty, if the production of a commodity is not accompanied by the payment to the workers employed in that production of a fair and reasonable rate of wage.

§ 4. Operation of the Wage-regulating Laws.

1. **System of Wages Boards.**—Wages Boards are appointed upon the application of either employers or employées. The grounds usually alleged by the former are that their business is hampered by "unfair" competitors, who pay only a sweating wage; by the latter, that they are sweated or are entitled to a consideration of their wages, by reason of the prosperity of the trade in which they are engaged.

2. **Wages Boards.**—There were at the end of 1907 fifty-one special Boards in existence in Victoria and eight in South Australia. Some of the Boards, however, of then recent appointment, had not made any determination. The following table shews the position of trades in relation to the Boards:—

WAGES BOARDS, 1907.

| Total Number of Distinct Trades carried on in Registered Factories. | | Total Trades under Boards. | Total Factories Regist'r'd | Total Employés | Total Employés under Wages Boards. | Percentage under Boards. | Number of Determinations. |
|---|-----|----------------------------|----------------------------|----------------|------------------------------------|--------------------------|---------------------------|
| Victoria ... | 152 | 51 | 5,003 | 71,968 | 56,994 | 80% | 48 |
| S. Australia ... | 78 | 24 | 1,557 | 20,895 | 5,496 | 26% | 10 |

The following table shews for Victoria the number of convictions for disobedience to determinations of Boards (not including overtime working):—

| 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-------|-------|-------|-------|-------|-------|-------|
| 34 | 33 | 41 | 39 | 27 | 52 | 43 |

3. **Mode of Constituting Special Boards and of Appointing Members.**—The following statement is taken from the Report of the Chief Inspector of Factories, Victoria, for 1907. It is interesting, in view of the very general movement throughout Australia towards the constitution of Wages Boards. The method is not precisely the same in the different States, but that of Victoria is given as being the State in which the system was first introduced, and has had most remarkable development:—

"The constitution of a Board, and the appointment of the members of a Board, involve two distinct procedures. Before a Special Board is constituted, it is necessary that a resolution in favour of such a course should be carried in both Houses of the Legislature. It is usual for the Minister administering the Factories Act to move that such a resolution should be passed. He may be induced to adopt such a course, either by representations made by employers and employées, or by employées alone, or by the reports of the officers of the department. The reasons alleged by employers for desiring a Board are, usually, unfair competition; and those by employées, low wages, and often the employment of excessive juvenile labour. If the Minister is satisfied that a case has

been made out, he will move the necessary resolution in Parliament, and when such resolution has been carried, an Order-in-Council is passed constituting the Board. The Order indicates the number of members to sit on the Board. The number of members must not be less than four nor more than ten. The Minister then invites, in the daily press, nominations for the requisite number of representatives of employers and employés. These representatives must be, or have been, employers or employés, as the case may be, actually engaged in the trade to be affected. All that is necessary is, that the full names and addresses of persons willing to act should be sent in. Where there are associations of employers or employés, it is not often that more than the necessary number of nominations are received. In any case, the Minister selects from the persons whose names are sent in, the necessary number to make up a full Board. The names of persons so nominated by the Minister are published in the *Government Gazette*, and unless within twenty-one days, one-fifth of the employers, or one-fifth of the employés, as the case may be, forward a notice in writing to the Minister that they object to such nominations, the persons so nominated are appointed members of the Board by the Governor-in-Council. If one-fifth of the employers or employés object to the persons nominated by the Minister—and they must object to all the nominations, and not to individuals—an election is held under Regulations made in accordance with the Act. Shortly stated, employers have from one to four votes, according to the size of the factories carried on, as regards the election of employers, but as regards Special Boards for shops, each employer has only one vote; and each employé in the trade, over eighteen years of age, has a vote for the election of representatives of employés. The Chief Inspector conducts such elections, the voting is by post, the ballot papers being forwarded to each elector. Within a few days of their appointment, the members are invited to meet in a room at the office of the Chief Inspector of Factories, and a person (always a Government officer, and usually an officer of the Chief Inspector's department), is appointed to act as secretary. The members must elect a chairman within fourteen days of the date of their appointment, and if they cannot agree to a chairman, he is appointed by the Governor-in-Council. The times of meeting, the mode of carrying on business, and all procedure, is in future entirely in the hands of the Board. Vacancies in Special Boards are filled on the nomination of the Minister without any possibility of either employer or employé objecting. The same course is observed as regards all appointments of members of the Furniture Board. The result of the labours of a Board is called a "Determination," and each item of such determination must be carried by a majority of the Board. It will be seen that, unless employers and employés agree, a full attendance of the Board is required, as, in case of a difference of opinion, the chairman decides the matter, and he has only one vote, the same as any other member of the Board. When a determination has been finally made, it must be signed by the chairman, and forwarded to the Minister of Labour. The Board fixes a date on which the determination should come into force, but this date cannot be within thirty days of its signature by the chairman. If the Minister is satisfied the determination is in form, and can be enforced, it is duly gazetted. In the event of the Minister considering that any determination may cause injury to trade, or injustice in any way whatever, he may suspend same for any period, not exceeding six months, and the Board is then required to reconsider the determination. If the Board does not make any alteration, and is satisfied that the fears are groundless, the suspension may be removed by notice in the *Government Gazette*. This power is not, however likely to be used by the Minister, as provision is now made by which either employers or employés may appeal to the Court of Industrial Appeals against any determination of a Board. This Court consists of any one of the judges of the Supreme Court, sitting alone, and the Judges arrange which of them shall for the time being constitute the Court. An appeal may be lodged (a) by a majority of the representatives of the employers on the Special Board; (b) a majority of the representatives of employés on the Special Board; (c) any employer or group of employers, who employ not less than 25 per cent. of the total number of workers in the trade to be affected; or, (d) 25 per cent. of the workers in any trade. The Court has all the powers of a Special Board, and may alter or amend the determination in any way it thinks fit. The decision of the Court is final, and cannot be altered by the Board,

except with the permission of the Court, but the Court may, at any time, review its own decision. The Minister has power to refer any determination of a Board to the Court for its consideration, if he thinks fit, without appeal by either employer or employé. The decision of the Court is gazetted in the same way as the determination of the Board, and comes into force at any date the Court may fix. The determinations of the Board and the Court are enforced by the Factories and Shops Department, and severe penalties are provided for breaches of determination. No proceedings for breaches of the determination can be taken by any one without the sanction of the Department. Any employé, however, may sue an employer for any wages due to him under any determination, notwithstanding any contract or agreement expressed or implied to the contrary."

The Court of Appeal in Victoria has heard five appeals from determinations of Boards. In one case the decision was upheld, in three cases decisions were reversed or amended, in one case the Board, unable to come to a determination, referred the matter to the Court, which exercised its power of fixing a proper wage where the average wage paid by employers did not afford a living wage.

4. **Effect of Acts.**—The question whether the operation of the Acts has bettered the monetary position of the operative may be answered in the affirmative. Starting from the lowest point, the provision of an absolute minimum wage per week has stopped one form of gross sweating. Another case is that of the "white-workers" and dressmakers; with these the lowest grade was the "outworkers," who were pieceworkers. In some branches of the Victorian trade, in 1897, the wages paid to outworkers for all classes of certain goods were only from one-third to one-half the wages paid in the factories for low-class production of the same line of stuff. By working very long hours the outworker could earn ten shillings per week. The average wage of females in the clothing trade in 1897 was ten shillings and tenpence per week; there were, however, in that year 4164 females receiving less than one pound per week, and their average was eight shillings and eightpence. It was almost a revolution when a minimum wage of sixteen shillings per week of forty-eight hours was fixed by the Board, when pieceworkers' rates were fixed to ensure a similar minimum, and when outworkers were placed on the level of pieceworkers. Many employers refused to continue to give out-work and took the workers into the factories on time work. The sanitary conditions required were far more healthy than could exist in the poorer class of dwellings. The evidence of South Australian reports discloses similar facts in that State.

5. **Change of Rate of Wage.**—The following table shews the change of affairs in these trades:—

WAGES OF FEMALES IN CLOTHING TRADES, VICTORIA, 1897 and 1907.

| Year. | Class. | Females Employed in the Dress, Mantle, and Under-clothing Trade. | | Females Employed in the Shirt Trade. | | | |
|-------|---|--|------------------|--------------------------------------|-------------------|----------------------|---------------|
| | | Number | Average Wage. | Number. | Average Wage. | | |
| 1897 | 16 yrs. and over receiving under £1 per wk. | 4,164 | £ s. d. 0 8 8 | 435 | £ s. d. 0 12 3 | | |
| | " " £1 and over ... | 593 | 1 9 1 | 144 | 1 3 10 | | |
| 1907 | Females Employed in ... | Dress and Mantle Trade. | | Shirt Trade. | | Underclothing Trade. | |
| | | Number. | Average Wage. | Number. | Average Wage. | Number. | Average Wage. |
| | Females at minimum wage and over ... | 2,581 | £ s. d. 1 1 2 | 245 | s. d. 19 11 | 585 | s. d. 19 3 |
| | Pieceworkers ... | 158 | 0 17 0 | 746 | 16 11 | 218 | 17 0 |

The above trade, the sweating* in which is world-wide, is taken as an example, and corresponding results may be obtained in any State, according as there is or is not a regulative law. In Tasmania, where no such law exists, the scale of wages may be gathered from the fact that in clothing factories females of three and five years' service, and of twenty to twenty-six years of age, receive twelve shillings per week.

It may be stated generally that some of the most prosperous trades in Victoria, e.g., the boot trade, have been longest under the Acts.

§ 5. Operation of the Arbitration Acts.

1. **New South Wales and Western Australia.**—In New South Wales eighty-six agreements were registered under the Industrial Arbitration Act 1901, and two under the Industrial Disputes Act 1908. These affect 1157 employers and nearly 38,000 employes. In Western Australia thirty-four agreements were registered up to the end of 1906; ten in 1907, and ten in 1908, making a total of fifty-four. The estimated number of employers affected was 619; of employes, 15,946. The courts have been kept extremely busy. In New South Wales, up to the end of 1908, 252 industrial disputes were filed, 130 awards were made, and the balance of the disputes were settled, withdrawn, or, for some other reason, removed from the list. Fifteen industrial agreements were made "common rules," but these are ineffective in consequence of a legal decision. Fifty-five awards have been made "common rules." There have also been 648 summonses for breaches of awards. In Western Australia 252 industrial disputes were, up to the end of 1908, filed; seventy-one awards were made, and forty-five breaches of awards were proved before the court. There have been a certain number of labour troubles in New South Wales since the passing of the Act, and several instances of cessations of work have been reported. In the majority of instances the strikes were by small bodies of men and were usually soon settled.

§ 6. Other Commonwealth Legislation affecting Labour.

1. **Constitutional Power.**—By sec. 51 of the Commonwealth of Australia Constitution Act power is conferred upon the Parliament of the Commonwealth to make laws respecting, *inter alia*—

- (xix.) Naturalisation and aliens.
- (xxiii.) Invalid and old-age pensions.
- (xxvii.) Immigration and emigration.
- (xxxv.) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State.

(2.) **Legislation.**—(i.) A special appropriation was made by Parliament (Act No. 18 of 1908), whereby an Invalid and Old-age Pensions Fund was created; and the payment of pensions as from the 1st July, 1909 (or such earlier day as is fixed by Parliament) is enacted by another statute (No. 17 of 1903).

(ii.) One of the first Acts of the Commonwealth was the *Pacific Island Labourers Act 1901*, which prohibited the importation of further Kanaka labour for sugar plantations and provided for the deportation of those already in the State.

(iii.) *The Immigration Restriction Acts 1901 and 1905* prohibit the immigration of any persons who are unable to comply with certain educational conditions. The effect of this Act is to exclude Asiatic and other coloured peoples from Australia.

(iv.) *The Contract Immigrants Act 1905* defines a contract immigrant as an immigrant to Australia under a contract or agreement to perform manual labour in Australia. The contract must be in writing and must be made by or on behalf of a resident

in Australia. Its terms must be approved by the Minister of External Affairs before the admission of the immigrant. It must not be made in contemplation of, or with a view of affecting an industrial dispute. The Minister must be satisfied that there exists a difficulty of obtaining a worker of equal skill and ability in the Commonwealth, but this last provision does not apply to contract immigrants who are British subjects either born in the United Kingdom or descended from persons there born. The terms of the contract must offer to the immigrant advantages equal to those of local workers. Domestic servants and personal attendants accompanying their employers to Australia are excluded from the operation of the Act. Contract immigrants not complying with the above conditions are excluded from Australia.

During the year 1907, 972 contract immigrants were admitted into the Commonwealth, of whom 731 were British, 107 were Spaniards, 80 Scandinavians, 41 Austrians, and 13 Germans. Out of this total 912 were agricultural labourers introduced for the Queensland sugar industry, viz., 571 by the Queensland Government and 341 by the Colonial Sugar Refining Company. The labourers for the sugar plantations included all the Spaniards, Scandinavians, and Austrians, and 684 out of 731 British. The remaining 47 British and the 13 Germans were required for various industries.

(v.) *The Sugar Bounty Act 1905* and the *Bounties Act 1907* make the payment of the bounty contingent on the goods having been grown or produced by white labour.

(vi.) Part VII. of the *Trade Marks Act 1905*, providing for the registration of marks by any individual Australian worker or association of Australian workers for the purpose of indicating that the articles to which it is applied are the exclusive production of the worker or of members of the association—an adaptation of the American "union label"—has been held by the High Court to be constitutionally *ultra vires*. The Court made an order forbidding the Registrar to keep a workers' register.

SECTION XXVIII.

DEFENCE.

§ 1. Military Defence.

1. **Historical Outline.**—(i.) *Introductory.* For many years after the establishment of colonies in Australia, there was no military training of the general body of citizens, nor even of a selection from out that body, as is the case to-day. Military needs up to 1870, viz., for fifteen years after the grant of responsible government, were met by detachments of Imperial troops. Colonists, however, had not left out of consideration the need for an efficient system of self-defence, and the early establishment of volunteer forces in times of emergency and stress, have now found fruition under the Commonwealth, since the aim of Australians is to make the continent self-contained in the matter of defence.

(ii.) *New South Wales.* Until the year 1870 the main defence of Australia consisted of the garrisons of British troops quartered in the leading cities. In the convict days the Imperial soldiery was maintained principally as a convict guard, and for policing the penal settlements. In 1801 a corps of volunteers, designated the "Loyal Association," was formed, in response to an invitation from the Governor, from among the settlers and the civil officials, to meet any French attack upon the colonies, the possibility of which was suggested by the frequent rumours of war between France and England. The members of the association were generally victualled at the public cost.

In 1803, the strength of the New South Wales corps being then 569 of all ranks, news reached the colony that war had been declared. The Governor summoned the inhabitants to a muster, and a defence corps, for service in case of invasion, was raised.

The period of the Napoleonic wars was one of alertness in the colony, but with the cessation of hostilities, the active service of the volunteers seems to have come to an end. In 1854, the year of the Russian war, a volunteer force was enrolled in Sydney, under the authority of the Act 18 Vict. No. 8. This corps consisted originally of one troop of cavalry, one battery of artillery, and six companies of foot, called the 1st Regiment of New South Wales Rifles; but with the termination of the Crimean war, the volunteers practically ceased to exist. A second force was enrolled in 1860, consisting of one troop of mounted rifles, three batteries of artillery, and twenty companies of infantry, with a total strength of 1700. In 1862 the Mounted Rifles gave place to more artillery. In 1868 the military force was reorganised under the Volunteer Regulation Act of 1867, a grant of 50 acres of land being given for five years' efficient service. Under this enactment a large force was maintained. 1870 saw the withdrawal of the Imperial troops. "Regular" troops were not immediately raised, and for some months the responsibility for home defence rested upon the volunteers. In 1870 a regular defence force was enrolled, comprising one battery of artillery and two companies of infantry. In the following year the latter were disbanded. In 1874 the land orders for volunteers were abolished, and a direct system of "partial payment" introduced. In 1876 the "permanent" artillery was strengthened by a second battery, and in the following year by a third. 1877 saw the augmentation of the Engineers' Corps, established as a "volunteer" body 10 years earlier, by a torpedo and signalling corps; in 1890 a

second field company was added. In 1878 a further reorganisation of the volunteers took place. In 1881 the Commissariat and Transport Corps was raised, designated Army Service Corps later. The Act of 1867, as amended in 1878, continued in force till the transfer of the troops to the Commonwealth. A corps of naval artillery volunteers was raised in 1882, and was followed a few years later by numerous bodies of military reserves, of all the principal arms; but all these "volunteers" were gradually disbanded, or merged in the "partially-paid" forces.

The cavalry regiment, known as the N.S.W. Lancers, was first raised in 1885 as a volunteer reserve corps, under the name of the Light Horse; but in 1888 the men were merged in the "partially-paid" troops, under their present designation. They provided their own horses and equipment—uniform and arms being supplied by the Government. Unlike the Lancers, the Mounted Rifles were directly enrolled in 1889 as a "partially-paid" body, and were strengthened by the inclusion of a large part of the Light Horse. An unpaid reserve of four batteries of field and garrison artillery was raised in 1885, but two of these were disbanded in 1892, and the others merged in the "partially-paid" force forming a second field battery. Unpaid infantry reserves were also raised in 1885. These were gradually weakened, and many of the men were formed into reserve rifle companies, the remainder in 1892 being absorbed by the 1st, 2nd, 3rd and 4th regiments, whose establishments were at the same time raised from eight to ten companies. At the end of the same year the rifle companies were disbanded, and civilian rifle clubs formed.

The "permanent" force was extended in 1888 to include corps of submarine miners and mounted infantry; but the latter ceased to exist in 1890, and a fourth battery was added to the artillery, while in the following year a "permanent" medical staff corps evolved out of the "volunteer" army medical corps, which had been raised in 1888.

In 1892 the "partially-paid" infantry absorbed many members of the older infantry reserves. Two years later, it was further strengthened by the absorption of the senior cadets from the public schools. Improvement in organisation and administration were further developed in 1895-6, by the addition of an Army Service Corps and Ordnance Store Corps and a Veterinary department to the establishments, and by the elaboration of arrangements necessary to mobilisation for war.

"Volunteers" were again instituted in 1895. The Scottish Rifles, followed by the Irish, the St. George's, and the Australian Rifles, were raised. In 1897 the First Australian Volunteer Horse and the Railway Volunteer Corps were added, as also was a "National Guard," consisting of old volunteers and men who had seen service. In 1899 the Defence Force Rifle Association was incorporated under regulations approved by the Government. In the same year the Railway Corps was disbanded, and in 1900 the Australian Horse came under the "partially-paid" system. The volunteer forces were strengthened during that year by the addition of the Canterbury Mounted Rifles, Civil Service Corps, and Drummoyne Volunteer Company. The Army Nursing Service Reserve was also established in connection with the Army Medical Corps. It consisted of 26 nursing sisters possessing the highest nursing qualifications and training.

The actual strength of the military forces of New South Wales on 31st December, 1900, was 505 officers and 8833 men, made up as shewn in table hereinafter.

In addition, there were on the same date a reserve with 130 officers and 1908 of other ranks, and civilian rifle clubs with 1906 members.

(iii.) *Victoria.* Soon after separation from New South Wales the war between Russia, and the allied forces of England, France, and Turkey led to the formation, in 1854, under the authority of an Act for volunteer corps in Victoria (18 Vict., No. 7) of the Melbourne Volunteer Rifle Regiment, later known as the Victorian Volunteer Artillery Regiment, with an establishment of 2000 men. In 1860 the volunteers in the colony took over the garrison duties of the Imperial troops, who were ordered to New Zealand, the actual strength in the year named being 4002. Reorganisation was effected in 1863, and two years later the Volunteer Act (28 Vict., No. 266) authorised the raising of a force comprising various arms of the service. On the withdrawal of the detachment of Imperial troops formerly stationed in the colony, the Discipline Act 1870

(34 Vict., No. 389) was enacted, instituting a paid artillery corps. If otherwise eligible, the men of this corps were drafted into the Police and Penal Departments as vacancies arose. In the first four years of the system 190 artillerymen were transferred to the civil branch. From the establishment of the "permanent" force the whole expenditure on military services has been borne by the State.

The "volunteer" force, as originally constituted, comprised cavalry, artillery, engineers, and infantry, with a torpedo and signal corps. At the end of 1871 the "permanent" artillery numbered 119 of all ranks, one only holding a commission. The volunteers and naval brigade consisted of 136 officers and 3663 other ranks, a total of 3799.

The years ensuing saw steady development in military matters. The permanent forces were at all times kept in a high state of efficiency, and the volunteers strove to emulate them in matters of training and discipline. The establishment of both the professional and civil soldiery was gradually increased. Buildings and fortifications were constructed and maintained, garrison and field guns and guns of position were purchased and made available, and the dismounted services were armed with rifles.

In 1876 effect was given to many of the recommendations of a Royal Commission appointed in 1875. Sea and coast defence began to be undertaken, and regular drills and camps of exercise for all arms were instituted shortly afterwards. In the year named the strength of the forces was 3736 of all ranks, including 136 permanent artillery.

Still greater changes in the system of Victorian defence were made in 1883 and 1884. The volunteer force was disbanded, and corps of paid "militia" were raised in lieu and enrolled under the Discipline Act 1883 (47 Vict., No. 777), which came into operation on 3rd December of that year. A large number of the volunteers were drafted into the paid militia, and granted continuity of service. A Ministry of Defence was constituted and a Council of Defence created, a special appropriation of £110,000 a year for five years being made. Officers from the active list of the Imperial navy and army were engaged for terms of service in the colonial forces to carry out the necessary discipline and instruction. The naval force was also considerably augmented. In 1887 the strength was 4189 of all ranks, including 268 permanent soldiers.

In 1890 the laws relating to defences and discipline were consolidated under the Defences and Discipline Act 1890 (54 Vict., No. 1083). This Act formed the principal law under which the forces were maintained until the enactment of the Defence Act 1903 by the Federal Parliament. A further appropriation of £145,000 was, on the expiration of the previous one, provided for naval and military purposes for two and a-half years, viz., from 1st July, 1899, to 31st December, 1901. The engaging of officers from the Imperial navy and army for terms of service was continued. Colonial officers were sent to England for special courses of instruction, and a scheme was arranged, with the consent of Home authorities, for sending selected officers of both arms of the defence force for courses of instruction in the Imperial service. The Admiralty gave permission for officers of the colonial navy to serve on board H.M. ships on the station, granting acting commissions so as to enable them to undertake responsible duties. The total defence establishment for 1891-2, fixed at 7360, was reduced in 1895 to 4901, but again increased in 1899 to 5885.

Rifle clubs were established in 1883 for the encouragement of rifle practice. Members were allowed to obtain rifles and ammunition at reduced rates, and were given free railway travelling for rifle practice and matches. Shortly after inauguration, the clubs were divided into six districts, and members in each district were required to meet once a quarter for practice in field firing. An annual allowance was made to the clubs for each effective marksman, the money being devoted to the maintenance of ranges and purchase of ammunition.

The regiment of Mounted Rifles was established in all the districts of Victoria. To cover the cost of uniform, and for incidental expenses, an effective and capitation allowance was made, and a small payment was granted by way of compensation for attendance at the annual camps of training; otherwise the corps was a "volunteer" one. Certain

articles of equipment were furnished by the Government, recruits on being passed into the ranks getting rifles, accoutrements, and horse-gear (except saddle) free. A minimum of twelve daylight drills annually, and a course of musketry, was prescribed for all members, and engagement was for three years with privilege of re-engagement.

An infantry volunteer regiment (the Victorian Rangers) was also raised in extra-metropolitan places. Effective and capitation allowance, and compensation for loss of time by reason of attendance at camp, were granted also to the Rangers.

The outcome of the encouragement of drill and rifle-shooting in the schools was the formation, in the year 1884, of Cadet Corps. These were authorised in any school in detachments of not less than twenty. The Government supplied rifles (principally Francotte breech-loaders) and provided ammunition at reduced rates. Corps were raised in all districts in the larger schools. Instructors of the militia and volunteers were permitted, in their spare time, to drill the cadets, payment of 2s. 6d. being allowed for each parade. Annual camps, largely attended, were held generally in the spring. In Melbourne, and in the principal inland towns, classes for instruction of cadet officers were conducted, which were regularly availed of by masters and teachers.

To form a link between the school cadets and the militia a battalion of Senior Cadets was established, and consisted chiefly of boys who had left school and engaged in regular occupations in life. All the work was voluntary, and arms and accoutrements were supplied by the Government. An effective allowance was made to assist the boys in the purchase of clothing.

The depression and consequent retrenchment in the last decade of the nineteenth century seriously affected the Defence Department, but efficiency was never sacrificed.

The strength of the Victorian Defence Force on the eve of Federation was as follows:—Officers, 301; other ranks, 6034; the details being as shewn in table hereinafter.

(iv.) *Queensland.* Steps were almost immediately taken, upon the separation of the Colony of Queensland from New South Wales in 1859, to provide for defence. A troop of mounted rifles was raised in March, 1860. The service was voluntary and the force quickly increased, infantry and cavalry, subsequently supplemented by artillery, being formed of "volunteers." Grants for efficiency and a capitation allowance, with free issue of ammunition, were obtained from the Government; and orders granting fifty acres of land were available upon completion of five consecutive years of service. In 1876 the total strength was 415. The Volunteer Act of 1878 provided for the raising of a force for defence, and many citizens entered upon useful and regular training. In 1880 the total strength was 1219 of all ranks.

But the volunteer system here, as elsewhere in Australia, was superseded. In 1883, a Military Committee of Inquiry, appointed to consider the basis of service, reported against the system as lacking in cohesion and discipline, and in 1884 the Volunteer Act was repealed. All male inhabitants within specified ages, and with certain exceptions, were liable to serve. A small permanent corps was authorised, and the formation of partially-paid militia and volunteer corps was provided for. Under the new system the force was greatly augmented, and a higher degree of efficiency was reached. Subsequent legislation crystallised the defence system of the colony. The total strength on 31st December, 1900, was 4028, made up as shewn in table hereinafter.

(v.) *South Australia.* The first attempt at military organisation in Adelaide dates back to 1854, when a Militia Act authorised the Governor to call out a force of 2000 men between 16 and 46 years of age. The power, however, was not exercised. The Acts of 1859 and 1860 provided for the establishment of volunteer forces, but in 1865 all previous Acts were repealed, and under a new enactment the calling out of not fewer than 540 and not more than 1000 men was authorised, with pay at the rate of 5s. a day. In 1867 the artillery were given a slightly higher rate. In 1877 the possibility of war with Russia acted as a stimulus in defence matters; 1000 men were raised under the existing legislation, and Imperial officers and drill instructors were obtained from England for purposes of instruction, discipline, and organisation.

A National Rifle Association was inaugurated in the following year, and rifle companies were formed. An Act of the year authorised the formation of a small "permanent" force, but it was only in 1882, under an amendment of the Act of 1878, that such force, consisting of one officer and 20 men, was raised. Three years after its formation the numbers were augmented.

In 1881-2, Acts were passed which allowed the paid volunteers to be raised to a maximum of 1500, and authorised a reserve without limit of numbers. In 1882 the force numbered 1880—1680 infantry and 200 artillery.

In 1886, by further legislation, the paid volunteers were styled "militia," the rifle companies became the "volunteer" force, and a militia reserve was also provided for. At the end of 1889 the strength of the "permanent," "militia," and "volunteer" force was 2720 of all ranks. Minor alterations were made in 1890 and 1895.

The strength on 31st December, 1900, was—officers of active and reserve forces, 135; other ranks, 2797, made up as shewn in table hereinafter.

(vi.) *Western Australia.* The first "volunteer" force in Western Australia was raised in 1861, under Local Ordinance 25 Vict., No. 3. By the Volunteer Force Regulation Act 1883, the local forces were placed under the military law of Great Britain in time of war, but with certain reservations. In 1889 the "volunteer" force numbered 603 of all ranks. In 1890 an increase in establishment to 712 was made. It consisted then of eight corps, of which two were field artillery and six were infantry. Attached to two of the infantry corps were 60 mounted infantrymen. For each efficient volunteer, a capitation grant of £1 10s. per annum was made. To attain efficiency, a volunteer had to attend 12 parades in the year, and complete a musketry course.

Other "volunteer" corps were formed under the provisions of an Act of 1894, and a small unit of "permanent" artillery was added. The "partially-paid" system was introduced in 1896-7. Cadet corps were formed at Perth and Fremantle, and the establishment of the Perth and Fremantle batteries were substantially increased.

Shortly before Federation, a "volunteer" reserve force was formed of persons who had served in the Imperial army, navy, or auxiliary force, or in the military forces of a colony. Six drills a year were required of each member, and an annual allowance of 10s. was made. Membership was restricted to persons under 60 years of age.

The strength of the Western Australian forces on 31st December, 1900, was—135 officers and 2561 other ranks, the details being as shewn in table hereinafter.

(vii.) *Tasmania.* Leaving out of consideration the presence of British military detachments during the early days of Tasmania, no really military local force was organised till 1859, when two batteries of "volunteer" artillery, and twelve companies of "volunteer" infantry were raised. In 1867 the infantry companies were disbanded, and the artillery increased by one battery.

The withdrawal of the Imperial force in 1870, and the simultaneous withdrawal of the volunteer vote, left the colony totally destitute of defence. It was not till 1878 that a remedy was applied, another "volunteer" force being enrolled in that year. In 1882 the strength of this force was 634 of all ranks.

Active forces, of a strength not exceeding 1200 in time of peace, were authorised under an Act of 1885, the services of existing volunteer corps being retained.

Eight years later, an additional "auxiliary" force of a total peace strength of 1500 was authorised.

At the end of 1896 the total strength of the Tasmanian force was 1399, of whom 966 belonged to the "auxiliary" force, and about 200 to the Tasmanian and Launceston Rifle Regiments.

Consolidation of these three units was effected in 1898, the new corps consisting of three battalions, forming the Tasmanian Infantry Regiment.

The strength on 31st December, 1900, was—113 officers and 1911 of other ranks, made up as shewn in table hereinafter.

(viii.) *Defence Works and Fortifications.* Fortifications have been erected for the defence of the principal coast cities of the States, and, in the case particularly of Sydney

and Melbourne, heavy armaments have been erected at the port entrances and other points of vantage. It is difficult to determine the total cost of defence works. Large sums have been spent out of loans in each State except Western Australia, but from 1872 to 1899 Victoria did not expend loan moneys on defence construction.

(ix.) *Fortification of Strategic Points.* For some time prior to 1890 the necessity of fortifying certain points on the Australian coast, at the joint expense of the colonies, was considered. Important trade routes are commanded by Albany, on King George's Sound, in Western Australia, and by Thursday Island, in Torres Strait. Hobart and Port Darwin were also regarded as strategic ports which should be fortified. As the result of a military commission, appointed by the Imperial and the different Australian Governments, which visited the places named, defences were erected at King George's Sound, one-fourth of the cost being borne by Western Australia, the remaining three-fourths by New South Wales, Victoria, Queensland, and South Australia, on a population basis. Equipment was supplied by the Imperial Government, and Western Australia provided the garrison and exercised general superintendence. Fortifications at Thursday Island were also erected, New South Wales, Victoria, Queensland, and Western Australia contributing to the cost of maintenance according to their respective populations. Owing to the formation of a harbour at Fremantle, the Imperial authorities now consider it should be the only fortified port in Western Australia. The whole question of fortification and rearmament is being considered by the Commonwealth Government.

(x.) *Summary.* The earliest settlements in Australia were made by British officers in charge of transported convicts, in the oversight of whom they were assisted by detachments of Imperial troops. The forces who were sent from the centre of Government to maintain order and discipline in the outlying parts of the Empire, were either specially raised and enlisted for the purpose, as in the case of the New South Wales corps, or were sent to their colonial destinations in the ordinary routine of their military service. Prior to the withdrawal of the last British troops from Australia, attempts had been made to organise local forces on a volunteer basis. In 1854 an effort was made which evinced considerable determination on the part of the colonists—engendered, evidently, by the fear of aggression likely to result from the Russian war. But the cessation of hostilities removed the cause for anxiety, and the volunteer movement seems to have passed into abeyance. Even in these early years, however, the need for a Federal system of defence was recognised by the thinking men of the community, and at last the federation of the Australian States—with its eminent advantages for effective defence—was consummated. In the sixties the Continental wars kept before statesmen the need of preparation for war, and the fact that in Australia the position of affairs was neither unobserved nor misunderstood is shewn by the raising—this time on a more lasting basis—of a volunteer force. Again, too, there was a determined effort to federalise defence, culminating in the proposals of 1870. In the year named, the Franco-German war, and the withdrawal of the last Imperial regiment from Australia, resulted in a definite basis for colonial defence being settled. Small detachments of permanent soldiery were instituted, to act generally as a nucleus about which the citizen soldiery should be shaped, and, generally, to look after the forts and defence works, which had then begun to be erected. The volunteer movement was enthusiastically taken up; many loyal colonists devoted their leisure to drill and training. No payment was made for loss of time, but arms and accoutrements, and sometimes uniforms, were furnished by Government. Reward for five years' service frequently took the shape of grants of land. In 1877 the possibility of another Russian war gave a stimulus to the movement, and establishments were increased. A few years later, as the result of rumours of war, consequent upon French activity in the New Hebrides, and of the reports of highly-qualified military experts who were specially employed to report on the condition of the defences, the "volunteer system" was abandoned, and the "militia," or "partially-paid" forces were brought into existence. The move towards federation is again noticeable, a very important convention being held in 1881. It was held that the "volunteer" system had failed. While many zealous men gave their whole energies to their training, some joined

apparently without serious motive, and consequently failed to acquire those essential ideas of discipline necessary no less in citizen than in professional soldiery. Citizen forces were not thereby doomed, however, for the provision of a small annual allowance—generally £10 or £12 for the gunner or private, with a sliding scale for higher ranks—together with arms, accoutrements, ammunition, and all military necessities, free, enabled the “militia” system to be inaugurated, and as it was begun, so practically it has remained to the present day. Reductions in the above rates of pay were found to be necessary, and the lower rates have been continued under the Federal Government. “Volunteer” corps have again been raised, and the “permanent” forces have been continued in the Public Service.

(xi.) *Strength of States' Defence Forces immediately prior to Federation.* The establishment and strength of the military forces of the several States on 31st December, 1900, immediately prior to federation, was as follows, cadets, reservists, and rifle club members being excluded :—

**ESTABLISHMENT AND STRENGTH OF MILITARY FORCES OF STATES,
31ST DECEMBER, 1900.**

| State. | Establishment. | | Strength. | |
|--------------------------|----------------|--------------|-----------|--------------|
| | Officers. | Other Ranks. | Officers. | Other Ranks. |
| New South Wales | 549 | 9,295 | 505 | 8,833 |
| Victoria | 394 | 6,050 | 301 | 6,034 |
| Queensland | 310 | 5,035 | 291 | 3,737 |
| South Australia | 141 | 2,847 | 135 | 2,797 |
| Western Australia | 140 | 2,553 | 135 | 2,561 |
| Tasmania | 131 | 2,605 | 113 | 1,911 |
| Commonwealth | 1,665 | 28,385 | 1,480 | 25,873 |

The strength of the various arms is shewn in the following table, permanent being distinguished from “militia,” or “partially-paid,” and “volunteers” :—

STRENGTH OF THE VARIOUS ARMS, 31st DECEMBER, 1900.

| Arms. | N.S.W. | | Victoria. | | Q'land. | | S. Aust. | | W. Aust. | | Tas. | | TOTAL. | |

2. **Land Defence of Federated Australia.**—(i.) *Assumption of Control by Commonwealth.* The Commonwealth of Australia Constitution Act of 1900 empowered the Commonwealth to legislate with respect to “the naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and “maintain the laws of the Commonwealth,” and vested the command-in-chief of the Commonwealth forces in the Governor-General, authorising him to proclaim a date, after the establishment of the Commonwealth, for the transference of the Defence Department from each State. This transfer was effected in March, 1901, when the State Ministry for Defence, one of the seven departments of the Executive Council of the federation, took over the control of the whole of the forces of the States.

(ii.) *The System of Administration.* Up to 12th January, 1905, the administration of the Commonwealth military forces was by means of a general officer commanding and a headquarters staff. On the date named, a Council of Defence, to deal with questions of policy, and a Military Board, to supervise the administration of the forces, were constituted. The main objects aimed at under the new system are (1) to establish continuity in defence policy; (2) to maintain a continuous connection between parliamentary responsibility and the control and development of the defence forces, the Minister being in constant and effective touch with his department; (3) to establish continuity of administrative methods by the creation of a continuous board; (4) the separation of administration from executive command, so as to develop the independence of district commands, and by giving scope to independent thought and initiative, make practicable a larger measure of decentralisation, and, more particularly, to make possible the ultimate development of a citizen force; (5) to maintain, on a uniform basis, the efficiency of the forces, by continuous and searching inspection by, and independent report from, an officer who, as Inspector-General, is appointed to report upon the results of the administration of the forces, the efficiency of the troops, the system of training, the equipment, the preparedness for war, and the state and condition of all defence works.

The military system of the Commonwealth is made up of—

- (a) Permanent Forces which include
 - Administrative and Instructional Staff.
 - The Royal Australian Artillery Regiment.
 - Small detachments of—
 - Royal Australian Engineers.
 - Australian Army Medical Corps.
 - Australian Army Service Corps.
- b) Citizen Forces, comprising
 - Militia Forces of all arms.
 - Volunteer Forces (infantry).
 - Reserve Forces.

The Royal Australian Artillery Regiment practically provides the garrison for certain naval strategic positions and other defended ports, and maintains the forts, guns, stores, and equipment in connection therewith. The other permanent detachments are to form a nucleus, each in its own arm, for instruction and administration of the citizen forces.

The forces of the Commonwealth are organised into—

- (a) Field Force.
- (b) Garrison Troops.

The field force consists of five Light Horse brigades, two infantry brigades, and four mixed brigades, and its duties are to undertake the defence of the Commonwealth as a whole, and to act as reserve to the garrison troops. The garrison troops find the necessary garrisons for the defended ports.

The reserves consist of (a) officers who, having passed through a certain period or course of training, have retired from active service, and (b) members of rifle clubs.

attested under the Defence Acts. Rifle club members are required each year to fire a prescribed musketry course, a capitation allowance being paid to clubs for each member classed as efficient. Rifle clubs would furnish a means of bringing the active forces up to war strength in time of national emergency.

(iii.) *The Military Forces under the Federation.* The position of the military forces under the Commonwealth is shewn in the following table:—

STRENGTH OF MILITARY FORCES, 1901 to 1908.

| State. | 1901. *1/3/01. | 1902. 1/8/02. | 1903. 30/6/03. | 1904. 30/6/04. | 1905. 30/6/05. | 1906. 30/6/06. | 1907. 30/6/07. | 1908. 30/6/08. |

§ 2. Naval Defence.

1. **Historical Outline.**—(i.) *States' Naval Forces.* The naval forces of Australasia prior to Federation derived their character and organisation from the local conditions of the colonies in which they were raised.

(ii.) *New South Wales.* New South Wales, being the base of the Imperial Navy, was fairly well assured as regards naval protection. Mainly with the view of reinforcing the vessels of the Royal Navy on the station, a Naval Brigade of seamen was raised, a large proportion being made up from time-expired petty officers and men of the Royal Navy. It was designed not only to serve as a reinforcement for the navy, but also to make up casualties and man any auxiliary ships, or take part in any expedition in which additional naval personnel would be of great service. To continue its naval character the *Wolverine*, an old composite or wooden corvette, late the flagship on the station, was made over to the New South Wales Government for exercise and training of the Naval Brigade, but this vessel was never fully equipped or commissioned. The officer commanding the naval forces was not an officer of the regular forces, but of the Civil Service, and the *Wolverine* was manned only on holidays and at Christmas or Easter time, and was rarely under way. Beyond the grant of the *Wolverine* and after that period—particularly after the arrival of the auxiliary squadron under the agreement—there was no recognition of this force by the Royal Naval authorities to the extent of its inclusion in any scheme of naval work or operations. In 1885 two torpedo boats were built in Sydney, and manned by the naval force, permanent officers and men being appointed for instruction and command and care of vessels and machinery. The *Wolverine* was sold for breaking up in 1889, but no other vessel was provided to take her place. The Naval Brigade, however, steadily increased in strength, and several companies of Naval Artillery Volunteers were added to it prior to Federation. The officer commanding the Naval Artillery Volunteers was in command of the torpedo boats. The strength of the New South Wales naval force stood at 614 at date of Federation, though, for lack of vessels in which to serve and exercise, this force had lost much of its sea character, and some sections had been merged in the land defence.

(iii.) *Victoria.* The Victorian force dates from the sixties. Local conditions dictated the character of this force. There was practically no permanent stationing of Royal Navy vessels in Victorian waters. The Heads were not fortified, and the large expanse of Port Phillip and Hobson's Bay open to foreign cruisers called for a service thoroughly naval in character for its defence. In June, 1885, the following vessels belonged to the Victorian Government, viz.:—*Nelson*, wooden frigate; *Cerberus*, ironclad; *Victoria* and *Albert*, gunboats; *Childers*, *Nepean*, and *Lonsdale*, torpedo boats; and there were also five auxiliary armed steamers. In 1892 the *Countess of Hopetoun*, first-class torpedo boat, was obtained. This force was considerably reduced in 1893. The gunboats were withdrawn then, and thus the best vessels for sea training were disposed of. This force was maintained at an annual cost of £27,000 up to 1900. Soon after Federation it was reduced to an annual expenditure of £19,000.

iv.) *Queensland.* The Queensland naval forces were established about 1884 on the advice of the Imperial authorities. Gunboats were built for the defence of all bays, rivers, or roadsteads against the "merchant cruiser" of the volunteer fleet order, then deemed the most probable enemy. Two gunboats, each of 360 tons, and armed each with one 8-inch and one 6-inch B.L. gun, with four light Q.F. or machine guns, the *Gayundah* and the *Paluma*, were commissioned. The *Gayundah* was maintained in commission with a full complement by the Queensland Government, the *Paluma* by the Admiralty for surveying service. There were also obtained for defence one second-class torpedo boat and one picket boat, and in addition there were guns for service in river defence, mounted on steam barges belonging to the Marine Department. Queensland, in addition to providing gunboats, had followed the example of New South Wales,

and organised companies of a Naval Brigade at the main ports, and, as in New South Wales, there was an excess of men over facilities for training, and the force was reduced in 1893. The gunboats were put out of commission, and the whole naval force reduced. Expansion followed on improved prosperity, and in 1899 and 1900 the Queensland naval forces were raised to a total of 784. The retrenchment following upon Federation reduced the force to practically its present strength.

(v.) *South Australia.* South Australia initiated a system of naval defence in 1884 with the advice of the Imperial authorities. The recommendations of Sir W. Jervois, then Governor of South Australia, an expert in defence and military engineering, took shape in the provision of the *Protector*, a small but heavily-armed cruiser, specially designed for service in the territorial waters of South Australia. This vessel was permanently commissioned with a three-fifths complement, and exercised in every way as a ship of war of the Royal Navy. At the time of her arrival (as was also the case with the Victorian and Queensland gunboats) her armament was in advance of any carried by the vessels of the Royal Navy on the station, which were all still armed with M.L. guns of short range. The naval force of South Australia also included a reserve of from 100 in 1886 to 200 in 1900 for raising the complement of the *Protector* and all subsidiary war services. In 1893 the *Protector* was placed in commission in reserve, and the permanent crew and officers, excepting only a commander, chief engineer, and instructional staff, were retrenched.

(vi.) *Western Australia and Tasmania.* Tasmania had no naval force or vessel other than a second-class torpedo boat, laid up for many years, and finally transferred to South Australia. Western Australia has had no naval force whatever.

2. **The Naval Agreement with the British Government.**—(i.) *The Original Compact.* The naval defence of Australasia and its trade is entrusted primarily to ships of the Imperial Navy, maintained under an agreement entered into between the British Government and the Governments of the Commonwealth and New Zealand, and at their joint charge. This agreement was embodied in Acts passed by the several Legislatures some ten years prior to Australian federation. According to its terms, a naval force, additional to the vessels of the Australian Naval Station, which were to be maintained at their normal strength, was to act as an auxiliary squadron. It consisted of five fast third-class cruisers and two torpedo gunboats, and its special function was the protection of the floating trade in Australasian waters. The agreement was made for ten years, and was then, or at the end of any subsequent year, to be terminable only upon two years' notice being given. On its termination, the vessels were to remain the property of the Imperial Government. Three cruisers and one gunboat were to be kept continuously in commission, and the remainder in reserve in Australasian ports, but ready for commission whenever occasion might arise. The vessels were to remain within the limits of the Australasian station, and were to be employed, in times of peace or war, within such limits, in the same way as the Sovereign's ships of war, or employed beyond those limits only with the consent of the Colonial Governments.¹ The first cost of the vessels was paid out of Imperial funds, but the Colonial Governments paid interest on the prime cost at 5 per cent. (up to a maximum of £35,000 per annum), and a sum not exceeding £91,000 for annual maintenance of the vessels, or a total annual contribution of £126,000. In times of emergency or actual war, the cost of commissioning and maintaining the three vessels kept in reserve during peace, was to be borne by the Imperial

1. The boundaries of the Australasian station were thus defined:—North—On the north from the meridian of 95° east, by the parallel of the 10th degree of south latitude to 130° east longitude; thence northward on that meridian to the parallel of 2° north latitude; and thence on that parallel to the meridian of 136° east longitude; thence north to 12° north latitude and along that parallel to 160° west longitude. West—On the west by the meridian of 95° east longitude. South—On the south by the Antarctic circle. East—On the east by the meridian of 160° of west longitude.

Nothing in the agreement was to affect the purely local naval forces which had been, or might be, established in the colonies for harbour and coast defence. Such local forces were to continue to be paid for entirely by the colony, and to be solely under its control.

Government, and, in every respect, the vessels were on the same status as the ships of war of the Sovereign, whether in commission or not. The officers and men of those in commission were subject to a triennial change. The tenth annual contribution, which was payable in advance on 1st March, 1900, apportioned on a population basis, was as follows:—New South Wales, £37,973; Victoria, £32,749; New Zealand, £21,304; Queensland, £13,585; South Australia, £10,439; Western Australia, £4816; Tasmania, £4776.

(ii.) *The Agreement of 1903.* The agreement was not dissolved by the union of six of the contracting colonies, but its renewal, with some alterations, was embodied in the Naval Agreement Act of 1903, the Parliament of New Zealand also assenting. The present agreement provides that the force shall be made up of one first-class armoured cruiser, two second-class cruisers, four third-class cruisers, four sloops, and a Royal Naval Reserve of 25 officers and 700 seamen and stokers. One of the ships is to be kept in reserve, three are to be partly manned for drill purposes for training the Royal Naval Reserve, and the remainder are to be kept in commission and fully manned. Australians are, as far as possible, to man the three drill ships and one other vessel, but they are to be officered by Royal Navy and R.N. Reserve officers. Eight nominations for cadet-ships are to be given annually in the Commonwealth and two in New Zealand. One half of the annual cost of maintenance is to be borne by the colonies—five-sixths of the half (but not exceeding £200,000) by Australia, and one-sixth (but not exceeding £40,000) by New Zealand. The agreement, like the earlier one, is for ten years. By a subsequent arrangement the strength of the squadron was established at one first-class armoured cruiser, three second-class cruisers, and five third-class cruisers. Three sloops were recalled as having no war value, but usually one is on the station surveying.

3. **The Naval Defence of Federated Australia.**—(i.) *Proposals for an Australian Navy.* The question of the complete assumption, by federated Australia, of every branch of defence for the continent has been mooted. It has been felt that Australia should consider the question of taking full responsibility for the defence of her ports and dock-yards, and the protection of coastal trade. The floating trade of the Commonwealth amounts to £170,000,000 per annum, and obviously its protection is vitally necessary. It has also been suggested that the only way in which attack can be met with advantage is on the seas surrounding our coasts. Fortress artillery would render no such adequate protection, for beyond the range of its batteries, ports could be sealed to traffic by the most insignificant enemy, while a fleet of any considerable dimensions could cause the sea trade to be annihilated.

These considerations have been controverted by the Imperial Defence Committee, whose views have been summarised as follows:—

- (i.) The British fleets guarantee Australia against invasion in force.
- (ii.) They guarantee against attack by any considerable squadron of armoured vessels.
- (iii.) The exigencies of war may require the withdrawal of the Australian Imperial Squadron.
- (iv.) Australia cannot be guaranteed against attack by unarmoured commerce raiders up to four in number, but the losses they would inflict would not be of more than secondary importance.

The two latter elements, viz., possible withdrawals, and the absence of guarantee of protection under certain conditions, have raised the question whether, even though the damage inflicted by a small fleet would have little or no effect on the ultimate issue, and be but of secondary importance, such damage would not be of serious consequence to Australia. This has led to a discussion whether Australia should possess her own navy, or at least such naval war material as would ensure the principal lines of sea communication being kept open; or if not, ensure her ports being fully defended.

The Commonwealth Government has now determined to start the building of an Australian navy, and in March, 1908, contracted with Messrs. Denny Brothers and Fairfield for the construction of two torpedo boat destroyers, to cost £81,500 each; one vessel to be delivered in fourteen months, the other in fifteen months from the date of signing the contract. A vessel of the same kind, to be ready for shipment in twelve months, is also to be delivered in Australia in sections, at a cost of £72,500, for local completion.

In connection with the construction of these vessels, it is proposed to send from twelve to twenty selected Australian workmen, to be trained in the yards of the successful tenderers.

(ii.) *The Naval Forces under the Federation.* Prior to 1905 a naval officer commanding administered the naval forces. On 12th January of that year the Council of Defence was established to deal with all questions of policy, and the Naval Board, then first constituted, took over the administration of the Commonwealth naval forces. Continuity of policy and administration are thereby believed to be ensured; whilst efficiency and uniformity are provided for in the scheme of inspection and report by an officer who, as Director of Naval Forces, is appointed to deal with the training of the *personnel*, and the condition of the *materiel*, of naval forces and works.

The following table shews the strength of Commonwealth naval forces on 30th June, 1908:—

STRENGTH OF COMMONWEALTH NAVAL FORCES, 1908.

| Branch of Service. | New South Wales. | Victoria. | Queensland. | South Australia. | Total. |
|--------------------------|------------------|-----------|-------------|------------------|--------|
| Permanently Employed ... | 4 | 115 | 52 | 37 | 208 |
| Partially-paid ... | 305 | 232 | 342 | 118 | 997 |
| Total ... | 309 | 347 | 394 | 155 | 1,205 |

In addition to the above there were naval volunteer cadets numbering 200 in New South Wales, 201 in Victoria, 126 in Queensland, and 64 in South Australia—a total of 591.

(iii.) *Harbour Defences.* The vessels for harbour defence obtained by the several colonies prior to federation, and now remaining, are:—

COMMONWEALTH NAVAL FORCES, VESSELS, 1908.

| Description. | Name. | State. |
|------------------------------------|---------------------------------|-----------------|
| Iron armour-plated turret ship ... | <i>Cerberus</i> ... | Victoria |
| Steel cruiser ... | <i>Protector</i> ... | South Australia |
| Steel gun vessel ... | <i>Gayundah</i> ... | Queensland |
| " " ... | <i>Paluma</i> ... | " |
| First-class torpedo boat ... | <i>Countess of Hopetoun</i> ... | Victoria |
| " " ... | <i>Childers</i> ... | " |
| Second-class torpedo boat ... | <i>Nepean</i> ... | " |
| " " ... | <i>Lonsdale</i> ... | " |
| " " ... | <i>Mosquito</i> ... | Queensland |
| " " ... | ... | South Australia |
| Torpedo launch ... | <i>Gordon</i> ... | Victoria |
| " " ... | <i>Midge</i> ... | Queensland |

The *Gayundah* and *Protector* are utilised for the sea-training of the Naval Militia.

§ 3. Expenditure on Defence.

1. **Expenditure, 1901-2 to 1908-9.**—The following table gives the expenditure of the Department of Defence from 1901-2 to 1907-8, and the estimate for 1908-9:—

EXPENDITURE ON DEFENCE, 1901-2 to 1908-9.

| Branch or Department. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. | 1908-9 Estimate |
|--|----------------|----------------|----------------|----------------|----------------|------------------|-------------------|--------------------|
| | £ | £ | £ | £ | £ | £ | £ | |
| Central Administration ... | 11,717* | 19,747 | 19,128 | 20,716 | 18,832 | 19,246 | 21,934 | 24,768 |
| Naval Forces ... | 67,277 | 44,736 | 40,988 | 43,370 | 45,753 | 50,200 | 54,069 | 63,531 |
| Military Forces ... | 586,323 | 517,364 | 458,963 | 490,731 | 500,379 | 535,182 | 577,627 | 625,483 |
| Royal Reception ... | 9,738 | 1 | 111 | ... | ... | ... | ... | ... |
| Rent, Repairs, & Maintenance | 26,516 | 22,796 | 24,551 | 23,923 | 29,721 | 27,378 | 32,023 | 43,177 |
| Additions and New Works ... | 2,640 | 5,537 | 16,259 | 26,213 | 33,556 | 35,171 | 47,122 | 85,620 |
| Defence Arms, Equipme't, &c | 50,681 | 16,527 | 96,983 | 174,046 | 138,077 | 159,988 | 143,950 | 48,260 |
| Audit Office ... | 446* | 1,422 | 929 | 789 | 765 | 810 | 809 | 1,001 |
| Pensions & Retir'g Allowances | ... | 934 | 670 | 712 | 907 | 974 | 974 | 1,008 |
| Supervision of Public Works by State Officers ... | 48 | 275 | 956 | 740 | 659 | 521 | 700 | 1,072 |
| Naval Agreement ... | 104,969 | 104,965 | 196,226† | 153,358 | 200,025 | 200,000 | 200,000 | 200,000 |
| Miscellaneous ... | 863 | 32,576 | ... | ... | 1,671 | 6,325 | 5,536 | 8,761 |
| Total ... | 861,218 | 766,880 | 855,764 | 934,598 | 970,345 | 1,035,795 | 1,084,744† | 1,102,681 |

* Portion of year only. † Includes portion paid in advance on account of 1904-5. ‡ In addition, the sum of £250,000 was paid into trust funds for harbour and coast defence.

2. **Expenditure Compared with Various Countries.**—The total expenditure on defence and the expenditure per inhabitant, according to the latest available estimates, are, in the countries indicated, as follows:—

EXPENDITURE ON DEFENCE—VARIOUS COUNTRIES.

| Country. | Year. | Army. | Navy. | Total. | Per Inhabitant. | |
|---------------------|--------|------------|------------|------------|-----------------|----|
| | | £ | £ | £ | s. | d. |
| Great Britain ... | 1908-9 | 27,459,000 | 32,319,000 | 59,778,000 | 27 | 1 |
| Germany ... | 1908-9 | 40,000,000 | 12,990,000 | 52,990,000 | 17 | 4 |
| France ... | 1908 | 31,081,000 | 12,876,000 | 43,957,000 | 22 | 5 |
| Italy ... | 1907-8 | 9,085,000 | 4,937,000 | 14,022,000 | 8 | 4 |
| Austria-Hungary ... | 1907 | 14,766,000 | 2,222,000 | 16,988,000 | 7 | 2 |
| Switzerland ... | 1908 | 1,582,000 | — | 1,582,000 | 9 | 2 |
| Russia ... | 1907 | 39,623,000 | 10,842,000 | 50,465,000 | 9 | 5 |
| Spain ... | 1908 | 6,303,000 | 1,878,000 | 8,181,000 | 8 | 6 |
| Norway ... | 1907-8 | 745,000 | 269,000 | 1,014,000 | 8 | 9 |
| Sweden ... | 1908 | 2,252,000 | 928,000 | 3,180,000 | 12 | 0 |
| Denmark ... | 1908-9 | 733,000 | 438,000 | 1,171,000 | 9 | 0 |
| Holland ... | 1907-8 | 2,295,000 | 1,532,000 | 3,827,000 | 13 | 6 |
| Belgium ... | 1908 | 2,284,000 | — | 2,284,000 | 6 | 4 |
| United States ... | 1906-7 | 24,515,000 | 20,891,000 | 45,406,000 | 10 | 9 |
| Canada ... | 1905-6 | 1,145,000 | — | 1,145,000 | 4 | 0 |
| Australia ... | 1908-9 | 839,150 | 263,531 | 1,102,681 | 5 | 3 |

§ 4. The Training of Officers, Etc.

1. **Instruction and Exchange.**—For some time officers and non-commissioned officers of the Imperial Army have not been engaged as instructors for the military forces of the Commonwealth; but in August, 1905, arrangements were made for the mutual exchange of permanent officers between the Commonwealth and England, India, and Canada. Three officers were exchanged in 1906, three in 1907, and three in 1908. At the same time the practice which has existed for some years of sending officers and non-commissioned officers to England for instruction has been continued, and this year two officers and four non-commissioned officers of the permanent forces will be sent. In addition, in 1908, four officers of the militia forces have been sent to India for instruction.

2. **Inspector-General's Conference with the War Office.**—Major-General Hoad, C.M.G., Inspector-General of the Commonwealth Military Forces, proceeded to England in August, 1908, to confer with the War Office with regard to the exchange of officers and the formation of a General Staff in the Commonwealth. He also took advantage of his visit to attend the principal military manœuvres in England.

§ 5. The Cadet System.

1. **School Cadets.**—Many years before the consummation of Australian federation the systematic military training of lads had been instituted in the schools of the colonies, and the cadet system had attained considerable development. The Commonwealth Government has made arrangements with the various Departments of Education so that boys attending school shall be afforded facilities for drill by their teachers, and regular instruction by the Cadet Instructional Staff of the military forces. The strength of the cadets has increased rapidly, and under the recently-introduced system great expansion is expected. The strength on the 30th June, 1908, was as shewn below.

2. **Senior Cadets.**—Senior cadet battalions are authorised for boys leaving school, and these form a connecting link between the schoolboy soldiers and the citizen forces, the strength on the 30th June, 1908, being as shewn below.

3. **Mounted Cadets.**—Mounted cadet corps have also been formed in various parts of the Commonwealth, the members supplying their own uniforms, mounts, and horse-gear, and being trained in troop and squadron drill by instructors appointed for that purpose. Their organisation is distinct from the educational establishments, but they are under similar conditions as regards drill and discipline. It is hoped that this corps will form a useful recruiting ground for the mounted branches of the service.

The strength of the Commonwealth cadets, school, senior, and mounted, was on 30th June, 1908, as follows:—

STRENGTH OF COMMONWEALTH CADETS, 1908.

| | N.S.W. | Victoria. | Q'land. | S.A. | W.A. | Tas. | Total. |
|--------------------|--------|-----------|---------|-------|-------|-------|--------|
| School cadets ... | 5,959 | 6,863 | 3,691 | 1,956 | 1,633 | 1,251 | 21,353 |
| Senior cadets ... | 2,218 | 3,232 | 953 | 472 | 506 | 232 | 7,613 |
| Mounted cadets ... | 67 | 136 | ... | ... | ... | 22 | 225 |
| Total ... | 8,244 | 10,231 | 4,644 | 2,428 | 2,139 | 1,505 | 29,191 |

4. **Naval Cadets.**—Naval cadets have also been organised. Generally the instruction, given voluntarily by members of the naval forces, aims at embracing all branches of a seaman's training.

5. **Boys' Brigades.**—In addition, boys' brigades have been instituted in connection with various societies. These have not as yet come under direct Governmental control, and it is not intended that they should do so. The idea of the originators of the movement appears to be to keep the lads together in their leisure time, turning it to profitable account, and inculcating the principles of self-restraint and discipline, while at the same time preparing them for the sterner duties of citizenship.

§ 6. Commonwealth Defence Legislation.

1. **The Defence Acts of 1903 and 1904.**—(i.) *General Provisions of the Acts.* The defence of Australia at the present time is enacted and prescribed by the Defence Acts of 1903 and 1904 of the Federal Parliament. Many of the provisions are merely enabling, empowering the Governor-General to arrange for the efficient defence of the Commonwealth, and to appoint officers to responsible positions and to commissioned ranks generally. The defence force is declared to consist of the naval and military forces of the Commonwealth, divided into "permanent" and "citizen" forces, the former consisting of persons bound to continuous service for a term, the latter of persons not so bound, and divided into "militia," who are paid, and "volunteers," who are not ordinarily paid, for their services. Members of rifle clubs duly sworn, and enrolled persons who have done active service, make up the reserve forces. In time of peace, enlistment is voluntary. In time of war, the citizen forces may be called out by the Governor-General, who must state his reason for so doing, and communicate the fact to Parliament. Members of the naval forces may be called upon to serve outside the Commonwealth, but those of the military forces are not liable for such service. The forces may be used for the protection of the States from domestic violence. Command in time of war may be given to the Commander of any portion of the King's regular forces, or of the King's naval forces. For training, and in war, the naval forces may be placed on board ships of the navy of the Australian station. The Army Act (Imperial) is to apply to the Commonwealth military forces, and the Naval Discipline Act (Imperial) to the Commonwealth naval forces, while on active service, except where those Acts are inconsistent with the Commonwealth Defence Acts. Regulations, however, may prescribe that any provisions of the Imperial Acts named shall not apply. Provision is to be made out of the Consolidated Revenue Fund for families of men killed or incapacitated while on service.

Male inhabitants between 18 and 60 years of age are liable to serve in time of war, Parliament being informed of the occasion if in session, and being summoned within ten days if not. Persons the doctrines of whose religion forbid them to bear arms or perform military service may be exempted.

Naval and military cadet corps are also established—to consist of schoolboys over 12 years of age, and youths between 14 and 19 not attending school. They are not liable for active service.

The construction and maintenance of vessels, building and equipment of forts, laying of mines, institution of arms and ammunition factories, the acquisition of artillery and rifle ranges, and the performance of all acts for efficient defence and protection, are provided for. Railways and tramways are to carry troops when required. In time of war, the control of these services may be assumed by an officer duly authorised, and vehicles and boats may be impressed, and troops billeted and quartered. Heavy penalties are decreed for unlawfully giving information as to defences, or unlawfully

obtaining same; and for supplying inferior provisions, material, equipment, etc. Information required under the Act is to be correctly given. Persons required to enlist are to do so, and are to take the oath or affirmation prescribed, and no person is to procure or aid desertion or to harbour deserters. Obstructing drill, personating, sketching fortifications and works or trespassing in them, or even being, with the intention of graphic representation, in their vicinity with drawing or photographing materials, etc., is forbidden. The uniform of the defence force, or colourable imitation of it, is not to be worn by persons not members of the force, and no contempt is to be brought on the uniform. The convening of courts-martial, and the appointment of officers to constitute them, is with the Governor-General, and he may confirm or remit their sentences. The composition and procedure are to be those in force in the King's regular army and navy. Corps moneys, arms, accoutrements, clothing, etc., are, for legal reasons, vested in commanding officers, who, for any good cause, may disrate or discharge any sailor or soldier of the citizen forces, the disrated or discharged person being given an opportunity to shew cause against it. The right to volunteer for service beyond the Commonwealth is conserved. No inducement is to be given to any person to enlist or engage in any naval or military force, the raising of which has not been authorised. In the arrest of deserters, the civil police are to assist.

An exhaustive body of regulations has been drawn up under the authority of the Act, and the details of service by members of the forces are set out therein. These, having been notified in the Government Gazette, have the force of law. Rates of pay for the permanent and militia forces have been fixed; the conditions of leave of absence and furlough, the mode of complaint by officers and men and of the redress of grievances, and the method of convening courts of enquiry and courts-martial, have been defined. Other matters dealt with are the preservation of the public safety during naval and military practice, payment of reasonable compensation for loss, injury, or damage caused by military impressment or service, the quartering and billeting of soldiers in time of war, the establishment and conduct of canteens, and the fixing, within certain defined limits, of penalties for breaches of the regulations. The standing orders define the duties of the members of the Military Board, District Commandants and staffs, Commanding and Regimental Officers. In addition, the following matters are regulated, viz.:—The allotment of duties of brigade and regimental staffs, soldiers' accounts, messing and cooking, orderlies, garrison and regimental duties, compliments by guards, salutes, correspondence and routine, regimental and company books, military training and schools of instruction, medals and decorations, veterinary duties, ordnance, stores, requisitions, issue of arms and ammunition, and military books and forms.

The Governor-General, under the powers conferred upon him by the Acts, has appointed an Inspector-General of the Military Forces, a Director of the Naval Forces, District Commandants, and commissioned officers generally. In the first appointment of officers, preference is accorded to persons who have served in the ranks. Promotions of officers are generally subject to passing the prescribed examinations, but distinguished service, or marked ability and gallantry in active service, may be permitted to gain promotion without examination. A Council of Defence, and Boards of Military and Naval Administration have been constituted. A Reserve of Officers has been formed, and also an Unattached List, whence officers may be employed for duty with any corps or with the staff. The authority of the Act to establish a Naval and Military College has not yet been availed of, but a Chair of Military Science has been endowed by the University of Sydney, and an officer of the general staff has been appointed Director of Military Science. Reference is made hereinafter to the course of instruction. It is hoped that now not only soldiers will be enabled to perfect themselves in the duties of their profession, but that the influence of the teaching will pervade all classes of the community, and enable them to speak and vote more effectively, because with greater knowledge, when defence matters come up for consideration.

(ii.) *Regulations for Efficiency.* Under the regulations certain requirements for efficiency are set out for members of the militia forces, inefficient being discharged. The principal of these requirements are :—Attendance at the annual camps of training; completion of a course of “field training” in the special duties of the arm to which the member is attached; attendance at District Commandants’ inspections; and the performance during the year of an allotted amount of drill, generally 12 days or equivalent. In the case of specialist corps the efficiency requirements are greater. Camps, inspections, musketry, and field-training parades count for efficiency, and two half-days or four nights are regarded as equivalent to a day. For volunteers, the parades required for efficiency are eight half-days and ten nights. The attendance of militia and volunteer forces at the camps in 1907-8 is shewn in the accompanying tables :—

ATTENDANCE OF MILITIA AND VOLUNTEER FORCES AT CAMPS OF CONTINUOUS TRAINING, 1907-8.

| Arm. | Establishment as per Estimates. | Actual Strength at date of Camp. | Actual Number in Camp. | Percentage of Attendance in Camp to Strength. |
|-----------------------------------|---------------------------------|----------------------------------|------------------------|---|
| Light Horse | 5,734 | 5,112 | 4,365 | 85 |
| Field Artillery | 1,353 | 1,083 | 998 | 92 |
| Garrison Artillery | 1,617 | 1,460 | 1,285 | 88 |
| Engineers | 752 | 656 | 597 | 91 |
| Infantry—Militia | 6,971 | 6,659 | 5,954 | 89 |
| Corps of Signallers | 284 | 266 | 251 | 94 |
| Army Service Corps | 275 | 266 | 245 | 92 |
| Army Medical Corps | 735 | 579 | 525 | 91 |
| Total Militia | 17,721 | 16,081 | 14,220 | 88 |
| Infantry—Volunteers | 5,838 | 4,911 | 2,757 | 56 |
| Total | 23,559 | 20,992 | 16,977 | 81 |

The numbers classed as “efficient” for the year 1907-8 were as follows :—

EFFICIENTS (MILITIA AND VOLUNTEER FORCES) ON 30th JUNE, 1908.

| Force. | Strength on 30th June, 1908. | Efficients. | Percentage of Efficients to Strength. | Non-Efficients. |
|---------------------|------------------------------|---------------|---------------------------------------|-----------------|
| Militia | 15,870 | 13,424 | 85 | 2,446 |
| Volunteers | 4,969 | 3,991 | 80 | 978 |
| Total | 20,839 | 17,415 | 84 | 3,424 |

§ 7. General Questions of Defence.

1. **Proposed Schemes.**—There have been before the public various proposals for securing the efficient defence of Australia. One aims at enforcing courses of compulsory drill on all males, on their attaining 18 years of age, the training to be conducted on lines somewhat similar to those at present in vogue for the militia and volunteers, attendance on certain nights throughout the year, with daylight parades on the afternoons of the weekly half-holiday (*e.g.*, Saturday and Wednesday), and on whole days as specially arranged. Another proposal makes the cadet system compulsory throughout the Commonwealth, and seeks to attain its end by elementary military training in school life. In connection with these and other propositions the figures of male population of the Commonwealth are of interest. The estimated number of males available for training as cadets, taken as those between the ages of 12 and 18 (at which latter age they are eligible for membership of the citizen forces) was, on 31st December, 1907, 276,000. That of males at the best period for military service, taken as those between 18 and 35, was 636,000; while between 35 and 60, there were 547,000 males. The figures in more detail are as follows :—

MALE POPULATION AT CERTAIN AGES, 31st DECEMBER, 1907.

| Age. | Estimated Male Population. | Age. | Estimated Male Population. | Age. | Estimated Male Population. |
|---------------------|----------------------------|---------------------|----------------------------|----------------------------|----------------------------|
| 12 and under 13 ... | 50,000 | 18 and under 19 ... | 41,000 | 35 and under 40 ... | 171,000 |
| 13 " 14 ... | 48,000 | 19 " 20 ... | 41,000 | 40 " 45 ... | 142,000 |
| 14 " 15 ... | 47,000 | 20 " 21 ... | 40,000 | 45 " 60 ... | 234,000 |

2. **Defence Policy.**—On the 13th December, 1907, in the House of Representatives, the Prime Minister of the day outlined a defence scheme, and on 29th September, 1908, the Minister of Defence introduced in the same Chamber a bill to give effect to that part of it which deals with compulsory training. The leading points are summarised as follows :—

Australia is no longer outside the area of the world's conflicts, and the enormous annual war expenditure of modern nations must therefore be considered. The great wealth of Australia demands a state of preparedness for war, if only to preserve peace. The question of defence, as seen by Australia, falls naturally into three parts. The first relates to the command of the high seas, the next to the protection of our coasts, and the last to our power to hold our own territory against invaders.

The British Empire depends on the navy as its first line of defence, and, because of her long coast line, Australia is deeply concerned in this. Dependence on the Imperial navy must therefore continue, the whole defence of the sea and its control being a matter for the British Government and the British navy. The present Naval Agreement is unsatisfactory, and in lieu thereof a contribution in kind was proposed, *viz.*, a naval force, Australian in character. It was intended to raise this force, the officers and men being engaged here under the same conditions as in the Royal Navy, or obtained after they have

served in the Royal Navy, to serve on our local vessels for the usual term on this station, and then to pass into other ships of the Royal Navy to continue their training elsewhere. They would remain members of the navy in every sense, recruited and serving under its laws. They would be paid in Australia at Australian rates of pay. The ships would fly the White Ensign and the Southern Cross, and be altogether Australian in cost and in political control, as to their movements and stations; in everything else they would be part of the British Navy. The whole control, both in peace and war, would be in the Commonwealth, but if in time of danger it chose to place its flotilla under the command of the admiral on this station, as would probably be the case, it would then pass wholly under his control for the time being. The annual cost to the Commonwealth was estimated at £100,000, and the remainder of the present subsidy would be applied to submarines or destroyers. The Australian Squadron would be an addition, although part of the Royal Navy, for which Australia would become a recruiting ground. It was intended that docks and fitting establishments should also be maintained, coaling facilities provided, and arrangements made for a supply of coal and naval stores for His Majesty's ships.

For local defence it was proposed to build vessels absolutely under Australian control, and with a sphere limited to Australian waters. This flotilla was to consist of submarines and torpedo boat (coastal) destroyers, three of the former and two of the latter being acquired annually for three years. The scheme proposed to give two submarines for New South Wales, two for Victoria, two for Queensland, one perhaps at Thursday Island, and one each for South Australia, Western Australia, and Tasmania; and one torpedo boat destroyer for the chief harbour of each State. If after three years the protective force were considered insufficient, additions would be made to it according to the most modern and up-to-date principles. In addition, lights and armaments for the shore forts would be installed. Ammunition was also to be purchased.

Regarding land defences, the militia is numerically weak, there being only 22,000 regularly drilled soldiers in the permanent, militia, and volunteer forces. Only one male in every 112 was undergoing drill and military experience, and that generally for but a short period. The annual cost of this was £800,000. Numerically our force was regarded as too weak, and financially as too expensive. The Government proposed a system of training, according to which every young man in the Commonwealth should be required to serve each year for at least sixteen days in the National Guard, during his nineteenth, twentieth, and twenty-first years, instruction, continuous and practical, being imparted in local camps. Each of the present militia units was to expand to three National Guard units, and the whole of the present militia was to be absorbed, being required to supply officers and non-commissioned officers to train the new levies. The Guard ordinarily was not to receive pay for its service, but for the longer training necessary in special corps a reasonable allowance was to be made. Appreciation and recognition of long service undertaken voluntarily was a special feature of the scheme. After the three years' training, it was proposed to keep the men in touch with what is being done, by attending occasionally, if only for a short time, at camps with the National Guard. The age of exemption from the reserves was to be forty years. It was intended that the uniform, accoutrements, mountings, fittings of ordnance, etc., whenever possible, should be locally made, and an ammunition factory established.

A school of permanent expert instruction was proposed to train the officers, by lectures and examinations, in the latest principles of military science, and the latest lessons of military history. The system of temporary exchanges of officers with England, India, Canada, and South Africa, was to be continued, and officers and non-commissioned officers were to be sent abroad for training.

The estimates of cost for each of the first three years are :—

DETAILS OF ESTIMATED EXPENDITURE.

| Items. | 1st Year. | 2nd Year. | 3rd Year. |
|---|----------------|----------------|----------------|
| | £ | £ | £ |
| Central Administration | 23,000 | 23,000 | 23,000 |
| Headquarters of Military Districts | 15,000 | 15,000 | 15,000 |
| Ordnance Department | 22,000 | 22,000 | 22,000 |
| Permanent Troops | 85,000 | 65,000 | 50,000 |
| Instructional Staff | 46,000 | 46,000 | 46,000 |
| Accounts and Pay Department | 6,000 | 6,000 | 6,000 |
| Rifle Range Staff | 3,000 | 3,000 | 3,000 |
| Total—Permanent Services | 200,000 | 180,000 | 165,000 |
| NATIONAL GUARD: Training— | | | |
| Pay, including Militia retained... .. | 93,000 | 80,000 | 90,000 |
| Clothing, etc. | 90,000 | 90,000 | 90,000 |
| Camps and Schools of Instruction | 39,000 | 68,000 | 85,000 |
| Central School | 5,000 | 5,000 | 5,000 |
| Ammunition annually expended | 20,000 | 40,000 | 60,000 |
| Total | 247,000 | 283,000 | 330,000 |
| Arms | 100,000 | 100,000 | 100,000 |
| Accoutrements, etc. | 75,000 | 75,000 | 75,000 |
| Stores, general contingencies, etc. | 32,000 | 28,000 | 24,000 |
| Field Artillery, guns, and reserve ammunition | 50,000 | 50,000 | 50,000 |
| Ammunition, reserve for rifles | 30,000 | 30,000 | 30,000 |
| Works and buildings | 29,000 | 29,000 | 29,000 |
| Repairs, maintenance, and rents | 26,000 | 21,000 | 16,000 |
| Total | 342,000 | 333,000 | 324,000 |
| Grand Total, excluding Rifle Clubs and Cadets... | 789,000 | 796,000 | 819,000 |

The total military and naval expenditure works out thus:—

GRAND TOTALS INCLUDING CAPITAL EXPENDITURE).

| Items. | 1st Year. | 2nd Year. | 3rd Year. |
|--|------------------|------------------|------------------|
| | £ | £ | £ |
| Military (including new special defence provision) ... | 1,097,000 | 1,021,000 | 1,074,000 |
| Naval Agreement | 200,000 | 200,000 | 200,000 |
| Local Naval Forces... .. | 60,524 | 60,524 | 60,524 |
| New naval expenditure | 357,070 | 414,140 | 471,210 |
| Presumed unexpended balance | ... | ... | ... |
| Total | 1,714,594 | 1,695,664 | 1,805,734 |

This table includes expenditure on cadets, rifle clubs, etc., and capital spent upon fixed defences, factories, and works.

The cost of the new system would not be much greater than under the present system, and it was hoped that camp life and healthy rivalry in outdoor military occupations would

not only serve as a great disciplinary power, but become a potent factor in fostering the best national spirit. It was calculated that the establishment under the new proposals would be 83,000, always in training, supplemented each year by about 30,000, an equal number passing to the reserve. In the eighth year over 200,000 men would be available, fully armed, equipped, and organised for the defence of the Commonwealth. The cadet movement was to be largely expanded, and rifle clubs to receive an increased subsidy. The term of compulsory service in the National Guard was to be reduced for those who had passed through and qualified in the cadet service, and rifle clubs recruited from those who have fulfilled their obligation of service in the Guard.

The ministry which took office in November, 1908, (Prime Minister, the Honourable Andrew Fisher, M.P.), has modified the policy above outlined, but at the time of going to press authoritative details were not to hand.

§ 8. Relation to the Empire.

During the New Zealand wars many colonists served with the British forces, their service generally being purely as individuals. At the outbreak of the war, the *Victoria*, a steam sloop of 450 tons register, with an armament of seven 32-pounders, and a crew of 95, a large percentage of whom had been in the Royal Navy, was offered by the Government of Victoria to the Imperial authorities for service in the New Zealand waters. The offer was accepted, and the vessel proceeded to Auckland, calling *en route* at Hobart, where she took on board part of the 40th Regiment (Imperial). The *Victoria* was employed continuously in transport and various operations along the coast until the termination of the war. In 1835 a field battery, an infantry battalion, and an ambulance corps, numbering in all 770, with 218 horses, left New South Wales to take part in the Suakin campaign. Lord Wolseley's despatch of 15th June, 1885, reads:—"The result was so satisfactory that I trust the noble and patriotic example set by New South Wales may, should occasion arise, be followed by other colonies."

In 1899 the outbreak of war with the Boers led to the several colonies offering contingents. This service was continued when, on 1st March, 1901, the control of the defence forces passed over to the Commonwealth. Besides the troops officially organised many Australians served as individuals in the campaign. The following table shews the strength of the military contingents sent at various times from Australia to South Africa:—

STRENGTH OF MILITARY CONTINGENTS SENT FROM AUSTRALIA TO SOUTH AFRICA.

| State. | State Troops at State Expense. | | | State Troops at Imperial Expense. | | | Commonwealth Troops. | | | Grand Total. | | |
|-------------------|--------------------------------|--------------|---------|-----------------------------------|--------------|---------|----------------------|--------------|---------|--------------|--------------|---------|
| | Officers. | Other Ranks. | Horses. | Officers. | Other Ranks. | Horses. | Officers. | Other Ranks. | Horses. | Officers. | Other Ranks. | Horses. |
| New South Wales | 160 | 3,217 | 3,135 | 76 | 1,308 | 1,443 | 78 | 1,271 | 1,294 | 314 | 5,796 | 5,872 |
| Victoria ... | 47 | 751 | 830 | 77 | 1,569 | 1,877 | 69 | 1,052 | 1,118 | 193 | 3,372 | 3,825 |
| Queensland ... | 39 | 694 | 868 | 73 | 1,346 | 1,603 | 37 | 699 | 736 | 149 | 2,739 | 3,207 |
| South Australia | 20 | 326 | 258 | 46 | 644 | 696 | 23 | 467 | 490 | 89 | 1,437 | 1,444 |
| Western Australia | 18 | 331 | 269 | 34 | 540 | 608 | 15 | 291 | 306 | 67 | 1,162 | 1,183 |
| Tasmania ... | 6 | 173 | 58 | 17 | 358 | 422 | 13 | 290 | 303 | 36 | 821 | 783 |
| Total ... | 290 | 5,492 | 5,418 | 323 | 5,765 | 6,649 | 235 | 4,070 | 4,247 | 848 | 15,327 | 16,314 |

There were, in addition, several special service officers attached, at the request of the colonial Governments, to the British forces, whose service with the Imperial troops was with the view of aiding the development of the Commonwealth forces, particularly in regard to the routine and administration of troops on service.

The Home Government also accepted the offer of contingents from Australia on the outbreak of the Boxer rebellion in China. Naval volunteers were furnished by New South Wales and Victoria, and South Australia equipped a gunboat for the Imperial service. The strength of the New South Wales contingent was 260, that of the Victorian 200, of all ranks.

§ 9. Military Education.

Following upon the endowment by the Sydney University of a Chair of Military Science, a curriculum, to extend over a period of three years, commenced in March, 1907. The courses of lectures are open to attendance by the public upon payment of the prescribed fees, but members of the University Scouts are permitted to attend without fee, and officers of the citizen forces at half fees. The curriculum consists of individual courses of instruction, each terminating with an examination. Completion of the curriculum entitles the student to a diploma in military science, and students not completing it may receive certificates for any courses in which they have given satisfaction.

The courses for the first year are Military History and Science I and Elementary Military Engineering. In the former subject ten lectures are given in military history and ten in strategy, and in the latter there are ten lectures with five days' practical instruction. In the second year the subjects are Military History and Science II and Military Topography. The former comprises ten lectures in military history and ten in Imperial defence. In topography ten lectures and seven days' practical instruction make up the course. The subjects for the third year are Military History and Science III and Military Law and Administration. Ten lectures in military history are joined with ten in tactics to make up the former, while there are twenty lectures in the latter course.

The lectures for diploma are given at the Sydney University during Lent and Trinity terms. Short continuous courses of instruction in military subjects for the benefit of officers of the permanent and citizen forces are also arranged, the lectures being delivered during Michaelmas term.

§ 10. The Defence Forces of New Zealand.

In 1840 New Zealand became a British colony by cession of the Maori chiefs. The natives have generally shewn themselves well disposed to the colonists, but in 1845-8 and 1860-70 there were native wars, in which, however, many of the clans fought for the colonial Government. Colonists joined with the Imperial troops in the campaign that began in 1845. In that year a Militia Ordinance was enacted, and 300 men were enrolled at Auckland and Wellington. The necessity of keeping trained bodies of men in case of continued resistance was acknowledged by the act of the Home Government in sending soldiers, not to be kept constantly under arms and in receipt of pay, but to maintain themselves on land granted them for settlement, being in readiness for military service if occasion arose. October, 1847, saw the arrival of the first detachment of this military colony. Garrison duty was performed for a few days each year. The grant was a cottage on an acre of land to each soldier, to become, on the completion of seven years' service, his own property, with the right to purchase five additional acres at a low price. This force ultimately rose to 500 men, and the scheme was successful. The corps of New Zealand Fencibles was also constituted about the same time from discharged soldiers resident in the colony, and was approximately of the same strength as the military settlement.

The outbreak of the Waitara war in 1860 revealed a state of military unpreparedness. Martial law was proclaimed, and volunteer forces raised to fight in conjunction with the

Imperial troops. After a short peace, hostilities were renewed with increased vigor and over a wider area. All available Europeans were called out for training or active service. In addition to the troops raised in New Zealand, a body of military settlers was enrolled, principally in Australia—for service in New Zealand. The terms of enrolment provided that on the termination of the war, the men were to be located on the frontier, with a grant of 50 acres each. About 1600 colonists also assisted the Imperial troops in transport and convoy duties. Before the completion of the war, the Imperial troops were removed. Owing to differences between the Home and Colonial Governments as to the conduct of the war, the latter declared its readiness to undertake its own defence. Orders were accordingly issued for the withdrawal of the Imperial troops, and most of them went home during 1866, though it was 1870 before the last regiment left the colony. The New Zealanders set about finishing the war. In 1867 it languished, and the combined forces were reduced to 3600, including 1700 military settlers. Quickened again into life, the insurrection necessitated the upkeep of an organised force. At first the only available body was the armed Constabulary corps, raised a few months before the fresh outbreak of 1868. With the increased activity of the disturbances, this body was increased to a strength of 1000 men, and designated the "Field Force." With the aid of other local forces and allied natives, the rebellion was quelled, and a lasting peace established. The Constabulary or Field Force was gradually reduced in strength, and after various changes it was separated from the Police Force and organised as a permanent artillery unit by the Defence Act 1886. This Act repealed previous laws relating to the militia and volunteers. The Defence Amendment Act of 1900 gives the Governor power to establish an Imperial reserve, drawn from any branch of the forces, for service outside, as well as within, the colony. Under the Acts of 1886, 1900, 1906, and 1907 the defence forces of the Dominion are constituted. In 1882 the strength of the forces maintained was 7367—made up of 732 cavalry, 907 artillery, 380 engineers, and 5348 infantry. The colony furnished 150 (approximately) officers and 4850 men for the South African war.

The Royal New Zealand Artillery, a permanent force, and auxiliary units of various arms, make up the military forces of the Dominion. Administration and control is in the hands of the Council of Defence. The following table gives the strength of the various corps on 29th February, 1908:—

| | | |
|--|--|--------|
| HEADQUARTERS AND DISTRICT STAFFS 64 | Mounted Rifles | 3,923 |
| PERMANENT— | Infantry, Cycle, and Signalling Corps | 6,118 |
| Royal N.Z. Artillery (including Electric Light sections) ... 307 | Field Hospital and Bearer Corps | 215 |
| VOLUNTEERS— | Garrison Bands | 141 |
| Field Artillery 361 | Battalion Bands | 308 |
| Naval and Garrison Artillery ... 1,001 | Grand total trained | 12,877 |
| Engineers 439 | | |

In addition there are the following:—Unattached officers, 151; reserves, 215; medical staff, 165; veterinary staff, 12; defence cadets, 3153; and rifle club members, 3369. The grand total of the defence forces is therefore 19,947.

The following table gives the military expenditure of New Zealand from 1900-1 to 1907-8:—

MILITARY EXPENDITURE, NEW ZEALAND, 1900-1 to 1907-8.

| Year | 1900-1. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|--------------------|----------|----------|----------|----------|----------|----------|----------|----------|
| Expenditure | £156,218 | £250,478 | £292,081 | £221,959 | £239,333 | £195,028 | £167,818 | £176,426 |

Enlistment for three years in a volunteer corps is decreed for all cadets in the Civil Service, on their attaining the age of 18 years.

SECTION XXIX.

PAPUA (BRITISH NEW GUINEA).

§. 1. Situation and Settlement.

1. **Geographical Situation of New Guinea.**—New Guinea, frequently described as the largest island in the world, lies to the north-east of Australia, between $0^{\circ} 25'$ and $10^{\circ} 40'$ S. latitudes, and between $130^{\circ} 50'$ and $150^{\circ} 35'$ E. longitudes. Its area is estimated as exceeding 300,000 square miles, the greatest length being 1490 miles and the greatest breadth 430 miles.

2. **Discovery.**—The island was probably sighted by Dabreu in A.D. 1511. The first visit by Europeans was apparently either that by the Portuguese Don Jorge de Meneses on his way from Goa to Ternate in 1526, or that by the Spaniard Alvaro de Saavedra in 1528. In 1606 Torres, having parted company with De Quiros at New Hebrides, sailed, on his way to the Philippines, through the strait which separates the island from Australia, and which now bears his name.

3. **Colonisation.**—Little progress was made for many years in settlement or exploration. First the Portuguese, and afterwards the Dutch, who to a great extent replaced them as the principal European traders in the East, seem to have jealously excluded other traders and adventurers, and to have kept the knowledge of their discoveries to themselves. The coasts were visited by Roda, Schouten, Lemaire, Tasman, Dampier, Torres, Bougainville, and Cook; but the difficulties of navigation, the savagery of the islanders, and the tempting fields for enterprise in the more temperate regions further south, diverted the energy of traders and voyagers. Forrest describes a voyage by himself in 1774. In 1793, New Guinea was annexed by two commanders in the East India Company's service. Since that date the Dutch have made extensive surveys of the western portion, and the British and Germans have occupied and colonised the eastern.

4. **Partition.**—These three powers have agreed to the partition of New Guinea, each having suzerainty over islands adjoining its own territory. The whole of the portion west of the 141st degree of latitude, comprising about 150,000 square miles, or nearly half the island, belongs to the Dutch. The eastern half is divided in almost equal portions between Great Britain and Germany, the area possessed by each (with adjacent islands) being about 90,000 square miles. The Dutch colony forms part of the residency of Ternate in the Moluccas, and has not been extensively developed. The German protectorate, where considerable political and commercial development has taken place, includes the northern part of the eastern half of the mainland, known as Kaiser Wilhelm's Land, and the large islands of the Bismarck Archipelago and the Solomon Group, as well as nearly 200 smaller islands. The south-eastern portion of New Guinea, nearest Australia, is British, and a dependency of the Commonwealth of Australia.

§ 2. Papuan Development.

1. **Australian Dependency of Papua.**—Surveys of the east coast of New Guinea by Stanley, Yule, Blackwood, Moresby, and others, brought home to Queensland, and to Australia generally, the danger to her commerce which would result from foreign possession of the islands and coasts opposite to Cape York, and from a hostile holding of the entrance to the splendid waterway inside the Barrier Reef. The mainland opposite the shores of Queensland east to the 141st meridian was therefore annexed by that colony in 1883; but the action was disallowed by the British Government. In 1884, however, a British protectorate was authoritatively proclaimed by Commodore Erskine over the region lying between the 141st meridian as far as East Cape, with the adjacent islands as far as Kosman Island. In the year following an agreement with Germany fixed the boundaries between the possessions of the two countries, and to Great Britain was assigned the portion now known as Papua, lying between the extreme limits of 5° and 12° S., and 141° and 155° E. The British protectorate was subsidised by Queensland, New South Wales, and Victoria, and lasted till 4th September, 1888, when it was proclaimed a possession of the Empire. Its constitution was then that of a Crown colony, in association, however, with Queensland. Administration was in the hands of a Lieutenant-Governor, aided by an executive and a legislative council, and advised by a native regulation board. Port Moresby, on the south coast, was made the headquarters of the official establishment; a supreme court was established there, and magisterial courts in the districts; and an armed native constabulary force, numbering 185 in 1907, under a European officer, was instituted for the maintenance of order.

2. **Annexation by Commonwealth.**—The territory was transferred from Queensland to the Commonwealth by proclamation on 1st September, 1906, under the authority of the Papua Act (Commonwealth) 1905. It is now under the administration of the Commonwealth, but not included within it.

3. **Physical Characteristics.**—The British territory of Papua lies wholly within the tropics. The northernmost point touches 5° S. latitude; its southernmost portion, comprising Sudest and Rossel Islands, lies within 11° S. and 12° S. latitude. The length of Papua from east to west is upwards of 800 miles; towards either end the breadth from north to south is about 200 miles, but about the centre it is considerably narrower. The length of coast-line is computed at 3664 miles—1728 on the mainland and 1936 on the islands. The total area is about 90,540 square miles, of which 87,786 are on the mainland and 2754 on the islands. From the eastern end of the territory rises a chain of mountains, which forms a great central ridge and attains its greatest altitude, as it extends westwards, in the Owen Stanley Range, the highest points of which are Mount Victoria (13,200 feet), Mount Scratchley, the Wharton Range, and Mount Albert Edward. The western end of the Possession is for nearly 300 miles generally low and swampy for some distance along the coast. The whole territory is well watered. The great mountains and a great portion of the lower country are covered with forest. The islands are mountainous, and, with the exception of the low coral islands of the Trobriand Group, part of Murua, and a few others of small dimensions, principally of volcanic formation. The highest is Goodenough Island, 8000 feet. The largest rivers of the mainland flow into the Gulf of Papua. The Fly River, with its tributaries, drains an extensive area of the territory of the Netherlands, as well as the British. Its length in British territory is about 620 miles, and it is navigable by a steam launch for over 500 miles. Other important rivers are the Turama and the Purari. There are many excellent harbours.

4. **Productions.**—The chief native industries are the manufacture of pottery, canoes, fishing nets, mats, shell ornaments, stone implements, and decorated gourds, and the

growth and preparation of sago. Gold mining, bêche-de-mer and pearl-shell fisheries, and copra, are industries which engage the attention of Europeans. Extensive plantations of cocoanut palms exist. Tortoise-shell in small quantities is collected. Rubber is a promising industry, and large areas are being planted. Gutta-percha is obtained from species of *Palaquium*, which grow on the hills. There are considerable forest areas, yielding a large variety of valuable timbers. Small quantities of ebony and sandalwood are exported. Sugar-cane, sago, palms, and cotton plants also are indigenous, and of good quality. Trade is exclusively with Australia.

§ 3. Population.

The total white population of Papua on 30th June, 1908, was 711, made up of 511 adult males and 124 adult females—adults being persons over 16 years of age. In addition, there were 41 male and 35 female children. It is not possible to make a reliable estimate of the number of natives, owing to the fact that much of the interior country is unexplored. It is generally assumed to be somewhere between 400,000 and 500,000 souls.

§ 4. Statistical Summary.

1. Revenue and Expenditure.—The revenue and expenditure, under principal heads, are given below; also a summary covering a period of eleven years:—

| REVENUE OF PAPUA, 1907-8. | | | | EXPENDITURE OF PAPUA, 1907-8. | | | |
|---------------------------------------|-----|---------|--|---------------------------------|-----|---------|--|
| | | | | | | | |
| £ | | | | £ | | | |
| Customs receipts ... | ... | 18,206 | | Lieutenant-Governor, Civic list | ... | 2,185 | |
| Judicial fines and fees ... | ... | 396 | | Government Secretary's Dept. | ... | 1,407 | |
| Land sales and leases ... | ... | 571 | | Treasury & Postal Department | ... | 2,655 | |
| Registration and survey of land | ... | 8 | | Magistrates ... | ... | 4,737 | |
| Liquor licenses ... | ... | 230 | | Armed Native Constabulary ... | ... | 3,259 | |

REVENUE AND EXPENDITURE OF PAPUA, 1897-8 to 1907-8.

| Item. | 1897-8. | 1898-9. | 1899-1900. | 1900-1. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|-----------------|---------|---------|------------|---------|---------|---------|---------|---------|---------|---------|---------|
| | £ | £ | £ | £ | £ | £ | £ | £ | £ | £ | £ |
| Revenue ... | 10,281 | 11,683 | 13,835 | 15,115 | 16,868 | 19,107 | 22,327 | 19,274 | 20,236 | 21,813 | 26,019 |
| Expenditure ... | 23,153 | 24,443 | 23,601 | 32,089 | 38,467 | 37,577 | 35,492 | 36,534 | 38,350 | 45,335 | 48,525 |

2. **Imports and Exports.**—The value of imports and exports for eight years is shewn in the table below. In 1906-7 the importation was very large, while the exports were below the average. The figures for 1907-8 shew great trade development:—

VALUE OF IMPORTS AND EXPORTS OF PAPUA, 1900-1 to 1907-8.

| | 1900-1. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|-------------|---------|---------|---------|---------|---------|---------|---------|---------|
| | £ | £ | £ | £ | £ | £ | £ | £ |
| Imports ... | 71,618 | 70,817 | 62,367 | 77,631 | 67,188 | 79,761 | 87,776 | 94,061 |
| Exports ... | 49,659 | 68,300 | 62,881 | 75,506 | 76,435 | 80,290 | 63,756 | 80,616 |
| Total trade | 121,277 | 139,117 | 125,248 | 153,137 | 143,623 | 160,051 | 151,532 | 174,677 |

The principal articles of import are foodstuffs, which in 1907-8 reached a total value of £33,440. The chief other imports in that year were:—Drapery and clothing, £9300; hardware and ironmongery, £10,774; tobacco and cigars, £7653; wine, spirits, and beers, £2297; building material, £1902; and machinery, £1966. In each of the seven years under review gold has formed considerably more than half the value of the total export. In 1907-8 the value of this metal exported reached £52,837. Other principal exports were:—Copper ore, £2497; béche-de-mer, pearls, pearl and turtle shell, £5115; copra, £7515; sandalwood, £6346; rubber, £483; and natural history specimens, £3661.

3. **Postal and Shipping.**—Considerable development has been shewn in means of communication, the postal returns, and the tonnage of vessels cleared at Papuan ports, having lately largely increased.

POSTAL STATISTICS OF PAPUA, 1900-1 to 1907-8.

| Year. | Letters. | | Packets. | | Newspapers. | |
|------------|-----------|-------------|-----------|-------------|-------------|-------------|
| | Received. | Despatched. | Received. | Despatched. | Received. | Despatched. |

§ 5. Land Tenure.

1. **Method of Obtaining Land.**—(i.) *The Land Laws.* The broad principles upon which the land laws of Papua are based are:—(a) No land can be alienated in fee simple; (b) the rental of the land leased is assessed on the unimproved value of the land, and is subject to reassessment at fixed periods.

(ii.) *Agricultural Lands.* The terms upon which the land may be leased are exceedingly easy to the settler. He can obtain a leasehold of the best class of agricultural land for any period up to ninety-nine years on the following conditions:—

- (a) Upon making application a small deposit fee, ranging from £1 to £10, according to the area, is payable. This is returned to the applicant if he accepts the lease he has applied for.
- (b) No survey fees are charged to the lessee, and no fee is charged for the preparation or registration of the lease.
- (c) If the lease is for more than thirty years the rent payable is determined at 5 per cent. per annum of the unimproved value of the land, but no rent is payable for the first period of ten years, and no more than sixpence per annum an acre during the second period of ten years.
- (d) The unimproved value of the land is to be appraised every twenty years during the currency of the lease, and the land determined accordingly, but if on any appraisal the rent is raised by more than one-third, the lessee may disclaim the lease, and is thereupon entitled to receive compensation for his improvements.

The compulsory improvement conditions attached to agricultural leases are as follow:—

- (a) One-fifth must be properly planted with some approved plants within five years.
- (b) Two-fifths within ten years.
- (c) Three-fourths within twenty years.
- (d) During the remainder of the term three-fourths of the suitable land must be kept properly planted. Provided always that, if at any time during the first five years of a lease it appears to the Land Board that reasonable efforts are not being made to fulfil the improvement conditions, they may recommend the Lieutenant-Governor to cancel the lease, and thereupon it shall be lawful for the Lieutenant-Governor, by notice in the *Gazette*, to cancel the lease accordingly.

All agricultural lands which have not been alienated by the Crown have been assessed under Section 13 of the Land Act at an unimproved value of 5s. per acre.

All pastoral lands have been assessed at 1s. per acre unimproved value.

This appraisalment definitely fixes all land rentals for twenty years as follows:—

Agricultural land (Class A).—first ten years, free; second ten years, 3d. per acre per annum.

Pastoral leases (Class B).—First ten years, free; second ten years, 25s. per 1000 acres.

If during the second twenty-year period of the lease the appraisalment is increased by more than one-third of the existing rental, the lessee may disclaim the lease, and is entitled to receive compensation for his improvements.

(iii.) *Pastoral Lands.* Pastoral land, suitable for cattle and horses, can be obtained in easily accessible positions. All these lands are well watered and clothed with blady kangaroo, crowfoot, couch, and scurvy grasses. The carrying capabilities of this land are estimated at forty head of cattle to the square mile. Five head of cattle, horses, asses, mules, or fifty head of sheep or goats, per square mile must be on the land within five years. Within ten years these numbers must be increased to ten head of big cattle or 100 sheep or goats to the square mile, and the land must be kept stocked to this extent for the remainder of the lease.

SECTION XXX.

MISCELLANEOUS.

§ 1. The Regulation of Immigration into Australia.

1. **Pre-Federal Restrictions.**—(i.) *Alien Races.* The several States of Australia had regarded it as desirable, long prior to Federation, to impose certain restrictions upon the admission of persons wishing to become inhabitants of those States. The influx of Chinese into the States, for example, was limited by stringent statutes, and later general Acts were passed in some of the States which had the effect of restricting the immigration of other—principally Asiatic—races.

(ii.) *Undesirable Immigrants.* Further restrictions were placed upon the admission of persons who were undesirable as inhabitants, either for medical or moral reasons, or who were likely to be an economic burden upon the community.

2. **Powers and Legislation of the Commonwealth.**—(i.) *Constitutional Powers.* By Chap. I., Pt. V., Sec. 51, xxvii. and xxviii. of the Commonwealth Constitution Act the Parliament of the Commonwealth is empowered to make laws with respect to immigration and emigration and the influx of criminals. (See page 49 herein).

(ii.) *Legislation.* The powers specified have now been exercised, and the laws passed in pursuance thereof supersede the State laws above referred to.

The first Act passed was the Immigration Restriction Act 1901, which contained provisions restricting the immigration of the classes of persons mentioned above. The clauses restricting the immigration of persons under contract were, however, repealed, and the Contract Immigrants Act 1905 was substituted therefor. (See page 58 herein.)

The Immigration Restriction Act of 1905 amends certain parts of the Act of 1901, and the immigration of alien races and undesirable persons is now regulated by the two Acts, viz., those of 1901 and 1905. This last applies only to immigrants under contract or agreement to perform manual labour in Australia. The admission of such persons is permitted if the contract is in writing, is made by or on behalf of some person named, who must be resident in Australia, and approved by the Minister. Such approval will not be given if the contract is made with the view of affecting an industrial dispute or if the remuneration and other terms are not as advantageous to the contract immigrant as those current for workers of the same class at the place where the contract is to be performed.

There is an additional provision where the proposed immigrant is not a British subject born in the United Kingdom or descendant of such a person. In such case it has to be proved that there is a difficulty in the employers obtaining in the Commonwealth a worker of at least equal skill and ability.

In case of infraction of the law it is provided that the contract is absolutely void and the immigrant and employer are both liable to penalties, and the employer is also liable to pay the immigrant until he obtains employment, or, at the option of the immigrant, to provide expenses for his return to the country whence he came.

The above matter is referred to also herein in connection with industrial legislation.

3. **Prohibited Immigrants.**—(i.) *Provisions of the Acts.* Persons comprised in the following classes are prohibited from entering the Commonwealth, viz.:—(a) Any person

who fails to pass the dictation test; that is to say, who fails to write out not less than fifty words of a language prescribed by regulation when dictated to him by an officer administering the Act. (b) Any person likely to become a charge upon the public. (c) Any idiot or insane person. (d) Any person suffering from an infectious or contagious disease. (e) Any person who has been convicted of an offence, other than a mere political offence, and has been sentenced to imprisonment for one year or longer and has not served his sentence or received a pardon. (f) Any person undesirable for moral reasons.

Regarding (a) it may be stated that the Act of 1901 provided for the dictation of not less than fifty words of a European language. The Act of 1905 provided for the retention of this test until regulations be passed prescribing the languages to be employed. No such regulations have yet been made, and the provision of the Act of 1901 is therefore *de facto* still in force. It may be stated that the dictation test is not and never has been imposed upon persons of European race.

(ii.) *Exemptions.* To these restrictions there are the following exemptions, viz.:— (a) Any person holding an exemption certificate. (b) Members of the King's regular land and sea forces. (c) The master and crew of any public vessel of any Government. (d) The master and crew of any other vessel landing during the stay of the vessel in a Commonwealth port; but before the ship can obtain her outward clearance the crew must, at the demand of an officer administering the Act, be mustered, and if any member of the crew be missing, and would otherwise, in the opinion of the officer, have been a prohibited immigrant, then such person is deemed to be a prohibited immigrant, and until the contrary be proved, to have entered the Commonwealth contrary to the Act. (e) Any Commissioner of, or other person accredited from, the Imperial or any other Government.

(iii.) *General Provisions.* An immigrant may be required to pass the dictation test at any time within a year after he has entered the Commonwealth.

A prohibited immigrant within the meaning of (a) above may, at the discretion of an officer, be allowed to enter the Commonwealth, or to remain within it, upon depositing £100 and within thirty days either obtaining an exemption certificate or departing from the Commonwealth; in either case the deposit is returned.

The punishment for breach of the Act by a prohibited immigrant is imprisonment for six months and deportation in addition, if so ordered.

4. **Liability of Shipmasters and Others.**—The master, owners, agents, and charterers of a vessel from which a prohibited immigrant enters the Commonwealth are jointly and severally liable to a penalty not exceeding £100 for each entrant. The vessel may be detained as security, but may be released upon the giving of a bond with two sureties for the payment of any penalties; the vessel may be seized and sold in default of payment of penalties. The master, owners, agents, and charterers may be required to provide a return passage for the prohibited immigrant, and to pay for his maintenance during his detention prior to deportation. Masters of vessels are authorised to prevent such a person from landing and to obtain any necessary assistance.

5. **Agreements with other Countries.**—Arrangements may be made with the Government of any country regulating the admission into Australia of the subjects or citizens of such country, such subjects being not, during the subsistence of the arrangement, required to pass the dictation test.

Persons who have resided either continuously or from time to time in the Commonwealth for a period of five years in the whole, and who are about to depart from it, being persons who, if they return, would be prohibited immigrants, may obtain a certificate of exemption entitling them to return.

Certificates of exemption are granted by the Minister of External Affairs, whose department administers the Act.

6. **Statistics.**—The following tables shew the number of persons who desired but were not permitted to land, those who were allowed to land, and the nationality of the persons admitted :—

**PERSONS ADMITTED OR REFUSED ADMISSION TO COMMONWEALTH UNDER
PROVISION OF IMMIGRATION RESTRICTION ACT, 1902 to 1908.**

* No persons were admitted after passing the test in either of the years 1906 or 1907.

† Not specified.

§ 2. Patents, Copyrights, Trade Marks, and Designs.

1. Devolution of Jurisdiction upon the Commonwealth.—Prior to the establishment of Federation, and for a few years thereafter, each Australian State possessed independent jurisdiction in respect of patents, copyrights, trade marks, and designs, and had in nearly all cases enacted its own laws governing them. Any person, therefore, who desired to protect a patent, copyright, trade mark, or design had necessarily to incur the trouble and expense of making six separate applications—one in each State. The Commonwealth Constitution Act conferred upon the Federal Parliament power to legislate respecting these matters. (See page 48 hereinbefore).

The State Acts, though in general based upon the Imperial Statutes dealing with these subjects, were not wholly governed by them. The Commonwealth Acts, both in regard to principle and practice, have the same general foundation, but in some respects have been modified and brought into line with the totality of Australian experience.

2. Patents.—The first Commonwealth Patents Act was passed in 1903, and was amended in 1906. (See page 58 hereinbefore.) Under these Acts, which are administered by a "Commissioner of Patents," the power of the States to grant patents was abolished, and their functions in that respect were transferred to the Commonwealth. A single Commonwealth patent now gives throughout the Commonwealth that protection which formerly could only be obtained by procuring a patent in each State. The rights of State patentees are in all cases reserved to them. A holder of a State patent in force may obtain, for a period not exceeding the unexpired time thereof, a Commonwealth patent for the invention comprised in the State patent. Any State may, however, be excepted from the patent if the Commissioner of Patents is satisfied that the invention either (a) is not novel, (b) has been made the subject of a pending application, or (c) has been published in such State. Comparatively small fees, totalling £8, are now sufficient to obtain for an inventor protection throughout the Commonwealth, and the only renewal fee (£5) is payable before the expiration of the seventh year of the patent.

(i.) *Applications for Patents.* Any of the following persons may make application for a patent:—(a) The actual inventor. (b) His assignee, agent, attorney, or nominee. (c) The actual inventor or his nominee jointly with the assignee of a part interest in the invention. (d) The legal representative of a deceased actual inventor or of his assignee. (e) Any person to whom the invention has been communicated by the actual inventor, his legal representative, or assignee (if the actual inventor, his legal representative or assignee is not resident in the Commonwealth). An application for a patent must be for one invention only, and must be made in the form prescribed, and lodged by being left at or sent by post to the Patent Office at Melbourne. It must be accompanied by either a provisional or a complete specification. The application must contain a declaration in the prescribed form setting out the facts relied on to support the application, and must be signed by the applicant and attested by a witness.

(ii.) *Term for which Granted.* The term for the duration of every patent is limited to fourteen years from the date of application. A patent ceases if the patentee fails to pay the renewal fee within the prescribed time. If in any case, however, by accident, mistake, or inadvertence a patentee fails to pay the renewal fee within the prescribed time, he may, on application to the Commissioner and on payment of the prescribed fees, obtain an extension of the time for not more than one year.

(iii.) *Opposition to Grant of Patent.* Within three months of the advertisement of the acceptance of a complete specification any person may give notice at the Patent Office of opposition to the grant on any of the following grounds:—(a) That the applicant has obtained the invention from the opponent. (b) That the invention has not been communicated to the applicant by the actual inventor (if the actual inventor is not resident within the Commonwealth). (c) That the invention has already been patented in the Commonwealth. (d) That the complete specification describes an invention other

than that described in the provisional specification, and that the opponent has applied for a patent for such other invention in the interval between the leaving of the provisional and complete specifications. (e) Want of novelty. (f) Prior publication.

The case is heard and decided by the Commissioner, from whose decision an appeal lies to the High Court or the Supreme Court.

(iv.) *Additional Patents and Amendments.* An important feature of the Patents Act of 1903 was that special provisions were made for granting patents to a patentee in respect of any improvement on his invention. Such patents are called "additional patents," and are granted for the unexpired term of the original patent, the amount of the fee for an additional patent being half that for an ordinary patent.

Amendments to specifications by way of disclaimer, correction, or explanation may be allowed on request to the Commissioner, provided that the specification, if amended as requested, does not claim an invention substantially larger than or different from the original invention. Any person may oppose an amendment on giving notice of opposition at the Patent Office.

(v.) *Revocations of Patents and Compulsory Licenses.* Revocation of a patent may be obtained by petition to the High Court or the Supreme Court of a State. A petition must be presented by either (a) the Attorney-General or person authorised by him, (b) any person alleging that he was the actual inventor or that the patent was obtained from him by fraud, or (c) by any person alleging that he had publicly used, made, or sold within the Commonwealth before the date of the patent anything claimed by the patentee as his invention.

A compulsory license to work a patent in the Commonwealth, or a petition for revocation of a patent, may be granted upon proof by any person interested that the reasonable requirements of the public with respect to the invention have not been satisfied. The Act also contains provisions regarding the remedies for infringement of patents.

(vi.) *International Protection of Patents.* The Patents Act of 1903 contained provisions under which the international arrangements for the protection of patents contained in the Imperial Acts could be made applicable to the Commonwealth by order of the King-in-Council. The necessary proclamation was issued by the Imperial Government as regards England and Australia on the 1st February, 1907, and as regards all other countries in the International Convention on the 5th August, 1907. British and foreign inventors are now, therefore, if they apply in Australia within twelve months of their original application, entitled to receive a patent for their inventions in priority to other applicants, and such patent has the same date as the date of the application abroad. Corresponding arrangements have also been made by the Commonwealth with New Zealand.

(vii.) *Patent Attorneys.* Any person on passing the prescribed examination, and on paying a fee of £5, may be registered by the Commissioner as a patent attorney. A solicitor may practise as a patent attorney without passing the prescribed examination and without being registered as a patent attorney.

(viii.) *Applications Filed, Provisional Specifications Accepted, and Letters Patent Granted, 1901 to 1908.* The numbers of individual inventions in respect of which applications were filed in the Commonwealth during each year from 1901 to 1908, inclusive, were as follows:—

NUMBER OF INVENTIONS FOR WHICH APPLICATIONS FILED, 1901 to 1908.

| Date ... | States Patents Acts. | | | | Commonwealth Patents Acts. | | | | |
|--------------|----------------------|--------|--------|--------------------------|----------------------------|-------|-------|-------|-------|
| | 1901. | 1902. | 1903. | 1904, to 1st June. | 1904, From 13th Feb. | 1905. | 1906. | 1907. | 1908. |
| Applications | 1,610* | 1,933* | 1,772* | 345* | 2,243 | 2,685 | 2,743 | 2,903 | 2,840 |

* Approximate.

From the 13th February, 1904, to the 1st June, 1904, applications were made both under the States and the Commonwealth Acts.

The subjoined table shows the number of provisional specifications accepted and the number of patents granted in each State and in the Commonwealth from 1901 to 1908, inclusive. Under the Commonwealth Patents Act of 1903 these functions ceased to be exercised by the States, and were transferred to the Commonwealth Patent Office on the 1st June, 1904:—

**PROVISIONAL SPECIFICATIONS ACCEPTED AND LETTERS PATENT GRANTED,
1901 TO 1908.**

| State. | States Patents Acts. | | | | Commonwealth Patents Acts. | | | | |
|--------|----------------------|-------|-------|--------------------------|----------------------------|-------|-------|-------|-------|
| | 1901. | 1902. | 1903. | To 1st June, 1904. | From 1st June, 1904. | 1905. | 1906. | 1907. | 1908. |

PROVISIONAL SPECIFICATIONS ACCEPTED.

| | | | | | | | | | |
|----------|-------|-------|-------|-----|-----|-------|-------|-------|-------|
| N.S.W. | 319 | 476 | 388 | 74 | ... | ... | ... | ... | ... |

| W. Aus. | 356 | 379 | 380 | 61 | ... | ... | ... | ... | ... |
| Tas. ... | 272 | 279 | 259 | 35 | ... | ... | ... | ... | ... |
| Cwlth. | 2,883 | 3,171 | 2,876 | 409 | ... | 1,097 | 1,739 | 1,402 | 1,630 |

In the above table the figures given for each State shew the number of provisional specifications accepted or of patents granted in each State. The total for the Commonwealth for each year up to the 30th June, 1904, does not, therefore, shew the number of separate inventions, as specifications may have been accepted or patents granted for the same inventions in any number, from one to six, of the States. On the other hand the figures given under the Commonwealth Acts represent separate inventions for the whole Commonwealth.

(ix.) *Revenue of Patent Office.* The revenue of the Commonwealth Patent Office for each year since its creation to the end of the year 1908 is shewn in the subjoined table. Particulars as to the revenue of the State Patent Offices for previous years are not available:—

REVENUE OF PATENT OFFICE, 1904 to 1908.

| Particulars. | 1904. | 1905. | 1906 | 1907. | 1908. |
|--|--------------|---------------|---------------|---------------|---------------|
| | £ | £ | £ | £ | £ |
| Fees collected under States Patents Acts ... | 3,181 | 5,567 | 6,233 | 3,746 | 2,016 |
| " " " Patents Acts 1903 to 1906 | 2,459 | 13,379 | 14,667 | 13,612 | 14,166 |
| Receipts from publications ... | ... | 102 | 134 | 155 | 146 |
| Petty receipts ... | 19 | 37 | 43 | 34 | 32 |
| Total ... | 5,659 | 19,085 | 21,077 | 17,547 | 16,360 |

3. **Copyright.**—Prior to the establishment of Federation the copyright legislation enacted by all the States except Tasmania, throughout which State Imperial legislation governed local productions, was based upon and closely followed the English law of copyright, differing, however, in some cases therefrom as to the periods for which a copyright was granted. Only local publications were affected by it. A colonial law did not affect the rights of authors and artists where copyrights were acquired outside the colony. The Imperial statutes governed copyright in those colonies which had not passed a local copyright law.

(i.) *Copyright Acts.* The first Commonwealth Act was passed in 1905 (see page 58 herein). It follows English legislation even more closely than the State Acts. It deals with literary, musical, dramatic, and artistic copyrights, and applies only to Australian publications. It may be applied to foreign publications by registration of them under it.

(ii.) *Principal Features.* The principal feature of the Australian Act is that it provides the same term of copyright and performing right for all publications under the above heads, namely, the life of the author and seven years thereafter, or forty-two years from publication, whichever be the longer. Every book published in Australia for which copyright is claimed must be printed from type set up or from plates or negatives made in Australia. With respect to lectures, it is provided that the author shall be the first owner of the lecturing right, and that he may prevent publication of a report of the lecture by giving notice at the beginning of the lecture, or by a conspicuous written notice on the entrance door or in the lecture-room stating that reporting is prohibited. The author of an article first published in a periodical to which it was contributed for valuable consideration retains the copyright in the article, but may not republish it until one year after the end of the year in which it was first published. The owner of the copyright in a book may be compelled to translate it, or to permit translation, if it be not translated within ten years of publication. The person ordering a photograph for which consideration is paid is the owner of the copyright in it.

An important and novel feature of the Copyright Act is that provision is made whereby the owner of the copyright in any book or artistic work, or his agent, may by notice in the prescribed form, require any person to deliver up to him any printed reproduction of the book or work, and similarly the owner of the performing right in a musical or dramatic work, or his agent, may forbid the performance of the work in infringement of his right, and may require any person to refrain from performing or taking part in the performance of the musical or dramatic work specified. Any person failing to observe the requirements of any notice served under these provisions is liable to a penalty of £10.

(iii.) *Registration.* Registration is a necessary preliminary to an action for infringement, but copyright exists independently of registration. The Commissioner of Patents has been appointed "Registrar of Copyrights."

Proceedings for the rectification of the register may be taken before the Supreme Court of any State.

In the matters of copyright the Commonwealth possesses the privileges conferred upon each signatory of the Berne Convention.

Particulars of applications for registration of copyrights and of the revenue derived therefrom are given in paragraph 6 hereof.

4. Trade Marks.—The remarks made concerning the unification of the patent system of the Commonwealth apply equally to trade marks. Under the Trade Marks Act 1905, which came into force on the 2nd July, 1906, the Commissioner of Patents is appointed to act also as “Registrar of Trade Marks.” There are two trade marks, viz., the “Workers’ Trade Mark” and the “Commonwealth Trade Mark,” for which special provisions are contained in the Act; the provisions regarding the former of these two Trade Marks have, however, been held to be unconstitutional (see p. 1074 *ante*). The latter may be registered in respect of all goods specified by a resolution passed by both Houses of Parliament that the conditions as to remuneration of labour in connection with their manufacture are fair and reasonable.

(i.) *Essential Particulars of Trade Marks.* A registrable trade mark must consist of essential particulars with or without additional matter. The essential particulars must be one or more of the following:—(a) A name or trading style of a person printed, impressed, or woven, in some particular and distinctive manner; (b) a written signature of the person applying for registration thereof or of some predecessor in his business; (c) a distinctive device, mark, brand, heading, label, or ticket; (d) one or more invented words; (e) a word or words having no reference to the character or quality of the goods, and not being a geographical name used or likely to be understood in a geographical sense. The additional matter which may be added must be either (a) any letters, words, or figures or (b) any combination of letters, words, or figures or any of them.

(ii.) *State Registrations.* State registrations cease to be in force at the expiration of fourteen years from the date of the Commonwealth Act, if the registration has not previously expired. Commonwealth registration of a State registered mark may be effected, and the fact of its registration in a State prior to the coming into force of the Commonwealth Act, may entitle the registered proprietor in the State to Commonwealth registration, notwithstanding the existence of defects which might be ground for refusal of an original application for Commonwealth registration.

(iii.) *Duration of Registration and General Provisions.* The registration of a trade mark is for a period of fourteen years, but may be renewed from time to time. International and intercolonial arrangements for the protection of trade marks may be made in a manner similar to that provided for the protection of patents. Registration may be opposed by any person lodging a notice of opposition at the Trade Marks Office within three months after the advertisement of the application. International arrangements for the protection of Australian trade marks were made by proclamation issued on the 1st February and on the 5th August, 1907 (see paragraph 2 (vi.) *ante*).

5. Designs.—The Designs Act of 1906 came into operation on the 1st January, 1907. Under this Act a Commonwealth Designs Office has been established and the Commissioner of Patents appointed “Registrar of Designs.”

(i.) *Registration.* Any new and original design which has not been published in Australia before the lodging of an application for its registration may be registered in respect of all or any of the articles enumerated in the classification contained in the regulations, which comprise jewellery, paperhangings, carpets, floor-cloths, lace, hosiery, millinery, wearing apparel, textile fabrics, bookbinding, and articles composed wholly or chiefly of a variety of solid substances. After an application for the registration of a design has been lodged the design may be published and used without prejudice to the validity of the registration.

(ii.) *Duration of Copyright in Designs.* The registration takes effect as from the date of the lodging of the application, and, subject to the provisions of the Act, remains in force for a period of five years from that date. The owner of a registered design must, within two years after registration, use the design in Australia, and if he fails to do so the copyright ceases. If, however, such design is used in any manufacture abroad the above period is limited to six months.

(iii.) *General.* The Act also contains provisions regarding the remedies for infringement of designs and the rectification of the register. Arrangements for the international and intercolonial protection of copyright in designs were made by the same proclamation referred to above with regard to patents and trade marks.

6. Applications for Copyrights, Trade Marks, and Designs.—The following table gives particulars of copyright, trade mark, and design applications received and registered under the Commonwealth Acts during the years 1907 and 1908:—

COPYRIGHT, TRADE MARK, AND DESIGN APPLICATIONS RECEIVED AND REGISTERED UNDER COMMONWEALTH ACTS, 1907 and 1908.

| Year. | Copyrights. | | | | Trade Marks. | Designs. |
|--------------------------|-------------|-----------|---------------|--------|--------------|----------|
| | Literary. | Artistic. | International | Total. | | |
| APPLICATIONS RECEIVED. | | | | | | |
| 1907 ... | 372 | 346 | 7 | 725 | 2,065 | 176 |
| 1908 ... | 479 | 581 | 46 | 1,106 | 1,580 | 155 |

| Fees collected under Cwth. Acts | 112 | 6,228 | 133 | 76 | 6,549 | 152 | 7,243 | 128 | 82 | 7,605 |
| Total ... | 112 | 6,411 | 133 | 76 | 6,732 | 152 | 7,283 | 128 | 82 | 7,645 |

In addition to the applications for copyright received and registered under the Commonwealth Act, as specified in the first table of this paragraph, certain applications for registration of copyrights under State Acts were received and registered. The following table gives particulars of such applications for the years 1907 and 1908:—

APPLICATIONS FOR REGISTRATION OF COPYRIGHT UNDER STATE ACTS, 1907-8.

| Year. | N.S.W. | | Victoria. | | Queensland. | | S. Australia. | | W. Australia. | | Tasmania. | |

§ 3. Old-age Pensions.

1. **General.**—A system for providing for the relief of the aged poor by some means which did not involve the stigma associated in so many minds with the idea of charitable aid, and which, while protecting the recipients from actual want, still left to them as large a degree of freedom as possible, has long been sought for by economists, statesmen, and social reformers. The difficulties surrounding a satisfactory solution of the question are numerous and great, and various schemes have been propounded with the object of overcoming them. Two of the principal objections which have been urged against the introduction of a general system of old-age pensions are—

- (i.) its costliness.
- (ii.) its tendency to induce thriftlessness.

The former is undoubtedly a serious difficulty, since in any normally constituted population the number of persons aged say sixty-five years and upwards will represent about 5 per cent. of the total population, and the provision of the sum required to pay to these a sum which would provide the pensioners with even the barest necessities of life would be a very considerable burden upon the State Treasury. To limit this amount various suggestions have been made, of which probably the most effective have been those which provide, the one for a contribution to the pension fund by the pensioner during his earlier years, and the other by a reduction of the amount of pension payable to those in receipt of income from other sources. The former of these is the principle which has been acted upon in the scheme in operation in Germany, while the latter is that which underlies the schemes in vogue in the Commonwealth and New Zealand as well as in that recently introduced in the United Kingdom.

The objection which has sometimes been raised to the payment of old-age pensions on the score of the tendency to thriftlessness thereby induced is one which, in Australia, at all events, is not accorded much weight, the general feeling being that the number of cases in which the prospect of a pension of, say, 10s. per week from sixty-five onwards would lead to thriftlessness in earlier years, is so small as to be practically negligible.

2. **Introduction of Old-age Pensions into Australia.**—At the present time systems of old-age pensions are in force in three of the States, viz., New South Wales, Victoria, and Queensland, while an Act providing for the payment of old-age pensions throughout Australia was passed by the Commonwealth Parliament on 10th June, 1908, and comes into force on 1st July, 1909. The credit of introducing old-age pensions into the Southern Hemisphere, however, belongs not to the Commonwealth, but to her sister dependency, the Dominion of New Zealand, where pensions have been payable since 1st April, 1898. The first State of the Commonwealth to make provision for the payment of old-age pensions was Victoria, whose legislation on the subject came into operation on 18th January, 1901. Later in the same year, viz., on 1st August, 1901, the pension system of New South Wales came into force, while in the case of Queensland old-age pensions became payable from 1st July, 1908.

3. **Rates of Pension Payable.**—In Victoria, under the Acts which came into force on 18th January, 1901, the maximum rate of pension was fixed at ten shillings per week, but later in the same year, under an Act which came into operation on 7th December, 1901, the rate of pension was reduced to eight shillings per week and the claims in connection with all existing pensions had to be reheard, and children of pensioners, when proved to be able to contribute towards the pension, were compelled to do so. In 1907, however, a further amendment was passed, in virtue of which the rate of pension was again raised to ten shillings per week.

In New South Wales the maximum rate of pension has remained as originally fixed, viz., ten shillings per week, except in the case of husband and wife living together, when

each receives seven shillings and sixpence per week. In Victoria and Queensland no distinction is made between the rates for married and single persons.

In Queensland the maximum amount of pension payable is ten shillings per week.

4. **Pension Age.**—In all three of the States the general age at which the right to a pension accrues is sixty-five, but in the case of New South Wales and Victoria provision is made for the payment of a pension at an earlier age under special circumstances. Thus in New South Wales a pension is payable at ages sixty to sixty-four on satisfactory evidence of physical incapacity through sickness or injury, but is not payable at those ages on account of senile debility. In Victoria a pension is payable at any age on satisfactory evidence of permanent disablement or ill-health caused by the applicant having been engaged in mining or any unhealthy or hazardous occupation.

5. **Length of Residence.**—In New South Wales the applicant for a pension must be a resident of, and must have resided in, the State continuously for the twenty-five years immediately preceding the date on which he establishes his claim. Occasional absence, however, for periods not amounting in all to more than two years, will not invalidate a claim, and the absence of a seaman while serving on board a vessel trading to and from the State is also admissible. In Victoria the applicant must be a resident of the State, and must have so resided for at least twenty years prior to his application. During the time from which these twenty years commenced to run he must not have been absent for more than five years, and during the five years immediately preceding the date of his application he must have resided continuously in the State. In Queensland the applicant must be residing in that State at the date on which his claim to a pension is made, and must have so resided, whether continuously or not, for at least twenty years. Residence in Queensland during the five years immediately preceding the date of his application must have been continuous.

6. **Evidence of Character of Applicant for Pension.**—In all the States the recipients are required to be of good moral character, and imprisonment for extended periods will, in the cases of New South Wales and Victoria, operate as a disqualification. Thus in New South Wales imprisonment for four months during the period of twelve years, or for five years during the period of twenty-five years prior to an application, will disqualify; while in Victoria imprisonment for six months during the five years immediately preceding an application, or imprisonment at any time for three years and upwards for any offence, will prevent a claim from being recognised.

7. **Limitations in respect of Income and Property.**—With a view to restricting the pensions to persons actually needing assistance, provision is made in all the States for reducing the payment when the applicant already possesses income or property above a given amount. In New South Wales the pension is diminished by £1 per annum for every £1 of income above £26 in the case of a separate pensioner, and for every £1 above £19 10s. in the case of husband and wife living together, and by £1 for every £15 of property owned by the pensioner in either case. In Victoria the pension is diminished by one shilling per week for every shilling earned over two shillings per week, and by sixpence per week for every £10 of property other than furniture and personal effects to the value of £25. In Queensland the pension is diminished by £1 per annum for every complete pound of annual income above £26, and also by £1 per annum for every complete £15 of net capital value of accumulated property. The maximum income that may be received, inclusive of pension, is, therefore, £52 per annum in New South Wales and Queensland and £31 4s. per annum in Victoria, and the maximum amount of property that may be held is £389 in New South Wales, £159 in Victoria, and £259 in Queensland. In Victoria the possession of money above the amount of £10 acts as a disqualification.

8. **Number of Pensioners.**—The following table furnishes particulars of the number of old-age pensioners in New South Wales and Victoria at the end of the years 1900-1. to 1907-8:—

NUMBER OF PERSONS IN RECEIPT OF OLD-AGE PENSIONS AT END OF YEAR.

| Year. | New South Wales. | Victoria. | Total. |
|--------|------------------|-----------|--------|
| 1900-1 | ... | 16,275 | 16,275 |
| 1901-2 | 13,957 | 14,570 | 28,527 |
| 1902-3 | 22,182 | 12,417 | 34,599 |
| 1903-4 | 20,905 | 11,609 | 32,514 |
| 1904-5 | 20,438 | 11,209 | 31,647 |
| 1905-6 | 21,402 | 10,990 | 32,392 |
| 1906-7 | 21,465 | 10,732 | 32,197 |
| 1907-8 | 21,685 | 11,288 | 32,973 |

It will be seen that during the past four years the number of pensioners has varied but slightly, the total at 30th June, 1908, representing an increase of only 459 on that at 30th June, 1904. The number in New South Wales increased during that period by 780, while the number in Victoria decreased by 321. At the Census of 31st March, 1901, the number of persons in New South Wales aged sixty-five years and upwards represented 3.44 per cent. of the total population of that State, while in Victoria the corresponding percentage was 5.52. Assuming these percentages to hold good for 30th June, 1908, the number of persons in these two States aged sixty-five and upwards may be stated approximately as—New South Wales, 54,300; Victoria, 69,300. On this basis the number of persons in receipt of old-age pensions in New South Wales on 30th June, 1908, represented 40 per cent. of the total number in the State on that date aged sixty-five years and upwards, while in Victoria the corresponding percentage was 16½. It is probable that the numbers aged sixty-five and upwards given above are somewhat underestimated, especially in the case of New South Wales, and that in consequence the percentage in receipt of pension is slightly overstated. The error involved is, however, probably not large.

9. Amount Paid in Pensions.—Since the inauguration of the old-age pensions schemes in the Commonwealth the total sum paid in this manner has amounted to no less than £5,105,817, of which New South Wales has provided £3,451,935 and Victoria £1,653,882. Details for the period are as follows:—

AMOUNT PAID TO OLD-AGE PENSIONERS.

| Year. | New South Wales. | Victoria. | Total. |
|--------|------------------|-----------|---------|
| | £ | £ | £ |
| 1900-1 | ... | 129,338 | 129,338 |
| 1901-2 | 436,183 | 292,432 | 728,615 |
| 1902-3 | 524,967 | 215,972 | 740,939 |
| 1903-4 | 503,133 | 205,183 | 713,316 |
| 1904-5 | 496,300 | 200,464 | 696,764 |
| 1905-6 | 489,095 | 189,127 | 678,222 |
| 1906-7 | 494,227 | 187,793 | 682,020 |
| 1907-8 | 503,030 | 233,573 | 736,603 |

In New South Wales the average pension paid during the year 1907-8 amounted to £23 6s. 3d., or approximately 8s. 11½d. per week, while the Victorian average for the same year was £20 13s. 10d., or about 7s. 11½d. per week.

10. Invalidity and Accident Pensions.—As already noted in paragraph 4, above, the Victorian old-age pension system makes provision for payments in case of permanent disablement or ill-health caused by engagement in mining or any unhealthy or hazardous occupation. The returns furnished, however, do not disclose the numbers and amounts of such pensions distinct from those relating purely to old-age. In New South Wales incapacity through sickness or injury at ages sixty to sixty-four was made a basis of claim

for old-age pension, and this principle was, by the Invalidity and Accident Pensions Act of 1907, considerably extended. The number of pension certificates issued under this Act during the six months from 1st January to 30th June, 1908, was 1906, and the amount paid in pension instalments during that period was £12,527. These figures are not included in those given above for old-age pensions.

11. **Cost of Administration.**—Owing to the differences in the methods of administration the cost involved in paying old-age pensions has throughout been much higher in New South Wales than in Victoria. This has to a large extent been due to the fact that in the former State a heavy charge is levied for commission on payment of pensions by the bank through which such payments are made, while in the latter the pensions are paid through the medium of the Post-office. Particulars of the cost of administration from 1900-1 onwards are given in the following table:—

COST OF ADMINISTRATION OF OLD-AGE PENSION SCHEMES, 1900-1 to 1907-8.

| Year. | New South Wales. | Victoria. | Total. |
|---------------|------------------|-----------|--------|
| | £ | £ | £ |
| 1900-1 | — | 711 | 711 |
| 1901-2 | 17,258 | 2,799 | 20,057 |
| 1902-3 | 20,567 | 2,185 | 22,752 |
| 1903-4 | 20,341 | 1,670 | 22,011 |
| 1904-5 | 22,040 | 1,682 | 23,722 |
| 1905-6 | 21,248 | 1,811 | 23,059 |
| 1906-7 | 20,949 | 1,890 | 22,839 |
| 1907-8 | 22,574* | 1,975 | 24,549 |

* Including invalidity and accident pension expenditure.

For the year 1907-8 the cost of administration in New South Wales represented no less than 4.38 per cent. of the amount actually paid in pensions, while in Victoria the cost of administration amounted to only 0.85 per cent. of the pension payments. Compared with the number of pensioners the cost of administration in New South Wales for 1907-8 represented nineteen shillings and fourpence per head, and in Victoria three shillings and sixpence per head. The total cost of administration since old-age pensions were introduced has been £159,700, of which New South Wales has paid £144,977 and Victoria £14,723. It may be mentioned that in New Zealand, for the year 1907-8, the cost of administration represented 2.22 per cent. of the amount actually paid in pensions, or ten shillings and ninepence per pensioner.

12. **Commonwealth Royal Commission on Old-age Pensions.**—On the 27th February, 1905, a Royal Commission, of which the Honourable Austin Chapman, M.P., was chairman, was appointed "to inquire within Australia into (a) the working of the Old-age Pension Acts of New South Wales and Victoria; (b) the probable cost and best means to be adopted for establishing old-age pensions for the Commonwealth; and (c) to continue the inquiry commenced by a Select Committee of the House of Representatives in relation to the said matters." Prior to the appointment of this Commission the Select Committee referred to had held six meetings, and had examined three witnesses. The Royal Commission visited each of the States of the Commonwealth, and examined sixty-four witnesses, their inquiries extending over thirty-six sittings, of which eleven were held in Melbourne, twelve in Sydney, five in Perth, three in Brisbane, two in Adelaide, two in Hobart, and one in Launceston. As the result of their inquiries the Commission made the following recommendations in their report, dated 16th February, 1906, and addressed to His Excellency the Governor-General:—

(i.) "That old-age pensions should be provided throughout the Commonwealth, and be paid out of the consolidated revenue.

(ii.) "That a bill for this purpose should be submitted by your Excellency's advisers for the early consideration of Parliament.

(iii.) "That the rate of pension should be fixed at a maximum of ten shillings per week, subject to any deductions hereinafter recommended.

(iv.) "That the qualifying age should be sixty-five years, but that it may be reduced to sixty where an applicant is permanently incapacitated for work.

(v.) "That a residential qualification should be imposed as follows:—

"In all cases a continuous residence in the Commonwealth of twenty-five years, provided—

(a) "that where the applicant is a native-born resident with an aggregate residence of at least fifty years in the Commonwealth such continuity shall not be deemed to be interrupted by absences totalling not more than six years; nor

(b) "that in all other cases such continuity shall not be deemed to be interrupted by absences totalling not more than three years.

(vi.) "That where otherwise qualified the following persons shall be eligible for an old-age pension:—

(a) "All natural-born British subjects of a white race.

(b) "All persons resident in the Commonwealth (not being Aboriginal natives of Australia, Asia, Africa, or the islands of the Pacific) who have been naturalised for a period of three years next preceding the date on which they make their pension claims.

(vii.) "That every pension granted should be held subject to review, amendment, suspension, and cancellation, at any time by the authorities clothed with power in that behalf.

(viii.) "That payment to pensioners should be made fortnightly.

(ix.) "That payments should be made through the Post-office.

(x.) "That the general administration should be by a Commissioner, responsible to a Minister of State. That a Deputy Commissioner be appointed for each State; the States to be divided into districts, and each district to have a registrar, to whom all applications should be made, and by whom pension claims should be prepared and placed before a police, stipendiary, or special magistrate for investigation. The magistrate should make recommendations to the Commissioner or a Deputy Commissioner with reference to the granting or rejection of applications. That, in the event of the rejection of any claim, an appeal should be allowed to the Minister. The magistrate should also have power at any time during the currency of a pension to recommend cancellation, amendment, or suspension. In all such cases there should be a right of appeal to the Minister. The power of granting, cancellation, or suspension should be given to the Commissioner or Deputy Commissioners.

(xi.) "That applications be heard in open court, provided that the magistrate have power, if he deem it advisable, to hear any case *in camera*; all evidence to be taken on oath.

(xii.) "That provision should be made to compel a husband, wife, or children, as the case may be, if in a position to do so, to contribute the amount of the pension.

(xiii.) "That if an applicant or a pensioner be proved to be of disreputable or intemperate habits, the magistrate should have power to recommend—

(a) "in the case of an applicant, that the application be refused, or granted conditionally on payment being made through an agent;

(b) "in the case of a pensioner, the forfeiture of one or more instalments, or that payment be made through an agent, or cancellation of the pension.

(xiv.) "That the yearly income of a pensioner from all sources, inclusive of pension, should not exceed fifty-two pounds per annum.

(xv.) "That the deduction on account of income from other sources be one pound for every pound over twenty-six pounds per annum.

(xvi.) "That the net capital value of accumulated property held by an applicant should not exceed £310.

(xvii.) "That the deduction on account of property should be one pound from pension, on every ten pounds of net capital value over fifty pounds, excepting where the property of an applicant consists of a home in which he permanently resides and which produces no income; then an exemption of £100 should be allowed.

(xviii.) "That the property of a pensioner at death should vest in the Registrar of Probates or the Curator of Intestate Estates, as the case may be, as officer acting for the Commonwealth Government, and the indebtedness on account of pension money paid should be liquidated therefrom in priority to all other claims.

"Pension money received from time to time should be a continuing charge on any land acquired by the pensioner before or after the receipt of the pension, notice of such charge to be recorded by the Registrar of Lands Titles as from the date of grant of pension.

(xix.) "That a penalty should be imposed for supplying an old-age pensioner with intoxicating drink."

13. Commonwealth Invalid and Old-age Pensions Act.—On the 10th June, 1908, an Act was passed by the Commonwealth Parliament to provide for the payment of invalid and old-age pensions. In this Act, which is to come into force on 1st July, 1909, or such earlier date as may be fixed by proclamation, provision is made for the payment of old-age pensions as from the commencement of the Act, and for invalid pensions as from a subsequent date to be fixed by proclamation.

The principles on which those provisions of the Act which relate to old-age pensions have been made are very similar to those underlying the Acts at present in force in New South Wales, Victoria, and Queensland. The age qualification for an old-age pension is the attainment under ordinary circumstances of sixty-five years, or in the event of permanent incapacitation for work, sixty years, while in the case of an invalid pension the applicant must be above the age of sixteen years and must be permanently incapacitated for work by reason of an accident or by reason of his being an invalid, and must not be in receipt of an old-age pension.

For an old-age pension twenty-five years' continuous residence in Australia is necessary, while five years' continuous residence is necessary to qualify for an invalid pension. Continuous residence is not considered as having been interrupted by occasional absences not exceeding in the aggregate one-tenth of the total period of residence. If a person can prove that during any absence from Australia his home was still in the Commonwealth, such absence will not be treated as affecting the continuity of his residence. The amount of pension payable is to be determined by the Commissioner or Deputy-Commissioner appointed under the Act, but must not exceed ten shillings per week in any case, nor be at such a rate as to make the pensioner's income, inclusive of pension, exceed one pound per week. Payments received by way of benefit from any registered friendly society, or, during illness, infirmity, or old-age, from any trade union, provident society, or other society or association are not, for the purposes of the Commonwealth Act, treated as income.

In cases where the pensioner has accumulated property the pension is subject to a deduction of £1 per annum for every complete £10 by which the net capital value of the property exceeds £50, except where the property includes a home in which the pensioner permanently resides, and which produces no income, in which case a net capital value of £100 is allowed prior to the pension deduction coming into operation. Accumulated property, whether in or out of Australia, to the value of £310 or upwards will disqualify for a pension, as will also the direct or indirect deprivation of himself of such property with the object of obtaining a pension. Residence in Australia at the time of the application, and during the payment of the pension, is essential in all cases, and provision is also made that in the case of an invalid pension the claimant must have been incapacitated whilst in Australia. An old-age pension will only be granted to a person

of good character, and an invalid pension will only be granted in cases where the claimant's relatives fail to adequately maintain him. Arrangements have been made for the appointment of a Commonwealth Commissioner of Old-age Pensions, and also for the appointment of a Deputy-Commissioner in each State. Provision is also made for the surrender of his certificate by a pensioner under any State Act, and the issue of a Commonwealth certificate in place thereof if the Deputy-Commissioner is satisfied that the State pensioner is entitled to a pension under the Commonwealth Act. It is stated to be probable that legislation will be introduced early in the forthcoming session of the Commonwealth Parliament to obviate the difficulty likely to arise in connection with the difference between the length of residence qualification in the Commonwealth Act and that in the State Acts.

14. **Estimated Cost of the Commonwealth Old-age Pension Scheme.**—In the last issue of the Year Book an estimate of the probable cost of the Commonwealth scheme was given, based largely upon the old-age pension experience of New South Wales taken in conjunction with the results of the Census of 31st March, 1901. The sum brought out as representing the probable cost if the New South Wales scheme had operated throughout the Commonwealth during the year 1906-7 was £1,580,000, including cost of administration. Since the passing of the Commonwealth Old-age and Invalid Pensions Act of 1908, the question has been further investigated in the Commonwealth Statistical Bureau, and an estimate based on the New Zealand old-age pensions experience taken in conjunction with the Australian Census results for 1881, 1891, and 1901 has been prepared. At the New Zealand Census of 29th April, 1906, the number of Europeans aged sixty-five and upwards was 40,788, and of this number 37,367 or 91.61 per cent. had been resident in the Dominion for twenty-five years. Similar statistics of length of residence in the Commonwealth are unfortunately not available, but by means of the age statistics of a Census and the estimated probabilities, at various ages, of surviving twenty-five years the number of persons possessing the requisite age and residence qualifications may be computed approximately for a point of time twenty-five years ahead of the date of the Census. It is clear, for instance, that in the year 1906 the only persons in the Commonwealth who would have the age qualification of sixty-five years and upwards, and the residential qualification of twenty-five years and upwards, would be those who were present at the Australian Censuses of 1881 and were then aged forty and upwards. On a similar basis estimates for the years 1916 and 1926 may be obtained from the Censuses of 1891 and 1901. These three sets of results have been computed actuarially, and the figures for intervening years have been supplied by systematic interpolation giving the following estimate.

ESTIMATED NUMBER OF PERSONS IN THE COMMONWEALTH, AGED SIXTY-FIVE YEARS AND UPWARDS, HAVING A RESIDENCE THEREIN OF TWENTY-FIVE YEARS AND UPWARDS, 31st DECEMBER, 1906 to 1926.

| 31st December | No. of Persons. | 31st December. | No. of Persons. | 31st December. | No. of Persons. |
|---------------|-----------------|----------------|-----------------|----------------|-----------------|
| 1906 | 156,000 | 1913 | 179,000 | 1920 | 218,000 |
| 1907 | 158,000 | 1914 | 184,000 | 1921 | 225,000 |
| 1908 | 161,000 | 1915 | 189,000 | 1922 | 232,000 |
| 1909 | 164,000 | 1916 | 194,000 | 1923 | 239,000 |
| 1910 | 167,000 | 1917 | 199,000 | 1924 | 247,000 |
| 1911 | 171,000 | 1918 | 205,000 | 1925 | 255,000 |
| 1912 | 175,000 | 1919 | 211,000 | 1926 | 264,000 |

With these figures it is possible to apply the New Zealand experience and obtain an estimate of cost for a series of years on the assumption that the general conditions of

the Commonwealth do not, upon the whole, differ materially from those of the Dominion of New Zealand.

The number of European pensioners in New Zealand on 31st March, 1906, was 11,915, and represented 31.89 per cent. of the number eligible on that date by age and length of residence. Applying this percentage to the numbers given above for the years 1909 to 1926, the probable average number of pensioners in the Commonwealth aged sixty-five and upwards for each of the financial years 1909-10 to 1926-7 is obtained as follows:—

ESTIMATED AVERAGE NUMBER OF COMMONWEALTH OLD-AGE PENSIONERS AGED SIXTY-FIVE AND UPWARDS, FOR EACH OF THE YEARS 1909-10 to 1926-7.

| Financial Year. | Pensioners 65 & Upwards. | Financial Year. | Pensioners 65 & Upwards. | Financial Year. | Pensioners 65 & Upwards. |
|-----------------|--------------------------|-----------------|--------------------------|-----------------|--------------------------|
| 1909-10 | 52,300 | 1915-6 | 60,300 | 1921-2 | 71,700 |
| 1910-1 | 53,300 | 1916-7 | 61,900 | 1922-3 | 73,900 |
| 1911-2 | 54,500 | 1917-8 | 63,500 | 1923-4 | 76,200 |
| 1912-3 | 55,800 | 1918-9 | 65,400 | 1924-5 | 78,700 |
| 1913-4 | 57,100 | 1919-20 | 67,300 | 1925-6 | 81,300 |
| 1914-5 | 58,700 | 1920-1 | 69,500 | 1926-7 | 84,200 |

The New Zealand old-age pension system provides for the payment of pensions only to persons aged sixty-five years and upwards, and does not, as in the case of the scheme provided under the Commonwealth Act, contain provision for payment under certain conditions to persons below that age.

The effect likely to be produced upon the cost of the scheme by including persons between the ages of sixty and sixty-five may be readily seen when it is noted that at the Commonwealth Census of 1901 there were 55 persons between the ages of sixty and sixty-five to every 100 persons above the age of sixty-five, so that, other things being equal, a system of old-age pensions for the Commonwealth, which recognised sixty as the general age at which a pension could be claimed, might be expected to cost no less than 55 per cent. more than one which placed the age at sixty-five. Even with the restrictions placed in the Commonwealth Act upon the granting of old-age pensions to persons below the age of sixty-five, the comparative largeness of the number between sixty and sixty-five must necessarily tend to considerably augment the number of pensioners. Taking as a guide the experience of New South Wales for the three years 1905-6, 1906-7, and 1907-8, it would appear that the number of pensioners between the ages of sixty and sixty-five would average about a ninth of the number at ages sixty-five and upwards. Assuming that a similar result would be obtained under the Commonwealth Act the average number of old-age pensioners of all ages for the years 1909-10 to 1926-7 would be as follows:—

ESTIMATED AVERAGE NUMBER OF COMMONWEALTH OLD-AGE PENSIONERS OF ALL AGES FOR EACH YEAR, 1909-10 to 1926-7.

| Financial Year. | Pensioners. All Ages. | Financial Year. | Pensioners. All Ages. | Financial Year. | Pensioners. All Ages. |
|-----------------|-----------------------|-----------------|-----------------------|-----------------|-----------------------|
| 1909-10 | 58,100 | 1915-6 | 67,000 | 1921-2 | 79,600 |
| 1910-1 | 59,200 | 1916-7 | 68,800 | 1922-3 | 82,100 |
| 1911-2 | 60,600 | 1917-8 | 70,600 | 1923-4 | 84,700 |
| 1912-3 | 62,000 | 1918-9 | 72,700 | 1924-5 | 87,400 |
| 1913-4 | 63,400 | 1919-20 | 74,800 | 1925-6 | 90,300 |
| 1914-5 | 65,200 | 1920-1 | 77,200 | 1926-7 | 93,600 |

The average number of old-age pensions payable in New Zealand during the year ended 31st March, 1908, was 13,413, representing a distribution to pensioners of £325,199, and a charge for administration of £7216. The average pension for the year was thus £24 4s 11d., while the average cost of administration was 10s. 9d. per pension, making a total annual charge of £24 15s. 8d. per pension. Assuming a similar charge to apply to the Commonwealth, the total cost of providing old-age pensions during the years 1909-10 to 1926-7 may be estimated as follows:—

ESTIMATED COST OF COMMONWEALTH OLD-AGE PENSIONS, 1909-10 to 1926-7, ON BASIS OF NEW ZEALAND EXPERIENCE.

| Financial Year. | Estimated Amount to be Distributed as Old-age Pensions | Estimated Cost of Administration. | Total Estimated Cost.* | Financial Year. | Estimated Amount to be Distributed as Old-age Pensions | Estimated Cost of Administration. | Total Estimated Cost.* |
|-----------------|--|-----------------------------------|------------------------|-----------------|--|-----------------------------------|------------------------|
| | £ | £ | £ | | £ | £ | £ |
| 1909-10... | 1,409,000 | 31,000 | 1,440,000 | 1918-9... | 1,763,000 | 39,000 | 1,802,000 |
| 1910-1 ... | 1,435,000 | 32,000 | 1,467,000 | 1919-20 | 1,814,000 | 40,000 | 1,854,000 |
| 1911-2 ... | 1,469,000 | 33,000 | 1,502,000 | 1920-1... | 1,872,000 | 41,000 | 1,913,000 |
| 1912-3 ... | 1,503,000 | 33,000 | 1,536,000 | 1921-2... | 1,930,000 | 43,000 | 1,973,000 |
| 1913-4 ... | 1,537,000 | 34,000 | 1,571,000 | 1922-3... | 1,991,000 | 44,000 | 2,035,000 |
| 1914-5 ... | 1,581,000 | 35,000 | 1,616,000 | 1923-4... | 2,054,000 | 45,000 | 2,099,000 |
| 1915-6 ... | 1,624,000 | 36,000 | 1,660,000 | 1924-5... | 2,119,000 | 47,000 | 2,166,000 |
| 1916-7 ... | 1,668,000 | 37,000 | 1,705,000 | 1925-6... | 2,189,000 | 49,000 | 2,238,000 |
| 1917-8 ... | 1,712,000 | 38,000 | 1,750,000 | 1926-7... | 2,270,000 | 50,000 | 2,320,000 |

* Invalid pensions not included.

To enable a reliable estimate to be made of the invalid pensions portions of the Commonwealth scheme tolerably complete statistics of permanent incapacitation are required. These, unfortunately, are not available, and, in consequence, any estimate of the cost of such pensions can be regarded as little more than a guess. Under similar provisions contained in the Invalidity and Accident Pensions Act of New South Wales, which, as before stated, came into operation on 1st January, 1908, it has been estimated, according to the New South Wales Auditor-General's report for 1907-8, that a sum of £75,000 would be required to meet the charges for pensions that will be claimed and granted during the year 1908-9. Assuming a similar result to hold for the Commonwealth as a whole, the cost of the Commonwealth invalid pension scheme for the year 1909-10 would be approximately £200,000, increasing in subsequent years probably in proportion to the population. On this basis, therefore, it would appear that the total cost of invalid and old-age pensions in the Commonwealth for the year 1909-10 will probably, if the invalid pension part be brought into operation early, be not less than £1,640,000.

15.—**Liability Undertaken in Granting Old-age Pensions.**—As an indication of the extent of the responsibility which an old-age pension scheme involves, it may be mentioned that in connection with the evidence tendered to the Commonwealth Commission on Old-age Pensions a computation was made of the total liability in respect of accrued pensions which the Commonwealth would have incurred if, at 31st March, 1901, the date of the Census, 39 per cent. of the persons aged sixty-five and upwards were entitled to pensions of ten shillings per week. The present value at that date of the liability so computed was £10,415,820. (See Minutes of Evidence of Royal Commission on Old-age Pensions, p. 80.)

§ 4. Local Option.

1. **General.**—The principles of local option as to the sale of fermented and spirituous liquors have been introduced into all the States of the Commonwealth except Western Australia, in which State the matter is under consideration in connection with a proposed amendment of the licensing laws.

2. **New South Wales.**—The Acts in force relating to local option in this State are the Liquor Amendment Acts 1905 and 1907. There were formerly two Acts which dealt with the subject, viz., the Licensing Acts 1882 and 1883, consolidated by the Liquor Act 1898. Under the Act of 1905, which came into force on the 1st January, 1906, the local option vote is to be taken in every electorate on the day fixed for the poll therein at each general election. The option with regard to licenses extends to publichouses, wineshops, and clubs, and the persons entitled to vote are those entered on the Parliamentary electoral rolls.

(i.) *Resolutions to be Submitted.* Except where resolution (c)—see below—has previously been carried, and is in force in an electorate, the following resolutions are to be submitted:—(a) That the number of existing licenses continue. (b) That the number of existing licenses be reduced. (c) That no licenses be granted in the electorate. Where resolution (c) has previously been carried the resolution to be submitted is:—(d) That licenses be restored in the electorate. Resolutions (a) and (b) are carried by a simple majority of the votes given, but neither resolutions (c) nor (d) will be carried unless at least three-fifths of the votes given are in favour thereof, whilst at least 30 per cent. of the number of electors on the rolls must vote for such resolution. If resolution (c) is not carried, the votes given in favour of that resolution are to be added to the votes given for resolution (b).

(ii.) *Effects of Resolutions.* The effects of carrying the resolutions are as follow:—If resolution (a) is carried, the number of licenses may not exceed the number at the time of taking the vote. If resolution (b) is carried, the number of licenses must be reduced, and may be reduced to three-fourths the number at the time of voting. If resolution (c) is carried, no licenses may be granted, renewed, or transferred. If resolution (d) is carried, licenses may be granted, renewed, and transferred, but so that the number of licenses is not greater than the number held when resolution (c) was carried, nor less than half such number.

For the purpose of effecting a reduction under resolution (b), a special court determines the reduction to be made in the number of existing licenses, and decides which premises are to be closed. The best conducted premises are given a preference over others. If resolution (c) is carried, it is to take effect at the expiration of three years from the date of the vote.

(iii.) *Local Option Votes, 1907.* The first local option vote under the Act of 1905 was taken at the general election on the 10th September, 1907. The following statement shews the number of electorates in which each of the resolutions was carried:—

NEW SOUTH WALES.—EFFECTS OF LOCAL OPTION VOTES, 1907.

| <i>Resolution</i> | (a) | (b) | (c) |
|--|-----|-----|-----|
| <i>Number of electorates in which carried</i> | 25 | 64 | 0 |

In one electorate (Allowrie) the Supreme Court decided that the vote was ineffective.

3. **Victoria.**—The Acts dealing with the subject of local option as to the sale of fermented and spirituous liquors in this State are the Licensing Acts 1890, 1906, and 1907. Other Acts, now repealed, which dealt with the subject are the Licensing Acts 1876, 1885, and 1888.

The last division of the Act of 1906 relates to the subject of local option, this division, however, does not come into force until the 1st January, 1917. In the meantime, in order to reduce the number of victuallers' licenses in Victoria, a Licenses Reduction Board is constituted.

(i.) *The Licenses Reduction Board.* Although the operations of this Board are not conducted in accordance with the principles of local option, the duties of the Board are, until the 31st December, 1916, after which date a system of local option comes into force under the Act of 1906, to reduce the number of licenses in existence and to award compensation according to the scheme provided for by that Act. The Board consists of three members at a salary of £800 per annum each, who may not engage in any business or employment other than the duties of their office as members of the Board. The first Board was appointed on the 21st May, 1907. A Compensation Fund has also been established under the Act, and is raised by means of a compensation fee at the rate of 3 per cent. on the value of liquor purchased by every licensed victualler. The owner of the premises is chargeable with two-thirds, and the tenant with one-third of the compensation fee. The total amount paid into the Compensation Fund was £48,233 for the year 1907, and £48,543 for 1908. When any reduction of licensed premises has been made, the remaining hotels, which will be benefited, are to bear a *pro rata* assessment to make up the amount of license fees lost. The maximum compensation, which is payable out of the Compensation Fund referred to above, is to be based on the results of the three years preceding the 31st December, 1906, in the case of owners, and of the three years preceding the 31st December, 1905, in the case of licensees. Up to the 31st December, 1908, 208 hotels had been closed by the Board, eighty-seven of this number having surrendered their licenses. Compensation was awarded in the case of 196 hotels, the total paid amounting to £99,177, or an average of £506 each. Certain of the compensation moneys, amounting to £6336, were made payable and have been paid in 1909 out of the fund for that year. Sixty-nine of these hotels were situated in the metropolitan district, while the remaining 127 were in country districts. In sixteen cases no claims for compensation were made by the licensees. Twelve cases for compensation in the country yet remain to be heard. The following table shews particulars of the operations of the Board up to the 31st December, 1908:—

VICTORIA.—OPERATIONS OF LICENSES REDUCTION BOARD, 31st DECEMBER, 1908.

| Particulars. | Licenses in December, 1906. | | | Hotels Deprived of Licenses | Compensation Awarded. | | Hotels Surrendered. | Compensation Awarded. | |
|----------------------|-----------------------------|-------------------|-------------------|-----------------------------|-----------------------|-----------|---------------------|-----------------------|-----------|
| | Number in Existence. | Statutory Number. | Number in Excess. | | Owner. | Licensee. | | Owner. | Licensee. |
| Metropolitan Country | 1,020 | 877 | 401 | 67 | £ 48,643 | £ 8,702 | 2 | £ 2,371 | £ 519 |
| | 2,440 | 1,622 | 976 | 54 | 20,253 | 3,519 | 85 | 13,657 | 1,513 |
| Total ... | 3,460 | 2,499 | 1,377 | 121 | 68,896 | 12,221 | 87 | 16,028 | 2,032 |

No reduction of any licensed premises is allowed in any licensing district in which the number of licensed premises is below the statutory number, but new licenses may, until 1917, be granted in such districts provided that a majority of the electors vote in favour of the increase, and that at least one-third of the number of electors on the roll record their votes.

(ii.) *Local Option Resolutions.* A local option vote of the electors is to be taken in every electoral district for the Legislative Assembly on the day fixed for the poll at each general election after the 1st January, 1917. The resolutions to be submitted, the majorities necessary, and the effects of carrying the resolutions are the same as specified in the case of New South Wales. Where any license existing before the 1st February, 1886, is cancelled as the result of a local option vote, the owner and licensee have each a claim to be paid out of the Compensation Fund, but only to the extent that such fund is from time to time available. If it appear to the Treasurer that there is not sufficient money in the fund to meet the claims, he may require every licensed victualler in Victoria to pay an additional compensation fee in order to satisfy the claims.

4. **Queensland.**—In Queensland the subject of local option is dealt with in Part VI. (sections 114 to 126) of the Licensing Act 1885. The provisions of that part of the Act may be applied in any municipality or division, or any subdivision of either, or in any other area which forms part of a municipality or division, and also forms part of one licensing district.

(i.) *Resolutions to be Submitted.* Any number, not less than one-sixth, of the ratepayers in an area may, by notice in writing, require the chairman of the local authority to take a poll of the ratepayers for or against the adoption of all or any of the following resolutions to have effect within the area, viz.:—(a) That the sale of intoxicating liquors be prohibited. (b) That the number of licenses be reduced to a certain number, specified in the notice, not less than two-thirds of the existing number. (c) That no new licenses be granted. The persons entitled to vote are those whose names are on the voters' roll or rate-book of the municipality or division of which the area forms part, as rated in respect of property within the area. Resolutions (b) and (c) may be carried by a simple majority, but resolution (a) cannot be carried unless "a majority of two-thirds of the votes recorded in respect of that resolution . . . is in favour of its adoption."

(ii.) *Effects of Resolutions.* If resolution (a) is adopted, it comes into force on the 30th June in the year following that in which the notice requiring the poll was given. If (b) is adopted, the licensing authority must restrict the total number of licenses and certificates granted or renewed to or within the number specified. If resolution (c) is adopted the licensing authority may not grant any new certificates for a licensed victualler's license or wine-seller's license.

(iii.) *Re-submission of Resolutions.* If resolution (a) is adopted, a poll may not be demanded again until after the expiration of three years from the date of adoption, and in such case a poll may be taken on resolution (a) only. If (b) is adopted, a poll may be again demanded on it or on the question of a further reduction, or on the adoption of the resolutions (a) or (c), but not until the expiration of two years after the last poll was taken. If resolution (c) is adopted, a poll may again be demanded on it or on resolutions (a) or (b), but not until the expiration of two years after the last poll was taken. If all the resolutions are rejected, a poll may not be demanded again until after the expiration of two years from the date of the last poll.

(iv.) *Resolutions Adopted, 1907.* At the end of the year 1907, resolution (a) was in force in three areas in Queensland, viz., the Tambourine shire, subdivision No. 3;

Tiaro shire, Bauple district ; and Inglewood shire (town of Silverspur). Up to the same date a poll as to resolution (b) had not been demanded in any area. The following statement shews the number of areas in which each resolution was either in force or precluded up to the 31st December, 1907 :—

QUEENSLAND.—NUMBER OF AREAS IN WHICH LOCAL OPTION RESOLUTIONS IN FORCE OR PRECLUDED FROM ADOPTION, 31st DECEMBER, 1907.

| Particulars. | Resolution (a). | Resolution (b). | Resolution (c). | Total. |
|---|--------------------|--------------------|--------------------|--------|
| No. of areas in which resolutions in force ... | 3 | 0 | 80 | 83 |
| No. of areas in which resolutions precluded from being put in force ... | 0 | 0 | 8 | 8 |
| Total ... | 3 | 0 | 88 | 91 |

The only resolution upon which a poll had been demanded within the metropolitan district (ten-miles radius) was resolution (c) ; this resolution is in force in thirty-three areas within the metropolitan district and has not been precluded in any area within that district.

5. **South Australia.** In this State the subject of local option is now regulated by Part V. of the Licensing Act 1908. Acts which formerly dealt with the subject were the Licensed Victuallers Amendment Act 1891, the Licensed Victuallers Further Amendment Act 1896, and the Local Option Act 1905.

Under the Licensing Act of 1908 each electoral district for the House of Assembly is constituted a local option district, and each electoral district may be divided into local option districts by proclamation of the Governor. A quorum consisting of 500 electors, or one-tenth of the total number of electors, whichever be the smaller number, in any district may petition the Governor for a local option poll. The persons entitled to vote at the poll are those whose names appear on the electoral roll and who reside in the local option district. The option extends to (a) publicans' licenses, (b) wine licenses, (c) storekeepers' Australian wine licenses, (d) storekeepers' licenses, and (e) club licenses.

(i.) *Resolutions to be Submitted.* The following are the resolutions which are to be submitted, under the Act of 1908, at every poll :—(a) That the number of licenses be reduced. (b) That the number of licenses be not increased or reduced. (c) That the number of licenses be increased in the discretion of the Licensing Bench. Any one of the resolutions is carried by a majority of the valid votes recorded, If the votes recorded in favour of resolution (a) do not constitute a majority, such votes are to be added to the votes in favour of resolution (b). If the sum of the votes recorded in favour of resolutions (a) and (b) do not constitute a majority, such votes are to be added to those recorded in favour of resolution (c).

(ii.) *Effects of Resolutions.* As to each class of license of which there are not less than three licenses current within the local option district at the date of the poll, the first resolution is to be taken to mean that the number of licenses so current be reduced by one-third, and as to each class of license of which there are less than three current, the first resolution is to be taken as equivalent to the second resolution.

The constitution of special Benches consisting of three members, appointed by the Governor, is provided for in order to give effect to the first resolution. A special Bench also deals with resolutions for the reduction of licenses adopted before the passing of the Act of 1908, but not then given effect to.

(iii.) *Resolutions Adopted.* Under the Acts prior to that of 1908 resolutions to reduce the number of licenses had been adopted in nine districts, in four of which, however, the polls were subsequently declared void. Special Benches were appointed in January, 1909, to deal with the determinations of electors at polls taken in the local option districts of Port Adelaide, East Torrens, and Sturt. In accordance with the decisions of this Bench, twenty publichouses in the Sturt and East Torrens districts, and fifteen in the Port Adelaide district, were closed on the 25th March, 1909.

6. *Tasmania.*—In this State the subject of local option is dealt with in Part VI. (sections 72 to 84) of the Licensing Act 1902. Other Acts which formerly dealt with the subject, but now repealed, are the Licensing Acts 1889 and 1890, the Inn Keepers Relief Act 1894, and the Licensing Act Amendment Act 1898. Under the Act of 1902, opposition to the grant of a license may be made (i.) by any resident ratepayer, (ii.) by petition of ratepayers resident in the neighbourhood, or (iii.) by local option poll.

(i.) *Opposition by Resident Ratepayer.* Any ratepayer resident in the district in which a house in respect of which an application for an hotel or publichouse certificate is intended to be made is situated, may, by giving five days' notice to the clerk of Petty Sessions, oppose the grant of the certificate before the Licensing Bench. The objections which may be taken to the granting of a certificate for an hotel or publichouse license are as follows:—(a) That the applicant is of bad character; (b) that he has been convicted of certain specified offences; and (c) that the house in respect of which the application is made does not comply with the requirements of the Act. The objections which may be taken to the granting of a provisional certificate for an hotel license are:—(a) That the house does not comply with the requirements of the Act, and (b) that an hotel is not required in the neighbourhood.

(ii.) *Petition of Resident Ratepayers.* The ratepayers resident in the neighbourhood of a house in respect of which an application for a license is made may petition the Licensing Bench against the granting of such license. The neighbourhood referred to is defined as meaning a space within a radius of 200 yards from the front door of the house if within a city, within a radius of 500 yards if within a town, and within a radius of one mile if the house is not situate within a city or town. If the petition is directed against the granting of a provisional certificate, and is signed by a majority of the resident ratepayers, the bench must refuse to grant the certificate.

(iii.) *Local Option Poll.* Any number of ratepayers, not less than seven, resident in the neighbourhood of the house in respect of which a provisional certificate for an hotel license has been applied for, may require, by petition lodged with the Clerk of Petty Sessions, that a poll of the ratepayers resident in the neighbourhood be taken upon the question whether such provisional certificate be granted or not. If a majority of the votes taken be against the granting of the certificate the Licensing Bench must refuse to grant it.

Particulars as to operations under Part VI. of the Act are not available.

§ 5. Valuation of Commonwealth Production.

The want of uniformity in methods of compilation and presentation of Australian statistics renders it an extremely difficult task to make anything like a satisfactory valuation of the various elements of production. At present there is so little accurate statistical knowledge regarding such industries as forestry, fisheries, poultry, and bee-farming, that any valuation of the production therefrom can only be regarded as the roughest approximation. As a matter of fact complete information as to value of production in all States is available in regard to the mining industry alone, and even in this case adjustments have to be made before the returns are strictly comparable. Careful estimates have been made in some of the States in connection with the value of production from the agricultural and pastoral industries, and where such returns are not available estimates have been made which, it is believed, in the main give fairly accurate results. In the case of manufactories, however, only four of the States have in 1907 statistics of value of production, and it is obvious that approximations for States which do not collect the information, based on the results from those which furnish returns, are of very inferior value. A glance at the chapter dealing with the manufactories will shew the poverty of the statistics hitherto collected on this important field. While the difficulties in the way of obtaining adequate valuations for all classes of production are serious enough at the present time they are still more pronounced in seeking to obtain information as to values for earlier years, when the returns were far more incomplete. It must be clearly understood, therefore, that the values given in the succeeding tables are, in general, approximations only. With the adoption of the forms and methods of tabulation agreed upon at the Statisticians' Conference of 1906 it is hoped, however, that at no distant date fairly complete valuations will be available for all industries, and the returns collected in 1907 certainly shew a considerable improvement over those of previous years. In the meantime the figures quoted must be taken with all their limitations. The table hereunder shews the approximate value of the production from all industries during the year 1907:—

ESTIMATED VALUE OF PRODUCTION FROM INDUSTRIES, 1907.

| State. | Agriculture. | Pastoral. | Dairy, Poultry, & Bee-farming. | Forestry and Fisheries. | Mining. | Manufacturing. | Total. |
|-----------------|--------------|-----------|--------------------------------|-------------------------|---------|----------------|---------|
| | £1000 | £1000. | £1000. | £1000. | £1000. | £1000. | £1000. |
| N.S. Wales ... | 7,483 | 22,281 | 5,275 | 1,532 | 10,292 | 14,485 | 61,348 |
| Victoria ... | 9,481 | 9,259 | 5,912 | 705 | 3,087 | 11,768 | 40,212 |
| Queensland ... | 3,292 | 11,438 | 2,144 | 920 | 4,131 | 4,719 | 26,644 |
| South Aust. ... | 6,447 | 4,068 | 1,103 | 150 | 906 | 3,459 | 16,133 |
| West. Australia | 1,750 | 2,548 | 369 | 1,322 | 7,634 | 1,904 | 15,527 |
| Tasmania ... | 2,047 | 1,066 | 781 | 197 | 2,251 | 1,240 | 7,582 |
| C'wealth ... | 30,500 | 50,660 | 15,584 | 4,826 | 28,301 | 37,575 | 167,446 |

A glance at the figures in the above table will give some idea of the distribution of the great producing industries throughout the Commonwealth. Thus Victoria and New South Wales, as might naturally be expected, take the leading position in Agriculture, with South Australia and Queensland following. In Pastoral Production, New South Wales is easily first, with Queensland second. In Dairy-farming the positions are the same as in Agriculture, except that Queensland occupies third place and South Australia fourth,

while in Forestry and Fisheries, and in Mining, New South Wales and Western Australia occupy first and second place respectively. Manufactories on an extensive scale are at present practically confined to New South Wales and Victoria.

The total production from all industries was thus £167,446,000, equal to an average of £39 17s. 11d. per inhabitant.

In the next table will be found the value of production at decennial intervals since 1871, and for the year 1907. The figures for the Census years have been taken from "Australia and New Zealand," and, in view of what has been said in a previous paragraph, must be regarded as very rough estimates only:—

ESTIMATED VALUE OF PRODUCTION, 1871 to 1907.

| State. | 1871. | 1881. | 1891. | 1901. | 1907. | Develop- ment* since 1871. |
|-----------------------|--------------------|-------------------|--------------------|-------------------|---------------------|----------------------------------|
| | £1000. | £1000. | £1000. | £1000. | £1000. | |
| New South Wales ... | 15,379 | 25,180 | 36,740 | 38,954 | 61,348 | 4.0 |
| Victoria ... | 19,260 | 22,750 | 30,320 | 30,807 | 40,212 | 2.1 |
| Queensland ... | 3,995 | 10,200 | 14,274 | 16,933 | 26,644 | 6.7 |
| South Australia ... | 5,228 | 8,457 | 9,026 | 10,314 | 16,133 | 3.1 |
| Western Australia ... | 707 | 943 | 1,806 | 12,544 | 15,527 | 21.8 |
| Tasmania ... | 2,131 | 3,586 | 3,921 | 5,033 | 7,582 | 3.6 |
| Commonwealth ... | 46,700 | 71,116 | 96,087 | 114,585 | 167,446 | 3.8 |
| Average per head ... | £ s. d. 27 17 2 | £ s. d. 31 1 3 | £ s. d. 29 19 9 | £ s. d. 30 2 6 | £ s. d. 39 17 11 | 1.4 |

* Ratio of present production to that of 1871.

In connection with the high values, absolute and relative, shown by the year 1907, the fact must not be overlooked that this year was a particularly favourable one over the greater part of Australia, while wool, metals, and other articles of domestic production realised very high prices in British and foreign markets.

APPENDIX.

Recent information and returns which have come to hand since the various sections of this book were sent to press, are given below.

SECTION II.

DISCOVERY, COLONISATION, AND FEDERATION OF AUSTRALIA.

§ 5. The Constitutions of the States.

The Australian States Constitution Act 1907 amended the Australian Constitution Acts and expressly declared that the following Bills passed by the Legislature of any State of the Commonwealth must be reserved for the signification of His Majesty's pleasure thereon, viz., any Bill which:—(a) Alters the Constitution of the Legislature of the State or of either House thereof; (b) affects the salary of the Governor of the State; (c) or is, under any State Act, passed after the passing of the Australian Constitution Act 1842, or under any provision contained in the Bill itself, required to be reserved. (See also page 961 (ii.) *The State Governors.*)

SECTION IV.

POPULATION.

§ 4. Elements of Growth of Population.

3. **Net Immigration, p. 168.**—The following table gives particulars of net immigration for the year 1908:—

NET IMMIGRATION,* 1908.

| Particulars. | N.S.W. | Victoria. | Q'land. | S. Aust. | W.A. | Tas. | C'wlth. |
|---|---------|-----------|---------|----------|--------|--------|---------|
| Arrivals | 239,669 | 194,545 | 75,041 | 79,857 | 24,594 | 35,188 | 72,208 |
| Departures | 243,341 | 186,797 | 73,611 | 71,215 | 23,922 | 36,858 | 59,058 |
| Excess of arrivals over departures | —3,672 | 7,748 | 1,430 | 8,642 | 672 | —1,670 | 13,150 |

Note.—(—) signifies excess of departures over arrivals. * Figures for States represent Interstate and Oversea migration; those for Commonwealth represent Oversea migration only.

4. **Total Increase, p. 170.**—The following table gives particulars of the total increase in population for each State and for the Commonwealth during the year 1908:—

TOTAL INCREASE OF POPULATION, 1908.

| Particulars. | N.S.W. | Victoria. | Q'land. | S. Aust. | W.A. | Tas. | C'wlth. |
|---|--------|-----------|---------|----------|-------|--------|---------|
| Excess of births over deaths | 26,403 | 15,331 | 9,150 | 5,873 | 4,876 | 3,486 | 65,119 |
| Excess of arrivals over departures | —3,672 | 7,748 | 1,430 | 8,642 | 672 | —1,670 | 13,150 |
| Total increase | 22,731 | 23,079 | 10,580 | 14,515 | 5,548 | 1,816 | 78,269 |

Note.—(—) signifies excess of departures over arrivals.

§ 8. Enumerations and Estimates.

5. **Estimates of Population, pp. 177 to 181.**—The following table shows the estimated population of each State and the Commonwealth on the 31st December, 1908:—

| Particulars. | N S.W. | Vic. | Qld. | S.A. | W.A. | Tas. | C'wealth. |
|--------------|-----------|-----------|---------|---------|---------|---------|-----------|
| Males ... | 849,164 | 636,102 | 299,953 | 216,858 | 154,625 | 95,325 | 2,252,027 |
| Females ... | 742,509 | 635,072 | 252,392 | 190,321 | 112,486 | 90,499 | 2,023,279 |
| Total ... | 1,591,673 | 1,271,174 | 552,345 | 407,179 | 267,111 | 185,824 | 4,275,306 |

SECTION V.

VITAL STATISTICS.

§ 1. Births.

1. **Male and Female Births, p. 203.**—The total number of male and female births registered, and the birth rates in each State and in the Commonwealth, during the year 1908 were as follows:—

BIRTHS AND BIRTH RATES, 1908.

| Particulars. | N S.W. | Vic. | Qld. | S.A. | W.A. | Tas. | C'wealth. |
|-----------------|--------|--------|--------|-------|-------|-------|-----------|
| Males ... | 21,605 | 16,071 | 7,677 | 4,949 | 3,993 | 2,818 | 57,113 |
| Females ... | 20,853 | 15,026 | 7,153 | 4,841 | 3,762 | 2,797 | 54,432 |
| Total ... | 42,458 | 31,097 | 14,830 | 9,790 | 7,755 | 5,615 | 111,545 |
| Birth rates ... | 26.86 | 24.71 | 26.99 | 24.59 | 29.25 | 30.90 | 26.35 |

§ 2. Marriages.

1. **Marriages, p. 213.**—The following statement shows the number of marriages registered in each State and the Commonwealth, and the marriage rates per 1000 of the mean population, during the year 1908:—

MARRIAGES AND MARRIAGE RATES, 1908.

| Particulars. | N.S.W. | Vic. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|---------------------|--------|-------|---------|----------|----------|-------|-----------|
| No. of marriages | 12,641 | 9,335 | 4,009 | 3,122 | 2,012 | 1,432 | 32,551 |
| Marriage rates* ... | 8.00 | 7.42 | 7.30 | 7.84 | 7.59 | 7.88 | 7.69 |

* Number of marriages, not persons married, per 1000 of mean population.

§ 3. Deaths.

1. **Male and Female Deaths, p. 220.**—The number of deaths registered during 1908, and the death rates per 1000 of the mean population, are shewn in the following table:—

MALE AND FEMALE DEATHS AND DEATH RATE, 1908.

| Particulars. | N.S.W. | Vic. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|-----------------|--------|--------|---------|----------|----------|-------|-----------|
| Male ... | 9,298 | 8,816 | 3,500 | 2,106 | 1,800 | 1,112 | 26,632 |
| Female ... | 6,757 | 6,950 | 2,180 | 1,811 | 1,079 | 1,017 | 19,794 |
| Total ... | 16,055 | 15,766 | 5,680 | 3,917 | 2,879 | 2,129 | 46,426 |
| Death rates ... | 10.16 | 12.53 | 10.34 | 9.84 | 10.86 | 11.71 | 10.97 |

SECTION VI.

LAND TENURE AND SETTLEMENT.

§ 2. Land Legislation in Individual States.

1. **New South Wales, p. 267.**—(ii.) *Acts now in Force.* The Crown Lands Acts were further amended by the Crown Lands (Amendment) Act 1908, which came into force on the 1st. February, 1909, and which contains a number of important provisions as to the conversion of tenures.

(i.) *Conversion of Homestead Selections or Grants.* Under the amending Act any homestead selection or grant (see p. 290 *ante*) may be converted into (a) a conditional purchase lease, (b) a conditional purchase, or (c) a conditional purchase and conditional lease, but so that the area comprised in such lease does not exceed three times the area comprised in the conditional purchase. Any application for conversion must be accompanied by a provisional deposit of one shilling per acre of the area of a proposed conditional purchase, as part payment of a deposit of 5 per cent. on the capital value; any balance of the latter deposit must be paid within one month after the applicant has been called upon to do so.

(ii.) *Conversion of Settlement Leases.* Any settlement lease (see page 305) may be converted into an original conditional purchase or into an original conditional purchase and a conditional lease if the total area held by an applicant for conversion (exclusive of land under annual tenure) does not exceed an area which, in the opinion of the Board, would be sufficient for the maintenance in average seasons and circumstances of an average family. The area of the lease must not exceed three times the area of the conditional purchase.

If the total area held by an applicant for conversion (exclusive of land under annual tenure) exceeds such area, the conversion must be partly into an original conditional purchase and the balance into a conditional lease.

(iii.) *Conversion of Non-residential Conditional Purchases.* A non-residential conditional purchase (see p. 289) may be converted into an original conditional purchase, the term of ten years' residence commencing from the date of application for conversion. The term of compulsory residence is, however, reducible by any period (not exceeding five years) of continuous residence on the land by the holder up to and immediately preceding his application for conversion.

(iv.) *Conversion of Special Leases and Church and School Lands Leases.* The registered holder of any special lease for the purposes of access to water, agriculture, bee and poultry farming, dairying, dams, drainage, garden, grazing, irrigation, orchard, pig and poultry farm, residence, sugar-cane growing, tanks, tobacco-growing, or water con-

servation, or of any church or school lands lease, may apply to convert the same or part thereof into (a) a conditional purchase lease, (b) a conditional purchase, (c) a homestead selection, (d) a settlement lease, or (e) a conditional lease. An application for conversion must be accompanied by the prescribed deposit. The application is referred to the Board for inquiry and the Board reports to the Minister as to whether there is any objection to the granting of the application. If the Board recommends the granting of the application, it proceeds to appraise the capital value or price or rent of the land.

(v.) *Purchase of Residential Leases.* The holder of any residential lease (see p. 306) may at any time after the first five years of his lease apply to purchase his holding. The application must be accompanied by the prescribed deposit, and is referred to the Secretary for Mines, who, if he concurs therein, reports to the Board, which in turn reports to the Minister. The purchase price is fixed by the Board and must be paid within three months, or within such extended time as the Minister may allow, subject to the payment of interest at 5 per cent.

(vi.) *Limitation of Transfer.* Conditional purchase leases, conditional purchases, homestead selections, and settlement leases, and subdivisions of the same may not be transferred, except by way of mortgage, to a person who already holds under any tenure (other than annual tenure) an area greater than a "home maintenance area."

§ 8. Leases and Licenses.

4. *Queensland, p. 311.—Irrigation and Reclaimed Lands.* Under the Irrigation and Reclaimed Lands Act 1908, special provisions are made for granting perpetual leases of reclaimed lands. The Governor is authorised to proclaim irrigation areas, and the Commissioner for Crown Lands must cause the land included in any such area to be divided into blocks. Any block may contain not more than fifty acres of reclaimed land, and fifty acres of land considered by the Commissioner to be irrigable, and may also contain any area of other land. Each block is offered on perpetual lease, at a rent not less than a sum equivalent to 4 per cent. on the unimproved value of the land, plus the cost of reclaiming and of providing pumping and irrigation channels. For the first year only one-quarter of the fixed rent is payable, for the second year one-half, and for the third year three-quarters.

(i.) *Irrigation Boards.* When leases have been granted of not less than two-thirds of the blocks in any irrigation area, the Governor may constitute a Board to take over the control and management thereof from the Commissioner, who may advance loans to the Board, repayable with interest at 4 per cent. by twenty annual instalments, the first instalment to be paid at the expiration of five years from the date of advance. The Irrigation Boards are vested with wide powers and exercise within the irrigation areas all the duties and powers of District Councils.

(ii.) *Government Loans to Settlers.* Under Part V. of the Act a fund is to be constituted, to be called the Lessees of Reclaimed Lands Loan Fund, consisting of moneys provided by Parliament. Advances may be made by the Commissioner to assist lessees (a) in erecting or completing permanent buildings and in making improvements on their lands, and (b) in making improvements which permanently increase the capital value of the land, such as grubbing, fencing, constructing drains, wells, tanks, and the like. Advances for the first purposes (a) may not exceed one-half the cost to the lessee of the permanent buildings and improvements then subsisting on his block, and for the second purposes (b) may not exceed one-half the value of the improvements, while the total amount owing by any lessee may not exceed £125. Loans must be repaid with interest at 4 per cent. by twenty equal annual instalments, the first instalment to be paid at the expiration of five years from the date of advance. In cases of hardship the time may be extended by the Commissioner, the deferred payments carrying interest at 5 per cent.

§ 9. Closer Settlement.

5. **Queensland, p. 328.**—*The Special Agricultural Selections Acts.* The Special Agricultural Selections Act 1905 (which, although an amendment to the Acts of 1901 and 1904, is not administered by the Department of Public Lands, but by the Department of Agriculture), provides that the Secretary for Agriculture may extend financial aid to all or any of the members of a body of selectors of agricultural homesteads under the principal Act. By regulations made under this Act it is provided that applicants for aid must be married men who desire to engage in farming, but do not possess sufficient money. For each body of selectors there must be an overseer, who acts as manager of the general business of the body during such period as the Minister thinks proper. During such period each selector must be amenable to and must obey all lawful orders and decisions of the overseer, who also acts as arbitrator in all disputes between the settlers. The overseer must keep an advance account for each settler, shewing the amount of aid extended. This account must be debited with interest at 5 per cent. per annum. Railway fares for the settler and his family to the station nearest to the selection, as well as the rent and proportionate parts of the survey fees payable for the first and second years, may be debited to the advance account. Advances may also be made to each selector to a value not exceeding £80 for the purpose of buying rations and tools, and to a value not exceeding £60 for the purpose of buying stock and poultry. After the expiration of two years the selector must repay the amount of his debt, within a term of twenty-three years, by half-yearly instalments with interest at the rate of £3 7s. 4d. per cent.

8. **Tasmania, p. 332.**—The Closer Settlement Act 1906 was amended in 1908. Under the provisions of these Acts a lessee must improve his holding to a value equal to $2\frac{1}{2}$ per cent. on the capital value of the land in each of the first ten years of the term of his lease, and he must, within two years of the date of the lease, personally reside on his allotment during at least eight months of each of the following nine years.

Under the Amendment Act of 1908 the Minister is authorised to lease any allotment of land exceeding £1500, but not exceeding £4000 in value, exclusive of buildings. Any land acquired for the purposes of closer settlement not suitable for leasing may be sold by auction or private contract for cash or on credit.

SECTION VIII.

AGRICULTURAL PRODUCTION.

§ 4. Wheat.

1. **Progress of Wheat Growing, p. 382.**—The following table shews the estimated area under wheat and the prospective yields of wheat in each State and the Commonwealth for the season 1908-9:—

ESTIMATED AREAS UNDER WHEAT AND PROSPECTIVE YIELDS, 1908-9.

| Particulars. | N.S.W. | Vic. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|----------------------------------|------------|------------|-----------|------------|-----------|---------|------------|
| Estimated area Acres | 1,386,521 | 1,779,905 | 81,850 | 1,727,692 | 311,300 | 29,878 | 5,317,146 |
| Prospective yld. Bush. | 15,731,000 | 23,345,649 | 1,201,130 | 19,979,746 | 2,854,500 | 562,304 | 63,674,329 |
| Average yield per acre ... Bush. | 11.35 | 13.12 | 14.67 | 11.56 | 9.17 | 18.82 | 11.98 |

§ 20. Government Loans to Farmers.

6. **South Australia, p. 441.**—The Advances to Settlers on Crown Lands Act 1908 was assented to on 23rd December, 1908. Under this Act a Board, called the Advances to Settlers Board, was created. The Treasurer is authorised to set apart a sum not exceeding £200,000 in any one financial year for the purpose of loans to settlers. The

maximum amount which may be advanced to any one settler is £400, and for a period of five years following the date on which the advance is made the settler is required to pay interest at the rate of 5 per cent. per annum, payable half-yearly. At the expiration of that period it is provided that he must repay the amount advanced by fifty equal half-yearly instalments, together with interest at 5 per cent. on the balance outstanding. A rebate of 1 per cent. interest is allowed if the half-yearly payment is made within fourteen days of the date on which it falls due. Advances may be made on prescribed security for the purpose of making improvements on a holding, such as ring-barking, clearing, boring for water, etc., or for discharging a mortgage existing on a holding. The amount of the advance may not exceed a sum equal to fifteen shillings in the pound on the value of improvements already made, and may not exceed twelve shillings in the pound on improvements made if the land be mortgaged.

SECTION XI.

FISHERIES AND PISCICULTURE.

§ 4. Development of the Industry.

2. **Experiment and Culture, p. 488.**—(viii.) *Commonwealth Investigations.* Early in 1909 the Commonwealth fisheries investigation vessel *Endeavour* made a preliminary trip eastward of the continent, and reported on return a most successful cruise. Extensive fishing grounds were proved in the regions visited, and a large catch of fish obtained. Tasmanian waters are next to be explored by the *Endeavour*.

SECTION XII.

MINES AND MINING.

§ 2. Gold.

2. **Production of Gold at Various Periods, p. 494.**—The Australian gold yield for 1908 is shown in the subjoined table. The figures are open to final revision, but only to a slight extent:—

GOLD RAISED IN AUSTRALIA, 1908.

| Particulars. | N.S.W. | Victoria. | Qld. | S.A. | W.A. | Tas. | C'with. |
|--------------------|---------|-----------|-----------|--------|-----------|---------|------------|
| Quantity Fine ozs. | 224,792 | 676,005 | 461,359 | 9,162 | 1,648,505 | 60,712 | 3,080,535 |
| Value ... £ | 954,855 | 2,871,485 | 1,959,727 | 38,917 | 7,002,399 | 257,888 | 13,085,271 |

The quantity raised in New Zealand during the year 1908 was 471,790 fine ounces, valued at £2,004,035, making the total yield for Australasia 3,552,325 fine ounces, valued at £15,089,306.

SECTION XVII.

ROADS AND RAILWAYS.

§ 3. Tramways.

1. **General, p. 741.**—*Classification of Mileage open for Passenger Traffic.* The Leonora-Gwalia tramway in Western Australia, 2½ miles in length, is included in the 25½ miles of horse tramways, but should be specified separately under steam motive power. This makes the totals for the Commonwealth as follows:—Steam, 52¼ miles, and horse, 59¼.

5. **South Australia, p. 748.**—The first section of the Adelaide electric tramway system, comprising the Kensington and Norwood lines, was formally opened on the 9th March, 1909.

SECTION XVIII.
POSTS, TELEGRAPHS, AND TELEPHONES.

§ 4. Telephones.

2. **Telephone Rates, p. 791.**—A new system of telephone charges was approved by the Commonwealth Executive Council on the 19th March, 1909. The new regulations stipulate that from the 19th March, the new system shall apply immediately to all new subscribers and to existing subscribers "after a date to be specified in a notice to him, issued by the Postmaster-General." In practice this will mean at the end of existing contracts.

The new scale of rental charges is as follows:—

TELEPHONES.—NEW RENTAL CHARGES, MARCH, 1909.

| In Telephone Networks having a Population of— | Radius of Network with Main Exchange as Centre. | Minimum Annual Charge. | | |
|---|---|------------------------|--|---|
| | | For Exclusive Service. | For each Subscriber or Instrument on a Two-party Line. | For each Subscriber or Instrument on a Three or more party Service. |
| | Miles. | £ s. d. | £ s. d. | £ s. d. |
| From 1 to 10,000. ... | 5 | 3 0 0 | 2 10 0 | 2 0 0 |
| " 10,001 to 100,000 | 10 | 3 10 0 | 2 15 0 | 2 5 0 |
| " 100,001 upwards | 10 | 4 0 0 | 3 0 0 | 2 10 0 |

It is provided that for all effective calls originated the subscriber will be charged the following rates:—(a) For calls not exceeding 2000 half-yearly, two calls for one penny; and (b) for calls above 2000 half-yearly, three calls for one penny,

Another new regulation permits persons occupying offices in the same building, or occupying the same private residence, to subscribe jointly under one exchange number (in addition to rental as for one person at the respective rates prescribed) of £1 per annum for each additional subscriber. This fee covers the insertion of the additional subscriber's name in the telephone list. If additional instruments are required the subscribers must pay the rates prescribed for party lines.

SECTION XX.

STATE FINANCE.

§ 2. State Consolidated Revenue Funds.

(D) Principal State Taxes.

3. **Bills of Exchange and Promissory Notes, p. 833.**—The Stamps Act 1908, of Victoria, which came into force on 20th October, 1908, provides that no Stamp duty is chargeable or payable on bills of exchange of any kind whatsoever except those that are both drawn in, and payable in, Victoria.

3. **Income Tax, Victoria, p. 838.**—Under the Income Tax Act of 1908, a similar deduction of 20 per cent. on the income tax payable for the year 1908, applies also to the tax payable for the year ending 31st December, 1909.

5. **Income Tax, South Australia, p. 840.**—By the provisions of the Taxation Act Amendment Act 1908, the exemption from payment of Income Tax is increased to £200. A tax of £5 on every £100 received by foreign shipping companies is imposed under this Act.

SECTION XXV. GENERAL GOVERNMENT.

§ 1. Scheme of Parliamentary Government.

3. **The Cabinet and the Executive Government, p. 959.**—*South Australian Ministry.* The Hon. A. A. Kirkpatrick, formerly Chief Secretary and Minister of Industry, has been appointed Agent-General for South Australia in London. The Hon. F. S. Wallis, M.L.C., was sworn in as Chief Secretary on the 27th March, 1909.

7. **Powers and Functions of the Governor-General and of the Governors, p. 960.**—The names of the State Governors in April, 1909, were as follow:—

New South Wales: LORD CHELMSFORD, G.C.B., K.C.M.G.

Victoria: SIR THOMAS DAVID GIBSON-CARMICHAEL, BART., LL.D., K.C.M.G.

Queensland: SIR WILLIAM MACGREGOR, G.C.M.G., C.B.

South Australia: SIR DAY HORT BOSANQUET, K.C.B., G.C.V.O.

Western Australia: SIR GERALD STRICKLAND, K.C.M.G.

Tasmania: (Name of new Governor in place of Sir Gerald Strickland, K.C.M.G., not notified at time of going to press.)

§ 2. Parliaments and Elections.

Summary, p. 964.—The Victorian Adult Suffrage Bill, extending the franchise in Victoria to females, was reserved for signification of His Majesty's pleasure thereon, and received the Royal Assent on the 15th February, 1909.

SECTION XXVI. LOCAL GOVERNMENT.

§ 2. New South Wales.

1. **Development of Local Government Systems, p. 981.**—The Local Government Act 1906 was amended by the Local Government (Amending) Act 1908. Under the latter Act certain alterations are made as to the constitution, reconstitution, and division of local government areas, and the powers of the councils are enlarged both in respect to their primary functions and to the additional functions which may be acquired under the principal Act. A council must make a valuation of all ratable land at least once in every three years; in a municipality such valuation must be of the unimproved and improved capital value, and the assessed annual value; in a shire the valuation of the unimproved capital value is compulsory, and of the improved capital value and the assessed annual value optional.

SECTION XXVII. INDUSTRIAL UNIONISM AND INDUSTRIAL LEGISLATION.

§ 2. Laws Relating to Conditions of Labour.

Pages 1054 et seq.—In December, 1908, the *Minimum Wage Act* 1908 of New South Wales was assented to. A minimum wage of four shillings per week is prescribed. Males under sixteen years of age, and all females, are to be paid not less than threepence per hour for overtime.

In March, 1909, the *Metropolitan Saturday Half-Holiday Act* 1909, of Victoria, was passed. On and after 1st May, 1909, all shops except those specially exempted are to close on Saturdays at 1 p.m. The closing hour on Fridays is extended to 10 p.m.

In March, 1909, the *Factories and Shops Act* 1909, of Victoria, became law. The Act alters the definition of "child," as stated in the Act of 1905, from thirteen for all children to fourteen for males and fifteen for females. These are, therefore, the ordinary minima ages of admission to factories.
