

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS,
MELBOURNE.

OFFICIAL
YEAR BOOK
OF THE
COMMONWEALTH OF AUSTRALIA,
CONTAINING AUTHORITATIVE STATISTICS FOR THE PERIOD
1901-1908
AND CORRECTED STATISTICS FOR THE PERIOD 1788 TO 1900.

No. 2.—1909.

PUBLISHED UNDER THE AUTHORITY OF THE MINISTER OF HOME AFFAIRS,
BY
G. H. KNIBBS,
FELLOW OF THE ROYAL STATISTICAL SOCIETY, ETC., ETC.
COMMONWEALTH STATISTICIAN.

BY AUTHORITY.

McCARRON, BIRD & CO., PRINTERS, COLLINS STREET, MELBOURNE.

PREFACE.

By the Constitution of the Commonwealth of Australia, the Commonwealth is empowered "to make laws for the peace, order, and good government, of the Commonwealth, with respect to," *inter alia*, "Census and Statistics." In exercising the power so conferred, a "Census and Statistics Act" was passed in 1905, and in the year following the "Commonwealth Bureau of Census and Statistics" was created. The publication here presented is the second authoritative Year Book issued under the Federal Constitution.

This Year Book furnishes corrected statistics for the whole period of Australian settlement, viz., from 1788 to 1908. Wherever space has permitted, detailed statistics have been furnished for each year since Federation, viz., from 1901 to 1908. In the few instances where this has proved impracticable, reference will be necessary to Year Book No. 1. The inclusion, as stated, of the total available information in the more important branches of statistics enables this publication to be used wherever it is desired to make a comparative survey of the unfolding of this portion of the British Empire. Not only are the results given for the Commonwealth as a whole, but also for each component State.

The general arrangement of the publication corresponds with that of Year Book No. 1, and is shewn in the synopsis on pp. ix. to xiii. immediately following. This arrangement has been widely commended, and will be substantially adhered to in future issues.

In addition, however, to what may be called purely statistical matter, it is intended that each issue shall contain special articles dealing at length with some particular subject or subjects of more or less permanent interest. It would be undesirable as well as impracticable to repeat these year after year, seeing that it would unduly increase the size of the publication. It was stated, therefore, in the preface to Year Book No. 1 that, as a rule, only a brief condensation of the special articles would appear in subsequent issues of the Year Book, or they might be omitted altogether. Consistently with this intention considerable changes will be found to have been made. In many cases the articles in Year Book No. 1 have been reduced to synopses; in other cases matter has been wholly deleted, and new matter introduced in lieu thereof, and specially important subjects have been more exhaustively discussed.

Among the subjects on which new articles have been introduced, the following may be specially mentioned:—The Exploration of Australia, The Constitutions of the States, The Hydrology of Australia, The Development of Australia's Trade with the East, The Customs Tariff 1908, Kindergarten Education, Administrative Government, Public Lighting, Papua, and Local Option. Other sections, including those on Land Tenure and Settlement, Manufacturing Industries, Commerce, and Railways, have been considerably elaborated. A number of new maps have also been inserted, including the following:—The Progress of Exploration of Australia, Geological map, Orographical map, and Australia and New Guinea. Various additions and improvements have also been made to the graphs.

Through the co-operation of the various State Bureaux with the Commonwealth Bureau it has been possible to considerably advance the accuracy, and in general the intrinsic value, of Australian Statistics, and the collection of data is being continually improved.

It has been found desirable to deal with the subject matter from a threefold aspect, viz.:—

- (i.) The development of the component States.
- (ii.) The progress of Australia as a whole from the earliest times.
- (iii.) The statistical comparison of Australia with other leading countries of the world.

In the endeavour to supply reliable details of this character, considerable difficulties have been experienced, more particularly as regards the early years of Australian colonisation, and although assistance has been cordially rendered not only by the State Statistical Bureaux, but also by other State Departments that were in a position to help, the results obtained must in many cases be considered as roughly approximate only. No effort is spared, however, to embody the most reliable information available.

A feature of this publication is the use made of maps and diagrams. The changing boundaries of the various States, the course of exploration, the orography and geology of the territory, the distribution of the population of Australia, of its rainfall, etc., the development of its railway system, and similar facts can be properly appreciated only by the use of maps. In like manner the progress of events, the characteristics of growth and decline, can in general be grasped much more readily graphically than numerically. The diagram or "graph" is a direct picture in which the relative magnitudes are preserved and by which instantaneous comparisons are made possible. For the more accurate examinations of statistical data, however, numerical results are also given *in extenso*.

The development of Australia has been in many instances very remarkable, and this could be shown only by tables and graphs dating back to its beginning in 1788. In most cases accurate data are not available for years much before 1860. In such cases, therefore, it seemed sufficient at present to give continuous results from that year onwards.

PREFACE.

The great mass of material embodied in this Year Book has been carefully examined, but it would be idle to hope that all error has been avoided. The Commonwealth Statistician desires to express his appreciation of the opportunity afforded him of perfecting the matter and arrangement of the Year Book, by those who have been kind enough to point out any defects or make any suggestions.

The corresponding years indicated in various sections of this book do not always necessarily refer to the same period. Though the years specified ordinarily refer to the calendar years, in certain sections—*e.g.*, the sections on *Railways*, and on *Commonwealth, State, and Private Finance*—the years indicated generally refer to the financial years ended the 30th June. Again, as regards the section on *Agricultural Production*, the year ordinarily ends on the 31st March, while in the section on *Local Government* the financial years of local bodies in the several States end at various dates.

Recent information on returns, which have come to hand since the various sections have been sent to press, may be found in the Appendix.

In conclusion, the Commonwealth Statistician desires to express his cordial thanks to the State Statisticians, and to the responsible officers of the various Commonwealth and State Departments, who have kindly, and often at considerable trouble, supplied all desired information.

G. H. KNIBBS,

Commonwealth Statistician.

SYNOPSIS.

SECTION I.—STATISTICAL ORGANISATION AND SOURCES OF INFORMATION.

| § 1. Introduction | PAGE | § 2. Statistical Publications of Australia | PAGE |
|---|------|--|------|
| 1. Development of Australian Statistics | 1 | 1. Commonwealth Publications | 5 |
| 2. Sources of Information | 4 | 2. State Publications | 6 |
| 3. Maintenance of Secrecy | 4 | | |
| 4. Accuracy Essential | 5 | | |

SECTION II.—DISCOVERY, COLONISATION, AND FEDERATION OF AUSTRALIA.

§ 1. Early Knowledge of Australia

| | |
|-------------------------------|----|
| 1. Introduction | 11 |
| 2. Early Tradition | 11 |
| 3. Discovery of Australia | 11 |
| 4. Discoveries by the English | 12 |

§ 2. The Taking Possession of Australia

| | |
|--|----|
| 1. Annexation of Eastern Part of Aust. | 13 |
| 2. Original Extent of New South Wales | 14 |
| 3. Annexation of Western Australia | 14 |

§ 3. The Creation of the Several Colonies

| | |
|---|----|
| 1. New South Wales as Original Colony | 15 |
| 2. Separation of Van Diemen's Land | 15 |
| 3. Extension of N. S. W. Westward | 15 |
| 4. Western Aust. constituted a Colony | 15 |
| 5. Creation of South Aust. as a Province | 15 |
| 6. Separation of New Zealand | 16 |
| 7. Separation of Victoria | 16 |
| 8. Separation of Queensland | 16 |
| 9. No further Constitution of Colonies | 16 |
| 10. The Changing Boundaries of the Colonies | 19 |
| 11. Australasia, 1863 to 1900 | 19 |
| 12. British New Guinea or Papua | 20 |

§ 4. The Exploration of Australia

(A) Eastern Australia—

| | |
|---|----|
| 1. Early Tours of Exploration, 1788 to 1791 | 20 |
| 2. French Voyages of Exploration, 1788 to 1802 | 21 |
| 3. Bass and Flinders, 1796 to 1803 | 21 |
| 4. Discovery of Port Phillip, 1801 | 22 |
| 5. Explorations in Tasmania, 1803 to 1807 | 22 |
| 6. The Blue Mountains, 1802 to 1813 | 22 |
| 7. Evans and Oxley, 1813 to 1823 | 23 |
| 8. Stirling and Currie, 1823 | 24 |
| 9. Hamilton Hume, 1814 to 1824 | 24 |
| 10. Allan Cunningham, 1817 to 1829 | 24 |
| 11. Charles Sturt, 1828 to 1830 | 24 |
| 12. Marine Surveys in H. M. S. "Beagle," 1826 to 1843 | 25 |
| 13. Sir Thomas Mitchell, 1831 to 1836 | 25 |
| 14. McMillan, 1839 to 1840 | 26 |
| 15. Count Strzelecki, 1840 | 26 |
| 16. Leslie and Russell, 1840 to 1841 | 26 |
| 17. Leichhardt, 1844 to 1845 | 26 |
| 18. Kennedy, 1847 to 1849 | 26 |
| 19. A. C. Gregory, 1846 to 1858 | 27 |
| 20. Later Exploration of the North-East, 1859 to 1872 | 27 |

(B) Central Australia—

| | |
|--|----|
| 1. Early Settlement of South Australia, 1836 to 1839 | 28 |
| 2. Edward John Eyre, 1838 to 1841 | 28 |
| 3. Sturt's Later Explorations, 1844 to 1845 | 29 |
| 4. Exploration in South Australia, 1851 to 1857 | 29 |
| 5. Discovery of Lake Eyre by B. H. Babbage, 1858 | 29 |
| 6. J. M. Stuart, 1858 to 1862 | 29 |
| 7. Burke and Wills Expedition, 1860 and 1861 | 30 |
| 8. Major Warburton, 1873 | 31 |
| 9. W. C. Gosse, 1873 | 32 |
| 10. Ernest Giles, 1872 to 1876 | 32 |
| 11. Later Explorations | 32 |

(C) Western Australia—

| | |
|---|----|
| 1. Early Discoveries | 33 |
| 2. Grey, 1837 to 1839 | 34 |
| 3. R. Austin, 1854 | 34 |
| 4. F. T. Gregory, 1857 to 1861 | 34 |
| 5. Sir John Forrest, 1869 to 1883 | 34 |
| 6. Alexander Forrest, 1871 to 1879 | 37 |
| 7. David Lindsay and L. A. Wells, 1891 to 1892 | 37 |
| 8. The Calvert Expedition under L. A. Wells, 1896 to 1897 | 37 |
| 9. The Carnegie Expedition, 1896 to 1897 | 37 |
| 10. Later Exploration in the North-West | 38 |

§ 5. The Constitutions of the States

| | |
|--|----|
| 1. Introduction | 39 |
| 2. Early Constitutional History | 39 |
| 3. The Constitution of New South Wales | 40 |

SECTION III.—PHYSIOGRAPHY.

| | |
|---|-----|
| § 1. General Description of Australia | |
| 1. Geographical Position | 61 |
| 2. Area of Australia compared with that of other Countries | 61 |
| 3. Relative Size of Political Sub-divsns. | 66 |
| 4. Coastal Configuration | 66 |
| 5. Hydrology of Australia | 67 |
| 6. Orography | 77 |
| § 2. The Geology of Australia | |
| 1. General | 78 |
| 2. Geology of New South Wales | 78 |
| 3. Geology of Victoria | 83 |
| 4. Geology of Queensland | 89 |
| 5. Geology of South Australia | 95 |
| 6. Geology of Western Australia | 100 |
| 7. Geology of Tasmania | 106 |
| § 3. The Fauna of Australia | |
| 1. Zoological Isolation of Australia | 111 |
| 2. Effect of Isolation | 111 |
| 3. The Non-marine Fauna | 112 |
| 4. Origin of the Fauna | 117 |
| § 4. The Flora of Australia | |
| 1. Character of the Australian Flora | 117 |
| 2. Botanic Distribution | 119 |
| 3. Natural Orders of Plants Re- presented in Australia | 122 |

| | |
|--|-----|
| § 5. Climate and Meteorology of Australia | |
| 1. History of Meteorology in Australia | 123 |
| 2. Magnetic Observations | 123 |
| 3. Equipment | 124 |
| 4. Wind Velocities and Pressure | 124 |
| 5. Creation of the Commonwealth Bureau of Meteorology | 124 |
| 6. Meteorological Conference | 125 |
| 7. Organisation of Meteorological Bureau | 125 |
| 8. Publications, etc. | 126 |
| 9. General Description of Australia | 126 |
| 10. Meteorological Divisions | 126 |
| 11. Temperatures | 127 |
| 12. Relative Humidity | 129 |
| 13. Evaporation | 129 |
| 14. Rainfall | 130 |
| 15. Remarkable Falls of Rain | 139 |
| 16. Snowfall | 141 |
| 17. Hail | 141 |
| 18. Barometric Pressures | 142 |
| 19. Wind | 142 |
| 20. Cyclones and Storms | 143 |
| 21. Influences affecting Australian Climate | 145 |
| 22. Comparison of Rainfalls and Tem- peratures | 146 |
| 23. Climatological Tables | 147 |

SECTION IV.—POPULATION.

| | |
|--|-----|
| § 1. Special Characteristics of Australian Population | |
| 1. Sex Distribution | 154 |
| 2. Age Distribution | 155 |
| 3. Race and Nationality | 156 |
| 4. Differences among the States | 158 |
| § 2. Commonwealth Population—Its Distri- bution and Fluctuation | |
| 1. Present Population | 161 |
| 2. Growth of Population | 161 |
| 3. Variations in Masculinity | 163 |
| § 3. Influences affecting Growth and Distri- bution of Population | |
| 1. Mineral Discoveries | 165 |
| 2. Pastoral Development | 166 |
| 3. Agricultural Expansion | 166 |
| 4. Progress of Manufacturing Indus- tries | 166 |
| 5. Influence of Droughts | 166 |
| 6. Other Influences | 166 |
| § 4. Elements of Growth of Population | |
| 1. Natural Increase | 167 |
| 2. Comparison with other Countries | 168 |
| 3. Net Immigration | 168 |
| 4. Total Increase | 170 |
| 5. Density of Population | 171 |
| § 5. Seasonal Variations of Population | |
| 1. Natural Increase | 173 |
| 2. Net Immigration | 174 |
| Urban Population | |
| 1. The Metropolitan Towns | 174 |
| 2. Provincial Towns | 175 |

| | |
|---|-----|
| § 7. Assisted Immigration | 176 |
| § 8. Enumerations and Estimates | |
| 1. Musters | 177 |
| 2. Census-taking | 177 |
| 3. The Census of 1901 | 177 |
| 4. The Census of 1911 | 177 |
| 5. Estimates of Population | 178 |
| § 9. Principal Results of Census of 1901 | |
| 1. Census Results | 181 |
| 2. Ages | 181 |
| 3. Birthplaces | 182 |
| 4. Occupations | 183 |
| 5. Religions | 184 |
| 6. Conjugal Condition | 186 |
| § 10. Naturalisation | |
| 1. The Commonwealth Act | 188 |
| 2. Statistics of Naturalisation | 190 |
| 3. Census Particulars | 199 |
| § 11. Graphical Representation of Growth of Population | |
| 1. General | 200 |
| 2. Graphs of Total Population | 200 |
| 3. Graphs for Commonwealth of Male and Female Population | 201 |
| 4. Graphs for each State of Male and Female Population | 201 |

OFFICIAL STATISTICS.

COMMONWEALTH OF AUSTRALIA YEAR BOOK, 1901 to 1908,

With Corrected Statistics for Earlier Years.

SECTION I.

STATISTICAL ORGANISATION AND SOURCES OF INFORMATION.

§ 1. Introduction.

1. **Development of Australian Statistics.**—In the first issue of the Commonwealth Official Year Book (No. 1, 1901-1907),¹ an account was given of the origin and development of the statistical methods of Australia from the earliest times to the organisation of the Commonwealth Bureau of Census and Statistics; *vide* pp. 1 to 16 therein. It will suffice here to mention that statistical compilation in Australia originated in the necessity of producing "Blue Books" for the information of the Home Government. The granting of Responsible Government extended the field of statistics required to be collected, and changed somewhat the administrative arrangements for statistical compilation. Certain branches, for example, were early relegated to the various Registrars-General. Finance was ordinarily dealt with by the Treasuries; Trade, by the Customs Departments; and in general each Department prepared statistics for itself. Owing to this, State Statistical Departments came ultimately to be organised largely as collecting agencies of official and general information. The effort of each State, however, was independent.

A short historical sketch was given in the Year Book (pp. 2 to 5), shewing how each State Bureau, and that of New Zealand, was actually developed, and a brief reference was made to the publications issued by the various Bureaux.

Although even from the earliest times the desirableness of uniformity in statistical compilation was recognised, and some effort was also made to bring it about, it was practically inevitable, in the absence of any co-ordinating authority, that divergencies of technique should arise, and that these divergencies should introduce difficulties in the way of so combining State statistics, as to get a satisfactory statistic for Australia as a whole. Individualising tendencies were only partially combated by the various conferences of State Statisticians, namely, in 1861, 1875, 1890, 1900, 1902, and 1903. (See hereunder).

1. All references to pages in this section will be to Year Book No. 1, 1901-1907.

STATISTICAL CONFERENCES.

| Date of Conference. | Place of Meeting. | Colonies or States represented. | Object of Conference. |
|---------------------|-------------------|---|---|
| October, 1861 ... | Melbourne | New South Wales, Queensland, South Australia, Victoria. | To secure uniformity in the collection and compilation of statistics. |
| January, 1875 ... | Hobart ... | New South Wales, South Australia, Tasmania, Victoria. | To secure uniformity in the collection and compilation of statistics. |
| March, 1890 ... | Hobart ... | New South Wales, South Australia, Tasmania, Victoria, New Zealand. | To secure uniformity in the collection and compilation of census returns. |
| February, 1900 | Sydney ... | New South Wales, Queensland, South Australia, Tasmania, Victoria, Western Australia, New Zealand. | To found a uniform basis for the estimation of population and to secure the collection and compilation of census on uniform principles. |
| January, 1902 ... | Hobart ... | New South Wales, Queensland, South Australia, Tasmania, Victoria, Western Australia, New Zealand. | To secure uniformity in the preparation of statistical returns. |
| September, 1903 | Melbourne | New South Wales, Queensland, South Australia, Tasmania, Victoria, Western Australia. | To secure uniform methods in the statistics of population. |
| Nov., Dec., 1906 | Melbourne | Commonwealth, and each State therein and New Zealand. | Co-ordination of the entire statistical effort of the Commonwealth and State Bureaux. |

(i.) *Creation of the Commonwealth Bureau of Census and Statistics.* In 1906 the Commonwealth Bureau of Census and Statistics was created under the authority of the Census and Statistics Act of 1905, the provisions of which were stated *in extenso* in Year Book No. 1, pp. 8 to 11. The Act deals with administration, with the taking of the census, with the collection of statistics generally, and with the obligations of the public to conform to the requirements of the Act itself. Prior to the creation of the Commonwealth Bureau, it was nearly always difficult, and often impossible, to combine the statistics of the several States, because the basis and whole technique of collection were fixed practically without regard to the necessities of compilation for Australia as a whole.

(ii.) *Statistical Conference, 1906.* It became evident that this state of things could no longer continue, and a conference under the presidency of the Commonwealth Statistician, attended by statistical representatives of each State and New Zealand, was held in November and December, 1906, for the purpose of devising a scheme under which statistical collection would become satisfactory for the study of the affairs of the Commonwealth, as well as those of its constituent parts. It was recognised that the statistical organisation should be such as to secure the following advantages, viz.:—

- (i.) Identity of categories under which the facts are to be collated.
- (ii.) Substantial identity in the method of collection.
- (iii.) Uniformity in the scheme of presenting the facts collected.
- (iv.) Simultaneity of collection where possible.

An account of the *personnel* of the conference, of the more salient points of the Commonwealth Statistician's address, and a *resumé* of the conference resolutions are given in Year Book No. 1, pp. 13-16. The main features of these resolutions were as follows:—

- (i.) In the interests alike of each State and the Commonwealth the collection and compilation of statistical information by the State Statistical Bureaux

should be co-extensive, and, within the limits indicated by the adopted forms, uniform in respect of method, order, and date of compilation; and each State Bureau should be equipped so as to make it possible to respond to this demand.

- (ii.) Excepting in the case of information confidentially collected, or compilation confidentially made for the State or Commonwealth Governments, the whole of the statistical information in each Statistical Bureau should be immediately available to the Commonwealth or State Statisticians.
- (iii.) In order to secure uniformity in the compilation and interpretation of statistical data, a complete scheme of instructions should be drafted by the Commonwealth Statistician for general adoption.
- (iv.) The classification of causes of death prepared by the International Institute of Statistics should be adopted.¹
- (v.) A quinquennial enumeration of population is necessary, owing to the rapid movement of population in Australia.
- (vi.) A monthly record of Interstate Trade should be furnished.
- (vii.) Statistics of production should be so published as never to disclose the operations of individual establishments, and, in general, in order to engender the necessary confidence in the minds of informants as to the strictly impersonal nature of statistical inquiries, and so secure readiness to furnish accurate information, the customary statistical practice of maintaining absolute secrecy should, under no circumstances, be departed from.
- (viii.) Statistical publications of the Commonwealth and States should, as far as possible, be of uniform sizes, and uniform as to order of subject matter.
- (ix.) Trade statistics should be published for each calendar year, classified under categories, and in statistics of export the State of origin should be shewn.
- (x.) All questions of mathematical method, mode of determining means, etc., shall be decided for all States by the Commonwealth Statistician.

Effect is gradually being given to these resolutions as opportunity offers. The Statistics of Trade and Customs for 1906 were published under the alphabetical arrangement, in response to the request of the Trade and Customs Department. For the 1907 trade statistics they have been classified under the categories referred to, viz.:—

CATEGORIES OF ITEMS, TRADE AND CUSTOMS STATISTICS.

| Class No. | Class No. |
|---|---|
| (i.) Foodstuffs of Animal Origin, but excluding Living Animals | (xiv.) Metals (unmanufactured) and Ores |
| (ii.) Foodstuffs of Vegetable Origin | (xv.) Metals, partly manufactured |
| (iii.) Beverages (non-alcoholic) and Substances used in making | (xvi.) Metals (manufactured), including Machinery |
| (iv.) Spirits and Alcoholic Liquors, including Spirits for Industrial Purposes, and Pharmaceutical Preparations dutiable as Spirits | (xvii.) Leather and Manufactures of Leather, and substitutes therefor; also Indiarubber and India-rubber Manufactures |
| (v.) Tobacco and preparations thereof | (xviii.) Wood and Wicker, raw and manufactured |
| (vi.) Live Animals | (xix.) Earthenware, Cements, China, Glass, and Stoneware |
| (vii.) Animal Substances (mainly unmanufactured) not Foodstuffs | (xx.) Paper and Stationery |
| (viii.) Vegetable Substances and Fibres | (xxi.) Jewellery, Timepieces, and Fancy Goods |
| (ix.) Apparel, Textiles, and Manufactured Fibres | (xvii.) Optical, Surgical, and Scientific Instruments |
| (x.) Oils, Fats, and Waxes | (xxiii.) Drugs, Chemicals, and Fertilizers |
| (xi.) Paints and Varnishes | (xxiv.) Miscellaneous |
| (xii.) Stones and Minerals used industrially | (xxv.) Excise. |
| (xiii.) Specie | |

1. The Commonwealth Statistician translated the necessary nosological classification, and it was published early in 1907.

2. Sources of Information.—(i.) *State Statistical Bureaux.* The State Statistical Bureaux now collect and arrange such information as they supply, under a common method, and according to uniform categories. The State Bureaux, therefore, have a double function, viz., they collect—(a) for their immediate requirements as States, and (b) as integral parts of the Commonwealth. The collections are made—(i.) by the police, (ii.) by special collectors, (iii.) by direct demand for returns, and (iv.) by compilation from official departmental reports.

(ii.) *Commonwealth and State Departments.* All statistical compilations of Commonwealth and State Departments are forwarded as soon as published, and occasionally in manuscript prior to publication, to the “Commonwealth Bureau of Census and Statistics,” for the purpose of facilitating official statistical compilation on behalf of the Commonwealth. This matter is more fully referred to in § 2, hereinafter, *q.v.*

(iii.) *Scientific and Technical Experts.* The services of scientific and technical experts are requisitioned where necessary, so that the whole of the information published under the auspices of the Commonwealth will be as authoritative and accurate as it is possible to make it.

(iv.) *Authority conferred on State Statisticians.* Where their Governments have formally entered into the necessary arrangements, the State Statisticians have been duly constituted as officers under the Commonwealth Census and Statistics Act.

(v.) *Supply of Information to the Commonwealth Statistician.* The Census and Statistics Act enacts, under penalty, that when persons are required by the Commonwealth Statistician so to do, they shall furnish him with information in any matters relating to population, vital, social, and industrial affairs; relating to employment and non-employment; to imports and exports, both oversea and interstate; to postal and telegraphic matters; to factories, mines, and any other productive industries, including agricultural, horticultural, viticultural, dairying, and pastoral; to banking, insurance, and finance; to railways, tramways, shipping, and transport generally; to land tenure, and occupancy generally; as well as to any additional matters which may be prescribed by regulation. Apart from rendering returns on the proper form, every person is required to answer all questions asked him by the Statistician or other officer authorised by the Statistician, in regard to any branch of statistics required by the Act to be collected. In order to facilitate inquiries “the Statistician or any officer authorised in writing by him may, at any time during working hours, enter any factory, mine, workshop, or place where persons are employed, and may inspect any part of it, and all plant and machinery used in connection with it, and may make such inquiries as are necessary” for the requisite information, and penalties are prescribed for hindering the Statistician or his authorised officers in the execution of their duty.

3. Maintenance of Secrecy.—It is desirable that it should be publicly recognised that accurate information supplied to a statistical office under promise of secrecy can never, under any circumstances, be used against the individual supplying it, and under no circumstances whatever will the Statistician disclose to any authority the affairs of individuals or of individual businesses, or of small groups of businesses, where, through inference, the affairs of an individual business would be virtually disclosed. In this connection it may be pointed out that the following resolutions of the 1906 Conference of Statisticians have been accepted by the Commonwealth and State Governments, viz.:—

- (i.) That in conformity with statistical practice, and for the purpose of engendering the necessary confidence in the minds of informants as to the strictly impersonal nature of statistical inquiries, and of thus securing increased readiness on their part to supply correct information, through which alone statistical accuracy is attainable, it is desirable that the details of the statistics of production should in no case be so published as to reveal the operations of individual establishments.

- (ii.) That it is further desirable that information obtained under promise of secrecy, express or implied, should not, under any circumstances be divulged.

A statistical office is, in respect of the affairs of individuals, and of individual businesses, an office in which absolute secrecy is maintained. Its inquiries are invariably impersonal, and it should be publicly known that no other Government department, as, for example, Customs, Excise, or Taxation, either land or income, can, under any circumstances whatever, make use of the statistical departments in order to acquire detailed information otherwise unavailable. All persons may therefore feel assured that they may render correct information without regard to any possible ulterior consequences.

4. **Accuracy Essential.**—It is needless to add that it is important that statistical information should be perfectly accurate, and any person who knowingly makes, on any form or document filled up or supplied, or in answer to any question asked him under the authority of the Census and Statistics Act, any statement which is untrue in any material particular, is liable to a penalty of £50. It is regrettable that census and other statistical results contain intrinsic evidence of deliberate misstatements. For example, the statement of age in census papers is often erroneous, probably, amongst other reasons, because it is not recognised that accurate data are essential for the preparation of the valuable tables necessary for forming judgments in various matters, for example, deducing the probability of life for both sexes at each age, or for determining the premium payments which a safe life insurance policy ought to require.

§ 2. Statistical Publications of Australia.

The official statistical publications of Australia may be divided bibliographically into two main divisions, viz.:—(1) Commonwealth publications dealing both individually and collectively with the several States of the Commonwealth, and (2) State publications dealing with individual States only. Besides these there are a large number of publications issued regularly, which, though not wholly statistical, necessarily contain a considerable amount of statistical information. These are included in the lists given hereunder.

1. **Commonwealth Publications.**—Commonwealth publications may be grouped under two heads, viz.:—(i.) Publications issued by the Commonwealth Statistician, and (ii.) departmental reports and papers.

(i.) *Publications Issued by the Commonwealth Statistician.* The following is a list of statistical publications issued from the Commonwealth Bureau of Census and Statistics since its inauguration and up to 30th June, 1908:—

Finance; Bulletin No. 1, 1901 to 1907.

Population and Vital Statistics; Bulletin No. 1, Population, 1901 to 1906.

Population and Vital Statistics; Bulletin No. 2, Commonwealth Demography, 1901 to 1906.

Population and Vital Statistics; Bulletins Nos. 3 to 5, issued quarterly, commencing quarter ended 31st March, 1907.

Production; Bulletin No. 1, 1901 to 1906.

Shipping and Oversea Migration for 1906.

Trade, Customs, and Excise Revenue for 1906; Parts I. and II.

Trade, Shipping, and Oversea Migration; Bulletins Nos. 1 to 13, issued monthly, commencing January, 1907.

Transport and Communication; Bulletin No. 1, 1901 to 1906.

Year Book of the Commonwealth; No. 1, 1901 to 1907.

(ii.) *Commonwealth Departmental Reports and Papers.* The following official reports and papers containing statistical matter have been issued since the inauguration of the Commonwealth:—

British New Guinea, Reports for 1904-5 and 1905-6.

Budget, 1901-2 to 1907-8.

Commonwealth Meteorologist. Climate and Meteorology of Australia; Bulletin No. 1.

Contract Immigrants Act 1905 and Immigration Restriction Acts 1901-5; Returns for Years 1902 to 1907.

Director of Naval Forces; Report for 1906.

Electoral Statistics of Commonwealth Elections; 1903 and 1906.

Estimates; 1901-2 to 1907-8.

Inspector-General of Military Forces; Reports, 1905 to 1907.

Military Board; Reports, 1905 and 1906.

Naturalisation Act 1903; Returns.

Patent Statistics; 1904 to 1907.

Public Service Commissioner; Reports, 1901-4 and 1905, and Public Service Lists, 1903 to 1907.

Representation Act 1905; Returns.

Trade and Customs Returns, 1903 to 1905; compiled by the New South Wales Government Statistician for the Minister for Customs.

Treasurer's Statements and Reports of Auditor-General, 1901-2 to 1906-7.

Treasury Statements of Receipts and Expenditure, issued quarterly in the *Commonwealth Gazette*.

2. State Publications.—The chief statistical publications of each State issued since Federation may be most conveniently grouped under the following heads, viz.:—(a) Publications issued by the Government Statist, (b) departmental reports and papers, and (c) reports and statements of local and public bodies. These are set out hereunder for each State:—

(i. **New South Wales.**—(a) *Publications by Government Statistician:*—

The Wealth and Progress of New South Wales, 1900-1.

The Seven Colonies of Australasia, 1901-2.

A Statistical Account of Australia and New Zealand, 1902-3, 1903-4.

The Official Year Book of New South Wales, 1904-5, 1905-6.

Six States of Australia and New Zealand (annual statistics), 1901 to 1905.

Monthly Statistical Bulletin, 1905 to 1908.

Statistical Registers, 1901 to 1907.

Census of New South Wales, 1901.

Vital Statistics, 1901 to 1907.

Agricultural and Live-stock Statistics, 1901 to 1907.

Statistical View of the Progress of New South Wales during 50 years, 1856 to 1906.

(b) *Departmental Papers:*—

Annual Reports of—

Australian Museum

Board of Public Health.

Chief Medical Officer

Commissioner of Railways

Comptroller-General of Prisons

Director of Botanical Gardens and Domains

Department of Agriculture

Department of Crown Lands

Department of Mines and Agriculture

Department of Police

Department of Public Works

Fisheries Board

Forestries Branch

Government Savings Bank

Inspector-General of Insane

Labour Commissioners

Minister of Public Instruction

National Art Gallery

Pharmacy Board

Public Library

| | |
|---|--|
| Public Service Board | Superintendent of Carpenterian Reformatory |
| Registrar of Friendly Societies, Building Societies, and Trade Unions | University of Sydney |
| State Children's Relief Board | Western Land Board. |

The Estimates.

Public Accounts and Report of the Auditor-General.

(c) *Reports and Statements of Local Bodies* :—

| | |
|---|-------------------------------------|
| Hunter District Water Supply and Sewerage Board | Sydney Harbour Trust |
| Metrop'lit'n Bd. of Water Supply & Sewerage | Town Clerk of the City of Sydney |
| | Annual Statements of Municipalities |

(ii.) **Victoria.**—(a) *Publications by the Government Statist* :—

Statistical Registers, 1901 to 1907.

The Victorian Year Books, 1902 to 1906.

Quarterly Statistical Abstracts, 1904 to 1908.

Statistics of Manufactories, Works, etc., 1901 to 1906.

Australasian Statistics, 1901-2, with Summaries for Previous Years.

The First Fifty Years of Responsible Government in Victoria, 1856 to 1906.

(b) *Departmental Papers* :—

Accounts of the Trustees of Agricultural Colleges and the Council of Agricultural Education.

Annual Reports of—

| | |
|---|---|
| Actuary for Friendly Societies on Trade Unions | Inspector-General of Penal Establishments and Gaols |
| Board for the Protection of Aborigines | Inspector-General of Savings Banks |
| Board of Public Health | Lands Purchase and Management Board |
| Chief Inspector of Explosives | Marine Board of Victoria |
| Commissioner of Crown Lands and Survey | Minister of Public Instruction |
| Conservator of Forests | Public Service Commissioner |
| Council of Judges | Registrar of Friendly Societies |
| Department of Agriculture | Railway Commissioners |
| Government Astronomer | Secretary for Mines |
| Inspector of Factories, Workrooms, and Shops | State Rivers and Water Supply Commission |
| Inspector-General of the Insane | Trustees of the Public Library, Museums, and National Gallery |
| Inspector of Neglected Children and Reformatory Schools | Vice-Chancellor of Melbourne University. |

The Budget.

Returns under the Banks and Currency Act 1890, the Companies Act 1890, and the Electric Light and Power Act 1896.

Statement of Expenditure under the Constitution Statute.

The Estimates.

Treasurer's Statement and Report of the Auditor-General.

(c) *Reports of Local Bodies* :—

| | |
|--|--|
| Annual Reports of the Melbourne Harbour Trust Commission | Statement of Accounts of the Melbourne and Metropolitan Board of Works |
| Annual Reports of the Fire Brigades Board | Annual Statements of Municipal and Shire Councils. |

(iii.) **Queensland.**—(a) *Publications by Government Statistician* :—

The Queensland Official Year Book, 1901.

The Census of 1901.

A.B.C. of Queensland Statistics, 1905 to 1907.

Statistical Registers, 1901 to 1907.

Stock List, 1901 to 1907.

Reports on Agricultural and Pastoral Statistics, on the Sugar Crops, on Vital Statistics, on the Wheat Crop, and on Live Stock.

(b) *Departmental Papers* :—

Annual Reports of the—

Agent-General

Auditor-General under the Supreme Court

Funds Act 1895

Auditor-General under the Queensland

National Bank Act 1896

Benevolent Asylums

Brisbane Board of Waterworks

Bureau of Sugar Experiment Stations

Chief Protector of Aborigines

Chief Inspector of Factories and Shops

Commissioner for Public Health

Commissioner of Income Tax

Commissioner of Police

Commissioner for Railways

Comptroller-General of Prisons

Curator of Intestate Estates

Department of Agriculture

Department of Public Works

Department of Public Lands

Director of Labour

Director of Forests

Engineer for Harbours and Rivers

Hydraulic Engineer on Water Supply

Immigration Agent

Inspector of Orphanages

Inspector of Hospitals for the Insane

Manager of the Government Savings Bank

Medical Officers of Hospitals

Marine Department

Official Trustees in Insolvency

Pacific Island Immigration

Parliamentary Committees

Police Investment Board

Public Service Board

Registrar of Friendly Societies, Building

Societies, and Trade Unions

Secretary for Public Instruction

Trustees of the Public Library

Trustees of the National Art Gallery

Trustees of the Agricultural Bank

Under-Secretary for Mines.

The Estimates.

Reports of the Auditor-General.

Treasurer's Financial Statement.

(c) *Reports and Statements of Local Bodies.*

(iv.) **South Australia.**—(a) *Publications by the Under-Secretary and Government Statistician* :—

Statistical Registers, 1901 to 1907.

The Census of 1901.

Annual Reports on Agricultural and Live-stock Statistics.

(a) *Departmental Papers* :—

Annual Reports of the—

Actuary on Friendly Societies, (1900-1904).

Agent-General

Audit-Commissioner

Chief Inspector of Stock

Commissioner of Police

Commissioner of Railways

Commissioners of the National Park

Conservator of Forests

Department of Agriculture

Department of Public Works

Destitute Board

Gaols and Prisons

Government Astronomer

Government Resident of Northern Territory

Governors of the Public Library, Museum, and Art Gallery

Hospital for the Insane

Inspector of Factories

Inspector of Fisheries

Marine Board

Minister for Education

Registrar of Births, Deaths, and Marriages

State Children's Council

Surveyor-General

Trustees of the Savings Bank.

The Estimates.

Financial Statement of the Treasurer.

(c) *Reports and Statements of Local Bodies* :—

Reports of Hospitals.
Schools of Mines and Industries.

(v.) **Western Australia.**—(a) *Publications by Government Statistician* :—

The Census of 1901.
Statistical Registers, 1901 to 1907.
Monthly Statistical Abstracts, 1901 to 1908.
Year Books of Western Australia, 1900-03, 1902-4, 1905 Part).
Quarterly Reports on Population and Vital Statistics.
Crop and Live Stock Returns.

(b) *Departmental Papers* :—

Annual Reports of the—

| | |
|--|---|
| Aborigines Department | Government Savings Bank |
| Agent-General | Government Labour Bureau |
| Agricultural Bank | Harbour and Light Department |
| Art Galleries | Inspector of Prisons |
| Chief Inspector of Factories | Inspector-General of Insane |
| Chief Inspector of Explosives | Land Titles Department |
| Chief Inspector of Fisheries | Museum and Art Gallery |
| Commissioner of Police | Public Library |
| Commissioner of Railways | Public Service Commissioner |
| Customs Collector and Registrar of Shipping | Registrar of Friendly Societies |
| Department of Agriculture | Registrar of Friendly Societies in connection with Trade Unions |
| Department of Public Health | Stock Department |
| Department of Public Works | Superintendent of Charities and Inspector of Industrial and Reformatory Schools. |
| Department of Lands and Surveys | Surveyor-General |
| Department of Mines | The Industrial Conciliation and Arbitration Act, 1902, by Registrar of Friendly Societies |
| Department of Woods and Forests | |
| Education Department | |
| Government Analyst | |
| Government Astronomer | |
| | |
| The Estimates. | |
| Public Accounts and Report of the Auditor-General. | |

(c) *Reports and Statements of Local Bodies* :—

| | |
|--|---|
| Cemetery Boards | Metropolitan Waterworks Board |
| Fire Brigades | Municipalities, Road Boards, and Boards of Health |
| Fremantle Harbour Trust Commissioners | Public Hospitals. |
| Fremantle Municipal Tramways and Electric Lighting Board | Waterworks Boards (country) |

(vi.) **Tasmania.** (a) *Publications by Government Statistician and Registrar-General* :—

The Census of 1901.
Statistical Registers, 1901 to 1907.
Reports on Vital Statistics and Migration, 1901 to 1907.
Reports on Agricultural and Live Stock Statistics, 1901 to 1907.
Statistical Summaries, 1901 to 1907.

(b) Departmental Papers:—

Annual Reports of the—

| | |
|--|--|
| Agent-General | Hobart and Launceston Gaols |
| Charitable Grants Department | Inspector of Machinery |
| Chief Inspector of Stock | Lands and Survey Department |
| Commissioner of Taxes | Museum and Botanical Gardens |
| Department of Agriculture | Police Department |
| Department of Education | Public Library |
| Department of Mines | Public Service Board |
| Department of Neglected Children | Recorder of Titles |
| Department of Public Health | Registrar of Friendly Societies and Trade Unions |
| Engineer-in-Chief of Public Works | Savings Bank |
| Explosives Department | Secretary for Mines |
| Fire Brigade Board | University of Tasmania. |
| General Manager of Government Railways | |
| The Budget. | |
| The Estimates—Finance 1906-7. | |
| Public Debts Sinking Fund. | |
| Report of the Auditor-General. | |
| Financial Statement of the Treasurer. | |

(c) Reports and Statements of Local Bodies:—

| | |
|--------------------|--------------------------|
| Country Libraries | Life Assurance Societies |
| Harbour Trusts | Marine Boards |
| Hospitals | Municipalities. |
| Industrial Schools | |

SECTION II.

DISCOVERY, COLONISATION, AND FEDERATION OF
AUSTRALIA.

§ 1. Early Knowledge of Australia.

1. **Introduction.**—It is proposed to give here only a brief summary of the more important facts relating to the early history of Australian discovery. A more complete account of this subject, together with bibliographical references thereto, may be found in Year Book No. 1 (pp. 44 to 51).

2. **Early Tradition.**—It would appear that there was an early Chaldean tradition as to the existence of an Austral land to the south of India. Rumours to that effect in course of time found their way to Europe, and were probably spread by voyagers from Indian seas, more especially by the Greek soldiers who accompanied Alexander the Great [B.C. 356-323] to India. References to this *Terra Australis* are found in the works of Ælianus [A.D. 205-234], Manilius [probably a contemporary of Augustus or Tiberius Cæsar], and Ptolemy [A.D. 107-161]. The precise period at which Australia was first discovered by Europeans is not known. In some of the maps of the first period of the Middle Ages there is evidence which might warrant the supposition of the knowledge of the existence of a *Terra Australis*, while a less indefinite idea of the Austral land appears in the maps and manuscripts of the fourteenth and fifteenth centuries.

3. **Discovery of Australia.**—The Venetian traveller, Marco Polo [1254-1324], and Nicolo de' Conti [circa 1440], refer to a land called *Java Major*, which there is little doubt was Australia. On the Mappamundi in the British Museum, of not later date than 1489, there is a coast-line which can be none other than the west coast of Australia. Martin Behaim's globe, the oldest known globe extant, constructed in 1492, also shews part of Australia's coast-line, and a wooden globe in Paris bears an inscription to the effect that the *Terra Australis* was discovered in 1499. It is possible, however, that this term was also applied to the regions now known as Terra del Fuego, so that but little weight can be attached to this reference.

In the Dauphin map [about 1530-1536] Australia is referred to as *Jave la Grande*.

The last decade of the fifteenth century and the commencement of the sixteenth saw numerous expeditions equipped in the ports of Spain and Portugal for the purpose of exploiting the new world. The Portuguese rounded Cape Horn and pushed eastward. The Spaniards, relying on the scientific conclusion that the world was spherical, attempted to get to the east by deliberately starting out west, Magalhaens by so doing reaching the Philippine Islands in 1581. It would appear, however, that for some reason all definite information regarding the *Terra Australis* was suppressed.

It may be mentioned that in 1606, de Quiros, on reaching Espiritu Santo, thought that he had come to this great land of the South, and therefore named the island *La Australia del Espiritu Santo*. De Torres, who was with him, passed through the straits which now bear his name, and proceeded to the Philippine Islands, thus marking the close of Spanish activity in the work of Australian discovery.

With the decline of Portuguese and Spanish naval supremacy came the opportunity of the Dutch for discovery. Cornelius Wytfliet's map, of which there was an English edition, published at Louvain in 1597, indicates roughly the eastern and western coasts of Australia, as well as the Gulf of Carpentaria. The following passage, which occurs in the book just referred to, is perhaps the first distinct account that we have of Australia:—"The *Australis Terra* is the most southern of all lands. It is separated from New Guinea by a narrow strait. Its shores are hitherto but little known, since, after one voyage and another, that route has been deserted and seldom is the country visited, unless when sailors are driven there by storms. The *Australis Terra* begins at one or two degrees from the equator, and is maintained by some to be so great an extent that, if it were thoroughly explored, it would be regarded as a fifth part of the world."

The Dutch East India Company, established in 1602, sent the *Duyfken* from Bantam to explore the islands of New Guinea, and the commander of that vessel made the first authentic discovery of the great South Land, the region he visited being a little to the south west of Cape York. The country was found for the most part desert; some of the crew were murdered by the blacks, and from want of provisions the expedition was obliged to turn back. Dirck Hartog, in the *Eendracht* in 1616, sailed along a considerable part of the west coast. The Dutch vessels, *Pera* and *Arnhem*, in 1623, discovered Arnhem Land, the peninsula on the western side of the Gulf of Carpentaria, which was so named in compliment to Peter Carpenter, Governor to the Dutch East India Company.

English enterprise was early shewn, viz., by Sir William Courteen petitioning James I., in 1624, for the privilege of erecting colonies in the *Terra Australis*, a petition which probably was not granted. In 1627, Pieter Nuyts, commander of the *Gulde Zeepaert*, sailed from Cape Leeuwin and sighted the whole shore of the Great Australian Bight. In 1628, De Witt, commander of the *Vianen*, discovered land on the north-west, viz., in about latitude 21° S. The *Batavia*, commanded by Francis Pelsart, was wrecked on the western coast of Australia in 1629. Pelsart was the first to carry to Europe an authentic account of the west coast of Australia, which, however, he described in the most unfavourable terms. His journal contains what is probably the first description of the kangaroo given by any white explorer. Gerrit Pool, commanding the yachts *Amsterdam* and *Wesel*, visited the Gulf of Carpentaria in 1636.

Abel Janszoon Tasman, in command of two vessels, the *Heemskirk* and *Zeehaen*, set out in 1642 to ascertain the extent of the great southern continent. He named Van Diemen's Land, imagining it to be part of Australia proper, and sailing north-easterly discovered New Zealand. In his second voyage in 1644, Tasman visited the northern coasts of Australia, but made no discoveries of importance. The period of Dutch discoveries may be said to have ended with Tasman's second voyage, and, with the decline of Dutch maritime power, their interest in Australian discovery vanished. It may, however, be pointed out, that William de Vlamingh landed at the mouth of the Swan River at the end of 1696, and in 1705 a Dutch exploring squadron under Martin van Delft visited and named parts of the north-west coast of Australia.

4. Discoveries by the English.—The north-western shores of Australia were first visited by William Dampier, in the *Cygnets*, in 1688. In describing the country Dampier stated that he was certain that it joined neither Asia, Africa, nor America. In 1699 he again visited Australia, in command of H.M.S. *Roebuck*, and on his return to England published an account in which a description is given of trees, flowers, birds, and reptiles observed, and of encounters with natives.

It was a question at the end of the seventeenth century whether Tasmania and New Zealand were parts of Australia, or whether they were separated from it, but themselves formed part of a great Antarctic Continent. Captain James Cook's first voyage, though primarily undertaken for the purpose of observing the transit of Venus from Otaheite, had also for its objective to ascertain whether the unexplored part of the southern hemisphere be only an immense mass of water or contain another continent. In command of H.M.S. *Endeavour*, a barque of 370 tons burthen, carrying about eighty-five persons, and accompanied by Sir Joseph Banks, Dr. Solander the naturalist, Green the astronomer,

draughtsmen, and servants, Cook, after observing the transit of Venus at Otaheite, turned towards New Zealand, sighting that land on the 8th October, 1769,¹ in the neighbourhood of Poverty Bay. Circumnavigating the North and South Islands, he proved that New Zealand was connected neither with the supposed Antarctic continent nor with Australia, and took formal possession thereof in the name of the British Crown. On the 20th of April, 1770,¹ at 6 a.m., Cook sighted the Australian mainland at a place he called Point Hicks, naming it after his first-lieutenant, who first saw it. Coasting northwards, Botany Bay was discovered on the 29th April, 1770.¹ The *Endeavour* dropped anchor, and Cook landed on the following day. On the 2nd May, 1770,¹ a seaman named Sutherland died and was taken ashore to be buried; he was probably the first British subject buried on Australian soil. Cook sailed along the coast in a northerly direction for nearly 1300 miles, until the 12th June, 1770,¹ when the *Endeavour* was seriously damaged by striking a coral reef in the vicinity of Trinity Bay. Repairs occupied nearly two months, and the *Endeavour* then again set her course to the north, sailing through Torres Straits and anchoring in the Downs on the 14th June, 1771.¹ In 1772 Cook was put in command of the ships *Resolution* and *Adventure*, with a view of ascertaining whether a great southern continent existed, and having satisfied himself that, even if it did, it lay so far to the south as to be useless for trade and settlement, he returned to England in 1774. Cook's last voyage was undertaken in 1776, and he met his death on the 14th February, 1779, by which date practically the whole coast of Australia had been explored. The only remaining discovery of importance to be made was the existence of a channel between Tasmania and Australia. This was discovered by Flinders and Bass in 1798.

The most complete examination of the early history of discovery in the region of Australia is the "Critical, Documentary, and Historical Investigation concerning the Priority of Discovery in Australasia by Europeans before the Arrival of Lieut. James Cook in the *Endeavour* in the year 1770," by George Collingridge, Esquire. 4to, pp. 376, + xv. Sydney, 1895.

§ 2. The Taking Possession of Australia.

1. **Annexation of Eastern Part of Australia.**—Although as far back as 1503 a French navigator named J. Binot Paulmier, Sieur de Gonneville, claimed to have landed on the west coast of Australia, and similar claims were put forward by the French and Portuguese in respect of alleged discoveries in 1531 and 1601 by Guillaume le Testre and Manoel Godinho de Eredia respectively, it was not until the 23rd August, 1770, that the history of Australia was brought into political connection with western civilisation. It was on that date that Captain Cook took possession "of the whole eastern coast, from lat. 38° to this place, lat. 10½° S., in right of His Majesty King George the Third." Cook, however, proclaimed British sovereignty only over what are now the eastern parts of New South Wales and Queensland, and formal possession, on behalf of the British Crown, of

1. *Correct dates of Captain Cook's Log.* After the 180° meridian of longitude had been passed, and owing to no allowance having been made for westing, the various log-books of this voyage are in error one day as to dates. Thus those in Captain Cook's private log, in his official log, in Gunner Forwood's, Pickersgill's, Clerke's, Wilkinson's, and Bootie's Journals, in the Palliser copy of Cook's log, and in Wharton's publication, all need correction by adding one day to the date given: that is, the 19th should read the 20th, etc. The anonymous log, doubtless Green's, is erroneously supposed by the author of the "Historical Records of New South Wales," to have been corrected for westing, see the foot-note on page 269 therein. The facts are as follows:—What was known as "ship time" began a day earlier than under the present system of astronomical reckoning, that is to say, Jan. 1 began at noon Dec. 31. The "Astronomical day," however, was a whole day later than the *ship's day*: thus what would be assigned to the 24th in Cook's Journal would appear in Green's Journal as the 23rd. (See "Captain Cook's Journal", 1768-71, by Captain W. J. L. Wharton, R.N., F.R.S., London, 1893, preface pp. xii., xiii.) There can be no doubt as to the need of the correction in the dates, since on reaching Batavia the log reads:—"Wednesday 10th, according to our reckoning, but by the people here Thursday 11th." (Op. Cit., pp. 352-3.) Attention was drawn to this matter by Mr. P. de Jersey Grut in the "Argus," Melbourne, May 15, 18 and 22, 1907.

the whole of the eastern part of the Australian Continent and Tasmania was not taken until the 26th January, 1788. It was on this last date that Captain Phillip's commission, first issued to him on the 12th October, 1786, and amplified on the 2nd April, 1787, was read to the people whom he had brought with him in the "First Fleet."

A full historical account of the period referred to may be found in the "Historical Records of New South Wales," vol. I., parts 1 and 2.

2. Original Extent of New South Wales.—The commission appointed Phillip "Captain-General and Governor-in-Chief in and over our territory called New South Wales, extending from the Northern Cape or extremity of the coast called Cape York, in the latitude of ten degrees thirty-seven minutes south, to the southern extremity of the said territory of New South Wales or South Cape, in the latitude of forty-three degrees thirty-nine minutes south, and of all the country inland westward as far as the one hundred and thirty-fifth degree of east longitude reckoning from the meridian of Greenwich, including all the islands adjacent in the Pacific Ocean within the latitudes aforesaid of ten degrees thirty-seven minutes south and forty-three degrees thirty-nine minutes south."

Although in November, 1769, Captain Cook had taken possession of the North Island of New Zealand, and in January, 1770; also of the South Island, it is a matter of doubt whether, at the time when Captain Phillip's commission was drawn up, New Zealand was considered as one of the "islands adjacent in the Pacific Ocean." The facts that under the Supreme Court Act (Imperial) of 1823 British residents in New Zealand were brought under the jurisdiction of the court at Sydney, while in 1839 there was a proposal on the part of the British Government to appoint a Consul in New Zealand, would leave this an open question, as nothing more than extra-territorial jurisdiction may have been intended. Various hoistings of flags notwithstanding, New Zealand does not appear to have unequivocally become British territory until 1840. In that year, on the 29th January, Captain Hobson arrived at the Bay of Islands. On the following day he read the commission, which extended the boundaries of the colony of New South Wales so as to embrace and comprehend the Islands of New Zealand. On the 5th February the Treaty of Waitangi, made with the native chiefs, was signed. Finally, on the 21st May, British sovereignty over the Islands of New Zealand was explicitly proclaimed. From that date until the 3rd May, 1841, New Zealand was indubitably a dependency of New South Wales.

3. Annexation of Western Australia.—In June, 1825, Lieut. - General Sir R. Darling, then Governor of New South Wales, sent Major Lockyer, with a party numbering about 75, to found a settlement at King George III. Sound. The expedition sailed from Sydney on the 9th November, 1826, and landed at the Sound on the 25th December following and hoisted the British flag. On the 17th January, 1827, Captain Gilbert in H.M.S. *Success* was despatched from Sydney to re-victual the settlement. A party from the vessel explored the Swan River on the 8th March, and King George's Sound was reached on the 2nd April. On the 2nd May, 1829, Captain Fremantle hoisted the British flag on the south head of the Swan River, and took possession of "all that part of New Holland which is not included within the territory of New South Wales." Thus, before the middle of 1829 the whole territory, now known as the Commonwealth of Australia, had been constituted a dependency of the United Kingdom.

For a fuller account of the discovery and annexation of Western Australia reference may be made to the Western Australian Year Book, 1902-4, pp. 1 to 30.

§ 3. The Creation of the Several Colonies.

1. **New South Wales as Original Colony.**—From what has been said, the mainland of Australia was, in Governor Phillip's commission of 1786, originally as shewn on map No. 1, that is, it was divided by the 135th meridian of east longitude into two parts. The earliest colonists believed that Van Diemen's Land—the present State of Tasmania—was actually joined to the mainland, and it was not till 1798 that the contrary was known. In that year, by sailing through Bass Straits, Flinders proved that it was an island. The territory of New South Wales, as originally constituted, and of New Zealand, which may be included, although Cook's annexation was not properly given effect to until 1840, was thus :—

| | Square Miles. |
|---|---------------|
| Australia, east of 135° longitude east | 1,454,312 |
| Van Diemen's Land | 26,215 |
| New Zealand | 104,471 |
| Total | 1,584,998 |

The western part of Australia, not then annexed, comprised originally 1,494,054 square miles.

2. **Separation of Van Diemen's Land.**—In 1825, Van Diemen's Land, as Tasmania was then called, was politically separated from New South Wales, being constituted a separate colony on the 14th June of that year. This reduced the area of New South Wales and its territorial dependencies by 26,215 square miles, that is, to 1,558,783 square miles.

3. **Extension of New South Wales Westward.**—In 1827 the western or inland boundary of New South Wales was extended westward to the 129th meridian,¹ thus increasing its area by 518,134 square miles, and making it, including New Zealand and excluding Tasmania, 2,076,917 square miles, or excluding also New Zealand, 1,972,446 square miles.

4. **Western Australia constituted a Colony.**—The territory annexed by Captain Fremantle in 1829, viz., "all that part of New Holland which is not included within the territory of New South Wales," extended eastward to the 129th meridian, and comprised 975,920 square miles. The constitution of this area into the Colony of Western Australia, now one of the six States of the Commonwealth, was the consequence of Fremantle's act. By it the annexation of the whole of the Continent of Australia by the British Crown was completed. The Australian colonies at this time were as indicated in the following table, and illustrated by map No. 2:—

| Colony. | Date of Annexation. | Date of Creation. | Date of First Permanent Settlement. | Area. Square mile. |
|--|---------------------|-------------------|-------------------------------------|--------------------|
| New South Wales (including New Zealand) | 1770 | 1786 | 1788 | 2,076,917 |
| Van Diemen's Land | | 1825 | 1803 | 26,215 |
| Western Australia | 1829 | 1829. | 1829 | 975,920 |

5. **Creation of South Australia as a Province.**—On the 15th August, 1834, the Act 4 and 5 William IV., cap. 95, was passed, creating South Australia a "province," and on

¹ See "The Annotated Constitution of the Australian Commonwealth," by Quick and Garran, 1901, page 35.

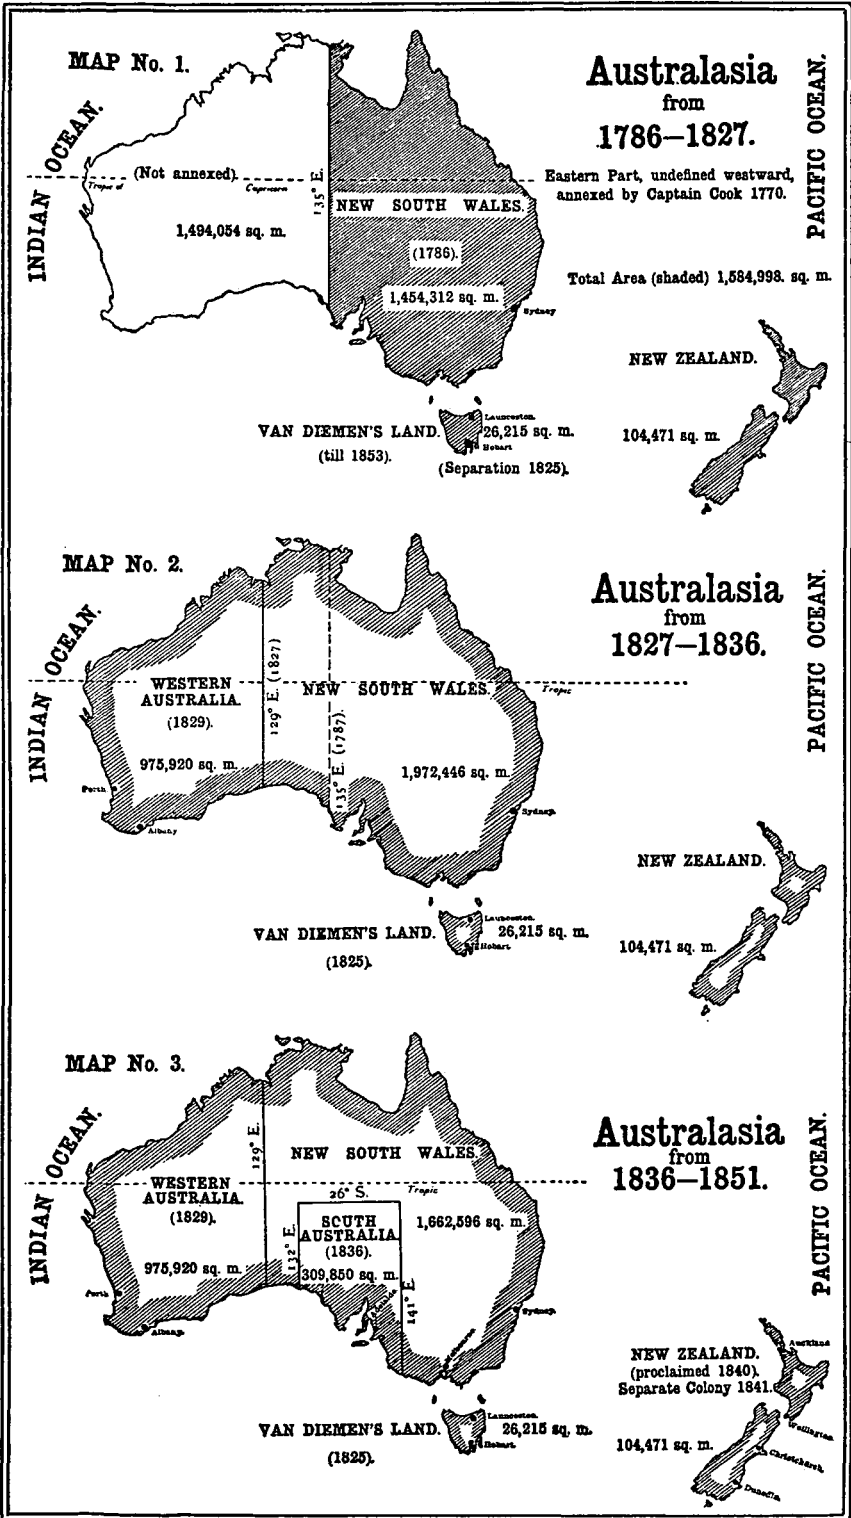

the 28th December, 1836, settlement took place. The new colony embraced 309,850 square miles of territory, which, lying south of the 26th parallel of south latitude, and between the 141st and 132nd meridians of east longitude, was up to that time included within the territory of New South Wales, as will be seen on reference to map No. 3. Thus the area of New South Wales and New Zealand was reduced to 1,767,067 square miles.

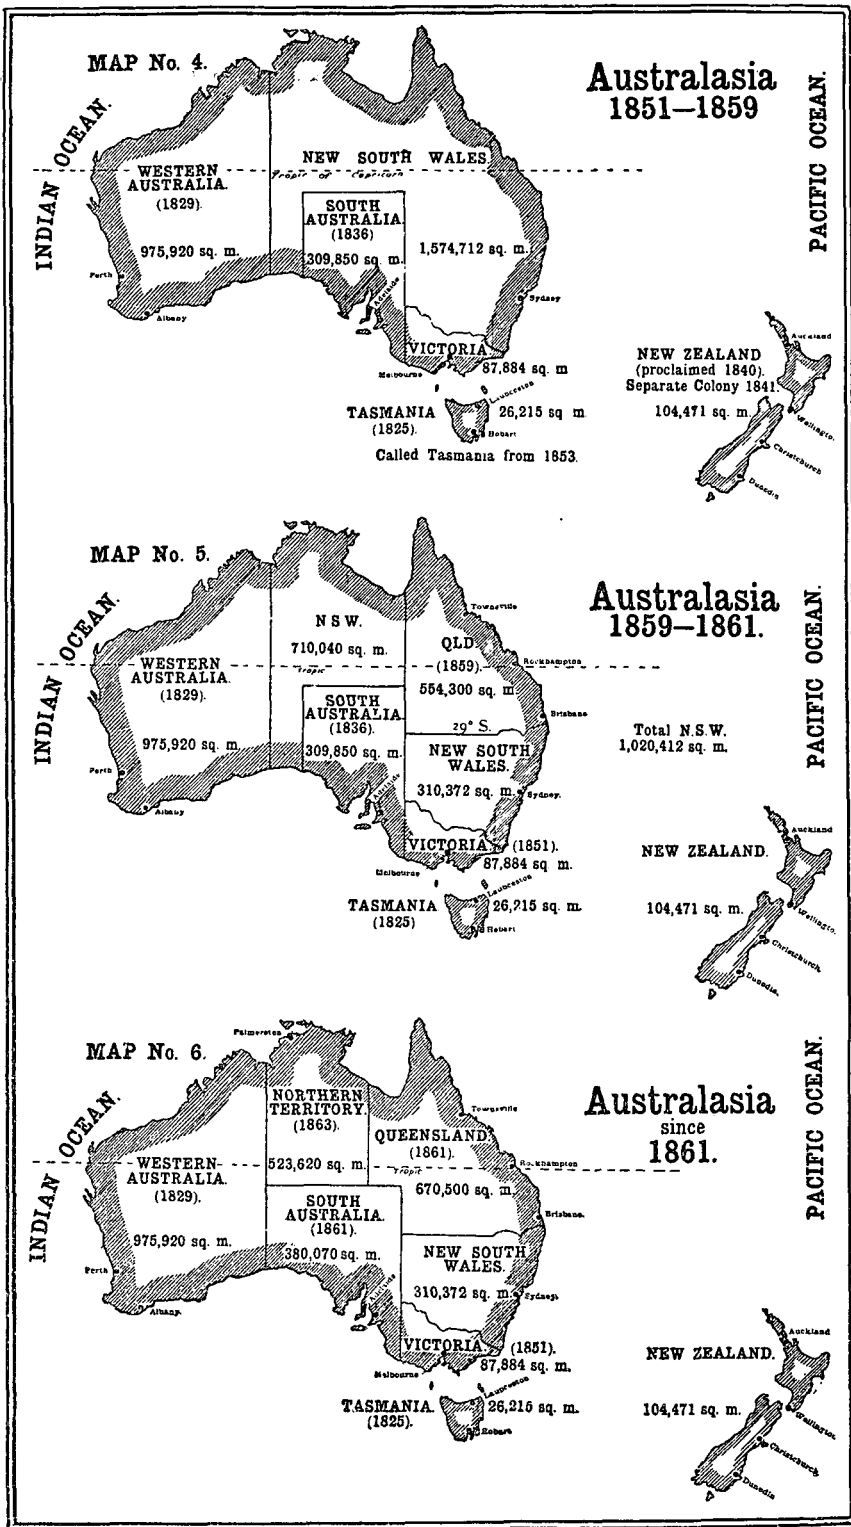

6. Separation of New Zealand.—New Zealand, nominally annexed by Captain Cook and formally declared by proclamation in 1840 as a dependency of New South Wales, was, by letters patent of the 16th November of that year, constituted a separate colony under the powers of the Act 3 and 4 Vic., cap. 62, of the 7th August, 1840. Proclamation of the separation was made on the 3rd May, 1841. The area of the colony is 104,471 square miles, and its position in reference to Australia is shewn on map No. 4. This separation reduced the political territory of New South Wales to 1,662,596 square miles. See map No. 3.

7. Separation of Victoria.—In 1851, what was known as the "Port Phillip District" of New South Wales, was constituted the Colony of Victoria, "bounded on the north and north-east by a straight line drawn from Cape Howe to the nearest source of the River Murray, and thence by the course of that river to the eastern boundary of the colony of South Australia." The area of the new colony is 87,884 square miles, and its separate existence took effect from the 1st July, 1851, upon the issuing of the writs for the first election of elective members of the Legislative Council. This reduced the territory of New South Wales to 1,574,712 square miles, as indicated on map No. 4.

8. Separation of Queensland.—In 1859 letters patent issued on the 6th June constituted what was then known as the Moreton Bay District of New South Wales a separate colony, under the name of Queensland. The territory originally comprised in the new colony was described in the letters patent as being so much of the colony of New South Wales as lies northward of a line commencing on the sea coast at Point Danger, in latitude about 28° 8' south, running westward along the Macpherson and Dividing Ranges and the Dumaresq River to the MacIntyre River, thence downward to the 29th parallel of south latitude, and following that parallel westerly to the 141st meridian of east longitude, which is the eastern boundary of South Australia, together with all the adjacent islands, their members, and appurtenances in the Pacific Ocean. In Year Book No. 1 it was stated that the western boundary of the new colony was defined by the letters patent of the 6th June, 1859, as being "the 141st meridian of longitude from the 29th to the 26th parallel, and thence the 138th meridian north to the Gulf of Carpentaria." Further investigations have, however, shewn that this statement is incorrect, and that the western boundary was not specifically defined at all. The western limits of the new colony were, however, defined by inference from the fact that its area comprised the territory to the northward of a line extending as far west as the 141st meridian of east longitude, *i.e.*, the 141st meridian was the western boundary. The area of the new colony thus constituted was 554,300 square miles. By this separation the remaining territory of New South Wales was divided into two parts, *viz.*, one of 310,372 square miles, the present State, and another of 710,040 square miles, of which 116,200 square miles is now a part of Queensland, 523,620 square miles is the Northern Territory, and 70,220 square miles is now a part of South Australia. These facts are shewn on map No. 5.

9. No further Creation of Colonies.—Since the separation of Queensland, no other creation of colonies has taken place in Australia, though the boundaries of New South Wales, Queensland, and South Australia were later altered. The dates of foundation of the Australasian colonies, and their areas at the close of 1859, were therefore as hereunder:—

| Colony. | Date of Annexation. | Date of Creation. | Date of First Permanent Settlement. | Area. Square Miles. |
|--------------------------|---------------------|-------------------|-------------------------------------|----------------------|
| New South Wales | 1770 | 1786 | 1788 | 904,212 |
| Tasmania | 1770 | 1825 | 1803 | 26,215 |
| South Australia | 1770 | 1834 | 1836 | 309,850 |
| Victoria | 1770 | 1851 | 1834 | 87,884 |
| Queensland | 1770 | 1859 | 1824 | 670,500 |
| Western Australia | 1829 | 1829 | 1829 | 975,920 |
| New Zealand | 1840 | 1841 | 1814 ? | 104,471 ¹ |

1. By proclamation dated 10th June, 1901, the area of the Dominion was increased by 280 square miles, making it now 104,751 square miles, by the inclusion of the Cook Group and other islands.

10. **The Changing Boundaries of the Colonies.**—When, on the 15th August, 1834, the Imperial Government constituted the province of South Australia, there lay between its western boundary and the eastern boundary of Western Australia (as proclaimed by Fremantle in 1829) a strip of country south of the 26th parallel of south latitude, and between the 132nd and 129th meridians of east longitude, legally included within the territory of New South Wales. The area of this territory, frequently but improperly referred to as “No Man’s Land,” has been calculated to cover approximately 70,220 square miles.¹ On the 10th October, 1861, by the authority of the Imperial Act 24 and 25 Vic., cap. 44, the western boundary of South Australia was extended so as to cover this strip, and to coincide with the eastern boundary of Western Australia—the 129th meridian. By letters patent dated the 13th March, 1861, forwarded by the Colonial Secretary to the Governor of Queensland on the 12th April, 1862, the area of Queensland was increased by the annexation of “so much of the colony of New South Wales as lies to the northward of the 26th parallel of south latitude, and between the 141st and 138th meridians of east longitude, together with all and every the adjacent islands, their members, and appurtenances, in the Gulf of Carpentaria.” The area of South Australia was therefore increased by 70,220 square miles, and became 380,070 square miles, while the area of Queensland, increased by 116,200 square miles, became 670,500 square miles. The territories of these two States thus became as represented in map No. 6. Nearly two years after this accession of territory, viz., on the 6th July, 1863, the Northern Territory, containing 523,620 square miles—also formerly a part of New South Wales²—was, by letters patent, brought under the jurisdiction of South Australia, whose area was thus increased to 903,690 square miles; whilst that of New South Wales was diminished by these additions to South Australia, and by the separation of the colonies of New Zealand, Victoria and Queensland, till its area became only 310,372 square miles. The territories of Tasmania, Western Australia, and the three other separated colonies, with the exception of some minor islands added to Queensland, remain as originally fixed.³

11. **Australasia, 1863 to 1900.**—The immense area generally known as Australasia had thus, by 1863, been divided into seven distinct colonies, the areas of which are shewn below:—

From the 1st January, 1901, the colonies mentioned above, with the exception of New Zealand, have become federated under the name of the “Commonwealth of Australia,” the designation of “Colonies” being at the same time changed into that of “States.” The total area of the Commonwealth is, therefore, 2,974,581 square miles, or about equal

1. The calculation has been made in this Bureau. The area has usually been left unstated in references to the territory, but when approximations have been given the margin of error seems to have been somewhat large.

2. A military post had been formed on Melville Island in 1825. This was transferred about 1827 to Raffles Bay, and some years later to Port Essington. The settlement at Port Essington was like its predecessors, under the command of Sir Gordon Bremer, and was designed, in addition, as a harbour of refuge for distressed vessels. It was finally abandoned in 1849.

3. The facts and maps here given are in substantial though not in complete accordance with the illustrated statement shewing the subdivision of Australia between 1787 and 1863, issued by the Department of Lands, Sydney, 1904.

to the area of the United States of America, exclusive of Alaska, or to that of all Europe, less about one-third of Russia.

DATE OF CREATING THE SEVERAL COLONIES.

| Colony. | Year of Formation into Separate Colony. | Present Area in Square Miles. | Colony. | Year of Formation into Separate Colony. | Present Area in Square Miles. |
|--|---|-------------------------------|--------------------------------------|---|-------------------------------|
| New South Wales ... | 1786 | 310,372 | New Zealand ... | 1841 | 104,471 ¹ |
| Tasmania ... | 1825 | 26,215 | Victoria ... | 1851 | 87,884 |
| Western Australia ... | 1829 | 975,920 | Queensland ... | 1859 | 670,500 |
| South Australia (proper) ² | 1834 | 380,070 | Northern Territory ³ | 1863 | 523,620 |
| Commonwealth | | ... | 2,974,581 square miles. | | |
| Australasia ... | | ... | 3,079,052 square miles. ³ | | |

1. Now 104,751 square miles: increased 10th June, 1901.

2. South Australia with the Northern Territory is 903,690 square miles.

3. Now 3,079,332 square miles.

The evolution of the various States will be seen in the accompanying diagrams.

12. **British New Guinea or Papua.**—Under the administration of the Commonwealth, but not included in it, is British New Guinea or *Papua*, finally annexed by the British Government in 1884, and for a number of years administered by the Queensland Government but transferred to the Commonwealth by proclamation on the 1st September, 1906, under the authority of the Papua Act (Commonwealth) of 16th November, 1905. The area of Papua is about 90,540 square miles.

§ 4. The Exploration of Australia.¹

(A) Eastern Australia.

1. **Earliest Tours of Exploration, 1788 to 1791.**—When the first settlement was established at Sydney in 1788 practically nothing was known of the nature even of the immediate interior or the surrounding country. It was not long, however, before CAPTAIN PHILLIP and his officers took steps to investigate a considerable area of country in the immediate neighbourhood of the settlement. The first excursion undertaken by Phillip was on the 2nd March, 1788, when he went to Broken Bay, whence he returned after an absence of eight days. In April Phillip again started off on a tour of examination. Landing at Shell Cove, near the North Head of Port Jackson, he penetrated about fifteen miles from the coast, and obtained his first view of the inland mountains, the northernmost of which he named the Carmarthen Hills and the southernmost the Lansdowne Hills. A noticeable landmark between the north and south elevations of these hills he called Richmond Hill. Phillip was strongly impressed with the idea that these mountains must contain the source of a large river, in search of which he consequently set off on the 22nd April. His efforts, however, did not meet with success,

1. See "The Historical Records of New South Wales," Vols. I. to VII., edited by F. M. Bladen; Rusden's "History of Australia," Vols. I. to III.; "Explorers of Australia," by E. Favenc; Map of Australia shewing Routes of Exploration, published by the Department of Lands and Survey, Melbourne, May, 1888; Year Book of Western Australia, 1902-4.

and after pushing westward for thirty miles, when he came in sight of land which promised to be richly cultivable, he was obliged to turn back through want of provisions.

(i.) *Discovery of the Hawkesbury River.* In June, 1789, Phillip again turned his attention to the exploration of the country. In company with CAPTAIN HUNTER and some of his officers, he proceeded to Broken Bay, and there, after examining numerous branches of the harbour, he discovered a river which he named the Hawkesbury, and which he explored as far as the foot of the hill which he had previously named Richmond Hill, when it was found that the river divided into two branches (one known later as the Nepean, the other as the Grose). The distant mountains, over which hung a blue haze, were named the Blue Mountains.

(ii.) *Captain Tench's Discoveries.* During the same month—June, 1789—in which the Hawkesbury River was discovered, CAPTAIN WATKIN TENCH discovered the Nepean River. The next and last excursion undertaken by Phillip was in April, 1791, when, accompanied by Captain Tench and LIEUTENANT DAWES, he set out in a westerly direction and examined the country towards the foot of the Blue Mountains. In the following month Tench and Dawes ascertained definitely that the Nepean was a tributary of the Hawkesbury.

The names of PATERSON, JOHNSON, PALMER, and LAING are also associated with exploration on the Hawkesbury.

(iii.) *Discovery of the Hunter River.* Towards the end of the year 1797, LIEUTENANT J. SHORTLAND was sent on an expedition along the coast in a northerly direction from Port Jackson. He went as far north as Port Stephens, and on his return journey discovered and named the River Hunter.

2. French Voyages of Exploration, 1788 to 1802.—Towards the close of the 18th century the French, who were supposed to covet territory in Australia, sent out several exploring expeditions. While "the first fleet" was still in Botany Bay, two French vessels, the *Boussole* and the *Astrolabe*, which had been sent out on a voyage of discovery under the command of LA PÉROUSE, put in to refit. Shortly after his arrival at Botany, PÈRE LE RECEVEUR, the naturalist of the expedition, died, and was buried on the shore of the Bay, a monument marking his last resting-place. After a stay of two months La Pérouse sailed away, and nothing further was heard of his expedition until about fifty years later, when it was surmised that his ships had been wrecked at one of the islands in the neighbourhood of the New Hebrides. In 1792 the French Admiral D'ENTRECASTEAUX was in Australian waters with two ships, searching for La Pérouse. D'Entrecasteaux spent some time on the coast of Tasmania, and named several places. In 1800 the French Republic fitted out two ships, *Le Géographe* and *Le Naturaliste*, obtaining passports from the English Government recommending the commander, CAPTAIN BAUDIN, to the British authorities in New South Wales. The expedition, having examined parts of the coasts of Van Diemen's Land and of what is now Victoria, arrived in Port Jackson in 1802. Although there were various rumours afloat as to the intention of the French to establish a settlement in Australia, nothing came of them, and the expedition left Sydney in November, 1802. It was chiefly in consequence of these and of later rumours to the same effect that steps were taken by the British to form settlements at various places on the Australian coasts.

3. Bass and Flinders, 1796 to 1803.—In June, 1796, SURGEON BASS set out on an expedition to the Blue Mountains, and succeeded in ascending the highest point he could find, whence, however, he was able to see only other ranges of mountains. Foiled in his expedition to the mountains, Bass took to exploration by water. With FLINDERS he had previously, in 1795, undertaken a voyage in a boat 8 feet long, which they named the "Tom Thumb," their object being to discover a supposed river to the south of Sydney. The river turning out to be only an arm of the sea, which they named Port Hacking, they proceeded as far as the Tom Thumb Lagoon, in the Illawarra district, whence they returned to Sydney.

(i.) *Discovery of Bass Straits.* In 1797 Bass sailed in an open whaleboat, and examined the coast southward from Sydney, discovering the mouth of the Shoalhaven and the inlet to Twofold Bay. Passing round Cape Howe and Wilson's Promontory, he then explored an inlet which he named Western Port. Bass was then convinced of the existence of the straits which now bear his name. On the 7th October, 1798, accompanied by Flinders and a crew of eight seamen, he set sail in the sloop *Norfolk*, of 25 tons, from Sydney. The island of Tasmania was circumnavigated and various places on its coasts were visited and named.

In 1799 FLINDERS sailed in the *Norfolk* northwards from Sydney as far as Hervey Bay, making a survey of the coast as he proceeded.

(ii.) *Voyage of the "Investigator."* On the 7th December, 1801, Flinders in command of H.M.S. *Investigator* sighted Australia in the vicinity of Cape Leeuwin, and commenced a survey of the coast of the Great Australian Bight. He sighted and named a number of promontories and inlets as far as Encounter Bay, where he met the French vessel *Le Géographe*, which had come from Bass Straits and was proceeding westward in her examination of the coast. On his way to Sydney Flinders entered Port Phillip, not knowing that it had been already discovered by MURRAY. (See 4 below.) The *Investigator* arrived in Port Jackson on the 10th May, 1802, and proceeding on her voyage, was the first vessel to completely circumnavigate the Australian continent. Flinders was eventually detained at Mauritius by the French as a prisoner of war for over six years, during which time the French expedition under Baudin took credit for his discoveries.

4. **Discovery of Port Phillip, 1801.**—The first landing effected in Victoria was in 1797, from a vessel wrecked on one of the Furneaux Islands. Three of the sailors, out of a total of seventeen, reached Sydney overland. Early in the year 1800 the English Government sent out the brig *Lady Nelson* for service in New South Wales, under the command of LIEUTENANT GRANT, who sighted Australia on the 3rd December, 1800. Grant named Cape Northumberland, Mount Gambier, Cape Bridgewater, Cape Nelson, Portland Bay, and Cape Otway, but passing at night from Cape Otway to Cape Liptrap failed to sight Port Phillip Heads. For some months after his arrival at Sydney the *Lady Nelson* was used for surveying purposes by GRANT and BARRALLIER. In November, 1801, ACTING-LIEUTENANT MURRAY was sent in the *Lady Nelson* to trace the coast between Point Schanck and Cape Otway. On the 5th January, 1802, Murray sighted the entrance to a large harbour, which he did not however enter, owing to stress of weather, until the 15th February, on his return from King Island. Murray named the harbour Port King, after GOVERNOR KING, who, however, changed the name to Port Phillip. Flinders shortly after entered Port Phillip on his way to Sydney, after his meeting with the French exploring expedition. (See above.)

In February, 1803, CHARLES ROBBINS in the schooner *Cumberland*, accompanied by GRIMES, the Surveyor-General of New South Wales, surveyed the Yarra for many miles above the present site of Melbourne.

5. **Explorations in Tasmania, 1803 to 1807.**—In September, 1803, LIEUTENANT BOWEN arrived at Risdon Cove on the Derwent, and founded the settlement of Hobart, while the settlement at Port Dalrymple (Launceston) was established in November, 1804, the district having been first explored by WILLIAM COLLINS in the commencement of the same year. During the following months the surrounding country was explored by LIEUTENANT-COLONEL PATERSON, who had the *Lady Nelson* at his disposal for survey purposes. In February, 1807, LIEUTENANT LAYCOCK succeeded in travelling overland from Launceston to Hobart and back again.

6. **The Blue Mountains, 1802 to 1813.**—For many years after the foundation of the colony in New South Wales settlement was confined, on the west by the inaccessible barrier formed by the Blue Mountains, and on the north and south by broken sandstone ridges, to a belt of country about 40 miles wide and 80 miles long. Most of the early

efforts in the direction of exploration were aimed at surmounting the ranges on the west. Unsuccessful attempts were made on several occasions between the years 1802 and 1805, notably by BARRALLIER and CALEY. According to his chart Barrallier, in 1802, reached a point 105 miles west of Lake Illawarra. However far these explorers succeeded in piercing the mountains, the verdict at that date was that they had not been passed, and until the year 1813 they were regarded as forming an impassable barrier to the extension of colonisation towards the west. At last, in 1813, GREGORY BLAXLAND, accompanied by W. C. WENTWORTH and LIEUTENANT LAWSON, by adhering to the ridge which formed the divide between the tributaries of the northern bank of the Warragamba River and the affluents of the Grose, succeeded in effecting a passage over the Blue Mountains, and from the summit of a high hill, afterwards called Mount Blaxland, the explorers obtained an extensive view of the pasture lands stretching towards the west. Blaxland's discoveries were most far-reaching in their effects. Not only did they open up the rich plains round Bathurst to settlement, but also marked the commencement of a new era of exploration and progress.

7. **Evans and Oxley, 1813 to 1823.**—In November, 1813, GEORGE WILLIAM EVANS, Deputy-Surveyor of Lands, following on the tracks of Blaxland's expedition, crossed the mountains and discovered and named the Fish and Campbell Rivers. The united stream he christened the Macquarie, and he followed its course for 98½ measured miles from the termination of Blaxland's journey. Evans reached the Nepean on his return journey on the 8th January, 1814. The work of making a road over the range was immediately proceeded with, and was completed as far as Bathurst in 1815.

(i.) *The Lachlan River Discovered, 1815.* On the 13th May, 1815, Evans again set out from Bathurst on an exploring expedition. Proceeding first in a southerly and then in a westerly direction, he discovered and named the Lachlan River. At the furthest point reached he carved his name and the date on a tree.¹ On the 12th June he returned to Bathurst.

In May, 1817, JOHN OXLEY, the Surveyor-General, accompanied by EVANS, ALLAN, CUNNINGHAM, CHARLES FRAZER, and nine others, explored a considerable part of the Lachlan, but being eventually stopped by swamps, the expedition returned to Bathurst via the Macquarie River in the following August.

(ii.) *Oxley's Expedition to the Macquarie River and the Liverpool Plains, 1818.* In June, 1818, OXLEY was sent with EVANS, DR. HARRIS, and CHARLES FRAZER to explore the Macquarie River. After proceeding for about 130 miles Oxley was again stopped by swamps, and determined to make for the eastern coast. Crossing the Castlereagh River he reached the Arbutnot Range, and skirting the base of Mount Exmouth, the explorers emerged on splendid pastoral country. Oxley called the locality Liverpool Plains. On the 2nd September they reached a river, which Oxley named the Peel, and on the 23rd of the same month they climbed a peak from which a view of the sea was obtained, and which was hence called Mount Seaview. The Hastings River and Port Macquarie were discovered and named, and after much hardship the settlement at Port Stephens was reached on the 1st November, 1818.

(iii.) *Discovery of Brisbane River, 1822-3.* In 1822 Sir Thomas Brisbane despatched JOHN BINGLE on the sloop *Sally* in search of a large river, supposed to exist between Port Macquarie and Sandy Cape. Bingle landed in Moreton Bay and established friendly communications with the natives, who had not hitherto seen a white man. In October, 1823, OXLEY was despatched in the cutter *Mermaid* to further examine the east coast. After discovering and naming the Tweed and Boyne Rivers, Oxley entered Moreton Bay and rowed for about fifty miles up a river which he named the Brisbane. This was Oxley's last voyage of exploration, and he arrived back in Port Jackson on the 13th December, 1823.

1. This tree was inadvertently ring-barked and killed. The shield of wood bearing the inscription is preserved in the Australian Museum at Sydney, and is the oldest marked tree in Australia.

8. **Stirling and Currie, 1823.**—In 1823 CAPTAINS STIRLING and CURRIE, in the course of an expedition to the southward, discovered the district which they called the Brisbane Downs, but which is now known as the Monaro Plains.

9. **Hamilton Hume, 1814 to 1824.**—In 1814 HAMILTON HUME, the first Australian-born explorer, when only seventeen years old, made his way with a brother and a black boy through Bargo Brush and explored the country around Berrima. Two years later he discovered and named Lake George, and afterwards discovered the Goulburn Plains and Lake Bathurst. About this time the Shoalhaven river was also discovered, probably either by HUME or MEEHAN.

(i.) *Discovery of the Hume or Murray River, 1824.* On the 14th October, 1824, HUME, accompanied by WILLIAM HILTON HOVELL, a retired coasting captain, started off from Lake George with the intention of reaching the Southern Ocean. On the 19th October the Murrumbidgee¹ was reached. As they proceeded the Snowy mountains came in sight, and the expedition bore to the westward, skirting the mountain ranges.

The Hume or Murray and the Ovens Rivers, and Mount Disappointment, were discovered and named, and on the 3rd December another river, named by them the Hovell, but now called the Goulburn, was discovered. On the 16th December, the expedition reached the Southern Ocean at the spot where Geelong now stands. This expedition had a great and immediate influence on the extension of Australian settlement. Later on Hume joined Sturt in his explorations. (See 11. below.)

10. **Allan Cunningham, 1817 to 1829.**—On his return from the expedition, on which he accompanied Oxley to the Lachlan River in 1817, Cunningham commenced the first of five coastal voyages, which he undertook with CAPTAIN P. P. KING, around most of the Australian continent. These voyages were made first in the *Mermaid* and later on in the *Bathurst*, and lasted from 1817 to 1822. King's instructions were to continue the coastal surveys commenced by Flinders. He commenced his survey on the north-west coast. Exmouth Bay, Nichol Bay, Port Essington, and Van Diemen's Gulf were explored, and Melville Island was discovered. Later King surveyed parts of the Tasmanian coasts, and of the eastern and western coasts of Australia.

(i.) *First Inland Exploration, 1823.* On the 31st March, 1823, Cunningham set out from Bathurst to discover a pass leading to the Liverpool Plains from the Upper Hunter; a route which had been sought for in vain by LAWSON and SCOTT in the previous year. This pass he discovered and named Pandora's Pass, and the valley leading to it he named Hawkesbury Vale. Cunningham returned to Bathurst on the 27th June.

(ii.) *Discovery of the Darling Downs, 1827.* In May, 1827, Cunningham set off on an expedition from Segenhoe, a station on one of the tributaries of the Hunter River. He traversed the affluents of the Namoi and the Gwydir, discovered the Darling Downs and returned to Segenhoe on the 28th July. In 1828 Cunningham went by sea to Moreton Bay, from where he set out by land with the object of connecting with his former camp on the Downs. He explored the sources of the Brisbane River and connected his two expeditions through an opening in the ranges, which opening was known as Cunningham's Gap.

11. **Charles Sturt, 1828 to 1830.**—In 1828 GOVERNOR DARLING selected for the command of another exploring party CAPTAIN CHARLES STURT, of H.M. 39th Regiment. With this leader HAMILTON HUME was associated.

(i.) *Discovery of the Darling, 1828.* In 1828, during a period of drought, the expedition started for that part of the Macquarie River where Oxley had found a vast swamp. An attempt by Sturt to follow the course of the Macquarie, which had dwindled to a small muddy channel, failed. The River Darling was then discovered and

1. But little is known regarding the discovery of the Murrumbidgee. Its existence was probably communicated by the blacks to the pioneer settlers in 1819 or 1820. In 1823 Currie and Ovens traced the upper courses of the Murrumbidgee and sighted the Australian Alps.

named, and its course descended for many miles, but the water was found to be salt. On the 7th April, 1829, Sturt finally returned to the depôt at Mount Harris, having ascertained that the Macquarie and Castlereagh Rivers, and, inferentially, the Namoi, Gwydir, and Darling Down Rivers, flowed into the newly-discovered Darling River.

(ii.) *The Murray River Expedition, 1829-1830.* Sturt was again commissioned in 1829 to explore the more southern rivers. He was accompanied by GEORGE MACLEAY. Forming a depôt on the Murrumbidgee, near its junction with the Lachlan, Sturt went down the river in a boat. He passed the junction of the Hume River, but failing to recognise it, rechristened it the Murray. Sturt then traced the Murray to its junction with the Darling, and then followed the Murray to its mouth in Lake Alexandrina in Encounter Bay. Sturt thus connected his overland journey with the discoveries of Flinders and other coastal explorers. On the 20th March, 1830, Sturt, after enduring great privations, reached the camp from which he had started.

Further explorations of Sturt are referred to in a later part of this section. (See B. *Central Australia*, 3.)

12. **Marine Surveys of H.M.S. "Beagle," 1826 to 1843.**—In the meantime maritime discovery had been followed up by CAPTAINS WICKHAM and STOKES in H.M.S. *Beagle*, which, during part of her voyages, carried with her MR. CHARLES DARWIN. The Great Barrier Reef, as well as many parts of the Australian coasts and other regions in the southern seas, were visited and examined. In 1838 the Fitzroy River (north-west coast) was discovered and in the following year the Burdekin, Victoria, and Adelaide Rivers were found and named. In 1839 Port Darwin was also discovered and named. In the Gulf of Carpentaria the Flinders and Albert Rivers were discovered and named by Captain Stokes in 1841.

13. **Sir Thomas Mitchell, 1831 to 1836.**—On the 21st November, 1831, MAJOR (afterwards Sir) THOMAS L. MITCHELL, who had been appointed Surveyor-General in succession to Oxley, left Liverpool Plains on an expedition to discover a river which had been reported by a runaway convict named CLARKE to follow a north-west course to the north coast of Australia. No confirmation of the convict's story could be found, but Mitchell discovered the lower courses of the Peel (The Namoi), Gwydir, and Dumaresq Rivers, and identified the Upper Darling.

In a minor expedition in 1833 Mitchell explored the country between the Bogan and Macquarie Rivers. On another expedition in 1835 he traced the Darling 300 miles down from Bourke.

(i.) *Overland Exploration to Cape Northumberland, 1836.* In 1836 Mitchell was despatched again to survey the Darling more effectually. Following the course of the Lachlan he reached the Murrumbidgee, the Murray, and the junction of the latter with the Darling. Returning up the Murray he left it at Mount Hope, ascended the Loddon, discovered the Avoca River on the 10th July, and turning southward on the 31st July he discovered a river which he called the Glenelg. He also discovered the Campaspe and Wimmera Rivers. He finally reached the coast near Cape Northumberland on the 20th August, 1836. The region in the neighbourhood of the Loddon he named "Australia Felix." On his return journey Mitchell visited Portland Bay, where he found that the Henty family, from Van Diemen's Land, had been established for about two years. Ascending Mount Macedon, Mitchell saw and identified Port Phillip.

(ii.) *Discovery of the Barcoo River, 1845-6.* Some years elapsed before Mitchell undertook any further work of exploration. In the meantime other explorers—notably GREY, EYRE, McMILLAN, WICKHAM, STOKES, STURT, and LEICHHARDT—had been on the field, and had made numerous discoveries. (See below.) On the 15th December, 1845, Mitchell started from the Buree with EDMUND B. KENNEDY as his second in command. From the Macquarie River Mitchell made his way to the Narran, the Balonne, and the Culgoa. He ascended the Balonne, passed the junction of the Maranoa, and reaching the Cogoon followed it to its sources. Turning westward, he further ex-

plored the Maranoa and discovered the Warrego. Proceeding to the north he discovered the Belyando and the Barcoo, the latter of which he named the Victoria, and which he then believed to be the same as that discovered by Captain Stokes in the *Beagle*.

14. **McMillan, 1839 to 1840.**—ANGUS MCMILLAN was the discoverer of the Gippsland district in Victoria. Starting on the 20th May, 1839, he explored the country watered by the Buchan River, and the upper reaches of the Tambo River. Later in the same year he followed the Tambo down its course to its mouth in the lakes of the south coast. He named Lake Victoria, and then turning west he discovered and named the Nicholson and Mitchell Rivers. On the 23rd January, 1840, he again set out and after discovering and naming the Macallister River, he explored the country as far as the Latrobe River.

15. **Count Strzelecki, 1840.**—In 1840 STRZELECKI explored the Gippsland districts, part of which McMillan had just traversed. Strzelecki first ascended the south-eastern portion of the main dividing range, and named Mount Kosciusko. On the 27th March, he met McMillan on the Tambo, and pushing westward he succeeded in reaching Western Port. Strzelecki discovered and named the Latrobe River, and also Lake King, which McMillan found but thought to be Corner Inlet.

16. **Leslie and Russell, 1840 to 1841.**—In 1840 PATRICK LESLIE set out with stock from the most northerly settled district (New England) in New South Wales, and formed a station on the Condamine River. In 1841 STUART RUSSELL followed that river for over a hundred miles, and adopted the opinion—eventually proved to be true—that the Condamine was a tributary of the Darling, and did not, as had hitherto been supposed, flow into the Pacific Ocean.

17. **Leichhardt, 1844 to 1845.**—On the 1st October, 1844, LUDWIG LEICHHARDT, a Prussian by birth, started from Jimbour Station on the Darling Downs, accompanied by six white and two black men, with the object of making his way overland to Port Essington. Leaving the Condamine River he discovered the Dawson River, and passing westward found and named the Peak Downs. There he discovered and named the Planet and Comet Rivers, and Zamia Creek. On the 10th January, 1845, he found and named the Mackenzie River, and later on the Isaacs, Suttor, Burdekin, Lynd, and Mitchell Rivers. Deviating from the Mitchell River, the expedition followed the coast of the Gulf of Carpentaria in a westerly direction. On the 28th June the party were attacked by the natives, and the naturalist, GILBERT, was killed near the river which now bears his name. After crossing and naming the Leichhardt, Nicholson, McArthur, Limmen Bight, and Roper Rivers, the worn-out travellers reached the settlement of Victoria, at Port Essington, on the 17th December, 1845.

After an expedition in 1847 to the country between the Darling Downs and the Peak Range, and to the Cogoon River, Leichhardt determined to endeavour to cross the continent from east to west. Early in 1848 he therefore equipped another party, consisting of himself, HENTIG, CLASSEN, DONALD STUART, KELLY, and two natives. Leichhardt started from McPherson's Station on the Cogoon, now perhaps better known as Muckadilla Creek. Since the residents of that station lost sight of him, no sure clue as to his fate or as to the fate of his companions has ever come to light. His last letter is dated the 3rd April, 1848, from McPherson's Station, but in that letter he did not mention his intended route. His plan was believed to be to pierce straight to the west, and, if necessary, to diverge northwards to the rivers of the Gulf of Carpentaria. Various expeditions were fitted out to ascertain the fate of Leichhardt and his companions. Probably the only authentic trace of the party was that found by A. C. (afterwards Sir Augustus) GREGORY, in charge of the second Leichhardt Search Expedition in 1858. (See below.) In the neighbourhood of the Barcoo River in lat. 24° 35' S., and long. 136° 6' E., Gregory found a tree marked with the letter L, and indications of a camp having been established there by Leichhardt.

18. **Kennedy, 1847 to 1848.**—EDMUND B. KENNEDY, as a Government surveyor, accompanied Mitchell on his last expedition. On his return from that expedition, Kennedy

was sent out, in 1847, to follow the course of the newly discovered Victoria River (the Barcoo). Kennedy identified the Barcoo and Victoria Rivers and Cooper's Creek as one and the same river. He discovered and named the Thomson River, and reached the head of the Warrego River.

(i.) *Exploration of Cape York Peninsula, 1848.* Kennedy next attempted to make his way up the eastern coast of the Cape York Peninsula. The expedition, however, came to a tragic ending. In May, 1848, Kennedy landed at Rockingham (in Queensland). He intended, with his party of twelve men, to examine the eastern spurs of the mountains in the peninsula and to make the coast at Port Albany where a ship was to meet him. On the 9th December, after great hardships, the expedition reached Weymouth Bay. Leaving there the main body of his men, Kennedy pushed forward to send back the schooner, which was awaiting them with relief. Kennedy gained the Escape River, where he was murdered by the blacks. His native boy, JACKY-JACKY, alone escaped, and conducted the relief ship back to the remainder of the expedition, where it was found that only two survived, the rest having died under the hardships to which they were exposed or having been killed by the blacks.

19. **A. C. Gregory, 1846 to 1858.**—The three brothers, A. C., H. C., and F. T. GREGORY, won considerable distinction in the work of exploration in Australia. H. C. Gregory was usually associated with his brother Augustus C. Gregory, but Frank Gregory carried on work chiefly in Western Australia (see below) as an independent explorer.

(i.) *Early Explorations in Western Australia, 1846.* A. C. Gregory's earliest explorations were in Western Australia. In 1846 he discovered and named Lake Moore, and later in the same year he conducted the "Settler's Expedition" with the object of finding pastoral country on the Gascoyne River. A considerable extent of both pastoral and agricultural country was discovered, and a vein of galena was found on the Murchison. The expedition did not, however, succeed in penetrating any distance beyond the Murchison, and re-entered Perth on the 17th November, 1846. Later Gregory made a journey to Champion Bay.

(ii.) *Explorations in Northern Australia, 1855-6.* In 1855 the Imperial Government voted £5000 for the purposes of further exploration of the interior of Australia, and of searching for Leichhardt's expedition. A. C. Gregory was placed in command, and left Moreton Bay for Point Pearce, near the mouth of the Victoria River, on the 12th August, 1855. Following the course of the Fitzmaurice River, the Victoria was reached on the 17th October. After excursions had been made in various directions Gregory started on an expedition to the interior on the 4th January, 1856. After following the course of the Victoria he then turned to the south-west and discovered and named Sturt's Creek, which he traced for 300 miles. Retracing his steps, he examined the eastern tributaries of the Victoria, and then started on the return journey overland to Moreton Bay. On the Elsey, a tributary of the Roper, he discovered the remains of what was probably one of Leichhardt's camps. Gregory for some distance followed a course parallel to the Gulf of Carpentaria, which he left at the Gilbert River, and thence made his way across to the settled districts south of the Fitzroy. He reached Brisbane on the 16th December, 1856.

(iii.) *Exploration in Western Queensland, 1858.* In March, 1858, from Euroomba Station, on the Dawson, Gregory again set out on an expedition, the main object of which was to search for Leichhardt. After exploring the districts near the Barcoo and Thomson Rivers, he struck a south-westerly course and traced Strzelecki's Creek as far as Lake Blanche, whence he went on to Adelaide.

20. **Later Exploration of the North-east, 1859 to 1872.**—After Kennedy's ill-fated expedition the main portion of eastern Australia was fairly well known. Certain parts of what is now Queensland, however, still remained unexplored.

(i.) *Frederick Walker, 1862.* In 1862 FREDERICK WALKER, a pioneer squatter in the districts of Southern Queensland, set out on an expedition in Western Queensland in

search of Burke and Wills. (See B. *Central Australia*, 7.) Proceeding in a northerly direction, he passed the Barcoo and Thomson Rivers and came to the head of the Flinders River. He pushed on as far as the Albert River, and on his return journey he traced the course of the Saxby, a tributary of the Flinders.

(ii.) *Exploration of River Burdekin Districts, 1859 to 1860.* In 1859 G. E. DALRYMPLE explored the coastal country north of Rockhampton as far as the Burdekin, and later traced that river down to the sea. In 1860 a party consisting of Messrs. CUNNINGHAM, SOMER, and three others explored the upper reaches of the Burdekin.

(iii.) *F. and A. Jardine, 1864.* In 1864 two brothers, FRANK AND ALEC JARDINE, with three companions, four natives, and a number of stock, set out from Carpentaria Downs, then the furthest station to the north, on the Einasleigh River, to make their way overland to the newly-established settlement of Somerset, near Cape York. Following first the Einasleigh and then the Staaten River, the expedition pushed its way along the west of the York Peninsula, and finally succeeded in reaching Somerset.

(iv.) *William Hann, 1872.* The last remaining unexplored district in Eastern Australia, namely, the tract of country near the base of the York Peninsula, was examined by WILLIAM HANN, a pioneer squatter of the Burdekin, in 1872. Hann discovered and named the Tate, Walsh, and Palmer Rivers. Proceeding northward he ascended the mountains and sighted the Pacific at Princess Charlotte Bay. On his return journey he discovered and named the Normanby River.

This expedition practically completed the exploration of Eastern Australia. The gold discoveries on the Palmer River, in Queensland, following soon after, led to a considerable amount of minor exploration being carried out by prospectors, whose labours are, however, unrecorded.

(b) Central Australia.

1. *Early Settlement of South Australia, 1836 to 1839.*—In 1836 COLONEL LIGHT surveyed the shores of St. Vincent's Gulf, and selected the site for the settlement at Adelaide. In the same year MITCHELL (see A. *Eastern Australia*, 13, above) had succeeded in travelling overland from the Darling to Cape Northumberland, and the settlers found little difficulty in driving stock from various parts of New South Wales to the new country. A great deal of minor exploration was done by these pioneers. CHARLES BONNEY, accompanied by G. H. EBDEN, led the way across to the Port Phillip settlement with sheep in 1837, and was shortly followed by others, among whom may be mentioned HAMILTON, GARDINER, and LANGBOURNE. Very soon this overlanding of stock was extended to Adelaide, CHARLES BONNEY and JOSEPH HAWDON being the first, in 1838, to undertake the journey. In 1839 Bonney succeeded in opening a new route overland to Adelaide. Leaving the Goulburn he made his way to the Grampian Mountains, where he struck the Wannon and then the Glenelg. He discovered and named Lake Hawdon, and also Mounts Muirhead and Benson, and thence made his way to Adelaide, via Lincepede Bay.

2. *Edward John Eyre, 1838 to 1841.*—EYRE'S first expedition was an overland journey from Mount Alexander to Adelaide with stock in 1838, during which expedition he discovered and named Lake Hindmarsh. He next explored the country in the neighbourhood of Mount Arden to the N.N.E. of Spencer's Gulf, and on the 5th August, 1839, he left Port Lincoln intending to penetrate as far as possible to the westward. He pushed his way to within nearly 50 miles of the Western Australian border, and on his return journey discovered and named Lake Torrens.

(i.) *Overland Journey to Western Australia, 1840-1.* On the 18th June, 1840, Eyre again left Adelaide, and after fruitless efforts to reach the interior in a northerly direction, and after discovering and naming Mounts Deception and Hopeless, he determined to push through to King George's Sound, accompanied by his overseer BAXTER, and three

native boys. Baxter was murdered by two of the natives, who then deserted, and after great hardships Eyre and the remaining native succeeded in reaching Thistle Cove, where they sighted the French vessel *Mississippi*, commanded by Captain Rossiter.¹ After recruiting his health, Eyre finally reached Albany in July, 1841.

(ii.) *Progress of Settlement and Exploration.* After Eyre's explorations at the head of Spencer's Gulf settlers soon spread in a northerly direction from Adelaide. Amongst the pioneers are to be found the names of HAWKER, HUGHES, CAMPBELL, ROBINSON, HEYWOOD, and HORROCKS. Particulars of their expeditions in search of grazing country have not been preserved.

3. **Sturt's Later Explorations, 1844 to 1845.**—CHARLES STURT, whose explorations in Eastern Australia have been mentioned above (see A. *Eastern Australia*, 11), set out in 1844, accompanied by JOHN MCDOUALL STUART and others, on an expedition to reach the centre of the continent. Sturt's plan was to follow the Darling as far as Laidley's Ponds, and then to strike north-west. The expedition arrived at Laidley's Ponds on the 11th October, 1844, and moving slowly forward reached the Barrier Range on the 27th January, 1845. Here the expedition stayed until the 17th July, Sturt vainly trying to find an opening leading to a permanent supply of water. He attained in one excursion a latitude of 28° 9' S., and was then within thirty miles of Cooper's Creek, then undiscovered, but returned baffled to his camp. The party suffered greatly from the heat and want of water. POOLE, the assistant surveyor, died and was buried at the foot of the hill now known as Mount Poole, three and a half miles from Depôt Camp. The details of their struggles cannot be here recounted. Forming a new depôt at a place called Fort Grey, where McDouall Stuart was left in charge, Sturt again pressed forward to the north-east. Crossing Strzelecki's, Leichhardt's, and Cooper's Creeks, he came to the Great Stony Desert, thence discovering and following Eyre's Creek he reached his furthest point in lat. 24° 30' S. and long. 137° 58' E. in September. In the following month he made another unsuccessful effort due north. Summer was approaching and he had to retreat. On the 21st December, 1845, after enduring great privations the expedition arrived at the camp of the relief-party under PIESSE, at Williorara.

4. **Exploration in South Australia, 1851 to 1857.**—A considerable amount of exploration work was done in South Australia during the year 1857. The formation of Lake Torrens was formerly supposed to be of a horseshoe character, extending from the west round to what is now known as Lake Frome in the east. In 1851 two squatters, OAKDEN and HULKES, found suitable grazing country west of Lake Torrens. In 1856 B. HERSCHEL BABBAGE, a Government surveyor, explored the country to the north-east of Lake Torrens and discovered and named Lake Blanche. In 1857 the district between Lakes Macfarlane and Torrens was visited by CAMPBELL, who discovered and named the Elizabeth Creek. In April of the same year GOYDER, the Deputy Surveyor-General, examined the country near Lake Torrens and found the water of the lake quite fresh. During the same year these districts were explored by COLONEL FREELING, the Surveyor-General; by STEPHEN HACK, who discovered Lake Gairdner; by MAJOR WARBURTON, who discovered the Davenport Range; by SWINDEN, MILLER, and DULTON, and by DELISSER and HARDWICKE.

5. **Discovery of Lake Eyre by B. H. Babbage, 1858.**—In 1858 an expedition was sent out under BABBAGE by the South Australian Government to examine the country between Lakes Torrens and Gairdner. Babbage traced Chambers Creek into Lake Eyre, and was thus the first discoverer of this lake, which he originally called Lake Gregory. He also proved the isolation of Lake Torrens from the other lakes in the basin.

6. **J. M. Stuart, 1858 to 1862.**—JOHN MACDOUALL STUART accompanied Captain Sturt on his last expedition as a draughtsman. His next expedition was in 1858, when he

1. The French whaler *Mississippi* was the first foreign vessel to enter Port Lincoln. Rossiter Vale, in the neighbourhood of Port Lincoln, was so named after the captain of the *Mississippi* by Captain Hawson and William Smith, who discovered it in about 1839.

discovered Chambers Creek, to the south of Lake Eyre, and returned to Port Augusta via Fowler's Bay. In April, 1859, he again set out, accompanied by HERGOTT and others. The Hergott Springs were discovered, as was also the Neale River, which Stuart traced for some distance. In November of the same year Stuart made a third expedition in the vicinity of Lake Eyre.

(i.) *First Attempt to Cross the Continent, 1860.* In 1860 Stuart, accompanied by only three men with thirteen horses, started from Chambers Creek with the object of crossing the continent from south to north. From the Neale River Stuart followed a N.N.W. course, and discovering and naming the Frew, Fincke and Stevenson Creeks, Chambers Pillar, and the McDonnell Range, he camped at the centre of Australia on the 22nd April, 1860, about two miles and a half to the south-west of a hill, which he called Central Mount "Sturt," but which is now erroneously called "Stuart."¹ Failing to find the head of the Victoria River, Stuart turned back and, after an encounter with the natives at Attack Creek, he reached Brodie's camp at Hamilton Springs on the 26th August.

(ii.) *Journey Across the Continent, 1861-2.* In 1861 the South Australian Government voted £2500 to organise a better equipped expedition to cross the continent. Stuart was placed in command, and on the 12th April he arrived at the Bonney. On the 4th May he reached the Ashburton Range, and on the 23rd he discovered and named the Newcastle Waters. Failing to discover a clear way to the north he returned to Adelaide, which place, however, he left in less than a month in order to make another departure north from Chambers Creek. On the 14th April, 1862, he was at the northern end of Newcastle Waters, and discovered Frew's Pond. Reaching the head of the Daly Waters, he worked his way eastward to a creek he named the Strangways. Thence he crossed the Roper, and on the 10th July he reached the Adelaide River, discovered in 1839 by Wickham and Stokes. (See above A, *Eastern Australia*, 12.) On the 25th July, 1862, he reached the sea at Chambers Bay. On the return journey the expedition was in great straits from want of water, but finally reached Adelaide in December, 1862. Along Stuart's track there is now erected the trans-continental telegraph line.

7. Burke and Wills Expedition, 1860 to 1861.—In 1860 funds were provided in Melbourne partly by the Government and partly by private subscription, amounting in all to £12,000, for the purpose of sending an expedition northward to explore the country to the Gulf of Carpentaria. ROBERT O'HARA BURKE, an inspector of police in Victoria, was placed in command, with G. J. LANDELLS as his second and WILLIAM JOHN WILLS as surveyor and astronomical observer. Ten Europeans and three Sepoys, together with numerous horses, wagons, and camels, accompanied the expedition, which left Melbourne in August, 1860. Before reaching Menindie, on the Darling, Landells quarrelled with Burke, and resigned, Wills becoming second in command and an overseer named WRIGHT succeeding Wills. On the 19th October, 1860, Burke, Wills, with six men and five horses, and sixteen camels, left Menindie for Cooper's Creek. Wright accompanied them for two hundred miles to indicate the route, and then returned to Menindie, to take charge of the main body. On the 11th November, Burke reached Cooper's Creek, where a site for a depôt was chosen and named Fort Wills. Here Burke encamped to await the arrival of the main body. As there were no signs of Wright's arrival, Burke, on the 16th December, started with Wills, KING and GRAY, taking six camels, a horse, and provisions for three months, to push forward to the Gulf of Carpentaria. The others, under BRAHE, were left at Fort Wills to wait three months for him. From the diaries kept by Burke and Wills which were eventually recovered, it appears that they proceeded almost due north. Crossing the river now known as the Diamantina and the northern dividing range, they reached the Flinders River in February, 1861, and followed it down to the mangroves and salt water. Debarred from a view of the open sea, they commenced their return journey,

1. Stuart's manuscript reads Central Mount Sturt, but was mis-read by the publishers of his diary. See Favenc's "Explorers of Australia," p. 180.

during which Gray died. At last on the 21st April the three survivors re-entered the *dépôt* at Fort Wills only to find it deserted. Some provisions and a letter signed by Brahe were however unearthed. It appeared that Wright had never reached Fort Wills, his advance having miscarried. An unsuccessful attempt to reach Mount Hopeless was then made by Burke and his companions. Their subsequent misfortunes and sufferings cannot be here recounted. All the horses and camels having died and their provisions being exhausted, the explorers existed for some days on food provided by the natives. Towards the end of June both Burke and Wills died, and King alone survived until rescued by Howitt's party on the 15th September. In the meantime Brahe had fallen in with Wright on the 29th April, at Bulloo. As soon as it became known that Burke, with his three companions, had not been heard of since the 16th December, 1860, various relief expeditions were organised. A. W. HOWITT was sent out from Melbourne with a search party. Queensland sent out two relief expeditions—the *Victoria*, a steam sloop, was sent up to the mouth of the Albert River, having on board WILLIAM LANDBOROUGH, with GEORGE BOURNE as second in command, while the other expedition, under FREDERICK WALKER, left the furthest station in the Rockhampton district. From South Australia JOHN MCKINLAY set out to cross the continent to the north.

(i.) *Howitt's Relief Expedition, 1861.* On the 4th July, 1861, A. W. HOWITT set out in search of Burke. On the 13th July he reached Cooper's Creek and on the 15th he discovered King. Howitt then returned to Melbourne, but on the 9th December he again set out for the *dépôt* at Cooper's Creek to recover the bodies of Burke and Wills. These he found and with them returned by way of Adelaide, which place he reached in December, 1862, the same month in which McDouall Stuart returned from his trans-continental journey.

(ii.) *Queensland Relief Expeditions under Walker and Landsborough, 1861.* From the western Rockhampton district an expedition set out under FRED. WALKER, a commandant of mounted natives under the Queensland Government. Striking a north-west course from the Barcoo, he descended the Norman, crossed the Flinders River, and found the tracks of Burke's camels descending northwards and returning southwards. He reached the sea at the Albert River, where the *Victoria* was awaiting him, and then returned overland to Rockhampton.

Another expedition, under WILLIAM LANDBOROUGH, went by sea in the *Firefly*, convoyed by the *Victoria*. Landsborough ascended the Albert River and discovered and named the Gregory and Herbert (subsequently rechristened the Georgina) Rivers, and also Lakes Frances and Mary. After learning that Walker had discovered Burke's tracks, Landsborough descended the Thomson River, crossed the Barcoo, and came to a station on the Warrego, where he learnt the fate of Burke and his companions.

(iii.) *South Australian Relief Party under McKinlay, 1861-2.* On the 26th October, 1861, JOHN MCKINLAY, a South Australian grazier, started from Adelaide in command of a relief party. From Lake Torrens he struck north and crossed the lower end of Cooper's Creek. After discovering Gray's body, McKinlay sent a messenger to Blanch Water to bring back rations for a prolonged journey. The messenger returned with news of the rescue of King and the deaths of Burke and Wills. McKinlay then started north and traced the course of the Diamantina River for some distance. Reaching the Leichhardt River, he traced it to its mouth and then crossed on to the head of the Burdekin, where he reached a cattle station on the 2nd August, 1862. The results of McKinlay's explorations were of great value in opening up Central Australia.

8. Major Warburton, 1873.—In 1873 an expedition was sent out by Thomas Elder and Walter Hughes, South Australian colonists, under the command of MAJOR WARBURTON, with the object of travelling through from Central Mount Stuart to Perth. On the 15th April, 1873, the expedition left Alice Springs for Burt's Creek, whence they struck to the westward. On the 5th June they crossed the Western Australian boundary. Proceeding to the north-west in an unsuccessful attempt to find Sturt's Creek, which

Gregory had discovered in 1856—(see A. *Eastern Australia*, 19.)—Warburton at last succeeded, after nearly perishing through want of water, in reaching a creek at the head of the Oakover River, which he followed till a station was reached in December, 1873.

9. **W. C. Gosse, 1873.**—On the 23rd April, 1873, WILLIAM CHRISTIE GOSSE, Deputy Surveyor-General of South Australia, left Alice Springs in command of the "Central and Western Exploring Expedition," with the object of reaching Perth. After passing both Warburton's tracks and those of Giles (see below), Gosse reached the westernmost spurs of the McDonnell Range. He made several ineffectual attempts to penetrate to the west, but was obliged to turn back. His homeward course was by way of the Musgrave Ranges. He discovered and named the Marryat, and traced the Alberga to within sixty miles of the transcontinental telegraph line, whence he reached Charlotte Waters Station.

10. **Ernest Giles, 1872 to 1876.**—ERNEST GILES' first expedition was in 1872, when, with two companions—CARMICHAEL and ROBINSON—he started from Chambers Pillar and discovered Lake Amadeus and Mount Olga. He then unsuccessfully attempted to force his way through the deserts to the settlements of Western Australia.

(i.) *Attempted Overland Expedition to Perth, 1873.* In 1873 GILES, accompanied by W. H. TIETKINS and two others, set off from the Alberga and made another effort to penetrate the western deserts. His furthest point west was long. 125° 35' E., whence he was forced to return to Adelaide.

(ii.) *Overland Journey to Perth and back, 1875-6.* In 1875 Giles set out on another expedition, financed by SIR THOMAS ELDER. Giles was again accompanied by Tietkins, setting off from Beltana, Giles' route lay in the vicinity of lat. 30° S. On the 4th November, 1875, the expedition arrived at an outside sheep-station in the settled districts of Western Australia. Giles' return journey was by way of the Murchison, Gascoyne, and Ashburton Rivers, the last of which he followed to its head. Thence striking to the south of east he arrived at the Peake telegraph station.

11. **Later Explorations.**—After Giles' expedition of 1876, the chief work of exploration in South Australia and the Northern Territory had been completed. There were still, however, considerable tracts of country which had not been explored.

(i.) *Lewis, 1874.* In 1874 LEWIS, a surveyor, who had accompanied Warburton in 1873, explored the country in the neighbourhood of Lake Eyre and the Diamantina River.

(ii.) *Hodgkinson, 1875.* In 1875 W. O. HODGKINSON, in charge of an expedition sent out by the Queensland Government, examined the country around Eyre Creek and the Georgina River, and discovered the Mulligan River.

(iii.) *Buchanan and Scarr, 1878.* In 1878 NATHANIEL BUCHANAN explored the country lying between the Georgina and the overland telegraph line, and discovered an important creek now known as Buchanan's Creek. In the same year this strip of unknown land was further explored by FRANK SCARR, a Queensland surveyor.

(iv.) *Favenc, 1878-83.* In 1878 an expedition was sent out from Queensland under ERNEST FAVENC, in connection with a project for a railway line from Brisbane to Port Darwin. Favenc explored the country between the Georgina and Diamantina Rivers, and then striking Buchanan's Creek, discovered and named Corella Lagoon. Thence proceeding to the north, the expedition, after exploring some good pastoral country, reached Powell's Creek Station in January, 1879. In 1883 Favenc explored the heads of several of the rivers of the Gulf of Carpentaria. He traced the course of the Macarthur, and discovered and named the Kilgour River. In 1888-9 he explored the head waters of the Gascoyne and Ashburton Rivers in Western Australia.

(v.) *Other Explorers.* Other explorers whose names should be mentioned in connection with the later exploration of Central Australia are:—(a) H. V. BARCLAY, who, in

1877, discovered and named the Jervois Ranges and the Hale, the Plenty, the Marshall, and the Arthur Rivers. (b) ADAM JOHNS and PHILLIP SAUNDERS, who started from Roeburne in 1876 and crossed to the overland line in South Australia. (c) DAVID LINDSAY, who, in 1883, led an expedition sent out by the South Australian Government to complete the survey of Arnhem's Land. (d) O'DONNELL and CARR-BOYD, who, in 1883, left the Katherine River and pushed across into Western Australia. (e) H. STOCKDALE; who travelled from Cambridge Gulf to the south through the Kimberley district in 1884. (f) W. H. TIETKINS, who had accompanied Giles as second. In 1889 Tietkins was placed in charge of the Central Australian Exploring Expedition. He explored the country to the north and west of Lake Amadeus, and discovered and named the Kintore and the Bonython Ranges. g ALFRED SEARCY, who, from 1882 to 1896 visited many parts of the coast and rivers of the Northern Territory. (h) HUBBE, in 1896, was sent out by the South Australian Government to open up, if possible, a stock route between Oodnadatta and Coolgardie. He reached Coolgardie in August. Though fair water was found in several places, the country was for the most part dry and covered with spinifex.

(c) Western Australia.

1. **Early Discoveries.**—In 1791 GEORGE VANCOUVER, in command of H.M.S. *Discovery*, found and named St. George's Sound. On the 25th December, 1826, MAJOR LOCKYER, with a detachment of soldiers, landed at King George's Sound to form a settlement, under instructions from SIR RALPH DARLING, then Governor of New South Wales. The settlement was established in order to forestall the French, who, it was rumoured, intended to occupy the harbour. Early in 1827 CAPTAIN JAMES STIRLING and CHARLES FRAZER examined and reported upon the Swan River districts with a view to forming a settlement there. In 1829 CAPTAIN FREMANTLE landed at the mouth of the Swan River and took possession of the country. A month later Stirling arrived with the first settlers.

In November, 1829, ALEXANDER COLLIE and LIEUTENANT PRESTON explored the coast between Cockburn Sound and Géographe Bay, and in the following month DR. J. B. WILSON, R.N., discovered and named the Denmark River.

(i.) *Captain Roe, 1830-1848.* JOHN SEPTIMUS ROE, the Surveyor-General of the new colony, accompanied Captain P. King on his explorations of the north and north-west coasts of Australia in 1818, and was a member of King's expedition in 1821. In 1830 Roe explored the country in the neighbourhood of Cape Naturaliste, Port Leschenault, and between the Collie and Preston Rivers. During the year 1832 Roe and Sir James Stirling, in H.M.S. *Sulphur*, were occupied in surveying the south coast. In 1835, Roe examined the country between the headwaters of the Kalgan and Hay Rivers. In 1836 he led an expedition to explore the country to the north and east of Perth, and in 1839 he rescued Grey's expedition (see below). In 1848 he made an attempt to penetrate to the eastward, and traced the course of the Pallinup River for some distance.

In the meantime CAPTAINS WICKHAM and STOKES, in H.M.S. *Beagle* (see A. *Eastern Australia* above), had completed a series of coastal surveys on the north-west coast, discovering the Fitzroy and Adelaide Rivers.

(ii.) *Other Early Explorers.* In 1830 GOVERNOR STIRLING and CAPTAIN CURRIE explored the vicinity of Cape Leeuwin, and determined on the site of Port Augusta. In the same year ENSIGN R. DALE explored the country to the east of the Darling Range. He traced the courses of the Avon and Helena Rivers, and explored as far east as Mount Caroline. In 1831 he examined the country fifty miles to the north and south of Mount Bakewell. In 1831 CAPTAIN BANNISTER travelled overland from Perth to King George's Sound, and W. K. SHENTON explored the Collie River. In the same year J. G. BUSSELL traversed the country between the Swan River and Port Augusta, and LIEUTENANT PRESTON made an excursion in a whaleboat to Point d'Entrecasteaux, and thence by land to the Murray River. In 1832 Alexander Collie explored the districts between

Albany and French River, and near King George's Sound. In 1833 F. WHITFIELD traced the Helena River to its source, and ALFRED HILLMAN, surveyor, explored the country between Albany and Nornalup Inlet. In 1834 G. F. MOORE traced the Swan River to its source, and in 1836 he discovered the Moore River. In May, 1836, LIEUTENANT BUNBURY explored the country between the mouths of the Dale and Williams Rivers, and later in the same year he crossed from Pinjarra to the Williams.

2. **Grey, 1837 to 1839.**—In December, 1837, an exploring party under CAPTAIN (afterwards SIR) GEORGE GREY and LIEUTENANT LUSHINGTON, landed at Hanover Bay, on the north-west coast, with the object of making their way to Perth. The Glenelg River was discovered and traced, but being unable to find a pass through the mountains Grey returned to the coast and thence to Perth. In January, 1839, Grey explored the country between the Williams and the Leschenault Rivers.

(i.) *Coastal Explorations, 1839.* In February, 1839, Grey set out on an expedition to examine Shark's Bay, and to make excursions inland. Landing at Bernier Island, they proceeded to Dorre Island, and thence landed on the mainland near the mouth of the Gascoyne River. The misfortunes encountered and the hardships undergone may be read in Grey's published narrative.¹ Grey, with two or three picked men, succeeded in making his way along the coast as far as Perth, where a relief expedition was organised by ROE. Grey discovered the Grey, Buller, Chapman, Greenough, Arrowsmith, Hutt, Bowyer, Murchison, and Gascoyne Rivers.

3. **R. Austin, 1854.**—In 1854 ROBERT AUSTIN, Assistant Surveyor-General of Western Australia, was sent in charge of an inland exploring party, with a view to the discovery of minerals or navigable water, and to search for agricultural or pastoral country in the Gascoyne district. He reached Cowcowing Lake on the 16th July, and thence made his way directly north, as far as a lake which he named Lake Austin. Finding the upper tributaries of the Murchison waterless, Austin succeeded with great difficulty in reaching the Geraldine Mine, where a small settlement had been formed to work the vein of galena discovered by A. C. Gregory. (See A. *Eastern Australia*, 19.) Thence he returned to Perth.

4. **F. T. Gregory, 1857 to 1861.**—In March, 1857, FRANK T. GREGORY, brother of Augustus Gregory, whose explorations have already been referred to (see A. *Eastern Australia*, 19, above), examined the upper reaches of the Murchison River. On the 16th April, 1858, he left the Geraldine Mine with the object of penetrating to the Gascoyne. He traced the Murchison River for many miles, and then struck off on a north-easterly course until, on the 6th May, he reached the Gascoyne. This river he descended to its mouth, and also discovered and named its tributary, the Lyons, which he traced as far as Mount Augustus. Retracing his steps, Gregory finally reached Perth on the 10th July, 1858.

In 1861 Gregory set out on another expedition, subsidised by the Imperial Government, to explore the north-western districts. Having disembarked at Nichol Bay, the party started on the 25th May, 1861. Gregory discovered and traced the Fortescue, and then, striking south, found and named the Ashburton River. Returning to Nichol Bay, he again set out in August, and discovered the Shaw, De Grey, and Oakover Rivers. He returned to Nichol Bay on the 18th October, 1861.

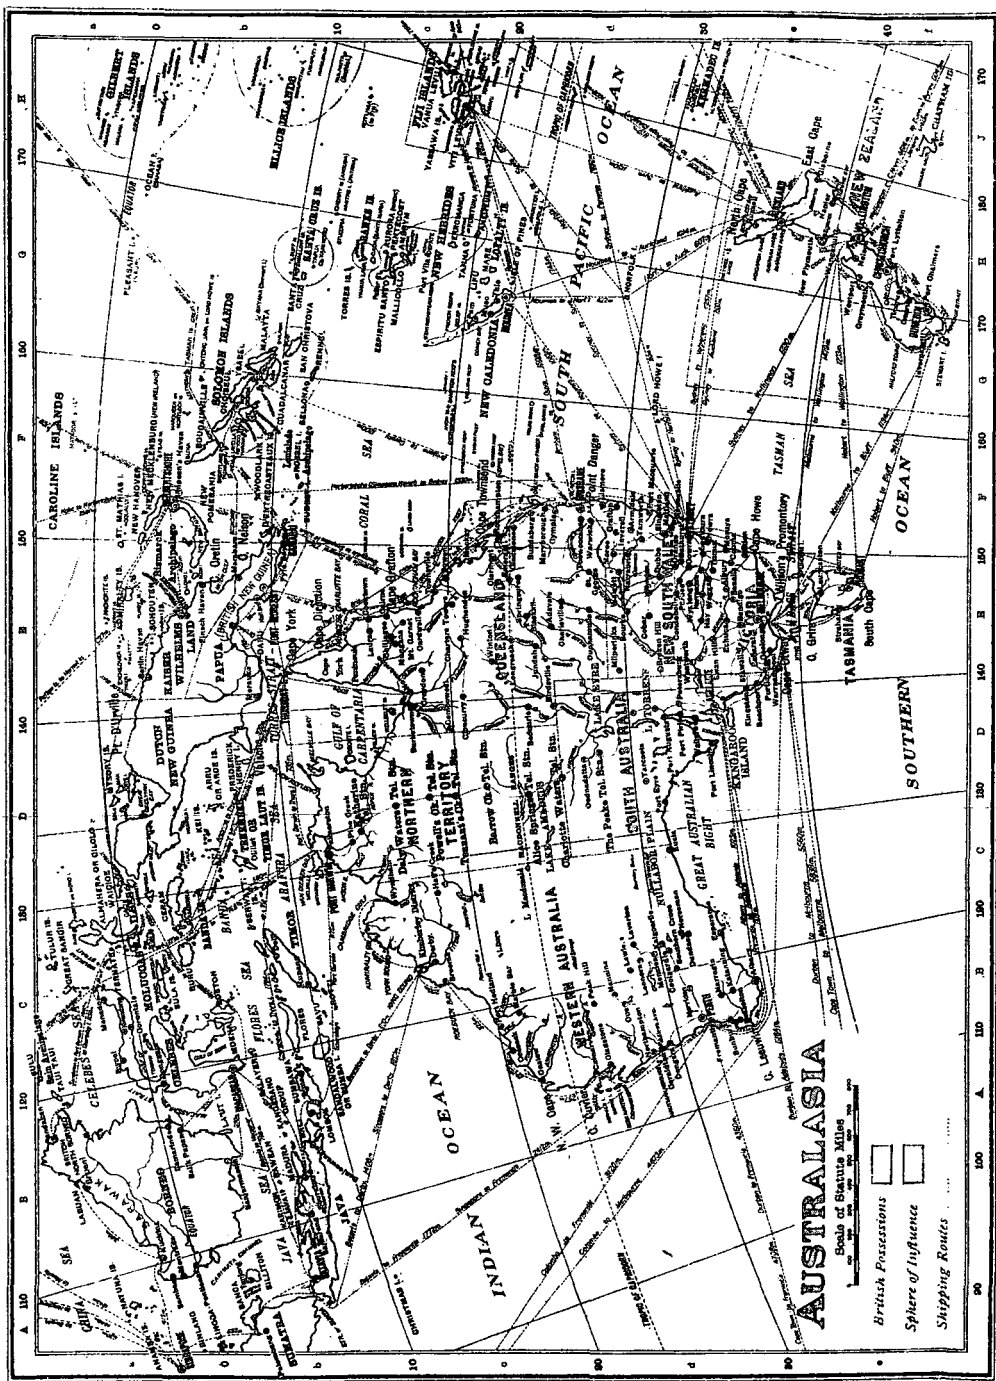

5. **Sir John Forrest, 1869 to 1883.**—On the 26th April, 1869, JOHN (now Sir John) FORREST, formerly an officer of the Survey Department of Western Australia, left Yarraging, the furthest station to the east, on an expedition to investigate certain reports that the blacks had killed some white men in the interior. These reports were found to have originated in the discovery of the skeletons of some horses which died during Austin's expedition. Forrest discovered and named Lake Barlee, and penetrated to the east some distance past Mount Margaret. He returned to Perth on the 6th August, 1869.

Printed by McCarron, Bird & Co., 419 Collins St., Melbourne.

(i.) *Coastal Journey from the West to Adelaide, 1870.* In 1870 Forrest was placed in command of an expedition, the object of which was to cross to Adelaide by way of the shores of the Great Australian Bight. On the 30th March, 1870, he left Perth, accompanied by his brother, ALEXANDER FORREST, and four others. A coasting schooner, the *Adur*, accompanied the expedition, calling at Esperance Bay, Israelite Bay, and Eucla. After a short trip inland Forrest left Eucla on the 14th July, and passing through South Australian territory he reached Adelaide on the 27th August, 1870.

(ii.) *Overland Journey from the West to Overland Telegraph Line, 1874.* Early in April, 1874, John Forrest, accompanied by his brother Alexander and four others, set out from Geraldton to endeavour to cross to the overland telegraph line. Taking a north-easterly course, he struck and traced the Murchison, and thence reached Weld Springs, where he had an encounter with the blacks. On the 27th September the expedition reached the telegraph line at a point some distance to the north of the Peake Station, and thence arrived at Adelaide on the 3rd November.

(iii.) *Later Explorations, 1883.* In 1883 Forrest landed at Roebuck Bay and examined a large portion of the Kimberley Division. He also investigated Cambridge Gulf and the lowest part of the Ord River.

6. Alexander Forrest, 1871 to 1879.—ALEXANDER FORREST accompanied his brother on two expeditions referred to above. In 1871 he took charge of a private expedition to search to the eastward for pastoral country, and penetrated inland for 600 miles.

(i.) *Overland Journey to Telegraph Line, 1879.* In 1879 Alexander Forrest led an expedition from the DeGrey River to the overland telegraph line of South Australia. He left the DeGrey on the 25th February and reached Beagle Bay on the 10th April. Thence he followed the coast as far as the Fitzroy, which he ascended as far as the King Leopold Range. Following up the Margaret River he reached a tableland which he called Nicholson Plains. After discovering and naming the Ord River he reached the Victoria River on the 18th August, and after much suffering and privation eventually reached the Daly Waters Station.

7. David Lindsay and L. A. Wells, 1891 to 1892.—LINDSAY'S explorations in Arnhem's Land in 1883 have already been referred to (see B. *Central Australia*, 11. v. (c)). In 1891 an expedition was sent out by Sir Thomas Elder, under the leadership of Lindsay, its purpose being to complete the exploration of Australia. Lindsay, accompanied by L. A. Wells and others, left Warrina on the 2nd May, 1891, and proceeded via Fort Müller to Mount Squires, whence a south-west course was taken to Queen Victoria's Spring. Fraser's Range was reached, whence a westerly course to the Murchison was taken. On the 1st January, 1892, the expedition reached its destination.

A flying trip was made by L. A. WELLS into the district lying between Giles' track of 1876 and Forrest's route of 1874. Wells discovered several ranges of hills and some good pastoral country. He completed the examination of what was practically the whole of the still unexplored districts in about six weeks, from the 23rd February to the 4th April, 1892.

8. The Calvert Expedition under L. A. Wells, 1896 to 1897.—On the 16th July, 1896, L. A. Wells, in command of the Calvert Expedition, started from Lake Way to examine the country between the East Murchison and Fitzroy Rivers. Striking a north-easterly course, Wells reached the Fitzroy near Mount Tuckfield on the 6th November, having, however, lost two of his companions—C. F. WELLS and G. LINDSAY JONES—who had been sent on a flying trip to the north-west from Separation Well. The bodies of the missing men were subsequently found by Wells.

9. The Carnegie Expedition, 1896 to 1897.—On the 20th July, 1896, an expedition equipped and led by the HON. DAVID CARNEGIE set off from near Lake Darlôt to strike

across the continent in a north-easterly direction. The objects of the expedition were: (a) extension of geographical knowledge, (b) to discover a practical stock-route between Kimberley and Coolgardie, and (c) the discovery of auriferous country. In the last two objects the expedition was unsuccessful. Carnegie, having discovered several springs on his way, reached the northern settlements at Hall's Creek. He then followed Sturt's Creek as far as Gregory's Salt Sea, and then kept a southerly course to Lake Macdonald. The expedition returned to Lake Darlôt, via the Rawlinson Range, on the 15th July, 1897.

10. Later Exploration in the North-West.—During the latter part of the 19th century various expeditions were sent out to explore those parts of the north-west of the continent, which still remained unknown.

(i.) *O'Donnell and Carr-Boyd, 1883-96.*—In 1883, W. J. O'DONNELL and W. CARR-BOYD, whose explorations have already been referred to (see B. *Central Australia*, 11, v. (d)), explored the country from the overland telegraph line in the direction of Roeburne and found good pastoral country. In 1896, Carr-Boyd, accompanied by DAVID BREARDON, explored the country near the Rawlinson Ranges. He also made several excursions between the southern goldfields of Western Australia and the South Australian border.

(ii.) *H. F. Johnston, 1884.* In the same year H. F. JOHNSTON, G. R. TURNER, and E. T. HARDMAN surveyed the country from Mount Pierre on the Fitzroy to the junction of the Negri and Ord, and discovered and named the Mary and Elvire Rivers. In the following year Johnston, accompanied by C. Y. NYULASY, further examined the country near Spencer Gulf.

(iii.) *F. S. Brockman, 1901.* In April, 1901, the Western Australian Government despatched a party under F. S. BROCKMAN, Controller of the Field Survey Staff, with CHARLES CROSSLAND as second in command, to explore the extreme north end of the State lying between the 17th and 14th parallels of latitude and west from the 128th meridian. The party was accompanied by GIBB MAITLAND, the Government Geologist, and by DR. F. M. HOUSE, as naturalist, and was successful in securing full information as to the geographical, geological, and botanical details of the districts traversed. From Wyndham, Brockman proceeded to the Charnley River, and thence to the tributary waters of the Glenelg and Prince Regent Rivers. The Moran and King Edward Rivers were discovered and traced. A large area (6,000,000 acres) of basaltic pastoral country was also discovered.

(iv.) *F. H. Hann, 1896-1907.* In 1896 FRANK H. HANN, a Queensland squatter, started from Lawn Hill, on the Gulf of Carpentaria, to prospect the north-west interior of Western Australia for pastoral country. Striking the Ord River, he followed it up to Hall's Creek. After an unsuccessful attempt to reach the head of the Oakover River, a course was made for Derby along the Fitzroy River. From Derby, Hann went to Broome, Condon, and Roeburne. Later on he crossed the King Leopold Range and traced and named some of the tributaries of the Fitzroy. In 1903 Hann made the first of several trips from Laverton to Oodnadatta. On the 20th November, 1906, he left Laverton on an expedition to Oodnadatta, with the objects (a) of proving the possibility of opening up a stock route between these two places, and (b) of demonstrating the existence of gold-bearing lodes. Hann reached Oodnadatta on the 13th February, 1907, having followed generally a route some distance to the south of Sir John Forrest's track in 1874. Though large stretches of well grassed country were discovered, many of the so-called "springs" were found to be dry. Hann reported that a practicable stock route between Laverton and Oodnadatta could be opened up by sinking wells, and he also succeeded in obtaining a number of mineral specimens from gold-bearing lodes.

(v.) *Other Explorers.* Other explorers whose names are connected with the exploration of Western Australia are:—GEORGE ELIOT, who, in 1839, explored the country between the Williams and Leschenault; WILLIAM NAIRNE CLARK, who, in 1841, discovered immense jarrah and karri forests in the south-west; R. H. BLAND (1842); H.

LANDOR (1842); LIEUTENANT HELPMAN (1844); CAPTAIN H. M. DENHAM (1858); B. D. CLARKSON, C. E. and A. DEMPSTER, and C. HARPER (1861); C. C. HUNT and RIDLEY (1863); R. J. and T. C. SHOLL (1865); A. MCRAE (1866); PHILLIP SAUNDERS and ADAM JOHNS (1876); H. STOCKDALE (1884); H. ANSTEY (1887); F. NEWMAN and W. P. GODDARD (1890); J. H. ROWE (1895); C. A. BURROWS and A. MASON (1896); HUGH RUSSELL (1897); and JOHN MUIR (1901).

§ 5. The Constitutions of the States.¹

1. **Introduction.**—The subject of "General Government" is dealt with in Section XXV. of this Book, but it has been thought desirable to here give a brief statement of the constitutional history of Australia, with a view to shewing how the present Constitutions of the States have been built up.

2. **Early Constitutional History.**—The earliest statute relating to Australia was passed in the year 1784, for the purpose of empowering the King in Council to appoint places in Australia to which convicts might be transported. By an Order in Council dated the 6th December, 1786, His Majesty's "territory of New South Wales, situated on the east part of New Holland," was appointed such a place. Captain Phillip, who was appointed the first Governor and Vice-Admiral of the territory, was empowered by his commission and letters patent to make ordinances for the good government of the settlement. By an Act passed in 1787 authority was given for the establishment of a court of criminal jurisdiction at Sydney. In the early days of settlement the Governor's power was almost absolute, and his rule virtually despotic, tempered by his own discretion and by the knowledge that he was responsible to the Imperial authorities for any maladministration. By Acts passed in 1819, 1821, and 1822, the Governor was given limited powers to impose local taxation in the shape of Customs duties on spirits, tobacco, and other goods imported into the colony.

(i.) *The First Constitutional Charter.* In 1823 an Act was passed authorising the creation of a Council, consisting of from five to seven persons charged with certain legislative powers of a limited character. This was the first constitutional charter of Australia, and was later improved and amended by an Act passed in 1828, and applying both to New South Wales and to Van Diemen's Land, which had been politically separated in 1825.

(ii.) *First Representative Legislature.* In 1842 an important measure was passed by the Imperial Government, establishing, for the first time in Australia, a Legislature partly, but not wholly, representative in character. It was enacted that there should be within the colony of New South Wales a Legislative Council, to consist of thirty-six members, twelve of whom were to be nominated by the Sovereign and twenty-four elected by the inhabitants of the colony. The Act contained provisions defining the legislative functions of the Council, and regulated the giving or withholding of the Royal assent to Bills passed by the Council. This Act did not grant responsible government to New South Wales; the heads of the Departments and other public officers continued to hold their offices at the pleasure of the Crown, as represented by the Governor. The new Council was opened by Sir George Gipps, on the 1st August, 1843.

(iii.) *The Australian Colonies Government Act, 1850.* The next important Act relating to representative government in Australia is the Australian Colonies Government Act, passed in 1850. The two main objects of this Act were (a) the separation of the Port Phillip District from New South Wales, and (b) the establishment of an improved system of government in all the Australian colonies. For New South Wales, for the separated Victoria, for Van Diemen's Land, and for South Australia, similar Legislatures

1. See "The Annotated Constitution of the Australian Commonwealth," Quick and Garran; Jenks' "Government of Victoria"; Rusden's "History of Australia."

were prescribed. The general provisions of the Act provided that the existing Legislature in New South Wales should decide the number of members of which a new Council was to consist in that colony, and should perform the same task for Victoria. On the issue of the writs for the first election in Victoria, separation was to be deemed complete. One-third of the number of members of the Council in each colony was to be nominated by the Crown. The existing Legislatures in Van Diemen's Land and South Australia were to decide as to the number of members in the new Council in each, but they were not to exceed twenty-four. Power was given to the Governor and Legislative Council in each colony to alter the qualifications of electors and members as fixed by the Act, or to establish, instead of the Legislative Council, a Council and a House of Representatives, or other separate Legislative Houses, to be appointed or elected by such persons and in such manner as should be determined, and to vest in such Houses the powers and functions of the old Council. The powers and functions of the Councils under this Act were as follows:—(a) to make laws for the peace, order, and good government of the colony, (b) to impose taxation, including the imposition of Customs duties, and (c) to appropriate to the public service the whole of the public revenue arising from taxes, duties, rates, and imposts. The restrictions on the powers and functions of the Councils were as follows:—(a) that no such law should be repugnant to the law of England, (b) that no such law should interfere with the sale and appropriation of Crown lands, (c) that no Customs duties of a differential character should be imposed, and (d) that it should not be lawful for the Council to pass any Bill appropriating to the public service any sum of money for any purpose unless the Governor should have previously recommended that provision for such appropriation be made.

3. The Constitution of New South Wales.—After the Act just referred to had been proclaimed, an Electoral Bill for New South Wales was passed increasing the number of members of the Council from thirty-six to fifty-four, of whom thirty-six were to be elective and eighteen nominee members. The extraordinary increase in the wealth and prosperity of the colony owing to the discovery of gold, soon imparted new and unforeseen features to its political and social conditions. In 1851 a remonstrance was despatched by the Legislative Council of New South Wales to the Secretary of State for the Colonies, in which objection was taken to the form of Constitution which the Imperial authorities proposed to grant under the Act of 1850, on the grounds (a) that it did not place the control of all revenue and taxation entirely in the hands of the Colonial Legislature, (b) that all offices of trust and emolument should be filled by the Governor and Executive Council, unfettered by instructions from the Secretary of State for the Colonies, and (c) that plenary powers of legislation should be conferred on the Colonial Legislature. In 1852 the Secretary of State for the Colonies, in a despatch to the Governor of New South Wales, promised to give effect to the wishes of the Legislative Council, and suggested that the Legislative Council should proceed to frame a Constitution resembling that of Canada and based on a bi-cameral Legislature. A select committee of the Council was accordingly appointed to draft a Constitution, and as a result of the deliberations of this body the new Constitution was, on the 21st December, 1853, adopted by the Council and transmitted to the Secretary of State for the Colonies. As it contained provisions in excess of the powers conferred by the Act of 1850, the Bill could not receive the Royal assent, but had to be introduced into the Imperial Parliament. With some amendments the Bill was passed by the Imperial Government and received the Royal assent on the 16th July, 1855. It is now known as the New South Wales Constitution Act 1855, and under its provision a fully responsible system of government was granted. The entire management and control of Crown lands was conferred on the New South Wales Parliament, while the provisions of former Acts respecting the allowance and disallowance of Bills were preserved. Subject to the provisions of the Act, power to make laws amending the Constitution was given to the New South Wales Parliament. The first Parliament, under the new Constitution, was opened by Sir William T. Denison, on the 22nd May, 1856. The Constitution was amended by Acts passed in 1857, 1884, and 1890, these Acts being repealed and consolidated by the Constitution Amendment Act of 1902. The last amending Act was passed in 1908.

4. The Constitution of Victoria.—After the proclamation of the Australian Colonies Government Act of 1850, the old Legislative Council of New South Wales met on the 28th March, 1851, for the purpose of making electoral and judicial arrangements required to bring the new Act into force in Victoria. Two Acts were passed specially concerning Victoria. The first provided for the continuation of the powers and functions of all public officers resident within the Port Phillip District until removed or reappointed by the Government of Victoria. The other Act provided that the Legislative Council of Victoria should consist of thirty members, ten nominees and twenty elective. On the 1st July, 1851, writs for the election of the elective members of the new Legislative Council of Victoria were issued and separation became complete. On the 15th July Mr. La Trobe was appointed the first Lieutenant-Governor of the colony. The powers and functions of the new Council were, under the Act of 1850, similar to those of the reorganised Legislative Council of New South Wales. The next important stage in the constitutional history of Victoria was that which was consummated by the attainment of a fully responsible system of government. Reference has already been made to the rapid advance in the population, wealth, and material prosperity of Australia consequent on the discovery of gold, and to the lead taken by the Legislature of New South Wales in the movement for an extension of constitutional power. In 1853 a despatch, similar to that received by the Governor of New South Wales (see above), was received by the Lieutenant-Governor of Victoria from the Secretary of State for the Colonies. A Constitution was drafted by a committee of the Legislative Council, and it was embodied in a Bill which was passed and reserved for the Queen's assent on the 28th March, 1854. This Bill contained clauses similar to those of the New South Wales Bill relating to the assent of the Governor to bills and the Sovereign's power to disallow the same; to the sale and appropriation of Crown lands; and to the amendment of the Constitution by the Victorian Parliament. As the new Constitution contained provisions beyond those authorised by the Act of 1850 a special Enabling Act was necessary. The Bill was passed and assented to on the 16th July, 1855, and the new Constitution was proclaimed on the 23rd November following. Several amendments have since been made, chiefly with reference to the term of membership and the qualifications of members and electors. In 1890 the Constitution Amendment Act was passed, repealing and consolidating all previous amendments. The last amending Act was passed in 1903.

5. The Constitution of Queensland.—As part of New South Wales, the Moreton Bay District enjoyed the benefits of responsible government under the Constitution Act of 1855. For electoral purposes the district was, in 1856, divided into eight electorates, returning nine members to the Legislative Assembly of New South Wales.

By an Act passed in 1842 the Queen was empowered to erect into a separate colony any part of the territory of New South Wales lying to the northward of 26° south latitude, which was altered by the Australian Colonies Government Act 1850 to 30° south latitude. By the New South Wales Constitution Act 1855 the power previously granted to alter the northern boundary of New South Wales was distinctly preserved, and Her Majesty was authorised, by letters patent, to erect into a separate colony any territory which might be so separated. It was further enacted that Her Majesty, either by such Letters Patent or by Order in Council, might make provision for the government of any such new colony, and for the establishment of a Legislature therein, in manner as nearly resembling the form of government and legislature established in New South Wales as the circumstances of the new colony would permit. The separation was effected by Letters Patent dated the 6th June, 1859, and the Constitution of the new colony was embodied in an Order in Council of the same date.

The Order in Council provided that there should be within the colony of Queensland a Legislative Council and a Legislative Assembly, with the advice and consent of which Her Majesty should have power to make laws for the peace, welfare, and good government of the colony in all cases whatsoever. The powers and functions granted to this Legislature were substantially the same as those granted to New South Wales and Victoria under their respective Constitution Acts, and similar restrictions were imposed. The first Parliament under the new Constitution was convened on the 29th May, 1859.

There have been several amendments of the Constitution, the dates of the amending Acts being as follows:—1867, 1871, 1874, 1890, 1896, and 1905.

6. The Constitution of South Australia.—The creation of South Australia as a Province has already been referred to above (see p. 15.) In the exercise of the provisions of the Act, by which the Province was created, a governor, a judge, seven commissioners, and other officials, were appointed. The Governor, with the concurrence of the Chief Justice, the Colonial Secretary, and the Advocate-General, or two of them, was authorised to make laws and impose taxes. The control of the Crown lands was placed in the hands of the Commissioners. In 1841 the settlement being involved in financial difficulties, a loan was advanced by the British Government. Under an Act passed in 1842 the system of government was remodelled; the colonisation commissioners were abolished, and the Province became a Crown colony. The Queen was empowered to constitute a nominated Legislative Council, consisting of the Governor and seven other persons resident in the colony, with power to make laws for the good government thereof. This system of government continued in force until the inauguration of a new scheme under the provisions of the Australian Colonies Government Act 1850, referred to above.

In 1838 the Legislative Council of South Australia, in pursuance of the powers conferred by the Act of 1850, passed a Bill to establish a bi-cameral Legislature for South Australia. The Royal assent was, however, refused on the ground that the Bill contained a provision limiting the right of the Crown in respect to the disallowance of Bills, which provision was in excess of the powers conferred by the Act of 1850. In 1855 a new Legislative Council, partly elective and partly nominee, having been duly constituted, a second Bill, based on the Tasmanian Constitution Bill, to create a bi-cameral legislature, was passed and duly received the Royal assent in 1856. This Act, known as the South Australian Constitution Act 1856, confers no legislative powers except by reference to the Act of 1850. In order to ascertain the principal legislative powers and functions of the Parliament of South Australia reference must therefore be made to the Australian Colonies Government Act 1850, defining the legislative powers and functions of the Council for which it was substituted (see p. 35 above). The first session of the new Parliament commenced on the 22nd April, 1857, during the Governorship of Sir Richard Graves McDonnell.

The legislative powers of the South Australian Parliament have been considerably enlarged by several Imperial Acts. In 1855 an Act was passed authorising the Legislature of each of the Australian colonies to sell, dispose of, and legislate with reference to Crown lands in the colony. In 1865 the Colonial Laws Validity Act removed the common law restriction which prevented colonial legislators from passing any law repugnant to the law of England. In 1873 the prohibition contained in the Australian Colonies Government Act 1850 was, by the Australian Colonies Duties Act, abolished as far as intercolonial duties were concerned. There have been a large number of amendments to the Constitution, the dates of the amending Acts being as follows:—1870, 1872, 1873, 1876, 1881, 1882, 1887, 1888, 1889, 1890, 1892, 1893, 1894, 1896, 1899, 1901, and 1902.

7. Constitution of Western Australia.—In 1829 the first Imperial Act relating to the Government of Western Australia was passed. By that Act the King in Council was empowered to make and constitute, and to authorise any three or more persons resident within the settlements to make and constitute laws, institutions, and ordinances for the peace, order, and good government of the settlements in Western Australia. By an Order in Council dated the 1st November, 1830, the first Executive Council was constituted, while in the following year a Legislative Council, which consisted at first solely of members of the Executive Council, was formed. This system of government remained unaltered for many years, though the numbers of members of both Councils were increased from time to time. In August, 1870, the nominee Legislative Council was dissolved and writs were issued (under the Australian Colonies Government Act 1850, the provisions of which did not apply to Western Australia until that colony was able to defray its own expenses) for the election of a Council to consist of twelve elected and six nominated members. These numbers were again increased from time to time until the

last Legislative Council under the old form of government, which expired on the 21st October, 1890, consisted of twenty-six members, of whom four were official members, five were nominees of the Crown, and seventeen were elected by the different constituencies. As far back as 1873 a movement was commenced in Western Australia for responsible government as it existed in the eastern colonies. In 1889 the Legislative Council was dissolved and a general election took place, the principal question being the introduction of responsible government. A resolution in favour of the change was passed by the new Council without dissent, and a Constitution providing for the creation of a bi-cameral Legislature was accordingly drafted. In August, 1890, an enabling Bill received the Royal assent, and responsible government was proclaimed in the colony on the 21st October, 1890. Under this Act the Legislative Council was a nominative chamber, subject to the provision that after the expiration of six years, or as soon as the colony acquired a population of 60,000, the Council should be constituted by election. The first Parliament under the new Constitution met on the 30th December, 1890. On the 18th July, 1893, the population of the colony being then over 60,000, the Legislature of Western Australia passed an Act to amend the Constitution, abolishing the nominee Council and substituting one elected by the qualified inhabitants of the colony. The present Constitution of Western Australia differs but little from those of the other States of the Commonwealth. It has been amended by Acts passed in 1893, 1894, 1896, 1899, and 1900.

8. Constitution of Tasmania.—Under an Order in Council dated the 14th June, 1825, and made in pursuance of the provisions of an Act passed in 1823, Van Diemen's Land, as it was known until the year 1853,¹ was separated from New South Wales and was proclaimed a separate colony. A Lieutenant-Governor was appointed, and an Executive and a Legislative Council were called into existence, the latter being on the same model as that introduced into the other colonies at the earliest stages of their constitutional progress. It was not until the Imperial Act of 1850 was passed, that a system of representative government was introduced into Tasmania. The provisions of that Act have already been briefly indicated (see p. 35) and will not be here repeated. A Constitution Bill was drafted and passed by the Legislative Council, and was assented to and proclaimed on the 24th October, 1856.

The Constitution of South Australia was based upon that of Tasmania, and the remarks made above with reference to the Constitution of the former State apply equally to the Constitution of the latter State.

The first Parliament under the new Constitution was opened on the 2nd December, 1856. The Constitution has been amended by Acts passed in 1870, 1884, 1885, 1890, 1900, 1903, and 1906.

9. Enlarged Legislative Powers.—The legislative powers and functions of the Parliaments of the States of the Commonwealth are in fact larger than they appear in the face of the Constitution Acts, inasmuch as contributory powers have been granted from time to time by Imperial Statutes. It is not within the scope of this work to enter into a consideration of the provisions of these Statutes. Among them, however, in addition to those already referred to (see "Constitution of South Australia" above), the following may be mentioned:—

Admiralty Offences (Colonial) Act 1860
Army Act 1881
Coinage Offences (Colonies) Act 1851
Colonial Copyright Act 1847
Colonial Marriages Act 1865

Colonial Naval Defence Act 1865
Extradition Acts 1870
Merchant Shipping Act 1894
Naturalisation Act 1870

1. In the year 1853, on the acquiescence of the Imperial Government in the cessation of transportation (finally abolished in 1857, by 20 and 21 Vic. c. 3), the name Tasmania was generally and voluntarily adopted instead of Van Diemen's Land. (See Quick and Garran's "Annotated Constitution of the Australian Commonwealth," p. 61.)

§ 6. The Federal Movement in Australia.

1. **Early Stages in the Federal Movement.**—A summary is given in Year Book No. 1 (pp. 17 to 21) of the "Federal Movement in Australia" from its earliest inception to its consummation. Only a synopsis of this will be given here.

Notwithstanding that, owing to the circumstances of their growth, the initial tendency in Australia was naturally toward the individualistic evolution of the several settlements, from the earliest period there was a clear recognition of the importance of intercolonial reciprocity. Governor Fitzroy, in 1846, and Earl Grey, in 1847, saw that there were questions which affected "Australia collectively, the regulation of which in some uniform manner, and by some single authority, may be essential to the welfare of them all," and a "central legislative authority for the whole of the Australian colonies" was actually contemplated. Even as far back as 1849, a Privy Council Committee recommended a uniform tariff, and the constituting of one of the Governors as Governor-General of Australia, Sir Charles Fitzroy being actually appointed as "Governor-General of all Her Majesty's Australian Possessions." The office, however, was nominal rather than actual, and expired in 1861. Dr. Lang's idea of "a great federation of all the colonies of Australia" was put forward in 1852, and a Victorian committee in 1853 advocated the value of the General Assembly of Delegates for the whole of Australia.

The need of union was urged by the *Sydney Morning Herald* in 1854, and, though in 1857 Wentworth sought to bring about the creation of a Federal Assembly, an "Enabling Bill" which was drafted turned out to be unacceptable to Her Majesty's Government. In the same year Mr. (afterwards Sir) Charles Gavan Duffy secured the appointment of a select committee of the Victorian Legislative Assembly to consider the necessity of a federal union of the Australasian colonies. The need for such union was unanimously affirmed, the general opinion being that it should not be longer delayed. In the same year a select committee of the New South Wales Legislative Council also considered this question, fully recognising that antagonisms and jealousies were likely to arise through delay.

Union was in a fair way toward realisation when the advent of the Cowper Administration destroyed all chance of attaining it, owing to the antagonism of Mr. Cowper and Mr. (afterwards Sir) James Martin. South Australia, also in the same year, and Queensland in 1859, were both unfavourable to the federal scheme. A second attempt by Mr. Duffy to bring about a conference in 1860 failed also.

Tariff differences, however, compelled political attention to the matter, and in 1862 correspondence was opened up by South Australia regarding tariff uniformity. By means of intercolonial conferences between 1863 and 1880 some degree of uniformity in legislation and a measure of concerted administration were realised. In March, 1867, Mr. (afterwards Sir) Henry Parkes expressed himself as follows:—" . . . The time has arrived when these colonies should be united by some federal bond. . . . There are questions projecting themselves . . . which cannot be dealt with by . . . individual Governments. . . . I believe it will lead to a permanent federal understanding." A Bill passed, however, was shelved by the Home Government.

2. **The Federal Council.**—The conference of November, December, 1880, and January, 1881, recommended the creation of a Federal Council, believing that the time had not arrived for a Federal Constitution with a Federal Parliament. Up till 1883, however, every effort proved abortive, but in November of that year a convention, at which the seven colonies and Fiji were represented, met in Sydney. A Bill to establish a Federal Council for Australasia, drafted by Mr. (now Sir) Samuel Griffith, was, after some modification by a committee of the convention, adopted. In July and August, 1884, the Crown was addressed, praying for the enactment of a Federal Council Act. New South Wales and New Zealand, however, held aloof, the view of Sir Henry Parkes being that a "council" would impede the way for a sure and solid federation. The Bill introduced

by the Earl of Derby in the House of Lords on the 23rd April, 1885, became law on the 14th August as "The Federal Council of Australasia Act 1885." The Council's career, however, soon shewed that it could not hope to be effective, and it met for the last time in January, 1899.

3. Formative Stages of the Federal Movement.—So far Australia has happily enjoyed peace, but as early as 1878 the necessity for federal defence was vividly brought into Australian consciousness, and arrangements for naval protection were entered into with the Imperial Government. These were ratified by the Australasian Naval Force Act. Queensland, however, did not come into line until as late as 1891.

Early in 1889 Sir Henry Parkes had confidentially suggested to Mr. Duncan Gillies the necessity for a Federal Parliament and Executive. Unable to accept the latter's suggestion that New South Wales should give its adhesion to the Federal Council, the former statesman urged the institution of "a National Convention for the purpose of devising and reporting upon an adequate scheme of Federal Government." This led to the Melbourne Conference of 6th February, 1890. It was at the banquet on this occasion that, in proposing "A United Australasia," Mr. James Service pointed out that the tariff question was "a lion in the path," which federationists must either slay, or by which they must be slain; in the reply to which Sir Henry Parkes made use of his historic phrase, *the crimson thread of kinship runs through us all*. Certain elements of doubt being expressed as to the motives underlying the movement, Sir Henry Parkes said:—"We desire to enter upon this work of Federation without making any condition to the advantage of ourselves, without any stipulation whatever, with a perfect preparedness to leave the proposed convention free to devise its own scheme, and, if a central Parliament comes into existence, with a perfect reliance upon its justice, upon its wisdom, and upon its honour I think an overwhelming majority of my countrymen will approve of the grand step of uniting all the colonies under one form of beneficent government, and under one national flag."

The first National Australasian Convention, under Sir Henry Parkes' presidency, was convened on the 2nd March, 1891, all the colonies and New Zealand being represented. The Bill then drafted was considered by the Parliaments of New South Wales, Victoria, South Australia, and Tasmania, but not by those of Queensland, Western Australia, and New Zealand, and though the parliamentary process of dealing with the matter failed, federal sentiment was strengthening. The collapse of the "land boom" had made apparent how intimately the interests of each colony are related; and the dangers of disunion became impressively obvious. The Australian Natives' Association took up the federal cause with enthusiasm, Federation leagues were established, the issues were widely and intelligently discussed. The late Sir George Dibbs' unification scheme helped to make the issue a real one.

At the Conference of Premiers at Hobart on the 29th January, 1895, it was agreed that federation "was the great and pressing question of Australian politics," and that "the framing of a Federal Constitution" was an urgent duty. The resuscitation of the whole matter led to the passing of Enabling Acts. In New South Wales the Act received the Royal assent on the 23rd December, 1895; South Australia anticipated this by three days; the Tasmanian Bill was passed on the 10th January, 1896, the Victorian on the 7th March, 1896; Western Australia fell into line on the 27th October. The "People's Federal Convention," held at Bathurst, N.S.W., in November, 1896, gave a considerable impulse to the movement; to wait longer for Queensland was considered unnecessary, and the 4th March, 1897, was fixed as the date for the election of federal representatives for New South Wales, Victoria, South Australia, and Tasmania. Western Australia followed suit, and on the 22nd March the representatives met at Adelaide.

The discussions made it evident that the federal point of view had advanced considerably. Constitutional, Finance, and Judiciary Committees were appointed, and a Bill drafted. This, reported to the Convention on the 22nd April, was adopted on the following day, and the Convention adjourned till September. The Parliaments of New South Wales, Victoria, South Australia, Tasmania, and Western Australia discussed the question before the Sydney Session of the Convention, which opened on the 2nd September, 1897.

The business of the Convention involved the general reconsideration of the whole Bill, and the consideration of no less than 286 suggested amendments. This work gave a definitive character to that of the Melbourne Session of 1898, extending from the 20th January to the 17th March, the necessity of reaching a final decision giving to its deliberations corresponding weight.

4. Votes on the Question of Federating.—Eleven weeks after this last convention the first popular vote was taken on Federation in New South Wales, Victoria, South Australia, and Tasmania. Though the decision was overwhelming in favour of Federation in three of the States, and there was a distinct majority in its favour in New South Wales, the majority was legally insufficient. On the 22nd January, 1899, the Premiers of the six colonies met at Melbourne in a conference initiated by the Right Honourable G. H. Reid, P.C., and seven amendments were made in the Bill. This step virtually effected the solution of the few outstanding difficulties which could in any way be regarded as fundamental.

On the occasion of the second popular vote Queensland also joined in, and the general majority in favour of Federation was more than doubled, that for New South Wales itself having been more than quadrupled when compared with the first vote. The following table shews the two results:—

VOTES FOR AND AGAINST FEDERATION.

| | | N.S.W. | Victoria. | Sth. Aust. | Tas. | Qld. | TOTALS |
|----------|-----------------------------|---------|-----------|------------|--------|--------|---------|
| 1st Vote | { For Federation ... | 71,595 | 100,520 | 35,800 | 11,797 | — | 219,712 |
| | { Against „ ... | 66,228 | 22,099 | 17,320 | 2,716 | — | 108,363 |
| | { Majority ² ... | 5,367 | 78,421 | 18,480 | 9,081 | — | 111,349 |
| 2nd Vote | { For Federation ... | 107,420 | 152,653 | 65,990 | 13,437 | 38,488 | 377,988 |
| | { Against „ ... | 82,741 | 9,805 | 17,053 | 791 | 30,996 | 141,386 |
| | { Majority ... | 24,679 | 142,848 | 48,937 | 12,646 | 7,492 | 236,602 |

5. Enactment of the Constitution.—The Secretary of State for the Colonies (the Right Honourable Joseph Chamberlain) expressed the hope on the 22nd December, 1899, that a delegation of the federating colonies should visit England on the occasion of the submission of the Commonwealth Bill to the Imperial Parliament. The delegation consisted of Mr. (now Sir) Edmund Barton (N.S.W.), Mr. Alfred Deakin (Vic.), Mr. C. C. Kingston (S.A.), Sir P. O. Fysh (Tas.), and later Mr. S. H. Parker was appointed delegate for Western Australia and Mr. W. P. Reeves for New Zealand. After discussion as to whether there should be some modification in the Bill, it was introduced into the House of Commons on the 14th May; the second reading was moved on the 21st of the same month; the discussion in committee commenced on the 18th June; and the Royal assent was given on the 9th July, 1900.

On the 31st July a referendum in Western Australia on the question of federating gave the result:—For, 44,800; against, 19,691; that is to say, a majority of 25,109 in favour of union. On the 21st August both Houses of Parliament in that State passed addresses praying that it might be included as an original State of the Commonwealth.

On the 17th September, 1900, Her Majesty Queen Victoria signed the proclamation declaring that on and after the first day of January, 1901, the people of New South Wales, Victoria, South Australia, Queensland, Tasmania, and Western Australia should be united in a Federal Commonwealth, under the name of the Commonwealth of Australia.

7. Creation of the Commonwealth.

1. **The Act.**—The Commonwealth of Australia Constitution Act, 63 and 64 Vic., Chapter 12, namely, an Act to constitute the Commonwealth of Australia, which, as already stated, received the Royal assent on the 9th July, 1900, is given in Year Book No. 1 *in extenso* (pp. 21 to 37). The division of the Constitution is as follows:—

Chapter I.—The Parliament:—

Part I.—General.

Part II.—The Senate.

Part III.—The House of Representatives.

Part IV.—Both Houses of Parliament.

Part V.—Powers of the Parliament.

Chapter II.—The Executive Government.

Chapter III.—The Judicature.

Chapter IV.—Finance and Trade.

Chapter V.—The States.

Chapter VI.—New States.

Chapter VII.—Miscellaneous.

Chapter VIII.—Alteration of the Constitution.

The Schedule.

2. **Summary of the Commonwealth Constitution.**—These chapters may be summarised as follows:—

CHAPTER I.—THE PARLIAMENT.

PART I.—GENERAL (SECTIONS 1 TO 6).

The legislative power of the Commonwealth is vested in the Federal Parliament, consisting of the Sovereign, the Senate, and the House of Representatives. A Governor-General, appointed by the King, represents His Majesty in the Commonwealth, and exercises, subject to the Constitution, such powers and functions as His Majesty is pleased to assign to him. The salary of the Governor-General is fixed at £10,000 per annum until otherwise provided by Parliament. The Governor-General may appoint the times for holding the sessions of Parliament; he may prorogue Parliament, and may dissolve the House of Representatives.

PART II.—THE SENATE (SECTIONS 7 TO 23).

Until Parliament otherwise provides, there are to be six senators for each original State, chosen by the people of the State voting as one electorate. Equal representation of the original States must be maintained, and no original State may have less than six senators. The senators are chosen for a term of six years. The qualification for electors of senators is the same as the qualification for electors of members of the House of Representatives. Provision is made whereby half the senators for each State vacate their seats at the expiration of three years in the case of the election of a new Senate. The qualifications of a senator are the same as those of a member of the House of Representatives. The place of a senator becomes vacant if he fails to attend the meetings of the Senate, without permission, for two consecutive months of any session. At least one-third of the whole number of senators must be present in order to constitute a meeting of the Senate.

PART III.—THE HOUSE OF REPRESENTATIVES (SECTIONS 24 TO 40).

The number of members of the House of Representatives is, as nearly as practicable, twice the number of senators, and the numbers of members elected in the several States are in proportion to the respective populations of the States, unless otherwise determined by Parliament. The House is elected for three years, but may be sooner dissolved by the Governor-General. Until Parliament otherwise provides, qualifications for membership are as follows:—(a) Members must be of the full age of twenty-one years, must be qualified for the franchise of the House, and must have been resident within the Commonwealth for at least three years, and (b) must be natural-born British subjects or for at least five years naturalised under a law of the United Kingdom, or of a colony which has become or becomes a State, or of the Commonwealth, or of a State. A member vacates his seat if he fails to attend the meetings of the House, without permission, for two consecutive months in any session. Until Parliament otherwise pro-

vided, the qualification for the franchise of the House of Representatives was in each State the same as that for the franchise of the more numerous House of Parliament in the State, but each elector could vote only once.¹

PART IV.—BOTH HOUSES OF PARLIAMENT (SECTIONS 41 TO 50).

Any adult person who is qualified to vote at elections for the more numerous House of Parliament of a State cannot be prevented by any law of the Commonwealth from voting at elections for either of the Commonwealth Houses of Parliament. A person subject to certain disqualifications, such as being attainted of treason, being an undischarged bankrupt, holding an office of profit under the Crown (except as a Minister of State or as an officer or member of the naval or military forces of the Commonwealth), or having a pecuniary interest in any agreement with the Commonwealth Public Service (except as a member of a company), may not be elected or sit as a member of either House. Until the Parliament otherwise provided, each senator and each member of the House of Representatives received an allowance of £400 a year.² The powers and privileges of members of both Houses are as declared by Parliament, and until declared are the same as those of the Commons House of Parliament of the United Kingdom. Each House may make rules and orders with respect to—(a) The mode in which its powers, privileges, and immunities may be exercised and upheld, and (b) the order and conduct of its business and proceedings, either separately or jointly with the other House.

PART V.—POWERS OF THE PARLIAMENT (SECTIONS 51 TO 60).

The Commonwealth Parliament has, subject to the Constitution, power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i.) Trade and commerce with other countries, and among the States:
- (ii.) Taxation; but so as not to discriminate between States or parts of States:
- (iii.) Bounties on the production or export of goods, but so that such bounties shall be uniform throughout the Commonwealth:
- (iv.) Borrowing money on the public credit of the Commonwealth:
- (v.) Postal, telegraphic, telephonic, and other like services:
- (vi.) The naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth:
- (vii.) Lighthouses, lightships, beacons and buoys:
- (viii.) Astronomical and meteorological observations:
- (ix.) Quarantine:
- (x.) Fisheries in Australian waters beyond territorial limits:
- (xi.) Census and statistics:
- (xii.) Currency, coinage, and legal tender:
- (xiii.) Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money:
- (xiv.) Insurance, other than State insurance; also State insurance extending beyond the limits of the State concerned:
- (xv.) Weights and measures:
- (xvi.) Bills of exchange and promissory notes:
- (xvii.) Bankruptcy and insolvency:
- (xviii.) Copyrights, patents of inventions and designs, and trade marks:
- (xix.) Naturalisation and aliens:
- (xx.) Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth:
- (xxi.) Marriage:
- (xxii.) Divorce and matrimonial causes; and in relation thereto, parental rights, and the custody and guardianship of infants:

1. The franchise qualification was determined by the Commonwealth Franchise Act 1902.

2. By the Parliamentary Allowances Act 1907, assented to on the 28th August, the amount of the allowance was increased to £600 a year.

- (xxiii.) Invalid and old-age pensions:
- (xxiv.) The service and execution throughout the Commonwealth of the civil and criminal process and the judgments of the Courts of the States:
- (xxv.) The recognition throughout the Commonwealth of the laws, the public Acts and records, and the judicial proceedings of the States:
- (xxvi.) The people of any race, other than the aboriginal race in any State, for whom it is deemed necessary to make special laws:
- (xxvii.) Immigration and emigration:
- (xxviii.) The influx of criminals:
- (xxix.) External affairs:
- (xxx.) The relations of the Commonwealth with the islands of the Pacific:
- (xxxi.) The acquisition of property on just terms from any State or person for any purpose in respect of which the Parliament has power to make laws:
- (xxxii.) The control of railways with respect to transport for the naval and military purposes of the Commonwealth:
- (xxxiii.) The acquisition, with the consent of a State, of any railways of the State on terms arranged between the Commonwealth and the State:
- (xxxiv.) Railway construction and extension in any State with the consent of that State:
- (xxxv.) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State:
- (xxxvi.) Matters in respect of which this Constitution makes provision until the Parliament otherwise provides:
- (xxxvii.) Matters referred to the Parliament of the Commonwealth by the Parliament or Parliaments of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law:
- (xxxviii.) The exercise within the Commonwealth, at the request or with the concurrence of the Parliaments of all the States directly concerned, of any power which can at the establishment of this Constitution be exercised only by the Parliament of the United Kingdom or by the Federal Council of Australasia:
- (xxxix.) Matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in the Federal Judicature, or in any department or officer of the Commonwealth.

The Parliament has also, subject to the Constitution, exclusive power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i.) The seat of Government of the Commonwealth, and all places acquired by the Commonwealth for public purposes:
- (ii.) Matters relating to any department of the public service the control of which is by this Constitution transferred to the Executive Government of the Commonwealth:
- (iii.) Other matters declared by this Constitution to be within the exclusive power of the Parliament.

Proposed laws appropriating revenue or moneys, or imposing taxation, may not originate in the Senate, and the Senate may not amend proposed laws either (a) imposing taxation, (b) appropriating money for the ordinary annual services of the Government, or (c) so as to increase any proposed charge or burden on the people.

If the House of Representatives passes any proposed law, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, and if after an interval of three months the House of Representatives, in the same or the next session, again passes the proposed law with or without any amendments which have been made, suggested or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may dissolve the Senate and the House of Representa-

tives simultaneously. But such dissolution may not take place within six months before the date of the expiry of the House of Representatives by effluxion of time.

If after such dissolution the House of Representatives again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may convene a joint sitting of the members of the Senate and of the House of Representatives.

The members present at the joint sitting may deliberate and vote together upon the proposed law as last proposed by the House of Representatives, and upon amendments, if any, which have been made therein by one House and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number of the members of the Senate and House of Representatives shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried is affirmed by an absolute majority of the total number of members of the Senate and House of Representatives, it shall be taken to have been duly passed by both Houses of the Parliament, and shall be presented to the Governor-General for the Queen's assent.

When a proposed law passed by both Houses of the Parliament is presented to the Governor-General for the Queen's assent, he shall declare, according to his discretion, but subject to this Constitution, that he assents in the Queen's name, or that he withholds assent, or that he reserves the law for the Queen's pleasure.

The Governor-General may return to the House in which it originated any proposed law so presented to him, and may transmit therewith any amendments which he may recommend, and the Houses may deal with the recommendation.

The Queen may disallow any law within one year from the Governor-General's assent, and such disallowance on being made known by the Governor-General by speech or message to each of the Houses of the Parliament, or by proclamation, shall annul the law from the day when the disallowance is so made known.

CHAPTER II.—THE EXECUTIVE GOVERNMENT (SECTIONS 61 TO 70).

The executive power of the Commonwealth is vested in the Queen and is exercisable by the Governor-General as the Queen's representative, and extends to the execution and maintenance of the Constitution, and of the laws of the Commonwealth.

The Executive Council advises the Governor-General in the government of the Commonwealth, and the members of the Council are chosen and summoned by the Governor-General and sworn as Executive Councillors, and hold office during his pleasure. The Governor-General may appoint officers to administer such departments of State of the Commonwealth as the Governor-General in Council may establish. Such officers hold office during the pleasure of the Governor-General. They are members of the Federal Executive Council, and are the Queen's Ministers of State for the Commonwealth. After the first general election no Minister of State may hold office for a longer period than three months unless he is or becomes a senator or a member of the House of Representatives. Until the Parliament otherwise provides, the Ministers of State may not exceed seven in number, and their joint salaries may not exceed £12,000 a year. The command-in-chief of the naval and military forces of the Commonwealth is vested in the Governor-General as the Sovereign's representative, while the appointment and removal of all officers of the Executive Government is vested in the Governor-General in Council, unless the appointment is delegated by the Governor-General in Council or by a law of the Commonwealth to some other authority.

On a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments of the public service in each State shall become transferred to the Commonwealth :—¹

| | |
|-------------------------------------|---|
| Posts, telegraphs, and telephones : | Lighthouses, lightships, beacons, and buoys : |
| Naval and military defence : | Quarantine. |

¹ As to departments transferred and dates of transfer, see Section XIX.—COMMONWEALTH FINANCE, § 1, 2, hereafter.

But the departments of customs and of excise in each State shall become transferred to the Commonwealth on its establishment.

CHAPTER III.—THE JUDICATURE (SECTIONS 71 TO 80).

The judicial power of the Commonwealth is vested in a Federal Supreme Court, to be called the High Court of Australia, and in such other federal courts as the Parliament creates, and in such other courts as it invests with federal jurisdiction. The High Court shall consist of a Chief Justice, and so many other Justices, not less than two, as the Parliament prescribes. The Justices of the High Court and of the other courts created by the Parliament—

- (i.) Are to be appointed by the Governor-General in Council :
- (ii.) May not be removed except by the Governor-General in Council, on an address from both Houses of the Parliament in the same session, praying for such removal on the ground of proved misbehaviour or incapacity :
- (iii.) May receive such remuneration as the Parliament may fix : but the remuneration shall not be diminished during their continuance in office.

The High Court has jurisdiction, with such exceptions and subject to such regulations as the Parliament prescribes, to hear and determine appeals from all judgments, decrees, orders, and sentences—

- (i.) Of any Justice or Justices exercising the original jurisdiction of the High Court :
- (ii.) Of any other federal court, or court exercising federal jurisdiction ; or of the Supreme Court of any State, or of any other court of any State from which at the establishment of the Commonwealth an appeal lies to the Queen in Council :
- (iii.) Of the Interstate Commission, but as to questions of law only :

and the judgment of the High Court in all such cases is final and conclusive.

Until the Parliament otherwise provides, the conditions of and restrictions on appeals to the Queen in Council from the Supreme Courts of the several States are applicable to appeals from them to the High Court.

No appeal may be made to the Queen in Council from a decision of the High Court upon any question, howsoever arising, as to the limits *inter se* of the Constitutional powers of the Commonwealth and those of any State or States, or as to the limits *inter se* of the Constitutional powers of any two or more States, unless the High Court certify that the question is one which ought to be determined by Her Majesty in Council.

The High Court has original jurisdiction in all matters :—(i.) Arising under any treaty : (ii.) Affecting consuls or other representatives of other countries : (iii.) In which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party : (iv.) Between States, or between residents of different States, or between a State and a resident of another State : (v.) In which a writ of Mandamus or prohibition or an injunction is sought against an officer of the Commonwealth : while Parliament may make laws conferring original jurisdiction on the High Court in any matter—(i.) Arising under the Constitution or under any laws made by the Parliament : (ii.) Of Admiralty and maritime jurisdiction : (iii.) Relating to the same subject matter claimed under the laws of different States.

CHAPTER IV.—FINANCE AND TRADE (SECTIONS 81 TO 105).

On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, passed to the Executive Government of the Commonwealth. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of customs and of excise not more than one-fourth is to be applied annually by the Commonwealth towards its expenditure. The balance, in accordance with the Constitution, is to be paid to the several States, or

applied to the payment of interest on debts of the several States taken over by the Commonwealth.

Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth, and on the imposition of such duties, trade, commerce, and intercourse among the States shall be absolutely free,¹ and the power of the Commonwealth Parliament to impose duties of customs and excise, and to grant bounties on the production or export of goods, shall become exclusive.

Until the imposition of uniform duties of customs it was provided that—

- (i.) The Commonwealth should credit to each State the revenues collected therein by the Commonwealth.
- (ii.) The Commonwealth should debit to each State—(a) The expenditure therein of the Commonwealth incurred solely for the maintenance or continuance as at the time of transfer, of any department transferred from the State to the Commonwealth. (b) The proportion of the State, according to the number of its people, in the other expenditure of the Commonwealth.
- (iii.) The Commonwealth should pay to each State month by month the balance (if any) in favour of the State.

During the first five years after the imposition of uniform duties of customs, and thereafter until the Parliament otherwise provides—(i.) The duties of customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former but in the latter State: (ii.) Subject to the last sub-section, the Commonwealth shall credit revenue, debit expenditure, and pay balances to the several States as prescribed for the period preceding the imposition of uniform duties of customs.

After five years from the imposition of uniform duties of customs, the Parliament may provide, on such basis as it deems fair, for the monthly payment to the several States of all surplus revenue of the Commonwealth, and during a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, the Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit.

The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to the State Government railways. The Commonwealth may not, however, by any law or regulation of trade, commerce, or revenue give preference to one State over another, nor by any law or regulation of trade or commerce abridge the right of a State to the reasonable use of rivers for conservation or irrigation.

CHAPTER V.—THE STATES (SECTIONS 106 TO 120).

The Constitution of each State of the Commonwealth, subject to the Constitution, continues as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be, until altered in accordance with the Constitution of the State. Every power of the Parliament of a Colony which has become or becomes a State, unless it is by this Constitution exclusively vested in the Parliament of the Commonwealth or withdrawn from the Parliament of the State, continues as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be, and every law in force in a Colony which has become or becomes a State, and relating to any matter within the powers of the Parliament of the Commonwealth, subject to the Constitution, continues in force in the State: and, until provision is made in that behalf by the Parliament of the Commonwealth, the Parliament of the State has such powers of alteration and of repeal in respect of any such law as the Parliament of the Colony had until the Colony became a State.

1. Uniform customs duties were imposed by the Customs Tariff Act 1902 (see Section XV., COMMERCE, § 2, hereafter).

When a law of a State is inconsistent with a law of the Commonwealth, the latter prevails, and the former, to the extent of the inconsistency, is invalid.

The Parliament of a State may surrender any part of the State to the Commonwealth; and upon such surrender, and the acceptance thereof by the Commonwealth, such part of the State becomes subject to the exclusive jurisdiction of the Commonwealth.

After uniform duties of customs have been imposed, a State may levy on imports or exports, or on goods passing into or out of the State, such charges as may be necessary for executing the inspection laws of the State; but the net produce of all charges so levied shall be for the use of the Commonwealth; and any such inspection laws may be annulled by the Parliament of the Commonwealth.

CHAPTER VI.—NEW STATES (SECTIONS 121 TO 124).

The Parliament may admit to the Commonwealth or establish new States, and may upon such admission or establishment make or impose such terms and conditions, including the extent of representation in either House of the Parliament, as it thinks fit.

The Parliament may make laws for the government of any territory surrendered by any State to and accepted by the Commonwealth, or of any territory placed by the Queen under the authority of and accepted by the Commonwealth, or otherwise acquired by the Commonwealth, and may allow the representation of such territory in either House of the Parliament to the extent and on the terms which it thinks fit.

The Parliament of the Commonwealth may, with the consent of the Parliament of a State, and the approval of the majority of the electors of the State voting upon the question, increase, diminish, or otherwise alter the limits of the State, upon such terms and conditions as may be agreed on, and may, with the like consent, make provision respecting the effect and operation of any increase or diminution or alteration of territory in relation to any State affected.

A new State may be formed by separation of territory from a State, but only with the consent of the Parliament thereof, and a new State may be formed by the union of two or more States or parts of States, but only with the consent of the Parliaments of the States affected.

CHAPTER VII.—MISCELLANEOUS (SECTIONS 125 TO 127).

The seat of Government of the Commonwealth shall be determined by the Parliament, and shall be within territory which shall have been granted to or acquired by the Commonwealth, and shall be vested in and belong to the Commonwealth, and shall be in the State of New South Wales, and be distant not less than one hundred miles from Sydney. Such territory shall contain an area of not less than one hundred square miles, and such portion thereof as shall consist of Crown lands shall be granted to the Commonwealth without any payment therefor. The Parliament shall sit at Melbourne until it meet at the seat of Government.

The Queen may authorise the Governor-General to appoint any person, or any persons jointly or severally, to be his deputy or deputies within any part of the Commonwealth.

CHAPTER VIII.—ALTERATION OF THE CONSTITUTION (SECTION 128).¹

The Constitution may not be altered except in the following manner:—

The proposed law for the alteration thereof must be passed by an absolute majority of each House of the Parliament, and not less than two nor more than six months after its passage through both Houses the proposed law must be submitted in each State to the electors qualified to vote for the election of members of the House of Representatives.

¹ The Constitution has been altered by the following Acts:—The Referendum (Constitution Alteration) Act 1906; The Constitution Alteration (Senate Elections) Act 1906.

But if either House passes any such proposed law by an absolute majority, and the other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, and if after an interval of three months the first-mentioned House in the same or the next session again passes the proposed law by an absolute majority with or without any amendment which has been made or agreed to by the other House, and such other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, the Governor-General may submit the proposed law as last proposed by the first-mentioned House, and either with or without any amendments subsequently agreed to by both Houses, to the electors in each State qualified to vote for the election of the House of Representatives.

When a proposed law is submitted to the electors the vote is taken in such manner as the Parliament prescribes. And if in a majority of the States a majority of the electors voting approve the proposed law, and if a majority of all the electors voting also approve the proposed law, it is presented to the Governor-General for the Queen's assent.

No alteration diminishing the proportionate representation of any State in either House of the Parliament, or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing, or otherwise altering the limits of the State, or in any manner affecting the provisions of the Constitution in relation thereto, can become law unless the majority of the electors voting in that State approve the proposed law.

3. The Royal Proclamation.—The preceding Act received the Royal assent on the 9th July, 1900. This made it lawful (see Sec. 3) to declare that the people of Australia should be united in a Federal Commonwealth. This proclamation, made on the 17th September, 1900, constituted the Commonwealth as from the 1st January, 1901: it reads as follows:—

BY THE QUEEN.

A PROCLAMATION.

(Signed) VICTORIA R.

WHEREAS by an Act of Parliament passed in the Sixty-third and Sixty-fourth Years of Our Reign intituled, "An Act to constitute the Commonwealth of *Australia*," it is enacted that it shall be lawful for the Queen, with the advice of the Privy Council, to declare by Proclamation, that, on and after a day therein appointed, not being later than One Year after the passing of this Act, the people of *New South Wales, Victoria, South Australia, Queensland, and Tasmania*, and also, if Her Majesty is satisfied that the people of *Western Australia* have agreed thereto, of *Western Australia*, shall be united in a Federal Commonwealth under the name of the Commonwealth of *Australia*.

And whereas We are satisfied that the people of *Western Australia* have agreed thereto accordingly.

We therefore, by and with the advice of Our Privy Council, have thought fit to issue this Our Royal Proclamation, and We do hereby declare that on and after the First day of *January* One thousand nine hundred and one, the people of *New South Wales, Victoria, South Australia, Queensland, Tasmania, and Western Australia* shall be united in a Federal Commonwealth under the name of the Commonwealth of *Australia*.

Given at Our Court at *Balmoral* this Seventeenth day of *September*, in the Year of Our Lord One thousand nine hundred, and in the Sixty-fourth Year of Our Reign.

GOD SAVE THE QUEEN.

§ 8. Commonwealth Legislation.

1. **The Commonwealth Parliaments.**—The first Parliament of the Commonwealth was convened by proclamation dated 29th April, 1901, by His Excellency the late Earl of Hopetoun, Governor-General. It was opened on the 9th May by H.R.H. the Duke of Cornwall and York, who had been sent to Australia for that purpose by His Majesty the King; the Rt. Hon. Sir Edmund Barton, P.C., G.C.M.G., K.C., being Prime Minister. It was dissolved on the 23rd November, 1903. The second Parliament was convened on the 2nd March, 1904, by His Excellency the Rt. Hon. Baron Northcote, G.C.M.G., G.C.I.E., C.B.; the Hon. Alfred Deakin being Prime Minister. The third session closed on the 12th October, 1906, and Parliament was dissolved on the 8th November, 1906. The third Parliament was convened on the 20th February, 1907, and met on that day and the following day only. It was prorogued on the 22nd February, the prorogation eventually extending to the 13th July, 1907, on which day the second session commenced. The Debates of these Parliaments will be found in Volumes I. to XXXV. of the Parliamentary Debates, as follows:—

| | | | | |
|--------------------|----------------------|-------|----------|-----------------------|
| First Parliament, | 1st Session | Vols. | I. to | XII., pp. 1 to 16,744 |
| " | " | " | XIII. " | XVII., " 1 " 6,440 |
| Second Parliament, | 1st Session | " | XVIII. " | XXIV., " 1 " 8,618 |
| " | " | " | XXV. " | XXX., " 1 " 7,461 |
| " | " | " | XXXI. " | XXXV., " 1 " 6,491 |
| Third Parliament, | 1st and 2nd Sessions | " | XXXVI. | |

2. **The Several Administrations.**—The following tabular statements shew the names of the several Governors-General, and the constitution of the Ministries which have directed the administration of the affairs of the Commonwealth since its creation:—

(a) GOVERNORS-GENERAL.

- Rt. Hon. EARL OF HOPETOUN, P.C., K.T., G.C.M.G., G.C.V.O. Sworn 1st January, 1901; recalled 9th May, 1902, left Melbourne 2nd July, 1902.
- Rt. Hon. HALLAM BARON TENNYSON, G.C.M.G. (Act. Governor-General). Sworn 17th July, 1902.
- Rt. Hon. HALLAM BARON TENNYSON, G.C.M.G. (Governor-General). Sworn 9th January, 1903; recalled 21st January, 1904.
- Rt. Hon. HENRY STAFFORD BARON NORTHCOTE, G.C.M.G., G.C.I.E., C.B. Sworn 21st January, 1904; recalled
- Rt. Hon. WILLIAM HUMBLE EARL OF DUDLEY, P.C., G.C.M.G., G.C.V.O., etc. Sworn 9th September, 1908.

(b) BARTON ADMINISTRATION, 1st January, 1901, to 24th September, 1903.

| DEPARTMENTS. | MINISTERS. |
|----------------------------------|--|
| External Affairs | Rt. Hon. SIR EDMUND BARTON, P.C., G.C.M.G., K.C. |
| Attorney-General | Hon. ALFRED DEAKIN. |
| Home Affairs | { Hon. SIR WILLIAM JOHN LYNE, K.C.M.G. (to 11/8/03). |
| Treasury | { Rt. Hon. SIR JOHN FORREST, P.C., G.C.M.G. (from 11/8/03). |
| Trade and Customs | { Rt. Hon. SIR GEORGE TURNER, P.C., K.C.M.G. |
| Defence | { Rt. Hon. CHARLES CAMERON KINGSTON, P.C., K.C. (resigned 24/7/03) |
| Postmaster-General | { Hon. SIR WILLIAM JOHN LYNE, K.C.M.G. (from 11/8/03). |
| Vice-President Executive Council | { The Hon. SIR JAMES ROBERT DICKSON, K.C.M.G. (died Jan. 1901). |
| Without Portfolio | { Rt. Hon. SIR JOHN FORREST, P.C., G.C.M.G. (to 10/8/03). |
| | { Hon. JAMES GEORGE DRAKE (from 10/8/03). |
| | { Hon. JAMES GEORGE DRAKE (to 10/8/03). |
| | { Hon. SIR PHILIP OAKLEY FYSH, K.C.M.G. (from 10/8/03). |
| | { Hon. RICHARD EDWARD O'CONNOR, K.C. |
| | { Hon. SIR PHILIP OAKLEY FYSH, K.C.M.G. (till 9/8/03). |

(c) DEAKIN ADMINISTRATION, 24th September, 1903, to 26th April, 1904.

| Home Affairs | { Hon. LITTLETON ERNEST GROOM (to 13/10/'06). Hon. THOMAS THOMSON EWING (from 13/10/'06 to 24/1/'07). Hon. JOHN HENRY KEATING (from 24/1/'07). |
| Vice-President Executive C'ncl | { Hon. THOMAS THOMSON EWING (to 13/10/'06). Hon. JOHN HENRY KEATING (from 13/10/'06 to 20/2/'07). Hon. ROBERT WALLACE BEST (from 20/2/'07). |
| Honorary Minister | Hon. J. HUME COOK (from 28/1/08). |

3. **The Course of Legislation.**—The actual legislation by the Commonwealth Parliament is indicated in alphabetical order in "Vol. VI. of the Acts of the Parliament of the Commonwealth of Australia, passed in the session of 1907, with Tables, Appendixes and Indexes." A "Chronological Table of Acts passed from 1901 to 1907, shewing how they are affected by subsequent legislation or lapse of time" is also given, and further "A Table of Commonwealth Legislation," for the same period, "in relation to the several provisions of the Constitution," is furnished. Reference may be made to these for complete information. The nature of this legislation, however, and its relation to the several provisions of the Constitution of the Commonwealth are set forth in the following, specially prepared, tabular statement:—

(a) ANALYTIC TABLE OF COMMONWEALTH LEGISLATION.

FROM 1901 TO JUNE, 1908, IN RELATION TO THE SEVERAL PROVISIONS OF THE CONSTITUTION.¹

| Section of Constitution. | Short Title of Commonwealth Act.* |
|--------------------------|--|

SECTION III.

PHYSIOGRAPHY.

§ 1. General Description of Australia.

1. **Geographical Position.**—The Australian Commonwealth includes Australia proper lying in the Southern Hemisphere, an island continent, and Tasmania, in all an area of about 2,974,581 square miles, the mainland alone containing about 2,948,366 square miles. Bounded on the west and east by the Indian and Pacific Oceans respectively, it lies between longitudes 113° 9' E. and 153° 39' E., while its northern and southern limits are the parallels of latitude 10° 41' S. and 39° 8' S., or including Tasmania, 43° 39' S. On its north are the Timor and Arafura Seas and Torres Strait, on its south the Southern Ocean and Bass Strait.¹

(i.) *Tropical and Temperate Regions.* Of the total area of Australia the lesser portion lies within the tropics. Assuming, as is usual, that the latitude of the Tropic of Capricorn is 23° 30' S.², the areas within the tropical and temperate zones are approximately as follows:—

AREAS OF TROPICAL AND TEMPERATE REGIONS OF STATES WITHIN TROPICS.

| | Queensland. | Northern Territory. | Western Australia. | Total. |
|--|-------------|---------------------|--------------------|------------|
| | Sq. miles. | Sq. miles. | Sq. miles. | Sq. miles. |
| Within Tropical Zone | 359,000 | 426,320 | 364,000 | 1,149,320 |
| Within Temperate Zone | 311,500 | 97,300 | 611,920 | 1,020,720 |
| Ratio of Tropical part to whole State ... | 0.535 | 0.814 | 0.373 | 0.530 |
| Ratio of Temperate part to whole State ... | 0.465 | 0.186 | 0.627 | 0.470 |

Thus the tropical part is roughly about one half (0.530) of the three territories mentioned above, or about five-thirteenths of the whole Commonwealth (0.386). See hereafter Meteorology 1.

2. **Area of Australia compared with that of other Countries.**—That the area of Australia is greater than that of the United States of America, that it is four-fifths of that of Canada, that it is more than one-fourth of the area of the whole of the British Empire, that it is nearly three-fourths of the whole area of Europe; that it is about 25 times as large as any one of the following, viz., the United Kingdom, Hungary, Norway, Italy, the Transvaal, and Ecuador, are facts which are not always adequately realised. It is this great size, taken together with the fact of the limited population, that gives to the problems of Australian development their unique character, and its clear comprehension is essential in any attempt to understand those problems.

1. The extreme points are "Steep Point" on the west, "Cape Byron" on the east, "Cape York" on the north, "Wilson's Promontory" on the south, or, if Tasmania be included, "South East Cape." The limits, according to the 1903-4 edition of "A Statistical Account of Australia and New Zealand," p. 2; and, according to Volume XXV. of the "Encyclopedia Britannica," p. 787; are respectively 113° 5' E., 153° 16' E., 10° 39' S., and 39° 11½' S., but these figures are obviously defective.

2. Its correct value for 1908.0 is 23° 27' 4".5.

The relative magnitudes may be appreciated by a reference to the following table, which shows how large Australia is compared with the countries referred to, or *vice versa*. Thus, to take line 1, we see that Europe is about $1\frac{1}{4}$ times (1.29776) as large as Australia, or that Australia is about three-quarters (more accurately 0.78) of the area of Europe.

SIZE OF AUSTRALIA

3. **Relative Size of Political Subdivisions.**—As already stated, Australia is divided into six States, the areas of which, in relation to one another and to the total of Australia, are shewn in the following table :—

RELATIVE SIZES OF STATES AND COMMONWEALTH.

| State. | Area. | Ratio which the Area of each State bears to that of other States and Commonwealth. | | | | | | |
|---------------|------------|--|-----------|---------|---------------|----------|----------|---------|
| | | N.S.W. | Victoria. | Q'land. | S.A. (Total.) | W. Aust. | Tas. | C'with. |
| | Sq. miles. | | | | | | | |
| N.S.W. ... | 310,372 | 1.000 | 3.532 | 0.463 | 0.344 | 0.318 | 11.840 | 0.104 |
| Victoria ... | 87,884 | 0.283 | 1.000 | 0.131 | 0.097 | 0.090 | 3.352 | 0.030 |
| Queensland | 670,500 | 2.160 | 7.629 | 1.000 | 0.742 | 0.687 | 25.577 | 0.225 |
| S.A. (total) | 903,690 | 2.912 | 10.283 | 1.348 | 1.000 | 0.926 | 34.472 | 0.304 |
| S.A. (proper) | (380,070) | (1.225) | (4.325) | (0.567) | (0.421) | (0.389) | (14.498) | (0.128) |
| N. Terr. ... | (523,620) | (1.687) | (5.958) | (0.781) | (0.579) | (0.537) | (19.974) | (0.176) |
| W. Aust. ... | 975,920 | 3.144 | 11.105 | 1.455 | 1.080 | 1.000 | 37.228 | 0.328 |
| Tasmania ... | 26,215 | 0.085 | 0.298 | 0.039 | 0.029 | 0.027 | 1.000 | 0.009 |
| Total ... | 2,974,581 | 9.584 | 33.847 | 4.436 | 3.292 | 3.048 | 113.469 | 1.000 |

Thus, looking at the top line, New South Wales is seen to be over three-and-a-half times as large as Victoria (3.532) and less than one-half the size of Queensland (0.463) : or again, looking at the bottom line, the Commonwealth is shewn to be more than nine-and-a-half times as large as New South Wales (9.584), and nearly thirty-four times as large as Victoria (33.847).

These relative magnitudes are shewn in the small diagram below. It may be added that Papua (or British New Guinea), with its area of 90,540 square miles, is 0.030 of the area of the Commonwealth.

4. **Coastal Configuration.**—There are no striking features in the configuration of the coast: the most remarkable indentations are the Gulf of Carpentaria on the north and the Great Australian Bight on the south. The York Peninsula on the extreme north is the only other remarkable feature in the outline. In Year Book No. 1 an enumeration of the features of the coast-line of Australia is given on pp. 60 to 68. This is not here repeated.

(i.) *Coast-line.* The lengths of coast-line, exclusive of minor indentations, both of each State and of the whole continent, are shewn in the following table :—

SQUARE MILES OF TERRITORY PER MILE OF COAST-LINE.

| State. | Coast-line. | Area ÷ Coast-line | State. | Coast-line. | Area ÷ Coast-line. |
|--------------------|-------------|-------------------|----------------------------|-------------|--------------------|
| | Miles. | Sq. miles. | | Miles. | Sq. miles. |
| New South Wales... | 700 | 443 | South Australia ... | 1,540 | 247 |
| Victoria ... | 680 | 129 | Western Australia | 4,350 | 224 |
| Queensland ... | 3,000 | 223 | Continent ¹ ... | 11,310 | 261 |
| Northern Territory | 1,040 | 503 | Tasmania ... | 900 | 29 |

1. Area 2,948,366 square miles.

For the entire Commonwealth this gives a coast-line of 12,210 miles, and an average of 244 square miles for one mile of coast-line. According to Strelbitski, Europe has only 75 square miles of area to each mile of coast-line, and, according to recent figures, England and Wales have only one-third of this, viz., 25 square miles.

(ii.) *Historical Significance of Coastal Names.* It is interesting to trace the voyages of some of the early navigators by the names bestowed by them on various coastal features—thus Dutch names are found on various points of the Western Australian coast, in Nuyts' Archipelago, in the Northern Territory, and in the Gulf of Carpentaria; Captain Cook can be followed along the coasts of New South Wales and Queensland; Flinders' track is easily recognisable from Sydney southwards, as far as Cape Catastrophe, by the numerous Lincolnshire names bestowed by him; and the French navigators of the end of the eighteenth and the beginning of the nineteenth century have left their names all along the Western Australian, South Australian, and Tasmanian coasts.

5. **Hydrology of Australia.**—It is not the function of this Year Book to furnish in any one number a complete geographical account of Australia, but, as previously indicated (Year Book No. 1), it is intended each year to give the most complete available information concerning some special geographical element. In this number an enumeration of the rivers and their approximate lengths is selected.

On the whole, Australia is a country with a limited rainfall. This is immediately evident on studying its river systems, its lakes, and its artesian areas. Its one large river system is that of the Murray and Darling Rivers, of which the former stream is the larger and more important. Many of the rivers of the interior run only after heavy rains. Depending almost entirely on rainfall, a consequence of the absence of high mountains, they drain large areas with very varying relation as between rainfall and flow. Thus it has been estimated that not more than 10 per cent. of the rainfall on the "catchment-area" of the Darling River above Bourke (N.S.W.) discharges itself past that town. The rate of fall is often very slight.

(i.) *Rivers.* The rivers of Australia may be divided into two great classes, those of the coastal plains, with moderate rates of fall, and those of the central plains, with very slight fall. Of the former not many are navigable for any distance from their mouths, and some are difficult of access or inaccessible from the sea on account of bars.

The two longest rivers of the northern part of the eastern coast are the Burdekin, discharging into Upstart Bay, with a catchment area of 53,500 square miles; and the Fitzroy, which reaches the sea at Keppel Bay, and drains about 55,600 square miles. The Hunter is the largest coastal river of New South Wales, draining about 11,000 square miles, before it empties itself at Newcastle. The Murray River, with its great tributary, the Darling, drains a considerable part of Queensland, the major part of New South Wales, and a large part of Victoria. It debouches into the arm of the sea known as Lake Alexandrina, on the eastern side of the South Australian coast. The total length of the Murray is about 1600 miles, 400 being in South Australia, and 1200 constituting the boundary between New South Wales and Victoria.¹

The total length of the Darling-Murray from the source of the Darling to the mouth of the Murray is 2310 miles.¹

The rivers on the north-west coast of Australia (Western Australia) are of considerable size, e.g., the Murchison, Gascoyne, Ashburton, Fortescue, DeGrey, Fitzroy, Drysdale, and Ord. So also are those in the Northern Territory, e.g., Victoria and Daly. The former of these, estimated to drain 90,000 square miles, is said to be navigable by the largest vessels for 50 miles.

The rivers on the Queensland side of the Gulf of Carpentaria are also of considerable size, e.g., Gregory, Leichhardt, Cloncurry, Gilbert, Mitchell, etc.

Owing to the small fall of many of the interior rivers, in wet seasons they may flood hundreds of miles of country, while in dry seasons they form a mere succession of water-

1. These distances were differently given in Year Book No. 1, but have since been measured on large scale maps, with the results as shewn.

holes, or are entirely dry. It is this fact that explains the apparently conflicting reports of the early explorers, one regarding the interior as an inland sea, and another as a desert.

The rivers of Tasmania have short and rapid courses, as the configuration of the territory indicates.

The following table¹ gives a list of the principal rivers in each State together with their approximate lengths, and shews moreover the tributary systems and the lengths of the tributaries:—

A comparison of the different sources of official information as to the lengths of the rivers of the Commonwealth shewed considerable discrepancies, even in important and well-known rivers. These discrepancies were relatively so large that it seemed desirable to re-estimate the lengths by using the largest scale maps available, and following all the bends of the rivers. This was carefully done for all the States by two methods—the mean of the two results, differing very slightly, being taken.

In the case of Queensland, South Australia, and Tasmania, the Lands Departments of those States were good enough to supply the lengths: where these substantially agreed with those computed as indicated, the lengths furnished were adopted. In the very few cases where the discrepancy was large, the result computed in the Bureau was retained in preference.

For purposes of reference, the following table has been prepared shewing the magnitude of the discrepancy:—

COMPARISON OF PUBLISHED LENGTHS OF VARIOUS RIVERS IN THE COMMONWEALTH.

| River. | C'wealth Official Year Book, No. 2. | Statistical Account of Aust. & N.Z., 1903-4. (Coghlan.) | Notes on the Colony of Victoria, 1875. (Hayter.) | Victorian Year Book, 1906-7. (Drake.) |

(ii.) *Lakes.* The "lakes" of Australia may be divided into three classes, viz., (a) true permanent lakes; (b) lakes which being very shallow, become mere morasses in dry seasons, or even dry up and finally present a cracked surface of salt and dry mud, and (c) lakes which are really inlets of the ocean, opening out into a lake-like expanse.

The second class (b) is the only one which seems to demand special mention. These are a characteristic of the great central plain of Australia. Some of them (*e.g.*, Lake Torrens, Gairdner, Eyre, Frome) are of considerable extent.

(iii.) *Artesian Areas.* A considerable tract of the plain country of New South Wales and of Queensland carries a water-bearing stratum, usually at a great depth. A large number of artesian bores have been put down, from which there is now a considerable efflux. These are of great value, and render large areas available which otherwise would be difficult to occupy even for pastoral purposes. Western Australia has also an artesian area of considerable magnitude.

The distribution of the rivers and lakes, and the approximate boundaries of the artesian basin, are shewn on the accompanying map.

The statistics relating to artesian bores will be given *in extenso* hereinafter, viz., in the section dealing with Water Conservation.

6. **Orography.**—Owing to the absence of any very high mountain chains, and to the great depression in the centre of Australia, the average elevation of the Australian continent over the level of the surrounding oceans is less than that of any of the other continents. This average, however, has not yet been estimated with any degree of precision.

(i.) *General Description of the Surface.* A section through the continent from east to west, at the point of its greatest breadth, shews first a narrow belt of coastal plain. This plain, extending north and south along the whole eastern coast, is well watered by rivers. Of variable width, seldom more than sixty or seventy miles, and occasionally only a few miles or disappearing altogether, its average may, nevertheless, be taken as about forty to fifty. From this the Great Dividing Range, or Australian Highlands, extending from the north of Queensland to the south of New South Wales, and thence sweeping westward through Victoria, rises often sharply, and frequently presents bold escarpments on its eastern face. The descent on its western slopes is gradual, until in the country to the north of Spencer's Gulf the plain is not above the sea-level, and occasionally is even below it. Then there is another almost imperceptible rise until the mountain ranges of Western Australia are reached, and beyond these another strip of coastal plain.

The great central plain is the most distinctive feature of the Australian continent, and its climatic peculiarities are doubtless to be largely ascribed thereto.

(ii.) *Mountain Systems.* The main mountain feature of Australia is the Great Dividing Range, which runs along the whole eastern coast of the continent, and can be

traced over the islands of Torres Straits to New Guinea, while in the South one branch sweeps westwards towards the boundary of Victoria and South Australia, and the other—the main branch—finds its termination in Tasmania.

This main mountain system is, at no place, more than 250 miles from the eastern coast-line, and it approaches to within 27 miles. On the whole it is much closer to the coast in both New South Wales and Victoria than it is in Queensland, the corresponding average distances being about 70, 65, and 130 miles respectively.

The mountains of Australia are of relatively small altitude. Thus in Queensland the Great Dividing Range reaches a height above sea-level of only 5440 feet (Mount Bartle Frere). In New South Wales Mount Kosciusko is only about 7300 feet, and Mount Bogong in Victoria only about 6510 feet high. The fact that there are no high mountains in Australia is also an important element in considering its climate.

There is no connection between the mountains of the eastern and other States of Australia. In South Australia there are two peaks rising to about 3005 feet (Mount Remarkable and Mount Brown); and in Western Australia the height of 3800 feet (Mount Bruce) is attained. In Tasmania the greatest height is only 5070 feet (Cradle Mountain).

It may be of interest to observe that at one time Tasmania was doubtless connected with the mainland. As the Great Dividing Range can in the north be traced from Cape York across Torres Straits to New Guinea, so can its main axis be similarly followed across the shallow waters of Bass Straits and its islands from Wilson's Promontory to Tasmania, which may be said to be completely occupied by ramifications of the chain. The central part of the island is occupied by an elevated plateau, somewhat triangular in shape, and presenting bold fronts to the east, west, and north. This does not extend in any direction more than about sixty miles. The plateau rests upon a more extensive tableland, the contour of which closely follows the coast-line, and occasionally broadens out into low-lying tracts not much above sea-level. The extreme south of the island is rugged in character.

The positions of the mountain ranges are shewn on the map, specially illustrating Australian orography.

§ 2. The Geology of Australia.

1. **General.**—The geology of different parts of Australia has, naturally, been studied with varying degrees of thoroughness. The great area to be covered, the difficulties to be encountered, and the limited time so far available, are obvious. Instead of attempting, therefore, to present in bold outline a general picture of Australian Geology, it is proposed to give authoritative, independent sketches of the geology of each State, notwithstanding that this will necessarily involve some degree of repetition.

A knowledge of the main features of Australian physical geography will be assumed, and references thereto consequently reduced to a minimum.

2. **Geology of New South Wales.**¹—In physical configuration New South Wales may be divided into three regions, viz.:—(1) The narrow coastal plain on the east; (2) the Great Dividing Range and its associated table-lands; and (3) the western plains. These will first be individually referred to.

(i.) *The Main Dividing Range.* The main dividing range or table-land of New South Wales is composed for the main part of Paleozoic sediments, together with granitic and other igneous rocks; that portion of it, however, which is situated to the westward of Maitland, Sydney, and Wollongong, is capped with Mesozoic strata, viz., the Hawkesbury series, forming the covering of the principal coal basin.

1. This article is contributed by E. F. Pittman, Esquire, A.R.S.M., Under Secretary for Mines, New South Wales, Government Geologist of New South Wales, sometime Lecturer, etc., on Mining University of Sydney.

(ii.) *The Coastal Plains.* The coastal plains, which extend from the eastern foothills of the Dividing Range to the ocean, and which vary in width from a mile or two up to 150 miles, contain two coal-bearing basins, the chief of which extends from the neighbourhood of Maitland on the north to the Shoalhaven River on the south. This coal basin consists of the Permo-Carboniferous coal measures overlaid by the Hawkesbury (Triassic) series. The second coal-field referred to is that known as the Clarence and Richmond field. It is composed of Triassic or Trias-Jura rocks, and so far as at present known it contains no coal seams of commercial value. It may, however, be underlain by the productive Permo-Carboniferous measures.

The coastal plains are also largely composed of Post-Tertiary fluviatile deposits, which form exceedingly rich agricultural areas. A considerable area between the Richmond and the Tweed Rivers is occupied by basalt, the decomposition of which has produced a rich soil eminently suitable for agriculture and dairy farming.

(iii.) *The Great Western Plains.* The great western plains, which extend from the western foothills of the great tableland, are underlain by granitic rocks and sediments of Palæozoic, Mesozoic, and early Tertiary age. The most northerly portion is Mesozoic (Triassic), and forms the artesian water-basin. South of this is a Palæozoic belt stretching westerly from the great tableland to the South Australian border. During the Mesozoic era this belt formed a mountain range, whose direction was at right angles to the main divide; but this range was subsequently planed down by denudation, and its surface is now level with the surrounding country. To the south of this, along the Lower Darling and the Murray, is a large area of early Tertiary marine beds (Eocene), while the remainder of the Riverina district (up the Murray, Murrumbidgee, and Lachlan Rivers) is underlain for the most part by granitic, Silurian, and Devonian rocks.

The surface of the western plains is covered by Post-Tertiary deposits, flood loams, etc., except in isolated places where the remains of the older formations still rise above their surface.

(iv.) *Classification of the Sedimentary Rocks of New South Wales.* In the following classification some indication of the economic significance of the different members of each series is given:—

| | | | | | | |
|------------|---|----------------|---|--|---|--|
| CAINOZOIC. | { | Post-Tertiary. | { | Recent; auriferous and stanniferous soils and alluvial deposits in the beds of existing rivers. | | |
| | | Tertiary. | | Pleistocene; alluvial leads containing gold, tin and gem-stones. Pliocene; alluvial leads, frequently covered by basalt, and containing gold, tin and gem-stones. Miocene; quartzites with plant remains at Dalton, near Gunning. Eocene; marine limestones and calcareous sandstones of the Lower Darling; plant beds of the New England district. | | |
| MESOZOIC. | { | Cretaceous. | { | Upper Cretaceous (desert sandstone); contains deposits of precious opal. | | |
| | | Jurassic. | | Middle Cretaceous; auriferous alluvial leads at Mount Brown. Lower Cretaceous (Rolling Downs formation of Queensland). Talbragar fish-bearing shales. | | |
| | | Triassic. | { | The Ipswich coal measures and the Clarence coal measures. | { | Form the base of the artesian water-bearing basin. These measures contain thin coal seams, not at present worked in New South Wales. |
| | | | | Hawkesbury series. | | Wiannamatta shales (contain fire-clays). Hawkesbury sandstones (building stone). Narrabeen shales. |

| | | | | |
|-------------|----------------------|---|--|---|
| PALÆOZOIC. | Permo-Carboniferous. | { | 1. Upper or Newcastle coal measures. | } The productive coal seams of New South Wales occur in these measures. |
| | | | 2. Dempsey series. | |
| | | | 3. Middle or Tomago coal measures. | |
| | | | 4. Upper marine series. | |
| | | | 5. Greta coal measures. | |
| | | | 6. Lower marine series. | |
| | Carboniferous. | { | Rhacopteris beds and associated marine beds. | } All the metalliferous lodes and reefs occur in these formations, or in such igneous rocks as granites, quartz-porphyrries, felsites, diorites, etc. |
| | | | Gympie claystones (of Queensland). | |
| | Devonian. | { | Upper Devonian. | |
| | | | Lower Devonian. | |
| Silurian. | { | Limestones and slates at Yass, Molong, Wellington, Quidong, etc. | | |
| Ordovician. | { | Slates and tuffs at Mandurama, Cadia, Tomingley, Berridale, and in the counties of Auckland and Wellesley, on the Victorian border. | | |
| Cambrian. | { | Limestones, schists and glacial beds of Terrawingee. | | |

(v.) *Cambrian System.* The oldest sedimentary rocks of New South Wales are probably those forming the Barrier Ranges in the far west. No organic remains have yet been found in them, and their geological age has been a matter of speculation for many years. Quite recently Mr. Mawson, of Adelaide, has stated that he has traced the Lower Cambrian beds of South Australia to Terrawingee, north of Broken Hill, and he also considers that the metamorphic rocks of Broken Hill may be of pre-Cambrian age. These statements have not yet been confirmed by the New South Wales Geological Survey, though it is quite possible they are correct.

The rocks at Broken Hill consist of a laminated series of crystalline gneisses, quartzites, micaceous and hornblendic schists, and garnet sandstones. Broken Hill itself is a low range in which these rocks have been folded into an anticline. The great Broken Hill lode occupies the saddle-shaped cavity caused by the folding of the strata as stated, but the saddle lode is now of larger dimensions than the original cavity, owing to the gradual replacement (metasomatism) of the country rock forming the walls by ores of lead, silver, and zinc.

To the north of Broken Hill the metamorphic rocks just described give place—in an unbroken series—to less altered slates and schists, traversed by tin-bearing dykes of coarse pegmatite, as at Euriovie, while at Terrawingee there are massive beds of blue limestone (and, according to Mr. Mawson, glacial till), which apparently belong to the same series.

(vi.) *Ordovician System.* At the Lyndhurst goldfields, near Mandurama, occurs a series of banded sedimentary rocks, consisting of indurated bluish grey claystones alternating with highly altered volcanic tuffs. The claystones contain Trilobites (agnostidæ), Brachiopods (obolella), Pteropods (hyolithes), Graptolites (diplograptus, dicellograptus, climacograptus, etc.), and remains of Radiolaria. The tuff beds, which vary from the thickness of paper up to 20 feet, contain bunches and impregnations of auriferous sulphides, and are worked for gold.

The series of banded rocks has been intruded by sills and dykes of hornblende, andesite, etc., which are apparently offshoots from a large body of hornblendic granite. The intrusions appear to have occurred while the sediments were still in a plastic condition, for the tuffs have been so forced into the claystones as to give the former the appearance of being intrusive.

Dark blue claystones and slates containing similar Graptolites also occur at Tomingley, Cadia, Berridale, and on the Victorian border—counties of Auckland and Wellesley. At Tomingley the slates are intersected by auriferous quartz reefs.

(vii.) *Silurian System.* Silurian rocks cover a large area of New South Wales, but the locality where they can be most satisfactorily studied is between Yass and the

Murrumbidgee River. There they consist of a considerable thickness of slates, sandstones, and limestones, with numerous characteristic fossils, such as Trilobites, Corals, Echinoderms, Brachiopoda, and Mollusca.

The celebrated auriferous reefs at Hill End, Tambaroora, and Hargraves occur in Silurian rocks, consisting of slates with interbedded volcanic tuffs, the latter being fossiliferous at Hill End. The Silurian rocks have been intruded, altered, and disturbed by granites, felspar porphyries, etc.

(viii.) *The Devonian System.* The Silurian slates and limestones to the south of Yass are succeeded by a belt of lavas (rhyolites, etc.) and tuffs, which separate them from a newer series of blue limestones, quartzites, and slates containing fossils of Lower Devonian affinities. At Wellington also the junction can be seen between Silurian and Lower Devonian rocks. At Tamworth, rocks of the same age as the Carboniferous of Europe are underlain by a series of banded claystone and volcanic tuffs, with occasional beds of limestone and intrusive sills of granite. The claystones contain numerous Radiolarian remains, while in the tuffs is found the plant *Lepidodendron australe*, and the limestones contain an abundant fossil fauna, including corals, which enable these beds to be correlated with the Upper Devonian of Queensland. A good section of Upper Devonian quartzites and shales containing *Lepidodendron australe* and numerous marine fossils can also be seen at Mount Lambie, near Rydal.

The Devonian system is characterised by the prevalence of grey and red quartzites and grits, and vary large areas of the southern half of the State are covered by these rocks.

(ix.) *The Carboniferous System.* A considerable area of the coastal plain and tableland north of Newcastle is occupied by bluish claystones and tuffs, with occasional belts of limestones, corresponding in age with the Lower Carboniferous rocks of Europe. Near Port Stephens they contain interbedded deposits of Magnetite, which, however, contains a considerable percentage of Titanium, whereby its value as an iron ore is reduced. At Copeland and several other goldfields the claystones are intersected by gold-bearing reefs. The plant *Lepidodendron australe* is fairly common in Lower Carboniferous rocks as well as in the Upper Devonian.

In the neighbourhood of Stroud is an area of shales, sandstones, and cherts containing abundant impressions of *Rhacopteris*, and these beds have been classified as Upper Carboniferous. No workable seams of coal have been found in the Carboniferous system, though in the *Rhacopteris* series near Stroud several very inferior seams with numerous bands are known.

(x.) *The Permo-Carboniferous System.* The productive coal measures of New South Wales contain fossil remains, shewing affinities to both the Permian and Carboniferous systems of Europe, hence the composite name which has been given to them. The measures are about 15,000 feet in thickness and have been classified as follows:—

- (a) *Upper or Newcastle Coal Measures*, containing an aggregate of about 100 feet of coal.
- (b) *Dempsey Series*: freshwater beds containing no productive coal. This series thins out completely in certain directions.
- (c) *Middle, or Tomago, or East Mailland Coal Measures*, containing an aggregate of about 40 feet of coal.
- (d) *Upper Marine Series*: sandstones and shales specially characterised by the predominance of the brachiopod *Productus brachyliketus*. At Branxton traces of glacial action have been seen in these beds.
- (e) *Lower or Greta Coal Measures*, containing from 20 to 40 feet of coal.
- (f) *Lower Marine Series*: sandstones and shales: specially characterised by the mollusc *Eurydesma cordata*. Glaciated boulders and erratics have been found in these beds at Lochinvar.

The three coal-bearing series contain numerous plant remains, including *Glossopteris*, *Gangamopteris*, *Phyllothea*, *Næggerathiopsis*, etc., while the Lower and Upper Marine series are characterised by an abundant fauna. The Permo-Carboniferous coal basin occupies an area of about 25,000 square miles extending to the north, west, and south of Sydney, and is the storehouse of one of the State's most valuable assets. In several collieries near West Maitland very fine seams of coal of 20 feet and upwards are being worked. A narrow isolated deposit of the Permo-Carboniferous system extends from near Inverell to the Queensland border. It contains a fine seam of coal (27 feet thick in places), which probably belongs to the Greta series. These measures lie unconformably upon altered claystones of Lower Carboniferous age, and have been intruded by granite which has tilted the coal seam to an angle of about 40 degrees.

(xi.) *The Triassic System.* The Permo-Carboniferous coal basin is overlain in most places by a thickness of over 1000 feet of shales and thick-bedded sandstones. There is no apparent stratigraphical unconformity between these beds and the underlying coal measures, nevertheless there is a very decided break in the fossil life, and the fauna and flora of the newer beds have been correlated with the Triassic system of Europe. These shales and sandstones have been named the Hawkesbury series, and have been subdivided as follows in descending order:—

- (a) *Wiannamatta Shales.* Blue, red, and grey shales, with occasional beds of sandstone. These shales are used for the manufacture of bricks and tiles. and some have the qualities of fireclay.
- (b) *Hawkesbury Sandstones.* Thick-bedded greyish-white freestones, used commonly about Sydney for building purposes.
- (c) *Narrabeen Shales.* Beds of chocolate-coloured shales and greenish tuffs varying from a foot or so to about 1800 feet in thickness. These shales form a very definite and persistent horizon.

The Clarence River coal basin is composed of rocks closely resembling the Hawkesbury series, and they are regarded as contemporaneous, thus the—

- (d) Upper Clarence shales may be the equivalents of the Wiannamatta shales.
- (e) Clarence sandstones " " Hawkesbury sandstones.
- (f) Lower Clarence shales " " Narrabeen shales.

It should be noted, however, that while the Clarence River series contains the fossil plants *Tæniopteris daintreei* and *Thinnfeldia odontopteroides*, the first-named has never been found in the Hawkesbury series, though *Thinnfeldia* is common in these rocks. It is possible, therefore, that the Clarence series may be newer than the Hawkesbury.

There are numerous seams of coal in the Clarence Measures, but they are too thin and their quality too inferior to be of commercial value. It is very probable, however, that these Triassic rocks may be underlain by the Permo-Carboniferous Coal Measures, which may mean a considerable addition to the coal resources of the State. The Clarence Coal Measures extend through Southern Queensland to the western flanks of the tableland of New South Wales, and dip thence under the north-western plains, forming the great artesian basin.

(xii.) *Jurassic System.* About 20 miles north-east of Gulgong is a small lacustrine deposit of thin-bedded yellow shales containing plants and fish remains which are considered to be Jurassic. The deposit referred to lies unconformably upon massive beds of Hawkesbury sandstone; it is of small extent and is the only known representative of the Jurassic in the State. Amongst the fossil plants are *Tæniopteris daintreei*, *Podozamites lanceolatus*, *Alethopteris australis*, *Thinnfeldia falcata*, and *Baiera bidens*: the fish include *Leptolepis gregarius*, *Archæomene robustus*, *Coccolepis*, etc.

(xiii.) *Cretaceous System.* The Rolling Downs formation of Queensland, which has been classified as Lower Cretaceous, and which consists of a series of shales, limestones and sandstones, is not known to outcrop at the surface anywhere in New South Wales, but its characteristic fossils have been met with in wells at Yandama, in the Milparinka

district, and a solid core from the Wallon bore, in the Moree district, shows that the drill penetrated about 1500 feet of Lower Cretaceous sediments there. It is possible, therefore, that these rocks underlie some considerable portion of the north-western plains.

The desert sandstones formation, which is believed to belong to the Upper Cretaceous epoch, is of very widespread occurrence over the north-western plains. There is a very marked stratigraphical unconformity between it and the Lower Cretaceous series, though there seems to be no practical distinction in regard to fossil life in the two formations. The most important fossils include—*Isocrinus*, *Maccoyella*, *Pseudavicula*, *Belemnites*, *Ancylloceras*, *Crioceras*, and *Cimoliosaurus*. The desert sandstone is generally horizontally bedded, and occurs as isolated hills and low ranges. Two varieties of rock are particularly noticeable, one being a greyish-white freestone, while the other is a vitreous rock of the character of porcellanite. Occasional beds of conglomerate occur, containing pebbles of quartz, agate, and chalcedony, and there is also a soft, fine-grained, siliceous rock having somewhat the appearance of kaolin. At White Cliffs, in the Wilcannia district, and at Lightning Ridge, north of Walgett, precious opal occurs in this rock, and extensive mining operations are carried on there.

(xiv.) *Tertiary System.* (a) *Eocene.* In the south-western portion of the State, along the course of the Lower Darling and Murray Rivers, there is a large area of marine calcareous sandstones, which have been classified as Eocene. In the Arumpo bore these beds have been proved to be at least 900 feet thick, the fossil *Trigonia semiundulata* being found at that depth.

At Tooraweenah, Warrumbungle Mountains, a lacustrine deposit, consisting of two series of shales and sandstones, occurs, containing Eocene plant remains. The two series of beds are separated by a flow of trachytic lava, and a similar lava covers the upper beds.

In New England (at Elsmore, Emnaville, etc.) Eocene leaves are found in fluvialite deposits (tin-bearing gravels) covered by basalt.

(b) *Miocene.* At Dalton, near Gunning, there is a lacustrine deposit of quartzite which has been classified as Miocene, on account of the plant remains found therein.

(c) *Pliocene.* Deep auriferous leads at Gulgong and Forest Reefs have been found to contain Pliocene plant remains—seeds, etc. These deposits are mostly covered by basalt. Most of the Tertiary deposits are of lacustrine or fluvialite origin, and they are important chiefly on account of the alluvial gold and tin ore, as well as diamonds, contained in them.

(xv.) *Post-Tertiary.* Much of the alluvial gold, tin ore, and gems has been found in Post-Tertiary soils and gravels. These are for the most part shallow, and their contents have been easily recovered by the miners.

Pleistocene surface deposits cover great areas of the western plains, and are the means of obscuring the underlying geological formations and rendering prospecting operations difficult. At Mount Kosciusko there are evidences of much glaciation during Post-Tertiary times—striated boulders are very numerous, and glaciated pavements, *roches moutonnées*, and terminal and lateral moraines occur in a good state of preservation.

3. *Geology of Victoria.*¹—The State of Victoria is of irregular shape, with the narrowest part to the east. Near the eastern end the Great Dividing Range enters, running south-westerly and westerly, being on the whole most rugged and of greatest altitude as it enters Victoria, *i.e.*, the general height falls as it runs westerly. On the whole also its southern faces are more steep than its northern, and as the Murray River is approached the character of the country is identical with that of the western plains of New South Wales.

1. This article was contributed by E. J. Dunn, Esquire, F.G.S., Director of the Geological Survey of Victoria.

(i.) *Geological Formations found in Victoria.* The following are the geological formations appearing in Victoria :—

SEDIMENTARY.

| | |
|---------------|--|
| CAINOZOIC ... | Recent; Post-Pliocene; Pliocene—newer and older; Miocene; Eocene. |
| MESOZOIC ... | Jurassic. |
| PALÆOZOIC ... | Permo-Carboniferous; Carboniferous; Devonian; Silurian—Yeringian and Melbourneian; Ordovician—Upper and Lower Darriwill, Castlemaine, Bendigo, Lancefield zones; Cambrian—Heathcotian. |

METAMORPHIC.

| | |
|---------------|---------------------|
| PALÆOZOIC ... | Schists. |
| ARCHÆAN ... | Schists and gneiss. |

IGNEOUS.

| | |
|--------------|--|
| VOLCANIC ... | Basic—Older and Newer Basalt; Acidic—Dacite, etc. |
| PLUTONIC ... | Basic—Gabbro, etc.; Acidic—Granite, Syenite, Grano-diorite, etc. |
| DYKES ... | Basic; Acid. |

The metamorphic and sedimentary series will be referred to in detail in the inverse order of the tabular statement.

(ii.) *Archæan System.* The Archæan system includes gneiss, schists, etc.

(a) *Gneiss.* In the vicinity of Barnawatha, Omeo, Bethanga, and Yackandandah there is an ancient system of rocks that are partly gneissic. White mica and garnets occur abundantly in them, and they are pierced by pegmatite, euritic, and other dykes. These rocks appear to be the most altered of the metamorphic series, and are more granitic in character than the schists of Yackandandah. At Cookimburra, Granya, and Bethanga, sulphides of lead, copper, iron, zinc, etc., together with gold and silver, have been found associated with the gneissic rocks, in lodes and disseminated. The soil is of poor quality in places, but of rich character about Bethanga.

(b) *Schists.* In many parts of Victoria schists have resulted from the alteration of the Silurian and Ordovician rocks caused by granite intrusions. Such schists may be seen at Maldon, south of Bendigo, Buxton, Beechworth, Omeo, Cassilis, etc. To the north of Yackandandah, however, there is a large area of schist which appears to be pre-Ordovician. The schist is much contorted and crumpled, and is characterised by a black mica. It differs widely from the adjacent Ordovician rocks exposed at Hillsborough, etc.

Schists occur over a great portion of the east of the State, and also are found in the south-west, but, so far, the Archæan schists have not been separated from the less ancient series by mapping, although very distinct on the ground.

Economically the schists are important on account of the mineral lodes associated with them. Gold, silver, copper, zinc, lead, arsenic, etc., are found at Cassilis, for instance. The Yackandandah schists have not hitherto proved rich in valuable minerals, but the contact schists often carry auriferous lodes, as at Maldon, Stawell, etc. Limestones have not been observed in this series.

(iii.) *Palæozoic.* The Palæozoic rocks include the following, viz. :—Cambrian, Ordovician, Silurian, Devonian, Carboniferous, and Permo-Carboniferous.

(a) *Heathcotian.* *Cambrian (?)* The Heathcotian rocks were first observed and separated from the Ordovician and Silurian beds in the neighbourhood of Heathcote, hence the name applied to them by Professor Gregory. They consist of much altered and contorted cherty beds, full of thin, ramifying quartz veins, and of jaspers coloured red, green, yellow, etc., associated

with interbedded and intrusive diabases, serpentines, porphyrites, agglomerates and tuffs. Similar rocks occur in the Mount Camel Range, past Toolleen, as far as Lake Cooper; in Gippsland, at Mount Tara, Accommodation Creek, near Mount Deddick, Limestone Creek, Nowa Nowa; at Green Hill and the Dog Rocks, near Geelong; and possibly at Waratah Bay, Mount Wellington, and near Wood's Point. They are separated from the Ordovician rocks by a distinct unconformity.

Gold, silver, copper, lead, zinc, and iron ores have been found associated with this series. Iron ores may be mentioned at the Iron Mask mine, near Mount Tara, Nowa Nowa, and Dookie.

Distinct from the typical Heathcotean series, but probably Cambrian, are the phosphatic rocks of Mansfield. The phosphate is wavellite (phosphate of alumina). Barytes in veins and lodes is of common occurrence in the Heathcotean.

- (b) *Ordovician*. Beds of this age outcrop at the surface over two considerable areas, one in the eastern part of the State and the other west of the meridian passing through Melbourne. They are composed of fine to coarse-grained sandstones, grits, slates, and shales, with rare thin beds of limestone and occasionally conglomerate, and are bent into a series of synclinal and anticlinal folds, and much faulted. The two Ordovician areas together cover about one-fifth of the State. They are of vast thickness, but there is no reliable data on which to base an estimate.

The Ordovician is the gold-bearing formation of Victoria. Most of the gold, since its discovery 56 years ago, has been won from Quartz reefs in these rocks, or from alluvial deposits formed from their disintegration. The western area is the richer of the two, and includes such famous goldfields as Ballarat, Bendigo, Dunolly, Castlemaine, Maryborough, etc. The usual matrix of the gold is quartz.

Bendigo is famous for its saddle reefs—quartz reefs that conform to the bedding in the arches of the anticlinal folds and less frequently in the synclinal folds. These occur one beneath the other, and have been worked from the surface down to a depth of 4250 feet. Along the anticlinals they have been traced for about 20 miles. A feature of this goldfield is the occurrence of basic dykes (limburgite) along the axis of the anticlines. The Berringa goldfield is marked by similar features.

Ballarat is remarkable for the vast quantity of gold which has been yielded from its deep and shallow alluvial deposits from the date of its discovery to the present time. Some of the nuggets were of great size.

A feature of the reef gold in Ballarat is that it occurs in connection with "indicators." These indicators are certain "beds," interlaminated with the usual slates, mudstones, sandstones, etc. When a quartz vein cuts across an indicator it is usually found to be enriched at the point of intersection. The other portions of the vein may be barren or very poor. The Tarnagulla district has long been famous for large gold nuggets, and has lately had public attention redirected to it by the Nick o' Time and Poseidon rushes. Probably these masses of gold come from indicator lines, but so far they have only been found in alluvial deposits. It is reasonable to expect that similar masses of gold remain in their original matrix. Other localities for large nuggets are Moliagul, where the "Welcome Stranger" nugget (2315 ozs.) was found and sold at the local bank for £9436 16s. 8d.; Rheola, or Berlin rush, also is famous for its great nuggets.

Intrusions of granitic rocks are frequent in the Ordovician series, and they are also cut through by numerous acid and basic dykes.

- (c) *Ordovician Fossils.* The following are amongst the typical fossils:—Upper Ordovician: *Stephanograptus gracilis*, *Dicellograptus elegans*, *Climacograptus bicornis*, *Glossograptus hermani*. Lower Ordovician: *Dictyonema pulchellum*, *Didymograptus caduceus*, *Tetragraptus serra*, *T. quadribracliatus*, *Goniograptus macer*, *Clonograptus rigidus*, *Trigonograptus wilkinsoni*, *Phyllograptus typus*, *Siphonotreta maccoyi*, *Saccocaris tetragona*, *Rhinopteroecaris maccoyi*, *Dinesus ida*.
- (d) *Silurian.* The Silurian rocks occur between the two great Ordovician outcrops, and occupy about half the area of the latter. They are divided into the upper, or Yeringian, and the lower, or Melbournian, series. Members of the upper division occur in the extreme east of the State at Limestone Creek, and at Wombat Creek, Mitta Mitta River, and Walhalla.

The beds consist of varieties of sandstone, slate, mudstone, etc. Some of the sandstones are reddish or purple in colour, and in other respects differ from those of Ordovician age in general appearance. They are bent into folds, but not so sharply and evenly as those of Bendigo. Quartz veins are less frequent than in the Ordovician rocks, and auriferous quartz reefs are generally associated with dioritic dykes, and are often exceptionally rich, as at Wood's Point, Walhalla, etc. Copper ore, associated with platinum, is found in a dioritic dyke at the Thomson R., near Walhalla. The goldfields, however, are generally less extensive than those in the older rocks.

Limestones occur in lenticular patches of considerable extent in the upper part of the Silurian series at Lilydale, near Mansfield, Mitta Mitta, Limestone Creek, etc. Lilydale supplies Melbourne with large quantities of lime.

- (e) *Silurian Fossils.* Some of the characteristic fossils are given below:—Upper series (Yeringian)^o:—*Favosites grandipora*, *Pleurodictyum megastomum*, *Chonetes robusta*, *Strophonella euglyphoides*, *Leptæna rhomboidalis*, *Pentamerus australis*, *Atrypa reticularis*, *Panænka gippslandica*, *Conocardium costatum*, *Cyclonema lilydalensis*. Lower Series (Melbournian): *Urasterella selwyni*, *Palaæster smythi*, *Protaster brisignoides*, *Botryocrinus longibrachiatus*, *Siphonotreta australis*, *Chonetes melburnensis*, *Nucleospira australis*, *Hyalithes spryi*, *Cyphaspis spryi*, *Homalonotus harrisoni*, *Dalmanites meridianus*, *Pterygotus australis*.
- (f) *Devontan.* The Devonian is divided into Upper, Middle and Lower. The principal mass of Devonian rocks lies between Briagolong and Mansfield. Sandstones, conglomerates, shales and limestones form the series. The sandstones are frequently red or purple and often mottled. The conglomerates are well developed near Mansfield, where they are several hundreds of feet thick, and are not folded. A remarkable feature of the conglomerates is the manner in which the pebbles are impressed into one another near Stockyard Creek, on the Dargo road, E. Gippsland. The Grampian Range, consisting of white, grey, red and purple sandstones, some conglomerate and a little shale with rocks of the Snowy River porphyry type, apparently interbedded at Hall's Gap, probably belongs to the Lower Devonian series, and is therefore too ancient to contain any coal seams.

Considerable areas of limestone of this age occur, the best known being at Buchau. The limestone tract here is 15 miles long and 6 miles wide. Caves have been known in this district for a number of years, and some discovered lately are said to rival the Jenolan Caves in beauty and extent. Valuable marble occurs. At Bindi also a considerable area occurs.

The soil from the sandstones and conglomerates is very poor, but the shales and limestones are covered with a very fertile soil.

(g) *Devonian Fossils*. The following are some typical fossils. Upper Devonian :—*Archæopteris howitti*, *Sphenopteris iguanensis*, *Cordaites australis*. Lower Devonian :—*Receptaculites australis*, *Favosites multitalbulata*, *F. gotlandica* var. *moonbiensis*, *Syringopora spelæanus*, *Chonetes australis*, *Spirifer yassensis*, *S. howitti*, *Plragmoceras subtrigonum*, *Asterolepis australis*.

(h) *Carboniferous*. The Devonian rocks appear to pass without an unconformity into the Carboniferous series. These beds consist of shales and sandstones of reddish colour, and contain abundant fish and plant remains. They are best known to the north of Mansfield.

(i) *Carboniferous Fossils*. Some Carboniferous fossils are *Lepidodendron australe*, *Gyracanthides murrayi*, *Acanthodes australis*, *Eupleurognmus cresswelli*, *Strepsodus decipiens*, *Ctenodus breviceps*, *Elonichthys sweeti*, *E. gibbus*.

(j) *Permo-Carboniferous*. The glacial conglomerates at Bacchus Marsh, Derrinal, Springhurst, Wooragee, Loddon Valley, and elsewhere are of very late Carboniferous or perhaps Permian age. The glacial conglomerates consist of pebbles and boulders, some rounded and grooved, and some still fairly angular, set in a fine tough clay matrix. The size of the boulders varies from several tons down to fine gravel. As a rule there is no stratification, but in places the boulder clay shews signs of rough bedding. This series appears to correspond with the Duyka conglomerate of South Africa.

Above the glacial series at Bacchus Marsh are thick bedded sandstones containing *gangamopteris*, *glossopteris*, etc.

The glacial beds yield a soil of good quality for grazing purposes.

(k) *Permo-Carboniferous Fossils*. Some characteristic fossils are as follows :—*Teniopteris sweeti*, *Gangamopteris obliqua*, *G. spatulata*, *G. angustifolia*, *G. cyclopteroides*.

(iv.) *Mesozoic*. So far as is known the Triassic and Cretaceous systems are not represented by any formations in Victoria, but the Jurassic system is of great importance, as it contains black coal measures.

(a) *Jurassic*. There are three considerable Jurassic areas exposed—those of South Gippsland, the Cape Otway District, and in the neighbourhood of Merino, in the extreme western part of the State. These three outcrops probably form part of a once continuous belt of similar rocks which is marked in the districts between them by Cainozoic sedimentary and volcanic rocks.

The rocks consist of felspathic sandstones, shales, and mudstones, while conglomerates occur along the coast near Kilcunda. Plant remains are common, and seams of black coal up to four feet thick are being worked in South Gippsland. These rocks are much disturbed and faulted, adding greatly to the difficulties of coal mining. Dykes and sills of basalt, as well as some old volcanic necks of early Cainozoic age penetrate these rocks.

(b) *Jurassic Fossils*. Amongst the characteristic fossils are :—*Coniopteris hymenophylloides* var. *australica*, *Cladophlebis denticulata* var. *australis*, *Sphenopteris ampla*, *Thinnfeldia odontopteroides*, *T. maccoyi*, *Teniopteris spatulata* and vars. *daintreei* and *carruthersti*, *Ginkgo robusta*, *Baiera subgracilis*, *Podozamites barklyi*, *Palissya australis*, *Brachyphyllum gippslandicum*, *Unio stirlingi*.

(v.) *Cainozoic*. The Cainozoic series, as represented in Victoria, is as follows :—

(a) *Eocene*. Beds of marls, clays, sandstones, and limestone of Eocene age are exposed along the littoral of Port Phillip at Geelong, Mornington, etc., and inland at Royal Park and along the Moorabool Valley. The limestone is used for building purposes, both as lime and as building stone, and for filters, and the marl at Mornington would form a valuable fertiliser for poor sandy soil.

(b) *Miocene*. Miocene clays, sands, conglomerates, etc., occur in the Moorabool Valley, near Morrison's, Melton, Altona Bay, Pitfield, in the La Trobe Valley, Cobungra, and at Feathertop, under the basalt of the Dargo high plains, etc. The brown coal beds are sometimes of enormous thickness. At Morwell a bore 1000 feet deep passed through 888 feet of brown coal. Many of the clays are valuable for pottery purposes, and they occur in very large quantities.

(c) *Pliocene*. The Pliocene period is represented in Victoria by sand dune formations and impure limestones near the coast, and by silt, sand, clay and gravel inland.

On the goldfields there are two distinct gravel formations, known as the Older and Newer Pliocene. The Older Pliocene gravels are generally composed of well-rounded quartz pebbles, bound together by clay or ferruginous cementing material. They cap the hilltops or occur in deep leads at levels of 300 or 400 feet below the present surface. They are frequently highly auriferous. The old deep leads were the drifts in ancient river valleys, and have since been covered to great depths by more modern silts, or by flows of basalt. Valuable deposits of clay occur of this age.

The Newer Pliocene of the goldfields consists of some highly rounded pebbles derived from the Older Pliocene mixed with sub-angular and angular pebbles, bound together by red, purple and grey mottled clays and drift material. The gravels are often highly auriferous. The Newer Pliocene beds are found at a lower level than the older gravels which cap the hilltops.

Sands which may be of Pliocene age cover a large area in the Mallee district. Soil from the Pliocene rocks is generally of poor quality.

(d) *Post Pliocene*. River terraces composed of red loam are found in the principal valleys as at Wangaratta, Carisbrook, etc. They contain *Diprotodon* remains indicating a fauna now extinct. These beds are most suitable for brickmaking, and yield a soil of good quality.

(e) *Pleistocene Fossils*.—*Ostrea angasi*, *Mytilus planulatus*, *Tellina deltoidalis*, *Natica conica*, *Vermetus novohollandiae*, *Pagrus unicolor*, *Sthenurus atlas*, *Macropus titan*, *Diprotodon longiceps*, *Phascolumys pliocenus*, *Sarcophilus ursinus*, *Canis dingo*.

(f) *Recent*. Under this heading come the present river drifts, the shifting sand dunes along parts of the coast, the deposits filling swamps such as Koo-Wee-Rup and Carrum, the surface limestone found over wide areas in the Mallee, and the surface in process of formation. The soils range from the most fertile to the most barren.

(g) *Fossils*. Mr. Chapman¹ makes the following note:—"The Tertiaries are here grouped under their several local horizons. In the present condition of our knowledge of the Tertiary stratigraphy of the State, about the succession of which there are yet varieties of opinion, it is impracticable to exactly indicate the equivalence of the strata to the various series defined in European areas."

Some of the characteristic Tertiary fossils in descending order are:—

KALIMNAN.²

Balcombe Bay Beds—*Spondylostrobus smythi*, *Eucalyptus pluti*, *Plesio-capparis prisca*, *Bathyaclis bearmariensis*, *Glycimeris halli*, *Trigonia howitti*, *Zenatiopsis angustata*, *Tylospira coronata*, *Voluta masoni*, *Cancellaria wannonensis*, *Cestracion cainozoicus*, *Oxyrrhina hastalis*.

1. F. Chapman, Esquire, A.L.S., F.R.M.S., Paleontologist to the National Museum of Victoria, who has supplied the lists of typical fossils.

2. These are the sub-divisions of the Cainozoic accepted by Mr. Chapman.

JANJUKIAN.

Coprosmeophyllum ovatum, *Cyclammina complanata*, *Deltocyathus subniola*, *Graphularia senescens*, *Cassidulus australis*, *Terebratulina catinuliformis*, *Limopsis involuta*, *Spondylus gederopoides*, *Spirulirostra curta*, *Carcharodon auriculatus*, *Squalodon wilkinsoni*, *Ziphius geelongensis*.

BALCOMBIAN.

Cinnamomum polymorphoides, *Laurus werribeensis*, *Operculina complanata*, *Plectroninia halli*, *Plachetrochus deltoideus*, *Magellania grandis*, *Arca celleporacea*, *Crassatellites dennanti*, *Chama lamellifera*, *Cypræa eximia*, *Galeocerdo davisii*, *Lamna apiculata*.

(vi.) *Plutonic*. A feature in the distribution of the granitic rocks is the manner in which the outcrops occur distributed over the whole State, except where the surface consists of Tertiary or Jurassic rocks which conceal the Plutonics. There are many varieties of the granitic rocks, such as granites, granodiorites, syenites, hornblende diorites, gabbros, etc. Auriferous quartz veins occur in the granodiorite rocks at Glen Wills, Mt. William and Warburton; tin lodes at Beechworth, Cudgewa and Koetong; copper at the Snowy River and in other parts of E. Gippsland; galena at Mt. Deddick and at Pine Mountain, Upper Murray. The soil derived from granitic rocks is generally of poor quality. The granodiorites yield a somewhat better soil than the other varieties.

(vii.) *Volcanic*. (a) *Diabases*. Interbedded lava flows, ash beds and agglomerates occur in the Heathcoteian, which, as already mentioned, is a formation older than the Ordovician. These rocks are well represented at Heathcote and in the Mt. Camel Range, at the Dog Rocks near Batesford, Green Hill near Geelong, etc. Soil of moderate quality.

(b) *Snowy River Porphyries*. These acid volcanic rocks of Lower Devonian age (?) are widely distributed in Eastern Gippsland, along the course of the Snowy River and in the Mitta Mitta Valley. With the lavas there is a great thickness of ash and agglomerate, which contain lodes of gold, copper, and silver-lead ore. Extremely beautiful porphyries occur in these rocks. The soil is poor.

(c) *Dacites*. The age of the Dacite series is not settled. They form the mountains at Healesville and Warburton, Dandenong Range, Mt. Macedon, and part of the Strathbogie Ranges. No metallic lodes have been found associated with these rocks. The soil varies from a rich loam to a poor siliceous sand.

(d) *Basalts*. The oldest basalt known in the State is that described by Dr. Howitt as interbedded with the Upper Devonian at Snowy Bluff, but the important basalts are of Tertiary age.

The Older Basalt (Eocene to Pliocene) is found at Dargo High Plains, Gelantipy, Warragul, Narracan, the Mornington Peninsula, Phillip and French Islands, etc. The soil is fertile, but the area occupied is insignificant when compared with the area covered by the Newer Basalts.

The Newer Basalts (Pliocene to Recent) extend to the north-west and west of Melbourne for almost 200 miles. This volcanic series forms vast plains of lava flows and ashes with numerous scattered scoria cones in all stages of preservation. Excellent building stone and good road metal is furnished by these volcanic rocks. The soil varies from a poor loam to dark brown and black clayey soils of marvellous fertility.

4. **Geology of Queensland.**¹—From a geological point of view Queensland may be divided into two great parts, occupying nearly equal areas, but possessing very different physical features. One of these extends along the eastern coast, from the New South

1. This article is slightly condensed from one by W. H. Rands, Esquire, A.R.S.M., F.G.S., Government Geologist of Queensland.

Wales border northwards to the 12th parallel of latitude, has an average width of about 200 miles from east to west, and is well watered and timbered. To this division also belongs an area in the north-west portion of the State, viz., in the Burke district, extending from the extreme north-west southwards to Cloncurry and Boulia. The loftiest mountain ranges occur in this division, the remnants of what was once a high tableland, the highest peak, Bellenden Ker, attaining an elevation of 5150 feet.

This region consists of stratified rocks of different ages from the oldest palæozoic—the exact age of older rocks has not yet been determined—up to those of recent origin. There are also large areas of granites, porphyries partly of igneous and partly of metamorphic origin, as well as other intrusive and interbedded igneous rocks. It is in this division that most of the mineral wealth of the State exists.

The other large division, known as the Western Interior, consists almost entirely of the Lower Cretaceous rocks, overlaid unconformably in places by the Desert Sandstone, which is of Upper Cretaceous Age.

This division, locally known as the Rolling Downs Formation, presents a vast area, in parts of almost treeless plains, with here and there clumps of "gidya" scrub.

The rainfall over this division, more especially in the south-west, is small. The river beds are generally dry. The want of water limits the use of some of the very best pastoral land in the State, though this difficulty has been partially overcome by the tapping of the supplies of artesian water contained in the Lower Cretaceous Beds.

The rivers to the north of the high open downs, in latitude about 21° 50' S., flow in a northerly direction into the Gulf of Carpentaria, while south of this they flow in a southerly, or south-westerly direction, into New South Wales.

(i.) *Geological Formations of Queensland.* The following table indicates the geological formations so far known as occurring in Queensland:—

| | | | |
|--------------------------|-----|-----|---|
| QUATERNARY AND CAINOZOIC | ... | ... | Recent Alluvia, Raised Beaches, Post-Tertiary or Tertiary Alluvia, and Bone-Drifts. |
| MESOZOIC | ... | ... | Upper Cretaceous—Desert Sandstone. Lower Cretaceous—Rolling Downs Formation; Blythesdale Braystone. Trias-Jura System—Upper Ipswich Formation; Lower Burrum Formation. |
| PALÆOZOIC | ... | ... | Permo-Carboniferous—Upper Bowen Formation; Middle Bowen Formation; Lower Bowen Formation; Star Formation; Gympie Formation. Devonian—Middle Devonian Formation. Silurian—Silurian Formation. Age undetermined—Slates, Schists, and Quartzites, etc. |

(ii.) *Plutonic and Metamorphic Rocks.* Large areas of granites, syenites, porphyries of both plutonic and metamorphic origin and of different ages, extend from the south to the north of the State.

In these a number of mineral areas are included, viz.:—The Charters Towers, the Croydon, Etheridge, Eidsvold, Normanby, Jimma goldfields; the Ravenswood gold and silver fields; Kangaroo Hills and Running Creek silver and tin fields; the Herberton and Annan, Bloomfield, and Stanthorpe tinfields; and the Mount Perry copper field.

(iii.) *Metamorphic Rocks.* These, embracing the slates, schists, etc., of undetermined age, are all older than the Burdekin Beds—Middle Devonian—and are all more or less metamorphosed. They consist of metamorphic granites, quartzites, slates, schists, gneisses, and shales. No fossils have up to the present been discovered in them, and their exact age has not yet been ascertained.

The principal mining areas in connection with these rocks are:—The McKinlay, Cape River, Gilbert and Woolgar, Coen, Normanby, Clermont, and Peak Downs goldfields; and the Peak Downs copper field.

(iv.) *Silurian*. A large region in the north-west part of the State, formerly included in the slates and schists, etc., of undetermined age, were transferred to the Silurian, the evidence as to the age of the rocks being determined by Mr. R. Etheridge, junr., from certain fossils found near the Cairns Range.¹

The area mapped as Silurian extends from the south of Boulia to the extreme north-west, and from 20 miles east of Cloncurry to the Western boundary of the State, but its boundary has not yet been accurately mapped.²

The principal mining areas are the Cloncurry, McKinlay, and Leichhardt goldfields, the Cloncurry copper fields, and the Lawn Hills silver field. There are also the rich ironstone deposits of Mount Leviathan, and of other hills in the neighbourhood of Cloncurry.

(v.) *Middle Devonian* (Burdekin Formation). Rocks containing characteristic fossils of the Middle Devonian occur in various parts of the State. The principal area, and the one from which the formation takes its name, is on the Upper Burdekin, including the Fanning River, Burdekin Downs, and Broken River. Rocks of this age also occur at Chillagoe; Reid's Gap; on the Townsville-Charters Towers Railway; south of Clermont; at Raglan; and in the neighbourhood of Olsen's Caves, north of Rockhampton.

A doubtful area is shewn on the last addition of the State map in the extreme north-west, in the neighbourhood of Camooweal.

The fossils occur in limestones, and consist almost entirely of corals, with a few Brachiopoda, and one Cephalopod. The most characteristic fossils are *Heliolites porosa*, *Pachypora meridionalis*, *Aulopora repens*, *Stromatopora*, and *Cystiphyllum*.

The Argentine silver field occurs in a series of slates and schists, etc., supposed to belong to this formation.

(vi.) *The Permo-Carboniferous System*. The greater portion of the stratified rocks of the eastern portion of Queensland are included in this system.

The system, as hitherto classified, includes five formations, beginning from the oldest, viz.: (1) Gympie Formation, (2) Star Formation, (3) Lower Bowen Formation, (4) Middle Bowen Formation, (5) Upper Bowen Formation.

A reclassification of these rocks may be found necessary; the following has been suggested:—

| | | | |
|-------------|-----|-----|--|
| GYMPIE | ... | ... | Marine Series. |
| (?) | ... | ... | Basic and Acidic Intrusions. |
| LOWER BOWEN | ... | ... | Lower Marine and Volcanic Series; Lower Fresh-water Series; Upper Marine Series; Upper Fresh-water Series. |
| UPPER BOWEN | ... | ... | Marine Series; Fresh-water Series; Old Alluvial Deposits. |

(a) *The Gympie Formation*, named after the type district (the Gympie goldfield), occupies large areas in the south-eastern, central, and north-eastern parts of the State, and consists chiefly of sandstones, grits, conglomerates, indurated shales, and limestones. These, in parts, have undergone considerable alteration. Bedded volcanic rocks are numerous, especially in the type district, as are also intrusive rocks. The strata generally dip at high angles of inclination.

This contains a very scant flora, represented by Calamites, Lepidodendron: but it has produced the largest fauna of any formation in Queensland, over 120 species having been described. The following genera are peculiar to it, viz.:—

1. These were identified as follows:—(1) Orthoceratites, sp. ind.; (2) Actinoceras (beaded siphuncle), sp. ind.; (3) Univalve and bivalve (casts and impressions). These are interesting, as the first Silurian fossils found in Queensland.

2. See the Geological Map of Queensland of 1899.

Protozoa.—Lasiocladia.
Actinozoa.—Zaphrentis, Cyathophyllum,
 Cladochonus, Monticulipora.
Blastoidea.—Mesoblatus, Granatocrinus,
 Tricelocrinus.
Echinoidea.—Archæocidaris.
Crustacea.—Griffithides.
Polyzoa.—Glaucanome, Rhombopora,
 Myriolithes.
Brachiopoda.—Martinia, Athyris, Lingula.

Pelecypoda.—Pterinopecten, Mytilops,
 Parallelodon, Nucula, Pleuropho-
 rus, Astartella, Cypricardella.
 Eurydesma, Conocardium, Ed-
 mondia, Sanguinolites.
Gasteropoda.—Loxonema, Euomphalus,
 Pleurotomaria, Yvania, Lucicella,
 Murchisonia, Bucania.
Pteropoda.—Conularia.
Cephalopoda.—Nautilus, Gyroceras.
Pisces.—Deltodus?

Several gold and other mineral fields occur in the Gympie formation, amongst which may be mentioned:—The Gympie goldfield, Cania, Calliope, Norton, and other goldfields in the Gladstone district; the goldfields of the Rockhampton district; the Warwick goldfields; Paradise, Hodgkinson, Mulgrave, and Palmer goldfields. Copper deposits at Glassford Creek, Gigoomgan, Gooroomgan, and Mount Coora; some mercury deposits at Kilkivan; and the Neerdie antimony mine.

- (b) *The Star Formation*. The palæontological evidence for separating these beds from the Gympie Series is slight. They contain nineteen species peculiar to themselves, and twelve species common to both, but are, however, less highly inclined than the Gympie Beds, and have been less disturbed and altered.

They are best developed at the following places:—Near the junction of the Great and Little Star Rivers, from which they take their name; near Dotswood, Keelbottom Creek; in the neighbourhood of Harvest Home, Lornesleigh, and Mount McConnell Stations (near the latter the nearly complete remains of a fish of the genus *Palæoniscus* was found); and at Drummond's Range, where numerous scales and teeth of fish occur.

The flora includes species of *Calamites*, *Asterocalamites*, *Lepidodendron*, *Cyclostigma*, *Stigmaria*, and *Cordaites*. The fauna is comparatively small when compared with that of the Gympie Beds, and includes the following genera:—

Crinoidea.—Actinoecrinus.
Crustacea.—Beyrichia, Phillipsia.
Polyzoa.—Fenestella.
Brachiopoda.—Spirifera, Spiriferina, Ret-
 zia, Rhynchonella, Orthis, Strop-
 homena, Chonetes.

Pelecypoda.—Entolium, Euchondria, Nu-
 culana.
Gasteropoda.—Naticopsis, Porcellia.
Cephalopoda.—Orthoceras.
Pisces.—Palæoniscus.

- (c) *The Lower Bowen Formation*. This formation consists of a series of white and yellow sandstones, with beds of conglomerates, containing pebbles of quartzite and porphyry, derived from the metamorphic rocks in the vicinity: the lowest beds, seen near the heads of Pelican Creek, south-west of Bowen, consisting of volcanic agglomerates. It dips under the Trappean rocks of Toussaint, Mount Dinlin, and Mount Macedon.

In another area, north of Mackay, the beds have undergone considerable alteration. So far no fossiliferous remains have been found therein.

- (d) *The Middle Bowen Formation*. This series overlies the last without any marked unconformity. It consists of alternate sandstones, blue and grey shales, and impure arenaceous ironstones, and extends from the type district on the Bowen River across the central railway between the Emerald and Duaringa, and for about 120 miles farther south up to the Dawson and Comet Rivers. The mapping out of these beds in detail on both sides of the central railway suggested the need for an alteration in the classification previously referred to.

Seams of coal have been discovered therein, both north and south of the railway line, one thirty miles south of Duaringa being nine feet thick of perhaps the best coal for steam purposes in the State; it is anthracitic, containing almost 87 per cent. of fixed carbon. Several seams of coal—most of them of a burnt or coked nature—occur in the type district; this is due to the intrusion of sheets of trap rock.

Although it contains a land flora in places the Middle Bowen is mainly marine. The flora include species of *Glossopteris* (which is very common), *Sphenopteris*, and a species of *Conifer*.

The fauna consists of over fifty described species, of which the most characteristic fossils are:—*Strophalosia clarkei*, Eth.; *Strophalosia gerardi*, King; and *Derbyia senilis*, Phill., which, with species of *Productus*, *Spirifera*, and *Martinia*, are very common.

- (e) *The Upper Bowen Formation.* The Upper Bowen Beds are chiefly fresh water, and contain but very small flora and fauna. The flora includes *Phyllothea australis*, *Sphenopteris lobifolia*, *S. flexuosa*, *S. crebra*, *Glossopteris browniana*, *G. linearis*, and a species of a *Conifer*. The fauna includes *Derbyia senilis*, *Productus brachythærus*, and a species of *Goniatites*.

The rocks have a low angle of dip in the type district, and cover a large area to the south of these creeks. They contain numerous coal seams, including the Macarthur, Daintree, and Havilah seams, but most have been destroyed by the intrusion of sheets of dolerite.

Beds of this formation occur west of Laura, on the Cooktown railway, on the Little River coalfield; at Hamilton, about twenty miles west of Cooktown; at Stewart's Creek, near Townsville, also further south near Mackay; and at Blair Athol, ten miles north-west of Clermont. Blair Athol is the only place where the coal seams of this formation are actually being worked; the coal is one of the best steam coals worked in the State.

(vii.) *Lower Trias-Jura* (the Burrum Formation). The Burrum Formation, the lowest member of Mesozoic rocks, extends along the coast from a point about 50 miles north of Bundaberg to south of Noosa Heads, and occupies an area of 3000 square miles.

Over the greater portion of this area the coal measures are covered unconformably with sandstones, clays, and conglomerates of a more recent age, a fact to which is attributable the flat and barren nature of the country. The overlying rocks, 20 to 50 feet in thickness, lie horizontally or nearly so. Their exact age has not been determined, as no fossils have been found in them.

This formation consists of grey and brown sandstones, conglomerates, and grey and black shales, etc. The flora and fauna are both very scant. The former includes:—*Sphenopteris flabellifolia*, var. *erecta*, T. Woods; *Trichomanites laxum*, T. Woods; *Thinnfeldia media*, T. Woods; *Teniopteris daintreei*, McCoy; *Alethopteris australis*, Morris; *Podozamites kidstoni*, Eth. fil.; *Otozamites*, sp. ind., and *Baiera bidens*, T. Woods. The fauna is represented by *Corbicula burrumensis*, Eth. fil., and *Rocellaria terra regina*, Eth. fil.

Seams of coal are known to occur in these measures in Littabella Creek, north of Bundaberg, to near Noosa, in the southern portion of the field, and have been worked near the Burrum River in the neighbourhood of the townships of Howard and Torbanlea, situated about 20 and 15 miles respectively north and north-west of Maryborough.

In the Burrum River, just above the railway bridge, five seams of coal of payable thickness can be seen cropping out in the bank within a distance of half a mile, with a regular dip to the north-east at about 12 degrees.

(viii.) *Upper Trias-Jura* (the Ipswich Formation). The Ipswich Coal Measures cover an area of about 12,000 square miles in the south-eastern portion of the State, a small area occurring in the neighbourhood of Stanwell and Wycarbah, in the Rockhampton district; and another on Callide Creek, south-west of Gladstone, where there is one seam of over 30 feet in thickness of solid coal.

The rocks consist of the usual alternations of sandstones, conglomerates and shales, etc. In the neighbourhood of Brisbane the base of the measures is a volcanic ash, consisting of a felspathic matrix with blebs of quartz, and angular pebbles of schist and quartz. This stone is largely used for building purposes, as are also certain of the sandstones and freestones from this formation.

On the western portion of this area at Gowrie, Jimbour, and Clifton, the coal measures are on a higher horizon to those in the Brisbane and Ipswich district, from which they are separated by a thick mass of basalt.

The flora of the Ipswich Formation contains over eighty known species, five of which are common to the Burrum beds.

The fauna is represented by four species only, viz.:—*Estheria mangalensis*, Jones; *Mesostigmodera typica*, Eth. fil. and Oliff; *Unio ipswichensis*, Eth. fil.; and *Unio cyrensis*.

Several seams occur in the Albert and Logan district, south of Brisbane, and thin coal has been met with close to Brisbane, but no mines have been opened up in either of these localities.

(ix.) *Lower Cretaceous Formation* (the Rolling Downs Formation). The strata of this formation, covering nearly the whole of the western interior, have a very great sameness over this immense area—equal to over half of the whole State—and consist of shales, sandstones, conglomerates, and thin limestones. Thin beds of coal have been met with in boring.

A very porous bed of sandstone—the Blythesdale Braystone—has been traced from the neighbourhood of Texas, on the southern border of the State, to Normanton, in the north of the Gulf of Carpentaria. This is the chief intake rock of the series from which the supply of artesian water is obtained.

The volume of flow of the many rivers that run across or along this sandstone greatly diminishes, shewing that it has absorbed the water. The efflux of the numerous bores, however, is very small when compared with the amount of water taken in by this rock and other porous beds that occur. It has been supposed that the water finds an outlet to the sea at the Great Australian Bight and at the Gulf of Carpentaria.

The Rolling Downs Formation has been classified under the general head of Lower Cretaceous, but it contains amongst its numerous fauna forms allied to the Oolite.

The fauna is represented by over 120 species. Ammonites and Belemnites make their appearance. Among the fish remains have been found the following species:—*Lamna daviesii*, Eth. fil.; *Lamna appendiculata*, Agassiz; a species of *Aspidorhynchus*, Agassiz; and *Belonostomus sweeti*, Eth. fil. and A. S. Woods. There are also the following reptilian remains:—*Notochelone costata*, Owen; *Ichthyosaurus australis*, McCoy; *Ichthyosaurus marathonensis*, Eth. fil.; *Plesiosaurus macrospodylus*, McCoy; *Plesiosaurus sutherlandi*, McCoy.

(x.) *Upper Cretaceous* (Desert Sandstone Formation). This formation at one time covered the greater portion of Queensland, but the work of denudation has left only isolated patches, or outliers, which overlie unconformably the older rocks. Some of these patches are of large extent, especially in the western districts, where they overlie and act as feeders to the Lower Cretaceous water-bearing beds.

The base of the Desert Sandstone, from 1000 to 1800 feet above the sea-level in the southern and central portions of the State, at Cape York Peninsula is nearly at that level.

The beds are always horizontal, or nearly so, and consist usually of very coarse sandstones (often false-bedded), coarse conglomerates, shales, and magnesite shales.

A series of rocks in the neighbourhood of Maryborough, overlying the Burrum Coal Measures, against which they have been faulted, have been included in this formation. They have produced a large number of fossils, some of which are allied to those from the Desert Sandstone at Croydon. Except at these places, the formation is almost barren of fossiliferous remains.

Glossopteris was discovered in rocks of this age at Betts Creek, near the Cape River goldfield, but had not before been discovered in Australia later than in the Permo-Carboniferous. *Glossopteris* was also found in the tableland between the Mitchell and the Walsh Rivers, and was consequently ascribed to the Carboniferous, though these rocks have since been found to be Upper Cretaceous. The genus makes its reappearance, therefore, in this formation, as it has not been detected in the formations intervening between this and the Permo-Carboniferous.

The fauna and flora are represented by thirty-five species, of which only the following eight species have been found outside the Maryborough rocks, and all of these, except the *Glossopteris*, are from Croydon:—*Didymosorus* (?) *gleichenioides*, Oldham and Morr.; *Glossopteris browniana*, Brong.; *Rhynchonella croydonensis*, sp. nov.; *Ostrea*, sp. ind.; *Placuna*, sp. ind.; *Maccoyella barklyii*, var. *maricaburiensis*, Eth. fil.; *Teredo*, sp. ind.; *Siphonaria samwelli*, sp. nov.

The only mineral of commercial value from these beds is the opal, for which there is now a considerable demand. Its chief sources are Opalton, Mayne River, Opal Range, Jundah, Duck Creek, Nickaville, and Listowel Downs.

(xi.) *Tertiary*. The Tertiary deposits are very poorly represented in Queensland—in fact, with the exception of a few alluvial drifts and some raised beaches, no sedimentary deposits of this age are known.

There was undoubtedly great volcanic activity at this period, as is evidenced in many parts of the State by the outflows of basalt capping the Desert Sandstone.

(xii.) *Post-Tertiary and Recent*. This period is represented by bone-drifts on the Darling Downs; Peak Downs; at Maryvale Creek; and along the Burdekin River, etc. They have furnished numerous remains of living and extinct marsupials, such as *Diprotodon australis*, *Macropus titan*, *Macropus ajax*, and other species of the same genus; *Thylacoleo*; several species of *Phascolumys*, and *Nototherium*, etc.; a struthious bird *Dromornis*; *Dinornis*, and the remains of reptiles and fishes.

The deposits in the Chillagoe Caves of North Queensland, and in the Olsen and Johansen Caves near Rockhampton, have also furnished a few bones, and may be expected to be a rich source of organic remains, when they come to be thoroughly explored.

5. Geology of South Australia.¹—In order to elucidate this indication of the principal geological formations of the State of South Australia, a short description of its physical geography is necessary.

A main range extends from Cape Jervis in the south, the opposite point of the mainland to Kangaroo Island, to beyond Hergott Springs in the north, a distance of about 400 miles: branching from about 150 miles north of Adelaide to the New South Wales border in the vicinity of the Barrier Ranges, and from Beltana north-eastward to Mount Babbage. This area includes the Mount Lofty, Barossa, Flinders, Mount Nor' West and Willouran Ranges, and also smaller ones. The highest points are: Mount Lofty, 2327 feet; Mount Brown, near Port Augusta, 3200 feet; St. Mary's Peak, Wilpena, 3900 feet; and Benbonyathe Hill, near the Illinawortina Pound, 3476 feet.

The Tomkinson, Mann, and Musgrave Ranges extend in the north-west corner from the West Australian boundary eastward for over three degrees of longitude along and south of the 26th parallel of south latitude, the northern boundary of the State. The Gawler Ranges run from near Port Augusta westward for about 120 miles. Northward of these are the Warburton Ranges, isolated and of comparatively low elevation. Ranges of similar character are the Peake and Denison, west of Lake Eyre; and there are also detached areas in the vicinity of Port Lincoln and Franklin Harbour, on Eyre Peninsula. The remainder of the State consists of plain and undulating country, with occasional isolated low peaks.

The lakes, mainly large expanses of mud, are numerous and extensive, and occupy low-lying portions of the plain country; the principal ones are Lakes Eyre, North and South, Torrens, Gairdner, Frome and Blanche.

The Murray is the largest river. It enters the eastern boundary of the State in latitude 34°, runs eastward to Morgan, thence southward to its mouth at Encounter Bay, previously widening out into Lakes Alexandrina and Albert; this is the only navigable river in South Australia. The drainage from the eastern watershed of the main range, as far north as the Burra, runs into the Murray, from the western as far north as Port Augusta, into Gulfs St. Vincent and Spencer; further northward the eastern drainage is

1. This article is contributed by H. Y. L. Brown, Esquire, F.G.S., Government Geologist of South Australia.

on to plains and into Lake Frome, and the western into Lake Torrens; north of latitude 30° drainage from all sides is into Lake Eyre, the principal rivers being the Cooper and Diamantina entering from Queensland, the Finke from the MacDonnell Ranges, Northern Territory, the Alberga and the Hamilton from the Musgrave Ranges, and the Neales and others from the westward. From the Musgrave Ranges southward to the Great Australian Bight, and the west coast of Eyre Peninsula, there are no lines of drainage of any importance on the surface.

The coast-line presents roughly a sweep north-westward from Cape Northumberland in latitude 38° S., to Eucla latitude 31° 30' S., crossing 12 degrees of longitude (129° to 141°), deeply indented by two gulfs, St. Vincent's and Spencer's. Kangaroo Island, immediately south of St. Vincent's Gulf, is the largest island of the State, and there are numerous smaller islands, grouped and separate, in Spencer's Gulf, and on the west coast as far as Fowler's Bay.

From Eucla to the head of the Great Australian Bight, the coast-line consists of continuous cliffs from 200 to 300 feet high, forming the edge of the Nullarbor Plain plateau.

The various geological formations will be referred to in ascending order.

(i.) *Archæan* (Metalliferous Rocks). Granite, gneiss, and crystalline metamorphic, hornblendic, micaceous and argillaceous rocks are found at several places, but to a limited extent, to underlie rocks containing Cambrian fossils; and in other places there are considerable exposures of granitic and gneissic rock containing granitic dykes of later age, which may also be Pre-Cambrian; these constitute the lower rock systems and may be classed as Archæan. Chief localities: Southern portion of Yorke's Peninsula, North-East, north end of Main Range, Musgrave Range, etc.

(ii.) *Pre-Cambrian and Cambrian* (Metalliferous Rocks). The Main Ranges from Cape Jervis to Mt. Babbage, the Ranges at Port Lincoln and Franklin Harbour, Kangaroo Island, the North-eastern (Olary) Ranges, Mt. North-west Ranges, the Peake and Dennison Ranges (near Lake Eyre), and isolated areas are composed of highly-contorted, faulted, cleaved, jointed and metamorphosed beds of micaceous, hornblendic and quartzose schists, sandstones, quartzites, argillites, clay slates, conglomerates, crystalline limestones and dolomites intruded into and intersected in places by igneous rocks consisting of granites, diorite, dolerite, gabbro, felspar, porphyry, felsite, etc. The Gawler Ranges are composed of granite and felspar-porphry, the latter predominating, the Musgrave Ranges of granite, metamorphic and eruptive, and altered sedimentary rocks. Cambrian rocks containing fossils of undoubted Cambrian age, have been found in dolomitic limestone beds at Normanville and Sellick's Hill, south of Adelaide, near Ardrossan, Yorke's Peninsula, near Gordon, Belton, Wirrealpa, Ajax Mine, and Ediacara in the far north, and east of Hawker. These beds occur in connection with those just mentioned, but owing to the intense plication, varying thickness, faulting and non-persistence of individual beds and metamorphism of the whole series, their exact stratigraphic relationship can only be determined by exhaustive geological survey and mapping.

(a) *Pre-Cambrian and Cambrian Fossils*. These are as follows, viz. :—*Ethmophyllum hindei*, *Coscinocyathus tatei*, *Microdiscus subsagittatus*, *Ptychoparia australis*, *Orthosina compta*, *Platyceras etheridgei*, *Stenotheca rugosa*, *Hyalithes communis*, *Protopharetra* (?) *scouleri*, *Olenellus pritchardi*, *Dolichometropis tatei*, *P. howchini*, *Ambonychia macroptera*, *Ophileta sublanulata*, *Salterella planocconvexa*, *H. conularioides*.

(iii.) *Ordovician*. Beds of quartzite, sandstone, grit, shale, and conglomerate dipping at low angles and often horizontal occur on Kangaroo Island, in the neighbourhood of Port Augusta, along the western side of Lake Torrens, and on the Alberga River. No fossils have been found in them, but from the positions they occupy and their resemblance to the Ordovician fossiliferous rocks found south of the MacDonnell Ranges, they are probably of that age.

(iv.) *Jurassic*. This is represented by argillaceous, carbonaceous, and bituminous shale with thin bands of sandstone, limestone, ironstone, pyrites, etc., containing seams of coal. The best defined outcrop of this formation is at Leigh Creek, where a basin has been proved by boring to have an extreme depth of about 2000 feet of strata containing Jurassic fossils. In one bore at from 1496 to 1544 feet, over 47 feet of brown coal was passed through in one continuous bed, and small seams at intervals for 300 or 400 feet deeper. Characteristic fossils of the same age have been discovered at Ooroowillannie Swamp, near Kuntha Hill on Cooper's Creek, and bituminous shale and coal similar to that of Leigh Creek at Lake Phillipson and other places in bores put down for artesian water. There is no distinct line of demarcation between this and the overlying Lower Cretaceous formation. It is probable that the sandstone, gravel, and conglomerate in which this water occurs is of Jurassic age.

(a) *Fossils*. The fossils observed are:—*Alethopteris australis*, *Macrotaeniopteris winamatta*, *Oleandridum (?) fluctuans*, *Podoxamites lanceolatus*, *Thinnfeldia odontopteroides*, *T. media*, *Unio eyrensis*.

(v.) *Lower Cretaceous*. These consist of gypseous clays, marls, argillaceous shales, and sandstones, with thin bands of limestone, ironstone, pyrites, etc., and sometimes thin seams of brown coal resting on sandstone and gravel conglomerate beds. This formation, with or without the underlying Jurassic beds, fills the vast artesian basin of which Lake Eyre is approximately the centre; from the north-east corner of the State it is continuous westward along the Queensland border and to slightly beyond the 134th meridian, and southward along the boundaries of Queensland and New South Wales to latitude 30° S. Westward of Lake Eyre, its boundary has not yet been determined, but probably does not extend very far in that direction; it is bounded northward and southward by granite and other primary rocks.

The most western bore, viz., that at Lake Phillipson, has passed through a shale formation down to 3131 feet. The depth to which bores have been sunk in this area, and artesian water obtained, varies from a few feet in the vicinity of the outcrops of primary rocks to 4850 feet in that portion of the basin extending northwards towards the Queensland border.

(a) *Fossils*. The fossils observed are:—*Lingula subovalis*, *Pecten socialis*, *Pseudavicula australis*, *P. anomala*, *Maccoyella barklyi*, *M. corbiensis*, *Lima randsi*, *Pinna australis*, *Mytilus rugocostatus*, *M. inflatus*, *M. linguoides*, *Nucula quadrata*, *Cytherea clarkei*, *C. woodwardiana*, *Leda elongata*, *Mya maccoyi*, *Natica variabilis*, *Cinulia hochstetteri*, *Belemites australis*, *B. canhami*, *Criocerax australe*, and others.

(vi.) *Mesozoic*. This is represented by argillaceous and arenaceous shales, grits, sandstones, quartzose sandstone, gravel, and conglomerate, with limestone and concretionary clay ironstone. The deposit, which is horizontal and undulatory, contains scattered pebbles and boulders of granite, quartzite, sandstone, etc. Some of these boulders are of great size, and denudation has led to their being scattered over the surface to a considerable extent. Bores have been sunk through the deposit to ascertain whether it contained coal, as from its general appearance and resemblance to carbonaceous rocks of the Cape Otway district, Victoria, which contain small seams of coal and are of Mesozoic age, it was thought that this might be the case. It may be noted that the Cape Otway beds also contain beds of pebble conglomerate, the pebbles consisting of granite, syenite, mica-schist, etc. The deposit is undoubtedly a glacial one. The greatest thickness proved by boring through these beds was 964 feet, at which depth clay slate of primary age was bottomed on. The area occupied by the deposit is considerable; the main body stretches across from Victor Harbour to Yankalilla, a distance of about twenty miles; it is of irregular shape, having a width in places of five miles, and lies in a trough between high ranges; its boundaries have not yet been completely defined, and it probably underlies a portion of the Miocene Tertiary lying north and north-westward of Crozier's Hill and other places in the hundreds of Encounter Bay, Goolwa, and Waitpinga. Between Yankalilla and Second Valley, and at Cape Jervis there are beds

of clay and boulder drift which may be of similar age; and these may, however, have been reconstructed from them or deposited during Miocene times. On Kangaroo Island, in the hundred of Menzies, there is a similar deposit, which consists of false-bedded horizontal and slightly-dipping beds of sandstone and grit, with pebble conglomerate layers on shale and sandy clay, containing concretionary masses of brown iron ore and ferruginous sandstone with pebbles, and overlaid unconformably by basalt; it appears to be an outlying area of the Yankalilla and Encounter Bay beds. No fossils have been found at any of these localities, but from the similarity of these beds to those of the Cape Otway district they may be provisionally classed as Mesozoic.

(vii.) *Lower Tertiary or Upper Cretaceous.* Chiefly in the north-eastern portion of the State there are large areas of stony downs and table-hill country where sheets and isolated cappings, as thin beds of sandstone, quartzite, conglomerate, jasper rock, porcelainised shale, etc., etc., overlie both the Lower Cretaceous and older rock formation, which are either of Lower Tertiary or Upper Cretaceous age. The beds are intermittent in character, and are scattered over an area extending from the end of the Musgrave Ranges eastward to the Queensland border, and southward to Lakes Frome, Torrens, and Gairdner, and westward towards the West Australian border, in which direction they occur as small and widely-separated exposures.

(a) *Principal Fossils.* The principal fossils are:—*Mantellia babbagensis* and *Zamites ensiformis*.

(viii.) *Eocene.* The Eocene Formation is represented by polyzoal coral and shell limestone, chalky limestone with flints, fossiliferous clays, calcareous sandstone, and shale.

(a) *Coastal Localities.* On the Murray River, from Bookmark downward to Murray Bridge, good sections of these rocks overlaid by Miocene strata are exposed; the Nullarbor plain, extending from Eucla to Denial Bay, and forming sea cliffs from 200 to 300 feet high between the head of the Great Australian Bight and the West Australian border; the coasts of Yorke's Peninsula, Ports Willunga and Noarlunga, Kangaroo Island, and other places to a less extent.

(b) *Localities Inland.* Near Ardrossan, McLaren Vale, Mount Jagged; at these places the beds are elevated to a height varying approximately from 200 to 700 feet above sea-level. On the Adelaide plains a bore at Croydon shewed a thickness of at least 2296 feet.

The deepest bore sunk for water on the Nullarbor plain penetrated a thickness of 500 feet of crystalline limestone and white chalky limestone with flints, succeeded by shale, gravel, etc., to 1387, where it bottomed on granite.

(c) *Fossils.* The characteristic fossils are:—*Magellania insolita*, *M. pectoralis*, *Magasella deformis*, *Salenia tertiaria*, *Scutellina patella*, *Cassidulis longianus*, *Lovenia forbesi*, *Fibularia gregata*, *Oxyrhina woodsii*, *Aturia australis*, *Voluta pagodoides*, *Fusus sculptilis*, *Turritella aldingæ*, *Natica aldingensis*, *Dentalium mantelli*, *Dimya dissimilis*, *Lima bassii*, *Pecten consobrinus*, *Pecten aldingensis*, *P. eyrei*, *P. flindersi*, *P. hochstetteri*, *Glycimeris cainozoica*, *Limopsis insolita*, *Chione cainozoica*.

(ix.) *Miocene.* This is represented by sand, clay, shale, loam, shell, limestone, sandstone grit, conglomerate, gravel, and boulder deposits. They fill the basins of ancient estuaries and old river beds, rising in the ranges and trending towards and into the sea, forming low cliffs along the coast and in its vicinity, and probably underlying newer formations at numerous places along the coast.

The oyster beds of the Murray Cliffs, Willunga, etc., are of this age.

(a) *Fossils.* The characteristic fossils are:—*Terebra crassa*, *Ancillaria orycta*, *Latirus approximans*, *Marginella hordeacea*, *Murex anceps*, *Cominella sub-*

filicea, *Campanile triseriale*, *Semicassis subgranosa*, *Calyptrea crassa*, *Diastoma provisi*, *Helignope dennanti*, *Natica subvarians*, *Ostrea sturtiana*, *Ostrea arenicola*, *Spondylus arenicola*, *Placunanomia ione*, *Pecten antiaustralis*, *P. palmipes*, *P. consobrinus*, *Lima semicostata*, *Lima jeffreysiana*, *Lithodomus brevis*, *Amussium lucens*, *Cucullæa corioensis*, *Mitylus submenkeanus*, *Cardita dennanti*, *Barbatia simulans*, *Meretrix sphericula*, *Trigonia acuticostata*, *Corbula ephamilla*, *Cardium mediosulcatum*, *Lucina nuciformis*, *Dosinia grayii*, *Tellina lata*, *T. basedowi*, *Myadora corrugata*, *Panopæa orbita*, *Plesiastræa st. vincenti*, *Loripes simulans*, *Macropneustes decipiens*.

(x.) *Volcanic Rocks.* Basalt, dolerite, amygdaloid, lava, ash, etc., which have been derived from several points of eruption, cover limited areas in the south-eastern district in the vicinity of Mount Gambier and Millicent, and smaller areas in the hundred of Menzies, Kangaroo Island. Mount Gambier itself is composed of volcanic ash beds which at one time formed a portion of the walls of a crater. Mount Schanck is a perfect crater formed of beds of ash, scoria, etc. Other eruptive centres occur in the neighbourhood of Millicent. The basalt overlies beds of coralline limestone with flints of Tertiary age. The volcanic eruptions most probably took place at the same time as those in Victoria, where the basalt flows overlie Pliocene gold drifts. The Kangaroo Island basalt occurs as cappings in the hundred of Menzies, it rests on a formation similar to that of Yankalilla and Encounter Bay, the age of which has not yet been determined; its thickness is about 100 feet, and its geological age is most probably the same as that of Mount Gambier.

(xi.) *Post-Tertiary (Pleistocene).* Sand, loam, concretionary limestone, clay, gravel, marl, gypsum, salt, shell limestone, sandstone, limestone, conglomerate, gravel, and boulder drift—these constitute the surface formations over a large extent of the plain country and the alluvium of the creek and gullies running through and from the ranges into these plains, and as cappings to all rocks of greater age. Alluvial gold occurs in these deposits in many parts of the State, and has been worked for to a greater or less extent on the various goldfields which have been discovered in the main range from Cape Jervis northward, and on the isolated ranges west of Lake Eyre.

Fossil remains of large extinct mammals (marsupial), birds, reptiles, amphibians, and fishes have been found. These include:—*Marsupials*: Diprotodon, Nototherium, Phascalomys, Sarcophilus, Palorchestes, Macropus, Thylacoleo. *Aves*: Genyornis (Newtoni), Phalacrocorax. *Reptilia*: Crocodilia—Pallimnarchus Polleus, larger than any living species, a freshwater species allied to *C. Johnstoni*, but larger. Chelonia (tortoise)—Megalania Prisca, a gigantic land lizard. (Localities: Warburton River, Cooper's Creek in vicinity of Lake Eyre. *Pisces*: Ceratodus Silurard, and other fishes. The localities are as just mentioned.

The chief localities of the mammals are Adelaide, Yankalilla, Millicent, Baldina, Bunday, Mundowdna, Booleroo Springs, Lake Callabonna, Warburton River, and Cooper's Creek.

At Yankalilla and other places the remains of Diprotodon, etc., occur in soft spring deposits. At Lake Callabonna they are partially imbedded in the mud of the lake, in which they appear not to have been disturbed since their original deposition, and in other localities they occur in alluvium, either *in situ* or washed out by floods.

(xii.) *General.* Ice action is evidenced by glacial striæ on rocks of presumably Cambrian age, and on erratic boulders at Hallett's Cove and in the Inman River, and also by the occurrence of erratic boulders in the same district and on Yorke's Peninsula, Kangaroo Island, etc. There is no fossil evidence, but the deposit at Hallett's Cove underlies Miocene limestone, and may provisionally be regarded as of Mesozoic age. Erratic boulders are found strewn on the surface and imbedded in the Lower Cretaceous shales of the Central artesian basin.

6. **Geology of Western Australia.**¹—The work of organising a systematic geological survey of Western Australia was commenced in 1896.

During the twelve years since then the mining industry has attained such magnitude that attention has been concentrated upon examinations in more or less detail at and around important mining centres. Any general knowledge of its geology as a whole can consequently be gathered only from information gained whilst travelling from centre to centre taken with the observations of previous geologists.

In Western Australia an enormous area is covered by crystalline rocks, and only a limited area discloses the sedimentary series. The most recent formations repose directly upon the oldest; thus in the southern portion of the State, where the prevailing formations are crystalline schists, they are fringed by deposits containing marine shells of existing types.

(a) *Physical Features.* The physical features of this State are in no way striking, the coast-line being generally very free from indentation and generally followed by low flat coastal plains at little elevation above the sea level, which again are followed by low ranges (the previous coast-line), whilst behind the latter are elevated plains, broken here and there by low ranges or isolated hills and areas of depression called "lakes." There are no mountains of an altitude known to exceed 3000 feet, whilst those rising from elevated plains do not as a rule present a striking appearance even locally. There are numerous watercourses but no flowing rivers, for these, owing to the gradual and uninterrupted fall of the land towards the coast, only run immediately after heavy rains, leaving only filled pools or waterholes behind.

The so-called lakes of the interior are, in reality, chains of wind-planed salt flats lying along main valleys, and they are connected one with another, thus forming the drainage channels of this flat country, but as a rule the rainfall is so light in the interior that the water accumulated upon them from the surrounding country simply evaporates, leaving its salt burden behind.

The general character of the land surface presents that of one which has for a long period been subjected to erosion, in the course of which it is highly probable that wave action in a shallow sea has played an important part, since this appears to be the only satisfactory solution of the problem as to how the detrital matter was removed. Portions of this area (particularly the elevated one) have undoubtedly been land surface for a very considerable period, as their laterite cappings conclusively prove.

When we turn to the rocks this impression is further supported by the fact that the most modern stratified rocks as yet known here, after the Recent, are of Jurassic age; therefore we may safely conclude that the western portion of this continent has existed either as dry land or a group of islands in a shallow sea since the time at which an elevation took place in mid-Mesozoic times.

(i.) *Geological Formations.* The known geological formations of Western Australia are as follows:—

| | |
|-----------------|---|
| CRYSTALLINE ... | Igneous origin; Metamorphic origin (Pre-Cambrian?). |
| PALÆOZOIC ... | Metamorphic origin (Pre-Cambrian?); Cambrian, Devonian, Lower Carboniferous and Permo-Carboniferous. |
| MESOZOIC ... | Jurassic. |
| RECENT ... | Superficial and marine deposits. |
| VOLCANIC ... | Sheets, flows and necks. |

(ii.) *Crystalline Series.* The Crystalline rocks, which consist of granite, gneiss, schist and greenstone, cover an estimated area of 650,000 square miles, or a total of two-

1. In the absence of A. Gibb Maitland, Esquire, F.G.S., etc., Government Geologist of Western Australia, this article was contributed by Harry P. Woodward, Esquire, F.G.S., Assoc. M. Inst. C.E., Assistant Government Geologist of that State.

Copyright belongs to H. E. C. Robinson, 41 Phillip St., Sydney, N.S.W.

Printed by McCarron, Bird and Co., Melbourne.

thirds of the superficial extent of the State, and may be divided into three groups, the first of which comprises the granites, gneissic granites, and schists of the south-west division; the second, granites, gneissic granites and greenstones of the central and eastern portion of the State; and the third, granites, gneissic granites, schists and greenstones of sedimentary origin of Kimberley and the north-western districts.

- (a) *First Group.* The first group is represented by a belt of gneissic granites and acidic schists, with intrusive granite and pegmatite veins, diorite dykes and quartz reefs, which occupy practically the whole of the south-western land division of this State; they occur in a belt that has a course a little west of north, extending from the south coast to the Murchison River, being about 200 miles in width at the south, extending from Point d'Entrecasteaux to Doubtful Island Bay, whilst to the northward as it impinges upon the west coast it narrows down to 125 miles.

Upon the western side of this belt, these rocks form a bold escarpment to the seaward, called the Darling Ranges. This face is evidently a fault line, since rocks belonging to a much more modern period are exposed in places at their base, where the talus covering them has been removed or pierced by wells.

This range forms the edge of an interior tableland, but does not attain any considerable elevation; the highest point, Mount William, is said to be 3000 feet above the sea level.

The question as to whether these rocks are of sedimentary or igneous origin has not yet been determined, but the uniformity of their foliation and apparent bedding, with the occurrence of graphite, would almost favour the former. They have so far proved of economic value only at two points, viz.: Northhampton at the north, where lead and copper lodes are found associated with porphyritic diorite dykes, and at Greenbushes at the south, where tin deposits occur in pegmatic and griesen dykes. The diorite dykes which have been intruded into these rocks are generally of an aphanitic character, whilst the quartz reefs are large and often contain marcasite in considerable quantities, but, although generally carrying both gold and silver in small quantities, discoveries of a payable nature have not yet been made.

Upon the south coast, and also upon the eastern side of the Darling Range, a series of magmatic intrusions of granite are met, which upon the coast form bold bare headlands and islands of rounded and polished dome-like shapes or fantastical ruined forms, and this character is maintained by the island outcrops, which generally follow the lake margins between the Great Southern Railway line and the goldfields.

- (b) *Second Group.* To the second group, which occupies the whole area of the eastern goldfields, very considerable interest attaches owing to its economic importance, and therefore, it has been more closely studied than any other series in this State, but, unfortunately, as yet this close attention has only been paid to main centres of production, whilst with regard to the balance but little is known.

The rocks of this region vary from that first mentioned in the occurrence of what appear to be lenticular magmatic intrusions of basic rocks probably of diabase origin, which have been altered by the action of paramorphism and hydration into amphibolites, hornblende and chloritic schists and epidote rock, whilst portions less altered still retain a massive form consisting of epidiorite or diorite. These magmatic intrusions are contained in a gneissic country of doubtful origin, whilst intrusive granite, often magmatic, has at a more recent period broken through them and is frequently met with at the contact of the gneisses with the greenstones. Except where purely local disturbances have taken place, the planes of foliation lie in a north-westerly direction, or parallel to the long axis of the

basic lenses, whilst the quartz reefs or lodes usually follow them, thus presenting a bedded appearance.

Basic dykes can be observed intersecting the gneissic rocks, whilst porphyritic and granite dykes are of common occurrence in the basic zone. It is probable, however, that the basic dykes also traverse the basic rocks, and the acidic the gneisses, but owing to their similarity in a weathered condition at the surface, it is difficult to determinè their presence.

- (c) *Third Group.* The third group includes rocks of undoubted sedimentary origin, in which the alteration is due in most cases to regional metamorphism owing to magmatic intrusions of igneous rock not necessarily always visible at the surface. These rocks are largely developed in the Kimberley and north-west districts, where the transition from undoubted sedimentary rocks of Palæozoic age can be traced into crystalline schists.

Although not crystalline, the slates, quartzites, and conglomerates of the same horizon, having undergone metamorphism, must necessarily be included in this group, and since both the crystalline and uncrystalline form the country rock of metalliferous lodes, they are of equal economic interest, and in consequence have received considerable attention.

In the Kimberley district the two main rivers, the Fitzroy and the Ord, take their rise at the same locality, the former flowing in a north-westerly direction and the latter north, forming roughly a horseshoe-shaped valley, which follows the anticlinal axis caused by a granite intrusion, the beds in contact with which have been altered into schist, whilst following and overlying them upon either side, an ascending series of Palæozoic age is exposed.

These rocks are intersected by numerous granite and diorite dykes, whilst a series of large auriferous quartz reefs and copper lodes occur both in the crystalline and uncrystalline portion of this series, following invariably the bedding planes of the rock.

In the north-west there is a greater complex of this series than in any other portion of the State, whilst they are of very considerable economic interest also since they contain a greater variety of metals and minerals than do the rocks of any other district. They have been very greatly disturbed and altered in places by intrusions of granite with pegmatite and diorite dykes, whilst at a more recent period the district has been the scene of very considerable volcanic activity, which has in all probability played an important part in the deposition of certain of the ores.

Under this section, the auriferous belt which includes both Norseman and Kalgoorlie has also been placed provisionally, but there exists very considerable doubt with regard to the soundness of this classification.

(iii.) *Palæozoic Series.* The Palæozoic Series, consisting of slates, shales, quartzites, sandstones, conglomerates, and limestones from which fossils have been determined to be of Cambrian, Devonian, Lower Carboniferous and Permo-Carboniferous age, are most largely developed in the Kimberley district, but in it as yet no rocks newer than the Lower Carboniferous have been identified, although it is quite possible the extensive shale beds may be of the Upper or even Permo-Carboniferous age.

In this series some small lead and copper deposits have been discovered in the Napier Range, but with this exception they have not so far proved to be of any economic value in this district.

- (a) *Devonian.* In the north-west district the Government Geologist assigns the Nullagine series provisionally to the Devonian period, the beds of which consist of sandstones, grits, and conglomerates, with interbedded volcanic flows or sheets. Of this series interest attaches to the conglomerates, since they have proved to be auriferous in places, being very similar to the banket deposits of South Africa.

To the southward from the north-west coast this series of rocks is supposed to extend in a southerly direction for a considerable distance, probably as far as the Gascoyne River, forming a tableland through which the creeks have cut many cannon-like gorges, at the bottoms of which slates are exposed, whilst from the unconformable junction springs often flow.

- (b) *Lower Carboniferous.* The Lower Carboniferous rocks are developed in the form of a long coastal belt, commencing a little north of the Ashburton River and extending southward across the Gascoyne and Wooramel Rivers, from which point they are lost until they outcrop again upon the Irwin River. It is, however, highly probable that they are continuous, their outcrops being hidden by superficial deposits.

This series north of the Wooramel consists of limestones, sandstones, shales, and conglomerates, with a general dip to the westward, and it is from them that the large supplies of artesian water have recently been obtained at several points.

- (c) *Permo-Carboniferous.* The age of Permo-Carboniferous has been assigned by palæontologists to the rocks of three localities, viz., the Irwin River, Bullsbrook, a little north of Perth, and Collie, in the south-west. The rocks at the Irwin and the Collie consist of sandstones, grits, and pebble beds, with shales more or less micaceous and coal seams of a non-caking and poor quality, identical in composition with some of the Mesozoic coals of both Europe and America.

Some recent boring upon the Greenough River, a little to the northward of the Irwin River, has revealed beds of a similar coal. It is therefore possible that these are of greater extent than was supposed, and that they dip beneath the Jurassic beds which lie to the westward.

(iv.) *Jurassic.* The Jurassic Series, which consists of sandstones, light-coloured claystones, grits, and limestones, occurs in the Northampton district, extending south to the Greenough River. In all probability it forms a continuous belt southward from this point, following the coast to Gingin, which is about 40 miles north of Perth, in which locality fossils of a similar age are said to have been obtained, but, since in the intervening country the surface is practically all sand, no definite statement with regard to it can be made at present.

(v.) *Recent.* The Recent deposits consist of raised beaches at various points around the southern and western coast and coralline limestones and sandstones, which sometimes contain fossils or casts of shells of existing types, thus proving this section of the coast to be rising.

(vi.) *Volcanic.* Until quite recently the volcanic series was considered to be only represented by a basaltic sheet in East Kimberley and an outcrop of the same rock at Bunbury in the south-west. Later investigations, however, prove that it is of considerable extent and importance.

These rocks evidently belong to two distinct periods, the one consisting principally of andesitic rocks and the more recent of basaltic. They both occur in the form of dykes, necks, sheets, and flows, and are often vesicular, whilst the andesites are sometimes amygdaloidal.

Basalt occurs as extensive flows, forming the Great Antrim Plateau in the East Kimberley district, which extends into the Northern Territory of South Australia, and is also met with at many points in West Kimberley, but this latter has not as yet been geologically mapped.

At Bunbury it occurs in sheet form, assuming the columnar structure upon the beach, whilst southward from this point outcrops are met with in the Lower Blackwood River, and at Black Point upon the coast.

The andesites are gradually proving to be of much more frequent occurrence than was supposed, since the cleaved hornblende andesites were often mistaken for aphanitic

amphibolites, into which they sometimes merge so imperceptibly that it is impossible to define a boundary. These rocks are largely developed in the north-west district, between the DeGrey River and the Ashburton River, whilst upon the Murchison goldfields they have been identified at Day Dawn, Cue, and Gabanintha, where they appear to have influenced the concentration of gold in the lodes.

(vii). *General.* A description of the geology of Western Australia would not be complete if the series of nondescript rocks called *laterites* were omitted, since they form one of the staple surface formations of this State. These rocks are supposed to originate from the gradual weathering *in situ* of schists containing iron, which, whilst in solution, is drawn to the surface by capillary attraction, and there deposited upon the evaporation of the water.

They are usually called ironstone gravel or conglomerates, and are found as cappings to most of the hills upon the goldfields, also covering all the ranges in the south-western district. The rock varies very greatly in both composition and character, the former being directly traceable to the parent rock from which it was derived, and the latter to the conditions under which it was formed. Nodular clay ironstone is by far its most common form, but it also often occurs in a massive state sometimes of considerable richness in iron, whilst at others it passes into a ferruginous sandstone.

No classification of the mineral veins has yet been determined upon, but typical examples exist of fault, dyke, shearing, discission, and shrinkage plane fissures, all of which possess one feature in common, no matter what class of ore is contained, which is that the matrix is quartz.

That the geological knowledge of Western Australia is at present very limited, is a natural consequence of the demand that the official staff shall give first attention to the study of economic problems. A considerable period must elapse before anything approaching a systematic survey can be undertaken.

7. Geology of Tasmania.¹—Tasmania is a geological outlier of Eastern Australia. Its Pre-Cambrian and early Palæozoic history can be delineated only imperfectly. In Mesozoic times some connection existed with the Australian part of Gondwana land. In the early Tertiary it was separated from the adjacent island continent; subsequently the land connection was restored, to be again broken, since when it has remained an island. Dr. A. W. Howitt and Mr. C. Hedley have pointed out that the last land connection was between Wilson's Promontory in Victoria and Cape Portland in Tasmania, *via* Flinders Island and the Kent group, and that an elevation of from 200 to 300 feet would lay dry a tract of country between Victoria and Tasmania.

The rugged nature and the remoteness of the mountain fastnesses of the island have been great impediments to geological research. In spite, however, of the physical difficulties, it has been possible to fix the stratigraphy of a large portion of the State, though the lower Palæozoic strata need further study before they can be satisfactorily determined. As far as examination has proceeded the following systems can be recognised:—

| | | |
|------------------|--------------------------|----------------------------|
| i. PRE-CAMBRIAN. | iv. SILURIAN. | vii. TRIAS AND TRIAS-JURA. |
| ii. CAMBRIAN. | v. DEVONIAN. | viii. TERTIARY. |
| iii. ORDOVICIAN. | vi. PERMO-CARBONIFEROUS. | ix. QUATERNARY. |

(i.) *Pre-Cambrian.* The diagnosis of the Pre-Cambrian must be accepted as provisional. It is probable that they belong to the Algonkian division of the group. Among them may be mentioned the quartzites and mica schists of the Port Davey districts. These are strongly developed in the south-west of the island as biotite and muscovite schists, greatly contorted, alternating with white saccharoidal quartzites, all striking north-west and dipping south-west. High headlands of quartzites, which have resisted denudation, jut out on the south coast, with bare, snow-white crests visible for many miles. Ores of copper, antimony, and lead occur in these schists. The contorted

1. This article is contributed by H. W. Twelvetrees, Esquire, Government Geologist and Chief Inspector of Mines of the State of Tasmania.

quartz schists and white quartzite of Rocky Cape, on the north-west coast, are also considered as Pre-Cambrian. These are traversed by granitoid dykes carrying copper ore. The quartzitic and micaceous schists west of the King William and Denison Ranges belong to the Pre-Cambrians. Garnetiferous amphibolite in the Collingwood River valley, the amphibolite of the Rocky River, enclosing lenses of magnetite with pyrrhotite and copper pyrites, and the zoisite-amphibolite of the Forth River, are also ascribed to the Pre-Cambrian group.

(ii.) *Cambrian*. This system is represented by friable, yellow sandstones, containing casts of *Dikelocephalus*, *Orthis*, *Bellerophon*, etc. These occur at two widely-separated localities on nearly the same meridian, one being on Caroline Creek, between Railton and Latrobe, the other on the Humboldt Divide and in the Florentine Valley. Mr. R. Etheridge reports that the fossils appear to be of Upper Cambrian age. The crystalline sandstones, quartzites, and conglomerate of which the Thumbs and Denison Ranges are composed are believed to be Cambrians.

(iii.) *Ordovician*. The slates and sandstones of the goldfields of Lefroy, Mount Victoria, Mathinna, Mangana, etc., in the northern and eastern parts of the island, are referred to this system, though few fossils of any stratigraphical value have been found. Their bearing is either east or west of north, and anticlinal axes are long and continuous. The gold quartz reefs which traverse them began to form apparently at the close of the Upper Silurian. Large and important mines have been opened on these reefs, and every geological consideration that can be adduced points to the permanency of the goldfields.

The conglomerates and sandstones at Beaconsfield, together with the blue limestones which prevail in that district at Blyth's Creek and Winkleigh, as well as the Chudleigh and Railton limestones, may be provisionally regarded as of Ordovician age. The Blyth's Creek limestone has yielded imperfect casts of corals, and the Railton quarries contain remains of *Actinoceras* and other cephalopods.

A series of clay slates occurs between Zeehan and Mount Read, known as the Dundas slates, and believed to be of this age. Ill-preserved traces of graptolites have been noticed in them. These slates extend to Mount Read, Mount Black, and the Red Hills, and along their junction with intrusive quartz porphyry rocks (felsite, keratophyre, granophyre, porphyroid, etc.) large lenses of complex gold and silver bearing sulphidic ores of zinc, lead, and copper have been formed.

Another group of rocks at the base of the Ordovician is the Gordon River series of limestones, sandstones and slates. The limestone in this group is fossiliferous. The organic remains include *Favosites*, *Orthoceratits*, *Raphistoma*, *Orthis*, *Rhynchonella*, *Euomphalus*, *Murchisonia*, etc. The limestone reappears to the north-east of Mount Farrell in the bed of the Mackintosh River, a short distance above its junction with the Sophia River. East of the Valley of Rasselas these rocks occur again in the Florentine Valley and at the Junee.

(iv.) *Silurian*. The Silurians are strongly developed at Zeehan on the West Coast, at Middlesex, and Mount Claude, Heazlewood, and the Eldon Valley, Queen River, etc.

At Zeehan, conglomerates and tubicolar sandstone underlie the limestones, slates, and sandstones, which are intersected by the numerous galena-bearing lodes which have the ore for which this field is so well-known.

The fossils found in limestone and quartzite belong to the genera *Hausmannia*, *Asaphus*, *Illænus*, *Cromus*, *Rhynchonella*, *Strophodonta*, *Lophospira*, *Murchisonia*, *Eunema*, *Tentaculites*, and the beds are considered by Mr. R. Etheridge to be homotaxially equivalent to the lower portion of the Upper Silurian.

Similar tubicolar sandstone occurs near Bell Mount, Middlesex, and on the Five Mile Rise, and casts of *Hausmannia* (or *Phacops*), *Rhynchonella*, *Orthis*, and coral have been found.

Clay slates in the Eldon Valley containing fossil casts of *Calymene*, *Orthis*, *Cardiola*, are considered to belong to the Upper Silurian.

At the Heazlewood limestone and sandstone have yielded remains of *Hausmannia*, *Cromus*, *Cornulites*, *Rhynchonella*, *Tentaculites*, and *Favosites*.

Sandstones and limestones in the Queen River district have been identified as Silurian (Middle or Upper Silurian). These are west of Queenstown. Brachiopods, and trilobites have been found also on the east side of the Lyell Razorback, indicating a similar age for rocks on the Lyell and Lyell Blocks mining properties there. The Queen River sandstones are charged with casts of *Spirifera* and *Orthis*.

Trilobite-bearing Silurian rocks also occur north of the Pieman River near the Wilson River.

In the Zeehan field the Silurian slates are largely accompanied by contemporaneous and intrusive sheets and dykes of vesicular melaphyre. The igneous rock corresponds very closely with the German spilite, an amygdaloidal diabase, sometimes called lime diabase.

Massive conglomerates crown most of the West Coast Mountains, the Dial Range on the North-west Coast, Mounts Roland, Claude, etc. These have generally been ascribed to the Devonian, but more recent data point to the commencement of the Silurian or even a still greater age as more probable.

The quartz-porphyrines or felsites which form the backbone of the West Coast Range are the geographical axes of Mounts Darwin, Jukes, Huxley, Tyndal, Read, Murchison, and Farrell. They carry copper ore associated with lenses of hematite and magnetite, chloritic and felspathic copper-bearing schists, some of them, probably schistose porphyries, flank them and are enclosed in them. The felspathic schists of Mount Lyell belong to this group. Sufficient is not known of this geological formation to enable its age to be stated definitely.

Associated with the rocks of the Silurian system in the northern and western parts of the island is an extensive development of serpentine, the altered form of gabbro and its appendages, peridotite and pyroxenite. This rock is found at the Heazlewood, at Trial Harbour, in the Dundas district, in the Forth Valley, and near Beaconsfield. The difference of age between it and the Devonian granite is slight. Chronologically some of the granite is later.

(v.) *Devonian*. Granite occurs in a meridional line down the East Coast, extending from Flinders Island to Maria Island. It forms Mt. Cameron, Mt. Stronach, the Blue Tier, Freycinet's Peninsula, and is exposed at Ben Lomond and at the base of Mt. Arthur. Exposures are also seen at the Hampshire Hills, Granite Tor, Middlesex, the Magnet and Meredith Ranges, Heazlewood, etc. The quartz porphyry dykes at Mt. Bischoff, the tourmaline lodes at Mt. Black, and in the Dundas district, the stannite lodes and quartz-porphyry dykes at Zeehan, all denote a granitic reservoir below a large portion of the mineral fields on the West Coast. No granite intrusion into Permo-Carboniferous strata has been observed. The normal granite is a dark mica one, but muscovite and lithia micas appear in the tin-bearing varieties. Tin-bearing lodes occur on Ben Lomond and Mt. Heemskirk, while on the Blue Tier floors or stocks of altered granite form huge tin ore bodies of low grade. Porphyry dykes at Mt. Bischoff have shed the vast accumulation of tin ores which has been mined by the Mt. Bischoff Co. for the last thirty-four years with wonderful success.

(vi.) *Permo-Carboniferous*. The base of the system is formed by glacial conglomerates, grits, micaceous sandstones and flagstones, well seen on Bruny and Maria Islands and elsewhere in Southern Tasmania. Fossiliferous mudstones and limestones form a lower division of the system, while the upper division comprises the Tasmanite shale and coal measures of the Mersey basin, with upper marine mudstones and shales in the Mersey basin and at Hobart, and the coal measure series of Mt. Cygnet and Southport. The characteristic fossil plants of the coal measures of this system are *Glossopteris*, *Gangamopteris*, *Noggerathiopsis*. The seams average from 1½ to 2 feet in thickness, and the analyses show from 36 to 42 per cent. fixed carbon, 41 to 48 per cent. gas, 2 to 9 per cent. ash, and 8 to 12 per cent. moisture. They are known as the lower coal measures of Tasmania.

South of Wynyard and at Barn Bluff, cannel coal or kerosene shale is met with. The Wynyard or Preolenna seam of this coal is in sandstone overlying fossiliferous

mudstones, and assays up to 76 per cent. volatile matter. The Barn Bluff cannel coal has only been observed in loose blocks, supposed to have been distributed by glacier action.

At the close of the system, or during Mesozoic times, a local intrusion of alkaline rocks, alkali and nepheline syenites, etc., occurred, traversing the Permo-Carboniferous strata south of Hobart, from Oyster Cove and Woodbridge on the Channel to the Huon River in a N.E.-S.W. line. Auriferous quartz and pyrites have been developed near the line of the contact of these igneous rocks with the Permo-Carboniferous sandstones and mudstones, and a good deal of free gold has been shed into the flats.

(vii.) *Mesozoic*. The fresh-water beds, which succeed the Upper Palæozoic, belong to the Mesozoic division, but cannot as yet be subdivided with certainty. The nearest approach to a subdivision would be as follows: but the reference to European equivalents is nothing more than an attempt at correlation homotaxially:—

- (a) *Trias* (?) 1. Variegated sandstones with remains of heterocercal fishes and amphibians.
- 2. Sandstones and shales with coal at Ida Bay.
- (b) *Jura* (or *Rhætic*). 3. Upper coal measure sandstones.
- (c) *Cretaceous* (?) 4. Diabase in intrusive masses, sills and dykes.

The variegated sandstones occur at Knocklofty, the Domain, Ross, etc. Remains of *Acrolepis* have been found at Knocklofty and Tinderbox Bay. Bones of an amphibian (labyrinthodontine?) have been obtained from the Government House quarry in the Domain.

The upper sandstones are readily recognised by their soft felspathic nature: they are generally greenish-grey to yellowish-brown, sometimes white. They are widely distributed throughout Eastern and South-eastern Tasmania, and occur also in the extreme south. They are largely interrupted by intrusions of diabase. They flank the central, eastern and western tiers, and fringe isolated mountains, e.g., Mt. Nicholas, Mt. Victoria, Ben Lomond, Ben Nevis, Mt. Dundas, Cradle Mountain, etc. From Fingal and Mt. Nicholas they extend on the outskirts of the diabase ranges southward to Seymour, Bicheno, Llandaff, Spring Bay, and all over South-eastern and a large part of Southern Tasmania.

These measures enclose the coal seams, averaging from 4 to 12 feet, which are worked at the Mount Nicholas, Cornwall, York Plains, and Sandfly collieries. The analyses of this coal range from 53 to 60 per cent. fixed carbon, 23 to 31 per cent. volatile matter, 9 to 16 per cent. ash, 2 to 4 per cent. moisture, and the coal is not a coking one. A sub-anthracitic coal is raised at York Plains, and at the Sandfly mine a seam of anthracite occurs containing 80 per cent. fixed carbon and 8 per cent. volatile matter.

The fossil flora from these measures must be regarded as characteristic for the Mesozoic. The list includes *Thinnfeldia*, *Pecopteris*, *Tæniopteris*, *Sphenopteris*, *Alethopteris*, etc.

The diabasic intrusions cut up the coal measure areas into different basins and cover large portions of the Central, Eastern and Southern districts.

(viii.) *Tertiary*. A great stratigraphic break exists between the Mesozoic and the succeeding strata. This Tertiary system cannot be subdivided as in Europe. The two divisions, Palæogene and Neogene, are adopted in Tasmania. According to this arrangement, the subdivisions are as follows:—

- (a) *Neogene* (= approximately to Pliocene).

Under this head would fall various river terraces and estuarine deposits.

- (b) *Palæogene* (= Eocene to Miocene).

- 3. Basalt lavas.

- 2. Fluvial and lacustrine clays and sands, tin ore drifts, and deep leads.

- 1. Fossiliferous marine beds at Wynyard (= Eocene).

The marine fossiliferous beds at Wynyard are covered with the basalt which, generally throughout the island, appears to separate the Lower from the Upper Tertiaries. The extensive lacustrine deposits within the watershed of the Tamar cover an area of 600 square miles, and embrace widely-spread pre-basaltic or Palæogene clays and sands, which form a series 900 to 1000 feet thick. Such sediments with fossil leaves of European genera occur at Launceston, Dilston, Windermere, Beaconsfield, Waratah, Strahan, St. Helens, Burnie, and on the Derwent. In the north-east and east, the sub-basaltic gravels are worked on a large scale for tin ore, and yield most of the alluvial tin of the State.

At the close of the Palæogene a great outpouring of basaltic lava took place, and this rock is very general throughout the Island, though rarer on the West Coast.

The rock is usually olivine basalt, but nepheline basalt occurs on the Shannon Tier, and at Sandy Bay, Hobart.

The Neogene valley terraces can only be distinguished from the earlier Tertiaries by position and lithological characters. Some of the gravel drifts of the Derwent, of the Longford plains, and in the neighbourhood of Launceston, belong to this subdivision. The close of the Tertiary, or the beginning of the Quaternary, witnessed a glacier epoch in the west and centre of the island. The highlands round Barn Bluff, Mounts Tyndal, Lyell, Sedgwick, Jukes, Darwin, etc., and the western edge of the great central plateau abound with tarns, ice-scratched stones, and moraines. No proof of glacier conditions in this period in the eastern part of the island has been adduced yet.

Tin and gold ores are the most important products of the deposits of the Tertiary system. They are won from the alluvial gravels and leads of the period. The sands in the Savage River and other tributaries of the Pieman and Huskisson have been worked for osmiridium. Zircon sand, near Table Cape, has also been exploited. Tertiary clays are used largely for brick-making and pottery, the gravels for road-making. Lignites exist, but are not yet industrially important. Though there has been great volcanic activity, there are no signs of Tertiary metalliferous veins.

(ix.) *Quaternary.* These deposits may be classed as follows:—

(a) *Recent.*

3. River alluvium and sand dunes.
2. Raised beaches and helicidæ sandstone.

(b) *Pleistocene.*

1. River drifts.

The later terrace drifts in the valleys of existing rivers are referred to the Pleistocene. Sand dunes, consolidated to shelly sandstones, occur on Cape Barren, Badger, Kangaroo and other islands in Bass Straits, containing shells of *Helix*, *Succinea*, etc. These sandstones sometimes overlies a raised beach. The raised beaches on the North and South Coasts indicate elevation within the Recent period.

(x.) *Ore Deposition.* The period during which the deposition of metalliferous ores was most active was the interval between the Upper Silurian and the Permo-Carboniferous. Ore deposition has been associated principally with the consolidation of the gabbroid and granitic masses. Nickel sulphide and osmiridium owe their origin to the serpentine at the Heazlewood, Trial Harbour, and Dundas. On the other hand the granite magma is responsible for the lodes of silver lead all over the island, whether these pierce quartz porphyry as at the Devon and Mount Tyndal, slate, sandstone and limestone as at Zeehan, or ultra basic dyke rock as at the Magnet. The pyritic lead, zinc, or copper ores of the West Coast Range (Mount Lyell, Mount Read, Mount Black, etc.) are also

most probably due to the action of the acid magma. Tin and wolfram ores are naturally referred to the same source, and the gold quartz reefs of the Ordovician strata must be regarded as the result of the expiring effort of the cooling magma to get rid of its surplus available silica. A few veins of barren quartz occur in the Permo-Carboniferous strata, but beyond the exceptional case of the alkali porphyries at Port Cygnet, the chapter of metal-bearing lode action closed, as it began, with the Devonian period. Within that period, therefore, were accumulated the great stores of mineral which the mining industry of Tasmania is now drawing upon. The mines of gold, silver, lead, copper, and tin, rank high among the famous mines of the world. Her mineral wealth may, in fact, be considered remarkable, when despite the small area of the island (26,000 square miles) the value of the mineral produced for the year ending 31st December, 1907, amounted to £2,277,159. The industry is thriving, is on a sound and established basis, and with the careful administration and care which it receives it may with confidence be expected to continue a highly important asset of the State for a quite indefinite period of time.

§ 6. The Fauna of Australia.¹

1. Zoological Isolation of Australia.—The most striking character of the Australian Fauna is its distinctness from that of the rest of the world. This character is evinced as much by the peculiarity of the animals found in Australia as by the absence of others which are widely spread over the remainder of the earth's surface. In consequence of this some zoogeographers have divided the earth into two regions, Australian and non-Australian.

The land-fauna of the globe is, as a rule, limited in its migrations by the sea. Other barriers to the spread of species may be now and again overstepped, but the sea imposes restrictions that remain absolute under the existing conditions. Geology, however, teaches us that the sea has once rolled where our highest mountains stand, and that the sites of former lands are now sunk beneath the waves. Here then we find a clue to the presence on all the larger land areas of terrestrial animals. The marine barrier that now separates them is but a passing feature; they were once united and they may yet be so again, and while the union existed there was a free interchange of inhabitants.

The older a group of animals is the farther could it spread, for it has been able to make use of many land connections that have now vanished. Thus, the *Felidæ* and *Suidæ* (cats and pigs) are old enough to have found their way over almost the whole habitable globe, excepting Australia and a few islands to the north. Alone of the great islands of the world, our island-continent has remained separated from the other great land masses since the first appearance of the *Felidæ* and *Suidæ*, and so none have reached it.

Facts of a similar nature, almost numberless, may be brought forward in confirmation of this conclusion. Animals and plants alike bear evidence to its truth, and thus we see how the deficiencies of the Australian fauna are accounted for. The barrier that prevented the incursion of the adaptable and enterprising cats and pigs was equally efficient in the case of a host of other forms, from elephants to earthworms.

2. Effect of Isolation.—Before this isolation of Australia, however, some animals had reached our shores, and among them were the marsupials. Once here, they were protected by isolation from competition with the more specialised forms that came into existence elsewhere. They varied among themselves, and gave rise to the diversified forms that now inhabit the country.

There are other groups besides the marsupials whose history runs on similar lines. Of some of them we know this history, but not of all, and the deciphering of the tale of the early origin of the fauna of Australia is one of the many interesting pieces of work that lie before the naturalist.

1. This article was contributed by T. S. Hall, Esquire, M.A., D.Sc., Lecturer in Biology, Melbourne University.

3. **The Non-marine Fauna.**—The chief interest in Australian fauna centres round the dwellers on land and in fresh water. It is they who shew the peculiarities just noticed, whereas the marine forms are more widely spread, since barriers to their migration are more easily burst through. The fauna of the Pacific Ocean differs in many points from that of the Atlantic, but is linked more or less closely with that of the Indian Ocean, so that it is usual to speak of an Indo-Pacific region. The widespread character of the marine fauna as opposed to that of the land will render it advisable, owing to limitations of space, to concentrate our attention on the latter, though we must, in consequence, pass by much that is of interest.

(i.) *Mammalia.* The great group of mammals has been divided into two sections. the *Prototheria* or egg-laying mammals, and the *Theria*, which includes all the rest. The *Theria* are again subdivided into numerous sections, one of which is that of the marsupials. For a long while the marsupials were separated from the rest of the *Theria* on account of certain peculiarities connected with gestation. The young are born in a very undeveloped condition, and usually there is, during development, no organic connection between the foetal and maternal tissues, or in other words, no placenta is formed. However, recent research has shewn that a placenta is present in the native cat (*Dasyurus*), and as it is universally present in all *Theria* other than marsupials the criterion fails. *Dasyurus* cannot be separated from the other marsupials, so all must belong to the one group, which is called *Theria*.

The egg-laying mammals are confined to Australia, Papua and Tasmania, and there is no absolutely conclusive evidence of their ever having lived elsewhere. As regards marsupials, they are found nowadays only in Australia and some adjacent islands, and in America as far north as the Southern United States. In former times, as we know from fossils, they ranged still further north and lived even in Europe.

(a) *The Higher Theria.* In the *Theria* above the marsupials we are poorly off. The Dingo (*Canis dingo*) reached Australia while the giant mammals were still living, and his bones occur as undoubted fossils, a fact proved some forty years ago, but still not accepted by many foreign naturalists. There are several kinds of true rats (*Mus*) and a widely spread water-rat *Hydromys chrysogaster*, as well as a few other kinds. Bats are common, for both they and rats have found their way all over the globe, excepting to a few remote islands, and this without the aid of man, and in fact before his appearance on the scene. The largest bats we have belong to the genus *Pteropus*, and are fruit-eaters, being a great scourge to orchards in the warmer parts. They are generally spoken of as flying foxes. Another large bat, a white one (*Megaderma gigas*), is found in caves far inland. Seals, whales, and the dugong being marine forms, must be passed over.

(b) *Marsupials.* The group of Marsupials has, in Australia, reached its highest stage of development, and, as the other *Theria* are almost absent, its members have become differentiated in almost every direction to occupy their places. Thus we have the grass-eating kangaroos, the flesh-eating Tasmanian wolf and Tasmanian devil, and the "tiger cat," the insect-eating native cats and "weasels," the ant-eating marsupial mole and banded ant-eater, the root-eating wombats, the omnivorous bandicoots and leaf-eating koalas. One great group of land *Theria* has no counterpart. There is no marsupial bat.

Marsupials have been divided into two main groups which, roughly speaking, though not exactly, correspond to carnivorous and vegetarian. This usual, but somewhat unsatisfactory, classification is founded on the teeth. An examination of the lower jaw of a wombat, kangaroo, "possum," or a few other forms, will shew that there are two strong teeth in front, the incisors. Usually only two are present. This gives the name to the group, *Diprotodontia*, that is, "two teeth in front." Most of its members are

vegetable feeders. The other group comprises forms with several lower incisors—the *Polyprotodontia*, “many front teeth.” These are almost entirely flesh-eaters. A more modern classification, and apparently a better one, is based on the structure of the foot. In the kangaroo, what appears to be a single toe on the inner side of the hind foot bears two claws. In reality there are two toes present which are bound together by skin. This feature is known as “syndactyly,” and gives its name to the group, *Syndactyla*. The other group comprises the remaining marsupials, and is known as *Diadactyla*.

- (c) *Prototheria* or *Monotremes*. The egg-laying mammals, in their strange method of reproduction, and in certain points in their structure, shew a decided approach to the reptiles, and they are widely separated in many ways from the higher mammals. They include only the platypus (*Ornithorhynchus anatinus*) and the spiny-ant-eaters. The platypus is found only in Eastern Australia and Tasmania, and does not range up very far into Queensland. Its curious duck-like bill is so extraordinary that the first skins sent to Europe were viewed with suspicion. The memory of the mermaid, made up of fish and monkey skin, was too recent to be forgotten. Although the adult has no trace of teeth, strong bony teeth are present in the young, and are shed only when the animal is about half-grown. Their place is supplied by horny pads, which are quite efficient for the work they have to do. The platypus makes its nest at the end of a long burrow in a river bank, the entrance being below water-level. The eggs have no hard shell, but are soft like those of the reptile.

The spiny-ant-eaters are represented on the mainland and in Tasmania by the well-known *Tachyglossus aculeata* or *Echidna aculeata*, and in Papua by an allied form with a somewhat longer beak. The beak is narrow and rounded, and the long tongue, covered with a viscid secretion, is a very effective instrument for the capture of the ants on which the animal lives. The spines with which the body is covered are colour-banded like those of the true porcupines of the northern hemisphere, but are much shorter. When attacked the animal rolls itself into a ball. It is of great strength, burrows vertically downwards with extreme rapidity, and is an expert rock climber. The two eggs are hatched in a pouch which superficially resembles that of the marsupials. Though possessed of a pouch and “marsupial” bones, the egg-laying mammals are not, in the ordinary sense of the term, allied to the marsupials.

(ii.) *Diadactylous Marsupials*. Confining our attention to the Australian marsupials, we find the *Diadactyla*, which have the second and third toes separate, are represented only by a single family, the *Dasyuridae*, or native cat family. This family is apparently less changed from the original marsupial stock than is any other Australian one. The “native cats” (*Dasyurus*), the several kinds of which vary in size from that of a pug-dog to that of a ferret, are nearly all spotted with white, the body colour being brown or black. They are found all over Australia, from Tasmania to New Guinea. A number of small species exist, ranging in size from a half-grown kitten to that of a mouse, and belonging to two other genera (*Phascologale* and *Sminthopsis*). Popularly they are called weasels and mice. Some of them are terrestrial, others arboreal. There is a peculiar jerboa-like little species (*Antechinomys laniger*), which is found throughout the drier interior. The banded ant-eater (*Myrmecobius*), about the size of a rat, has a similar range, but seems commoner on the western side of the continent. The Tasmanian Devil (*Diabolus ursinus*, or *Sarcophilus ursinus*), now confined to Tasmania, is a clumsy, hideous, black and white blotched animal, about as large as a pug-dog. Its ferocity and strength justified its name.

The last member of this family is the Tasmanian wolf or tiger (*Thylacynus cynocephalus*). It is about the size of a retriever, but with a much longer body. The cross-

banded back gives it the name of tiger, which is the one generally used. It is a fierce, predatory animal, but is rapidly becoming exterminated. Like the Tasmanian Devil, it formerly lived on the mainland, and its fossil remains have been found as far north as the Darling Downs. All authorities are not agreed that the "tiger" should be included in the same family as the animals previously mentioned. Some place it in a family by itself; others group with it certain South American extinct animals known as Sparassodonts; others again hold that the latter forms are not marsupials at all, but a sort of connecting link between them and an ancient group, the *Creodonta*, which gave rise to the modern *Carnivora*, and to the *Marsupialia* as well.

(iii.) *Syndactylous Marsupials*. Taking now the remaining Australian marsupials, we find that they all have the second and third toes bound together; they are *Syndactyla*. Two families are polyprotodont, namely the *Peramelidæ* and the *Notoryctidæ*; the others are diprotodont.

The *Peramelidæ*, or bandicoot family, comprises several animals mostly about the size of a large rat. They are ground-dwellers, and range over all Australia. The marsupial-mole (*Notoryctes*) forms a family by itself. It is about the size of a newly-born kitten, golden yellow in colour, quite blind, its eyes being very rudimentary and covered by the muscles of the face. On hard ground it is a clumsy, sprawling walker, but in sandy soil a remarkably rapid burrower, its great, shovel-shaped claws enabling it to sink out of sight almost at once. It has a remarkably restricted area of distribution, being confined, as far as is known, to the basin of the Finke River in Central Australia, though there is the probability that it is to be found in Western Australia.

The remaining families are diprotodont. The *Phalangeridæ* include the Australian "possums" (*Trichosurus*), which have wrongly appropriated the name of the true or American opossums. The value of the skins of these animals for furriers' purposes leads to their slaughter by millions annually, and they have now disappeared where they were once common. Some allied forms (*Petaurus*, *Dromicia* and *Acrobates*) have a fold of skin stretching from the hind to the fore-limb, which enables them to glide from a greater to a lesser height. Collectively, they are spoken of as flying-squirrels, though they cannot fly and are not squirrels. The Koala, Kola, or native bear or monkey-bear (*Phascolarctos*), a lethargic leaf-eater, belongs to this family.

The *Phascolomyidæ*, or wombat family, contains only one living genus (*Phascolomys*), which is confined to the south-east and Tasmania. The wombats are inoffensive burrowers, but unfortunately are apt to damage crops where they are common, and their great strength and burrowing powers make fences but poor protection against their inroads.

The kangaroo family (*Macropodidæ*) is a large one, and its members vary in size from the giant, standing higher than a man, to the Musk kangaroo of the Herbert River, which is about ten inches long. The larger forms were dwellers on the open plains, where, with scarcely any foes, they grazed in countless thousands. Now, like the bison of America, they are passing away. The smaller kangaroos which belong to various genera, and are spoken of as wallabies, frequent the scrubs and rocky fastnesses of the mountains. The tree kangaroos of Queensland and New Guinea (*Dendrolagus*) browse on the leaves of lofty eucalypts, which they climb to their topmost branchlets.

Among extinct marsupials we have *Diprotodon*, as large as a rhinoceros, but as inoffensive apparently as a wombat, which it seems to have resembled much in appearance. *Thylacoleo*, a huge carnivorous monster, greater than a polar bear, was allied to the phalangers. There were also giant kangaroos, standing a dozen feet high, and wombats as large as an ox. On the other hand there was a dwarf wombat, about a quarter of the size of our recent species. The oldest known Australian marsupial, *Wynyardia*, is of Oligocene or perhaps Eocene age.

(iv.) *Aves*. Birds shew the same characteristics that the mammals do. Deficiencies, as well as the presence of peculiarly Australian forms, serve to distinguish Australia from the rest of the world. Among the groups which are eminently characteristic are the birds of paradise, which have their home in New Guinea and just pass into Northern Queensland. Of pigeons, we have more species than the rest of the world, and we have

the largest and the smallest kinds. The cassowary and the emu, forming a single family, are unknown beyond our regions. The cassowary (*Casuarinus*) is found in the forests of New Guinea and North Queensland, and the emu (*Dromæus*) ranges over all Australia, and, till it was exterminated, was common on Kangaroo Island, the islands of Bass Straits, and Tasmania. The brush-tongued lorises (*Trichoglossidae*) follow the flowering of the honey-yielding eucalypts throughout Australia. The honey-eaters (*Meliphagidae*) are among our most characteristic birds, though they pass far beyond Australia itself, and out across the Pacific, even to the Sandwich Islands. The larger ones are sought for food, while some of the smaller kinds, which have developed a taste for orchard fruits, are at times a scourge. The peculiar mound-nests of the *Megapodidae*, where the eggs are hatched after the manner of those of reptiles, are very characteristic of Australia, though not confined to it. Among other strange forms are the bower birds (*Ptilonorhynchidae*), whose habit of building playing-runs and decorating them with bones, shells, flowers, and so on, has often been described. The lyre birds (*Menuridae*) are remarkable for their peculiar tail feathers. They are inhabitants of dense fern-gullies in Eastern Australia. Their allies, the scrub birds (*Atrichidae*) are confined to the dense forests of the warm east coast, and of West Australia. The most striking absentees, whose abundance in Eastern Asia makes their absence here so remarkable, are the pheasants and vultures, while there are other abundant East Asiatic forms which are poorly represented amongst us.

(v.) *Reptilia*. Among reptiles we have the estuary crocodile (*Crocodylus porosus*), occurring commonly in the northern rivers, and ranging from India to the Solomons, and even it is said, as a stray, to Fiji. A small, harmless species (*Crocodylus johnstoni*) is found in the fresh waters of the north. Of freshwater tortoises there are three genera represented (*Chelodina*, *Emydura* and *Elseya*). None occur in Tasmania. These tortoises tuck their heads into their carapaces by an S-shaped fold in a horizontal plane, and belong to a group whose other representatives are found in South America.

Among lizards the most peculiar are the so-called legless lizards (*Pygopodidae*), which are confined to Australia. In them the front limbs are completely absent, and the hind limbs are represented only by a pair of short flaps, which fit into grooves at the side of the body, and so easily escape detection. The family contains seven genera, *Pygopus*, *Delma*, and *Lialis* being the most widely spread. The skinks (*Scincidae*) are the most numerous Australian family, and the *Varanidae*, commonly called "goannas," contain the largest of our lizards. Altogether we have about 390 species of lizards.

There are slightly more than 100 species of Australian snakes, about three-quarters of them being venomous. The number of non-poisonous forms decreases as the latitude rises, so that in Tasmania none are found, all the snakes being venomous. The harmless kinds include the blind snakes (*Typhlopidae*), which have very smooth, glassy skins, and are burrowing forms, living principally on termites, and therefore deserving of careful protection. The pythons and rock snakes are the largest of our Ophidia, but are also harmless. *Python spilotes*, the diamond and carpet snake of the mainland, is beautifully mottled. It grows to a length of about 10 feet, and is found throughout Australia. The long, slender, green tree-snake (*Dendrophis punctulatus*) inhabits almost the whole of Australia. It is quite harmless and feeds on tree frogs, young birds, and lizards. Though so many of our snakes are poisonous, only five common forms are really deadly. These are the brown snake (*Diemenia textilis*, or *Demansia textilis*), the black snake (*Pseudechys porphyriacus*), the copperhead—unfortunately called diamond snake in Tasmania—(*Denisonia superba*), the tiger snake (*Notechis scutatus*), known in Tasmania as the carpet snake, and lastly the death adder (*Acanthophis antarctica*). The first four all occur in Tasmania, and are the only snakes found there. The tiger snake is the boldest of all, and commonly shews fight. The death adder, a short, thick-bodied snake, is very lethargic, and often allows itself to be trodden on, when it strikes with lightning-like rapidity and deadly effect. None of our snakes have long enough teeth to make their bite, when made through clothing—even a single thickness of tweed—a cause of dread.

(vi.) *Amphibia*. In amphibia the most striking fact is the absence of tailed forms (*Urodela*). The characteristic old world genus *Rana* just invades North Queensland.

We are especially rich in tree frogs (*Hylidæ*), some of which as *Hyla aurea*, the common southern green frog, have lost their tree-climbing habits and the adhesive suckers on fingers and toes. The *Cystignathidæ*, which include the common sand frog of the south-east, occur also in South America. The water-holding frog, with its body enormously distended by water, can live for a year or more in thoroughly dried mud. It is found in Central Australia.

(vii.) *Pisces*. Owing to our poor river development, Australia is not rich in fresh-water fish. The great river basin of the Murray has several species peculiar to itself, as the Murray cod (*Oligorus macquariensis*), the golden perch (*Plectroplites ambiguus*), the silver perch (*Therapon ellipticus*) and the catfish (*Copidoglanis tandanus*). Of these, the Murray cod, owing to stream capture and the consequent alteration of drainage areas, has invaded the head waters of a few other rivers, as the Richmond and Clarence Rivers in New South Wales. Another curious instance of distribution is that of the blackfish of the south-east (*Gadopsis marmoratus*). This is almost confined to rivers entering Bass Straits, it being found in Northern Tasmania and Southern Victoria. These streams are the now separated upper-waters of a river which drained the plain now occupied by Bass Strait, and entered the ocean to the north of King Island. River capture has carried blackfish into the upper waters of the Goulburn and the Loddon. Eels, which are common in all streams from Cape York to Beachport, are absent from the entire Murray basin and Central and Western Australia, and apparently from Northern Australia as well. The southern trouts (*Galaxias*) are found in the streams of south-eastern Australia and Tasmania. Elsewhere they are found in South Africa, New Zealand, Patagonia and Chile. As some of the species, but not all, breed in the sea, the distribution of the genus is not as remarkable as once was thought. The gudgeons or bullheads (*Gobiidæ*) have representatives in fresh water all over Australia. None of these grow to any size.

The most remarkable of all our fresh-water fish, however, is the Lung fish (*Neoceratodus forsteri*) of the Mary and Burnet Rivers of Queensland. It is one of the three surviving species of an ancient and once world-wide group of fish. As its name implies, it has a lung, a modified swim-bladder, in addition to the usual gills. When the water is foul it comes to the surface to breathe. It cannot, as its African relatives do, live in the mud of dried-up ponds.

(viii.) *Invertebrate Fauna*. In land and fresh-water shellfish we are not well off. The eastern coastal strip from Cape York well into New South Wales is closely related to Papua in its shellfish, as it is also in so many other ways. There are many genera of the Helices. Of the rest of Australia the western State seems the poorest in molluscs, though many of its inhabitants range right across to the eastern highlands.

Among insects, the butterflies of the warm damp Queensland coastal districts vie in beauty with those of any part of the world. As we retire from this region their number and size decrease. The wandering butterfly, a black and white species, at times appears in countless myriads and travels far out to sea. We are especially rich in beetles of the families *Buprestidæ*, *Curculionidæ*, and *Cerambycidæ*, the members of the first family containing some very handsome insects. White ants are plentiful, especially in the tropics. One species is remarkable for its narrow, wall-like nests, which have their long axes along the north and south line.

Among crustacea a species of *Apus* is found in the interior, and the allied *Lepidurus* in the southern coastal districts. The peculiar isopod, *Phreatoicus*, and some allied genera, are found in our mountain streams or burrowing in the damp southern gullies. *Koonunga*, a recently described Anaspid, is an annectant form between the stalk-and sessile-eyed groups. Among the higher crustacea belonging to the *Parastacidæ* are the genera *Astacopsis* (*Chærops*), which is spread all over the continent, and *Engæus*, found only in Tasmania and Southern Victoria. The larger species of *Astacopsis* are used as food.

Among the flat-worms, *Linstowia* is peculiar, as it is confined to the monotremes and the marsupials of Australia and South America. The genus then must date back to Meso-

zoic times. *Tennocephala* infests the fresh-water crayfish, and is curious on account of its distribution, as it ranges up into America, and, strange to say, an allied form has recently been recorded from Southern Europe.

Australia is rich in earthworms, but the native species are being ousted by European forms. *Megascolides* is remarkable for the size of one of its species, the giant earth worm of Gippsland (*M. australis*), which reaches a length of over seven feet, and is as thick as a man's finger. The *Acanthodrilidæ* are distinctly a southern family, being especially plentiful in Australia, New Zealand and South America, and gradually becoming fewer in species as we pass north from these lands.

To attempt to deal with the fresh-water protozoa would make too great demands on space, and for the same reason the whole of the marine fauna must here be passed over in silence.

4. Origin of the Fauna.—The place of origin of our Fauna and its route of entry into Australia has been much discussed. As mentioned previously, it consists of several constituents. The marsupials, and probably some of the birds, the tortoises, the cystig-nathid frogs, some fresh-water fish (as the Galaxiidae and some others), many insects and earthworms, have their nearest living allies in South America. These represent ancient groups, and probably date back to the times when a great antarctic continent existed, of which the southern lands are but isolated fragments.

Much of the remaining Fauna has a northern origin, as the dingo, rats, bats, most of our flying birds, lizards, fresh-water crayfish, and probably the bulk of our insects. The evidence of a Malayan incursion, both of plants and animals, is specially strong along the damp seaward slopes of the eastern coast range of Australia.

The native Australian Fauna is in danger of disappearing before the inroads of introduced animals like the rabbit, the sparrow, and the starling. The beginning of an attempt to stay this onset may be seen in the reservation in some of the States of asylums for the native animals. The Victorian reserve includes nearly all Wilson's Promontory, the southernmost part of Australia; New South Wales has reserved a coastal strip near the Hawkesbury mouth; but enlightened action is badly needed.

§ 7. The Flora of Australia.

1. Character of the Australian Flora.—(i.) *Effect of Climate and Altitude.* As would naturally be expected in a territory whose limits extend from the tropical latitudes of North Queensland to the temperate regions of Victoria and Tasmania, and whose physical elevation varies from the sea coast (or levels even below that of the sea) to peaks whose tops are covered during a great part of the year with snow, the vegetation of Australia is largely varied. In the Queensland tropics there are many forms which belong to the Malayan and Oceanic regions. In the north of Western Australia, the tropical area, comprising some 364,000 square miles, is lacking in these forms. The assertion of land contiguity between Northern Queensland and New Guinea and the Malayan Archipelago generally, frequently made by geologists and zoologists, is thus supported by botanical evidence. The existence of many types common to both Australia and South Africa points to the possibility of a land connection between those continents by way of what is now the Indian Ocean. But, whatever evidences of land connection may be discovered, the fact remains that the great bulk of the vegetation of the temperate zone, where the flora is profuse and various, is distinctively Australian. Hence Australia has been isolated for a long time, but probably not so long as New Zealand. The fact that the Australian flora is of a primitive type is of particular interest from a scientific point of view. Forms belonging to early stages in plant evolution exist upon this continent, which otherwise can only be studied as fossils in rocks of long-passed geological ages. This is seen particularly in *Byblis*, *Casuarina*, *Cephalotus*, *Nuytsia*, *Polypompholyx*, and *Phylloglossum*.

(ii.) *General Features of the Australian Landscape.* The coastal regions furnish the most luxuriant vegetation. A marked physical feature of the continent is the chain of mountain ranges which runs along part of the southern and the eastern coast, roughly parallel to the contour, and at little distance from the shore. Upon these heights, and on the uplands and foot-hills which stretch from them to the coast, is to be found the heaviest forest. There is, however, in Western Australia, also a great forest belt, some 350 miles in length, and from 50 to 100 miles in breadth, not on the coastal side but extending eastward from the Darling Ranges. Inland, from what may be called the coastal forest region, the vegetation becomes thinner as the more arid regions replace those of heavier rainfall, and rapidly dwindles, till bushes, scrubs, and dwarf eucalypts, with belts of pine at intervals, give place to a scant and inferior vegetation. Except in its south-west portion, Western Australia has little forest. South Australia has still less. But the great Australian mountain system runs from the Grampians of Western Victoria easterly, following generally the trend of the coast-line, north-easterly into New South Wales, and northerly through that State and Queensland to Cape York, with a spur which turns westward and forms the watershed between the streams which flow north into the Gulf of Carpentaria and those which eventually reach the Murray. Here there are large trees and dense undergrowth, very often giving place to rich pasture lands on the extensive plateaux and great plains that stretch away into the interior. Under the copious rainfall of the coastal regions the wild flowers that belong to Australia, variegated, bright, often scentless, grow luxuriously.

(iii.) *Special Plant Adaptations.* The general dryness of the climate of Australia has led to marked adaptations in form and structure especially in the interior parts of the continent. Spiny plants, with foliage of hard, woody ribs and reduced surface area, are characteristic. Exhalation into the air of the moisture absorbed from the soil by the roots, is thus reduced through the absence of soft cellular parts. The moisture absorbed by the root-system, scant because of the desert soil, is eagerly taken up by the arid atmosphere. In these, the relative amount of transpiring foliage is small, and appears to correspond to the soil conditions. Short, scale-like leaves, for example, mark considerable reduction in the foliage area. In the great majority of acacias, the true leaves are suppressed, the leaf stalks, however, remaining in a flat leaf-like form (*phyllodia*); or the leaf may be entirely suppressed, the leaf-functions being carried on by the stems of the plants. In some desert plants, as *Verbenaceæ* and *Solanaceæ*, a dense coat of hairs covers the leaves or whole plant; in others, as in some acacias, the surface of leaves and twigs is substantially a layer of resin, both modifications greatly reducing the transpiration, and serving also, as a protection against the extremes of heat and cold to which they are subjected. Generally the vegetation on the west coast is more drought-resisting (*xerophilous*) than that on the east coast.

(iv.) *Forestry, Agriculture, and Horticulture.* Both hardwoods and softwoods abound in the forests, their commercial uses being set out in the chapter on Forestry (see Section X.) Among the exotics that have been acclimatised are many that yield valuable timber. Cereals are grown in large quantities, but none are indigenous. Native plants fit for human consumption are insignificant. Generally the indigenous plants that can be utilised for food need some preparation before being used. The part suitable for food is the yam-like root of some, the stems, foliage, or seeds of others. Useful fruits are found, but most of them require to be cooked, being very acid in their native state. In tropical Queensland there are pleasant fruits of the lime family. Edible species of fungi are also common, but none are marketed or much used, except the common mushroom. The aborigines eat the fruits of the doobah (*Marsdenia Leichhardtiana*), the seeds of acacias, the grains of some indigenous grasses and of the nardoo (*Marsilia quadrifolia*), as well as other vegetable products having a more or less meagre store of nutriment. Many of the native grasses and other herbage have high nutritive properties, affording rich fodder, but there is not a native fodder clover; on the contrary, many native Leguminosæ are poisonous. The cultivation of native wildflowers, and the sporting of selected garden stocks, has led to the introduction of many new varieties, and horticulture is a growing industry.

2. Botanic Distribution.—(i.) *Tropical and Extra-tropical Regions.* The indigenous vegetation of Australia may be roughly classed as tropical and extra-tropical. The line of geographical distribution between the two classes is not distinctly marked, but it may be said that the former class covers the north-eastern uplands, where the Malayan and Oceanic forms have, by their incursion, enriched the east coast from Torres Straits as far south as Illawarra, and also the tropical regions of Western Australia, where the different climatic conditions and the absence of high mountains and the permanent streams and still waters usually associated with them do not cause the vegetation of these tropical latitudes to be specially distinguished. Extra-tropical plants, mostly hardwoods, characterise the Australian forests of temperate regions.

(a) *The North-east Tropical Vegetation.* While something under a tenth of Queensland bears timber of general commercial value, at least a third of that State may be said to be covered with trees which have a local use for building and other purposes. The vegetation is rich, the number and variety of plants being very large. There are a large number of fibrous plants of the orders *Malvaceæ*, *Sterculiaceæ*, *Leguminosæ*, *Urticaceæ*, *Scitamineæ*, *Amaryllidææ*, and *Aroideæ*. Of indigenous fruits the principal are the lime and Davidson's plum, with others of the order *Euphorbiaceæ*, *Ampelidææ*, *Rutaceæ*, and *Urticaceæ*. There are numerous fungi—many of them edible. Among trees, acacias, araucarias, xanthorrhœas, eucalypts, canariums and callitris are the most abundant. Besides these there are medicinal, oil, perfumery, rubber, and spice plants, as well as some which give tanning and dyeing material. Trees of many varieties, of unique beauty in the landscape, and yielding handsome timber for carpentry, cover the forests. Overlapping of the tropical and extra-tropical vegetation is inevitable, and the merging of the former into the latter becomes more and more marked after the New South Wales border is crossed. The vegetation of the north-east may be summarised by saying that between the Dividing Range and the Pacific there are some of the finest belts of forest in the continent. Among eucalypts are several varieties of ironbark (*Eucalyptus paniculata*, *E. crebra*, *E. siderophloia*, *E. sideroxylon*), tallow-wood (*E. microcorys*), blackbutt (*E. pilularis*), grey gum (*E. propinqua*), spotted gum (*E. maculata*), turpentine (*Syncarpia laurifolia*), forest red gum (*E. tereticornis*), and red mahogany (*E. resinifera*); among conifers, the Moreton Bay (*Araucaria Cunninghamhami*), brown (*Podocarpus elata*), and Bunya-Bunya (*Araucaria Bidwillii*) pines; while among the brush timbers of fine grain are red cedar (*Cedrela australis*), rosewood (*Dysoxylon Fraserianum*), red bean (*Dysoxylon Muelleri*), black bean (*Castanospermum australe*), white beech (*Gmelina Leichhardtii*), silky oak (*Grevillea robusta* and *Orites excelsa*), and tulipwood (*Harpulia pendula*). In Queensland, a large portion of the country west of the Divide is an extensive plateau running into great plains, but with little timber. Towards the centre of the continent, where the land gradually falls to a vast shallow basin, with low hilly ridges at intervals on its rim, and wide expanses of plain country with short water-courses losing themselves in the desert, the tree growth is very scanty, consisting chiefly of stunted eucalypts, such as the gimlet-gum (*E. salubris*) and black box (*E. microtheca*), the desert sheoak, acacias and mallee. Westward of the ranges in New South Wales, where the tableland sinks down to undulating country and vast plains, through which the tributaries of the Murray make their way, the vegetation changes to scrub and open forest, consisting of eucalypts such as red gum (*E. rostrata*) along the water-courses, with several varieties of box, cypress and other pines, and wattles. Farther inland again the timber becomes more sparse, being chiefly cypress pine, stunted eucalypts, and casuarianas, with extensive areas of mallee scrub.

(b) *The North-west Tropical Vegetation.* In the northern district of Western Australia, there are extensive tracts of pasture lands on the slopes drained

by the rivers flowing into the Indian Ocean. Inland from these are stunted bush and scrub lands, which in some cases impinge even upon the sea border. The Kimberley district has forest country about the Fitzroy River, and the King Leopold Ranges are tree-clad. Farther eastward, and continuing across the border into the Northern Territory, grasses and stunted growths form the main vegetation. The flatness of the country accounts for the absence of mountain flora, the vertical elevation rarely reaching 1500 feet. The chief geological features are sandstone of the carboniferous era forming the tableland, and basaltic plains. As a consequence, the flora is very little varied, the largest order of plants being *Leguminosæ*, represented by acacias and cassias. The smaller plants include *Indigofera*, *Crotalaria*, *Daviesia*, and *Bossia*. Next to *Leguminosæ*, *Gramineæ*, of which there are several new types, are the most numerous. With the exception of the grasses, all the monocotyledons are limited. The *Myrtaceæ* include eucalypts (principally *E. rostrata*) and melaleucas. The *Loranthaceæ*, *Rubiaceæ*, *Cucurbitaceæ* and *Proteaceæ* are represented by several plants. *Compositæ*, *Chenopodiaceæ*, *Santalaceæ* and *Orchideæ* are rare, but members of the family *Lythraceæ* are more numerous than might have been expected. The Gymnosperms are sparingly represented, *Euphorbiaceæ* are surprisingly scarce. Perhaps the most marked characteristic of the whole tract is the almost entire absence of lichens and mosses, though ferns are plentiful in the vicinity of the Victoria River.

- (c) *The Australian Extra-tropical Vegetation.* Australia is believed to have been free from geological upheavals and cataclysms for a longer period than most other lands. The persistence of type which has resulted has enabled its flora to become very well adapted to prevailing climatic conditions. The chief feature of the Australian forest landscape, as presented by the eastern, south-eastern, and south-western portions of the continent, is the presence of giant hardwoods, mostly eucalypts—very often rapidly reproductive, and attaining to a great age. The existing types are of high antiquity, and are possessed of special means of resistance to the extremes of temperature, to excessive sunshine, and to alternations of drought and flood to which they are subject. Along the shores of the Great Australian Bight, and in the north and north-west, there are no extensive forests. In the desert interior the vegetation is generally dwarfed and stunted, the forests of the inland slopes of the eastern mountains gradually thinning from the thickly-clad hilltops to second-class eucalypts, whilst these latter in turn give place to extensive areas of mallee scrub, the vegetation becoming more scarce, until in the arid interior, patches are found with no covering of herbage of any kind. The hill slopes, however, are often clad with rich grass, and along the water-courses eucalypts such as red gum persist, with pines and acacias. In the south-west, where the ranges approach closely to the ocean, the forest belt extends beyond the watershed some distance inland. The great belt of jarrah (*E. marginata*) which stretches eastward from the Darling Hills, has two distinct but narrow belts of tuart (*E. gomphocephala*) and red gum (*E. calophylla*) between it and the coast. Within this extensive tract of jarrah, in the extreme south-western part of the State, is the main karri (*E. diversicolor*) belt, stretching from Cape Hamelin to Torbay. In this region the jarrah, karri, tuart and red gum are the dominant trees. In the somewhat drier districts stretching eastward of the jarrah belt, there is a fairly wide strip of white gum (*E. redunca*) enclosing a narrow belt of York gum (*E. loxophleba*) which, as regards its northern and southern limits, is almost coterminous with the jarrah. Eastward of this again the arid region is entered, and the forest rapidly dwindles, changing first to a poorer growth of white gum until, in the sandy wastes of the goldfields region, the vegetation is scant and stunted, consisting chiefly of the eucalypts, locally known as salmon,

morrell (*E. macrocarpa*), and gimlet (*E. salubris*) gums, with some belts of pines at intervals. The Tasmanian flora represents that of South-east Australia, but there are also some valuable conifers, chiefly in the western and southern parts, such as the Huon (*Dacrydium Franklini*), King William, and celery-top (*Phyllocladus rhomboidalis*) pines. The forest area of the island is extensive, covering two-thirds of its surface. The principal eucalypts are blue-gum (*E. globulus*), stringy-bark (*E. obliqua*), peppermint (*E. amygdalina*—the mountain ash of Victoria), and silver-top ironbark (*E. Sieberiana*); the chief fine-grain woods are blackwood (*Acacia melanoxylon*), beech or myrtle (*Fagus Cunninghami*), sassafras (*Atherosperma moschata*), native cherry (*Exocarpus cupressiformis*), native box (*Bursaria spinosa*), and casuarina or sheoak. These are distributed throughout the State.

The extra-tropical vegetation of Australia is highly differentiated from that of the rest of the world. In the eastern States, however, there is some admixture in the flora of species derived in the course of past ages from almost all other regions of the globe, but South and Western Australia are, as regards their flora, typically and purely Australian. The natural orders which are endemic, or nearly so, to Australia are either entirely confined to the continent or are represented elsewhere only by one or a few outlying species, mostly in adjoining regions. They are the *Tremandrea*, *Stackhousiaceæ*, *Stylidæ*, *Goodeniaceæ*, *Casuarineæ*, *Phyllidreæ*.

Like Australia, New Zealand has its own characteristic flora: 72 per cent. of its species are endemic, 21 per cent. are found also in Australia, and 7 per cent. are sub-antarctic. The forests are often mixed in their growths, with pines of various kinds generally predominating, the finest tree being the kauri pine (*Agathis australis*). Tawa (*Beilschmiedia lawa*) and totara (*Podocarpus totara*) also flourish. In the Middle Island several species of beech (*Nothofagus*) are found, particularly on the higher levels. In the forest areas there is dense undergrowth. In the meadows the tussock form is characteristic of various grasses and sedges. The shrub-form and the iris-like form also help to make up the facies. The scrub is made up to a large extent of manuka, which seems to be the same as our *Leptospermum scoparium*. *Bursaria spinosa* is common here as in the rest of Australia, this shrub being universal throughout Australia and New Zealand. *Pittosporum* is native to New Zealand.

- (d) *Alpine Vegetation.* The Australian continent is not remarkably irregular in physical elevation, the highest elevation being only 7000 feet above sea level, while a great deal of the land surface stretches for many miles in extensive plains, offering no kind of relief to the eye. In these circumstances little characteristic alpine flora is to be expected. There is none in Western Australia, the vegetation on heights and plains having the same physiognomy. In Eastern and South-eastern Australia and New Zealand only the highest points of the mountains bear alpine flora. The transition from the forest to the alpine region is gradual, considerable overlapping of alpine and lowland flora being noticeable, and differentiation of alpine types is less marked than usual. Numerous bushes grow on these transition areas. Endemic conifers are wanting in the Australian Alps; but on many mountains which attain a height of 5000 feet the flowering plants display rich and varied colours.

(ii) *Exotics.* While Australia has made large and flourishing additions to the forest flora of many countries, a large number of exotics have been successfully introduced here, furnishing a welcome variation to the sombre landscape presented by the prevailing eucalypts. With practically no cereals of value as food for man, and with few fodder plants, and these generally of an inferior kind, the fruits of the earth which Australia offered were indeed small. Now, however, her fields are sown with introduced grains and

grasses, and yield abundantly. But alien weeds have come in too. Native pests are few in number, but some of the most aggressive weeds have intruded themselves, to the detriment of the native flora.

(iii.) *Persistence of Types.* Though there is every probability that individual varieties have been eliminated in the various terrestrial convulsions that have altered the land surface of this part of the globe, there is good reason for believing that Nature, "so careful of the type," has not suffered the eradication of representative forms. Nor has the hand of man, careless, in the strenuous days of early colonisation, in conserving the original vegetation, stamped out any of the indigenous species. That many places have been set aside for the preservation, as virgin country, of areas where the plant covering is yet undisturbed, attests a desire to render to botanic science that assistance which only forms belonging to an early stage of vegetation, such as the Australian, can afford.

3. **Natural Orders of Plants Represented in Australia.**—The following is a list of the natural orders of plants represented in Australia:—

CLASS I.—DICOTYLEDONS.

SUB-CLASS I.—POLYPETALÆ.

| | | | |
|------------------|-------------------|------------------|-------------------|
| 1. Ranunculaceæ | 18. Elatineæ | 34. Celastrineæ | 47. Combretaceæ |
| 2. Dilleniaceæ | 19. Hypericineæ | 35. Stackhousiæ | 48. Myrtaceæ |
| 3. Magnoliaceæ | 20. Guttiferæ | 36. Rhamnæ | 49. Melastomaceæ |
| 4. Anonaceæ | 21. Malvaceæ | 37. Ampelideæ | 50. Lythrarieæ |
| 5. Menispermaceæ | 22. Sterculiaceæ | 38. Sapindaceæ | 51. Onagrarieæ |
| 6. Nymphaeaceæ | 23. Tiliaceæ | 39. Anacardiaceæ | 52. Samydaceæ |
| 7. Papaveraceæ | 24. Lineæ | 40. Leguminosæ | 53. Passifloreæ |
| 8. Crucifereæ | 25. Malpighiaceæ | SUB-ORDERS: | |
| 9. Capparideæ | 26. Zygophyllaceæ | (i) Papilionaceæ | |
| 10. Violarieæ | 27. Geraniaceæ | (ii) Cæsalpinieæ | |
| 11. Bixineæ | 28. Rutaceæ | (iii) Mimosæ | |
| 12. Pittosporæ | 29. Simarubæ | 41. Rosaceæ | 54. Cucurbitaceæ |
| 13. Tremandreeæ | 30. Burseraceæ | 42. Saxifrageæ | 55. Ficoideæ |
| 14. Polygaleæ | 31. Meliaceæ | 43. Crassulaceæ | 56. Umbellifereæ |
| 15. Frankeniaceæ | 32. Olacineæ | 44. Droseraceæ | 57. Araliaceæ |
| 16. Caryophylleæ | 33. Ilicineæ | 45. Haloragææ | 58. Cornaceæ |
| 17. Portulacææ | | 46. Rhizophoreæ | 59. Loranthaceæ |
| | | | 60. Caprifoliaceæ |
| | | | 61. Rubiaceæ |
| | | | 62. Compositæ |

SUB-CLASS II.—MONOPETALÆ.

| | | | |
|------------------|--------------------|-------------------|----------------------|
| 63. Stylideæ | 77. Loganiaceæ | 91. Selagineæ | 105. Thymeleæ |
| 64. Goodenovieæ | 78. Gentianeæ | 92. Verbenaceæ | 106. Elæagnaceæ |
| 65. Campanulaceæ | 79. Hydrophyllaceæ | 93. Labiateæ | 107. Nepenthaceæ |
| 66. Ericaceæ | 80. Boragineæ | 94. Plantagineæ | 108. Euphorbiaceæ |
| 67. Epacrideæ | 81. Convolvulaceæ | 95. Phytolaccaceæ | 109. Urticeæ |
| 68. Plumbagineæ | 82. Solaneæ | 96. Chenopodiaceæ | 110. Casuarineæ |
| 69. Primulaceæ | 83. Scrophularineæ | 97. Amarantaceæ | 111. Piperaceæ |
| 70. Myrsineæ | 84. Lentibularieæ | 98. Paronychiaceæ | 112. Aristolochiaceæ |
| 71. Sapotaceæ | 85. Orobanchaceæ | 99. Polygonaceæ | 113. Cupulifereæ |
| 72. Ebenaceæ | 86. Gesneraceæ | 100. Nyctagineæ | 114. Santalaceæ |
| 73. Styracaceæ | 87. Bignoniaceæ | 101. Myristiceæ | 115. Balanophoreæ |
| 74. Jasmineæ | 88. Acanthaceæ | 102. Monimiaceæ | 116. Conifereæ |
| 75. Apocynææ | 89. Pedalineæ | 103. Laurineæ | 117. Cycadeæ |
| 76. Asclepiadeæ | 90. Myoporineæ | 104. Proteaceæ | |

CLASS II.—MONOCOTYLEDONS.

| | | | |
|--------------------|--------------------|-----------------|-------------------|
| 118. Hydrocharideæ | 125. Dioscorideæ | 132. Juncaceæ | 139. Alismaceæ |
| 119. Scitamineæ | 126. Roxburghiaceæ | 133. Palmæ | 140. Eriocaulæ |
| 120. Orchideæ | 127. Liliaceæ | 134. Pandanaceæ | 141. Centrolepidæ |
| 121. Burmanniaceæ | 128. Pontederaceæ | 135. Aroideæ | 142. Restiaceæ |
| 122. Irideæ | 129. Phytidraceæ | 136. Typhaceæ | 143. Cyperaceæ |
| 123. Amaryllideæ | 130. Xyrideæ | 137. Lemnaceæ | 144. Gramineæ |
| 124. Taccaceæ | 131. Commellinaceæ | 138. Naiadeæ | |

CLASS III.—ACOTYLEDONS (Non-flowering Vegetation).

| | | |
|-------------------|------------------|--------------|
| 145. Lycopodiaceæ | 146. Marsileaceæ | 147. Filices |
|-------------------|------------------|--------------|

§ 8. Climate and Meteorology of Australia.¹

1. **History of Meteorology in Australia.**—Systematic rainfall observations appear to have been commenced first in Adelaide by the late Sir G. Kingston in 1839, and continued till 1878, the last eighteen years being concurrent with more complete observations taken at the Astronomical Observatory in that city. At Sydney, Port Macquarie, Melbourne, and Brisbane observations appear to have been taken from 1840. Those at Sydney from April, 1840, to the end of 1855 were taken at South Head, five miles east of Sydney; at Petersham in 1856, at Double Bay in 1857-8, and at the Sydney Observatory, Flagstaff Hill, from 1859 onwards.

At Brisbane a record of rainfall was kept from 1840 to 1846 by Captain T. C. Wickham. About 1860 Dr. Barton, Resident Surgeon of the Brisbane Hospital, continued the observations on the site occupied by the Supreme Court buildings, but upon his death the duties were transferred to the staff of the telegraph office, and the instruments removed to William-street. On the appointment of the first Government Meteorologist (Mr. E. MacDonnell) the instruments were again removed to Wickham Terrace, and some years later to the present site. Mr. C. L. Wragge succeeded Mr. MacDonnell in 1887.

At Hobart observations were started by Sir John Franklin, when Governor of Tasmania, in the year 1840. The Observatory was founded in the following year by Captain Kay, R.N., who took hourly observations for eight years. Mr. Francis Abbot, who had a private observatory in Murray-street, carried on tri-daily observations of pressure, temperature, humidity, cloud and rain from 1841 to 1880. Observations of rainfall were also started by the Marine Board at the lighthouses under their care, and by others privately. Mr. Abbot was obliged to relinquish his work in 1880. Captain Short was appointed Government Meteorologist in 1882.

Under the late Mr. R. L. J. Ellery, an Observatory was founded near Williamstown, Melbourne, in the middle of 1853, and a record also kept at Melbourne by Mr. Brough Smyth from 1856 till 1858, viz., to the date of the creation of the new Observatory on Flagstaff Hill under Professor Neumayer.

The observations at the present Melbourne Observatory were commenced in June, 1863, under Mr. R. L. J. Ellery himself, the Observatories at Williamstown and Flagstaff Hill being abandoned. At Port Phillip records were taken for the years 1840 till 1851, and are given in the New South Wales *Government Gazette*. Some doubt attaches to these records and to the site upon which they were taken; for this reason they have not been used in the discussion of rainfall for Melbourne itself, the results of which have been tabulated and given herein.

At Perth no official records of rainfall were taken till 1875, when the observations were commenced at the Botanical Gardens by the Surveyor-General (Sir Malcolm Fraser), and where they have been continued up to the present time. During the first half of last century meteorological observations were confined largely to rainfall only. Systematic observations of pressure, temperature, rainfall, wind, and other meteorological elements began with the foundation of the astronomical Observatories in the capitals of the different States, viz.:—At Adelaide in 1856; Hobart, 1841; Melbourne, 1854; and Sydney, 1858. The directors of these Observatories established meteorological stations, under competent observers, in different parts of the country from time to time, as opportunity allowed.

2. **Magnetic Observations.**—On the 1st January, 1841, an Imperial Observatory, forming part of an international scheme, was founded at "Hobart Town" (Tasmania), and magnetic observations were taken there systematically up to the end of 1854.

Early in 1858 Prof. Neumayer opened an Observatory on Flagstaff Hill, Melbourne, where hourly observations in terrestrial magnetism were taken regularly up to the 28th

1. Prepared from data supplied by the Commonwealth Meteorologist, H. A. Hunt, Esquire, F.R.M.S.

February, 1863. That gentleman also made extended trips into the country, where he determined the magnetic elements at 230 stations from sea-level to 7200 feet above, and distributed in such a manner that the greatest distance between them was not more than 30 miles, and frequently only 18 or 20 miles. By the commencement of February, 1864, Neumayer had completed his magnetic survey of Victoria. Since June, 1863, magnetic observations have been systematically continued at the Melbourne Observatory.

Observations in the other States, more or less fragmentary, have been carried on from time to time under the auspices of the Surveyor-General's Department.

3. **Equipment.**—The determination of the climatological data has been made by records from the following instruments :—

- (i.) *Rainfall.* Rainfalls have been generally measured by the cylindrical gauge, 8 inches in diameter.
- (ii.) *Temperature.* Temperatures have been recorded by self-registering maximum and minimum thermometers, which are read and set daily.
- (iii.) *Atmospheric pressure.* Pressures have been measured by mercurial barometers of the Fortin or Kew pattern.
- (iv.) *Evaporation.* The following description of tanks has been used in the observations of evaporation, viz.:—

PERTH.—Slate tank :—3 ft. by 3 ft. by 3 ft., inside a cement tank (sunk into the ground 2 ft. 6 in., leaving 5 in. clear all round) which is kept full of water.

ADELAIDE.—Slate tank :—3 ft. by 3 ft. by 3 ft., inside a cement tank (sunk into the ground, leaving 7 in. clear all round) which is kept full of water.

BRISBANE.—Piché's tube evaporimeter, from 1902 to 1906, that is, for five years only.

SYDNEY.—Galvanised iron tank, 4 ft. diameter and 3 ft. deep, sunk in the ground 2 ft. 11 in.

MELBOURNE.—Slate tank :—3 ft. by 3 ft. by 10 in., sunk in ground and covered with wire cage 2 ft. above tank, $\frac{3}{4}$ -in. wire netting.

4. **Wind Velocities and Pressures.**—The velocities have been measured by means of anemometers, of Robinson's pattern, at Perth, Adelaide, Sydney, and Melbourne, the sizes being as follows :—

Perth—Diameter of cups, 9 in. ; distance from centre to centre of cups, 4 ft.

Adelaide—Diameter of cups, 8 $\frac{1}{4}$ in. ; distance from centre to centre of cups, 4 ft.

Sydney—Diameter of cups, 4 in. ; distance from centre to centre of cups, 4 ft.

Melbourne—Diameter of cups, 8 $\frac{3}{8}$ in. ; distance from centre to centre of cups, 4 ft. 0 $\frac{1}{2}$ in.

At Hobart, Hagemann's suction tube was used.

The wind-pressures corresponding to the observed velocities have been calculated by the formula $P=0.003 V^2$, in which P denotes pressure in lbs. per square foot, and V velocity in miles per hour.

5. **Creation of the Commonwealth Bureau of Meteorology.**—By Chapter 1, Part 5, Section 51, sub-section viii., of the Commonwealth Constitution it is enacted that "Parliament shall, subject to this constitution, have powers to make laws for the peace, order, and good government of the Commonwealth with respect to *inter alia* meteorological observations." The Meteorological Act of 1906 was assented to on the 28th August, 1906, and enacts that—The Commonwealth Meteorologist may, subject to the regulations and to the directions of the Minister, be charged with any of the following duties :—

- (a) The taking and recording of meteorological observations.
- (b) The forecasting of weather.
- (c) The issue of storm warnings.
- (d) The display of weather and flood signals.
- (e) The display of frost and cold wave signals.

- (f) The distribution of meteorological information.
- (g) Such other duties as are prescribed to give effect to the provisions of this Act.

The Governor-General may enter into an arrangement with the Governor of any State in respect of all or any of the following matters:—

- (a) The transfer to the Commonwealth, on such terms as are agreed upon, of any observatory and the instruments, books, registers, records, and documents used or kept in connection therewith.
- (b) The taking and recording of meteorological observations by State officers.
- (c) The interchange of meteorological information between the Commonwealth and State authorities.
- (d) Any matters incidental to any of the matters above specified or desirable or convenient to be arranged or provided for the purpose of efficiently and economically carrying out this Act.

The Governor-General may enter into any arrangement with the Governments of other countries or any of them for the interchange of meteorological information and any matter incidental thereto between such Governments and the Commonwealth.

The Governor-General may make regulations prescribing all matters necessary or desirable to be prescribed for carrying out or giving effect to this Act.

H. A. Hunt, Esquire, F.R.M.S., was appointed Commonwealth Meteorologist, and entered upon his duties on the 1st January, 1907.

6. Meteorological Conference.—Under the presidency of the Commonwealth Meteorologist, a conference of meteorologists was held in the Conference-room of the Bureau of Census and Statistics during the period from the 20th to the 23rd May, 1907, when the following questions were discussed, viz.:—

- (i.) The range of practical meteorological observation to be at once undertaken.
- (ii.) The expansion of meteorological work to be undertaken in the future.
- (iii.) The extent of purely scientific investigations, the undertaking of which is desirable in the interests of meteorology.
- (iv.) Meteorological records, reports, and publications.
- (v.) Maritime meteorology.
- (vi.) The relation of river observation to flood forecasting.
- (vii.) The co-operation of the Commonwealth and States Departments.

7. Organisation of Meteorological Bureau.—The Central Bureau premises are situated at the corner of Victoria and Drummond streets, Carlton, Melbourne. Observations are carried on at this site, and also within the Royal Society's grounds, which afford a better exposure for the instruments. Divisional offices are also maintained in the capitals of each of the other States. The central Bureau is divided into five sub-departments, each being under the immediate supervision of assistants, whose duties are distributed as follows:—

Weather predictions, storm warnings, summaries of current weather, and management of the Central Bureau.

Divisional Bureaux and observing stations.

Climatological work and records of the Commonwealth.

Daily observations, entry of same into ledgers, reduction tables for various elements, distribution and collection of information with respect to the maritime branch of the service.

Instrumental stock, standardising and satisfactory working of all instruments before distribution to the observing stations throughout the Commonwealth.

The five assistants have been drawn from the different States, where they held leading positions in the meteorological services prior to the advent of federal control. They now constitute a daily forecast board, presided over by the Commonwealth Meteorologist. The observations made at the chief meteorological stations are telegraphed to the Central

Bureau, where they are plotted on charts and discussed by the Board. The results of its deliberations are then wired to the divisional Bureaux, where they are amplified or modified in the light of the latest local indications, and then distributed to the settled districts of the respective States.

8. **Publications, etc.**—The following have been issued daily, viz.:—(i.) Weather charts. (ii.) Rainfall maps. (iii.) Bulletins, Victorian and Interstate, shewing pressure, temperature, wind, rain, cloud extent, and weather.

The Bulletins of Climatology are as follows:—(i.) Bulletin No. 1.—A general discussion of the climate and meteorology of Australia, illustrated by one map and diagrams.

(ii.) Bulletin No. 2.—A discussion of the rainfall over Australia during the past ten years compared with the normal, illustrated by one map.

The daily observations made at all stations throughout the Commonwealth are being reduced to tabular form monthly with a view to publication at the end of the present year.

9. **General Description of Australia.**—In the general description of Australia, § 4.1. (i.), it is pointed out that a considerable portion (0.530) of three States of the Australian Commonwealth is north of the tropic of Capricorn, that is to say, within the States of Queensland, the Northern Territory and Western Australia, no less than 1,149,320¹ square miles belong to the tropical zone, and 1,020,720 to the temperate zone. The whole area of the Commonwealth within the temperate zone, however, is 1,825,261² square miles, thus the tropical part is about 0.386, or about five-thirteenths of the whole, or the "temperate" region is half as large again as the "tropical" (more accurately 1.509). By reason of its insular geographical position, and the absence of striking physical features, Australia is, on the whole, less subject to extremes of weather than are regions of similar area in other parts of the globe; and latitude for latitude Australia is, on the whole, more temperate.

The altitudes of the surface of Australia range up to a little over 7300 feet, hence its climate embraces a great many features, from the characteristically tropical to what is essentially alpine, a fact indicated in some measure by the name Australian Alps given to the southern portion of the great Dividing Range,

While on the coast the rainfall is often abundant and the atmosphere moist, in some portions of the interior the rainfall is very limited, and the atmosphere dry. The distribution of forest, as might be expected, and its climatic influence, is consequently very variable. In the interior there are on the one hand fine belts of trees, on the other there are large areas which are treeless, and where the air is hot and parched in summer. Again, on the coast, even as far south as latitude 35°, the vegetation is tropical in its luxuriousness and also somewhat so in character. Climatologically, therefore, Australia may be said to present a great variety of features. The various climatological characteristics will be referred to in detail.

10. **Meteorological Divisions.**—The Commonwealth Meteorologist has divided Australia, for climatological and meteorological purposes, into five divisions. The boundaries between these may be thus defined:—(a) between divisions I. and II., the boundary between South and West Australia, viz., the 129th meridian of east longitude; (b) between divisions II. and III., starting at the Gulf of Carpentaria, along the Norman River to Normanton, thence a straight line to Wilcannia on the Darling River, New South Wales; (c) between divisions II. and IV., from Wilcannia along the Darling River to its junction with the Murray; (d) between divisions II. and V., from the junction of the Darling and Murray Rivers, along the latter to Encounter Bay; (e) between divisions III. and IV., starting at Wilcannia, along the Darling, Barwon, and Dumaresq Rivers to the Great Dividing Range, and along that range and along the

1. In the article "Australia" in the Encyclopædia Britannica, Vol. XXX., p. 796, this area is given as 1,145,000 square miles.

2. Given as 1,801,700 square miles in the work above quoted, where, however, the statistics are said "to refer only to the continental States of the Federation, not to Tasmania."

watershed between the Clarence and Richmond Rivers to Evans Head on the east coast of Australia; (f) between divisions IV. and V., from the junction of the Darling and Murray Rivers along the latter to its junction with the Murrumbidgee, along the Murrumbidgee to the Tumut River, and along the Tumut River to Tumut, thence a straight line to Cape Howe; (g) division V. includes Tasmania.

The populations included within these boundaries on 30th June, 1907, may be taken approximately as follows:—

| Division | I. | II. | III. | IV. | V. |
|------------|---------|---------|---------|-----------|-----------|
| Population | 260,000 | 481,000 | 537,000 | 1,369,000 | 1,511,000 |

In these divisions the order in which the capitals occur is as follows:—(i.) Perth, (ii.) Adelaide, (iii.) Brisbane, (iv.) Sydney, (v.) Melbourne, (vi.) Hobart, and for that reason the climatological and meteorological statistics will be set forth in the indicated order in this publication.

(i.) *Special Climatological Stations.* The latitudes, longitudes, and altitudes of special stations, the climatological features of which are graphically represented hereinafter, are as follows:—

SPECIAL CLIMATOLOGICAL STATIONS.

| Locality. | Height above Sea Level. | Latitude. | | Longitude. | | Locality. | Height above Sea Level. | Latitude. | | Longitude. | |
|---------------|-------------------------|-----------|------|------------|------|-------------------|-------------------------|-----------|------|------------|------|
| | | S. | E. | S. | E. | | | S. | E. | | |
| Perth ... | 197 | deg. | min. | deg. | min. | Port Darwin ... | 97 | deg. | min. | deg. | min. |
| Adelaide ... | 140 | 31 | 57 | 115 | 51 | Daly Waters ... | 700 | 12 | 28 | 130 | 51 |
| Brisbane ... | 137 | 27 | 28 | 153 | 2 | Alice Springs ... | 1926 | 23 | 38 | 133 | 37 |
| Sydney ... | 146 | 33 | 51 | 151 | 13 | Dubbo ... | 863 | 32 | 18 | 148 | 35 |
| Melbourne ... | 91 | 37 | 50 | 144 | 59 | Laverton ... | 1530 | 28 | 40 | 122 | 23 |
| Hobart ... | 160 | 42 | 52 | 147 | 22 | Coolgardie ... | 1402 | 30 | 57 | 121 | 10 |

11. Temperatures.—In respect of Australian temperatures generally it may be pointed out that the isotherm for 70° Fahrenheit extends in South America and South Africa as far south as latitude 33°, while in Australia it reaches only as far south as latitude 30°, thus shewing that, on the whole, Australia has a more temperate climate when compared latitude for latitude with places in the Southern Hemisphere.

The comparison is even more favourable when the Northern Hemisphere is included in the comparison, for in the United States the 70° isotherm extends in several of the western States as far north as latitude 41°. In Europe the same isotherm reaches almost to the southern shores of Spain, passing, however, afterwards along the northern shores of Africa till it reaches the Red Sea, when it bends northward along the eastern shore of the Mediterranean till it reaches Syria. In Asia nearly the whole of the land area south of latitude 40° N. has a higher isothermal value than 70°.

The extreme range of shade temperatures in summer and winter in a very large part of Australia amounts to probably only 81°. In Siberia, in Asia, the similar range is no less than 171°, and in North America 153°, or say nearly double of the Australian range.

Along the northern shores of the Australian continent the temperatures are very equable. At Port Darwin, for example, the difference in the means for the hottest and coldest months is only 8.7°, and the extreme readings for the year, that is, the highest maximum in the hottest month and the lowest reading in the coldest month, shew a difference of under 50°.

Coming southward the extreme range of temperature increases gradually on the coast, and in a more pronounced way inland.

The detailed temperature results for the several capitals of the States of Australia are shewn on the Climatological Tables hereinafter. It will suffice here to briefly refer to special features.

(i.) *Perth*. Meteorological observations were taken in the Perth Botanical Gardens as far back as 1876, but since the conditions surrounding the instruments and the situation of the station relative to Perth cannot be regarded as quite satisfactory, the more exact climate history of Perth did not properly commence until 1897, when the present Observatory was established. During the period 1897 to 1907, the mean annual shade temperature of Perth was 64° , about a degree higher than that for Sydney and Adelaide, over 5° higher than that for Melbourne, and 10° above that for Hobart, but, on the other hand, 4° below that for Brisbane. The average temperature for the month of January is 73.6° , and for July 55.2° .

The extreme maximum shade record of 107.9° was registered in December, 1904, and the lowest minimum shade temperature was 36.4° , viz., in July, 1906.

(ii.) *Adelaide*. In Adelaide the climate is drier and more sunny than in the other capitals, and, consequently, radiation is less hindered. The extremes of heat are consequently somewhat more marked, especially in the summer months. The mean shade temperature for January and February is 74.0° , and that of July 51.6° . Records of the temperature having reached 100° exist for each of the six summer months from October to March, and of having exceeded 110° exist for each of those months with the exception of March and October. The highest record of shade temperature in Adelaide is 116.3° , registered in January, 1858, and the lowest 32.2° , a range of 84.1° . The freezing point, although closely approached, has never actually been reached by the shade temperature thermometers, notwithstanding the fact that records have been kept for fifty-one years. Frosts have, however, occurred on the grass (four feet below the shade thermometers) at various times between the beginning of April and the end of November.

(iii.) *Brisbane*. In Brisbane the monthly mean shade temperature ranges from 77.3° in January to 58.0° in July, a difference of 19.3° . The extremes have varied from 108.9° in January to 36.1° in July, viz., through a range of 72.8° .

(iv.) *Sydney*. In Sydney the highest monthly mean is 71.5° , recorded in January, while the lowest, again in July, is 52.3° , giving a range of 19.2° .

The extremes of shade temperature recorded at Sydney over a period of nearly half a century are 108.5° in January, 1896, and 35.9° in July, 1890, *i.e.*, a range of 72.6° .

(v.) *Melbourne*. In Melbourne the January mean shade temperature averages 67.3° , and that of July 48.5° , the highest reading ever recorded being 111.2° in January, 1862, and the lowest 27.0° in July, 1869.

(vi.) *Hobart*. The mean temperature for the hottest month at Hobart is 62.0° in January and February, and that of the coldest 45.7° , the highest reading ever recorded being 105.2° in December, 1897, and the lowest 27.7° , nearly a degree higher than the lowest experienced in Melbourne.

(vii.) *Hottest and Coldest Parts*. A comparison of the temperatures recorded at coast and inland stations shews that, in Australia as in other continents, the range increases with increasing distance from the coast.

In the interior of Australia, and during exceptionally dry summers, the temperature occasionally reaches or exceeds 120° in the shade, and during the dry winters the major portion of the country to the south of the tropics is subject to ground frosts. An exact knowledge of temperature disposition cannot be determined until the interior becomes more settled, but from data procurable, it would appear that the hottest area of the continent is situated in the northern part of Western Australia about the Marble Bar and Nullagine goldfields, where the maximum shade temperature during the summer

sometimes exceeds 100° for days, and even weeks continuously. The coldest part of the Commonwealth is the extreme south-east of New South Wales and extreme east of Victoria, namely, the region of the Australian Alps. Here the temperature seldom, if ever, reaches 100° even in the hottest of seasons.

In *Tasmania* also, although occasionally hot winds may cross the Straits and cause the temperature to rise to 100° in the low-lying parts, yet the island as a whole enjoys a most moderate and equable range of temperature throughout the year.

(viii.) *Monthly Maximum and Minimum Temperatures.* The mean monthly maximum and minimum temperatures can be best shewn by means of graphs, which exhibit the nature of the fluctuation for each for the entire year. In the diagram (on page 135) for nine representative places in Australia, the upper heavy curves shew the mean maximum, the lower heavy curves the mean minimum temperatures based upon daily observations. On the same diagram the thin curves shew the relative humidities. (see next section).

12. **Relative Humidity.**—Next after temperature the degree of humidity may be regarded as of great importance as an element of climate; and the characteristic differences of relative humidity between the various capitals of Australia call for special remark. For nine representative places the variations of humidity are shewn on the preceding graph, which gives results based upon daily observations of the greatest and least humidity. Hitherto difficulties have been experienced in many parts of Australia in obtaining satisfactory observations for a continuous period of any length. For this reason it has been thought expedient to refer to the record of humidity at first order stations only, where the results are thoroughly reliable. Throughout the degree of humidity given will be what is known as *relative humidity*, that is, the percentage of aqueous vapour actually existing to the total possible if the atmosphere were saturated.

(i.) *Perth.* At Perth the mean annual humidity at 9 a.m. is 63; the greatest monthly mean is 83, and is in June, and the lowest 45, in January.

(ii.) *Adelaide.* At Adelaide the mean annual humidity is only 56; the mean monthly humidity has been as low as 33 in January and December, and as high as 84 in June.

(iii.) *Brisbane.* In Brisbane the mean annual humidity is 68; the lowest monthly mean recorded is 47, and is in September, and the highest 85 in the months of March and May.

(iv.) *Sydney.* In Sydney the mean annual humidity is 73; the greatest monthly average, which occurred in May, 1889, the wettest month on record during the last forty years, was 90, while the lowest monthly mean, 55, occurred in the month of October, 1867.

(v.) *Melbourne.* The mean annual humidity in Melbourne is 72; the greatest monthly average 88, in June and July, and the lowest 54, in February.

(vi.) *Hobart.* Hobart's mean annual humidity is 72, the highest 92, in June, and the lowest 51, in February.

From the above results, it is seen that, in respect of relative humidity, Sydney has the first place, while Hobart, Melbourne, Brisbane, Perth, and Adelaide follow in the order stated, Adelaide being the driest. The graphs on page 135 shew the annual variations in humidity. It will be observed that the *relative humidity* is ordinarily but not invariably great when the temperature is low.

13. **Evaporation.**—The rate and quantity of evaporation in any territory is influenced by the prevailing temperature, and by atmospheric humidity, pressure and movement. In

Australia the question is of perhaps more than ordinary importance ; since in its drier regions water has often to be conserved in "tanks"¹ and dams. The magnitude of the economic loss by evaporation will be appreciated from the following records, which have been obtained from either jacketed tanks sunk into the ground, or from jacketed vessels exposed on the surface.

The average total evaporation at Sydney is 37.42 inches ; at Melbourne, 38.33 inches ; at Adelaide, 54.92 inches ; and at Perth, 65.81 inches, these results being based respectively upon 46, 35, 38, and 9 years' observations. For Brisbane the result is 86.64 inches, based upon 5 years' observations only, and determined by means of Piché's tube evaporimeter.

In the interior of New South Wales the annual evaporation is as high as 84 inches ; at Coolgardie, Western Australia, it was 85 inches in 1905, and at Laverton in the same year, 140.8 inches, or nearly 12 feet.

(i.) *Monthly Evaporation Curves.* The curves shewing the mean monthly evaporation in various parts of the Commonwealth will disclose how characteristically different are the amounts for the several months in different localities. The evaporation for characteristic places is shewn on diagram shewing also rainfalls (see page 136).

(ii.) In the interior of Australia the possible evaporation is often greater than the actual rainfall. Since therefore, the loss by evaporation depends largely on the exposed area, tanks and dams so designed that the surface shall be a minimum are advantageous. Similarly, the more protected from the direct rays of the sun and from winds, by means of suitable tree planting, the less will be the loss by evaporation : these matters are of more than ordinary concern in the drier districts of Australia.

14. **Rainfall.**—As even a casual reference to climatological maps, indicating the distribution of rainfall and prevailing direction of wind, would clearly shew, the rainfall of any region is determined mainly by the direction and route of the prevailing winds, by the varying temperatures of the earth's surface over which they blow, and by the physiographical features generally.

Australia lies within the zone of the south-east and westerly trade winds. The southern limit of the south-east trade strikes the eastern shores at about 30° south latitude. Hence we find that, with very few exceptions, the heaviest rains of the Australian continent are precipitated along the Pacific slopes to the north of that latitude, the varying quantities being more or less regulated by the differences in elevation of the shores and of the chain of mountains, upon which the rain-laden winds blow, from the New South Wales northern border to Thursday Island. The converse effect is exemplified on the north-west coast of Western Australia from the summer south-east trade winds. Here the prevailing winds, blowing from the interior of the continent instead of from the ocean, result in the lightest coastal rain in Australia.

The westerly trade winds, which skirt the southern shores, are responsible for the very reliable, although generally light, rains enjoyed by the south-western portion of Western Australia, by the south-eastern agricultural areas of South Australia, by a great part of Victoria, and by the whole of Tasmania.

(i.) *Factors determining Distribution and Intensity of Rainfall.* The distribution and intensity of rainfall in the interior of the continent, and also to some extent in the areas already mentioned, are governed by the seasonal peculiarities of three distinct atmospheric control systems, the most important of which is, undoubtedly, the anti-

1. In Australia artificial storage ponds or reservoirs are called "tanks."

cyclonic stream. This stream, which girdles the earth and embraces approximately the region between 15° and 40° south latitude, breaks up into vast elliptically-shaped bodies of circulating atmosphere, measuring frequently 3000 miles in their major and 2000 miles in their minor axes. In passing over Australia from west to east, these great bodies of circulating air cause moist-laden winds to sweep across the continent from the surrounding oceans. The front-circulation brings in winds from the Southern Ocean, and the rear-circulation those from the equatorial seas.

The rain-invoking agent second in order of importance because of its reliability is the well-known "V-shaped depression." The sphere of operation of this latter disturbance is ordinarily the southern half of the continent, although occasionally it may extend its influence to tropical latitudes. The western half of this type of disturbance, with a southerly wind circulation, is the portion from which rain is most frequently to be expected, but occasionally good falls of rain, attended with electrical manifestations, are liberated from the warm eastern portion.

The third agent associated with the production of rain is the tropical depression more popularly known as the "monsoonal depression." This disturbance may be in active evidence for a succession of seasons, and then be conspicuously absent for a number of years, thus raising the question whether, after all, it can be regarded as in any way a distinctive feature of Australian meteorology.

When these disturbances are actively operative in the production of rain, the effect on the country generally, and the economic results for the succeeding season, are very pronounced. The interior of the continent becomes transformed. The plains, which ordinarily have so profound an effect on the heat winds of the summer, are deluged with rain, and respond immediately with an astonishingly luxurious growth of grass and herbage. The air is both tempered in heat, and loses its dryness for considerable periods after their visitations.

The distribution of rain by monsoonal disturbances is, however, very capricious in comparison with that precipitated by the southern "depressions." During some seasons the whole of the northern half of the continent will benefit to a fairly uniform degree, at another time some special region will be favoured. A remarkable example of this peculiarity occurred in 1902, for when monsoonal rains were copiously falling over the major portion of Western Australia, the eastern half of the continent was suffering from severe drought conditions.

During other seasons, tongue-shaped regions extending southwards from the northern shores of the continent will be particularly favoured in regard to rain. These regions may extend to the interior of Western Australia, and simultaneously others may occur in the Central Territory, in Western Queensland, and in the interior of New South Wales:

It is thus obvious that different parts of the continent are mainly dependent upon forms of atmospheric disturbances for what may be called their fundamental rains, and since there is a seasonal tendency for a particular class of storms to predominate, it rarely happens that any year passes without a good rain being universally enjoyed. Again, the condition of drought can hardly affect the whole of the continent at the same time. Nevertheless a more than ordinarily fortunate condition in one part of the continent ordinarily implies drought conditions in another, or *vice-versâ*. Thus in New South Wales, monsoonal rains, so beneficial to its north-western districts, rarely extend during the same season to coastal areas, or to Southern Riverina. For this reason it may happen occasionally that sheep may with advantage be sent 500 or 600 miles from the coast for feed and water. Should the southern or antarctic low-pressures be the predominating influence, the country to the south of the Murrumbidgee River is benefiting at the expense of the remainder of the State.

Good coastal season ordinarily depends upon an anticyclonic control; when such exists, the country west of the tablelands usually wants water.

A good season for Australia as a whole is dependent upon many circumstances. Not only must the main rain-giving storms be well represented, but other favourable conditions must also coexist. The general rate of translation of the atmosphere across the continent is a factor of the utmost importance. Another is the latitude the cyclones and anti-cyclones are moving in, and, further, the daily or periodic surgings of high and low pressures to and from the equator are also factors of considerable moment.

(ii.) *Time of Rainfall.* Monsoonal rains affect the northern parts of the continent in December or January, and may continue with diminishing energy for nearly six months of the year. As they penetrate into higher latitudes the period of action is delayed, but is not shortened, though the quantities of the fall materially lessen. Antarctic rains are experienced during the winter months of the year, the resultant quantities being reliable and consistently regular. The heaviest totals from this source are precipitated on the west coast of Tasmania. Thus at Queenstown the total for one year exceeded 140 inches, and even the average is 127.81 inches.

Anti-cyclonic rains occur at all times of the year, but more markedly from March to September. They benefit particularly the southern area of the continent, and are responsible for many of the heaviest rainfalls and floods on the coastal districts of New South Wales.

(iii.) *Wettest and Driest Regions.* The wettest place in Australia is Geraldton, on the north-east coast of Queensland, where the average rainfall is no less than 145 inches, the maximum yearly total being 211.24 inches and the minimum 69.87 inches. The difference of range between these extremes is 141.37 inches.

The driest known part of the continent is about the Lake Eyre district in South Australia (the only part of the continent below sea level), where the annual average is but 5 inches, and where it rarely exceeds 10 inches for the twelve months.

The inland districts of Western Australia have until recent years been regarded as the driest part of Australia, but authentic observations taken during the past decade at settled districts in the east of that State shew that the annual average is from 10 to 12 inches.

(iv.) *Quantities and Distribution of Rainfall generally.* The departure from the normal rainfall increases greatly and progressively from the southern to the northern shores of the continent, and similarly also at all parts of the continent, subject to capricious monsoonal rains, as the comparisons hereunder will shew. The general distribution is best seen from the map on page 138, shewing the areas subject to average annual rainfalls lying between certain limits. The areas so defined are shewn in the following table:—

DISTRIBUTION OF AVERAGE RAINFALL.

| Average Annual Rainfall. | N. S. W. | Victoria. | Queensland. | South Aust. | Northe'n Territ'y. | Western Aust. | Tasmania. | Commonwealth. |
|--------------------------|-----------|-----------|-------------|-------------|--------------------|---------------|-----------|---------------|
| | sqr. mls. | sqr. mls. | sqr. mls. | sqr. mls. | sqr. mls. | sqr. mls. | sqr. mls. | sqr. mls. |
| Under 10 inches | 81,144 | nil | 135,600 | 306,663 | 6,300 | 408,300 | nil | 938,007 |
| 10—20 " | 116,363 | 36,300 | 255,300 | 57,935 | 213,430 | 400,720 | nil | 1,080,048 |
| 20—30 " | 77,910 | 27,900 | 173,400 | 13,908 | 96,790 | 113,700 | 11,395 | 515,003 |
| 30—40 " | 20,414 | 18,770 | 58,700 | 1,198 | 120,600 | 39,100 | 5,396 | 264,178 |
| Over 40 " | 14,541 | 4,914 | 47,500 | 366 | 86,500 | 14,100 | 9,424 | 177,345 |
| Total area ... | 310,372 | 87,884 | 670,500 | 380,070 | 523,620 | 975,920 | 26,215 | 2,974,581 |

Referring first to the southern capitals, it may be noted that the average at Melbourne from authentic records is 25.57 inches; the maximum 44.25, and minimum 15.61; the range therefore is 28.64 inches. At Adelaide the average determined from sixty-eight years' totals is 20.88, the maximum 30.87, the minimum 12.43, and the range therefore 17.44 inches. At Hobart 23.53 inches is the average annual rainfall, 40.67 is the highest total for one year, 13.43 is the lowest; thus 27.24 inches is the extreme range. The average for Perth is 33.18 inches, 46.73 being the maximum and 20.48 inches the minimum; the range is therefore 26.25 inches. These figures appear to constitute an exception to the general rule, but it should be mentioned as a possible explanation that records have there been taken only since 1876, whereas the records at the other cities date from 1840 or thereabouts.

Continuing the comparison of rainfall figures, Sydney's average annual total is 48.54 inches, its maximum 82.81 in 1860, and minimum 21.48 in 1849, thus the range is 61.33 inches. At Brisbane the disparities are greater still. There the average is 48.44 inches—a trifle lower than that of Sydney—the annual maximum was 88.26 inches in 1893, the minimum 16.17 inches in 1902, and the range therefore 62.09 inches.

In order to shew how the rainfall is distributed throughout the year in various parts of the continent, the figures of representative towns have been selected. Port Darwin, typical of the Northern Territory, shews that in that region nearly the whole of the rainfall occurs in the summer months, while little or nothing falls in the middle of the year. The figures of Perth, as representing the south-western part of the continent, are the reverse, for while the summer months are dry, the winter ones are very wet. In Melbourne and Hobart the rain is fairly well distributed throughout the twelve months, with a maximum in October in the former, and in November in the latter. The records at Alice Springs and Daly Waters indicate that in the central parts of Australia the wettest months are in the summer and autumn. In Queensland, as in the Northern Territory, the heaviest rains fall in the summer months, but good averages are also maintained during the other seasons.

On the coast of New South Wales, the first six months of the year are the wettest, with slight excesses in April and July; the averages during the last six months are fair and moderately uniform. In general it may be said that one-fourth of the area of the continent, principally in the eastern and northern parts, enjoys an annual average rainfall of from 20 to 50 inches, the remaining three-fourths receiving generally from 10 to 15 inches.

(v.) *Curves of Rainfall and Evaporation.* The relative amounts of rainfall and evaporation at different times through the year are best seen by referring to the graphs for a number of characteristic places. It will be recognised at once how large is the evaporation when water is fully exposed to the direct rays of the sun, and to wind, etc.

(vi.) *Tables of Rainfall.* The table of rainfall for a long period of years for each of the various Australian capitals, affords information as to the variability of the fall in successive years and the list of the more remarkable falls furnishes information as to what may be expected on particular occasions.

RAINFALL AT THE AUSTRALIAN CAPITALS.

GRAPHS SHEWING ANNUAL FLUCTUATIONS OF MEAN MAXIMUM AND MINIMUM TEMPERATURE AND HUMIDITY IN SEVERAL PARTS OF THE COMMONWEALTH OF AUSTRALIA.

EXPLANATION OF THE GRAPHS OF TEMPERATURE AND HUMIDITY.—In the above graphs, in which the heavy lines denote 'temperature' and the thin lines 'humidity,' the fluctuations of mean temperature and mean humidity are shewn throughout the year. These curves are plotted from the data given in the Climatological Tables hereinafter. The temperatures are shewn in degrees Fahrenheit, the inner columns giving the corresponding values in centigrade degrees. Humidities have not been obtained for Port Darwin, Daly Waters, or Alice Springs.

For the thin lines the degree numbers represent relative humidities, or the actual percentages of actual saturation on the total for the respective temperature.

In both cases the upper line represents the mean of the maximum, and the lower line the mean of the minimum results; thus the curves also shew the progression of the range between maximum and minimum temperatures throughout the year.

INTERPRETATION OF THE GRAPHS.—The curves denote mean monthly values. Thus, taking, for example, the temperature graphs for Perth, the mean readings of the maximum and minimum temperatures for a number of years on 1st January would give respectively about 83° Fahr. and 62° Fahr. Thus the mean range of temperature on that date is the difference, viz., 21°. Similarly, observations about 1st June would give respectively about 66° Fahr. and 51° Fahr., or a range of 15°.

In a similar manner it will be seen that the mean of the greatest humidities, say on 31st March, is about 64 and the mean of the least humidities 55; in other words, at Perth, the degree of saturation of the atmosphere by aqueous vapour ranges on 31st March between 64 % and 55 %.

GRAPHS SHEWING ANNUAL FLUCTUATIONS OF MEAN RAINFALL AND MEAN EVAPORATION IN SEVERAL PARTS OF THE COMMONWEALTH OF AUSTRALIA.

(For explanation see next page.)

EXPLANATION OF THE GRAPHS OF RAINFALL AND EVAPORATION.—On the preceding graphs thick lines denote rainfall and thin lines evaporation, and shew the fluctuation of the mean rate of fall *per month* throughout the year. The results, plotted from the Climatological Tables hereinafter, are shewn in inches (see the outer columns), and the corresponding metric scale (centimetres) is shewn in the two inner columns. The evaporation is not given for Hobart, Port Darwin, nor Daly Waters.

INTERPRETATION OF THE GRAPHS.—The distance for any date from the zero line to the curve, represents the average number of inches, reckoned as per month, of rainfall at that date. Thus, taking the curves for Adelaide, on the 1st January the rain falls on the average at the rate of about four-fifths of an inch per month, or, say, at the rate of about $9\frac{1}{2}$ inches per year. In the middle of June it falls at the rate of nearly 3 inches per month, or, say, at the rate of about 36 inches per year. At Dubbo the evaporation is at the rate of nearly 17 inches per month about the middle of January, and only about $1\frac{1}{4}$ inches at the middle of June.

TABLE SHEWING MEAN ANNUAL RAINFALL AND EVAPORATION IN INCHES OF THE PLACES SHEWN ON PRECEDING PAGE, AND REPRESENTED BY THE GRAPHS.

| — | Rainfall. | Evapora- tion. | — | Rainfall. | Evapora- tion. |
|---------------|-----------|-------------------|---------------------|-----------|-------------------|
| Perth ... | 33.03 | 65.70 | Port Darwin ... | 61.55 | — |
| Adelaide ... | 20.89 | 54.97 | Daly Waters ... | 27.14 | — |
| Brisbane ... | 47.47 | 86.64 | Alice Springs... .. | 10.78 | 97.88 |
| Sydney ... | 48.80 | 37.42 | Dubbo ... | 22.23 | 81.03 |
| Melbourne ... | 26.35 | 38.33 | Laverton, W.A. ... | 10.76 | — |
| Hobart ... | 23.38 | — | Coolgardie ... | 8.88 | 83.58 |

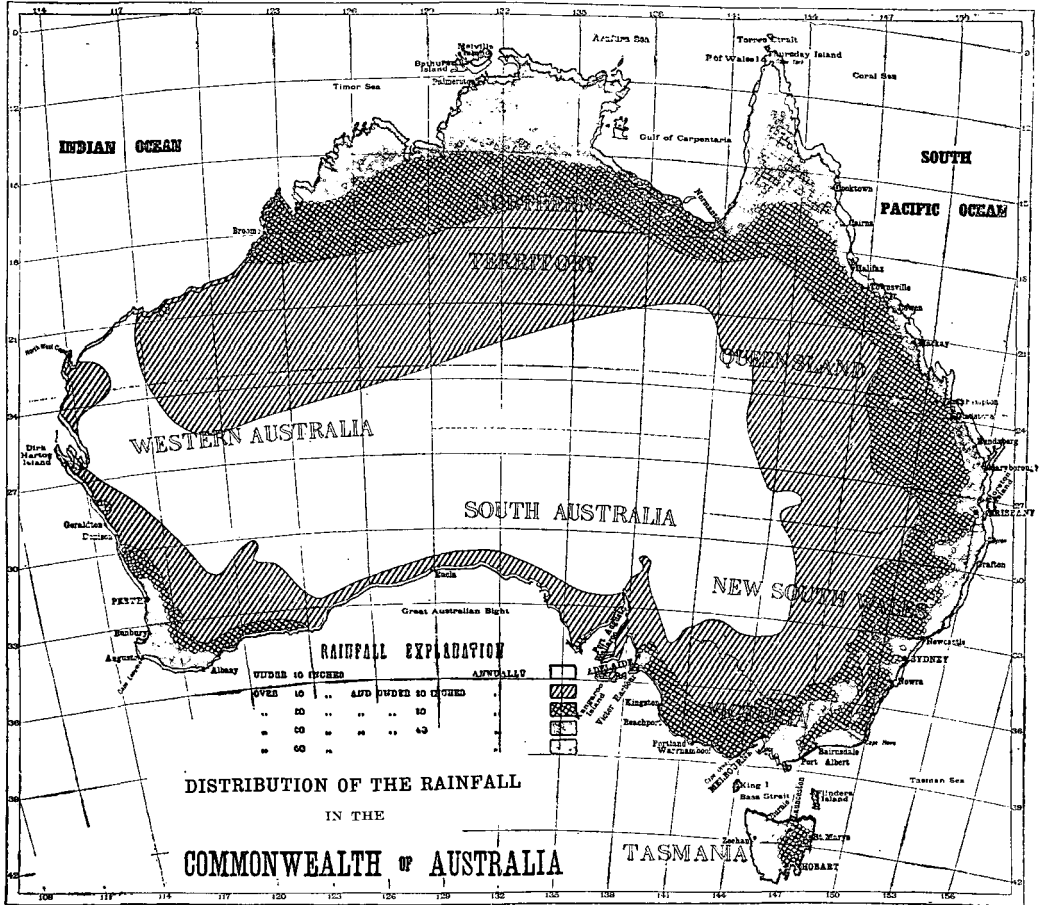

GRAPHS SHEWING ANNUAL FLUCTUATIONS OF MEAN BAROMETRIC PRESSURE FOR THE CAPITALS OF THE COMMONWEALTH OF AUSTRALIA.

EXPLANATION OF THE GRAPHS OF BAROMETRIC PRESSURE.—On the above graphs the lines representing the yearly fluctuation of barometric pressure at the capital cities are means for long periods, and are plotted from the Climatological Tables given hereinafter. The pressures are shewn in inches on about $2\frac{1}{2}$ times the natural scale, but the corresponding pressures in centimetres are also shewn in the two inner columns, each division representing one millimetre.

INTERPRETATION OF THE BAROMETRIC GRAPHS.—Taking the Brisbane graph for purposes of illustration, it will be seen that the mean pressure on 1st January is about 29.93 inches, and there are maxima in the middle of May and August of about 30.15 and 30.14 respectively. The double maxima appear clearly on each graph.

RAINFALL OF AUSTRALIA.

The above map has been prepared from a chart showing the isohyets (curves of equal mean annual rainfall) for every 10 inches for Australia, and compiled from the most recent information. It was impracticable on the small scale map to distinguish between the areas with 40 to 50, 50 to 60, 60 to 70, and over 70 inches of rain annually.

15. Remarkable Falls of Rain.—The following are the more remarkable falls of rain in the States of Western Australia, South Australia, Queensland, and New South Wales :—

HEAVY RAINFALLS, NEW SOUTH WALES, UP TO 1907, INCLUSIVE.

16. **Snowfall.**—Light snow has been known to fall even as far north, occasionally, as latitude 31° S., and from the western to the eastern shores of the continent. During exceptional seasons it has fallen simultaneously over two-thirds of the State of New South Wales, and has extended at times along the whole of the Great Dividing Range, from its southern extremity in Victoria as far north as Toowoomba in Queensland. During the winter snow covers the ground to a great extent on the Australian Alps for several months, where also the temperature falls below zero Fahrenheit during the night, and in the ravines around Kosciusko and similar localities the snow never entirely disappears.

The antarctic "V"-shaped disturbances are always associated with our most pronounced and extensive snowfalls. The depressions on such occasions are very steep in the vertical area, and the apexes are unusually sharp-pointed and protrude into very low latitudes, sometimes even to the tropics.

17. **Hail.**—Hail falls throughout Australia most frequently along the southern shores of the continent, and in the summer months. The size of the hailstones generally increases with distance from the coast, a fact which lends strong support to the theory that hail is brought about by ascending currents. Rarely does a summer pass without some station experiencing a fall of stones exceeding in size an ordinary hen-egg, and many riddled sheets of light-gauged galvanised iron bear evidence as to the weight and penetrating power of the stones.

Hail storms occur most frequently in Australia when the barometric readings indicate a flat and unstable condition of pressure. They are invariably associated with tornadoes or tornadic tendencies, and on the east coast the clouds from which the stones fall are generally of a remarkable sepia-coloured tint.

18. **Barometric Pressures.**—The mean annual barometric pressure in Australia varies from 29.88 inches on the north coast to 30.06 inches over the central and southern parts of the continent. In January the mean pressure ranges from 29.76 inches in the northern and central areas to 29.94 and 29.95 inches in the southern. The July mean pressure ranges from 29.97 inches at Port Darwin to 30.18 at Alice Springs. Barometer readings, corrected to mean sea-level, have, under anticyclonic conditions in the interior of the continent, ranged from 30.81 inches to as low as 28.44 inches. This lowest record was registered at Townsville during a hurricane on the 9th March, 1903. The mean annual fluctuations of barometric pressure for the capitals of Australia are shewn on page 137.

19. **Wind.**—(i.) *Trade Winds.* The two distinctive wind currents in Australia are, as previously stated, the south-east and westerly trade winds. As the belt of the earth's atmosphere in which they blow apparently follows the sun's ecliptic path north and south of the equator, so the area of the continent affected by these winds varies at different seasons of the year. During the summer months the anticyclonic belt travels in very high latitudes, thereby bringing the south-east trade winds as far south as 30° south latitude. The westerly trade winds are forced a considerable distance to the south of Australia, and are very rarely in evidence in the hot months. When the sun passes to the north of the equator, the south-east trade winds follow it, and only operate to the north of the tropics for the greater part of the winter. The westerly winds, by the same force, are brought into lower latitudes during the same period of the year. They sweep across the southern areas of the continent from the Leeuwin to Cape Howe, and during some seasons are remarkably persistent and strong. They occasionally penetrate to almost tropical latitudes, and though usually cold and dusty, are of the greatest service to the country, for being rain-bearing winds, moisture is by their agency precipitated over vast areas in the south of the continent.

(ii.) *Land and Sea Breezes.* The prevailing winds second in order of importance are the land and sea breezes. These generally blow at right angles to the coast line in their early stages, but are deflected to the north and south in the middle and later periods of the blows.

On the east coast the sea breezes which come in from the north-east, when in full force, frequently reach the velocity of a gale during the afternoon in the summer months, the maximum hourly velocity, ordinarily attained about 3 p.m., not unfrequently attaining a rate of 35 to 40 miles per hour. This wind, although strong, is usually shallow in depth, and does not ordinarily penetrate more than 9 or 12 miles inland.

The land breezes on the east coast blow out from a south-westerly direction during the night.

On the western shores of the continent the directions are reversed. The sea breezes come in from the south-west, and the land breezes blow out from the north-east.

(iii.) *Inland Winds.* Inland, the direction of the prevailing winds is largely regulated by the seasonal changes of pressure, so disposed as to cause the winds to radiate spirally outwards from the centre of the continent during the winter months, and to circulate spirally from the seaboard to the centre of Australia during the summer months.

(iv.) *Prevailing Direction at the State Capitals.* In *Perth*, southerly is the prevailing direction for November to February inclusive, and north-north-easterly for the mid-winter months.

In *Adelaide* the summer winds are from the south-west and south, and in the winter from north-east to north.

In *Brisbane*, south-east winds are in evidence all the year round, but more especially during the months January, February, March and April.

In *Sydney* from May to September the prevailing direction is westerly, and for the remaining seven months north-easterly.

Melbourne winter winds are from north-west to north-east, and those of the summer from south-west to south-east.

At *Hobart* the prevailing direction for the year is from north-west.

Over the greater part of Australia January is the most windy month, *i.e.*, is the month when the winds are strongest on the average, though the most violent wind storms occur at other times during the year, the time varying with the latitude.

20. Cyclones and Storms.—(i.) *General.* The “elements” in Australia are ordinarily peaceful, and although severe cyclones have visited various parts, more especially coastal areas, such visitations are rare, and may be properly described as erratic.

During the winter months the southern shores of the continent are subject to cyclonic storms, evolved from the V-shaped depressions of the southern low-pressure belt. They are felt most severely over the south-western parts of Western Australia, to the south-east of South Australia, in Bass Straits, including the coast-line of Victoria, and on the west coast of Tasmania. Apparently the more violent wind pressures from these cyclones are experienced in their northern half, that is, in that part of them which has a north-westerly to a south-westerly circulation.

Occasionally the north-east coast of Queensland is visited by hurricanes from the north-east tropics. During the first three months of the year these hurricanes appear to have their origin in the neighbourhood of the South Pacific Islands, their path being a parabolic curve of south-westerly direction. Only a small percentage, however, reach Australia, the majority recurring in their path before reaching New Caledonia.

Anemometrical records for these storms do not exist, but the fact that towns visited by them have been greatly damaged indicates that the velocity must be very great. Fortunately the area covered by these storms is very small when compared with the southern cyclones, and the region affected during an individual visitation is very limited. The heaviest blows are experienced to the west of the vortex with south-east to south-west winds.

(ii.) *Severe Cyclones.* Very severe cyclones, popularly known as “Willy Willies,” are peculiar to the north-west coast of Western Australia from the months of December to March, inclusive. They apparently originate in the ocean, in the vicinity of the Cambridge Gulf, and travel in a south-westerly direction with continually increasing force, displaying their greatest energy near Cossack and Onslow, between latitudes 20° and 22° South. The winds in these storms, like those from the north-east tropics, are very violent and destructive, causing great havoc amongst the pearl-fishers. The greatest velocities are usually to be found in the south-eastern quadrant of the cyclones, with north-east to east winds. After leaving the north-west coast, these storms either travel southwards, following the coast-line, or cross the continent to the Great Australian Bight. When they take the latter course their track is marked by torrential rains, as much as 29.41 inches, for example, being recorded at Whim Creek from one such occurrence. Falls of 10 inches and over have frequently been recorded in the interior of Western Australia from similar storms.

Cyclones occasionally develop from incipient monsoonal low-pressures in the interior of the continent. Their formation is apparently materially assisted by the advancing high-pressures to the west of them, for they seldom or never appear without this accompaniment. The velocity and duration of the resultant gales, too, has a distinct relation to the magnitude of pressure in the anti-cyclones. Evidence of excess of high pressures on such occasions indicates severe gales in the cyclones, and in the case of moderate pressures, moderate gales.

These cyclones do not attain their severest phases until they reach the seaboard. The most violent winds occur in the south-western quadrant, with south-west to south-east winds. The area affected on the coast-line is not usually very great. During the visitation of one of these storms, about 500 miles in diameter, in July, 1903, a strip of land, only 80 miles in extent, was affected. But so severe was the gale within this

region that steamers of from 8000 to 10,000 tons, leaving Port Jackson, were buffeted and tossed about like corks by the turbulent sea. Notwithstanding this, vessels 200 miles to the east lay becalmed and had no indication of the violent atmospheric upheaval relatively so near.

Though storms of this type may occur at any time of the year, they are more frequent during the months of August and September. The velocity of the wind has on one occasion reached the rate of 120 miles per hour.

(iii.) *Southerly Bursters.* The "Southerly Burster" is a characteristic feature of the eastern part of Australia. It is a cool, or cold, wind peculiar to the coastal districts of New South Wales, south of latitude 30°. In a modified form, however, it also appears in the interior of that State, in Victoria, and the western districts of Queensland.

The "Southerly Bursters" invariably follow periods of hot weather, and are a great relief to the population settled over the favoured areas. They occur in all months from August to May inclusive, but most frequently in November. The preceding winds in the early and late summer months are from a north-westerly, and in the midsummer months from a north-easterly direction. A rise in the barometer always takes place before their advent, but no relation has been established between the time this rise begins and the moment of the arrival of the wind itself, neither is there any apparent connection between the velocity of the wind and the rate of gradient of the barometric rise, notwithstanding that records of nearly fifteen hundred "Bursters," extending over a period of forty years, have been analysed with a view of ascertaining if such a connection could be established. All that can be said is that, should the rise be sharp and rapid, the life of the blow will be short, while a slow and gradual one indicates a long and steady blow from the south, after the initial "Burster" has passed. "Southerly Bursters" are usually first noted on the extreme south coast, and travel northward at a rate of 20 miles an hour. The rate of translation has ordinarily no definite relation to the velocity attained by the wind itself.

"Bursters" frequently occur simultaneously at several places along the seaboard, and occasionally they have been known to progress down the coast from north to south. While they may arrive at any time during the day or night, the interval between sun-down and midnight is that in which they ordinarily occur.

This type of storm is usually associated with "V"-shaped depressions, but occasionally a condition of relatively high barometric pressures in Victoria will induce their occurrence. It is most frequent during seasons of sporadic rains, and very rare during good years in the interior. In the summer of 1890, the year of the great Darling River flood, only sixteen visitations occurred, and even these were of a very mild character. The series of good years in the interior of Australia, since 1903, has been remarkable for the small annual number of "southerly bursters."

The greatest number ever experienced in a single summer was sixty-two, the average being thirty-two.

In the months of December and January they are usually short lived, and two may occur within the twenty-four hours. In the early and late summer months the intervening periods of warm weather are longer, and the winds are longer sustained, the energy being supplied from the more pronounced high pressures prevailing at these seasons of the year. The velocity varies from a rate of a few miles an hour to over 80 miles per hour, the maximum puffs occurring about an hour after the arrival of the burster. During recent years there has been a falling-off both in their number and strength, the reason for which is not yet understood, but it is suspected that the gradual extension of the agricultural and pastoral industries to the interior of the country may be one of the causes of the change.

Winds of a like character, and possibly derived from similar atmospheric actions and conditions, are—

In Europe—"The Bora," a sharp, cold north-east wind, which blows from the Croatian and Illyrian Mountains along the coast of Dalmatia from Trieste southward:

and the "Mistral," a violent northerly wind which blows from France to the Gulf of Lyons.

In North America, the "Northerners" of Texas have similar characteristics, and in South America "The Pampero," a cold and strong southerly wind which blows over the Pampas of Argentina, is almost identical with the "Southerly Bursters." The "Tehuantepec" winds that blow on the Pacific side of Central America are also very similar.

All parts of Australia are subject during the summer months to hot, desiccating winds, of two kinds. The most common and general class are associated with low-pressure isobars. The more rare and local hot winds are caused by the heating of descending air on the lee-side of mountains. In Victoria the former class are known as "Brick Fielders," a name originally applied to the "Southerly Bursters" in Sydney, because of the dust they raised from the brickfields to the south of the city. When the goldfields were discovered in Victoria the miners hailing from Sydney gave the name to the dusty winds from the opposite quarter.

The hot winds on the south-eastern littoral are analogous to the "Chinook" winds which blow at the eastern foot of the Rocky Mountains; to the "Föhn" winds of the Alpine Valleys; and to the "North-Westers" of the Canterbury Plains in the Middle Island of New Zealand.

21. Influences affecting Australian Climate.—Australian history does not cover a sufficient period, nor is the country sufficiently occupied, to ascertain whether or not the advance of settlement has materially affected the climate as a whole. Local changes therein, however, have taken place, a fact which suggests that settlement and the treatment of the land have a distinct effect on local conditions. For example, the mean temperature of Sydney shews a rise of two-tenths of a degree during the last twenty years, a change probably brought about by the great growth of residential and manufacturing buildings within the city and in the surrounding suburbs during that period. Again, low-lying lands on the north coast of New South Wales, that originally were seldom subject to frosts, have with the denudation of the surrounding hills from forests experienced annual visitations, the probable explanation being that, through the absence of trees, the cold air of the high lands now flows, unchecked and untempered, down the sides of the hills to the valleys and lower lands.

It is pointed out by Abercromby,¹ as shewing the influence of irrigation on climate, that "Before the Suez Canal was made, the desert through which it is cut was said to be rainless; now since the Bitter Lakes have been filled up with water, rain falls on an average eight days in the year at Ismailia." And in the United States, General A. W. Greely² says, concerning "Heat Waves," "It seems possible that the frequency and intensity of such visitations have diminished on the Pacific coast, since Tennant's record of hot days (classing as such those on which the temperature rose to 80° or above, at San Francisco) indicates that their annual number has very materially diminished since 1859. For seven years prior to 1859 such days averaged thirteen yearly, and since that time, up to 1871, the average yearly number is but four. The immense quantity of land placed under irrigation and the vast increase in vegetation are obvious reasons why there should be some diminution in this respect."

(i.) *Influences of Forests on Climate.* As already indicated, forests doubtless exercise a great influence on local climate, and hence, to the extent that forestal undertakings will allow, the weather can be controlled by human agency. The direct action of forests is an equalising one; thus, especially in equatorial regions and during the warmest portion of the year, they considerably reduce the mean temperature of the air. They also reduce the diurnal extremes of their shade temperatures, by altering the extent of radiating surface, by evaporation, and by checking the movement of air. While decreasing

1. "Seas and Skies," Hon. Ralph Abercromby. 8vo, London, 1888, p. 30.

2. "American Weather." 8vo, London, 1888, p. 253.

evaporation from the ground, they increase the relative humidity. Vegetation greatly diminishes the rate of flow-off of rain, and the washing away of surface soil. Thus when a region is protected by trees, steadier water supply is ensured, and the rainfall is better conserved. In regions of snowfall the supply of water to rivers is similarly regulated, and without this and the sheltering influence of ravines and "gullies" watercourses supplied mainly by melting snow would be subject to alternate periods of flooding and dryness. This is borne out in the inland rivers. Thus the River Murray, which has never been known to run dry, derives its steadiness of flow mainly through the causes above indicated.

(ii.) *Direct Influences of Forest on Rainfall.* Whether forests have a direct influence on rainfall is a debatable question, some authorities alleging that precipitation is undoubtedly induced by forests, while others contend the opposite. According to Dr. Hann, observations have been made in India and Germany which support the idea that the destruction of trees has had a most deteriorating effect upon the climate.¹ In the Cordilleras clouds with rain falling from them can be seen hanging over forests, while over contiguous lands covered with shrubs or used for agriculture the sky is blue and the sun is shining.

In America the influence of forests on the rainfall is still debated, but in Europe authorities contend that forests encourage frequent rainfalls. Hann states that a surface which keeps the air moist and cool, and from which there is as great an evaporation as takes place from extended forests, must have a tendency to increase the amount and frequency of precipitation, as contrasted with an open country which is dry, but over which conditions are otherwise similar.

Obviously the settlement of this very important question is difficult. Observations would have to be taken, with different treatments of the land, over very extended periods. Sufficient evidence exists, however, to establish that, even if the rainfall has not increased, the beneficial effect of forest lands in tempering the effects of the climate is more than sufficient to disclose the importance of their protection and extension. Curtis, in a paper read before the Meteorological Congress in 1893, sets forth important evidence of the ill-effects on orchard and wheat country of the felling of trees for the timber trade.

In Michigan, where half a century ago peach trees flourished and were rarely injured by cold, the crops have now nearly disappeared, owing to the removal by timbermen of the shelter afforded by the forests. In Northern Kansas, too, from the same cause, the growing of peaches has been largely abandoned. Many of the South Californian citrus fruit-growers protect their orchards from the destructive effects of wind by the judicious planting of eucalyptus and other trees.

It is the rapid rate of evaporation (says Dr. Fernow), induced by both hot and cold winds, which injures crops and makes life uncomfortable on the plains. Whether the forest aids in increasing precipitation there may be doubt, but nobody can say that it does not check the winds and the rapid evaporation due to them.

Trees as wind-breaks have been successfully planted in central parts of the United States, and there is no reason why similar experiments should not be successful in many parts of our treeless interior. The belts should be planted at right angles to the direction of the prevailing parching winds, and if not more than half a mile apart will afford shelter to the enclosed areas.²

22. Comparison of Rainfalls and Temperatures.—For the purpose of comparison the following lists of rainfalls and temperatures are given for various important cities throughout the world, for some of the places mentioned as possible sites for a federal capital, and for the capitals of the Australian States :—

1. "Climatology," p. 194.

2. See A. Woelfkof, *Petermann's Mittheilungen*, 1885; and W. M. Fulton and A. N. Salisbury, "Convention of U.S.A. Weather Bureau Officials, 1896."

SECTION IV.

POPULATION.

§ 1. Special Characteristics of Australian Population.

1. **Sex Distribution.**—In respect of the relative proportions of the sexes in its population, Australia has, since the first settlement of the continent in 1788, differed materially from the older countries of the world. In the latter the populations have, in general, grown by natural increase, and their composition usually reflects that fact, the numbers of males and females being in most countries approximately equal, with a more or less marked tendency, however, for the females to slightly exceed the males. The excess of females arises from a variety of causes, amongst which may be mentioned—(a) higher rate of mortality amongst males; (b) greater propensity on the part of males to travel; (c) the effects of war; (d) employment of males in the army, navy, and mercantile marine; (e) preponderance of males amongst emigrants. On the other hand, the last-mentioned cause has tended naturally to produce an excess of males in Australia, since the majority of those emigrating to Australia have been males. The circumstances under which the colonisation of Australia was first undertaken, and the remoteness of this country from Europe, have combined to accentuate this feature.

There is little doubt that the continent presented few attractions to the explorers who visited its shores, mainly on the west and north, during the sixteenth, seventeenth, and early part of the eighteenth centuries, and it was only when the Declaration of Independence of the United States, in 1776, closed to the British prison authorities the North American plantations, which had previously been used as receptacles for the deportation of convicts, that the overcrowding of the gaols caused them to consider the advisability of converting the great southern continent into a convict settlement. This idea was put into practice in 1787, when the first consignment of convicts left England, arriving in Sydney Cove on 26th January, 1788. Reports concerning the number actually landed are conflicting, but it appears that the total may be set down approximately at 1035, including the military. Details as to the sexes are not available, but the males must have largely preponderated. Indeed, nearly nine years later, on the 31st December, 1796, in a total population of 4100, there were 257 males to every 100 females.

The subsequent progress of Australia resulting from extensive mineral discoveries and the development of its great natural resources, pastoral, agricultural, forestal, etc., have tended to attract male rather than female immigrants, particularly in view of the distance from the principal centres of European population. Even at the end of 1907, after nearly 120 years of settlement, there were 111 males to each 100 females, and this notwithstanding the equalising tendency due to additions to the population by means of births and to deductions therefrom by the deaths of immigrants.

The terms "masculinity" and "femininity" have been used to express the proportion of the sexes in any group, the former indicating the ratio of males to females, the latter the reciprocal of this, viz., the ratio of females to males. The term "masculinity" is that which it is proposed to adopt, and the masculinity of any group will usually be

expressed numerically as the number of males to each 100 females. The masculinity of the population of the Commonwealth at intervals of five years from 1800 to 1905, and also for the years 1906 and 1907 is as follows:—

MASCULINITY OF THE AUSTRALIAN POPULATION, 1800 to 1907.

| Year. | Number of Males to each 100 Females. | Year. | Number of Males to each 100 Females. | Year. | Number of Males to each 100 Females. |
|-------|--------------------------------------|-------|--------------------------------------|-------|--------------------------------------|
| 1800 | 263.05 | 1840 | 201.75 | 1880 | 117.28 |
| 1805 | 233.35 | 1845 | 163.38 | 1885 | 118.33 |
| 1810 | 190.53 | 1850 | 143.20 | 1890 | 116.06 |
| 1815 | 188.84 | 1855 | 145.48 | 1895 | 113.41 |
| 1820 | 243.71 | 1860 | 140.15 | 1900 | 110.55 |
| 1825 | 329.77 | 1865 | 125.38 | 1905 | 111.23 |
| 1830 | 308.30 | 1870 | 121.10 | 1906 | 111.70 |
| 1835 | 260.71 | 1875 | 118.25 | 1907 | 111.48 |

The curious inequalities of the increases in the number of males and in the number of females for the Commonwealth as a whole, and for the individual States respectively, will be seen by referring to the graphs on pages 192 and 193.

The significance of the rates of masculinity shewn in the above table will perhaps be better understood by a comparison with the corresponding information for other countries. This has been made in the next table which shews, for some of the principal countries of the world for which such particulars are available, the masculinity of the population according to the most recent statistics:—

MASCULINITY OF THE POPULATION OF VARIOUS COUNTRIES.

| Country. | Year. | No. of Males to each 100 Females. | Country. | Year. | No. of Males to each 100 Females. |
|--------------------------|-------|-----------------------------------|-----------------------|-------|-----------------------------------|
| New Zealand ... | 1907 | 112.78 | Ireland ... | 1901 | 97.40 |
| Australia ... | 1907 | 111.48 | Prussia ... | 1905 | 97.38 |
| India (Feudatory States) | 1901 | 106.02 | Russia (European) ... | 1897 | 97.18 |
| Servia ... | 1905 | 105.87 | German Empire ... | 1905 | 97.17 |
| Canada ... | 1901 | 105.04 | France ... | 1901 | 96.84 |
| United States of America | 1900 | 104.87 | Austria ... | 1900 | 96.65 |

| Japan ... | 1903 | 102.03 | Scotland ... | 1901 | 94.58 |
| Poland (Russian) ... | 1897 | 101.42 | Denmark ... | 1906 | 94.49 |
| Greece ... | 1907 | 101.37 | Norway ... | 1900 | 94.37 |
| Belgium ... | 1900 | 98.70 | England and Wales ... | 1901 | 93.63 |
| Netherlands ... | 1906 | 98.43 | Portugal ... | 1900 | 91.53 |

2. Age Distribution.—The causes which operated to bring about an excess of males in the population of the Commonwealth, have been equally effective in rendering the age distribution essentially different from that of older countries. The majority of the immigrants, whether male or female, were in the prime of life, and as the Australian birth-rate in earlier years was a comparatively high one, the effect produced is a population in which the number of young and middle-aged persons is somewhat above, and the number for advanced ages somewhat below the normal.

Thus in the Commonwealth at the Census of 31st March, 1901, the age distribution of the population was as shewn in the table hereunder; that for England and Wales is given also for the sake of comparison:—

AGE DISTRIBUTION OF POPULATION,

COMMONWEALTH AND ENGLAND AND WALES, AT CENSUS OF 31ST MARCH, 1901.

| Age Group. | Population of COMMONWEALTH. | Percentage on Total Population. | Population of ENGLAND and WALES. | Percentage on Total Population. |
|------------------------|-----------------------------|---------------------------------|----------------------------------|---------------------------------|
| Under 15 | 1,325,323 | 35.12 | 10,545,739 | 32.42 |
| 15 and under 65 | 2,297,689 | 60.88 | 20,464,351 | 62.91 |
| 65 and upwards | 150,789 | 4.00 | 1,517,753 | 4.67 |
| Total | 3,773,801 | 100.00 | 32,527,843 | 100.00 |

During the past 40 years, the age distribution of the Australian population has varied considerably, as will be seen from the following table, which gives for each sex the proportion per cent. of the total population in the age groups "under 15," "15 and under 65," and "65 and over." The figures upon which these percentages have been computed are those furnished by the Censuses of the several States. Those for 1861 include the results of the Western Australian Census of 1859, while those for 1871 include the results of the Western Australian and Tasmanian Censuses of 1870 :—

AGE DISTRIBUTION OF AUSTRALIAN POPULATION, 1861 to 1901.

| Census Year. | Males. | | | | Females. | | | | Persons. | | | |
|--------------|-----------------|------------------|--------------|--------|-----------------|------------------|--------------|--------|-----------------|------------------|--------------|--------|
| | Under 15 Years. | 15 and under 65. | 65 and over. | Total. | Under 15 Years. | 15 and under 65. | 65 and over. | Total. | Under 15 Years. | 15 and under 65. | 65 and over. | Total. |
| | % | % | % | % | % | % | % | % | % | % | % | % |
| 1861 | 31.41 | 67.42 | 1.17 | 100 | 43.03 | 56.20 | 0.77 | 100 | 36.28 | 62.72 | 1.00 | 100 |
| 1871 | 38.84 | 59.11 | 2.05 | 100 | 46.02 | 52.60 | 1.38 | 100 | 42.09 | 56.17 | 1.74 | 100 |
| 1881 | 36.37 | 60.85 | 2.78 | 100 | 41.89 | 56.07 | 2.04 | 100 | 38.91 | 58.65 | 2.44 | 100 |
| 1891 | 34.77 | 62.02 | 3.21 | 100 | 39.36 | 58.08 | 2.56 | 100 | 36.90 | 60.20 | 2.90 | 100 |
| 1901 | 33.87 | 61.82 | 4.31 | 100 | 36.50 | 59.85 | 3.65 | 100 | 35.12 | 60.88 | 4.00 | 100 |

The excess of males over females, previously referred to, is found mainly in ages of 21 and upwards. In the total population under the age of 21 there were, at the date of the last Census, less than 102 males to each 100 females, while in that aged 21 and upwards there were more than 118 males to each 100 females. In the absence of a large immigration of males, therefore, the disparity between the sexes in Australia will soon be eliminated.

3. **Race and Nationality.**—(i.) *Constitution of Australia's Population.* As regards race, the population of the Commonwealth may be conveniently divided into two main groups, one comprising the aboriginal natives of Australia, and the other the various immigrant races which, since the foundation of settlement in 1788, have made the Commonwealth their home. Under the head of "immigrant races" would, of course, be included not only those residents of Australia who had been born in other countries, but also their descendants born in Australia.

It would appear that the aboriginal population of Australia was never large, and that the life led by them was, in many parts of Australia, a most precarious one. With the continued advance of settlement the numbers have shrunk to such an extent that in the more densely populated States they are practically negligible. Thus, at the Census of 1901 the number of full-blooded aboriginals and nomadic half-castes living with those of full blood remaining in New South Wales was stated to be 4287, while in Victoria the total was only 271, and in Tasmania the last aboriginal native died in 1876. In Queens-

land, South Australia, and Western Australia, on the other hand, there are considerable numbers of natives still in the "savage" state, numerical information concerning whom is of a most unreliable nature, and can be regarded as little more than the result of mere guessing.

Ethnologically interesting as is this remarkable and rapidly-disappearing race, practically all that has been done to increase our knowledge of them, their laws, habits, customs, and language, has been the result of more or less spasmodic and intermittent effort on the part of enthusiasts either in private life or the public service. Strange to say, an enumeration of them has never been seriously undertaken in connection with any State Census, though a record of the numbers who were in the employ of whites, or living in contiguity to the settlements of whites, has usually been made. As stated above, various guesses at the number of aboriginal natives at present in Australia have been made, and the general opinion appears to have prevailed that 150,000 might be taken as a rough approximation to the total. Recent estimates, however, have given results considerably below this total. Thus, in his report of June, 1908, the Queensland Chief Protector of Aborigines estimates the total at 74,030, distributed as follows:—New South Wales, 6960; Victoria, 270; Queensland, 20,000; South Australia (including the Northern Territory) 19,800; Western Australia, 27,000. A somewhat similar estimate made by Dr. Roth, formerly Chief Protector of Aborigines in Queensland, gives Queensland at least 18,000; Western Australia at least 24,000, and the Northern Territory from 20,000 to 22,000. It is proposed to make an attempt to enumerate the aboriginal population of Australia in connection with the first Commonwealth Census to be taken in 1911.

The number of aboriginal natives enumerated in the several States of the Commonwealth at the Census of 1901 was as follows:—

ABORIGINAL NATIVES ENUMERATED AT CENSUS OF 1901.

| Persons, etc. | N.S.W. | Victoria. | Queens-land. | South Australia. | Western Australia | Tasmania. | Commonwealth. |
|------------------------------|--------------------|-----------|--------------|------------------|-------------------|-----------|---------------|
| Males | 2,451 | 163 | 3,089 | 14,076 | 2,933 | 0 | 22,712 |
| Females | 1,836 | 108 | 2,048 | 12,357 | 2,328 | 0 | 18,677 |
| Total | 4,287 ¹ | 271 | 5,137 | 26,433 | 5,261 | 0 | 41,389 |
| Masculinity ² ... | 133.5 | 150.9 | 150.8 | 113.9 | 126.0 | — | 121.6 |

1. Including 509 half-castes living in nomadic state with natives of full blood.

2. Number of males per hundred females.

In the Commonwealth Constitution Act provision is made for aboriginal natives to be excluded for all purposes for which statistics of population are made use of under the Act, but the opinion has been given by the Commonwealth Attorney-General that, "in reckoning the population of the Commonwealth, half-castes are not aboriginal natives within the meaning of section 127 of the Commonwealth of Australia Constitution Act, and should therefore be included." It may be added, however, that as "half-castes," living in the nomadic state, are practically undistinguishable from aborigines, it has not always been found practicable to make the distinction, and further, that no authoritative definition of "half-caste" has yet been given.

As regards the immigrant races, it may be said that they consist mainly of natives of the three divisions of the United Kingdom and their descendants. The proportion of Australian-born contained in the population of the Commonwealth has, in recent years, increased rapidly, and at the Census of 31st March, 1901, out of a total population of 3,765,879 persons whose birthplaces were specified, no fewer than 2,908,303, or 77.23 per cent., were Australian born, while of the remainder, 679,159, or 18.03 per cent., were natives of the United Kingdom, and 25,788, or 0.68 per cent., were natives of New Zealand, that is, 95.94 per cent. of the total population at the date of the Census had

been born in either Australasia or the United Kingdom. The other birthplaces most largely represented in the Commonwealth were Germany, 38,352 (1.02 per cent.); China, 29,907 (0.79 per cent.); Scandinavia (comprising Sweden, Norway and Denmark), 16,144 (0.43 per cent.); Polynesia, 10,363 (0.28 per cent.); British India, 7637 (0.20 per cent.); United States of America, 7448 (0.20 per cent.); and Italy, 5678 (0.15 per cent.). The total population of Asiatic birth was 47,014 (1.25 per cent.), of whom 3593 were born in Japan.

(ii.) *Biological and Sociological Significance.* As regards race and nationality, therefore, the population of Australia is fundamentally British, and thus furnishes an example of the transplanting of a race into conditions greatly differing from those in which it had been developed. The biological and sociological significance of this will ultimately appear in the effects on the physical and moral constitution produced by the complete change of climatic and social environment, for the new conditions are likely to considerably modify both the physical characteristics and the social instincts of the constituents of the population. At present the characteristics of the Australian population, whether physical, mental, moral, or social, are only in the making, and probably it will not be possible to point to a distinct Australian type until three or four generations more have passed. Even then it is hardly likely that with the great extent of territory and varying conditions presented by the Commonwealth there will be but one type; on the contrary, a variety of types may be expected. The Australian at present is little other than a transplanted Briton, with the essential characteristics of his British forbears, the desire for freedom from restraint, however, being perhaps more strongly accentuated. The greater opportunity for an open-air existence, and the absence of the restrictions of older civilisations, may be held to be in the main responsible for this.

4. *Differences among the States.*—(i.) *Sex Distribution.* The varying circumstances under which the settlement of the several States has been effected, and the essentially different conditions experienced in the due development of their respective resources, have naturally led to somewhat marked differences in the constitution of their populations. In the matter of sex distribution the States in which the normal condition of older countries is most nearly represented are those of Victoria and Tasmania, in the former of which the numbers of males and females are practically identical, while in the latter there are 106 males to each 100 females. In Western Australia and Queensland, on the other hand, the position of affairs is quite abnormal, the numbers of males to each 100 females being respectively 139 and 120.

The variation in the masculinity of the estimated population of the several States and of the Commonwealth as a whole during the past eight years will be seen from the following table:—

MASCULINITY* OF THE POPULATION, 31st DECEMBER, 1900 to 1907.

| State. | Masculinity of the Population on 31st December. | | | | | | | |
|---------------------|---|---------------|---------------|---------------|---------------|---------------|---------------|---------------|
| | 1900. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
| N. S. W. ... | 111.14 | 110.22 | 111.17 | 111.55 | 112.42 | 113.40 | 114.26 | 114.92 |
| Victoria ... | 101.23 | 101.37 | 100.77 | 100.31 | 99.96 | 100.13 | 100.25 | 99.88 |
| Queensland | 125.33 | 125.58 | 124.39 | 123.91 | 123.06 | 122.01 | 120.66 | 119.51 |
| S. Australia | 104.04 | 103.50 | 103.08 | 103.02 | 105.53 | 109.28 | 112.85 | 112.72 |
| W. Australia | 157.54 | 155.85 | 154.14 | 149.41 | 147.15 | 144.31 | 142.15 | 139.08 |
| Tasmania ... | 107.97 | 107.37 | 108.15 | 107.65 | 106.95 | 106.58 | 106.46 | 106.01 |
| C'wealth ... | 110.55 | 110.29 | 110.42 | 110.28 | 110.64 | 111.23 | 111.70 | 111.48 |

* Number of males to each 100 females.

(ii.) *Age Distribution.* The disparity in sex distribution exhibited by the several States is accompanied by a corresponding inequality in the matter of age distribution. The number of persons in each State at the Census of 31st March, 1901, at what are commonly known as the "dependent," "supporting," and "old" ages, and the proportion of same to total of each State and Commonwealth was as follows:—

**NUMBER AND PROPORTION OF PERSONS IN THE COMMONWEALTH OF
DEPENDENT, SUPPORTING, AND OLD AGE.**

| State. | Number of persons of | | | | Proportion of Population of | | |
|-----------------------|---------------------------|-----------------------------------|---------------------------|-----------|-----------------------------|-----------------------------------|---------------------------|
| | Dependent age (under 15). | Supporting age (15 and under 65). | Old age (65 and upwards). | All ages. | Dependent age (under 15). | Supporting age (15 and under 65). | Old age (65 and upwards). |
| New South Wales ... | 486,996 | 821,277 | 46,573 | 1,354,846 | 35.94 | 60.62 | 3.44 |
| Victoria ... | 409,363 | 725,647 | 66,060 | 1,201,070 | 34.08 | 60.42 | 5.50 |
| Queensland ... | 182,432 | 302,824 | 12,873 | 498,129 | 36.62 | 60.79 | 2.59 |
| South Australia ... | 129,237 | 218,932 | 14,938 | 363,157 | 35.59 | 60.30 | 4.11 |
| Western Australia ... | 53,270 | 127,532 | 3,322 | 184,124 | 28.93 | 69.26 | 1.81 |
| Tasmania ... | 64,025 | 101,427 | 7,023 | 172,475 | 37.12 | 58.81 | 4.07 |
| Commonwealth ... | 1,325,323 | 2,297,689 | 150,789 | 3,773,801 | 35.12 | 60.88 | 4.00 |

Thus in Western Australia a larger proportion of its population was of supporting age than in any other State. In Tasmania the proportion is the lowest. On the other hand, in Tasmania the proportion of dependent age was the highest for the Commonwealth, while the Western Australian proportion was the lowest. Victoria had the highest and Western Australia the lowest proportion of persons aged 65 years and upwards.

(iii.) *Birthplaces.* Complete information concerning the race and nationality of the population is not available in the Census returns, the material there furnished of this nature being the records of birthplaces. The following table exhibits, in a very condensed form, the distribution of the population of the several States according to birthplace:—

BIRTHPLACES AT CENSUS OF 31st MARCH, 1901.

| Birthplace. | Total Population of Commonwealth at Census. | | | | | | |
|------------------------------|---|-----------|---------|----------|----------|---------|-----------|
| | N.S.W. | Victoria. | Ql'd. | S. Aust. | W. Aust. | Tas. | C'wealth. |
| Australia ... | 1,079,154 | 940,830 | 323,436 | 289,993 | 126,952 | 147,938 | 2,908,303 |
| New Zealand ... | 10,589 | 9,020 | 1,571 | 711 | 2,704 | 1,193 | 25,788 |
| United Kingdom | 220,401 | 214,371 | 126,159 | 56,862 | 41,551 | 19,815 | 679,159 |
| Other European Countries ... | 20,151 | 16,548 | 21,174 | 9,326 | 6,076 | 1,398 | 74,673 |
| Asia ... | 14,208 | 8,793 | 13,878 | 4,376 | 4,810 | 949 | 47,014 |
| Africa ... | 986 | 926 | 378 | 235 | 243 | 101 | 2,869 |
| America ... | 4,813 | 3,659 | 1,688 | 811 | 1,151 | 385 | 12,507 |
| Polynesia ... | 1,139 | 203 | 8,877 | 39 | 78 | 27 | 10,363 |
| At Sea ... | 1,967 | 1,564 | 634 | 539 | 317 | 182 | 5,203 |
| Unspecified ... | 1,438 | 5,156 | 334 | 265 | 242 | 487 | 7,922 |
| Total ... | 1,354,846 | 1,201,070 | 498,129 | 363,157 | 184,124 | 172,475 | 3,773,801 |

The proportions for the several States for each of the birthplaces shewn in the foregoing table expressed as percentages of the total population, the birthplaces of which were specified, are as follows:—

PERCENTAGE OF COMMONWEALTH POPULATION ACCORDING TO BIRTHPLACE,

31ST MARCH, 1901.

| Birthplace. | Percentage of Total Population. | | | | | | |
|---------------------------------|---------------------------------|-----------|-------------|------------------|--------------------|-----------|---------------|
| | New South Wales. | Victoria. | Queensland. | South Australia. | Western Australia. | Tasmania. | Commonwealth. |
| | % | % | % | % | % | % | % |
| Australia | 79.74 | 78.67 | 64.97 | 79.91 | 69.04 | 86.02 | 77.23 |
| New Zealand | 0.78 | 0.75 | 0.32 | 0.20 | 1.47 | 0.69 | 0.68 |
| United Kingdom | 16.28 | 17.93 | 25.34 | 15.67 | 22.60 | 11.52 | 18.03 |
| Other European Countries | 1.49 | 1.38 | 4.25 | 2.57 | 3.30 | 0.81 | 1.98 |
| Asia | 1.05 | 0.74 | 2.79 | 1.21 | 2.62 | 0.55 | 1.25 |
| Africa | 0.07 | 0.08 | 0.08 | 0.06 | 0.13 | 0.06 | 0.08 |
| America | 0.36 | 0.30 | 0.34 | 0.22 | 0.63 | 0.22 | 0.33 |
| Polynesia | 0.08 | 0.02 | 1.78 | 0.01 | 0.04 | 0.02 | 0.28 |
| At Sea | 0.15 | 0.13 | 0.13 | 0.15 | 0.17 | 0.11 | 0.14 |
| Total | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 |

As regards distribution according to birthplace, the population of New South Wales is very similar to that of Victoria, the proportions born in Australia and Asia being slightly higher, and that born in the United Kingdom slightly lower, in the case of New South Wales. There is also a rough similarity between the population distributions of Queensland and Western Australia. In both, the Australian-born represent a much smaller, and those born in the United Kingdom, in "Other European Countries" and in Asia, a much larger proportion than is the case with the remaining States. Polynesians were, however, much more numerously represented in Queensland at the date of the Census than in any other State, but this position has been considerably modified by the recent deportation of Kanakas. Natives of New Zealand were, proportionately, most numerous in Western Australia. Tasmania had the largest proportion of Australian-born population, viz., 86 per cent., while Queensland, with 65 per cent., had the smallest. On the other hand, more than 25 per cent. of Queensland's population consisted of natives of the United Kingdom, while only 11½ per cent. of the population of Tasmania had been born there. For the Commonwealth as a whole 98 per cent. of the population were from Australasian or European birthplaces.

§ 2. Commonwealth Population—Its Distribution and Fluctuation.

1. **Present Population.**—The estimated population of the several States of the Commonwealth at the end of each of the last eight years is as follows:—

POPULATION OF COMMONWEALTH on 31st DECEMBER, 1900 to 1907.

| Year. | New South Wales. | Victoria. | Queensland. | South Australia. | Western Australia. | Tasmania. | Commonwealth. |
|----------|------------------|-----------|-------------|------------------|--------------------|-----------|---------------|
| MALES. | | | | | | | |

| 1907 ... | 1,568,942 | 1,248,095 | 541,765 | 392,664 | 261,563 | 184,008 | 4,197,037 |

2. **Growth of Population.**—(i.) *1788 to 1824.* From 1788, when settlement first took place in Australia, until December 1825, when Van Diemen's Land became a separate colony, the whole of the British Possessions in Australia were regarded as one colony, viz., that of New South Wales. The population during this period increased very slowly, and at the end of 1824 had reached only 48,072.

The population with which settlement in Australia was inaugurated, and that at the end of each year until 1824, are as follows:—

POPULATION OF AUSTRALIA (INCLUDING TASMANIA)

ON 31ST DECEMBER, 1788 TO 1824.

| Year. | Males. | Females. | Total. | Year. | Males. | Females. | Total. |
|-------------------|--------|----------|--------|-------|--------|----------|--------|
| 1788 ¹ | ... | ... | 1,035 | 1806 | 5,389 | 2,521 | 7,910 |

| 1805 | 5,395 | 2,312 | 7,707 | 1824 | 36,871 | 11,201 | 48,072 |

1. On 26th January.

(ii.) *1825 to 1858.* The period extending from 1825 to 1859 witnessed the birth of the colonies of Tasmania (then known as Van Diemen's Land), Western Australia, South Australia, Victoria, and Queensland. The years in which these came into existence as separate colonies were as follows:—Tasmania, 1825; Western Australia, 1829; South Australia, 1836; Victoria, 1851; Queensland, 1859.

The estimated population of the Commonwealth during each year of this transition period was as follows:—

POPULATION OF AUSTRALIA (INCLUDING TASMANIA)

ON 31ST DECEMBER, 1825 TO 1858.

| Year. | Males. | Females. | Total. | Year. | Males. | Females. | Total. |
|-------|---------|----------|---------|-------|---------|----------|-----------|
| 1825 | 40,288 | 12,217 | 52,505 | 1842 | 153,753 | 87,226 | 240,984 |
| 1826 | 41,289 | 12,593 | 53,882 | 1843 | 158,846 | 92,002 | 250,848 |
| 1827 | 43,053 | 13,247 | 56,300 | 1844 | 165,034 | 99,253 | 264,287 |
| 1828 | 44,778 | 13,419 | 58,197 | 1845 | 173,159 | 105,989 | 279,148 |
| 1829 | 46,946 | 14,988 | 61,934 | 1846 | 181,342 | 111,907 | 293,249 |

(iii.) *1859 to 1907.* From 1859, the year in which Queensland came into existence as a separate colony, until the beginning of 1901, when the Commonwealth of Australia was inaugurated under the provisions of the Commonwealth Constitution Act, Australia consisted of six States, practically independent of each other in all matters of government. During this period, the population of the Commonwealth increased from 1,050,828

COMMONWEALTH POPULATION—ITS DISTRIBUTION AND FLUCTUATION. 163

at the end of 1858 to 3,765,339 on the 31st December, 1900. The particulars for this period are given in the table hereunder.

During the seven years that have elapsed since the federation of the States was effected the population of the Commonwealth has increased by 431,698, from 3,765,339 on 31st December, 1900, to 4,197,037 on 31st December, 1907. See table hereunder:—

POPULATION OF AUSTRALIA (INCLUDING TASMANIA)
ON 31ST DECEMBER, 1859 TO 1907.

| Year. | Males. | Females. | Total. | Year. | Males. | Females. | Total. |
|-------|-----------|-----------|-----------|-------|-----------|-----------|-----------|
| 1859 | 644,376 | 452,929 | 1,097,305 | 1884 | 1,411,996 | 1,193,729 | 2,605,725 |
| 1860 | 668,560 | 477,025 | 1,145,585 | 1885 | 1,460,394 | 1,234,124 | 2,694,518 |
| 1861 | 669,373 | 498,776 | 1,168,149 | 1886 | 1,510,954 | 1,277,096 | 2,788,050 |
| 1862 | 683,650 | 523,268 | 1,206,918 | 1887 | 1,559,118 | 1,322,244 | 2,881,362 |

| 1876 | 1,061,477 | 897,202 | 1,958,679 | 1901 | 2,006,734 | 1,819,502 | 3,826,236 |
| 1877 | 1,102,340 | 928,790 | 2,031,130 | 1902 | 2,037,710 | 1,845,369 | 3,883,079 |
| 1878 | 1,132,573 | 959,591 | 2,092,164 | 1903 | 2,059,444 | 1,867,525 | 3,926,969 |
| 1879 | 1,168,781 | 993,562 | 2,162,343 | 1904 | 2,092,818 | 1,891,572 | 3,984,390 |
| 1880 | 1,204,514 | 1,027,017 | 2,231,531 | 1905 | 2,133,978 | 1,918,452 | 4,052,430 |
| 1881 | 1,247,059 | 1,059,677 | 2,306,736 | 1906 | 2,173,545 | 1,945,936 | 4,119,481 |
| 1882 | 1,289,892 | 1,098,190 | 2,388,082 | 1907 | 2,212,480 | 1,984,557 | 4,197,037 |
| 1883 | 1,357,423 | 1,148,313 | 2,505,736 | | | | |

It will be seen from the foregoing tables that the population of Australia attained its first million in 1858, seventy years after settlement was first effected; its second million nineteen years later, in 1877; its third million twelve years later, in 1889; and its fourth million sixteen years later in 1905.

The growth of the total population of the Commonwealth generally, and of each State therein, is graphically shewn on page 191, and of each sex considered separately on pages 192 and 193.

3. **Variations in Masculinity.**—For convenience of reference particulars concerning variations in the masculinity of the population of the several States are given below for each year since 1796. In future issues summaries only will be published. The graphs corresponding to these figures will be found on page 197.

MASCULINITY OF AUSTRALIAN POPULATION, 1796 to 1907.

§ 3. Influences affecting Growth and Distribution of Population.

1. **Mineral Discoveries.**—The discovery of gold in Australia in 1851 was undoubtedly one of the most powerful factors in bringing about a rapid settlement of the country. Its effect may be gauged by a comparison of the increase during the ten years preceding with that during the ten years succeeding the discovery. From 31st December, 1840, to 31st December, 1850, the increase was only 214,948 (viz., from 190,408 to 405,356). The rush of people to the newly-discovered goldfields during the succeeding decennium caused an increase of no less than 740,229, the population advancing to 1,145,585 on 31st December, 1860. In 1861, owing to the opening up in that year of the New Zealand goldfields, a rush of population from Australia set in, the result being that the net increase of population of the Commonwealth, which in 1854 amounted to 98,343, and even in 1860 was as much as 48,108, fell in 1861 to 22,564. In fact, during the year 1861 the departures from Australia exceeded the arrivals by 5958, the gain of 22,564 being due to the births exceeding the deaths by 28,522.

In more recent years the gold discoveries of Western Australia in 1886 and subsequent years, led to such extensive migration to that State that its population, which on 31st December, 1885, amounted to only 35,959, increased in 22 years by no less than 225,604, totalling 261,563 on 31st December, 1907. In this case, however, the additions to the population of the western State were largely drawn from those of the eastern States, so that the actual gain of population to the Commonwealth was but slight.

2. Pastoral Development.—Very early in the colonisation of Australia it was recognised that many portions were well adapted for pastoral pursuits, and pastoral developments have led to a considerable distribution of population in various directions. As the numbers engaged in connection therewith, compared with the value of the interests involved, are relatively small, and as pastoral occupancy tends to segregation rather than aggregation of population, the growth of pastoral industry is but slightly reflected in the population statistics of the Commonwealth.

3. Agricultural Expansion.—At the present time the area annually devoted to crops in the Commonwealth is about $9\frac{1}{2}$ millions of acres. Although considerable in itself, this area, viewed in relation to the total area of the Commonwealth, is relatively small, and represents only $\frac{1}{2}$ per cent. of the total area. Per head of population of the Commonwealth the area under crop, however, is $2\frac{1}{2}$ acres, a fairly high amount when allowance is made for the recency of Australian settlement. Nearly 80 per cent. of the area under crop is devoted to the production of wheat and hay, which require for their profitable production in Australia a considerable area in the one holding. Thus on the whole the agricultural districts of Australia are somewhat sparsely populated, though in a less marked degree than is the case in the pastoral areas.

4. Progress of Manufacturing Industries.—One direct effect of the development of manufacturing industries is the concentration of population in places offering the greatest facilities for the production of the particular commodities. In Australia, where manufacturing industries are as yet in their infancy, the tendency throughout has been to concentrate the manufacturing establishments in each metropolis. This has accentuated the growth of the capital cities, which growth, when compared with that of the rest of the country, appears somewhat abnormal.

5. Influence of Droughts.—The droughts, which at times so seriously affect the agricultural and pastoral prospects of Australia, have a marked influence on the distribution of population. Districts, which in favourable seasons were fairly populous, have, in times of drought, temporarily become more or less depopulated until the return of better conditions. This movement, however, ordinarily affects only the internal distribution of the population and not the total, but severe drought may even make its influence felt in the statistics of the total population of Australia. Thus in the case of the drought of 1902-3, the departures from the Commonwealth exceeded the arrivals for the two years, 1903 and 1904, by 10,380. It may be noted also, that for the former of these years, the natural increase of population by excess of births over deaths was abnormally low, being only 51,150, as compared with 54,698 in the preceding and 60,541 in the succeeding year.

6. Other Influences.—(i.) *Commercial Crisis.* The effect on population of a commercial crisis, such as that which occurred in Australia in the early years of the final decade of the last century, is clearly indicated on comparing the migration statistics of the Commonwealth for the five years 1887-91, with those for the five years 1892-96. During the former period, the arrivals in the Commonwealth exceeded the departures by no less than 146,872. In the latter period, the corresponding excess amounted to only 2064.

(ii.) *South African War.* The war in South Africa has apparently also left its impress on the population statistics of the Commonwealth, the departures during 1899 and 1900 exceeding the arrivals for the same period by no less than 10,546.

A reference to the graphs of population on pages 191 to 196 will illustrate the preceding observations.

§ 4. Elements of Growth of Population.

1. **Natural Increase.**—The two factors which contribute to the growth of a population are the “natural increase” by excess of births over deaths, and the “net immigration,” *i.e.*, the excess of arrivals over departures. While the relative potency of these factors depends upon a variety of causes, it may be said that, in general, in the case of a new country, “net immigration” occupies an important position as a source of increase of population, while in an old country “natural increase,” modified more or less by “net emigration,” or excess of departures over arrivals, is the only element causing growth of population. The table hereunder gives the total natural increase, as well as that of males and females:—

NATURAL INCREASE¹ OF THE POPULATION

OF AUSTRALIA, STATES AND COMMONWEALTH, FROM 1861 TO 1907.

MALES.

| Period. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |

I. Excess of Births over Deaths.

With a single exception, viz., Tasmania, for the period 1906 and 1907, the natural increase of females exceeded that of males throughout the 47 years referred to in the foregoing table. This excess, for the total period 1861 to 1907, is shewn in the table both in absolute numbers and as percentages of the male increase. The quinquennial period in which the largest natural increase of population took place was that of 1891-5 with a total for the Commonwealth of 317,874. For the individual States the quinquennia of maximum natural increase were as follows:—New South Wales, Victoria and Queensland 1891-5, South Australia 1881-5, and Western Australia and Tasmania 1901-5.

2. **Comparison with other Countries.**—Notwithstanding its comparatively low birth-rate, Australia has a high rate of natural increase, owing to the fact that its death-rate is a very low one. The following table furnishes a comparison between the average rates of natural increase for some of the principal countries of the world for which such information is available, and those for the several States of the Commonwealth and the Dominion of New Zealand:—

NATURAL INCREASE PER 1000 OF MEAN POPULATION.

| Country. | Increase. | Country. | Increase. | Country. | Increase. |
|--------------------------------|-----------|---------------------------|-----------|---------------------------|-----------|
| Australasia (1903-7). | | Europe— <i>continued.</i> | | Europe— <i>continued.</i> | |
| Western Australia | 18.40 | Netherlands ... | 15.59 | Switzerland ... | 10.43 |
| Tasmania ... | 18.25 | Prussia ... | 15.23 | Belgium ... | 10.15 |
| New Zealand ... | 17.14 | German Empire | 14.44 | Spain ... | 9.38 |
| New South Wales | 16.11 | Denmark ... | 14.39 | Ireland ... | 5.89 |

| Commonwealth | 15.00 | Finland ... | 12.76 | Japan... | 10.84 |
| South Australia... | 13.54 | England & Wales | 12.13 | Ceylon ... | 10.21 |
| Victoria ... | 12.67 | Scotland ... | 12.09 | America— | |
| Europe (1902-6) ¹ — | | Austria ... | 11.33 | Jamaica ... | 14.94 |
| Bulgaria ... | 18.29 | Italy ... | 10.78 | Chile ... | 6.14 |
| Servia ... | 16.37 | Hungary ... | 10.76 | | |
| | | Sweden ... | 10.71 | | |

1. 1902-6 generally for rest of table.

The graphs of natural increase for each of the States, as well as for the Commonwealth, are shewn on page 196.

3. **Net Immigration.**—The other factor of increase in the population, viz., the excess of arrivals over departures, known as "net immigration," is, from its nature, much more subject to marked and extensive variation than is the factor of "natural increase." These variations are due to numerous causes, many of which have already been referred to in dealing with the influences which affect the growth of population. An important cause not yet referred to, is that of assisted immigration. The number of persons so introduced varies considerably in different years.

NET IMMIGRATION, OR EXCESS OF ARRIVALS OVER DEPARTURES
(STATES AND COMMONWEALTH), FROM 1861 TO 1907 INCLUSIVE.

| Period. | N.S.W. | Victoria. | Q'sland. | S. Aust. | W. Aust. | Tasmania. | C'wealth. |

Throughout, the minus sign (—) signifies that the number of departures was in excess of arrivals.

During the period 1861-1907, viz., 47 years, the gain to the Commonwealth population by excess of arrivals over departures was 784,982 persons, while the gain by excess of births over deaths for the same period was 2,266,470. That is, nearly 26 per cent. of the increase for the Commonwealth during the past 47 years has been due to "net immigration" and 74 per cent. to "natural increase." In regard to the contribution of individual States to the total net immigration of 784,982, it may be said that for two, viz., Victoria and Tasmania, the departures for the period in question actually exceeded the arrivals, viz., by 26,713 in the case of the former, and 12,488 in that of the latter, while in South

Australia the total gain for the period was only 13,663. In New South Wales, Queensland, and Western Australia, on the other hand, the additions due to net immigration during the 47 years were respectively 377,498; 246,923; and 186,099.

The quinquennial period in which the greatest net immigration to the Commonwealth occurred was that of 1881-5 with a total of 224,040, whilst that in which the smallest was recorded was the period 1896-1900 with the total of only 2487. The quinquennial periods in which maximum net immigration occurred in the several States were as follows:—New South Wales and Queensland 1881-5, Victoria 1886-90, South Australia 1876-80, Western Australia and Tasmania 1896-1900. In all the States quinquennial periods have occurred in which the departures for the five years have exceeded the arrivals. The periods in which such net emigration from the several States was greatest were as follows:—New South Wales and Victoria 1896-1900, Queensland and Tasmania 1901-5, South Australia 1886-90, and Western Australia 1906-7.

The graphs shewing net increase, both for the Commonwealth as a whole and for each of the States, will be found on pages 194 and 195.

4. **Total Increase.**—(i.) *Rates for various Countries.* The table hereunder furnishes particulars concerning rates of increase in population for the Commonwealth, its component States, and other countries:—

RATES OF INCREASE IN POPULATION, 1881 to 1907.

Information not yet available.

* Decrease. † 1890 to 1905. ‡ 1901 to 1905.

(ii.) *Variations in the Commonwealth Rate.* During the twenty-six years 1881-1907, the annual rate of increase in the population of the Commonwealth has exhibited a marked decline, falling from an average of 3.86 per cent. for the five years 1881-6 to an average of 1.49 for 1901-6, the rate for the latter period being also the average for the five years 1896-1901. During the year 1907, however, an improvement took place, the rate of increase for that year being 1.88 per cent., or almost identical with the rate for the period 1891-6. As regards the separate States of the Commonwealth, the rates of increase in all cases except that of Western Australia were lower, and in most instances considerably lower, for the period 1901-6 than for 1881-6, while in all cases except that of Western Australia the rate of increase for 1907 was higher than for the preceding quinquennium. In Western Australia a loss of population amounting to 0.07 per cent. was experienced. In all the other States fluctuations more or less marked have been in evidence.

(iii.) *Unsatisfactory Nature of Commonwealth Rate.* The annual rate of increase in the Commonwealth population for the quinquennium 1901-6 was practically identical with the annual rate for Germany, the figures being respectively 1.49 per cent. and 1.47 per cent. In view of the sparsity of the population of Australia, and the recency of its settlement, this rate of increase, equal only to that of such a densely populated country as Germany, cannot be regarded as satisfactory. When contrasted with the growth of population in the United States the comparison is even less favourable, since the annual rate of increase of that country for the period 1901-6 was 1.62 per cent. Further, if the increase in the population of the Commonwealth be compared with that of the United States under comparable conditions as to density of population, it will be seen that whilst during the seventy years 1790-1860 the population of the United States increased at a rate of slightly more than 3 per cent. per annum, that of the Commonwealth has, in the past ten years, grown at less than half that rate. The full significance of the difference between these two rates of increase will be seen on comparing the figures shewn in line (a) below with those appearing on line (b). The former represent the population of the Commonwealth in the years specified, on the assumption that the rate of increase experienced in the Commonwealth during the past ten years remains permanently in force, while the latter shew what it would be in the same years if the rate of increase experienced in the United States during the seventy years 1790-1860 were in force.

SIGNIFICANCE OF PRESENT RATE OF GROWTH OF COMMONWEALTH POPULATION.

| | 31st Dec., 1907. | 31st Dec., 1908. | 31st Dec., 1909. | 31st Dec., 1910. | 31st Dec., 1920. | 31st Dec., 1930. | 31st Dec., 1940. | 31st Dec., 1950. |
|-----|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|
| (a) | 4,197,037 | 4,260,000 | 4,324,000 | 4,388,000 | 5,091,000 | 5,906,000 | 6,852,000 | 7,949,000 |
| (b) | 4,197,037 | 4,324,000 | 4,454,000 | 4,568,000 | 6,176,000 | 8,312,000 | 11,188,000 | 15,058,000 |

(a) On basis of Commonwealth rate of increase 1898-1907.

(b) On basis of U.S.A. rates of increase 1790-1860.

These are not predictions as to the probable future population of the Commonwealth, but computations shewing what the population will be if only the present rate of increase is maintained, and what it would be if the increase were as rapid as in the United States at a comparable period.

5. *Density of Population.*—From one aspect population may be less significant in respect of its absolute amount than in respect of the density of its distribution. The Commonwealth of Australia, with an area of 2,974,581 square miles, and a population on 31st December, 1907, of 4,197,037, has a density of only 1.41 persons to the square mile, and is, therefore, the most sparsely populated of the civilised countries of the world. For the other continents the densities are approximately as follows:—Europe, 111; Asia, 55; Africa, 13; and America, 10. The population of the Commonwealth has thus about 14 per cent. of the density of that of America, about 11 per cent. of that of Africa, about 2½ per cent. of that of Asia, and about 1¼ per cent. of that of Europe.

Particulars concerning the number and density of the population of the various countries of the world for the latest dates for which such information is available are given in the following table. These figures have in the main been derived from the 1908 issue of the "Statesman's Year Book," and in some instances, more particularly in the case of Africa, must be considered as rough approximations only, complete data not being obtainable:—

NUMBER AND DENSITY OF THE POPULATION OF THE VARIOUS COUNTRIES OF THE WORLD.

Pacific Islands.

§ 5. Seasonal Variations of Population.

1. **Natural Increase.**—In most of the States of the Commonwealth the natural increase of the population is greatest in the quarter ending 30th September, and least in that ending 31st March. The birth rate is usually at its highest, and the death rate at its lowest, in the September quarter, and *vice versa* in the March quarter. The average natural increase in population of the several States for each of the quarters, based upon the experience of the seven years 1901 to 1907, is as follows:—

. AVERAGE NATURAL INCREASE, STATES AND COMMONWEALTH, 1901 to 1907.

| State. | * Average Natural Increase for Quarter ended on last day of— | | | | | | | | Average Natural Increase per annum, 1901-7. | |
|------------------|--|------|---------|------|------------|------|-----------|------|---|-------|
| | March. | | June. | | September. | | December. | | | |
| | Persons | % | Persons | % | Persons | % | Persons | % | Persons | % |
| New S'th Wales | 5,465 | 3.80 | 5,890 | 4.08 | 6,010 | 4.13 | 5,793 | 3.96 | 23,158 | 15.97 |
| Victoria ... | 3,529 | 2.91 | 3,973 | 3.27 | 4,017 | 3.30 | 3,709 | 3.04 | 15,228 | 12.53 |
| Queensland ... | 1,836 | 3.55 | 2,227 | 4.29 | 2,199 | 4.21 | 1,938 | 3.71 | 8,200 | 15.77 |
| South Australia | 1,120 | 3.02 | 1,355 | 3.65 | 1,378 | 3.71 | 1,158 | 3.10 | 5,011 | 13.47 |
| W. Australia ... | 932 | 4.11 | 1,031 | 4.47 | 1,250 | 5.33 | 966 | 4.09 | 4,179 | 18.00 |
| Tasmania ... | 749 | 4.22 | 781 | 4.42 | 835 | 4.73 | 863 | 4.84 | 3,228 | 18.22 |
| Commonwealth | 13,631 | 3.46 | 15,257 | 3.86 | 15,689 | 3.95 | 14,427 | 3.62 | 59,004 | 14.88 |

* The symbol % denotes "per thousand."

2. **Net Immigration.**—For the Commonwealth as a whole the excess of arrivals over departures for the years 1901 to 1907 was greatest in the September quarter, while in the March quarter the average excess of departures over arrivals was 1682. In New South Wales also the September quarter gives the greatest excess of arrivals over departures. In Western Australia the largest excess is in the June quarter. In South Australia and Tasmania the arrivals largely exceeded the departures in the December quarter, but in all the other quarters the departures were in excess. In Queensland, the June quarter was the only one showing an average excess of arrivals. Victoria shows an excess of departures for every quarter, the maximum being that for the quarter ended 30th June. Particulars concerning the average net immigration of the several States are as follows:—

AVERAGE NET IMMIGRATION, STATES AND COMMONWEALTH, 1901 to 1907.

| State. | Quarter ended on last day of— | | | | | | | | Average Net Immigration per annum, 1901-7. | |
|----------|-------------------------------|-------|---------|--------|------------|-------|-----------|-------|--|-------|
| | March. | | June. | | September. | | December. | | | |
| | Persons | % | Persons | % | Persons | % | Persons | % | Persons | % |
| N.S.W. | 999 | 0.69 | 2,253 | 1.56 | 3,334 | 2.29 | 61 | 0.04 | 6,647 | 4.59 |
| Victoria | -2,513 | -2.07 | -3,078 | -2.54 | -2,082 | -1.71 | 143 | -0.12 | -7,816 | -6.43 |
| Q'land | 598 | -1.15 | 1,518 | 2.93 | 132 | -0.25 | 2,148 | -4.11 | -1,355 | -2.61 |
| S. Aust. | 979 | -2.64 | -1,441 | -3.88 | 464 | -1.25 | 2,238 | 5.99 | 646 | -1.74 |
| W. Aust. | 2,857 | 12.61 | 3,350 | 14.52 | 1,921 | 8.19 | 650 | -2.75 | 7,478 | 32.22 |
| Tas. | -1,453 | -8.18 | -1,903 | -10.77 | 204 | -1.16 | 1,919 | 10.77 | -1,641 | -9.26 |
| C'wealth | -1,682 | -0.43 | 699 | 0.18 | 2,373 | 0.60 | 1,277 | 0.32 | 2,667 | 0.67 |

Throughout, the minus sign (—) denotes that the departures were in excess of arrivals. and % denotes per thousand of population.

§ 6. Urban Population.

1. **The Metropolitan Towns.**—A feature of the distribution of population in Australia is the tendency to accumulate in the capital cities. To such an extent is this metropolitan aggregation carried, that in every State the population of the capital far outnumbers that of any other town therein, and ranges between 19 and 46 per cent. of the entire population of the State. The estimated populations of the several capitals on 31st December, 1907, and the percentages of such populations on the totals for the

respective States, are shewn in the table hereunder. That this metropolitan concentration is phenomenal, may be readily seen by comparing the percentage on the total population with the similar figures for the principal countries of Europe, also given in the table hereunder:—

METROPOLITAN POPULATION.

| State or Country. | Metropolis. | Year. | Population. | Percentage on total of State or Country. |
|-----------------------|--------------------|------------------|-------------|--|
| | | | | % |
| New South Wales ... | Sydney ... | 31st Dec., 1907. | 577,180 | 36.79 |

* Population of Greater London 7,217,941.

2. Provincial Towns.—In connection with the particulars shewing the tendency in Australia to concentrate population in the metropolis, it should be borne in mind that in most of the European States the capital is but one of many populous cities, and in some instances is by no means the most populous. In Australia, on the other hand, the metropolis is in every instance the most populous city, and, in some of the States, is also the only town of considerable magnitude. It will be seen from the table on the next page, that there are in all, only fifteen towns in the Commonwealth having a population upwards of 20,000. Of these three are in New South Wales, four in Victoria, two in Queensland, one in South Australia, three in Western Australia, and two in Tasmania.

In the following table are given the estimated populations of the principal Australian towns. These particulars relate to the year 1907, except in the case of the Queensland provincial towns, the figures for which represent the population within a radius of 5 miles at the date of the Census of 1901. The metropolitan towns are included for the purpose of giving a complete view of the urban population of the Commonwealth. In all cases the populations given for the towns include those of contiguous suburban areas:—

POPULATION OF PRINCIPAL TOWNS IN THE COMMONWEALTH.

| Town (including Suburban Areas). | State in which Situatcd. | Popula- tion. | Town (including Suburban Areas). | State in which Situatcd. | Popula- tion. |

§ 7. Assisted Immigration.

In the earlier days of settlement in Australia, State-assisted immigration played an important part. Such assistance practically ceased in Victoria in 1873, in South Australia in 1886, and in Tasmania in 1891. In New South Wales general State-aided immigration was discontinued in the year 1887, but those who arrived under that system and were still residing in New South Wales might, under special regulations, send for their wives and families. A certain amount of passage money, graduated according to the age of the immigrant, was required to be paid in each case. Under the provisions of these regulations immigrants to the number of 1994 received State assistance during the years 1888 to 1899, inclusive. From 1900 to 1905 no assistance of any kind was given, but in 1906 assistance was again afforded, a total of 680 State-assisted immigrants being recorded for that year and 2845 for the year 1907. In Queensland and Western Australia, such assistance, although varying considerably in volume from year to year, has been accorded for many years past. The numbers so assisted during 1907 were 1176 in Queensland and 949 in Western Australia. In the second half of 1907 assistance to 127 immigrants was rendered by the Victorian Government.

The total number of immigrants to Australia from the earliest times up to the end of 1907, the cost of whose introduction was wholly or partly borne by the State, is approximately as follows:—

ASSISTED IMMIGRANTS UP TO END OF 1907.
STATES AND COMMONWEALTH.

| State | N.S.W. | Victoria. | Qld. | S. Aust. | W.A. | Tas. | C'wth. |
|----------------------------|---------|-----------|---------|----------|-------|--------|---------|
| No. of Assisted Immigrants | 215,497 | 140,229 | 171,473 | 95,348 | 9,452 | 21,699 | 653,698 |

§ 8. Enumerations and Estimates.

1. Musters.—Actual enumerations of Australia's population, of varying accuracy, have been made from the earliest times onward. Originally known as "Musters," these were first undertaken with a view to estimating the food and other requirements of the settlements. These musters, the results of which are said to have been very unreliable, appear to have been carried out at least annually from 1788 to 1825, when they were discontinued.

2. Census-taking.—The first regular Census in Australia was that of New South Wales, in November, 1828. The dates on which Censuses have been taken in the several States, and the populations enumerated thereat, are as shewn in table on the page immediately following.

3. The Census of 1901.—A conference of the State Statisticians of Australia and New Zealand held in Sydney in February and March, 1900, aimed at securing uniformity in the collection and compilation of the Census of 1901. The householder's schedule which it drafted made provision for the collection of information in all the States under the following heads, viz.:—Name, Sex, Age, Conjugal Condition, Relation to Head of Household, Occupation, Sickness and Infirmity, Birthplace, Length of Residence in Colony, Religion, Education, Materials of Houses and Number of Rooms. In addition to these, it was agreed that States so desiring might include further inquiries relating to Land, Live Stock, Crops, and certain other matters.

Provision was made for uniformity in the classification and compilation of the data by formulating rules for dealing with cases in which differences of opinion as to methods of treatment might exist. Thus, although conducted by six different States, the Census of the Commonwealth, as taken in 1901, was carried out on a fairly uniform plan, and consequently furnished data in many ways suitable for purposes of aggregation or comparison. A detailed examination of the results, however, gives many indications of departure from a common line of action, which, in the absence of a central authority, can hardly be avoided in an undertaking of this nature.

4. The Census of 1911.—Under Section 51, sub-section (xi.) of the Constitution Act, power is given to the Parliament of the Commonwealth to make laws with respect to "Census and Statistics." This power was brought into requisition in 1905, when the Census and Statistics Act 1905 became law, being assented to on 8th December, 1905, under this Act provision is made for the appointment of a Commonwealth Statistician, and amongst other duties that officer is charged with the taking of a Census in the year 1911 and in every tenth year thereafter.

The particulars which the Act requires to be included in the Census schedule are almost identical with those which were contained in the 1901 schedule, the principal

alterations being that "Length of Residence in Australia" is to be asked instead of "Length of Residence in the Colony of Enumeration," that "Duration of Marriage" is to be asked in all cases, and that nationality is to be ascertained in addition to birthplace.

| 1901 ⁵ | 1,354,846 | 1,201,070 | 498,129 | 363,157 | 184,124 | 172,475 | 3,773,801 |

1. Including Port Phillip District, which afterwards became the Colony of Victoria. 2. Previously included with New South Wales. 3. 3rd April. 4. 5th April. 5. 31st March.

5. **Estimates of Population.**—In the absence of an annual enumeration of the population, it becomes necessary to adopt some method of estimating it for intercensal periods, basing such estimates on the results of the most recent Censuses. The manner in which this is effected varies, however, in different parts of the world. In England, for example, the assumption made is that the rate of increase of the preceding intercensal period will

continue unchanged during the current period. Again, in the United States, it has been assumed, in certain cases, that the numerical increase per annum ascertained for the preceding intercensal period will hold good for the current period. From the earliest times in Australia, "statistics of fluctuation" have been obtained from the records of births, deaths, arrivals and departures. With reasonable thoroughness in the collection of such statistics, the deduced estimates possess much greater weight than those based on the mere assumption of a continuation of the increase experienced in the preceding period. In most cases, however, estimates of population, based on statistics of fluctuation, are found to be in excess at the Census, thus indicating a uniform tendency to over-estimation, and the necessity for a correction. In the population figures given in the earlier portion of the present section, the estimates of the population of the several States have been carefully revised, the results of the various Censuses being taken in conjunction with the records of births, deaths, arrivals and departures. It is believed that by this means the population of the Commonwealth from the date of settlement onwards has been obtained with a high degree of accuracy, and that the figures supplied represent a reasonably close approximation to the actual numbers. Particulars for the several States from the date of settlement onwards are given in the following tables, and are shewn by graphs on pages 191 to 193:—

AUSTRALIAN POPULATION FROM EARLIEST DATE.

* Previously included with New South Wales.

† Details not available.

The tables on the two preceding pages, shewing the quinquennial figures for the male, female, and total population of each State and the Commonwealth, give sufficient indication, for general purposes, of its progress. A reference to the diagrams given hereinafter (in this section), on which the graphs shew the particulars for *each* year, is also desirable. The characteristics of the fluctuations of each element, or of the totals, will be more readily perceived by reference to the graphs than they possibly can by reference to these numerical tables. The earliest date for which particulars as to sex were available was 1796. The figures from 1788 to 1825 inclusive shew the results of the musters taken in those years; those for subsequent years are founded upon estimates made at the end of each year on the basis of the Census results and the annual returns of births and deaths and immigration and emigration.

§ 9. Principal Results of Census of 1901.

1. **Census Results.**—In the first issue of the Official Year Book tables are given shewing in some detail particulars for the several States under the headings of Ages, Birthplaces, Occupations, Religions, and Conjugal Condition. Similar information in a very condensed form is given hereunder. For fuller particulars reference should be made to the first issue.

2. **Ages.**—The numbers of persons of each sex in some of the more important age groups enumerated in the several States of the Commonwealth at the Census of 31st March, 1901, are as follows:—

AGE DISTRIBUTION OF AUSTRALIAN POPULATION ON 31st MARCH, 1901.

3. **Birthplaces.**—In the next table is given a summary of the populations of the several States of the Commonwealth on 31st March, 1901, classified according to sex and birthplace, the birthplaces being grouped under the five continental divisions of the globe, with two additional headings for those born in Polynesia, and those born at sea. Of the total population of 3,773,801 those of unspecified birthplace numbered only 7922, or little more than 2 per thousand :—

4. **Occupations.**—In the compilation of the results of the Census of 31st March, 1901, the populations of the several States were tabulated according to occupation in the following classes:—

(i.) *Professional.* Embracing all persons not otherwise classed, mainly engaged in the government and defence of the country, and in satisfying the moral, intellectual, and social wants of its inhabitants.

(ii.) *Domestic.* Embracing all persons engaged in the supply of board and lodging, and in rendering personal services for which remuneration is usually paid.

(iii.) *Commercial.* Embracing all persons directly connected with the hire, sale, transfer, distribution, storage, and security of property and materials.

(iv.) *Transport and Communication.* Embracing all persons engaged in the transport of persons or goods, or in effecting communication.

(v.) *Industrial.* Embracing all persons not otherwise classed who are principally engaged in various works of utility, or in specialities connected with the manufacture, construction, modification, or alteration of materials so as to render them more available for the various uses of man, but excluding, as far as possible, all who are mainly or solely engaged in the service of commercial interchange.

(vi.) *Agricultural, Pastoral, Mineral, and other Primary Producers.* Embracing all persons mainly engaged in the cultivation or acquisition of food products, and in obtaining other raw materials from natural sources.

(vii.) *Indefinite.* Embracing all persons who derive incomes from services rendered, but the direction of which services cannot be exactly determined.

(viii.) *Dependents.* Embracing all persons dependent upon relatives or natural guardians, including wives, children, and others, not otherwise engaged in pursuits for which remuneration is paid, and all persons depending upon private charity; or whose support is a burthen on the public revenue.

Particulars concerning the number contained in each of these classes are given in the table hereunder:—

5. Religions.—In the Acts under which the Census of 1901 was taken in the several States, persons enumerated were required under penalty to furnish replies to all the inquiries contained in the schedule, with the exception of that relating to religion. In this case, any person objecting to give such particulars was allowed to insert the words "Object to state" in the column provided for religion. Of the total population of 3,773,801 there were 42,131, or 1.12 per cent., who availed themselves of this option. There were also 14,060, or 0.37 per cent., concerning whom no particulars as to religion were obtained.

Of the remainder, 3,626,449, or 97.55 per cent., were members of the various Christian denominations, 53,371 were members of non-Christian religions, 31,011 were of indefinite religious belief, and 6779 stated that they were of no religion.

Amongst the Christian denominations, that most numerous represented was the Church of England, with 1,497,576 adherents, the next in order being the Roman Catholic (850,620), the Methodist (504,101), the Presbyterian (426,105), the Baptist (89,338), the Lutheran (75,021), the Congregational (73,561), and the Salvation Army (31,100).

The principal non-Christian religions represented in Australia were the Hebrew, Mahomedan, Buddhist and Confucian, the members of the Hebrew congregation totalling 15,239.

Those included under the head of "Indefinite" in the attached table consist mainly of persons who stated that they were "Freethinkers" or "Agnostics," or returned themselves as being of "No Denomination," while under the head of "No Religion" are given those who were so returned on the schedules as well as a small number who stated that they were "Atheists."

6. **Conjugal Condition.**—In the following tables are given summaries of the particulars concerning the population of the several States on 31st March, 1901, classified according to age and conjugal condition. In the case of South Australia divorced persons and persons whose conjugal condition was not stated were included under other heads. The figures given in these tables are exclusive of 1553 half-castes in Queensland, and 553 in South Australia, whose ages and conjugal condition were unspecified:—

§ 10. Naturalisation.

1. **The Commonwealth Act.**—The Commonwealth Constitution empowers the Commonwealth Parliament to make laws with respect to “Naturalisation and Aliens,” a power which was exercised when the “Naturalisation Act of 1903” was passed. Assented to on 13th October of that year, this Act came into force on 1st January, 1904, in accordance with a proclamation by *Gazette* of 14th November, 1903.

Prior to the passing of this Act the issue of certificates of naturalisation had been a function of the State Governments, carried out under Acts of the several State Legislatures, which, however, did not differ materially from each other, and furnished the basis on which the Commonwealth Act was drafted. From 1st January, 1904, when the Act became operative, the right to issue certificates of naturalisation in the Commonwealth has been vested exclusively in the Federal Government, but all certificates or letters of naturalisation issued under the several State Acts prior to that date entitle the recipients to be deemed to be naturalised under the Commonwealth Act.

The grant of a certificate of naturalisation entitles the recipient within the limits of the Commonwealth to all the rights and privileges, and renders him subject to all the obligations, of a natural-born British subject, with the exception that where, by any Commonwealth or State Constitution or Act, a distinction is made between natural-born British subjects and naturalised persons, such distinction shall hold good in the case of all persons naturalised under the Commonwealth Act.

Applications for certificate of naturalisation must be made to the Governor-General, the qualifications required in an applicant being :—

- (i.) That he is not a British subject.
- (ii.) That he is not an aboriginal native of Asia, Africa, or the Islands of the Pacific, excepting New Zealand.
- (iii.) That he intends to settle in the Commonwealth.
- (iv.) (a) That he has resided in Australia continuously for two years immediately preceding naturalisation ; or
(b) That he has obtained in the United Kingdom a certificate or letters of naturalisation.

An applicant who has already obtained a certificate or letters of naturalisation in the United Kingdom is required to furnish, in support of his application—

- (i.) His certificate or letters of naturalisation.
- (ii.) His statutory declaration—
 - (a) That he is the person named therein.
 - (b) That he obtained the certificate or letters without fraud or intentional false statement.
 - (c) That the signature and seal thereto are, to the best of his knowledge and belief, genuine.
 - (d) That he intends to settle in the Commonwealth.

If the applicant is not already naturalised in the United Kingdom the particulars which he is required to furnish in support of his application are as follows :—

- (i.) His own statutory declaration stating—
 - (a) Name ; (b) Age ; (c) Birthplace ; (d) Occupation ; (e) Residence ; (f) Length of residence in Australia ; (g) Intention to settle in the Commonwealth.
- (ii.) A certificate signed by a Justice of the Peace, a postmaster, a teacher of a State school, or an officer of police, that the applicant is known to him and is of good repute.

In connection with any application for naturalisation, the Governor-General in Council is authorised to grant or withhold a certificate as he thinks most conducive to the public good, but the issue of a certificate to any person who is not already naturalised in the United Kingdom is not admissible until the applicant has taken an oath or affirmation of allegiance. The grant of a certificate is made free of charge.

In addition to naturalisation by grant of certificate, the Act makes provision for—

- (i.) Naturalisation by marriage.
- (ii.) Naturalisation by residence with naturalised parent.

The former relates to the case of a woman who is not herself a British subject, but is married to a British subject; the latter to that of an infant who is not a natural-born British subject, but who has resided at any time in Australia with a father or mother who is a naturalised British subject. In each instance the person concerned is deemed to be naturalised under the Commonwealth Act.

The administration of the Act is carried out by the Department of External Affairs, and the Governor-General is authorised to make such regulations as are necessary or convenient for giving effect to the Act. Up to the present, however, no such regulations have been issued.

2. **Statistics of Naturalisation.**—Particulars relative to the nationalities of the recipients of certificates of naturalisation issued under the Act during each of the four years 1904 to 1907, and to the countries from which such recipients had come, are shewn in the following table. Corresponding particulars as to certificates issued under the State Acts during the years 1901 to 1903 are not available in such detail as to admit of comparison:—

COMMONWEALTH CERTIFICATES GRANTED, 1904 to 1907.

The following table furnishes particulars concerning the States in which the recipients of Commonwealth certificates of naturalisation during the years 1904 to 1907

GRAPHS OF TOTAL POPULATION OF THE COMMONWEALTH OF AUSTRALIA AND EACH STATE THEREIN, 1788-1907.

EXPLANATION OF GRAPHS.—The base of each small square represents two years' interval for both States and Commonwealth; and the vertical height 80,000 persons for Commonwealth or 20,000 for States. The zero line for the States is the bottom line; for the Commonwealth it is the line marked "Commonwealth," with 0 written below. The scale on the right and that below the Commonwealth zero line on the left relate to the States, that above the Commonwealth zero line on the right relates to the Commonwealth.

Where the population falls suddenly the fall denotes the creation of a new colony, e.g., New South Wales 1825, loses the whole population of Tasmania, then erected into a separate colony.

The curves are as follows:—Commonwealth, an unbroken line; New South Wales, — — —; Victoria, - - - - -; Queensland, - - - - -; South Australia, - - - - -; Western Australia, - - - - -; Tasmania, - - - - -; the names on the curves also shew which State each represents.

The manner in which the population of the Commonwealth would have grown from 1860 to 1907 if, during that period, there had been in operation the rate of increase actually experienced in the United States from 1790 to 1860, is shewn for purposes of comparison.

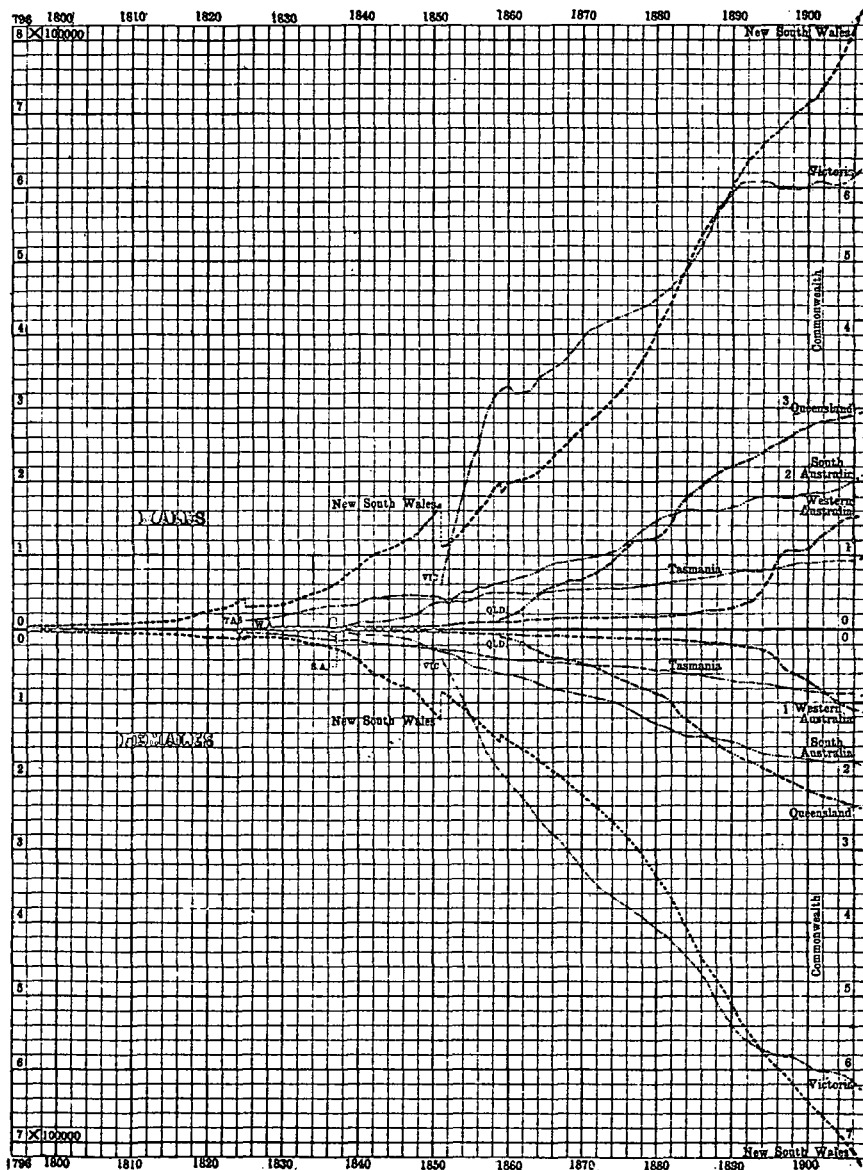

GRAPHS OF MALE AND FEMALE POPULATIONS, COMMONWEALTH OF AUSTRALIA, 1796-1907

EXPLANATION OF GRAPHS.—The base of each small square represents two years' interval, and the vertical height 80,000 persons. The distances upward from the heavy zero line denote the number of males, and downward the number of females. From 1860 onward is shown, for purposes of comparison, the manner in which the numbers of each sex in the Commonwealth would have grown from 1860 to 1907 if, during that period, there had been in operation the rate of increase actually experienced in the United States from 1790 to 1860.

The asymmetry of the two graphs reveals the want of uniformity in the increase of the two sexes.

GRAPHS OF MALE AND FEMALE POPULATION OF THE STATES OF AUSTRALIA, 1796-1907.

EXPLANATION OF GRAPHS.—The base of each small square represents two years' interval, and the vertical height 20,000 persons. The distances upward from the zero line represent the number of males, and downward the number of females.

The sudden falls denote the creation of new colonies.

The names on the curves denote the States to which they refer, and the curves are as follows :—New South Wales, — — —; Victoria, — — — — —; Queensland, — — — — —; South Australia, — — — — —; Western Australia, — — — — —; Tasmania, — — — — —.

The asymmetry of the two series of graphs reveals the want of uniformity in the increase of the two sexes.

GRAPHS SHEWING NET INCREASE OF POPULATION OF THE COMMONWEALTH OF AUSTRALIA AND THE STATES OF NEW SOUTH WALES AND VICTORIA, 1850-1907.

(For explanation see foot of next page.)

GRAPHS SHEWING NET INCREASE OF POPULATION OF THE STATES OF QUEENSLAND, SOUTH AUSTRALIA, WESTERN AUSTRALIA, AND TASMANIA.

EXPLANATION OF GRAPHS SHEWING NET INCREASE.—The base of each small square represents an interval of a year for both States and Commonwealth; the vertical height represents 2000 for the Commonwealth and 1000 for the States. Four zero lines are taken, viz.—(i.) For the Commonwealth; (ii.) for New South Wales and Victoria; (iii.) for Queensland and South Australia; and (iv.) for Tasmania and Western Australia. These are indicated on the graphs.

NET DECREASES in population are shown by carrying the graph in such cases below the zero line, the distance of the graph below the zero line indicating the extent of the decrease.

The lines used are as follows:—Commonwealth, an unbroken line; New South Wales, — — —; Victoria, — · — ·; Queensland, · · · ·; South Australia, — — — —; Western Australia, — — — —; Tasmania, — · — ·.

The names given on the diagram also indicate which State each graph represents.

GRAPHS OF NATURAL INCREASE OF THE POPULATION OF THE COMMONWEALTH AND STATES OF AUSTRALIA, 1860-1907.

EXPLANATION OF GRAPHS.—The base of each small square represents one year for both States and Commonwealth, and the vertical height 1000 persons for the States or 2000 persons for the Commonwealth.

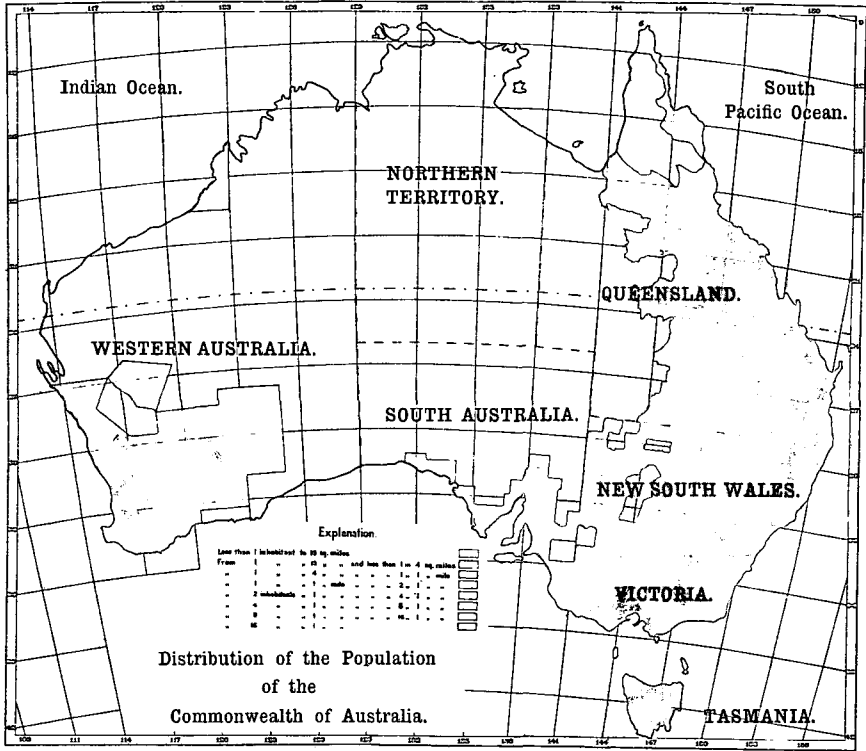

The distances upward from the zero line, marked 0 for both Commonwealth and States, denote the excess of births over deaths. The smaller scale running 0. 5. 10. 15. 20 relates to the States, while the larger running 20. 30. 40. 50. 60. 70. relates to the Commonwealth curve. The names show the States to which the curves refer, they are as follows:—Commonwealth —; New South Wales, — — —; Victoria, — — — —; Queensland, — — — — —; South Australia, — — — — — —; Western Australia, — — — — — — —; Tasmania, — — — — — — — —.

GRAPHS SHEWING MASCULINITY OF THE COMMONWEALTH AND STATES
OF AUSTRALIA, 1796-1907.

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year, and the vertical height an excess of eight per cent. of males over females. The basic line (shewn thickened) for Commonwealth and all the States is 100 per cent., equivalent to a numerical equality of the sexes.

DENSITY OF POPULATION THROUGHOUT THE COMMONWEALTH OF AUSTRALIA
ACCORDING TO CENSUS OF 1901.

This map furnishes a graphic representation of the distribution of the population of the Commonwealth at the date of the last census, 1901. For this purpose the density of the population of variously constituted districts in each State has been computed, and the areas representing those have been shaded in accordance with the scale of density given at the foot of the map. The districts for which the results of the census were tabulated in the several States and which have, therefore, been used in the map are as follows:—New South Wales, counties; Victoria, counties; Queensland, census districts coincident with registration districts; South Australia, counties so far as the State has been divided into counties; Western Australia, magisterial districts; Tasmania, electoral districts.

A map drawn on such a small scale must of course be considered as furnishing only a rough approximation as to the true distribution of the population, owing to the fact that a small densely-populated area may exist in certain cases within a comparatively large district, the balance of which is but sparsely populated. Thus, in such a case, owing to the density of the whole district being alone taken into account, the fact of a concentration of population within a small area is lost for purposes of representation. It is evident that the larger the district is for which the density has been calculated, the less will the map represent the true facts. Thus New South Wales, Victoria, and South Australia present a truer picture than the remaining three States. The densely-populated mining centres of the northern part of Queensland, the goldfields and pearling grounds of Western Australia, and the mines on the west coast of Tasmania are all contained in large districts which, apart from the centres mentioned, are very sparsely populated, and which, therefore, shew a darker shading on the map than they would present if the size of the map had allowed a division into smaller districts to be made.

The concentration of population about the capitals, referred to in the accompanying text, is obvious on reference to the above map.

were resident. The numbers of certificates granted under the several State Acts during the years 1901, 1902, and 1903 are also given.

NATURALISATION CERTIFICATES GRANTED, 1901 to 1907.

| STATE. | Number of Certificates Granted. | | | | | | |
|-----------------------|---------------------------------|-------|-------|-------|-------|-------|-------|
| | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
| New South Wales ... | 507 | 386 | 400 | 1,379 | 544 | 475 | 458 |
| Victoria ... | 574 | 500 | 397 | 319 | 213 | 301 | 214 |
| Queensland... | 449 | 375 | 355 | 115 | 150 | 177 | 193 |
| South Australia ... | 109 | 54 | 43 | 25 | 34 | 45 | 27 |
| Western Australia ... | 58 | 111 | 75 | 248 | 166 | 150 | 134 |
| Tasmania ... | 70 | 28 | 149 | 21 | 11 | 39 | 16 |
| Commonwealth ... | 1,767 | 1,454 | 1,419 | 2,107 | 1,118 | 1,187 | 1,042 |

3. **Census Particulars.**—In the Census Schedule drafted by the Statistical Conference of 1900, provision was made for the inclusion of particulars concerning the number of persons who had become British subjects by naturalisation. This information was obtained in all the States except Queensland, the particulars being as follows:—

NUMBER OF NATURALISED BRITISH SUBJECTS RECORDED AT THE AUSTRALIAN CENSUS OF 1901.

| Particulars. | N.S.W. | Victoria. | Qld. | S. Aust. | W. Aust. | Tasmania. | C'wealth.* |
|--------------|--------|-----------|------|----------|----------|-----------|------------|
| Males ... | 3,265 | 3,304 | 1 | 1,360 | 576 | 119 | 8,624 |
| Females ... | 354 | 1,262 | 1 | 545 | 101 | 24 | 2,286 |
| Persons ... | 3,619 | 4,566 | 1 | 1,905 | 677 | 143 | 10,910 |

1. Not ascertained. 2. Exclusive of Queensland.

It is probable that the numbers furnished above fall short of the total number of naturalised persons at the date of the Census, as the method of recording the fact of naturalisation on the schedule was that of inserting the letter N after the birthplace, a method which is always liable to lead to errors of omission. Cases also of women who had become naturalised by marriage to British subjects, would probably remain unrecorded in many instances.

§ 11. Graphical Representation of Growth of Population.

1. **General.**—The nature of the fluctuations of the numbers representing (a) total population, or those representing (b) births and deaths from year to year, or (c) the natural increase, *i.e.*, the difference of births and deaths, or (d) the net immigration, all of which taken together make up the element of increase of total population, cannot be readily discerned from mere numerical tables. It has been deemed desirable therefore to furnish a series of graphical representations, shewing in some cases the characteristics of these elements from 1788 to 1907, and in others from 1860 to 1907. The graphs furnish at a glance a clear indication of the changes taking place, and of their significance from year to year. The great importance of such representations is that only by their means can the most recent changes be justly apprehended, either in their relation to the past, or their meaning for the future.

2. **Graphs of Total Population** (page 191).—These graphs furnish interesting evidence of the comparatively slow rate of growth of the several States and of the Commonwealth as a whole, during the period from the foundation of settlement in 1788 until 1832. From that year onwards to 1851, a moderately increased rate of progress was experienced. In 1851 gold was discovered in Australia, and the effect of this discovery on the population of the Commonwealth is shewn by the steepness of the curves for New South Wales and Victoria, and also of the Commonwealth, from this point onwards for a series of years. The sudden breaks in the continuity of the curves for New South Wales indicate the creation of new colonies, and their separation from the mother colony. Thus, Tasmania came into existence in 1825, Victoria in 1851, and Queensland in 1859. Owing to the extensive gold discoveries in Victoria, its population increased so rapidly that in 1854 its total passed that of New South Wales, and remained in excess until 1892, when the mother State again assumed the lead, which it has since maintained. The rate of increase in New South Wales is large, but the State is only sparsely populated. A feature of the New South Wales curve is its comparative regularity as compared with that of Victoria, the population of which State increased with great rapidity from 1851 to 1860, less rapidly from 1861 to 1878, with a further period of increased rapidity from 1878 to 1891, and a period of very slow and fluctuating growth from the latter year to 1907. Victoria, however, has a population density more than double that of Tasmania, and about three times that of New South Wales.

In the case of Queensland, the curve indicates a rate of growth which, though varying somewhat, has on the whole been satisfactory, and at times very rapid. Periods of particularly rapid increase occurred from 1862 to 1865, from 1873 to 1877, and from 1881 to 1889. The population of Queensland passed that of Tasmania in 1867, and that of South Australia in 1885. The population density of Queensland is less than one-seventeenth that of Victoria.

The curve for South Australia indicates that with fluctuations more or less marked, the population increased at a moderate rate from the date of the foundation of the colony in 1836 until 1884, and that from that point onwards a diminished rate of increase was experienced. The population of South Australia passed that of Tasmania in 1852. Its density is about half that of Queensland, about one-twelfth that of New South Wales, and about one-thirty-third that of Victoria.

The curve for Western Australia indicates that the population increased regularly but very slowly until 1886, when the discovery of gold in the Kimberley division caused an influx of population. The effects of the further rich discoveries of gold in the Murchison and Coolgardie districts in 1891 and 1892, are clearly shewn in the rapid increase of population in those and subsequent years to 1897. Two years of retarded progress then occurred, followed by a satisfactorily rapid rate of increase from 1899 to 1906, and a decline in 1907. The population of Western Australia became greater than that of Tasmania

in 1899. Its density is little more than half that of South Australia, one-third that of Queensland, one-eighteenth that of New South Wales, and about one-fiftieth that of Victoria.

The Tasmanian population curve indicates a comparatively slow rate of growth throughout. Its most noticeable feature is a retardation in increase in 1852 and subsequent years, brought about by the discovery of gold on the mainland. The population density of Tasmania is more than 40 per cent. greater than that of New South Wales, and a little less than half that of Victoria.

3. Graphs for Commonwealth of Male and Female Population (page 192).—These curves shew the relative growth of male and female population of the Commonwealth, and it will be seen that the former are far more liable to marked fluctuations than the latter. The curves representing an increase of population on the basis of the United States rate for 1790 to 1860, indicate that on the whole the female rate of increase in the Commonwealth has been a fairly satisfactory one, and that from 1860 to 1893 the same might be said of the male population. From 1893 onwards, however, the male population of the Commonwealth has fallen considerably below this rate, and it may be added that the rapid lowering of the rate of increase of the male population must be regarded as unsatisfactory from a national standpoint.

Although the rate of increase of the female population from 1860 onwards is on the whole very satisfactory, it should be noted that the total number at the beginning of this period was relatively very small, and that from 1894 there is an unsatisfactory falling off in the rate of increase, similar to that experienced in the case of males.

4. Graphs for each State of Male and Female Population (page 193).—These graphs, shewing the relative progress in male and female population for each of the States, disclose the fact that in all cases the female population is much less liable to marked fluctuations than the male, and further, that in cases where rapid increases have taken place in the latter a similar, but much more gradual, increase is in evidence in the former, commencing usually, however, somewhat later than in the case of the males. A comparison of the graphs of each of the States with that of the Commonwealth shews that the fluctuations in the latter case are smaller than in the former. This is largely due to internal migrations of the male element of the population, brought about by various causes, amongst which mining developments figure prominently.

5. Graphs of Natural Increase of Population, Commonwealth and States (page 196).—The graphs indicate that, with the exception of certain marked variations, the natural increase of the population of the Commonwealth, viz., the excess of births over deaths, advanced with fair rapidity from 1860 to 1892, in which year it attained its maximum, when, however, it fell rapidly till 1898. A subsequent rise to 1900 was followed by a continuous fall for the three years succeeding, viz., to 1903. The recovery shows a fairly rapid rise to 1907. The years in which the natural increase of the Commonwealth was at its highest were 1865, 1871, 1881, 1892, and 1900; and the years of extraordinarily low rates of natural increase were 1866, 1875, 1882, 1898, and 1903. The low rate of 1898 was due in large measure to a phenomenally high death rate experienced in practically all the States in that year, when an epidemic of measles was prevalent throughout the Commonwealth. The low rate of 1903 was brought about by the low birth rates and high death rates which accompanied the drought of 1902-3, while the advance in the rate of natural increase since 1903 has been collateral with the marked improvement in material conditions experienced throughout the Commonwealth during that period.

6. Graphs shewing Net Increase of Population (pages 194 and 195).—The graphs disclose the fact that the most notable years of large net increases of population of the Commonwealth as a whole were 1864, 1877, 1883, 1888, and 1907. The highest increase was attained in 1883. The net increase for 1907 was higher than for any year since 1891. The years in which low net increases were noticeable were 1861, 1867, 1872, 1878, 1889, 1893, 1898, and 1903.

The graph for New South Wales indicates a high net increase of population between 1876 and 1893, advancing to a maximum in 1883, and then declining to 1901. From the latter year onwards to 1907 an advance in the net increase has been in evidence.

A feature of the graph shewing the Victorian net increase is the height attained in 1864, 1870, 1888, and 1901, the smallness of the increase for the years 1861 and 1875, and the decreases for 1896 and 1903.

For Queensland it will be seen that the years of high net increases were 1862, 1875, 1883, 1895, and 1901, while the years in which these were at very low level were 1869, 1878, 1891, and 1903.

In South Australia the net increases were exceptionally high in 1865, 1876, 1883, and 1892, and correspondingly low in 1870, 1886, and 1896.

In Western Australia the net increase graph indicates no very marked advance until about 1884, from which it rises somewhat rapidly to 1886, and then declines to 1888. This is followed by an exceedingly rapid rise to 1896, and a subsequent fall to 1899, succeeded by a further rise to 1902, and fall thereafter.

In the case of the Tasmanian graph indications of a very varied net increase are in evidence, the principal high points being those for the years 1887, 1891, 1897, and 1902, while actual decreases were experienced in 1874, 1875, 1892, and 1906.

7. Graphs shewing Masculinity of Population, Commonwealth and States (page 197).—These graphs furnish information concerning the variations which have taken place in the relative numbers of males and females in the populations of the Commonwealth and the several States during the years 1796 to 1907, and incidentally serve to indicate special features of growth in the respective populations. In general it will be noted that in recent years there has been a marked tendency towards a masculinity of 100, that is, to a condition in which the numbers of males and females in the population were equal, but that with the exception of Victoria in 1904 and 1907 the masculinity has never fallen below 100. The early experience of the Commonwealth exhibits a fairly rapid decline in masculinity to 1812, followed by an even more rapid rise to 1828 and a subsequent fall with more gentle slope to 1850. From 1850 onwards the decline in masculinity has been fairly continuous though subject to fluctuations. It should be noted that the marked variations of the earlier as compared with the later years have been due to a considerable extent to the fact that, owing to the smallness of the population, any considerable influx of male immigrants had a marked effect in increasing the masculinity of the population, while an influx of female immigrants tended to considerably reduce it. Two points of special interest in the graphs of the separate States are the maxima attained in 1852 in Victoria and 1896 in Western Australia, as the result of extensive male immigration consequent on the gold discoveries in the respective States.

SECTION V.
VITAL STATISTICS.

§ 1. Births.

1. **Male and Female Births, 1901 to 1907.**—The total number of male and female births registered in the Commonwealth and New Zealand during the years 1901 to 1907 is as shewn in the two tables hereunder :—

TOTAL MALE BIRTHS, AUSTRALASIA, 1901 to 1907.

| State, etc. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-------------------------------|--------|--------|--------|--------|--------|--------|--------|
| N.S. Wales ... | 19,149 | 19,322 | 18,377 | 19,857 | 20,206 | 21,066 | 21,604 |
| Victoria ... | 15,876 | 15,583 | 15,115 | 15,313 | 15,523 | 15,716 | 15,986 |
| Queensland, ... | 7,281 | 7,279 | 6,427 | 7,134 | 6,978 | 7,280 | 7,451 |
| S. Australia ¹ ... | 4,687 | 4,587 | 4,484 | 4,686 | 4,514 | 4,617 | 4,689 |
| W. Australia ... | 2,946 | 3,241 | 3,433 | 3,666 | 3,862 | 4,043 | 3,962 |
| Tasmania ... | 2,570 | 2,604 | 2,570 | 2,702 | 2,812 | 2,792 | 2,797 |

1. Including Northern Territory.

2. **Total Births, 1901 to 1907.**—While the total number of births for the Commonwealth was higher in 1907 than in any of the preceding six years, the following table of particulars discloses also the fact that in Victoria, Queensland and South Australia the excess of births in 1907 over those in 1901 was very small :—

TOTAL BIRTHS, AUSTRALASIA, 1901 to 1907.

| State, etc. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|----------------------------------|---------|---------|--------|---------|---------|---------|---------|
| New South Wales ... | 37,875 | 37,835 | 35,966 | 38,667 | 39,501 | 40,948 | 42,201 |
| Victoria ... | 31,008 | 30,461 | 29,569 | 29,763 | 30,107 | 30,844 | 31,865 |
| Queensland ... | 14,305 | 14,216 | 12,621 | 14,082 | 13,626 | 14,019 | 14,540 |
| South Australia ¹ ... | 9,111 | 8,947 | 8,508 | 9,133 | 8,868 | 8,946 | 9,238 |

| New Zealand ... | 20,491 | 20,655 | 21,829 | 22,766 | 23,682 | 24,252 | 25,094 |

1. Including Northern Territory.

3. *Birth Rates, 1901 to 1907.*—(i.) *Crude Birth Rate.* The birth rate for the whole Commonwealth was lower in 1907 than in 1901, and Tasmania is the only State in which a slight increase in the rate took place, as will be seen from the following table, which gives also the number of persons per square mile in each State :—

CRUDE BIRTH-RATE,¹ AUSTRALASIA, 1901 to 1907.

| State, etc. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | Density ² (No. per sq. mile). |
|----------------------------------|-------|-------|-------|-------|-------|-------|-------|--|
| New South Wales ... | 27.78 | 27.20 | 25.41 | 26.81 | 26.79 | 27.12 | 27.22 | 5.06 |
| Victoria ... | 25.75 | 25.16 | 24.46 | 24.65 | 24.83 | 25.20 | 25.32 | 14.20 |
| Queensland ... | 28.53 | 27.89 | 24.62 | 27.13 | 25.92 | 26.31 | 26.98 | 0.81 |
| South Australia ³ ... | 25.11 | 24.54 | 23.25 | 24.71 | 23.67 | 23.55 | 23.96 | 0.43 |

| Tasmania ... | 28.60 | 29.23 | 28.62 | 29.60 | 29.33 | 29.82 | 29.50 | 7.02 |
| Commonwealth ... | 27.14 | 26.66 | 25.23 | 26.33 | 26.12 | 26.41 | 26.55 | 1.41 |
| New Zealand ⁴ ... | 26.34 | 25.89 | 26.61 | 26.94 | 27.22 | 27.08 | 27.30 | 8.87 |

1. Number of Births per 1000 of the mean annual population.
2. On 31st December, 1907.
3. Including Northern Territory.
4. Excluding Maoris.

The population density of each State and of the Commonwealth has been given for the purpose of considering the influence, if any, of concentration of population on birth-rate, in connection with the disparities of the rate in different parts of Australia.

(ii.) *Objections to Crude Birth Rate.* The figures just given represent the "crude birth rate," viz., the number of births per thousand of mean annual population. The number of births per thousand of the female population of child-bearing ages, viz., from 15 to 45, would furnish a more significant rate. To calculate this, would, of course, involve assumptions concerning the variations of the age and sex constitution of the population since the last Census. Calculations of this nature at the present time would be subject to so large an uncertainty that it has been decided to defer computing the rates of fecundity and fertility on other and better bases until after the next Census.

4. **Birth Rates of Various Countries.**—A comparison with other countries shews that the Australian States occupy a very low position, which is, however, fortunately counterbalanced by a still lower position in regard to their death rates, as will be seen from the table on page 221.

CRUDE BIRTH RATE¹ OF VARIOUS COUNTRIES.

| Country. | Year. | Rate. | Country. | Year. | Rate. |
|----------------------|-------|-------|-------------------------|-------------|-------------|
| Russia, European ... | 1901 | 47.9 | Western Australia ... | 1907 | 29.4 |
| Bulgaria ... | 1905 | 43.8 | Denmark ... | 1906 | 28.5 |
| Servia ... | 1906 | 41.3 | Scotland ... | 1906 | 27.9 |
| Rumania ... | 1905 | 38.6 | Switzerland ... | 1905 | 27.4 |
| Jamaica ... | 1906 | 38.1 | New Zealand ... | 1907 | 27.3 |
| Hungary ... | 1906 | 36.0 | New South Wales ... | 1907 | 27.2 |
| Ceylon ... | 1906 | 35.7 | England and Wales ... | 1906 | 27.1 |
| Chile ... | 1905 | 35.1 | Queensland ... | 1907 | 27.0 |
| Spain ... | 1906 | 34.1 | United Kingdom ... | 1906 | 26.8 |
| Austria ... | 1905 | 33.7 | Commonwealth ... | 1907 | 26.6 |
| Prussia ... | 1906 | 33.7 | Norway ... | 1906 | 26.5 |
| German Empire ... | 1905 | 33.0 | Belgium ... | 1906 | 25.7 |
| Italy ... | 1906 | 31.9 | Sweden ... | 1906 | 25.7 |
| Finland ... | 1905 | 30.6 | Victoria ... | 1907 | 25.3 |
| Japan ... | 1905 | 30.6 | South Australia ... | 1907 | 24.0 |
| Netherlands ... | 1906 | 30.4 | Ireland ... | 1906 | 23.6 |
| Tasmania ... | 1907 | 29.5 | France ... | 1906 | 20.6 |

1. Number of births per 1000 of the mean population.

5. **Masculinity at Birth.**—The masculinity of births registered during the last seven years in the several States of the Commonwealth, *i.e.*, the number of males per 100 females, has varied from 102.26 in New South Wales in 1901 to 115.01 in Tasmania in 1905. The following table, which gives the values for the States and Commonwealth for 1901 to 1907, shews the remarkable fact that for the Commonwealth there was a steady increase of masculinity from 1901 to 1906, with a decrease to the 1902 level in 1907.

MASCULINITY¹ OF BIRTHS REGISTERED IN AUSTRALIA, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------|--------|--------|--------|--------|--------|--------|--------|
| N.S.W. ... | 102.26 | 104.37 | 104.48 | 105.57 | 104.72 | 105.96 | 104.89 |
| Victoria ... | 104.92 | 104.74 | 104.57 | 105.97 | 106.44 | 103.89 | 103.95 |
| Queensland ... | 103.69 | 104.93 | 103.76 | 102.68 | 104.96 | 108.03 | 105.11 |
| South Australia | 105.94 | 105.21 | 111.43 | 105.37 | 103.67 | 106.65 | 103.08 |
| West. Australia | 106.28 | 108.36 | 105.11 | 104.44 | 103.82 | 107.61 | 105.65 |
| Tasmania ... | 108.90 | 104.96 | 102.39 | 104.32 | 115.01 | 109.88 | 112.15 |
| C'wealth ... | 104.11 | 104.90 | 104.93 | 105.13 | 105.58 | 105.99 | 104.89 |

1. Number of males to each 100 females.

There is ordinarily a very small difference between the masculinity of legitimate and illegitimate births. Thus, according to Bodio, whose figures are quoted in the following table, for the period about 1837-1891, the masculinity ranged from 108.3 to 103.6, and from 107.9 to 101.6 for total and illegitimate births respectively.

MASCULINITY OF BIRTHS IN VARIOUS COUNTRIES.

| Country. | Masculinity of Births. ¹ | | Country. | Masculinity of Births. ¹ | |
|----------------------|-------------------------------------|---------------------------|-------------------|-------------------------------------|---------------------------|
| | All Live Births. | Illegitimate Live Births. | | All Live Births. | Illegitimate Live Births. |
| Spain | 108.8 | 107.9 | German Empire ... | 105.2 | 104.7 |
| Rumania | 107.7 | 103.4 | Finland | 105.0 | 105.2 |
| Portugal | 107.5 | 106.4 | Hungary | 105.0 | 102.9 |
| Austria | 105.8 | 105.5 | Sweden | 105.0 | 104.3 |
| Italy | 105.8 | 104.4 | Denmark | 104.8 | 105.0 |
| Norway | 105.8 | 105.9 | Servia | 104.7 | 103.5 |
| Ireland | 105.5 | 104.8 | France | 104.6 | 102.9 |
| Netherlands ... | 105.5 | 104.7 | Belgium | 104.5 | 102.2 |
| Scotland | 105.5 | 105.9 | Switzerland ... | 104.5 | 101.6 |
| Russia, European ... | 105.4 | 104.5 | England | 103.6 | 104.4 |

1. Number of males to each 100 females.

The masculinity of illegitimate births in Australia was as follows:—

**MASCULINITY¹ OF ILLEGITIMATE BIRTHS REGISTERED IN AUSTRALIA,
1901 TO 1907.**

| State. | 1901. | 1902. | 1903 | 1904. | 1905. | 1906. | 1907. |
|------------------|--------|--------|--------|--------|--------|--------|--------|
| N. S. W. ... | 108.46 | 103.67 | 97.79 | 100.80 | 102.50 | 103.10 | 104.91 |
| Victoria ... | 102.22 | 106.78 | 114.83 | 108.68 | 102.52 | 102.23 | 105.59 |

1. Number of males to each 100 females.

It is curious to note that while, so far as the total births are concerned, there has always been an excess of male births over female births, this has not been the case in regard to illegitimate births, where in South Australia in 1904 the masculinity was only 83.50. On the other hand it rose as high as 124.82 in Tasmania in 1906. Little weight, however, can be attached to the two last figures on account of the small totals on which they are based.

6. Illegitimacy.—The total illegitimates fell from 1901 to 1903, then rose rapidly to 1907. See the table on next page.

It is, of course, possible that the number of illegitimate births is somewhat understated, owing to diffidence in proclaiming the fact of illegitimacy, and it is not unlikely that the majority of unregistered births are illegitimate.

**TOTAL ILLEGITIMATE BIRTHS REGISTERED IN AUSTRALASIA,
1901 TO 1907.**

| State, etc. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------------|-------|-------|-------|-------|-------|-------|-------|
| N.S.W. ... | 2,712 | 2,497 | 2,413 | 2,755 | 2,912 | 2,882 | 2,920 |
| Victoria ... | 1,729 | 1,677 | 1,695 | 1,707 | 1,689 | 1,721 | 1,764 |
| Queensland ... | 848 | 859 | 857 | 971 | 950 | 1,076 | 1,117 |

| New Zealand | 937 | 921 | 994 | 1,029 | 1,082 | 1,132 | 1,157 |

(i). *Rate of Illegitimacy, 1901 to 1907.* The rate of illegitimacy, viz., the percentage of illegitimate to total births, shews on the whole a slight increase, from 1901 to 1905, with a decrease during the last two years, as the subjoined table shews:—

**PERCENTAGE OF ILLEGITIMATE ON TOTAL BIRTHS, AUSTRALASIA,
1901 TO 1907.**

| State, etc. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------|-------|-------|-------|-------|-------|-------|-------|
| | % | % | % | % | % | % | % |
| N S.W. ... | 7.16 | 6.60 | 6.71 | 7.12 | 7.37 | 7.04 | 6.92 |
| Victoria ... | 5.58 | 5.51 | 5.73 | 5.74 | 5.61 | 5.58 | 5.62 |
| Queensland ... | 5.93 | 6.04 | 6.79 | 5.90 | 6.97 | 7.68 | 7.68 |
| S. Australia... | 3.96 | 4.35 | 4.16 | 4.02 | 4.35 | 4.00 | 4.09 |
| W. Australia... | 3.88 | 3.96 | 4.70 | 4.36 | 4.19 | 4.78 | 3.86 |
| Tasmania ... | 5.94 | 6.12 | 5.61 | 5.82 | 5.52 | 5.78 | 5.78 |
| C'wealth ... | 5.99 | 5.82 | 6.01 | 6.17 | 6.24 | 6.23 | 6.15 |
| New Zealand | 4.57 | 4.46 | 4.55 | 4.52 | 4.57 | 4.67 | 4.61 |

A comparison of greater significance would be obtained by calculating the number of illegitimate births per thousand of the single and widowed female population between the ages of 15 and 45, but until the next Census has once more shewn the composition of the population, such a calculation would be liable to considerable error, and will, therefore, be deferred.

(ii). *Causes of Increase.* Since the rate of illegitimacy might appear to increase by the mere decrease in the general birth rate, the following table has been prepared:—

**CRUDE ILLEGITIMATE, LEGITIMATE AND TOTAL BIRTH RATES, AUSTRALIA,
1901 to 1907.**

| Births. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------------|-------|-------|-------|-------|-------|-------|-------|
| Illegitimate ... | 1.62 | 1.56 | 1.52 | 1.62 | 1.63 | 1.65 | 1.63 |
| Legitimate ... | 25.52 | 25.10 | 23.71 | 24.71 | 24.50 | 24.76 | 24.92 |
| Total ... | 27.14 | 26.66 | 25.23 | 26.33 | 26.13 | 26.41 | 26.55 |

1. Number of births per 1000 of mean population.

(iii). *Illegitimacy—Rates of Various Countries.* The rate for the Commonwealth is higher than that for England and Wales, slightly lower than that for Scotland, and considerably below the rates for many of the countries for which returns are available, as the table hereunder shews. The rates for the States, Commonwealth, and New Zealand are for 1907, while those for other countries are for 1905 or 1906, generally:—

PERCENTAGE OF ILLEGITIMATE ON TOTAL BIRTHS IN VARIOUS COUNTRIES,
1905 to 1907.

| Country. | Rate. | Country. | Rate. |
|--------------------------|-------|------------------------|-------|
| | % | | % |
| Netherlands | 2.1 | Norway | 6.7 |
| Ireland | 2.8 | Scotland | 6.7 |
| England and Wales | 3.9 | New South Wales | 6.9 |
| West Australia | 3.9 | Queensland | 7.7 |
| South Australia | 4.1 | Germany | 8.5 |
| Switzerland | 4.6 | France | 8.8 |
| New Zealand | 4.6 | Hungary | 9.8 |
| Italy | 5.6 | Rumania | 10.0 |
| Victoria | 5.6 | Denmark | 10.1 |
| Tasmania | 5.8 | Portugal | 11.4 |
| Commonwealth | 6.2 | Sweden | 12.1 |
| Belgium | 6.4 | Austria | 12.8 |

It may be added that the general circumstances in Australia with regard to opportunity for marriage are probably relatively easy as compared with those in older established countries.

7. Multiple Births.—Among the total number of 110,347 births registered in the Commonwealth in 1907 there were 108,263 single births, 2046 twins, and 38 triplets. The number of cases of twins was 1029, twelve children being still-born, and the number of cases of triplets fourteen, four children being still-born. The total number of mothers was, therefore, 109,306, the proportion of mothers of twins being one in every 106, and of mothers of triplets one in every 7872 of total mothers.

8. Ages of Parents.—The relative ages of the parents of children registered in 1907 have been tabulated, twins and triplets being distinguished from single births, and are shewn for single ages in "Bulletin of Population and Vital Statistics, No. 8; Vital Statistics of the Commonwealth for the Year 1907." In the present work the exigencies of space allow only the insertion of corresponding tables shewing the relative ages of parents in groups of five years. The tables, moreover, must be given exclusive of the figures for South Australia, as the Registration Act of that State, which was in force to the end of 1907, did not require those particulars to be mentioned. For the year 1908 it will be possible to tabulate this information for all the States of the Commonwealth. It will be seen from the tables that while the largest number of single births occurred where the ages of both father and mother were between 25 and 29, the largest number of twin births took place in the age group where both father and mother were between 35 and 39. The largest number of mothers of single children was found at ages 25 to 29, and that of mothers of twins at ages 30 to 34.

§ 2. Marriages.

1. **Marriages, 1901 to 1907.**—The number of marriages registered in the Commonwealth in 1907 was 32,470, the highest number ever recorded. There has been a steady increase in the annual number of marriages in each State since 1903, and the crude marriage-rate increased similarly in all the States, with the exception of Western Australia, where a further diminution may reasonably be expected until the composition of the population as to sexes and ages approaches more closely to that of the other States. The number of marriages in each State since 1901 is shewn below:—

TOTAL MARRIAGES, AUSTRALASIA, 1901 to 1907.

| State, etc. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|--------------------|--------|--------|--------|--------|--------|--------|--------|
| N. S. W. ... | 10,538 | 10,486 | 9,759 | 10,424 | 10,970 | 11,551 | 12,187 |
| Victoria ... | 8,406 | 8,477 | 7,605 | 8,210 | 8,774 | 8,930 | 9,575 |
| Queensland ... | 3,341 | 3,243 | 2,933 | 3,078 | 3,173 | 3,588 | 4,105 |
| S. Australia ... | 2,309 | 2,383 | 2,272 | 2,534 | 2,599 | 2,681 | 3,079 |
| W. Australia... .. | 1,821 | 2,024 | 2,064 | 2,088 | 2,123 | 2,261 | 2,114 |
| Tasmania | 1,338 | 1,313 | 1,344 | 1,350 | 1,365 | 1,399 | 1,410 |
| C'wealth ... | 27,753 | 27,926 | 25,977 | 27,684 | 29,004 | 30,410 | 32,470 |
| New Zealand | 6,095 | 6,394 | 6,748 | 6,983 | 7,200 | 7,592 | 8,192 |

2. **Marriage Rates, 1901 to 1907.**—The number of marriages registered per thousand of mean population is shown in the following table for the same period:—

CRUDE MARRIAGE RATE,¹ AUSTRALASIA, 1901 to 1907.

| State, etc. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------------|-------|-------|-------|-------|-------|-------|-------|
| N.S.W. ... | 7.73 | 7.54 | 6.89 | 7.23 | 7.44 | 7.65 | 7.86 |
| Victoria ... | 6.98 | 7.00 | 6.29 | 6.80 | 7.24 | 7.30 | 7.73 |
| Queensland ... | 6.66 | 6.36 | 5.72 | 5.93 | 6.03 | 6.73 | 7.62 |
| S. Australia ... | 6.36 | 6.54 | 6.21 | 6.86 | 6.94 | 7.06 | 7.98 |
| W. Australia... | 9.66 | 9.83 | 9.32 | 8.83 | 8.48 | 8.70 | 8.06 |
| Tasmania ... | 7.76 | 7.55 | 7.57 | 7.55 | 7.62 | 7.82 | 7.86 |
| C'wealth ... | 7.32 | 7.24 | 6.66 | 7.00 | 7.22 | 7.44 | 7.81 |
| New Zealand | 7.83 | 8.01 | 8.23 | 8.26 | 8.28 | 8.48 | 8.91 |

1. Number of marriages (not persons married) per 1000 of mean annual population.

3. **Marriage Rates in Various Countries.**—A comparison of the Australian marriage rate with that of European countries shows it to be considerably below the rates prevailing in the East of Europe, almost identical with those of Central and Western Europe, and higher than those of the North of Europe:—

CRUDE MARRIAGE RATE.—VARIOUS COUNTRIES.

| Country. | Year. | Crude Marriage Rate. | Country. | Year. | Crude Marriage Rate. |
|-------------------|-------|----------------------|------------------|-------|----------------------|
| Bulgaria ... | 1905 | 10.9 | Italy ... | 1906 | 7.8 |
| Servia ... | 1906 | 10.2 | Commonwealth ... | 1907 | 7.8 |
| New Zealand... | 1907 | 8.9 | Switzerland... | 1905 | 7.6 |
| Hungary ... | 1906 | 8.7 | Denmark ... | 1906 | 7.5 |
| Russia ... | 1901 | 8.6 | Netherlands | 1906 | 7.5 |
| Belgium ... | 1906 | 8.1 | Spain ... | 1906 | 7.3 |
| German Empire | 1905 | 8.1 | Scotland ... | 1906 | 7.0 |
| Rumania ... | 1905 | 7.9 | Finland ... | 1905 | 6.5 |
| Austria ... | 1905 | 7.8 | Sweden ... | 1906 | 6.1 |
| England and Wales | 1906 | 7.8 | Norway ... | 1906 | 5.9 |
| France ... | 1906 | 7.8 | Ireland ... | 1906 | 5.2 |

4. **Age at Marriage.**—(a) The age at marriage of bridegrooms and brides will be found in the following table, the previous conjugal condition of the contracting parties being distinguished. It will be seen that no less 1156 males were married during 1907, who were less than twenty-one years of age. The corresponding number of females was 6796, of whom four were widows. At the other end of the scale there were twenty-six men of sixty-five years and upwards, who described themselves as bachelors, and five spinsters of corresponding ages.

AGES AND CONJUGAL CONDITION OF PERSONS MARRIED, 1907.

| 40 to 44 ... | 1,373 | ... | 33 | 225 | 301 | 308 | 267 | 164 | 74 | 1 |
| 45 to 49 ... | 603 | 1 | 10 | 81 | 117 | 136 | 167 | 147 | 144 | ... |
| 50 to 54 ... | 422 | ... | 4 | 21 | 64 | 58 | 76 | 77 | 122 | ... |
| 55 to 59 ... | 207 | ... | ... | 7 | 17 | 18 | 34 | 40 | 90 | 1 |
| 60 to 64 ... | 131 | ... | ... | 6 | 9 | 6 | 18 | 15 | 77 | ... |
| 65 and upwards ... | 169 | ... | ... | 3 | 7 | 4 | 13 | 23 | 118 | 1 |
| Not stated ... | 9 | ... | ... | 2 | ... | 2 | ... | ... | ... | 5 |
| Total Brides ... | 32,470 | 12 | 4,571 | 14,255 | 7,895 | 2,936 | 1,399 | 696 | 690 | 14 |

5. **Previous Conjugal Condition.**—In a previous table the total number of bachelors and spinsters, widowed and divorced persons, who were married during the year 1907, was shown. In the following table the relative conjugal conditions of the contracting parties are given:—

RELATIVE CONJUGAL CONDITIONS OF PERSONS MARRIED, 1907.

| Conjugal Condition. | Total Bridegrooms. | Brides. | | | |
|---------------------|--------------------|------------|---------|-----------|-----|
| | | Spinsters. | Widows. | Divorced. | |
| Bridegrooms { | Bachelors ... | 30,220 | 28,967 | 1,113 | 140 |
| | Widowers ... | 2,103 | 1,479 | 590 | 34 |
| | Divorced ... | 147 | 117 | 18 | 12 |
| Total Brides ... | 32,470 | 30,563 | 1,721 | 186 | |

6. **Birthplaces of Persons Married.**—Information as to the birthplaces of persons who were married in 1907 was not obtained in the States of South Australia and Western Australia; the following figures refer, therefore, only to New South Wales, Victoria, Queensland, and Tasmania. As might be expected, there were more brides than bridegrooms who were born in one of the Commonwealth States, and more bridegrooms than brides who were born elsewhere. In "Bulletin No. 8 of Population and Vital Statistics" the relative birthplaces of bridegrooms and brides will be found tabulated:—

BIRTHPLACES OF PERSONS MARRIED, 1907.

| Birthplaces. | Bridegrooms. | Brides. | Birthplaces. | Bridegrooms. | Brides. |
|-----------------------|--------------|---------|---------------------------|--------------|---------|
| New South Wales ... | 9,578 | 10,517 | British West Indies ... | 1 | ... |

| Bermudas ... | 1 | ... | | | |

7. **Occupations and Ages of Bridegrooms.**—The question has been asked whether persons in some walks of life marry earlier than in others, and a tabulation has therefore been made of the occupations and ages of all males who were married in the Commonwealth in the year 1907. In "Bulletin No. 8" this tabulation is shown for orders of occupations, while here it is repeated for classes only, with a subdivision of the Industrial class and of the class of Primary Producers. The average ages of the persons falling under those twelve subdivisions were determined, and it appears that, apart from the Indefinite class, which consists chiefly of persons who have retired from business and who

are living on their own means, and where a high average age may naturally be expected, the average age ranges from 28.01 in the Manufacturing class to 32.55 years in the Pastoral class. The figures for one year are, however, rather small to allow of definite conclusions being drawn. The results obtained are shewn in the following table:—

OCCUPATIONS AND AGES OF BRIDEGROOMS, 1907.

| Ages at Marriage. | Professional | Domestic. | Mercantile. | Transport and Communication. | Industrial. | | | Primary Producers. | | | Indefinite. | |
|----------------------|--------------|-----------|-------------|------------------------------|---------------------|-------------------------------|--------------------------------------|--------------------|-----------|------------------------|-------------|-----------------------------|
| | | | | | Manu- facturing. | Building and Construction. | Indefinite Industrial Workers. | Agricultural. | Pastoral. | Mines and Quarries. | | Other Primary Producers. |

8. **Fertility of Marriages.**—The quotient obtained by division of the legitimate births registered, say during the five years 1903 to 1907, by the number of marriages registered during the five years 1898 to 1902, i.e., the period antecedent by five years to the period of the births, has been called the "fertility of marriages." This works out at 3.70, or in other words, the number of children to be expected from every four marriages in the Commonwealth is fifteen. This method, while not professing any claim to accuracy, furnishes results which agree fairly well with those found by more elaborate and careful investigation.

9. **Registration of Marriages.**—In all the States of the Commonwealth marriages may be celebrated either by ministers of religion, whose names are registered for that purpose with the Registrar-General, or by certain civil officers, in most cases district registrars. The percentage of marriages celebrated by ministers of religion has increased from 96.25 per cent. in 1901 to 97.37 per cent. in 1907. The figures for the individual States were in 1907: New South Wales, 97.83 per cent.; Victoria, 99.20 per cent.; Queensland, 94.88 per cent.; South Australia, 96.82 per cent.; Western Australia, 90.82 per cent.; and Tasmania, 99.22 per cent. The registered ministers in 1907 belonged to forty-three different denominations, some of which, however, can hardly be regarded as having any valid existence. The extraordinary number of marriages credited to some denominations, the number of whose adherents, according to the Census returns, was very small indeed, is not inconsistent with the supposition that some of these denomina-

tions have been created for the purpose of obtaining the registration necessary to conduct marriages, or to be connected with a so-called "Matrimonial Agency." The figures for 1907 are shewn in the following table:—

MARRIAGES IN EACH DENOMINATION, 1907.

| Denomination. | N.S.W. | Vic. | Q'land. | S.A. | W.A. | Tas. | C'with. |

| Not stated | ... | 2 | 9 | ... | 1 | ... | 12 |
| Total | 12,187 | 9,575 | 4,105 | 3,079 | 2,114 | 1,410 | 32,470 |

10. **Mark Signatures.**—The marriage registers afford some clue, even if an imperfect one, to the illiteracy of the adult population, since a small and constantly diminishing percentage of bridegrooms and brides sign the registers with marks.

(i.) *Males and Females, 1901 to 1907.* For a number of years mark signatures by males have been slightly more numerous than those by females, the percentages for the Commonwealth during the past seven years having been as follows:—

**PERCENTAGE OF MARK SIGNATURES AT MARRIAGE, AUSTRALIA,
1901 to 1907.**

| Year. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------|-------|-------|-------|-------|-------|-------|-------|
| Male ... | 1.35 | 1.21 | 1.17 | 0.95 | 0.91 | 0.92 | 0.81 |
| Female ... | 1.29 | 1.11 | 1.02 | 0.91 | 0.93 | 0.86 | 0.70 |

(ii.) *Mark Signatures in Commonwealth States, 1901 to 1907.* The following table shews that while the Tasmanian percentage has been the highest, and the Victorian the lowest, in each of the seven years under review, there has been a marked decrease in every State:—

**PERCENTAGE OF MARK SIGNATURES AT MARRIAGE IN AUSTRALASIA,
1901 to 1907.**

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------|-------|-------|-------|-------|-------|-------|-------|
| N.S.W. ... | 1.34 | 1.22 | 1.10 | 0.90 | 1.12 | 0.94 | 0.87 |
| Victoria ... | 0.53 | 0.61 | 0.60 | 0.54 | 0.44 | 0.43 | 0.36 |
| Queensland ... | 2.56 | 1.93 | 1.86 | 1.72 | 1.39 | 1.67 | 1.14 |
| South Australia | 0.95 | 1.15 | 1.32 | 0.65 | 0.83 | 0.67 | 0.55 |
| West. Australia | 0.99 | 0.69 | 0.75 | 0.53 | 0.57 | 0.66 | 0.64 |
| Tasmania ... | 4.11 | 3.12 | 2.38 | 2.85 | 2.12 | 2.18 | 2.02 |
| Commonwealth | 1.32 | 1.16 | 1.10 | 0.93 | 0.92 | 0.89 | 0.76 |
| New Zealand ... | 0.54 | 0.34 | 0.50 | 0.54 | 0.32 | 0.33 | 0.23 |

A complete disappearance of mark signatures is hardly to be expected, for the available information tends to shew that two-thirds of those who sign with marks are natives of their respective States, who apparently have not made use of the advantages offered to them by the State schools.

§ 3. Deaths.

1. Male and Female Deaths, 1901 to 1907.—The total number of deaths registered in the Commonwealth from 1901 to 1907 inclusive, gives an annual average of 26,256 males and 19,233 females, the details being as follows:—

MALE DEATHS, AUSTRALIA, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | Rate. 1907. |
|------------------|--------|--------|--------|--------|--------|--------|--------|----------------|
| N.S.W. ... | 9,327 | 9,535 | 9,428 | 8,733 | 8,709 | 8,715 | 9,444 | 11.40 |
| Victoria ... | 9,035 | 9,152 | 8,626 | 7,992 | 8,273 | 8,342 | 7,977 | 12.88 |

| W. Australia... | 1,653 | 1,832 | 1,829 | 1,823 | 1,728 | 1,878 | 1,866 | 12.17 |
| Tasmania ... | 1,001 | 1,044 | 1,136 | 1,061 | 1,061 | 1,118 | 1,083 | 11.70 |
| C'wealth ... | 27,143 | 27,876 | 27,212 | 24,939 | 25,311 | 25,374 | 25,939 | 11.84 |

FEMALE DEATHS, AUSTRALIA, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | Rate. 1907. |
|------------------|--------|--------|--------|--------|--------|--------|--------|----------------|
| N.S.W. ... | 6,694 | 7,111 | 7,069 | 6,627 | 6,269 | 6,260 | 6,967 | 9.65 |
| Victoria ... | 6,869 | 7,025 | 6,969 | 6,401 | 6,403 | 6,895 | 6,562 | 10.59 |
| Queensland ... | 2,169 | 2,280 | 2,395 | 1,991 | 2,004 | 1,883 | 2,116 | 8.64 |
| S. Australia ... | 1,776 | 1,925 | 1,709 | 1,707 | 1,763 | 1,822 | 1,741 | 9.59 |
| W. Australia | 866 | 991 | 959 | 994 | 981 | 1,206 | 1,065 | 9.78 |
| Tasmania ... | 813 | 870 | 980 | 913 | 783 | 893 | 915 | 10.55 |
| Commonwealth ... | 19,187 | 20,202 | 20,081 | 18,633 | 18,203 | 18,959 | 19,366 | 9.86 |

2. **Male and Female Death Rates, 1907.**—The crude male and female death rates for 1907 only are given, viz., in the last column of the preceding tables: both are high for Victoria and Western Australia, while the Queensland rate is lowest for females, and the South Australian for males.

Owing to differences in the age constitution of the six States, the crude rates are not, however, strictly comparable, but as has been pointed out in the case of the births, the available data, at a period so remote from the Census, are insufficient for a satisfactory distribution of the population according to ages. For the purposes of calculating the "Index of Mortality" (see page 231) a distribution into five age-groups has, however, been made.

3. **Death Rates of Various Countries.**—A comparison with foreign States is, for the same reason, apt to show the Commonwealth in too favourable a light, but even if an allowance for the different age constitution were made, it would still be found occupying a very enviable position:—

DEATH RATES OF VARIOUS COUNTRIES.

| Country. | Year. | Crude Death Rate. | Country. | Year. | Crude Death Rate. |
|-------------------------|-------------|-------------------------|----------------------|-------|-------------------------|
| Commonwealth ... | 1907 | 10.9 | France ... | 1906 | 19.9 |
| New Zealand ... | 1906 | 10.9 | Italy ... | 1906 | 20.8 |
| Denmark ... | 1906 | 13.5 | Bulgaria ... | 1905 | 21.9 |
| Norway ... | 1906 | 13.7 | Japan ... | 1905 | 22.0 |
| Sweden ... | 1906 | 14.4 | Servia ... | 1906 | 24.0 |
| Netherlands ... | 1906 | 14.8 | Hungary ... | 1906 | 24.8 |
| England and Wales ... | 1906 | 15.4 | Austria ... | 1905 | 25.0 |
| United Kingdom ... | 1906 | 15.6 | Rumania ... | 1905 | 25.0 |
| Scotland ... | 1906 | 16.0 | Jamaica ... | 1906 | 26.2 |
| Belgium ... | 1906 | 16.4 | Spain ... | 1906 | 26.2 |
| Ireland ... | 1906 | 17.0 | Russia, European ... | 1901 | 32.1 |
| Switzerland ... | 1905 | 17.9 | Chile ... | 1905 | 32.3 |
| Finland ... | 1905 | 18.4 | Ceylon ... | 1905 | 34.3 |
| German Empire ... | 1905 | 19.8 | | | |

4. **Total Deaths, 1901 to 1907.**—The total number of deaths in each of the Commonwealth States during the seven years 1901 to 1907, is shown below:—

TOTAL DEATHS, AUSTRALASIA, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|---------------------|--------|--------|--------|--------|--------|--------|--------|
| N.S.W. ... | 16,021 | 16,646 | 16,497 | 15,360 | 14,978 | 14,975 | 16,411 |
| Victoria ... | 15,904 | 16,177 | 15,595 | 14,393 | 14,676 | 15,237 | 14,539 |
| Queensland ... | 6,007 | 6,204 | 6,346 | 5,250 | 5,503 | 5,095 | 5,598 |
| South Australia ... | 4,065 | 4,314 | 3,951 | 3,778 | 3,804 | 3,931 | 3,828 |
| W. Australia ... | 2,519 | 2,823 | 2,788 | 2,817 | 2,709 | 3,084 | 2,931 |
| Tasmania ... | 1,814 | 1,914 | 2,116 | 1,974 | 1,844 | 2,011 | 1,998 |
| Commonwealth | 46,330 | 48,078 | 47,293 | 43,572 | 43,514 | 44,333 | 45,305 |
| New Zealand... | 7,634 | 8,375 | 8,528 | 8,087 | 8,061 | 8,339 | 10,066 |

5. **Crude Death Rates, 1901 to 1907.**—The death rate for 1907 was the lowest experienced during the seven years under review in the States of Victoria and South Australia. In New South Wales, Queensland, and Western Australia there were lower rates in some of the intermediate years, though a satisfactory decrease on the 1901 rate is shewn. In Tasmania, however, the rate for 1907 was higher than that for 1901, and was only surpassed in 1903 and 1906. The Commonwealth rate for 1905 and 1906 was a little lower than that for 1907, but the difference is insensible.

CRUDE DEATH RATES, AUSTRALASIA, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|---------------------|-------|-------|-------|-------|-------|-------|-------|
| N.S.W. ... | 11.75 | 11.97 | 11.65 | 10.65 | 10.16 | 9.92 | 10.58 |
| Victoria ... | 13.21 | 13.36 | 12.90 | 11.92 | 12.10 | 12.45 | 11.74 |
| Queensland ... | 11.98 | 12.17 | 12.38 | 10.11 | 10.47 | 9.56 | 10.39 |
| South Australia ... | 11.20 | 11.83 | 10.80 | 10.22 | 10.15 | 10.35 | 9.93 |
| W. Australia ... | 13.37 | 13.71 | 12.60 | 11.91 | 10.82 | 11.87 | 11.17 |
| Tasmania ... | 10.52 | 11.00 | 11.92 | 11.04 | 10.29 | 11.24 | 11.14 |
| Commonwealth | 12.22 | 12.47 | 12.12 | 11.02 | 10.83 | 10.85 | 10.90 |
| New Zealand... | 9.81 | 10.50 | 10.40 | 9.57 | 9.27 | 9.31 | 10.95 |

6. **Male and Female Death Rates, 1901 to 1907.**—The rise in the Commonwealth rate from 1905 to 1907 was due to an increase in the female death rate, as the subjoined table shews:—

MALE AND FEMALE DEATH RATES, AUSTRALIA, 1901 to 1907.

| Year. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|----------------------|-------|-------|-------|-------|-------|-------|-------|
| Male Rate ... | 13.65 | 13.78 | 13.30 | 12.02 | 11.98 | 11.78 | 11.84 |
| Female Rate... | 10.64 | 11.02 | 10.82 | 9.92 | 9.56 | 9.81 | 9.86 |
| Crude Total Rate ... | 12.22 | 12.47 | 12.12 | 11.02 | 10.83 | 10.85 | 10.90 |

7. **Infantile Death Rate.**—(i.) *Deaths and Death Rates of Male and Female Infants, 1901 to 1907.* A marked improvement has taken place in the infantile death rate since

1901, in which year it stood at 103.61 per thousand births registered, while, in 1907 it had fallen to 81.06 per thousand, a rate lower than that experienced in any previous year. In the following table, which shews both the total number of deaths of children under one year and the rate per thousand births since 1901, males and females are distinguished. The universal experience that during the first few years of life the excess of male births disappears as a consequence of the higher death rate of male infants is shewn by the fact that out of 374,787 male infants born from 1901 to 1907, 37,491 died during their first year of life, while of 356,668 female infants the number who died was only 30,171:—

**NUMBER OF INFANTILE DEATHS AND RATE OF INFANTILE MORTALITY, AUSTRALIA,
1901 TO 1907.**

| Year. | Registered Deaths under one year. | | | Rate of Infantile Mortality. ¹ | | |
|-------|-----------------------------------|----------|--------|---|----------|--------|
| | Males. | Females. | Total. | Males. | Females. | Total. |
| 1901 | 5,888 | 4,778 | 10,666 | 112.13 | 94.73 | 103.61 |
| 1902 | 6,008 | 5,004 | 11,012 | 114.19 | 99.76 | 107.15 |
| 1903 | 6,003 | 4,960 | 10,963 | 119.09 | 103.25 | 111.36 |
| 1904 | 4,713 | 3,800 | 8,513 | 88.33 | 74.87 | 81.77 |
| 1905 | 4,884 | 3,696 | 8,580 | 90.69 | 72.41 | 81.76 |
| 1906 | 5,002 | 3,981 | 8,983 | 90.10 | 76.01 | 83.26 |
| 1907 | 4,993 | 3,952 | 8,945 | 88.39 | 73.38 | 81.06 |

1. Number of deaths under 1 year per 1000 births registered.

(ii.) *Infantile Mortality, 1901 to 1907.* Divided among the six States, the rate of infantile mortality during the last seven years was as follows:—

RATE OF INFANTILE MORTALITY, AUSTRALASIA, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------|--------|--------|--------|--------|--------|--------|-------|
| N.S.W. ... | 103.74 | 109.74 | 110.35 | 82.42 | 80.55 | 74.53 | 88.46 |
| Victoria ... | 102.94 | 108.60 | 106.40 | 77.92 | 83.30 | 92.92 | 72.60 |
| Queensland ... | 101.94 | 100.17 | 119.88 | 76.13 | 75.52 | 74.68 | 77.65 |
| South Australia | 99.99 | 94.00 | 97.09 | 70.51 | 72.96 | 75.90 | 66.57 |
| West. Australia | 128.89 | 142.01 | 141.22 | 113.02 | 104.19 | 110.00 | 97.51 |
| Tasmania ... | 89.05 | 79.06 | 110.83 | 90.70 | 80.65 | 90.19 | 82.97 |
| Commonwealth | 103.61 | 107.15 | 111.36 | 81.77 | 81.76 | 83.26 | 81.06 |
| New Zealand... | 76.28 | 82.89 | 81.08 | 70.98 | 67.52 | 62.10 | 88.79 |

The movement has been a fairly regular one, shewing an increase in the rate during 1902 and 1903, and a fall since the latter year, so that the 1907 rate was lower than that for 1901 in every State, but above the 1906 rate in New South Wales and Queensland.

(iii.) *Infantile Mortality in Various Countries.* Compared with European countries the States of the Commonwealth occupy a very enviable position, and it may be pointed out that experience has shewn that a high birth rate is often, though not invariably,

accompanied by a high infantile death rate. The figures in the subjoined table relate to the latest years for which returns are available :—

RATE OF INFANTILE MORTALITY IN VARIOUS COUNTRIES.

| Country. | Year. | Rate of Infantile Mortality. | Crude Birth Rate. | Country. | Year. | Rate of Infantile Mortality. | Crude Birth Rate. |
|-------------------------|-------------|------------------------------|-------------------|----------------------|-------|------------------------------|-------------------|
| Commonwealth ... | 1907 | 81 | 26.6 | Servia | 1906 | 144 | 41.3 |
| Norway | 1905 | 81 | 27.4 | Belgium | 1905 | 146 | 26.1 |
| Sweden | 1904 | 84 | 25.8 | Japan | 1905 | 151 | 30.6 |
| New Zealand | 1907 | 89 | 27.3 | Italy | 1905 | 166 | 32.5 |
| Ireland | 1906 | 93 | 23.6 | Spain | 1906 | 173 | 34.1 |
| Scotland | 1905 | 116 | 27.9 | Jamaica | 1906 | 197 | 38.1 |
| Denmark | 1905 | 121 | 28.4 | Ceylon | 1906 | 198 | 35.7 |
| Netherlands | 1906 | 127 | 30.4 | Rumania | 1899 | 198 | 42.0 |
| Switzerland | 1905 | 129 | 27.4 | German Empire | 1905 | 205 | 33.0 |
| England and Wales | 1906 | 132 | 27.1 | Hungary | 1906 | 205 | 36.0 |
| Finland | 1905 | 135 | 30.6 | Austria | 1903 | 211 | 35.2 |
| France | 1905 | 136 | 20.6 | Chile | 1903 | 263 | 34.0 |
| Bulgaria | 1904 | 142 | 42.7 | Russia, European | 1901 | 272 | 47.9 |

(iv.) *The Effect of Infantile Mortality on Birth-rate.* It has been contended by certain investigators that the birth-rate question is intimately related to that of infantile mortality, and that in many cases a declining birth-rate may be to a large extent accounted for by a decline in the infantile death-rate, since, in the case in which an infant has survived, the period elapsing before the birth of the next child is likely to be longer than in the case in which the infant has died. It may indeed be readily admitted that in any community the birth-rate may be affected in a definite way by variations of infantile mortality, but careful investigation of the question serves to shew that, whether considered from the theoretical aspect with a view to determining the *maximum* and the *probable* effects which a given change in the rate of infantile mortality would produce in the birth-rate, or from the practical point of view by observing the fluctuations in the birth-rates of various countries which have been collateral with changes in their rates of infantile mortality, there is little ground for the contention that the rate of infantile mortality is an important factor in determining the variations in the birth-rate. One calculation which has been made on the basis of normal Australian conditions indicates that the *maximum* effect of increasing the rate of infantile mortality 100 per cent. would, in the absence of other disturbing causes, be to increase the birth-rate by only $3\frac{1}{2}$ per cent., whilst the *probable* effect would be considerably less than this. In other words, the *maximum* effect of an increase in the rate of infantile mortality from 100 to 200 per 1000 births would be to increase the birth-rate from say 30 to 31 per 1000 of population. It may be noted too, that although in some countries an increase in birth-rate accompanies an increase in the rate of infantile mortality, in others the birth-rate would appear to be quite unaffected by such an increase, while in the case of England and Wales, Scotland, and Ireland, the tendency apparently exhibited is for an increase in the rate of infantile mortality to be associated with a decrease in the birth-rate. The conclusion which these results appear to warrant is that although infantile mortality undoubtedly tends on the whole to increase the birth-rate, the practical effect produced is so slight that the existence of such a relation may in any instance be quite masked by more important causes of variation.

8. **Deaths in Age-Groups, 1901 to 1907.**—A distribution of the 318,425 deaths which occurred in the Commonwealth from 1901 to 1907 into age-groups has been made, and the results are tabulated for each State. It is, however, sufficient here to shew the results for the Commonwealth as a whole, which are as follows :—

DEATHS IN AGE-GROUPS, AUSTRALIA, 1901 to 1907.

| Ages. | Males. | Females. | Total. | Percentage of Total Males. | Percentage of Total Females. | Percentage of Total. |
|---------------------------|---------|----------|---------|----------------------------|------------------------------|----------------------|
| Under 1 year ... | 37,494 | 30,168 | 67,662 | 20.40 | 22.41 | 21.25 |
| 1 year and under 5 ... | 11,042 | 10,246 | 21,288 | 6.00 | 7.61 | 6.68 |
| 5 years and under 20 ... | 10,951 | 9,829 | 20,780 | 5.96 | 7.30 | 6.53 |
| 20 years and under 40 ... | 26,428 | 22,510 | 48,938 | 14.39 | 16.72 | 15.37 |
| 40 years and under 60 ... | 35,054 | 20,491 | 55,545 | 19.08 | 15.22 | 17.44 |
| 60 years and under 65 ... | 10,636 | 6,451 | 17,087 | 5.78 | 4.79 | 5.37 |
| 65 years and over ... | 51,920 | 34,887 | 86,807 | 28.25 | 25.91 | 27.26 |
| Age not stated ... | 269 | 49 | 318 | 0.14 | 0.04 | 0.10 |
| Total ... | 183,794 | 134,631 | 318,425 | 100.00 | 100.00 | 100.00 |

9. Deaths at Single Ages and in Age-Groups, 1907.—The 45,305 deaths which were registered in the Commonwealth in the year 1907 will be found tabulated under single years (in weeks up to one month, and in months up to one year), and in groups of five years in the following table:—

DEATHS AT SINGLE AGES AND IN AGE-GROUPS, 1907.

| Ages. | Males. | Females. | Total. | Ages. | Males. | Females. | Total. |
|---------------------------------|--------|----------|--------|---------------------------------|--------|----------|--------|

10. **Deaths of Centenarians, 1907.**—Particulars as to the twenty-three persons who died in 1907, aged 100 years and upwards, are given in the following table. It must, of course, be understood that while the Registrars-General of the various States take the greatest care to have statements as to abnormally high ages verified as far as possible, no absolute reliance can be placed in the accuracy of the ages shown, owing to the well-known tendency of very old people to overstate their ages. The fact must not be lost sight of in connection with this question, that while parish registers in the United Kingdom often date very far back, compulsory registration of births dates practically only from 1874, the Act passed in 1836 having left many loop-holes open for those unwilling to register the births of their children:—

DEATHS OF CENTENARIANS, 1907.

| Age | Locality where Death occurred. | State. | Cause of Death. | Occupation. | Birth Place. | Length of Residence in Commonwealth. |
|--------|--------------------------------|-------------|------------------------------|--------------------|--------------|--------------------------------------|
| MALES. | | | | | | |
| Yrs. | | | | | | |

| | | | | Total Male Deaths | 25,939 |

14. **Index of Mortality.**—The death rates so far shewn are crude rates, *i.e.*, they simply shew the number of deaths per thousand of mean population, without taking the age constitution of that population into consideration. It is, however, a well-known fact that the death rate and age constitution of a people are intimately related, thus, other conditions being equal, the death rate of a country will be lower if it contain a large percentage of young people (not infants). In order to have a comparison of the mortality of various countries on a uniform basis, so far as age constitution is concerned, the International Statistical Institute in its 1895 session recommended the universal adoption of the population of Sweden in five age-groups, as ascertained at the Census of 1890, as the standard population by which this "Index of Mortality," as distinguished from the crude death rate should be ascertained. The calculation for 1907 is shewn below for each of the six States and for the Commonwealth, but it will be understood that the distribution of the mean population of 1907 into age-groups according to the distribution as found at the Census of 1901 must be taken as the best approximation which the data will admit of, not as absolutely correct:—

(a) INDEX OF MORTALITY, 1907.—(STATES AND COMMONWEALTH.)

| Age-Groups. | Mean Population, 1907, distributed according to Results of Census of 1901. | Number of Deaths, 1907. | No. of Deaths per 1000 of Mean Population, 1907, in each Age-Group. | Age Distribution per 1000 of Standard Population. | Index of Mortality. |

| 40 " 60 | 654,446 | 8,307 | 12.69 | 192.3 | 2.44 |
| 60 " and upwards | 255,562 | 16,100 | 63.00 | 114.6 | 7.22 |
| Total | 4,155,673 | 45,305 | 10.90 | 1,000.0 | 14.37 |

NOTE.—The small number of persons whose ages were not ascertained at the 1901 Census have been proportionately distributed among the various age-groups, and the same plan has been followed in regard to the 67 persons who died in 1907, and whose ages were not stated in the certificates of death.

It will be seen that the States and the Commonwealth remain in the same order with one exception—while the crude death rate was second highest in Western Australia, and highest in Victoria, the index of mortality was higher in Western Australia than in Victoria. The range of the indexes is rather wider than that of the crude death rates, for while the latter in 1907 rose from 9.93 per thousand in South Australia to 11.74 per thousand in Victoria, a range of 1.81 per thousand, the indexes varied from 13.33 per thousand in South Australia to 15.66 per thousand in Western Australia, a range of 2.33 per thousand.

For the purpose of comparison with previous years the index of mortality is shewn in the following table for each of the Commonwealth States for the years 1902 to 1907:—

(b) INDEX OF MORTALITY, 1902 to 1907.

| State. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------|-------|-------|-------|-------|-------|-------|
| New South Wales ... | 15.45 | 15.06 | 14.10 | 13.53 | 13.44 | 14.31 |
| Victoria ... | 15.89 | 15.25 | 14.29 | 14.55 | 15.05 | 14.40 |
| Queensland ... | 15.85 | 16.22 | 13.23 | 14.53 | 13.20 | 14.60 |
| South Australia ... | 15.12 | 13.89 | 13.32 | 13.52 | 13.94 | 13.33 |
| Western Australia ... | 17.66 | 15.75 | 15.60 | 14.41 | 16.51 | 15.66 |
| Tasmania ... | 14.26 | 14.86 | 14.36 | 13.36 | 14.87 | 14.87 |

A comparison of the above figures with the crude death rates given on a previous page shews that while the crude death rate was highest in Victoria for five out of the six years, and in Western Australia in one year, and lowest three times in South Australia, twice in Queensland, and once in Tasmania, the index of mortality was highest in Western Australia five times and in Victoria once, and lowest twice in South Australia, twice in Queensland, and twice in Tasmania. The crude death rates shew the following ranges:—In New South Wales, 2.05; in Victoria, 1.62; in Queensland, 2.44; in South Australia, 1.90; in Western Australia, 2.89; and in Tasmania, 1.63 per thousand; while the fluctuations in the indexes amounted to 2.01 per thousand in New South Wales; to 1.60 in Victoria; to 3.02 in Queensland; to 1.80 in South Australia; to 3.25 in Western Australia; and to 1.51 in Tasmania.

15. **Causes of Death.**—(i.) *Changes in Classification from 1903 to 1906.* The causes of death were classified in all the States of the Commonwealth to the end of 1903 according to the system originally devised by Dr. William Farr, and modified in 1886 by Dr. William Ogle. A conference of the State Statisticians, held at Hobart in January, 1902, decided to substitute for that system the classification adopted since 1901 by the Registrar-General of England. While New South Wales, Queensland, and Tasmania remodelled their vital statistics on that plan, Victoria, South Australia and Western Australia continued to tabulate according to the Farr-Ogle system, and a comparison of the causes of death in the six States during the years 1903, 1904, 1905, and 1906 is, therefore, a matter of extreme difficulty. The differences in tabulation will be seen in the following statement:—

TABULATION OF CAUSES OF DEATH.

| State. | 1902. | 1903. | 1904. | 1905. | 1906. | State. | 1902. | 1903. | 1904. | 1905. | 1906 |
|--------------|-------|-------|-------|-------|---------------|--------------|-------|-------|-------|-------|------|
| N.S.W. ... | Old | Old | Old | New | International | S. Australia | Old | Old | Old | Old | Old |
| Victoria ... | Old | Old | Old | Old | Old | W. Australia | Old | Old | Old | Old | Old |
| Queensland | Old | New | New | New | New | Tasmania ... | Old | New | New | New | New |

Old= Farr-Ogle classification. New= New classification by Registrar-General of England.
International—See next paragraph.

(ii.) *The Classification of the International Institute of Statistics.* At a conference held in Melbourne in November and December, 1906, the Commonwealth Statistician recommended the adoption of the classification of the International Institute of Statistics, generally known as the Bertillon Index, and after some discussion that recommendation was accepted, a course which has met with wide approval in medical circles. This index, as the one used by the Registrar-General of England, is based on the original Farr-Ogle classification, but approximates more closely to the present English system than to the older one. The chief advantage possessed by the international classification is that it presents a very extensive field for comparison, the countries which have adopted it representing a population which is probably not less than 150,000,000. Provision is made for a decennial revision of the classification, as it has been recognised that finality is impossible in the present state of medical science. The committee charged with the first revision will meet in Paris in 1909, and a number of recommendations will, in accordance with a resolution of the Australasian Medical Congress, held in Melbourne in October, 1908, be made to it, dealing particularly with tropical diseases occurring in the northern parts of Australia.

The detailed classification groups causes of death under 179 different headings in fourteen categories, as follows:—

- | | |
|---|---|
| i. General Diseases. | viii. Diseases of the Skin and Cellular Tissue. |
| ii. Diseases of the Nervous System and Organs of Special Sense. | ix. Diseases of the Organs of Locomotion. |
| iii. Diseases of the Circulatory System. | x. Malformations. |
| iv. Diseases of the Respiratory System. | xi. Infancy. |
| v. Diseases of the Digestive System. | xii. Old Age. |
| vi. Diseases of the Genito-urinary System and Adnexa. | xiii. Violence. |
| vii. Puerperal Condition. | xiv. Ill-defined Diseases. |

(iii.) *Compilation of Vital Statistics for 1907 in Commonwealth Bureau.* The vital statistics of the six Commonwealth States for 1907 have been tabulated according to this classification in the Commonwealth Bureau, and the system is being employed in the majority of the State offices in the preparation of their monthly and quarterly bulletins of vital statistics, New South Wales being the only State to publish its Annual Vital Statistics for the year 1906 on the International classification.

(iv.) *Classification of Causes of Death, 1905 to 1907, according to Abridged Bertillon Index.* An abridged classification, which enumerates thirty-five diseases and groups of diseases, is in use in many European and American States, and while the Commonwealth Statistics for 1907 have been compiled on the detailed classification of 179 headings, it was at least possible to group the causes of death experienced in 1905 and 1906 under the 35 headings of the abridged classification. Two slight modifications had to be made in the tabulation of those two years, viz., in No. 31, Congenital Debility and Malformations, only children under three months, who died of congenital debility, should have been included. The age limit had here to be extended to 12 months, as in the majority of States the causes of death were only tabulated for the group "under one year." For the same reason, the very few cases of "Insufficient Nourishment of Infants," No. 153 of detailed, and No. 34 of abridged classification, had to be included with No. 173, "Inanition," of detailed, and No. 33 of abridged classification. Apart from the two cases mentioned, and certain minor difficulties mentioned in paragraph 16 hereinafter,

it is believed that all the causes of death enumerated either under the Farr-Ogle, or under the Registrar-General's classification, have been grouped under the correct headings of the abridged Bertillon Index. The compilation for 1907 does not labour under

CAUSES OF DEATH.—AUSTRALIA, 1907.

16. **Deaths from Special Causes.**—The foregoing table furnishes comparisons for the last three years only, and comparisons will, therefore, be restricted to that period.

(i.) *Typhoid Fever.* Deaths from typhoid fever were less numerous in 1907 than in either of the two preceding years, numbering 564 against 630 in 1905 and 738 in 1906. Of the deaths registered in 1907, 191 occurred in New South Wales and 119 in Western Australia, the numbers in the four remaining States being below 100.

(ii.) *Typhus.* The death of one woman was registered in 1906 in Victoria as being due to typhus, but this registration may have been due to an error in the death certificate, and the death have been one of typhoid (enteric) fever.

(iii.) *Intermittent Fever and Malarial Cachexia.* Deaths from malarial diseases are practically confined to the tropical districts of Northern Queensland, 32 out of 42 deaths registered in 1907 having occurred in that State.

(iv.) *Small-pox.* No deaths from small-pox occurred during the last three years.

(v.) *Measles*. No serious epidemic of measles has occurred for several years; the deaths in 1907 were, however, slightly more numerous than in 1905 and 1906, numbering 147, against 113 and 39 respectively. Of the 147 deaths in 1907, 81 were registered in New South Wales and 39 in Victoria.

(vi.) *Scarlet Fever*. Only 37 deaths were registered in 1907, 27 of which occurred in New South Wales.

(vii.) *Whooping Cough*. A rather severe epidemic of whooping cough visited New South Wales in the early part of 1907, causing 592 deaths out of a total of 1070 registered in the Commonwealth. The number of deaths in Victoria was 130; in Queensland, 127; in South Australia, 76; in Western Australia, 97; and in Tasmania, 43. The deaths in 1905 numbered only 42, and in 1906, 293.

(viii.) *Diphtheria and Croup*. Deaths in 1905 numbered 314; in 1906, 280; and in 1907, 403, of which 154 occurred in New South Wales, 97 in Victoria, and 73 in Western Australia.

(ix.) *Influenza*. This disease was rather more prevalent in 1907 than in the two previous years, the deaths numbering 902, against 428 and 539. Of the deaths occurring in 1907, 309 were registered in New South Wales, 275 in Victoria, and 209 in Queensland.

(x.) *Asiatic Cholera*. No cases of Asiatic cholera have ever occurred in the Commonwealth.

(xi.) *Cholera Nostras*. Isolated cases only of choleric form diarrhoea occurred in each of the three years.

(xii.) *Other Epidemic Diseases*. The number of deaths registered under this heading was 597 in 1905, 354 in 1906, and 268 in 1907. The list in 1907 includes the following diseases:—Dysentery, 120; plague, 48 (of which 19 in New South Wales, 1 in Victoria, and 28 in Queensland); erysipelas, 45; other epidemic diseases, 55.

(xiii.) *Tuberculosis of the Lungs*. The deaths in 1907 numbered 3166, viz., 1774 males and 1392 females. This was a slight decrease on the figures for 1905 and 1906, which were 3244 and 3222 respectively. Of the deaths in 1907, 1016 occurred in New South Wales, 1182 in Victoria, 341 in Queensland, 297 in South Australia, 217 in Western Australia, and 113 in Tasmania.

(xiii.a) *Tuberculosis of the Respiratory System*. Of the various forms of tuberculosis prevalent in the Commonwealth, that which has probably attracted the most attention and has been the subject of the widest comment is phthisis, or tuberculosis of the lungs. The intimate relation, however, between tuberculosis of the lungs and that of other parts of the respiratory system renders it desirable that all forms of tuberculosis of the respiratory system should be brought under one head for various investigations concerning the age incidence and duration of this disease. A preliminary investigation of these two phases has been made by the Commonwealth Statistical Bureau, but owing to the paucity of the data and their incompleteness in certain particulars the results obtained, so far as duration is concerned, can be considered as tentative only, and cannot be regarded as sufficiently reliable to warrant their inclusion in an official Year Book. It is proposed to pursue the matter further, and it is hoped that it will be possible to include in the next issue of the "Year Book" results of this nature that will be of service.

In the matter of the age incidence of death from tuberculosis of the respiratory system, more satisfactory data are obtainable, and the diagrams given hereunder furnish graphic representation of the frequency of deaths at successive ages in England and Wales during 1906 (Fig. 1), and in the Commonwealth during 1907 (Fig. 2). The figures for the Commonwealth being insufficient in extent to admit of an exact determination of

the age incidence of death for the first five years, the English results have been made use of in deciding the form of this portion of the curve.

The figures shewn at the foot of each graph denote the respective ages at death, while the figures shewn in the margin denote the number of deaths corresponding to each year of age. In each of the graphs various rectangles are shewn, through the upper parts of which smooth curves have been drawn. The areas of these rectangles represent the number of deaths which occurred between the ages indicated at the extremities of their respective bases, the scale being 100 persons for each small square in the case of graphs for England and Wales and 10 for each small square in the case of the Commonwealth graphs. The smooth curve may be said to represent the form of the results which would have been obtained under the existing circumstances if the number of cases observed had been indefinitely large and the age intervals had been made indefinitely small.

If a point be taken on the base-line corresponding to any given age, the vertical height of the curve above that point represents the rate per annum at which deaths are occurring at the given age.

It will be seen that in both instances the curve for males differs considerably from that for females, and that there is a general though not a close resemblance between the two curves for males, and also between the two curves for females. It will also be noticed that in both cases the curve for females rises much more abruptly than that for males, owing to the fact that the age of maximum frequency is less in the case of females than in the case of males.

The figures dealt with furnish the following death-rates from tuberculosis of the respiratory system for the years specified :—

| | Males. | Females. | Total. |
|---|------------|------------|------------|
| ENGLAND AND WALES, 1906— | | | |
| Population | 16,689,707 | 17,857,309 | 34,547,016 |
| Deaths from tuberculosis of the respiratory system | 22,645 | 17,101 | 39,746 |
| Death-rate per 100,000 of population ... | 135.68 | 95.76 | 115.05 |
| COMMONWEALTH OF AUSTRALIA, 1907— | | | |
| Population | 2,191,472 | 1,964,201 | 4,155,673 |
| Deaths from tuberculosis of the respiratory system | 1,891 | 1,477 | 3,368 |
| Death-rate per 100,000 of population ... | 86.29 | 75.20 | 81.05 |

(xiv.) *Tuberculosis of the Meninges.* The number of deaths registered in 1905 was 290; in 1906, 273; and in 1907, 237. Not much reliance can, however, be placed on the figures for 1905 and 1906, as the tabulation in some of the States appears to include simple meningitis.

(xv.) *Other Forms of Tuberculosis.* Deaths in 1905 numbered 498; in 1906, 547; and in 1907, 455. The deaths in 1907 include the following forms of tuberculosis :— Tuberculosis of the larynx, 40; tuberculosis of the peritonæum, 141; Pott's disease, 30; cold abscess, 1; white swellings, 1; tuberculosis of other organs, 80; and general tuberculosis, 162.

(xiv.a) *All Forms of Tuberculosis.* A complete tabulation of all the different tubercular diseases from which deaths occurred in 1907, will be found in Bulletin No. 8 of Population and Vital Statistics. Here it will suffice to show a few of the features of the tabulation mentioned. The total number of deaths due to tubercular diseases was 3858, viz., 2135 males and 1723 females. The following table shews the ages of these 3858 persons :—

AGES OF PERSONS WHO DIED FROM TUBERCULAR DISEASES, 1907.

| Ages. | Male. | Female. | Total. | Ages. | Male. | Female. | Total. |
|----------------------|-------|---------|--------|-----------------------|-------|---------|--------|
| Under 5 years ... | 134 | 122 | 256 | 55 years and under 60 | 115 | 46 | 161 |
| 5 years and under 10 | 33 | 44 | 77 | 60 " " 65 | 88 | 43 | 131 |
| 10 " " 15 | 34 | 53 | 87 | 65 " " 70 | 89 | 33 | 122 |
| 15 " " 20 | 84 | 150 | 234 | 70 " " 75 | 58 | 22 | 80 |
| 20 " " 25 | 175 | 254 | 429 | 75 " " 80 | 27 | 10 | 37 |
| 25 " " 30 | 199 | 246 | 445 | 80 " " 85 | 9 | 6 | 15 |
| 30 " " 35 | 232 | 203 | 435 | Age not stated ... | 1 | ... | 1 |
| 35 " " 40 | 237 | 183 | 420 | | | | |
| 40 " " 45 | 214 | 135 | 349 | | | | |
| 45 " " 50 | 237 | 101 | 338 | | | | |
| 50 " " 55 | 169 | 72 | 241 | Total deaths ... | 2,135 | 1,723 | 3,858 |

The length of residence in the Commonwealth of persons who died from tubercular diseases has been tabulated for the year 1907 for all the Commonwealth States, with the exception of South Australia, with the following results :—

LENGTH OF RESIDENCE IN COMMONWEALTH
OF PERSONS WHO DIED FROM TUBERCULAR DISEASES, 1907 (EXCLUSIVE OF SOUTH AUSTRALIA).

| Length of Residence in Commonwealth. | Male. | Fem. | Total. | Length of Residence in Commonwealth. | Male. | Fem. | Total. |
|--------------------------------------|-------|-------|--------|--------------------------------------|-------|-------|--------|
| Born in Commonwealth ... | 1,157 | 1,250 | 2,407 | Resident 10 yrs. & under 15 | 45 | 10 | 55 |
| Resident under 1 year ... | 17 | 10 | 27 | .. 15 .. " 20 | 50 | 24 | 74 |
| .. 1 year ... | 13 | ... | 13 | .. 20 .. " over ... | 463 | 195 | 658 |
| .. 2 years ... | 5 | 1 | 6 | Length of residence not stated | 148 | 29 | 177 |
| .. 3 .. | 3 | 1 | 4 | | | | |
| .. 4 .. | 7 | 4 | 11 | | | | |
| .. 5 .. & under 10 | 39 | 20 | 59 | Total deaths ... | 1,947 | 1,544 | 3,491 |

There would not appear, therefore, to be much ground for the statement sometimes heard that many persons arrive in Australia in the last stages of consumption.

In order to shew the prevalence of tuberculosis in the several States, the death rates from tubercular diseases are shewn in the following table, together with the percentage which deaths from tuberculosis bear on the total number of deaths registered :—

DEATH RATES FROM TUBERCULOSIS AND PERCENTAGE OF TOTAL DEATHS, 1907.

| State. | Death Rates (per 1000) from Tuberculosis. | | | Percentage of Total Deaths. | | |
|---------------------|---|----------|--------|-----------------------------|----------|--------|
| | Males. | Females. | Total. | Males. | Females. | Total. |
| New South Wales | 0.86 | 0.74 | 0.80 | 7.51 | 7.73 | 7.61 |
| Victoria ... | 1.17 | 1.15 | 1.16 | 9.10 | 10.89 | 9.91 |
| Queensland ... | 0.94 | 0.47 | 0.73 | 7.92 | 5.53 | 7.02 |
| South Australia ... | 0.92 | 0.98 | 0.95 | 9.01 | 10.28 | 9.59 |
| Western Australia | 1.05 | 0.86 | 0.96 | 8.52 | 8.82 | 8.63 |
| Tasmania ... | 0.82 | 0.91 | 0.86 | 7.02 | 8.63 | 7.76 |
| Commonwealth | 0.97 | 0.87 | 0.92 | 8.23 | 8.90 | 8.52 |

In the first issue of this book a series of figures was given shewing the rates of mortality from phthisis in various countries, and it was shewn that these ranged from 570 per million in New Zealand to 4415 per million in Hungary, with a rate of 808 for the Commonwealth. It is not considered necessary to repeat those figures here in detail, and it may suffice to state that while deaths from all tubercular diseases in the Commonwealth were 0.92 per thousand in 1907, they were 1.40 per thousand in Belgium in 1904; 1.65 per thousand in England and Wales in 1906; 1.80 per thousand in the Netherlands in 1906; 2.04 per thousand in the German Empire in 1905; and 2.72 per thousand in Switzerland in 1905. The Commonwealth occupies, therefore, a very enviable position in regard to tubercular diseases, when compared with European countries.

(xvi.) *Cancer and other Malignant Tumours.* Deaths from cancer shew a tendency to increase, the figures for 1905 being 2748 deaths; for 1906, 2772 deaths; and for 1907, 2940 deaths. Of the deaths registered in 1907, 1589 were those of males, viz., 624 in New South Wales, 499 in Victoria, 203 in Queensland, 134 in South Australia, 78 in Western Australia, and 51 in Tasmania; while 1351 were those of females; viz., 459 in New South Wales, 492 in Victoria, 150 in Queensland, 137 in South Australia, 53 in Western Australia, and 60 in Tasmania. "Bulletin No. 8" contains a complete tabu-

lation of the various types of cancer and of the seat of the disease, of which the following is a summary :—

DEATHS FROM CANCER, 1907.

| Seat of Disease. | Male. | Female | Total. |
|---|-------|--------|--------|
| Cancer, etc., of the mouth | 244 | 19 | 263 |
| „ „ the stomach and liver | 671 | 422 | 1,093 |
| „ „ the peritonæum, the intestines, and the rectum | 161 | 140 | 301 |
| „ „ the female genital organs | ... | 331 | 331 |
| „ „ the breast | ... | 193 | 193 |
| „ „ the skin | 55 | 18 | 73 |
| „ „ other organs | 458 | 228 | 686 |
| Total deaths | 1,589 | 1,351 | 2,940 |

Of these deaths 996 were described as cancer, 1147 as carcinoma, 153 as epithelioma, 398 as "malignant disease," 6 as neoplasm, 15 as "rodent ulcer," 198 as sarcoma, and 27 as Scirrhus.

The ages of the 2940 persons who died from cancer in 1907, are shewn in the following table :—

AGES OF PERSONS WHO DIED FROM CANCER, 1907.

| Ages. | Males. | Female | Total. | Ages. | Males. | Female | Total. |
|-----------------------|--------|--------|--------|-----------------------|--------|--------|--------|
| Under 15 years ... | 17 | 14 | 31 | 65 years and under 70 | 260 | 166 | 426 |
| 15 years and under 20 | 11 | 1 | 12 | 70 „ „ 75 | 246 | 175 | 421 |
| 20 „ „ 25 | 8 | 3 | 11 | 75 „ „ 80 | 139 | 104 | 243 |
| 25 „ „ 30 | 6 | 16 | 22 | 80 „ „ 85 | 69 | 42 | 111 |
| 30 „ „ 35 | 20 | 20 | 40 | 85 years and over ... | 31 | 22 | 53 |
| 35 „ „ 40 | 31 | 59 | 90 | Age not stated ... | 2 | 2 | 4 |
| 40 „ „ 45 | 82 | 107 | 189 | | | | |
| 45 „ „ 50 | 121 | 176 | 297 | | | | |
| 50 „ „ 55 | 169 | 134 | 303 | Total Deaths ... | 1,589 | 1,351 | 2,940 |
| 55 „ „ 60 | 180 | 150 | 330 | | | | |
| 60 „ „ 65 | 197 | 160 | 357 | | | | |

A tabulation has been made of the occupations of the males who died from cancer, of which the following is a summary :—

OCCUPATIONS OF MALES WHO DIED FROM CANCER, 1907.

| Occupation. | No. of Deaths. | Occupation. | No. of Deaths. |
|---|----------------|-----------------------------------|----------------|
| Professional class | 76 | Pastoral class | 67 |
| Domestic class | 43 | Working in mines and quarries ... | 139 |
| Mercantile class | 165 | Other primary producers | 14 |
| Engaged in transport and communication | 109 | Independent means | 61 |
| Manufacturing class | 150 | Dependents | 23 |
| Engaged in building and construction | 102 | Occupation not stated | 62 |
| Indefinite industrial workers | 313 | | |
| Agricultural class | 265 | Total Male Deaths | 1,589 |

As the following tables shew, the death rates from cancer are below those for tubercular diseases in all the States, but while the latter have a tendency to decrease the former have, on the contrary, shewn an increase for several years.

DEATH RATES FROM CANCER, AND PERCENTAGE OF TOTAL DEATHS, 1907.

| State. | Death Rates (per 1000) from Cancer. | | | Percentage of Total Deaths. | | |
|---------------------|-------------------------------------|----------|--------|-----------------------------|----------|--------|
| | Males. | Females. | Total. | Males. | Females. | Total. |
| New South Wales | 0.75 | 0.63 | 0.69 | 6.60 | 6.59 | 6.60 |
| Victoria ... | 0.80 | 0.79 | 0.80 | 6.25 | 7.49 | 6.81 |
| Queensland ... | 0.69 | 0.61 | 0.65 | 5.83 | 7.09 | 6.30 |
| South Australia ... | 0.65 | 0.75 | 0.70 | 6.42 | 7.87 | 7.08 |
| Western Australia | 0.51 | 0.48 | 0.50 | 4.18 | 4.97 | 4.47 |
| Tasmania ... | 0.55 | 0.69 | 0.62 | 4.71 | 6.56 | 5.55 |
| Commonwealth | 0.72 | 0.68 | 0.70 | 6.12 | 6.97 | 6.49 |

The table shewing the death rates from cancer in various countries, which was given in the first issue of this work, is not here repeated. It may, however, be stated that while the death rate of the Commonwealth from cancer in 1907 was 0.70 per thousand, that of Belgium in 1904 was 0.56; that of the German Empire in 1905, 0.80; that of England and Wales in 1905, 0.92; that of the Netherlands in 1906, 1.01; and that of Switzerland in 1905, 1.32 per thousand.

(xvii.) *Simple Meningitis.* The table shews 461 deaths in 1905, 250 deaths in 1906, and 648 deaths in 1907. The last figure is the only one that can be taken as correct, the returns for some of the States having in 1905 and 1906 included this disease with tuberculosis of the meninges, as has already been stated in paragraph xiv.

(xviii.) *Congestion, Hæmorrhage, and Softening of the Brain.* The deaths registered under this heading in 1905 numbered 1611, viz., 865 males and 746 females; in 1906, they were 1685, viz., 908 males and 781 females; and in 1907, 1901, viz., 1038 males and 863 females. The 1907 figures are made up of congestion and hæmorrhage of the brain—976 males, 817 females, total 1793; and softening of the brain—62 males, 46 females, total 108.

(xix.) *Organic Diseases of the Heart.* Owing to the changes in tabulation it is impossible to say whether the figures for the three years are strictly comparable. The number of deaths registered in 1907 was 3801, viz., 2154 males and 1647 females. Of these deaths, New South Wales was responsible for 745 males and 552 females; Victoria for 708 males and 607 females; Queensland for 292 males and 168 females; South Australia for 181 males and 176 females; Western Australia for 120 males and 52 females; and Tasmania for 108 males and 92 females. To the figures for 1907 correspond the following death rates and percentages to total deaths:—

DEATH RATES FROM ORGANIC HEART DISEASE AND PERCENTAGE OF TOTAL DEATHS, 1907.

| State. | Death Rates (per 1000) from Organic Heart Disease. | | | Percentage of Total Deaths. | | |
|---------------------|--|----------|--------|-----------------------------|----------|--------|
| | Males. | Females. | Total. | Males. | Females. | Total. |
| New South Wales | 0.90 | 0.76 | 0.83 | 7.89 | 7.92 | 7.90 |
| Victoria ... | 1.14 | 0.98 | 1.06 | 8.87 | 9.25 | 9.44 |
| Queensland ... | 0.99 | 0.68 | 0.85 | 8.38 | 7.94 | 8.21 |
| South Australia ... | 0.88 | 0.97 | 0.92 | 8.67 | 10.11 | 9.32 |
| Western Australia | 0.78 | 0.47 | 0.65 | 6.43 | 4.88 | 5.87 |
| Tasmania ... | 1.16 | 1.06 | 1.11 | 9.97 | 10.05 | 10.01 |
| Commonwealth ... | 0.98 | 0.84 | 0.91 | 8.30 | 8.50 | 8.39 |

(xxi.) *Acute Bronchitis.* The nomenclature of causes of deaths requires deaths of persons under five years of age, which are merely ascribed to "bronchitis," to be classified under "acute bronchitis," and similarly certified deaths of older persons under "chronic bronchitis." This rule has been followed in adjusting the tabulation of 1905 and 1906, and followed throughout in compiling the tables for 1907, with the result that acute bronchitis is credited with 478 deaths in 1905, 421 deaths in 1906, and 514 deaths in 1907, viz., 294 males and 220 females.

(xxii.) *Chronic Bronchitis.* The adjustment mentioned in the preceding paragraph gives a total of 1023 deaths due to chronic bronchitis in 1905, 984 deaths in 1906, and 844 deaths, viz., 464 males and 380 females, in 1907.

(xxiii.) *Pneumonia.* The figures for 1905 and 1906 are unduly swelled by the inclusion of broncho-pneumonia, etc., which in 1907 is classified under "Other Diseases." The 1907 figures were 1103 males and 685 females, a total of 1788 deaths.

(xxiii.) *Diseases of the Stomach (Cancer excepted).* In 1907 this heading includes: Ulcer of the stomach, 46 males, 50 females; and other diseases of the stomach (cancer excepted), 126 males, 112 females; a total of 334 deaths. The corresponding figures for 1905 and 1906, which are fairly comparable, were 442 and 467 respectively.

(xxiv.) *Diarrhœa and Enteritis (Children under two years only).* In 1905 the deaths numbered 2593, viz., 1421 boys and 1172 girls; in 1906 they were 2881, viz., 1624 boys and 1257 girls; and in 1907, 2773, viz., 1513 boys and 1220 girls. The 1907 deaths were distributed amongst the six States as follows:—New South Wales, 601 males, 500 females, total 1101; Victoria, 367 males, 307 females, total 674; Queensland, 194 males, 152 females, total 346; South Australia, 97 males, 72 females, total 169; Western Australia, 202 males, 152 females, total 354; and Tasmania, 52 males, 37 females, total 89.

The following are the death rates and percentages of total deaths due to infantile diarrhœa and enteritis in the six States for the year 1907:—

DEATH RATES FROM INFANTILE DIARRHŒA AND ENTERITIS, AND PERCENTAGE OF TOTAL DEATHS, 1907.

| State. | Death Rate (per 1000) from Infantile Diarrhœa and Enteritis. | | | Percentage of Total Deaths. | | |
|---------------------|--|----------|--------|-----------------------------|----------|--------|
| | Males. | Females. | Total. | Males. | Females. | Total. |
| New South Wales | 0.72 | 0.69 | 0.71 | 6.36 | 7.17 | 6.71 |
| Victoria ... | 0.59 | 0.49 | 0.54 | 4.60 | 4.68 | 4.63 |
| Queensland ... | 0.66 | 0.62 | 0.64 | 5.57 | 7.18 | 6.18 |
| South Australia ... | 0.47 | 0.39 | 0.44 | 4.65 | 4.13 | 4.41 |
| Western Australia | 1.31 | 1.39 | 1.35 | 10.82 | 14.27 | 12.08 |
| Tasmania ... | 0.56 | 0.42 | 0.49 | 4.80 | 4.04 | 4.45 |
| Commonwealth | 0.69 | 0.62 | 0.65 | 5.83 | 6.30 | 6.03 |

As a large number of these deaths is directly due to improper feeding, it would be interesting to know the percentages of infants who were bottle-fed, but, unfortunately, no provision exists for the registration of that fact.

(xxv.) *Hernia, Intestinal Obstructions.* The number of deaths has not varied much from year to year, the number registered in 1905 being 432; in 1906, 399; and in 1907, 411, viz., 214 males and 197 females.

(xxvi.) *Cirrhosis of the Liver.* The deaths in 1905 numbered 290; in 1906, 267; and in 1907, 325, viz., 193 males and 132 females.

(xxvii.) *Nephritis and Bright's Disease.* The number of deaths attributable to these diseases is a very large one from year to year. In 1905 there were registered the deaths of 1083 males and 690 females; in 1906, those of 1114 males and 678 females; and in 1907, those of 1065 males and 695 females. Of the deaths registered in 1907 those of 95 males and 51 females were ascribed to acute nephritis, and those of 970 males and 644 females to Bright's disease. New South Wales was responsible for 595 deaths; Victoria for 696; Queensland for 208; South Australia for 147; Western Australia for 71; and Tasmania for 43; making a total of 1760.

(xxviii.) *Non-cancerous Tumours and other Diseases of the Female Genital Organs.* Deaths in 1905 numbered 134; in 1906, 153; and in 1907, 128. Included in the 128 deaths registered in 1907 were the following:—Metritis, 5; non-puerperal uterine hæmorrhage, 1; non-cancerous uterine tumours, 40; other diseases of the uterus, 30; cysts and other ovarian tumours, 12; other diseases of the female genital organs, 40.

(xxix.) *Puerperal Septicæmia (Puerperal Fever, Puerperal Peritonitis, Puerperal Phlebitis).* Deaths in 1905 were 205; in 1906, 168; and in 1907, 179.

(xxx.) *Other Puerperal Accidents of Pregnancy and Confinement.* The deaths in 1905 numbered 411; in 1906, 458; and in 1907, 435. Included in the 435 deaths registered in 1907 were the following:—Accidents of pregnancy, 109; puerperal hæmorrhage, 45; other accidents of childbirth, 103; puerperal albuminuria and eclampsia, 98; puerperal phlegmasia alba dolens, 3; and other puerperal accidents (including "sudden death"), 77.

(xxx. a) *All Puerperal Diseases.* The 614 deaths registered in 1907 under the two preceding headings will be found tabulated in "Bulletin No. 8 of Population and Vital Statistics" under the various names of the diseases causing death as found in the certificates of death. The names amount to more than seventy, and need not be repeated here. Of the women who succumbed to puerperal diseases in 1907, 30 were between the ages of 15 and 19; 97 between 20 and 24; 132 between 25 and 29; 154 between 30 and 34; 139 between 35 and 39; 50 between 40 and 44; and 12 between 45 and 49. As the total number of confinements registered in 1907 was 109,306, it follows that one mother in every 178 succumbed to puerperal disease.

(xxxii.) *Congenital Debility and Malformations.* As has been pointed out on a previous page, the figures set down under this heading, viz., 3200 for 1905, 2960 for 1906, and 3038 for 1907, are not strictly comparable, owing to the impossibility of distinguishing in every case for 1905 and 1906 between children under three months of age and those from three to twelve months. The 1907 figures include:—Malformations, 193 males, 133 females, total 326; and congenital debility, icterus, and scleroma of children under three months of age, 1523 males and 1189 females, total 2712; or a grand total of 3038. Of these deaths, 1226 were registered in New South Wales, viz., 676 males and 550 females; 826 in Victoria, viz., 470 males and 356 females; 389 in Queensland, viz., 220 males and 169 females; 225 in South Australia, viz., 135 males and 90 females; 223 in Western Australia, viz., 127 males and 96 females; and 149 in Tasmania, viz., 88 males and 61 females.

(xxxiii.) *Senile Debility.* The deaths ascribed to "old age" form a large group, and are slightly in excess of those due to infantile debility. In 1905 they numbered 3160, viz., 1807 males and 1353 females; in 1906, 3031, viz., 1712 males and 1319 females; and in 1907, 3136, viz., 1721 males and 1415 females. Of the deaths registered in 1907, 981 occurred in New South Wales, viz., 561 males and 420 females; 1210 in Victoria, viz., 657 males and 553 females; 236 in Queensland, viz., 138 males and 98 females; 371 in South Australia, viz., 183 males and 188 females; 85 in Western Australia, viz., 55 males and 30 females; and 253 in Tasmania, viz., 127 males and 126 females.

Of the males whose death was described as due to senility, 3 were between 45 and 49 years old; 3 between 55 and 59; 31 between 60 and 64; 130 between 65 and 69; 289 between 70 and 74; 449 between 75 and 79; 416 between 80 and 84; 284 between 85 and 89; 74 between 90 and 94; 30 between 95 and 99; while 11 were 100 years old and upwards; and of 1 the age was not stated.

Of the females, 1 was between 35 and 39; 1 between 45 and 49; 2 between 50 and 54; 2 between 55 and 59; 21 between 60 and 64; 74 between 65 and 69; 222 between 70 and 74; 332 between 75 and 79; 327 between 80 and 84; 293 between 85 and 89; 101 between 90 and 94; 30 between 95 and 99; while 7 were 100 years old and upwards; and of 2 the age was not stated.

(xxxiii.) *Violence.* A very large number of deaths is every year due to external violence, and, as might be expected from the fact that their occupations expose them much more to accidents, males largely predominate. The figures quoted are exclusive of suicides, which have been treated as a separate group. Deaths ascribed to violence numbered, in 1905, 2663, viz., 2014 males and 649 females; in 1906, 2617, viz., 2024 males and 593 females; and in 1907, 2679, viz., 2038 males and 641 females. Of the deaths registered in 1907, those of 721 males and 251 females occurred in New South Wales; those of 552 males and 186 females in Victoria; those of 349 males and 80 females in Queensland; those of 122 males and 50 females in South Australia; those of 204 males and 38 females in Western Australia; and those of 90 males and 36 females in Tasmania.

The following table shows the various kinds of accidental deaths which occurred in 1907, distinguishing males and females:—

DEATHS FROM VIOLENCE, 1907.

| Cause of Death. | Males. | Females. | Total. |
|--|--------------|------------|--------------|
| Fractures | 243 | 70 | 313 |
| Other accidental injuries | 876 | 128 | 1,004 |
| Burning by fire | 143 | 219 | 362 |
| Burning by corrosive substances | ... | 2 | 2 |
| Insolation | 46 | 18 | 64 |
| Electric shock | 11 | 1 | 12 |
| Accidental drowning | 402 | 71 | 473 |
| Inanition | 46 | 5 | 51 |
| Inhalation of noxious gases | 38 | 18 | 56 |
| Other accidental poisoning | 65 | 38 | 103 |
| Other external violence | 168 | 71 | 239 |
| Total Deaths | 2,038 | 641 | 2,679 |

In every kind of accidental death there was, therefore, a large excess of males, with the exception of burning accidents, in which female deaths largely predominated.

(xxxiii.a) *Suicide.* Suicides have shown a tendency to decrease during recent years, the number in 1905 having been 520, viz., 431 males and 89 females; while in 1906 it was 499, viz., 403 males and 96 females; and in 1907, 461, viz., 385 males and 76 females. Of the last named, those of 133 males and 25 females happened in New South Wales; those of 100 males and 21 females in Victoria; those of 76 males and 18 females in Queensland; those of 25 males and 6 females in South Australia; those of 42 males and 6 females in Western Australia; and those of 9 males in Tasmania.

The modes adopted by persons who committed suicide in 1907 were as follows:—

SUICIDES, 1907.

| Mode of Death. | Males. | Females. | Total. |
|------------------------------------|------------|-----------|------------|
| Poison | 57 | 32 | 89 |
| Asphyxia | 2 | ... | 2 |
| Hanging or strangulation | 71 | 12 | 83 |
| Drowning | 37 | 19 | 56 |
| Firearms | 129 | 3 | 132 |
| Cutting instruments | 61 | 5 | 66 |
| Precipitation from a height | 6 | 1 | 7 |
| Crushing | 3 | 2 | 5 |
| Other modes | 19 | 2 | 21 |
| Total Suicides | 385 | 76 | 461 |

The death rates from suicides and the percentage of total deaths borne by suicides are shown in the following table:—

DEATH RATES FROM SUICIDES AND PERCENTAGE OF TOTAL DEATHS, 1907.

| State. | Death Rates (per 1000) from Suicides. | | | Percentage of Total Deaths. | | |
|-----------------------|---------------------------------------|-------------|-------------|-----------------------------|-------------|-------------|
| | Males. | Females. | Total. | Males. | Females. | Total. |
| New South Wales ... | 0.16 | 0.03 | 0.10 | 1.41 | 0.36 | 0.96 |
| Victoria ... | 0.16 | 0.03 | 0.09 | 1.25 | 0.32 | 0.83 |
| Queensland ... | 0.25 | 0.07 | 0.17 | 2.18 | 0.85 | 1.68 |
| South Australia ... | 0.12 | 0.03 | 0.08 | 1.20 | 0.34 | 0.81 |
| Western Australia ... | 0.27 | 0.05 | 0.18 | 2.25 | 0.56 | 1.64 |
| Tasmania ... | 0.09 | ... | 0.05 | 0.83 | ... | 0.45 |
| Commonwealth | 0.17 | 0.04 | 0.11 | 1.48 | 0.39 | 1.02 |

From the following table, which shows the ages of the persons who committed suicide in 1907, it will be seen that both extreme youth and extreme old age are represented:—

AGES OF PERSONS WHO COMMITTED SUICIDE, 1907.

| Ages. | M. | F. | Total. | Ages. | M. | F. | Total. |
|-----------------------|----|----|--------|-------------------------|------------|-----------|------------|
| Under 15 years ... | 2 | 1 | 3 | 65 years and under 70 | 17 | 4 | 21 |
| 15 years and under 20 | 7 | 4 | 11 | 70 " " 75 | 16 | ... | 16 |
| 20 " " 25 | 19 | 13 | 32 | 75 " " 80 | 10 | 3 | 13 |
| 25 " " 30 | 34 | 7 | 41 | 80 " " 85 | 7 | 1 | 8 |
| 30 " " 35 | 31 | 13 | 44 | 85 " " 90 | 2 | ... | 2 |
| 35 " " 40 | 37 | 6 | 43 | Age not stated ... | 1 | ... | 1 |
| 40 " " 45 | 50 | 3 | 53 | | | | |
| 45 " " 50 | 55 | 8 | 63 | | | | |
| 50 " " 55 | 38 | 4 | 42 | Total Deaths ... | 385 | 76 | 461 |
| 55 " " 60 | 30 | 4 | 34 | | | | |
| 60 " " 65 | 29 | 5 | 34 | | | | |

The birthplaces of suicides, which are shown in the following table, are exclusive of 25 males and 6 females in South Australia:—

BIRTHPLACES OF PERSONS WHO COMMITTED SUICIDE, 1907.

| Birthplaces. | M. | F. | Total. | Birthplaces. | M. | F. | Total. |
|---------------------|----|-----|--------|-----------------------|-----|-----|--------|
| New South Wales ... | 52 | 15 | 67 | Scotland ... | 12 | 1 | 13 |
| Victoria ... | 64 | 14 | 78 | Sweden ... | 3 | ... | 3 |
| Queensland ... | 27 | 6 | 33 | Wales ... | 6 | ... | 6 |
| South Australia ... | 10 | ... | 10 | United States ... | 3 | ... | 3 |
| Tasmania ... | 8 | 1 | 9 | Ceylon ... | 1 | ... | 1 |
| New Zealand ... | 4 | 2 | 6 | China ... | 5 | ... | 5 |
| Austria-Hungary ... | 1 | ... | 1 | India ... | 1 | ... | 1 |
| Denmark ... | 3 | ... | 3 | Japan ... | 1 | ... | 1 |
| England ... | 72 | 19 | 91 | At sea ... | 1 | ... | 1 |
| France ... | 1 | 1 | 2 | Birthplace not stated | 34 | 4 | 38 |
| Germany ... | 13 | ... | 13 | | | | |
| Ireland ... | 31 | 6 | 37 | | | | |
| Italy ... | 5 | ... | 5 | | | | |
| Norway ... | 2 | 1 | 3 | | | | |
| | | | | Total Deaths ... | 360 | 70 | 430 |

The following table shows the occupations of the 385 males who committed suicide:—

OCCUPATIONS OF MALE PERSONS WHO COMMITTED SUICIDE, 1907.

| Occupations. | Deaths. | Occupations. | Deaths. |
|--|---------|-----------------------------------|---------|
| Professional class ... | 24 | Pastoral class ... | 21 |
| Domestic class ... | 7 | Working in mines and quarries ... | 36 |
| Mercantile class ... | 45 | Other primary producers ... | 8 |
| Engaged in transport and communication ... | 23 | Independent means ... | 9 |
| Manufacturing class ... | 37 | Dependents ... | 3 |
| Engaged in building and construction ... | 11 | Occupation not stated ... | 25 |
| Indefinite industrial workers ... | 89 | | |
| Agricultural class ... | 47 | Total Deaths ... | 385 |

(xxxiv.) *Other Diseases.* The number of causes included under this heading is a very large one, amounting to no less than 89 of the items shewn in the detailed classification, and deaths were recorded under every one of these with the exception of the following six:—Glanders and farcy, rabies, pellagra, other poisonings due to occupation, other diseases of the circulatory system, non-puerperal diseases of the breast (cancer excepted). The total number of deaths under "other diseases" in 1905 was 10,263, viz., 6137 males and 4126 females; in 1906 it was 9976, viz., 5880 males and 4096 females; and in 1907, 8679, viz., 5102 males and 3577 females. Some of the diseases included here account for very considerable numbers of deaths. Thus there were 904 deaths ascribed to broncho-pneumonia; 633 to diarrhoea and enteritis of children over two years of age and of adults; 549 to convulsions of children under five years of age; 388 to diabetes; 346 to paralysis without indicated cause; and 305 to appendicitis and abscess of the iliac fossa. Particulars of the deaths included in 1907 are shewn in the following table:—

CAUSES OF DEATH INCLUDED UNDER "OTHER DISEASES," 1907.

| Causes. | M. | F. | T'tal. | Causes. | M. | F. | T'tal. |
|--|-----|-----|--------|--|-------|-------|--------|
| Leprosy | 8 | ... | 8 | Diseases of the Thyroid Body ... | 4 | 18 | 22 |
| Purulent Infection and Septicæmia | 73 | 70 | 143 | Broncho-Pneumonia | 495 | 409 | 904 |
| Malignant Pustule and "Charbon" | 4 | ... | 4 | Pleurisy | 88 | 56 | 144 |
| Trichinosis, etc. | 2 | 1 | 3 | Congestion of the Lungs and Pulmonary Apoplexy | 87 | 77 | 164 |
| Scrofula | 1 | ... | 1 | Gangrene of the Lungs | 21 | 13 | 34 |
| Syphilis | 98 | 72 | 170 | Asthma | 83 | 42 | 125 |
| Blennorrhagia of Adults | 1 | ... | 1 | Pulmonary Emphysema | 27 | 14 | 41 |
| Gonococcal Diseases of Children under five years of age | 1 | 1 | 2 | Other Diseases of the Respiratory System (Consumption excepted) | 108 | 40 | 148 |
| Other Tumours (Tumours of the female genital organs excepted) | 94 | 24 | 48 | Diseases of the Mouth and its Associated Organs | 8 | 8 | 16 |
| Acute Articular Rheumatism | 56 | 77 | 133 | Diseases of the Pharynx | 14 | 14 | 28 |
| Chronic Rheumatism & Gout | 33 | 60 | 93 | Diseases of the Oesophagus | 8 | 8 | 16 |
| Scurvy | 3 | 1 | 4 | Diarrhoea and Enteritis of Children under two years of age and Adults | 325 | 308 | 633 |
| Diabetes | 188 | 200 | 388 | Intestinal Parasites | 1 | 7 | 8 |
| Exophthalmic Goitre | 5 | 36 | 41 | Other Diseases of the Intestine's Icterus Gravis | 39 | 39 | 78 |
| Addison's Disease | 11 | 7 | 18 | Hydatid Tumours of the Liver | 2 | 4 | 6 |
| Leucæmia | 42 | 26 | 68 | Biliary Calculi | 43 | 29 | 72 |
| Anæmia, Chlorosis | 86 | 91 | 177 | Other Diseases of the Liver | 11 | 34 | 45 |
| Other General Diseases | 132 | 37 | 159 | Diseases of the Spleen | 109 | 97 | 206 |
| Acute and Chronic Alcoholism | 18 | 4 | 22 | Simple Peritonitis (non-puerperal) | 5 | 6 | 11 |
| Lead Poisoning | 5 | 5 | 10 | Other Diseases of the Digestive System (Cancer and Tuberculosis excepted) | 117 | 126 | 243 |
| Other Chronic Poisonings | 3 | 2 | 36 | Appendicitis and Abscess of the Iliac Fossa | 9 | 3 | 12 |
| Encephalitis | 74 | 2 | 196 | Other Diseases of the Kidneys and their Adnexa | 184 | 121 | 305 |
| Progressive Locomotor Ataxia | 132 | 64 | 346 | Calculi of Urinary System | 77 | 41 | 118 |
| Other Diseases of the Spinal Cord | 194 | 152 | 346 | Diseases of the Bladder | 31 | 15 | 46 |
| Paralysis without indicated cause | 123 | 23 | 146 | Other Diseases of the Urethra, Urinary Abscess, etc. | 163 | 26 | 189 |
| General Paralysis | 26 | 36 | 62 | Diseases of the Prostate | 35 | 4 | 39 |
| Other Forms of Mental Alienation | 60 | 61 | 121 | Non-venereal Diseases of the Male Genital Organs | 164 | ... | 164 |
| Epilepsy | 17 | 18 | 35 | Gangrene | 2 | 2 | 4 |
| Belammpsia (non-puerperal) | 296 | 253 | 549 | Carbuncle | 58 | 50 | 108 |
| Convulsions of Children under five years of age | 60 | 23 | 83 | Pilesmon, Acute Abscess | 13 | 4 | 17 |
| Tetanus | 60 | 23 | 83 | Other Diseases of the Skin and Adnexa | 18 | 20 | 38 |
| Chorea | 3 | 2 | 5 | Non-tubercular Diseases of the Bones | 48 | 27 | 75 |
| Other Diseases of the Nervous System | 178 | 99 | 277 | Arthritis and other Diseases of the Joints (Tuberculosis & Rheumatism excepted) | 52 | 26 | 78 |
| Diseases of the Eyes and their Appendages | 1 | 1 | 2 | Amputation | 6 | 6 | 12 |
| Diseases of the Ear | 5 | 7 | 12 | Other Diseases of the Organs of Locomotion | 2 | 1 | 3 |
| Pericarditis | 32 | 20 | 52 | Other Diseases peculiar to Infancy | 6 | 2 | 8 |
| Acute Endocarditis | 161 | 123 | 289 | Want of Care (Infants) | 36 | 45 | 81 |
| Angina Pectoris | 66 | 26 | 92 | | 16 | 21 | 37 |
| Diseases of the Arteries, Atheroma, Aneurism | 244 | 58 | 302 | | | | |
| Embolism and Thrombosis | 51 | 43 | 94 | | | | |
| Diseases of the Veins (Varices, Varicose Ulcers, Hæmorrhoids) | 5 | 12 | 17 | | | | |
| Diseases of the Lymphatic System | 6 | 6 | 12 | | | | |
| Hæmorrhages | 48 | 21 | 69 | | | | |
| Diseases of the Nasal Fossæ | 6 | 1 | 7 | | | | |
| Diseases of the Larynx | 58 | 42 | 100 | | | | |
| | | | | Total Deaths | 5,102 | 3,577 | 8,679 |

(xxxv.) *Unspecified or ill-defined Diseases.* The number of cases which has to be included here is a considerable one from year to year, having numbered 1042 in 1905; 1168 in 1906; and 1275, viz., 830 males and 445 females, in 1907. The detailed classification distinguishes these ill-defined diseases under three headings:—Dropsy, including such definitions as anasarca, ascites, general œdema, etc.; sudden death, including syncope; and unspecified or ill-defined causes, of which the following are specimens:—Asthénia, coma, dentition, exhaustion, heart failure, etc. In 1907 the number of cases of death which would have to be classed under the first of these categories was 44; those belonging to the second, 26; and those belonging to the third, 1205. It is, of course, true that there must always occur some cases where the disease is not well characterised, or where sufficient information is not procurable to allow of a clear definition being given in the certificate of death, but in the majority of cases included under this heading a

more complete diagnosis and consequently a more satisfactory certificate would no doubt have been possible.

17. Causes of Death in Classes.—The figures presented in the preceding paragraphs relate to certain definite causes of death. It is almost generally acknowledged that figures of this kind are of greater value in medical statistics than is a classification under general headings. The classification under fourteen general headings adopted by the compiler of The International Nomenclature is, however, shown in the following table, together with the death rates and the percentages of the total deaths pertaining to those classes:—

DEATHS, DEATH RATES, AND PERCENTAGES OF TOTAL DEATHS IN CLASSES,

1907.

| Class. | Total Deaths. | | | Death Rate (per 1000). | | | Percentage of Total Deaths. | | |
|---|---------------|---------------|---------------|------------------------|-------------|--------------|-----------------------------|---------------|---------------|
| | M. | F. | Total. | M. | F. | Total. | M. | F. | Total. |
| 1. General diseases ... | 6,345 | 5,385 | 11,730 | 2.90 | 2.75 | 2.83 | 24.45 | 27.81 | 25.90 |
| 2. Diseases of the Nervous System & of the Organs of Special Sense... | 2,546 | 1,885 | 4,431 | 1.16 | 0.96 | 1.07 | 9.81 | 9.73 | 9.78 |
| 3. Diseases of the Circulatory System | 2,761 | 1,961 | 4,722 | 1.26 | 1.01 | 1.14 | 10.63 | 10.13 | 10.42 |
| 4. Diseases of the Respiratory System | 2,838 | 1,997 | 4,835 | 1.30 | 1.02 | 1.17 | 10.94 | 10.31 | 10.67 |
| 5. Diseases of the Digestive Organs.. | 2,967 | 2,514 | 5,481 | 1.36 | 1.28 | 1.32 | 11.48 | 12.98 | 12.10 |
| 6. Diseases of the Genito-Urinary System and Adnexa ... | 1,537 | 909 | 2,446 | 0.70 | 0.46 | 0.58 | 5.92 | 4.69 | 5.40 |
| 7. Puerperal Condition ... | ... | 614 | 614 | ... | 0.31 | 0.15 | ... | 3.17 | 1.35 |
| 8. Diseases of the Skin and of the Cellular Tissue ... | 137 | 101 | 238 | 0.06 | 0.05 | 0.05 | 0.53 | 0.52 | 0.53 |
| 9. Diseases of the Organs of Locomotion ... | 66 | 35 | 101 | 0.03 | 0.02 | 0.02 | 0.25 | 0.18 | 0.22 |

| Total ... | 25,939 | 19,366 | 45,305 | 11.84 | 9.86 | 10.90 | 100.00 | 100.00 | 100.00 |

§ 4. Graphical Representation of Vital Statistics.

1. General.—The progressive fluctuations of the numbers representing the total births and marriages are important indexes of the economic conditions and social ideals of a community. For this reason graphs have been prepared (see pages 255 and 256), shewing these fluctuations from 1860 to 1907, both for the States and the Commonwealth. The facts are very significant from the national point of view and call for serious consideration. To properly appreciate the situation it should be remembered that, normally, the increases of births and also of marriages will be similar to the increase of population. Although the marriage curve shows a falling off in marriages after 1891 (see page 256), it shews a recovery in 1894, and, with the exception of a small fall for 1903, it has continually advanced. The same characteristic is not seen in the curve of births, which discloses a recovering tendency only in 1904.

The table on the following page shews the number of births, marriages and deaths which would have been experienced had the rate for 1890 continued, and reveals the significance of the facts disclosed by the curves. It may be remarked that the death rate has greatly improved, and among other countries, Australia stands in a very favourable position in this respect. At the same time the decline in the marriage rate, overtaken once more in 1907, and the still more serious decline in the birth rate, in a country but sparsely popu-

lated, have an obvious and most important bearing on the national future, and on questions concerning the extent to which it is desirable to promote immigration.

ACTUAL BIRTHS, DEATHS, AND MARRIAGES

EXPERIENCED IN THE COMMONWEALTH DURING THE YEARS 1890 TO 1907, COMPARED WITH THE NUMBER THAT WOULD HAVE OCCURRED IF THE RATES OF 1890 HAD REMAINED IN OPERATION.

| Year. | BIRTHS. | | DEATHS. | | MARRIAGES. | |
|-------|---------|---|---------|---|------------|---|
| | Actual. | Number of Births that would have been experienced if the 1890 birth rate had been in operation. | Actual. | Number of Deaths that would have been experienced if the 1890 death rate had been in operation. | Actual. | Number of Marriages that would have been experienced if the 1890 marriage rate had been in operation. |
| 1890 | 108,683 | | 44,449 | | 23,725 | |
| 1891 | 110,187 | 111,802 | 47,430 | 45,737 | 23,862 | 24,419 |
| 1892 | 110,158 | 114,502 | 42,268 | 46,842 | 22,049 | 25,009 |
| 1893 | 109,322 | 116,617 | 45,801 | 47,707 | 20,631 | 25,470 |
| 1894 | 104,660 | 118,734 | 42,958 | 48,573 | 20,625 | 25,933 |
| 1895 | 105,084 | 121,002 | 43,080 | 49,501 | 21,564 | 26,428 |
| 1896 | 100,134 | 123,212 | 45,202 | 50,405 | 23,068 | 26,911 |
| 1897 | 101,137 | 125,419 | 43,447 | 51,308 | 23,939 | 27,393 |
| 1898 | 98,845 | 127,371 | 51,406 | 52,106 | 24,472 | 27,819 |
| 1899 | 100,638 | 129,088 | 47,629 | 52,809 | 25,958 | 28,194 |
| 1900 | 102,221 | 130,848 | 44,060 | 53,529 | 27,101 | 28,579 |
| 1901 | 102,945 | 132,662 | 46,330 | 54,271 | 27,753 | 28,975 |
| 1902 | 102,776 | 134,873 | 48,078 | 55,175 | 27,926 | 29,458 |
| 1903 | 98,443 | 136,478 | 47,293 | 55,832 | 25,977 | 29,808 |
| 1904 | 104,113 | 138,305 | 43,572 | 56,579 | 27,682 | 30,207 |
| 1905 | 104,941 | 140,511 | 43,514 | 57,482 | 29,004 | 30,689 |
| 1906 | 107,890 | 142,908 | 44,333 | 58,462 | 30,410 | 31,213 |
| 1907 | 110,347 | 145,365 | 45,305 | 59,468 | 32,470 | 31,749 |

2. **Graphs of Annual Births, Commonwealth and States** (page 255).—A striking feature of the graphs of births is the practically continuous increase in the number of births exhibited in the graph for the Commonwealth from 1860 to 1891, and the marked variations of subsequent years. As the curve clearly shews, a turning point in the number of births occurred in 1891, whilst, as regards the separate States, New South Wales and Tasmania date their decline in number from 1893, Victoria from 1891, and Queensland from 1890. In South Australia the corresponding decline took place as early as 1885, while in Western Australia the increase in number of births has been practically continuous throughout.

It is of special interest to note the decline in births associated with the commercial crisis of 1891-3, and also the decline occurring in 1903, an accompaniment of the severe drought of that period.

In the case of New South Wales the graph crosses that of Victoria in 1879, *i.e.*, the births for that year were sensibly identical in the two States. A fairly continuous increase was experienced in the former State from 1860 to 1893, the only marked fluctuation being a sudden decline in 1889 and an equally rapid recovery in 1890. From 1893 to 1898 a somewhat rapid decline again took place, succeeded by a rise, the continuity of which was broken only by a sharp decline in 1903 and recovery in 1904.

In the case of Victoria the graph shews the increase between 1860 and 1880 to have been comparatively slight, the curve being a gradual rise, with fluctuations more or less

marked to 1873, with a subsequent decline. From 1880 to 1891 the increase in the number of births is seen to be very rapid and practically continuous, while from 1891 to 1898 an equally sharp and continuous decline was experienced. A further rise and fall took place between 1898 and 1903, succeeded by a continuous rise from the last-mentioned year onwards.

Starting in 1860 with a lower number of births than any State except Western Australia, the Queensland graph shews that the births increased somewhat rapidly until 1867. The equality in the number of births in Queensland and Tasmania in 1864 is shewn by the Queensland curve crossing the Tasmanian curve at the line for that year. From 1867 to 1882 a continuous though somewhat less rapid increase was experienced, followed by a very rapid rise to 1890, in which year Queensland's maximum number of births was recorded. The South Australian graph is crossed by that of Queensland at the year 1885. From 1890 onwards the number of births has fluctuated somewhat, but has, on the whole, retained a practically stationary position at a height rather less than that of 1890. The most serious variation was a sudden fall in 1903, the drought year, and rapid recovery in 1904.

The South Australian graph, a slow but practically continuous rise from 1860 to 1885, exhibits the steady increase in the total number of births. This rise is followed by a slow but fluctuating decline to 1903, and a slight recovery to 1907.

The Tasmanian curve may be regarded as made up of five portions, of which the first, from 1860 to 1877, represents a period of very slight variation, viz., on the whole an increase; the second, from 1877 to 1884, a period of continuous and moderately rapid increase; the third, from 1884 to 1893, a period of rapid increase; the fourth, from 1893 to 1898, a period of continuous but slow decrease; and the fifth, from 1898 onwards, a period of steady recovery.

The Western Australian curve indicates that an increase, which was practically continuous but very slow, took place from 1860 to 1884, and that a somewhat quicker rate of increase, experienced from 1884 to 1896, was succeeded by a still more rapid and very satisfactory rate of increase from 1896 onwards.

It will be seen that the years in which the highest points were reached by the several curves are as follows:—

| State | ... N.S.W. | Vic. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|-------|------------|------|---------|----------|----------|------|-----------|
| Year | ... 1907 | 1891 | 1890 | 1885 | 1906 | 1906 | 1907 |

3. **Graphs of Annual Marriages, Commonwealth and States** (page 256).—The Commonwealth marriage graph from 1860 to 1885 reveals a moderate but somewhat fluctuating increase in the annual number of marriages between 1860 and 1871, a more rapid increase between 1871 and 1879, and a still more rapid increase between 1879 and 1885. From 1885 to 1891 the numbers continued to increase, but with marked fluctuations in rate. The financial crisis associated with the period subsequent to the latter year was accompanied by a strongly-marked decline in the number of marriages, which reached its lowest point in 1894. From that year onwards a fairly rapid recovery was effected, the record for 1891 being exceeded by that of 1897. This progress was maintained until 1902, when the severe drought of that and the succeeding year were collateral with a rapid fall in the number of marriages. An equally rapid recovery, however, has since taken place, and the number of marriages in the Commonwealth during 1907 was greater than in any preceding year.

4. **Graphs of Annual Deaths, Commonwealth and States** (page 257).—The curves, shewing the progression of the annual number of deaths, indicate clearly that the periods for which exceptionally large numbers of deaths occurred were:—(1) 1866-7, (2) 1875-6, (3) 1884-5, (4) 1889-1891, (5) 1893, (6) 1898, and (7) 1902-3. It is remarkable that in each of the periods specified the phenomenon of a relatively high number of deaths

was experienced in a majority of the States. Thus, as regards 1866-7, all the States except Western Australia and Tasmania were so affected, in 1875-6 all except Western Australia; in 1884-5 all were affected; in 1889 all except Western Australia and South Australia; in 1891 all except Queensland; whilst in 1893 and 1898, and in 1902-3, all were affected. The fact that the periods of high death rates have been practically identical in the several States furnishes an indication that the excessive mortality has been due to a considerable extent to some common cause operating throughout the Commonwealth.

It may be noted as curious that periods of heavy mortality have occurred at intervals of approximately nine years, viz.:—1866-7, 1875-6, 1884-5, 1893, and 1902-3. There are, however, two marked increases between the third and fourth dates, and one between the fourth and fifth. Thus there is no real indication of the periodicity in the death rate.

Periods in which the number of deaths was exceptionally low are far less clearly defined than those in which the number was high, and the agreement amongst the States is also less complete. The principal periods of low mortality may be said to be 1861, 1869-71, 1879, 1892, 1897, 1900, 1904-5.

5. Graphs of Annual Birth, Death, and Marriage Rates and of Rate of Natural Increase—Commonwealth (page 258.)—(i.) *General*. These graphs represent the number of births, deaths, and marriages, and the excess of births over deaths (natural increase) per 1000 of the population of the Commonwealth for each of the years 1860 to 1907.

(ii.) *Births*. In the case of births, the graph indicates a well marked decline in rate during the period, and represents a fall from 42.56 per 1000 of population in 1860 to 26.55 per 1000 in 1907. This enormous reduction has been subject to small fluctuations during the period under review, but may, on the whole, be said to have been in evidence throughout. There are, however, two periods of arrested decline noticeable, one from 1877 to 1890, and the other from 1898 to the present time. The course of the graph thus indicates a rapid fall from 42.56 in 1860 to 34.99 in 1877, succeeded by a fluctuating but, on the whole, fairly stationary, period to 34.98 in 1890, then a fall even more rapid to 27.15 in 1898, and a further comparatively stationary period to 26.55 in 1907. The lowest point reached, viz., 25.23, was attained in 1903, the year in which the Commonwealth suffered severely from the worst drought it has ever experienced. Since then a small but well defined advance in birth-rate has been in evidence. A declining birth-rate is usually due to complex causes, amongst which the variations in the age constitution of the population, and the adoption of preventive measures, are generally considered the most potent.

(iii.) *Deaths*. The three graphs relating to deaths furnish particulars concerning the rates experienced during the period amongst males and females separately, and in the population as a whole, the latter occupying naturally a position between the other two. Throughout the period the rate for males has largely exceeded that for females, but the fluctuations in the two rates have synchronised remarkably, indicating that the conditions which have been responsible for the marked variations which have occurred from time to time have affected males and females alike. On the whole, the graphs furnish clear evidence of a satisfactory decline in the death rate of the Commonwealth, a fall having taken place from 20.86 in 1860 to 10.90 in 1907. The graphical representation of the death rates brings into prominence five years in which the rates were exceptionally high when compared with those of adjacent years. These years are 1860, 1866, 1875, 1884, and 1898. The principal cause of the excessive rate of 1860 was the prevalence in that year of measles, scarlatina, and diphtheria, while the high rates of 1866, 1875, and 1898 were also largely due to epidemics of measles. Prior to 1892, when a rate of 12.91 was experienced, the lowest general death rate for the Commonwealth was that of 1871, viz., 13.24. The highest male death rate for the period was 20.97 in 1860, and the lowest 11.78 in 1906. For females the highest was 20.71 in 1860, and the lowest 9.56 in 1905. The difference between the male and female rates has, since 1869, been fairly constant, and has ranged between 1.97 and 3.44, with a mean value of about 2.7.

(iv.) *Marriages.* In the case of the graph representing marriage rates, the fluctuations are less abrupt than in the case of the birth-rate and death-rate graphs, and the rate for 1907, the final year of the period, viz., 7.81, does not differ very considerably from that of 1860, which was 8.42. The lowest marriage rate for the period was that of 1894, viz., 6.08, marking the culmination of the commercial and financial depression indicated by the declining rates from 1888 onwards. From 1894 to the present time a satisfactory increase has been in evidence, disturbed only by the sharp decline which, in 1903, accompanied the severe drought experienced in the Commonwealth in that year.

(v.) *Natural Increase.* This graph, which represents the excess of births over deaths per 1000 of population, exhibits marked fluctuations arising from the combined fluctuations in birth and death rates. Thus, corresponding to the high death rates of 1860, 1866, 1875, and 1898, there are exceptionally low rates of natural increase, accentuated in the last-mentioned year by a comparatively low birth rate. A combination of low birth rate and comparatively high death rate was also responsible for a very low rate of natural increase in 1903. The highest rate of natural increase for the period was 26.58 in 1864, and the lowest 13.03 in 1898.

6. Graphs of Annual Birth Rates — States (pages 259 and 260).—These graphs furnish for the several States information similar to that supplied in the graph on page 258 for the Commonwealth as a whole. It will be seen that in every case the total effect has been an extensive decline in rate, subject to very marked fluctuations. In all the States the period from 1875 to 1885 was one of arrested decline, if not of actual advance, in the birth rate. With the exception of the very low rate accompanying the drought of 1903, the variations in any of the States since 1901 have not been very marked, and in some cases a slight tendency to increase is in evidence.

The highest birth rates during the period were as follows:—New South Wales (1864), 44.00; Victoria (1862), 44.71; Queensland (1860), 47.93; South Australia (1862), 45.44; Western Australia (1860), 38.96; and Tasmania (1884), 36.63. The following were the lowest rates for the period:—New South Wales (1903), 25.41; Victoria (1903), 24.46; Queensland (1903), 24.62; South Australia (1903), 23.25; Western Australia (1896), 23.44; Tasmania (1899), 27.43.

7. Graphs of Annual Death Rates—States (pages 261 and 262).—These graphs furnish for the several States similar information to that given for the Commonwealth as a whole in the diagram on page 258, and indicate in each case a satisfactory decline in death rate. It may be noted that an exceptionally high death rate was experienced in all the States in 1875, and that a similar uniformity, though on a smaller scale, is observable for the year 1898, the principal cause in each case having been an epidemic of measles. The highest death rates experienced during the period were as follows:—New South Wales (1867), 19.79; Victoria (1860), 22.77; Queensland (1866), 25.96; South Australia (1875), 19.97; Western Australia (1884), 21.54; and Tasmania (1875), 19.99. The following were the lowest death rates for the period:—New South Wales (1906), 9.92; Victoria (1907), 11.74; Queensland (1906), 9.56; South Australia (1907), 9.93; Western Australia (1905), 10.82; and Tasmania (1905), 10.29.

GRAPHS SHEWING TOTAL ANNUAL BIRTHS IN THE COMMONWEALTH AND STATES OF AUSTRALIA, 1860-1907.

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year for both Commonwealth and States, and the vertical height represents 2000 persons of the Commonwealth, and 1000 for the States.

The scale running from 0 to 20 on the left and that from 0 to 40 on the right relate to the States, while those from 50 to 110 on the left and from 90 to 110 on the right refer to the Commonwealth.

The distances upwards from the common zero lines of the States and Commonwealth, marked 0, denote the total annual number of births in the States and Commonwealth, the scale of the latter being reduced one-half.

The names of the States to which the graphs refer are written thereon, and the characters of the lines used are as follows:—Commonwealth, an unbroken line; New South Wales, -----; Victoria, - - - - -; Queensland, - . - . - .; South Australia, - - - - -; Western Australia, - . - . - .; Tasmania, - - - - -.

GRAPHS SHEWING TOTAL ANNUAL MARRIAGES IN THE COMMONWEALTH AND STATES OF AUSTRALIA, 1860-1907.

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year for both Commonwealth and States, and the vertical height represents 600 marriages for the Commonwealth and 300 for the States.

The scale running from 0 to 4500 on the left and that from 0 to 10,500 on the right relate to the States, while that from 9000 to 30,000 on the left refers to the Commonwealth.

The distances upwards from the zero line, marked 0, denote the total annual number of marriages in the States and Commonwealth, the scale of the latter being reduced one-half.

The names of the States to which the graphs refer are written thereon, and the lines used are similar to those for births on page 255.

GRAPHS SHEWING TOTAL ANNUAL DEATHS IN THE COMMONWEALTH AND STATES OF AUSTRALIA, 1860-1907.

EXPLANATION OF GRAPH.—The base of each small square represents an interval of one year for both Commonwealth and States, and the vertical height represents 2000 persons for the Commonwealth and 1000 for the States.

The scale running from 0 to 10 on the left of the diagram and that from 0 to 20 on the right relate to the States, while those from 20 to 50 on the left and 40 to 50 on the right refer to the Commonwealth.

The distances upwards from the common zero line for States and Commonwealth, marked 0, denote the total annual number of deaths in the States and Commonwealth, the scale of the latter being reduced one-half.

The names of the States to which the curves refer are written thereon, and the lines used are similar to those for births on page 255.

GRAPHS SHEWING GENERAL BIRTH, DEATH, MARRIAGE, AND NATURAL INCREASE RATES, AND MALE AND FEMALE DEATH RATES IN THE COMMONWEALTH OF AUSTRALIA, 1860-1907.

EXPLANATION OF GRAPHS.—The base of each small square represents a year's interval, and the vertical height, according to the character of the curve, one per thousand of the population—the basic line being five per thousand of the population.

GRAPHS SHEWING BIRTH RATES IN THE STATES OF NEW SOUTH WALES, VICTORIA, AND QUEENSLAND, 1860-1907.

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height one birth per thousand of the population—the basic line for each State being twenty per thousand of the population.

GRAPHS SHEWING BIRTH RATES IN THE STATES OF SOUTH AUSTRALIA,
WESTERN AUSTRALIA, AND TASMANIA, 1860-1907.

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height one birth per thousand of the population—the basic line for each State being twenty per thousand of the population.

GRAPHS SHEWING DEATH RATES IN THE STATES OF NEW SOUTH WALES,
VICTORIA, AND QUEENSLAND, 1860-1907.

EXPLANATION OF GRAPHS.—The base of each small square represents a year's interval, and the vertical height one death per thousand of the population. The zero for each State is shown by a thickened line.

GRAPHS SHEWING DEATH RATES IN THE STATES OF SOUTH AUSTRALIA,
WESTERN AUSTRALIA, AND TASMANIA, 1860-1907.

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height one death per thousand of the population. The zero for each State is shewn by a thickened line.

SECTION VI.

LAND TENURE AND SETTLEMENT.

§ 1. Introduction and Early History.

1. **Introduction.**—The various forms of land tenure which have been adopted with a view to securing the settlement of a large and sparsely populated country like Australia are not only of interest to the immigrant, but also have an important and immediate bearing upon the welfare of the community. A comprehensive description, in a classified and co-ordinated form, of the land systems of the several States has not hitherto been published, and an attempt is here made to give such a description and to thus obviate the necessity of having recourse to the numerous Acts of Parliament and other documents dealing with the subject. Though there is a certain similarity between the principal forms of tenure in the States of the Commonwealth, the difficulty of the task of rendering a succinct and co-ordinated account of the land systems is increased by the variety in detail of the terms and conditions imposed, and also by the different manners in which statistics dealing with the subject are presented by the several States. In the account given in this section the classifications ordinarily adopted in the several States have necessarily not always been adhered to, the tenures having been reclassified in accordance with the scheme indicated hereunder. (See § 4.) Statistics relating to various forms of tenure have also, where necessary, been regrouped according to that scheme.

In order to preserve continuity, and in order that the general trend of land legislation may be comprehended, a short historical account of land settlement in the Commonwealth is first given hereunder.

2. **First Grants of Land made in New South Wales, 1789.**—In the early days of Australian colonisation, land was alienated by grants and orders from the Crown, the power of making such being vested solely in the Governor, under instructions issued by the Secretary of State. The first instructions, issued on the 25th April, 1787, authorised the Governor to make grants only to liberated prisoners. The grant was to be free from all taxes, rents, fees, and other acknowledgments for the space of ten years, after which period an annual quit-rent of sixpence for thirty acres was payable; for each unmarried male the grant was not to exceed thirty acres; in case of a married man twenty acres more was allowed, and a further quantity of ten acres for each child living with his or her parents at the time of making such grant. The first settler was a convict of the name of James Ruse, who, having been liberated, entered on his farm of thirty acres at Parramatta on the 25th February, 1789. By further instructions issued by the Secretary of State in 1789, the privilege of obtaining grants was extended to free immigrants and to such of the men belonging to the detachment of marines serving in New South Wales—which then included the whole of the eastern part of Australia—as were desirous of settling in the colony; the maximum grant was not to exceed 100 acres, and was subject to a quit-rent of one shilling per annum for every fifty acres, to be paid within five years of the date of issue. In many cases these grants were made conditional upon a certain proportion of the land being cultivated, or upon certain services being regularly performed, but these conditions do not seem to have been enforced. The first free settlers arrived in the *Bellona* on the 15th January, 1793, and took up land at Liberty Plains, about eight miles from Sydney.

3. **Grants of Town Allotments in Sydney, 1811.**—Until the year 1811 all the land which had hitherto been alienated lay outside the borders of the town of Sydney, but in that year the Governor, with the authority of the Secretary of State, commenced to grant town allotments on lease only, for periods of fourteen or twenty-one years; the rents on these leases varied considerably from time to time according to the discretion of the Governor, by whom they were imposed. In 1824 and 1826 further regulations relating to grants to immigrants were issued by the Colonial Office. In 1829, leases were entirely abolished, grants of freehold estates being made in lieu. Five years later they were, however, again introduced under a Government notice, by which allotments in country towns only were allowed to be alienated by lease, with a covenant to convert the same into grants, either upon payment of twenty-one years' quit-rent or upon the erection of buildings to the value of £1000. As regards the payment of quit-rents generally, it appears that they were collected in a very perfunctory manner, and in later years the Government offered special inducements for their redemption. By official notices in 1846, 1849, and in 1851, it was directed that all persons who had paid quit-rent for twenty years should be released from further payment; that those who had paid more than twenty years should have the difference refunded to them; that at any time any person could commute his future quit-rent by an equivalent cash payment, and finally that all quit-rents of a higher annual value than two shillings for every 100 acres should be reduced to that uniform rate at the expiration of the year 1851.

4. **Introduction of Land Sales, 1825.**—By this time the principle of alienation of land by sale to free settlers had already been introduced under Sir Thomas Brisbane, and under a Government order of the 24th March, 1825, land was allowed to be sold by private tender, at a minimum price of five shillings an acre, no person being allowed to buy more than 4000 acres, nor any family more than 5000 acres. The disposal of lands by sale did not, however, interfere with the ordinary method of alienating town allotments and country lands by grants subject to the payment of quit-rents. In 1830 the division of the eastern part of the colony into counties, hundreds and parishes had been completed by a commission of three persons appointed for that purpose. Dividing the territory into nineteen counties, covering about 34,505 square miles, they made a valuation of the whole of the lands with a view to fixing a fair price for future sales. This territory comprised a belt of land in what is now the middle of the Eastern Division of New South Wales, extending from the coast nearly as far as the boundary of the Central Division, and from the Macleay River in the north to the Moruya River in the south.

5. **Free Grants Abolished, 1831.**—On the 14th February, 1831, it was notified by a Government order that no Crown lands were in the future to be disposed of except by public auction, the minimum price for country lands being fixed at five shillings an acre, which was raised to twelve shillings an acre in 1839, power being given in the latter year to select, at the upset price, land for which there was no bid at the auction, or upon which the deposit paid at the time of sale had been forfeited. This was the first introduction of the principle of selection into the land laws of Australia, and it was then only applied to lands which had been put up for sale by auction. Until the year 1841 regulations for the sale of land were issued by the Imperial authorities, but in October of that year instructions were forwarded to Sir George Gipps, giving him discretionary power as to the upset price and the quantity of land to be sold. In the Port Phillip District, however, the minimum price was to be £1 an acre.

6. **Land Regulations Issued under Imperial Acts, 1842 and 1847.**—These instructions were superseded by regulations made under an Imperial Act of Parliament, which came into force in June, 1842. The principle of sale by auction was maintained, the lands were to be surveyed before being put up for sale, and the upset price was fixed at twenty shillings an acre. It was provided that, subject to a primary charge for survey, half the proceeds of sales were to go to defray the cost of immigration of persons to the colony in which the revenue accrued. Special blocks of 20,000 acres formed an exception.

They might be sold, before survey, by private contract at not less than the upset price. Under Orders in Council, issued on the 9th March, 1847, in pursuance of the provisions of the Waste Lands Act of 1846, a new classification of lands took place, and the territory was divided into—(a) settled districts, including the nineteen original counties, and the lands in the counties of Stanley and Bourke immediately surrounding the settlements at Moreton Bay and Melbourne respectively; (b) intermediate districts, comprising a belt of land from 50 to 200 miles inland beyond the boundaries of the settled districts, and in which pastoral occupation had already spread; and (c) unsettled districts extending westward to the extreme limits of the State. Under this Act the principles of sale by auction or by private contract were maintained, but a system was introduced by which leases were granted for various terms in each of the three divisions for pastoral purposes only. During the currency of such a lease the lessee could at any time purchase the freehold at the upset price of £1 an acre, and on the expiration of the term he had a pre-emptive right at the same price over all or any part of the land.

7. Occupation of Pastoral Lands.—In the early days land was held for pastoral purposes under tickets of occupation, which ceased to be issued on the 1st May, 1827, after which date pastoral lands could only be occupied under annual licenses, upon payment of a quit-rent of twenty shillings per 100 acres, and had to be vacated at six months' notice. As the numbers of stock belonging to the settlers increased, new areas were necessary for depasturing them. The settlers accordingly extended their operations inland, with no right except that of first discovery, until the Legislature was compelled, in 1833, to pass an Act protecting Crown lands from trespass and encroachment, and commissioners were appointed for the purpose of safeguarding the public estate. The provisions of this Act were in many cases disregarded, and new regulations, in which severe penalties were enacted, were issued in 1836. In order to further restrain unauthorised occupation, an Act was passed in March, 1839, providing the means for defraying the expenses of police in the inland districts by a yearly assessment upon stock at the following rates:—One half-penny for every sheep; three halfpence per head of cattle; and threepence for every horse.

Under the Imperial Act of 1846, referred to above, an entirely new system for the occupation of pastoral lands was introduced. The tenure formerly had been a yearly one, and the license fee was calculated according to the extent of the land occupied. Under the new system fixity of tenure of lease was granted, and the fee was paid upon the stock-carrying capacity of the run. In the unsettled districts the term of the lease was fixed at fourteen years; in the intermediate districts the term was for eight years; while in the settled districts the yearly tenure was retained. The license fee was fixed at a minimum rate of £10 for 4000 sheep, and £2 10s. for every additional 1000 sheep which the run was estimated to carry. In the settled districts lands might be occupied in sections of not less than one square mile, the annual fee for each section being fixed at ten shillings.

The provisions of the Act of 1846 were not popular with a considerable proportion of the community. It was urged that the Act tended to "lock up" the land; that it frustrated many honest buyers in their endeavours to secure the freehold; and that it deprived the Crown of a revenue which, under other circumstances, might have been applied for the construction of public works and the promotion of the public good. In the inland districts, remote from the sphere of settlement, squatters spread over the country. Land, which would have realised £5, or even £20 an acre, was seized upon condition of paying two shillings an acre for only a few years, while there was no guarantee for the fulfilment of the conditions.¹

8. First Land Legislation of Individual States.—The legislation of 1846 remained in force in New South Wales until the year 1861; and in the States of Victoria and Queensland, which were separated from the mother colony in 1851 and 1859 respectively, until repealed by Acts of the State Parliaments. The discovery of gold in 1851, and the

1. See Rusden's "History of Australia," Vol. II., p. 338.

consequent rush of population to Australia, greatly changed the conditions of colonisation. The various States of the Commonwealth have found it to their advantage to adopt different systems for securing the settlement of an industrial and agricultural population. The land regulations of Victoria, Queensland, and Tasmania were identical with those in force in New South Wales until the dates of the separation of these States from the mother State, and at the present time practically the same form of conditional occupation with deferred payments exists in all four States. In Western Australia and in South Australia the influence of the legislation of New South Wales was not felt. In these States new conditions prevailed; under a different set of circumstances settlement was effected by legislation of a special and novel character, and it was not until a later date that their land laws were brought more into line with those of the eastern States.

9. **New South Wales Areas Alienated between 1787 and 1859.**—The subjoined statement shews the areas of Crown lands which had been alienated, both in the mother colony and in the settlements administered from Sydney, from the date of the foundation of the colony in 1787 up to the dates of separation of these settlements by their constitution as separate colonies:—

**NEW SOUTH WALES ALIENATIONS,
UP TO SEPARATION OF VARIOUS SETTLEMENTS, BETWEEN 1787 AND 1859.**

| Particulars. | In New South Wales Proper (N.S.W.). | In Van Diemen's Land' (Tasmania). | In Port Phillip District' (Victoria). | In Moreton Bay District' (Q'nsland). |
|---|---|---|---|--|
| | Acres. | Acres. | Acres. | Acres. |
| From 1787 to 1823 | 520,077 | 57,423 | ... | ... |
| From 1824 to 1836 | 4,268,750 | ... | ... | ... |
| From the first settlement in Port Phillip in 1837 to 1841 | 1,110,544 | ... | 222,214 | ... |
| From the first settlement in Moreton Bay in 1842 to the separation of Port Phillip in 1851 | 48,119 | ... | 121,702 | 2,521 |
| From 1852 to the separation of Moreton Bay in 1859 | 899,283 | ... | ... | 58,398 |
| Total from 1787 to 1859 inclusive ... | 6,846,773 | 57,423 | 343,916 | 60,919 |

1. Particulars for the States *after* their separation are shewn in subsequent paragraphs.

§ 2. Land Legislation in Individual States.

1. **New South Wales.**—After the excitement of the first rush, following the discovery of gold in 1851, had died away, the interest in gold-digging commenced to decline, and the number of people desiring to settle on the land greatly increased. The question of land-settlement had accordingly to be dealt with in an entirely new spirit, to meet the requirements of a class of immigrants differing greatly from those contemplated by the Act of 1847.

(i.) *The Lands Act and Occupation Act 1861.* The public interest in the question which thus arose resulted in the passing of the Crown Lands Act and the Occupation Act in 1861, under the leadership of Mr. (afterwards Sir) John Robertson. The object of these Acts was to facilitate the establishment of an agrarian population side by side with the pastoral tenants. It had hitherto been difficult for men with limited capital to establish themselves with a fair chance of success, but under the new principle of free selection before survey, introduced by Robertson's Act, country lands were sold in limited areas of from 40 to 320 acres at a price of £1 an acre, payable partly by deposit, and

carrying interest on the balance outstanding at the rate of 5 per cent. per annum. The land had formerly been occupied for pastoral purposes under a system of yearly licenses; later on, under the Imperial Act of 1846, the licensee had been given fixity of tenure, the fee being calculated according to the stock-carrying capacity of the run. By the Occupation Act of 1861 the colony was divided into first and second-class settled districts and unsettled districts, and the whole of the pastoral leases were left open to the operations of free selectors. The runs in the first-class districts were available only on annual leases at £2 per square mile, while in the second-class and unsettled districts runs ranging in area from 25 to 100 square miles could be leased for a term of five years, being open to competition by public tender. The system of unconditional sales was still continued under the Act of 1861, and remained in force until its abolition in 1884. With many benefits there was also considerable mischief as a result of the operation of Robertson's Act, chiefly for the reason that land, being held under pastoral leases not exempt from free selection, could be the subject of speculative selecting without *bond-fide* intention of settlement.

(ii.) *Acts now in Force.* The Crown Lands Act of 1884 and the supplementary Act of 1889 were accordingly passed to remedy this state of things. These measures, while maintaining the principle of free selection before survey, were designed to give fixity of tenure to the pastoral lessees, and at the same time incidentally tended to restrict the area sold unconditionally. Pastoral leases were required to be surrendered to the Crown and divided into two equal parts. One of these parts was returned to the lessee under a lease with fixity of tenure for a certain term of years; the other half, called the resumed area, the lessee was allowed to hold under an annual occupation license, but this half was always open to selection.

It was found in course of time that the Acts of 1884 and 1889 did not succeed in attaining the objects for which they were designed; settlement proceeded very slowly, and the accumulation of land into large estates continued. Parliament has been led to introduce entirely new principles into the agrarian legislation of the State, embodied in the Crown Lands Acts 1895 to 1905, in the Labour Settlements Act 1902, and in the Closer Settlement Acts 1904 to 1907, which, while still giving fixity of tenure to pastoral lessees, retain the principle of free selection before survey, and to offer *bond-fide* settlers special inducements by the introduction of new forms of tenure on easy terms and conditions.

(iii.) *The Western Lands Acts.* All lands in what is known as the Western Division of New South Wales are now subject to the special provisions of the Western Lands Acts 1901 and 1905. The registered holder of a lease of any description or of an occupation license of land could bring his lease or license within the provisions of the Western Lands Act by application before the 30th June, 1902. If he did not so apply, the lease or license is dealt with as if the Act had not been passed, and the Western Land Board, constituted under the Act, is to be deemed to be the Local Land Board to deal with such cases. All leases issued or brought under the provisions of the Western Lands Act expire on the 30th June, 1943, except in cases where part of the land leased is withdrawn for the purpose of sale by auction or to provide small holdings, in which case the Governor may add to the remainder of the lease a term, not exceeding six years, as compensation for the part withdrawn.

2. *Victoria.*—The early history of land settlement in Victoria is intimately bound up with that of New South Wales. For the first fifteen years of its existence, during which period it was known as the District of Port Phillip, the alienation of Crown lands was regulated by the Orders in Council of the mother State, to which orders reference has already been made. In the month of September, 1836, the Port Phillip district was proclaimed open to settlement, and the principle of the sale of unoccupied land by auction was introduced. The first Port Phillip land sale took place on the 1st June, 1837, when 100 Melbourne town lots and seven allotments in Williamstown were sold. On the 17th January, 1839, the upset price was raised from five shillings to twelve shillings per acre.

On the 15th October, 1840, the first Portland Bay land sales took place, and on the 31st December following there had been alienated by purchase in the Port Phillip district 160,577 acres at a total price of £327,497. In the year 1841 the upset price of country lands, in New South Wales limited to twelve shillings per acre, was specially raised to twenty shillings per acre in the Port Phillip district.

The Orders in Council made under the Imperial Acts of 1842 and 1846, referred to above, remained in force until 1860, when an Act was passed by the Victorian Government, which, after making provision for special reserves for mineral purposes, etc., divided all Crown lands into country and special classes. The former were available after survey for selection in allotments of from forty to sixty acres. Application for these blocks had to be accompanied by a deposit of £1 an acre, and the successful applicant had the option of paying for half the allotment in cash, or taking the whole upon the same conditions, but if he only took half he might rent the other half for a term specified in the proclamation at the rate of one shilling per acre per annum, with the right to purchase at any time during the term. Special lands, situated near towns, railways, rivers, etc., were sold quarterly by auction at an upset price of £1 an acre.

(i.) *Duffy's Act 1862.* In 1862 free selection before survey was introduced by Duffy's Act, which provided for the setting apart of large agricultural areas, within which land could be selected at a uniform price of £1 an acre. Alternative conditions were imposed to the effect that certain improvements should be effected, or that part of the land should be placed in cultivation, and modifications were introduced as to the mode of payment. As regards pastoral lands, license fees and assessments on stock were abolished, and provision was made for the payment of rent for runs according to their value, based on their stock-carrying capacity.

(ii.) *The Land and Pastoral Acts 1869.* The next legislation on the subject of land settlement was in 1869, in which year a Land Act and a Pastoral Act were passed, consolidating and amending all previous land legislation. The system of free selection before survey, as applied to all unoccupied Crown lands, was retained, but the selected area was limited to 320 acres, and was at the outset to be held under license for a term of three years, during the first two and a-half years of which the selector had to reside on the land, fence it, and cultivate a certain proportion of it. The rent was fixed at two shillings an acre per annum, and at the end of the period of license the selector could, if all conditions had been complied with, either purchase the land outright at the rate of £1 an acre, or he might obtain a further lease for seven years, with the right to purchase the land at any time during the term, all money paid as rent being credited towards the purchase price. The Pastoral Act of 1869 provided for the occupation of the land for pastoral purposes under two systems, either as runs under license or lease or under grazing rights. The Land Act of 1869 was amended in 1878, when the conditions of selection were greatly restricted, the immediate effect being a considerable falling-off in the areas taken up. The period of license was increased to six years, and the selector had to reside on his land for a period of five years.

(iii.) *Acts now in Force.* In 1884 the whole system of land occupation and alienation, except as regards Mallee lands (see below), was altered. This measure was again modified by the Acts of 1890, 1891, 1893, 1896, 1898, and 1900, the whole being consolidated in the Land Act 1901, which came into force on the 31st December of that year, and which has in turn been modified by the amending Acts of 1903, 1904, and 1905. The subject of closer settlement was dealt with in the Land Act of 1898, until the introduction of the Closer Settlement Act 1904, which has been amended in 1906 and 1907. Other special forms of tenure have been provided for by the Settlement and Lands Act 1893 and the Small Improved Holdings Act 1906.

The Land Act of 1869 is inoperative as to future selections, but concessions as to payment of arrears of rent, the option of converting their present leases into perpetual leases, and of surrendering part of and obtaining new leases on better terms for the balance of their holdings, have been granted to selectors thereunder by the recent legislation.

The Amendment Act of 1903 introduced amendments as regards the classification of unalienated Crown lands. The Act of 1904 altered the amount to be expended on improvements in the case of agricultural and grazing allotments, and made certain amendments with regard to the powers of perpetual leases of Mallee lands. The Act of 1905 deals principally with the conditions upon which bee range areas may be declared and bee farm site licenses granted.

(iv.) *Mallee Lands.* The territory known generally as the "Mallee"—so named from the scrub with which the country, in its virgin state, was covered—comprises an area of about 11,000,000 acres in the north-western district of the State, and of this area more than half is unalienated and available for occupation. The soil is mostly of a light chocolate and sandy loam character, covered with scrub, interspersed with plains lightly timbered with box, she-oak, and pines. The scrub can be cleared at a moderate expenditure, and the extension of railway facilities and of successful systems of irrigation, should bring large districts in this country into prominence as a field for agricultural enterprise.

Originally Mallee lands could be acquired under lease either as "Mallee Blocks" or "Mallee Allotments." The former were very large areas of the back country, and the term was for a period of twenty years. All such leases have now expired, and these areas are now only let under annual grazing licenses until required for selection. "Mallee Allotments" could be leased up to a maximum area of 20,000 acres, but the area was latterly restricted to the area which could be selected. Alienation by selection was allowed by the Land Act 1896. Lands in the Mallee are now dealt with by a special part of the Land Act of 1901 and are held under special forms of tenure; it is now provided that all Mallee lands after forfeiture or resumption, or on the expiration of any lease of a Mallee block or a Mallee allotment, shall be available for selection and shall not be again leased as a Mallee block or allotment.

3. *Queensland.*—Previous to the year 1859 the Moreton Bay district, as it was then called, formed a portion of New South Wales. The early history of its methods of land settlement is thus included in that of the mother colony. With separation from New South Wales, and the election of a Legislative Assembly of its own, the district of Moreton Bay—or, as it was henceforth to be known, the Colony of Queensland—entered on a new era of prosperity. The first Parliament of the new colony, which assembled in 1860, passed three Acts dealing with Crown lands.

(i.) *Pastoral Leases.* The first two of these (24 Vic., Nos. 11 and 12) dealt chiefly with the occupation of land for pastoral purposes, and their provisions differed but little from those adopted in the mother colony. These measures were amended by Acts passed in 1862, 1863, and 1864. In 1868 an Act was passed providing more land for agricultural settlement by the resumption of land from runs as required, unless the proprietors voluntarily surrendered for selection one-half of their runs, and accepted a ten-years' lease for the remainder. The occupation of lands for pastoral purposes was further dealt with by Acts passed in 1869, 1876, and 1892.

(ii.) *General Settlement.* The third measure (24 Vic. No. 15), passed in 1860, provided for general settlement. This was also more an expansion of the existing law than the adoption of a new line of policy. This Act was amended in 1863 and 1864, and again in 1866, when a comprehensive measure was passed practically introducing the principle of deferred payment, although styled leasehold with the right of purchase. The principle of selection before survey was extended by the Crown Lands Alienation Act 1868, which introduced more liberal conditions and threw open to selection parts of the areas hitherto occupied for pastoral purposes. These principles were further extended by the Homestead Areas Act of 1872 and the Crown Lands Alienation Act of 1876. These measures, with slight amendments, continued in force until 1884, when the Crown Lands Act was passed. This Act introduced the system of grazing farms and provided for the constitution of a Land Board, which was the forerunner of the Land Court established by the Act of 1897. The complaints of pastoral lessees as to insecurity of tenure were also met by the Act of 1884, which, while securing prescribed proportions for settlement, gave the

lessees fixed tenures of the remainder of their holdings for fifteen years, increased later to twenty-one years, subject to prescribed powers of resumption, and later again to twenty-eight years on the holdings being enclosed by rabbit-proof fences.

(iii.) *Acts now in Force.* The Act of 1884 was, after various amendments, repealed by the Land Act 1897, which was in turn amended in 1902, 1905, and 1908, and which re-enacted with modification the provisions relating to grazing farms, abolished the exclusively leasehold tenure as applied to agricultural farms, restoring to them the earlier principle of conditional purchase, but on more liberal terms. Nearly all pastoral leases are now held under the Act of 1897, in conjunction with the Land Act 1902. Under the provisions of the Agricultural Lands Purchase Acts 1894 to 1905, power was given to the Government to repurchase lands for the purposes of closer settlement; these Acts have now been consolidated and repealed by the Closer Settlement Act of 1906. Under the Co-operative Communities Land Settlement Act of 1893, as amended in 1894, provision has been made for the establishment of co-operative communities. No action has, however, up to the present been taken under the Act. The Special Agricultural Selections Acts 1901 to 1905 were passed for the purpose of promoting closer settlement upon agricultural lands, by affording to bodies of settlers special facilities for the acquirement of agricultural selections to be held in conjunction with portions in adjacent agricultural townships.

4. South Australia and the Northern Territory.—In the year 1834 a Bill for the colonisation of South Australia was passed by the British Government, and under this Act the colony was founded. It provided for the appointment by the Crown of three or more Commissioners to carry certain parts of the Act into execution; they were to declare all the lands of the colony, excepting areas reserved for roads and footpaths, to be open to purchase by British subjects, and to make regulations for the survey and sale of such lands at such price as they might deem expedient, and for letting unsold lands for periods of not less than three years. They might sell the land by auction or otherwise, but for ready money only, at a uniform price, and at not less than twelve shillings per acre. The Commissioners were restrained from entering upon the exercise of their general powers until they had invested £20,000 in Exchequer bills, and until land to the value of £35,000 had been sold. There was some difficulty in disposing of a sufficient quantity of land to enable the Commissioners to realise the required sum of £35,000, however, and to secure funds sufficient to enable them to found the colony. The price of the land had at the outset been fixed at £1 per acre, and each land order was for eighty acres of country land, and one acre of town land. About this time the South Australian Company was formed, and an offer was made by this company to purchase the remaining lots of land, provided the price was reduced to twelve shillings an acre. This proposal was readily accepted by the Commissioners, and a sufficient quantity of land having been sold, the investment of £20,000 as required by statute was completed. The principles on which the colony was established originated with Mr. Edward Gibbon Wakefield. He had observed the evils which, in other colonies, had arisen from the grants of large tracts of country to intending settlers, out of all proportion either to individual requirements or to the capacity of grantees to successfully deal with. The main idea in Wakefield's scheme was the sale of waste or unappropriated lands at a high price, and the application of the revenue thus obtained to the introduction of immigrants, so as to secure a constant supply of hired labour for the cultivation of the land, and for the progress of settlement. Other leading features of the scheme were that no convicts should be transported, that no State church should be established, and that the new colony should be financially independent, and not be a charge on Great Britain.

The Wakefield system fell into disfavour owing to the financial crisis of the early forties, and soon had to be modified. It was not until 1872, however, that an Act was passed more in conformity with the legislation of the neighbouring States, and giving to settlers with only a small amount of capital an opportunity of settling upon the lands of the Crown under fair conditions and with a reasonable chance of success. The Act of 1872 was amended from time to time, until it was repealed and its provisions consolidated

by the Crown Lands Act of 1888. The principles of closer settlement were introduced by the Closer Settlement Act of 1897, which was amended in 1902, while village settlements were dealt with by the Village Settlements Act 1901.

(i.) *The Torrens Act.* Reference may here be made to the Real Property Act, which was originated in South Australia by the late Sir R. R. Torrens in the year 1858, and which has been adopted in all the States of the Commonwealth, and also in New Zealand. The objects of this Act are to give security and simplicity to all dealings with land, by providing for such registration of title as shall admit of all interests which may appear upon the face of the registry being protected, so that a registered title or interest shall practically never be affected by any claim or charge not registered. By this system everyone who acquires an estate or interest in land, upon being registered as owner thereof, obtains a title, if not absolutely at least practically secure against everyone whose claim does not appear upon the registry; and the two elements of simplicity and security as regards the acquisition of land appear to be effectually attained.

(ii.) *Acts now in Force.* The Act of 1888, referred to above, in course of time underwent numerous amendments, the whole being repealed and consolidated by the present Crown Lands Act of 1903, which also repealed the previous Closer Settlement and the Village Settlement Acts, and which in turn was amended in 1905 and 1906. Provisions as to the occupation of land for pastoral purposes are now contained in the Pastoral Act 1904.

(iii.) *The Northern Territory.* In 1863 so much of the State of New South Wales as lay to the north of lat. 26° S., and between long. 129° and 138° E., was annexed to South Australia. This portion of the continent is under the administration of a Resident, appointed by the Government of South Australia. The Acts referred to in the preceding paragraph hereof do not apply to the Northern Territory lands, the sale and occupation of which are now regulated by the Northern Territory Crown Lands Act 1890.

5. **Western Australia.**—In the year 1827 Captain James Stirling, accompanied by Mr. Charles Fraser, the Colonial Botanist in New South Wales, made an examination of the country in the vicinity of the Swan River, with a view to the establishment of a settlement, and in consequence of the favourable report made by these gentlemen, the Imperial Government decided to organise a colonising expedition forthwith. On the 2nd June, 1829, the transport *Parmelia* arrived in Cockburn Sound, having on board Captain Stirling, who had been appointed Civil Superintendent of the Swan River settlement, and a number of officials and intending settlers. On the 17th June the expedition disembarked and encamped on the north bank of the Swan River, at the place now called Rous Head, and with the landing of these immigrants the settlement of Western Australia commences.

(i.) *First Grants of Land.* The first settlers were offered large grants of land proportional to the amount of capital introduced, which comprised the value of all stock and implements of husbandry, at the rate of forty acres for every sum of £3, but they had to spend one shilling and sixpence per acre on improvements, before they could obtain the fee simple. The land granted was to be within three years cultivated, or otherwise improved, or reclaimed from its wild state, to a fair proportion of at least one-fourth, or the owners were liable to a payment of sixpence per acre into the public chest; and if still unimproved at the end of seven years the land reverted absolutely to the Crown. Grants were also made to capitalists at the rate of 200 acres for every labourer brought over at their expense, but any land so granted reverted to the Crown unless it was brought under cultivation, or otherwise improved, or reclaimed from its wild state within twenty-one years. Closely following the *Parmelia* a number of vessels arrived, increasing the number of settlers and introducing further supplies of live stock, until at the end of the year 1830 nearly 1800 immigrants had arrived in the colony. No preparations had been made for the reception or provision of these settlers; many of them were persons who were quite unfitted for the hardships which had to be endured, and a general feeling of despondency and depression commenced to spread amongst the colonists. Numbers left, rather than face the difficulties inseparable from initial colonisation;

those who remained, however, struggled on manfully, and in spite of great hardships and privation laid the foundation of the present State.

(ii.) *Free Grants Abolished.* The original regulations under which grants were made to the first settlers were amended by others of a similar nature issued by the Imperial Government on the 20th July, 1830, which in turn were replaced in 1832, when free grants were abolished and land was sold at a minimum price of five shillings per acre. In 1837 the price of allotments in Perth, Fremantle, and Albany was fixed at a minimum of £5 an acre. New land regulations were issued by the Colonial Office in 1843, and these were amended and amplified in 1864. Further amendments were made in 1873 and 1882, and in 1887 the whole of the regulations were amended and consolidated. The colony was divided into six divisions, in all of which sale by auction was permitted, but otherwise the conditions of occupation differed in each division.

(iii.) *Acts now in Force.* In the year 1890 Constitutional Government was granted to the colony, and from time to time various amendments were made in the land laws, until the year 1898, when a Land Act was passed amending, repealing, and consolidating previous legislation as to the sale, occupation, and management of Crown lands. This Act has in turn been amended in 1899, 1900, 1902, 1904, 1905, and 1906, and, with its amendments, is now in force. The principle of repurchasing Crown lands for the purposes of closer settlement was introduced by the Agricultural Lands Purchase Act 1896, amended in 1904.

6. *Tasmania.*—The early settlement of Tasmania was carried out under the regulations framed for the disposal of Crown lands in New South Wales, of which colony it was, at the outset, a part, and after its constitution under a separate administration in 1825 the regulations issued from the Colonial Office for the settlement of Crown lands in the mother colony were made applicable to Tasmania. In 1828 the first land sales in the island took place, but so low were the prices obtained that 70,000 acres enriched the Treasury by only £20,000. In the month of January, 1831, the system of issuing free grants of land was abolished.

In 1855 responsible government was granted to the island colony, and from this time dates the policy under which later settlement has taken place. The Waste Lands Act 1858 introduced the principle of free selection before survey, but owing to the small area available for selection, and the fact that much of the land was heavily timbered, the practical value of this measure was comparatively small. From 1860 to 1870 no less than thirteen Land Acts were passed, and in the latter year a new measure, the Waste Lands Act 1870, embodying and consolidating many of the salient features of previous enactments, was carried. One of the most important features of this Act was the extension of a principle, introduced by a former Act in 1863 and embodied in the legislation now in force, devoting a portion of the purchase-money derived from land sales to the construction of roads and bridges. The Act of 1870 also gave power to the Governor to reserve such land as he might deem necessary for public purposes, and the lands not so reserved were divided into (a) town, (b) agricultural, and (c) pastoral lands. The first class comprised all lands within the towns and villages; the second class included lands which might from time to time be proclaimed as suitable for agricultural purposes; the third class comprised lands which were better adapted for grazing than tillage. The conditions attached to conditional purchases were that the selector, his tenant or servant, should within one year of the date of selection, reside upon the land until the full purchase-money was paid. The upset price for agricultural lands was £1 an acre, that for pastoral lands being a sum equivalent to twelve years' rental, but not in any case more than five shillings an acre. If the selection were purchased for cash a deposit of one-fifth of the purchase-money had to be made and the remainder had to be paid within a month; if purchased upon credit the purchaser had to pay an extra sum of six shillings and eightpence an acre. Numerous amendments to the Act of 1870 were passed, until, in 1890, a measure was carried consolidating the various Acts then in force; the Act of 1890 was itself amended from time to time. The law relating to land tenure and settlement is now consolidated in the Crown Lands Acts 1903, 1905, and 1907, and in the Closer Settlement Acts of 1906 and 1907.

§ 3. Administration and Classification of Crown Lands.

1. **General.**—In each of the States of the Commonwealth there is now a Lands Department under the direction of a responsible Cabinet Minister, who is charged generally with the administration of the Acts relating to the alienation, occupation, and management of Crown lands. The administrative functions of most of the Lands Departments are to some extent decentralised by the division of the States into what are usually termed Land Districts, in each of which there is a Land Office, under the management of a land officer, who deals with applications for selections and other matters generally appertaining to the administration of the Acts within the particular district. In some of the States there is also a Local Land Board or a Commissioner for each district or group of districts.

In most of the States Crown lands are classified according to their situation, the suitability of the soil for particular purposes, and the prevailing climatic and other conditions. The modes of tenure under the Acts, as well as the amount of purchase-money or rent and the conditions as to improvements and residence, may vary in each State according to the classification of the land. The administration of certain special Acts relating to Crown lands has in some cases been placed in the hands of a Board, under the general supervision of the Minister; for such purposes, for instance, are constituted the Western Lands Board in New South Wales, the Lands Purchase and Management Board and the Small Holdings Board in Victoria, and the Closer Settlement Board in Tasmania.

In each of the States there is also a Mines Department, which is empowered under the several Acts relating to mining to grant leases and licenses of Crown lands for mining and auxiliary purposes. Such leases and licenses are more particularly referred to in a later part of this section. (See § 10, below.)

Full information respecting lands available for settlement or on any matter connected with the selection of holdings may be obtained from the Commonwealth representative in London, from the Lands Departments, or from the Agents-General of the respective States.

2. **New South Wales.**—For the purposes of land administration there are now in New South Wales three main territorial "divisions," viz., the Eastern, Central, and Western, each of which is subdivided into a number of "Land Districts." In making the main divisions the special climatic and other prevailing conditions have been taken into consideration. It may be observed that, as a rule, only the Eastern and Central Divisions are suitable for agriculture, dairying, fruit-growing, and mixed farming. The climate, soil, and general character of the Western Division rendering it suitable for grazing on a large scale, that part of the State has, by an Act called "The Western Lands Act," been placed under the control of three Commissioners, appointed by the Governor for a term of seven years, forming the Western Land Board, which has power to recommend leases and otherwise deal with the Crown lands in this division.

(i.) *Land Districts.* To facilitate the transaction of business in connection with the disposal of Crown lands and the collection of rent, interest, and instalments in respect of lands conditionally alienated, the State has been divided into 103 Land Districts, in each of which an officer, called the "Crown Land Agent," is stationed. In addition to the Western Land Board District, which comprises ten of the 103 Land Agents' Districts in the State, there are eleven other Land Board Districts, each of which embraces several Land Agents' Districts. Each Land Board District is under the jurisdiction of a Local Land Board, consisting of a chairman and two other members. At the headquarters of each Land Board a District Surveyor and staff are also located. An application for land, accompanied by the required deposit, must be lodged with the Land Agent of the district in which the land is situated, and it is sent by him to the District Surveyor, by whom it is in due course forwarded, with a report, to be dealt with by the Local Land Board. Appeals from decisions of Local Land Boards may be made to the Land Appeal Court. The latter consists of a President and two Commissioners, appointed by the Executive,

and its decisions have the force of judgments of the Supreme Court. The Western Land Board Commissioners are authorised to exercise all the powers conferred upon the Local Land Boards.

(ii.) *Closer Settlement Board.* For the purpose of carrying out the provisions of the Closer Settlement Acts 1904 to 1907 a Board has been constituted. This Board consists of the president and commissioners of the Land Appeal Court and the chairman and members of the Local Land Board for the land district in which the land under inquiry is situated. Under the amending Act of 1907 the Governor is empowered to appoint three Advisory Boards to report upon areas suitable to be acquired for the purpose of closer settlement.

(iii.) *Classification of Lands.* Under the provisions of Part II. of the Crown Lands Act 1895 the Governor is empowered, for the purpose of effecting a proper classification of Crown lands, to set apart, by notification in the *Gazette*, any tract or area for holdings (whether by way of purchase, lease, or otherwise) of the particular kinds specified in the notification; and it is provided that any lands comprised within such tract or area shall not become available for the purpose of any application for a holding of a kind not specified in the notification.

3. **Victoria.**—For the purposes of land administration the State is divided into seventeen districts, in each of which there is a Land Office under the management of a land officer. Intending selectors can obtain from these officers full information as to the locality and description of lands available for settlement. Local Land Boards are appointed to deal with applications for selections in the various districts. The whole of the unalienated lands belonging to the Crown, with the exception of Mallee lands, are divided into the following classes:—(1) Good agricultural or grazing lands, situated chiefly in the central southern districts; (2) lands to a large extent suitable for grazing, but which in parts are also suitable for cultivation, vineyards and orchards—land of this class is fairly distributed throughout the State; (3) grazing lands, which are situated in nearly every county; (4) inferior grazing lands, situated chiefly in the extreme eastern and western districts of the State;¹ (5) pastoral lands (large) areas; (6) swamp or reclaimed lands; (7) lands which may be sold by auction (not including swamp or reclaimed lands); (8) auriferous lands; (9) State forest reserves; (10) timber reserves; and (11) water reserves.

(i.) *Reclassification of Lands.* Provision is made in the Land Acts for the reclassification of lands where it is considered that any land in either of the first four classes is too highly classed, or if any land in the second to the fifth classes is not classed high enough. For this purpose Land Classification Boards, each consisting of three members, who are officers of the Lands Department, or other competent persons, are constituted. The classification of any land cannot, however, be altered after an application to select the same has been granted.

(ii.) *Mallee Lands.* The provisions of the Land Act of 1901 referring to lands comprised in any of the above eleven classes do not apply to lands in the Mallee country or Mallee border, which are dealt with by a special part of the Act. Land in the Mallee is divided into four classes, the unimproved value of the land in each class being twenty, fifteen, ten, and five shillings respectively. For the purposes of classification Mallee Classification Boards are constituted.

(iii.) *Administration of Closer Settlement Acts.* For the purposes of carrying out the provisions of the Closer Settlement Acts 1898 to 1907, a Board consisting of three members has been constituted. This Board has power to acquire for the purposes of the Act, either by agreement or compulsorily, private lands in any part of the State. The Small Holdings Act 1906 is also administered by a special Board.

4. **Queensland.**—This State is for administrative purposes divided into Land Agents' Districts, in the principal town of each of which there is a Public Lands Office, under the management of a Land Agent, with whom applications for selections must be lodged.

1. Agricultural and grazing lands are classified by the Lands Department in three divisions only, although the Acts provide (if necessary) for a fourth class.

(i.) *Lands Commissioners.* The Governor is empowered to appoint Land Commissioners as may be necessary for carrying the provisions of the Land Acts into effect. To each Commissioner Land Agents' Districts are assigned. A Commissioner must hold a court at least once a month. His powers and duties relate to the consideration of applications to select land, the valuation of land and improvements, the granting of applications for certificates as to performance of conditions, the holding of courts to enquire into violation of the Acts by settlers, and the granting of special licenses and applications.

(ii.) *The Land Court and Land Appeal Court.* Under the provisions of the Land Act of 1897 a Land Court and a Land Appeal Court have been constituted. The Land Court consists of three members, and exercises the powers and functions of the Land Board constituted under the repealed Acts. It hears appeals from the Commissioners' Courts, and has power to summon any person as a witness and examine him on oath. One member of the Court ordinarily acts in the first instance. In certain cases it is imperative that the powers of the Court be exercised by one member only, but an appeal lies from such member to the Land Appeal Court, consisting of a judge of the District Court and the members of the Land Court other than the member pronouncing the decision appealed against. No appeal lies in any case in which the Land Court *may* be lawfully constituted by the three members thereof sitting together. Under certain circumstances an appeal may be made from the decision of the Land Appeal Court to a Supreme Court judge. An appeal lies to the Full Court from any decision of the judge upon a question of law.

(iii.) *Classification.* In Queensland, Crown lands are generally classified as town lands, suburban lands, or country lands. Town and suburban lands are set apart by proclamation, while country lands comprise all Crown lands which are not so proclaimed or are not reserved.

Under the Land Act 1902, section 9, new pastoral leases are to be classified according to the term of the lease, and under section 37 of the Act of 1905 newly acquired holdings are classified by the Land Commissioners, according to whether they are free from or are infested by prickly pear.

5. South Australia and the Northern Territory.—In this State there is a Land Board and a Pastoral Board. There is no general classification of lands, but special areas are set apart by notification in the *Gazette* to be applied for on perpetual lease or agreement. Town lands comprise all Crown lands set apart as the site for a town, and suburban lands comprise all Crown lands surveyed in sections of not greater area than twenty acres each, situated within two miles of any town lands and park lands, the latter of which include lands adjacent to a town and reserved for the use of the inhabitants thereof.

(i.) *The Land Board.* This Board consists of four members, of which three must be civil servants. The Board travels to various centres to take evidence; it arranges the subdivisions of lands, considers applications, deals with transfers, fixes prices, and generally attends to all matters referred to it by the Commissioner of Crown Lands and Immigration.

(ii.) *The Pastoral Board.* This Board, as at present constituted, was created by the Pastoral Act of 1904 to deal generally with pastoral lands. The Board consists of the Surveyor-General and two other members (one not being a civil servant). The Board, with the approval of the Commissioner of Crown Lands, considers applications and decides upon the area, the boundaries of the land, the annual rent to be paid, and the term to be granted, and deals with all other matters referred to it by the Commissioner.

(iii.) *Land Districts.* Under the Crown Lands Act 1903, section 7, authority is given to the Governor to divide the State into Land Districts by proclamation. No such districts have, however, up to the present been proclaimed.

(iv.) *Northern Territory.* In the Northern Territory, Crown lands are also divided into town, suburban, and country lands. Country lands are classified as either (a) surveyed, or (b) unsurveyed. The Minister controlling the Northern Territory carries out all the duties of the Land Board for that part of the State.

6. **Western Australia.**—Under the Lands Act Amendment Act of 1906 six main territorial divisions are defined, viz.:—The South-west Division, the Kimberley Division, the North-west Division, the Central Division, the Eucla Division, and the Eastern Division. The Kimberley, North-west, and Western Divisions are at present more especially adapted to tropical cultivation and for pastoral purposes, to the latter of which they are principally devoted. The South-western is the most important farming division.

(i.) *Land Districts.* In addition to the land divisions, which have been principally arranged with reference to the regulations dealing with pastoral leases, the State is divided into Land Districts for the purpose of conveniently dealing with land sales. In each district is stationed a Land Agent, with whom applications for selections must be lodged. By the Amendment Act of 1906 power was given for the appointment of a Land Board for any district; no such Boards have, however, been constituted up to the present.

(ii.) *Classification of Lands.* Unoccupied Crown lands are generally grouped into two classes. The first class comprises what are termed "cultivable" lands, and are open for selection by conditional purchase. The second class comprises land which is suitable only for grazing purposes, and may be held under grazing leases. Lands may also be classified by notice in the *Gazette* as town or suburban lands.

7. **Tasmania.**—In this State there are no Land Districts, and applications for selections must be lodged at the Central office, Hobart, or at the Brauch office, Launceston.

(i.) *Classification.* Crown lands are divided into (a) town lands and (b) rural lands. (a) *Town lands* comprise all lands situated within any city and within five miles from any point of the boundaries of any city, and all lands situated within the boundaries of any town, township, or village, or which are laid out in lots as the site for a town. Town lands can only be sold by auction, or if, after having been offered at auction and not sold, by private contract, within one year after the auction sale. (b) *Rural lands* comprise all lands other than town lands, and are divided into three classes according to whether the value is at or above £1 an acre, from ten shillings to £1 an acre, or from five shillings to ten shillings an acre. Rural lands may be sold at auction or may be selected for purchase privately.

(ii.) *Special Areas.* Special areas of rural lands, not less than 1000 acres in extent and suitable for agricultural, horticultural, or dairy-farming purposes, together with adjoining areas of second or third-class land, may be set apart and divided into blocks for sale by auction.

(iii.) *Administration of Closer Settlement Acts.* For the purpose of carrying out the provisions of the Closer Settlement Acts 1906 and 1907 a Board, consisting of three members appointed by the Governor, is constituted. Upon the recommendation of the Board the Minister may enter into an agreement for the repurchase of private lands at a price not exceeding that recommended by the Board.

§ 4. Tenures under which Crown Lands may be Alienated or Occupied.

1. **Introduction.**—The freehold of Crown lands in the several States of the Commonwealth may now ordinarily be alienated either by free grant (in trust for certain specified purposes), by direct sale and purchase (which may be either by agreement or at auction), or by conditional sale and purchase. Crown lands may be occupied in the several States under a variety of forms of leases and licenses, issued both by the Lands and the Mines Departments.

2. **Classification of Tenures.**—The tabular statement given on pages 278 and 279 shews the several tenures under which Crown lands may be acquired or occupied in each State of the Commonwealth. The several forms of tenure are dealt with individually in the succeeding parts of this section.

(i.) *Free Grants, Reservations, and Dedications.* The modes of alienation given in this category include all free grants either of the fee simple or of leases of Crown lands. "Free" homesteads in Queensland and Western Australia are not included in this class, these tenures being free in the sense that no purchase-money is payable, though the grants are not free from residential and improvement conditions. Reservation and dedication, which are ordinarily conditions precedent to the issue of free grants, are also dealt with herein.

(ii.) *Sales by Auction and Special Sales.* This class of tenure includes all methods by which the freehold of Crown lands may be obtained (exclusive of sales under the Closer Settlement and kindred Acts) for cash or by deferred payments, and in which the only condition for the issue of the grant is the payment of the purchase-money.

(iii.) *Conditional Purchases.* In this class are included all tenures (except tenures under Closer Settlement and kindred Acts) in which the issue of the grant of the fee simple is conditional upon the fulfilment of certain conditions (as to residence or improvements) other than, or in addition to, the condition of the payment of purchase-money.

(iv.) *Leases and Licenses.* This class includes all forms of occupation of Crown lands (other than under Closer Settlement and kindred Acts) for a term of years under leases and licenses issued by the Lands Departments. As the terms indicate, the freehold cannot be obtained under these forms of tenure.

(v.) *Closer Settlement Sales, Leases, and Licenses.* In this division are included all forms of tenure provided for under the various Closer Settlement Acts and also under kindred Acts, such as the Village Settlements and Small Holdings Acts.

(vi.) *Mines Departments' Leases and Licenses.* The tenures here specified include all methods in which Crown lands may be occupied for mining and auxiliary purposes under leases and licenses issued by the Mines Departments in the several States.

§ 5. Free Grants, Reservations, and Dedications.

1. **Introduction.**—Although free grants of Crown lands were virtually abolished as far back as 1831 (see § 1, 4, above), the Land Acts of all the States now contain provisions under which the free alienation or occupation of Crown lands for certain specified purposes—comprising generally charitable, educational, and public purposes—is allowed. In all the States, also, Crown lands may be excepted from sale and reserved to the Crown or dedicated for various public and special purposes. Generally reservation and dedication are conditions precedent to the issue of a free grant. In addition to reservations of a permanent nature, temporary reservations are also made, but these are, as a rule, subject to considerable fluctuations in area by reason of withdrawals, renotifications, and fresh reservations.

The following table shews the area for which free grants were issued and the areas reserved or dedicated in each State during each year from 1901 to 1907, inclusive:—

‡ Free leases.

2. **New South Wales.**—Under Sections 104 to 106 of the Crown Lands Act 1884 Crown lands may be reserved or dedicated for certain charitable, educational, and public purposes therein specified, and at any time thereafter the fee simple of such lands may be alienated in trust for the purpose specified. The Crown Lands Alienation Act 1861, which was repealed by the Act of 1884, contained provisions for the dedicating and granting in trust of Crown lands for religious purposes. In cases where a dedication or a promise of dedication had been made under the authority of the repealed Act, but had not been carried into effect before such repeal, the grant is made by virtue of the saving clause contained in Section 2 of the Act of 1884. No fresh promises of dedication for religious purposes were made after the 11th May, 1880, on which date a resolution against any further such grants was passed by the Legislative Assembly. Holders of certificates issued to such volunteers as had served efficiently for a certain period under the provisions

of the Volunteer Force Regulation Act 1867 are entitled to a free grant of 50 acres of such land as may be open to conditional purchase, other than lands within a proclaimed special area.

(i.) *Reservations.* In addition to the reservations under Sections 104 to 106 of the Act of 1884, referred to above, Crown lands may also be temporarily reserved as sites for cities, towns, or villages under Section 101 of the same Act, and may be reserved for mining purposes under Section 106 of the Mining Act 1906. Crown lands within one mile of any made or projected railway may be temporarily reserved from sale under Section 103 of the Crown Lands Act 1884, and under Sections 112 to 114 of that Act any Crown lands may be reserved from sale for the preservation and growth of timber. Further, under Section 39 of the Crown Lands Act 1889, Crown lands may be reserved by notification in the *Gazette* from being sold or let upon lease or license, in such particular manner as may be specified, or may be reserved from sale or lease generally.

(ii.) *Areas Granted and Reserved, 1907.* During the year 1907 the total area for which free grants were issued was 305 acres. Of that area 32 acres were granted for religious purposes, 23 acres for public purposes, and 250 acres under Volunteer Land Orders. During the same period 1509 acres were dedicated and permanently reserved; of that area 670 acres were for quarantine purposes, 454 acres for public recreation grounds, and 147 acres for travelling stock and camping grounds.

3. **Victoria.**—Under Section 10 of the Land Act 1901 the Governor is authorised to reserve Crown lands, either temporarily or permanently, from sale, lease, or license for any public purpose whatsoever. In case of temporary reservations the land cannot be sold or leased, nor a license be granted until the temporary reservation has been revoked, and in case of permanent reservation all conveyances and alienations except for the purpose for which the reservation is made are void both against the Crown and against all other persons.

During the year 1907 forty-nine free grants, comprising an area of 861 acres, were issued for railway, municipal, or water supply purposes, or as sites for cemeteries, or for extension of Melbourne University. During the same year 134 reservations of a permanent nature, comprising an area of 1770 acres, were made; of this area 486 acres were reserved for public purposes, 373 acres for recreation grounds, 292 acres for watering and camps, 56 acres for water-supply purposes, 37 acres for State schools, and 20 acres for railway purposes.

4. **Queensland.**—Under Section 190 of the Land Act 1897 the Governor-in-Council may grant in trust or may reserve from sale or lease, either temporarily or permanently, any Crown lands required for any of the various charitable, educational, and public purposes specified therein, and may, by proclamation and without issuing any deed of grant, place any lands so reserved under the control of trustees.

(i.) *Reservations.* Under Section 19 of the same Act the Governor-in-Council may set apart any Crown lands as reserves for public purposes, and under Section 2 of the State Forests and National Parks Act 1906 he may permanently reserve any Crown lands and declare them to be a State Forest or a National Park.

(ii.) *Areas Granted and Reserved, 1907.* During the year 1907 there were thirty-three free grants for a total area of 943 acres issued. During the same period 167 reserves, having an area of 487,766 acres, were proclaimed, of which 375,227 acres were for State forest reserves, 67,718 acres for timber reserves, 18,878 acres for camping and water, and 17,924 acres for stock-dip reserves.

5. **South Australia.**—Under Section 7 (d) of the Crown Lands Act 1903 the Governor is empowered to dedicate by proclamation any Crown lands for various charitable, educational, and public purposes, and may, at any time after dedication, grant the fee simple of such lands to secure the use thereof for the purpose for which they were dedicated.

(i.) *Reservations.* Under Section 7 (*f*) of the same Act the Governor may by proclamation reserve any Crown lands (*a*) for the use of aborigines, (*b*) for the purposes of military defence, (*c*) for forest or travelling-stock reserves, (*d*) for public recreation grounds, (*e*) for railways or tramways, and (*f*) for park lands.

(ii.) *Artesian Leases.* Under special circumstances free leases of pastoral lands may be granted to discoverers of artesian wells. (See § 8. 5. vi. c.)

(iii.) *Areas Granted and Reserved, 1907.* During the year 1907 free grants were issued for a total area of 200 acres, of which 99 acres were for water-works purposes, 43 for railways, 22 for schools, and the remainder for institute, show, cemetery, and district council purposes. During the same year sixty-seven reserves, comprising 47,831½ acres, were proclaimed; of this area 38,400 acres were for native fauna and flora reserves, 6459½ acres for water reserves, 1216½ acres for forests, and 643 acres for marine boards.

6. **Western Australia.**—Under Section 39 of the Land Act 1898, as amended by Section 27 of the Act of 1906, the Governor is authorised to except from sale, and to reserve to the Crown or to dispose of in such other manner as may seem best for the public interest, any Crown lands which may be required for the various religious, charitable, and public purposes specified. These reservations may be either temporary or permanent, but if temporary the reservation lapses unless confirmed within twelve months. Any reserve may either be alienated in trust for the purpose specified, the trustees having power of leasing for any term not exceeding twenty-one years, or may be leased for a term of 999 years. The Governor is further authorised, without issuing any deed of grant, to place any reserve under the control of any person or body of persons, as a board of management.

During the year 1907 free grants for 132 acres were issued, while the area reserved was 406,116 acres. Further particulars are not available.

7. **Tasmania.**—There are no free grants of the fee simple of Crown lands in this State. Under Section 24 of the Crown Lands Act 1903, however, the Governor may by proclamation reserve any Crown lands for the purposes therein specified, and may thereafter, in order to give effect to any such proclamation, vest for such term as he thinks fit any lands so reserved in any person or body of persons. Under this section lands are reserved from sale and are ordinarily leased to the trustees of public bodies for a period of ninety-nine years at a peppercorn rental. These leases contain provisions that the lands shall be appropriated only to the purposes for which they were reserved. Upon breach of such provisions the lands are forfeited to the Crown.

During the year 1907 there were six free leases, comprising an area of 6715 acres, issued. Of this area 6690 acres were for the purpose of a catchment area for water supply. During the same period 6780 acres were reserved, 6760 acres being reserved for water catchment.

§ 6. Sales by Auction and Special Sales.

1. **Introduction.**—In all the States sales by auction of Crown lands are held from time to time. Notifications of such sales are given in the *Government Gazette*, together with particulars as to the upset price and conditions of sale. Excepting in the case of South Australia, where land is sold at auction for cash only, the purchase may be either for cash or on credit by deferred payments. In most of the States land may also be purchased by private contract at the upset price, when it has been offered at auction and not sold. In the case of auction sales on credit in the States of Western Australia and Tasmania, certain improvement conditions are imposed, and such sales are therefore classed for the purposes of this article among *Conditional Purchases*. (See § 7 below.)

In most of the States comparatively small areas of Crown lands may be sold without competition under special circumstances. Sales by auction and special sales under Closer Settlement Acts are referred to in a later part of this section. (See § 9.)

2. New South Wales.—Under the Crown Lands Act 1884 lands not exceeding in the aggregate 200,000 acres for the whole State may be sold by auction during any one year. The sales are notified in the *Gazette* not less than one month before the day of sale. The upset prices may not be less than £8 an acre for town lands; £2 10s. for suburban lands; and other lands fifteen shillings. Town lands may not be sold in areas exceeding half-an-acre; suburban lands in areas exceeding twenty acres; and country lands in areas exceeding 640 acres. A deposit of 25 per cent. on the purchase-money must be paid at the sale, and the remainder within three months.

(i.) *Deferred Payment on Auction Sales.* Under the Auction Sales Balances Act 1887 and the Crown Lands Amendment Act 1903 special terms of payment may be made on auction sales of land subdivided into areas not exceeding forty acres. The time for deferred payments may not exceed five years and the instalments carry interest at five per cent. per annum. A cash deposit of 25 per cent. on the purchase-money must be paid.

(ii.) *After-auction Sales.* Under the Crown Lands Amendments Acts 1895 and 1903 lands which have been offered for sale at auction and not sold may be granted at the upset price to any person applying. A deposit of 25 per cent. on the upset price must be paid, and the remainder according to the terms on which the land was offered at auction.

(iii.) *Special Sales without Competition.* Under the Crown Lands Act 1884 the Governor is authorised to rescind the reservation of water frontage, or of land adjoining such frontage, contained in any Crown grant, and to sell the land, the subject of such rescission, at a fair price not less than the upset price, to the owner of the land contained in the grant. Crown lands may be sold to the owners of adjacent lands in a similar manner in the following cases:—(a) Where there is no way of access attainable, (b) where the lands comprised are insufficient in area for conditional sale, (c) where the lands are situated between granted land and a road which should form the way of approach to such granted land, (d) where the lands are encroached upon by buildings erected on granted land, and (e) where lands have been reclaimed with the authority of the Governor from below high-water mark.

(iv.) *Improvement Purchases.* Although termed an "improvement" purchase, this type of sale is not conditional on the subsequent fulfilment of any improvement conditions. Only lands within proclaimed goldfields are available for improvement purchase. The areas which may be acquired in this manner may not exceed one-quarter of an acre within the boundaries of a town or village defined as such in the Mining Act; or two acres of land outside such boundaries. The price of the land is fixed by the Local Board, and must not be less than at the rate of £8 per acre for town lands, and £2 10s. for suburban or other lands, or for any area less than one acre. The applicant must be in authorised occupation under the Mining Act of the land he applies for, and must be the owner of the improvements thereon in virtue of which his application is made, and such improvements must be of value equal to the respective minimum rates above-mentioned, i.e., £8 an acre for town lands, and £2 10s. an acre for suburban or other lands, or for an area less than one acre. No person who has made an improvement purchase may make a subsequent purchase of the same kind within three miles of a prior purchase by him.

(v.) *Alienation by Auction and Special Sales.* During the year ended the 30th June, 1907, the area of Crown lands sold by auction and special sales amounted to 26,515 acres, of which 21,071 acres were sold by auction; 4246 were sold by after-auction sales; 57 acres were sold as improvement purchases; and 1131 acres were sold as special purchases. The following table gives particulars of Crown lands alienated by auction and special sales during each year from 1901 to 1907:—

NEW SOUTH WALES.—AUCTION AND SPECIAL SALES, 1901 to 1907.

| Year. | Auction and After-auction Sales. | Improvement Purchases. | Special Sales. | Total. | |
|-----------------------|----------------------------------|------------------------|----------------|--------|---------|
| | | | | Area. | Price. |
| | Acres. | Acres. | Acres. | Acres. | £ |
| 1901 ... | 49,074 | 43 | 445 | 49,562 | 116,562 |
| 1902 ... | 50,110 | 801 | 1,022 | 51,933 | 115,625 |
| 1903 ... | 40,610 | 23 | 576 | 41,209 | 117,879 |
| 1904 ... | 53,556 | 23 | 1,185 | 54,764 | 120,946 |
| 1905 ¹ ... | 22,390 ³ | 6 | 129 | 22,525 | 99,246 |
| 1906 ² ... | 22,774 ³ | 36 | 2,616 | 25,426 | 86,802 |
| 1907 ³ ... | 25,327 ³ | 57 | 1,131 | 26,515 | 132,127 |

1. Half-year ended 30th June. 2. Year ended 30th June. 3. Including land sold under the Centenary Park Sale Act.

The total areas alienated by auction and other forms of sale up to the 30th June, 1907, are shewn below. (See § 12.)

3. **Victoria.**—The lands comprised within the areas described in a schedule attached to the Land Act 1901 and any land in any city, town, or borough, may be sold by auction in fee simple, not exceeding 100,000 acres in any one year, at an upset price of £1 an acre, or at any higher price determined. Before any country lands can be sold a schedule thereof must be laid before both Houses of Parliament. The purchaser must pay the survey charge at the time of the sale, together with a deposit of 12½ per cent. of the whole price; the residue is payable in equal half-yearly instalments not exceeding forty in number, according to the amount, with interest at the rate of 4 per cent. per annum, or may be paid at any earlier time at the option of the purchaser. On failure of the payment of any instalment with interest, the deposit and any instalments already paid are liable to forfeiture, and the contract becomes void. Isolated portions of Crown lands not exceeding fifty acres, or any portion not exceeding three acres required as a site for a church or for any charitable purpose, for which land cannot legally be reserved, may also be sold by auction. There are stringent provisions and penalties against illegal agreements to prevent fair competition at auction sales.

(i.) *Special Sales without Competition.* Detached strips of land not exceeding twenty acres may be sold at a valuation to the owner of the adjoining freehold in cases similar to those specified above in respect to Crown lands in New South Wales.

(ii.) *Areas Sold at Auction and by Special Sales, 1901 to 1907.* The following table gives particulars of auction sales and special sales for each year from 1901 to 1907:—

VICTORIA.—AUCTION AND SPECIAL SALES, 1901 to 1907.

| Particulars. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------------|--------------|--------------|---------------|--------------|--------------|--------------|--------------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| Country lands ... | 4,079 | 3,297 | 4,936 | 3,154 | 3,267 | 2,060 | 2,776 |
| Town and suburban lands ... | 2,127 | 2,259 | 1,957 | 1,924 | 2,129 | 1,946 | 1,369 |
| Special sales ... | 846 | 1,748 | 6,330 | 4,510 | 3,382 | 2,636 | 2,168 |
| Total ... | 7,052 | 7,304 | 13,223 | 9,588 | 8,778 | 6,642 | 6,313 |

Particulars of total areas alienated are given below. (See § 12.)

4. **Queensland.**—The Governor may proclaim any Crown lands to be sold by auction. Town or suburban lots must be offered as nearly as possible according to the following scale:—Town lands in allotments of from one rood to one acre, at an upset price of £8 per acre; suburban lands, if within one mile from town lands, in lots of from one to five acres, and if over one mile from town lands, in lots of from one to ten acres, the upset price being £2 per acre. In respect of country lands, the maximum area which may be sold by auction in any one year is 500,000 acres, and the upset price is fixed at £1 an acre for lands classed as agricultural, and not less than ten shillings per acre in the case of other lands. The area of any portion of country lands so sold may not exceed 5120 acres. In sales by auction both of country and of town lands, a deposit, as specified in the proclamation, must be paid at the time of sale, and the balance, including the value of improvements on the land, together with assurance and survey fees, must be paid within one month from the date of sale.

(i.) *Deferred Payment on Auction Sales.* The Governor may, by the proclamation under which the sale is notified, vary the conditions as to the amount of the deposit and the times for payment of the balance. The time for payment may not, however, be extended beyond ten years. If the time for payment is extended beyond six months, all instalments payable at a later date bear interest at 5 per cent. per annum.

(ii.) *After-auction Sales.* The proclamation of lands for sale by auction may specially declare that any lands therein mentioned, which have been offered at auction, but not sold, shall be open to purchase at the upset price by the first applicant. The price may be paid in the same instalments and at the same periods as if the land had been bought at the auction.

(iii.) *Special Sales without Competition.* Land may be sold without competition to the holder or holders of adjoining lands at a price to be determined by the Land Court, under circumstances similar to those specified above in the case of New South Wales. When the holder of any land proves that, owing to danger from floods or other reasons, it is unsafe to reside on his holding, he may be granted, on payment of a price determined by the Land Court, an area not exceeding ten acres out of the nearest convenient and available Crown lands.

(iv.) *Areas Sold at Auction, after Auction, and by Special Sales, 1901 to 1907.* The following table shews the areas sold at or after auction, and by special sales during each year from 1901 to 1907:—

QUEENSLAND.—AUCTION AND SPECIAL SALES, 1901 to 1907.

| Particulars. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------|--------|---------|---------|---------|---------|--------|--------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| Town | 334 | 156 | 167 | 197 | 128 | 340 | 285 |
| Suburban | 793 | 620 | 277 | 389 | 363 | 706 | 364 |
| Country— | | | | | | | |
| Ordinary sales | 52,132 | 17,870 | 119,092 | 92,553 | 157,839 | 15,481 | 11,556 |
| Special sales | ... | 174,470 | 33,512 | 9,939 | 1,659 | ... | 3,716 |
| Total | 53,259 | 193,116 | 153,048 | 103,078 | 159,989 | 16,527 | 15,921 |

Particulars as to the total areas alienated by all forms of purchase up to the end of each year from 1901 to 1907 are given in a later part of this section. (See § 12 below.)

(v.) *Unconditional Selections.* Although termed a "selection," this form of tenure partakes rather of the nature of a sale by auction with deferred payment than of a conditional purchase. Areas of land are available for unconditional selection at a price ranging from thirteen shillings and fourpence upwards, which is payable in twenty annual instalments. The maximum area which can be acquired by any one person as an unconditional selection is 1280 acres. As the term implies, no other condition than the payment of the purchase-money is attached to this mode of selection; a negotiable lease for the term of twenty years is issued to the selector when his application to select has been approved by the Court, and a deed of grant may be obtained at any time on payment of the balance of the purchasing price. An agricultural farm, or an agricultural homestead, may be converted into an unconditional selection, and an unconditional selection may be converted into an agricultural farm.

The following table shews the number and area of unconditional selections for which applications were accepted during each year from 1901 to 1907:—

QUEENSLAND.—UNCONDITIONAL SELECTION, 1901 to 1907.

| Particulars. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|----------------|--------|--------|--------|--------|--------|--------|--------|
| Number | 151 | 91 | 71 | 59 | 90 | 130 | 91 |
| Area ... Acres | 24,322 | 15,464 | 10,449 | 14,758 | 10,586 | 25,262 | 25,382 |
| Rent ... £ | 1,180 | 714 | 511 | 754 | 481 | 1,113 | 1,042 |

5. *South Australia.*—The following lands may be sold by auction for cash:—(1) *Special blocks.* Any single section of Crown lands which may be surrounded by lands sold or contracted to be sold, and any section or block of land (not exceeding 100 acres in area) which may be required for the establishment of any industry, trade, or business. (2) *Crown lands which have been offered for perpetual lease, and not taken up for two years.* (3) *Town lands.* (4) *Suburban lands,* which the Governor by proclamation may except from being dealt with by the Board. The upset price of any land offered at auction is determined by the Commissioner, and 20 per cent. of the purchase-money must be deposited at the time of sale, and the residue must be paid within one month or within such extended time as the Commissioner may allow. Purchase-moneys derived from the sale of lands by auction are paid into a fund primarily applicable to the payment of such portion of the public liabilities as shall be specially charged thereon.

(i.) *After-auction Sales.* All Crown lands, except town or suburban lands, offered at auction and not sold remain open for leasing or sale under agreement or may be sold by private contract for cash at the upset price.

(ii.) *Sales for Special Purposes.* Under section 201 of the Crown Lands Act 1903 the Governor may, on the application of the purchaser or lessee under any of the Crown Lands Acts, grant any of the land comprised in such agreement or lease to a corporation or to trustees, to be used for any public or charitable purposes, not exceeding two acres, for any one purpose, or he may, on the application of the holder of a lease or agreement, grant not over one acre of land, comprised in such lease or agreement, as a site for a blacksmith's or carpenter's shop, mill, store, or post office, provided that the land is not situated within five miles of any town lands. The purchase-money for such land must be paid at the time of application.

(iii.) *Northern Territory, Auction Sales.* Town and suburban lands may be offered for sale by auction at an upset price of not less than £1 an acre, and country lands at an upset price of not less than ten shillings an acre: 20 per cent. of the amount of the

purchase-money must be paid at the time of sale, and the balance within one month. Town and suburban lands may also be sold by private contract.

(iv.) *Areas Sold for Cash, 1901 to 1907.* The following table shews the areas sold for cash during each year from 1901 to 1907, inclusive. The total areas sold under all types of sale at the end of each year from 1901 to 1907 is shown in a later part of this section. (See § 12.)

SOUTH AUSTRALIA.—AUCTION AND SPECIAL SALES, 1901 to 1907.

| Year | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-------------------|--------|--------|--------|--------|--------|--------|--------|
| Area in acres ... | 11,314 | 18,595 | 30,512 | 31,756 | 77,022 | 69,060 | 70,349 |

6. **Western Australia.**—Town and suburban lands throughout the colony, after being surveyed into lots and notified in the *Gazette* as open for sale, may be sold by public auction at an upset price to be determined by the Governor-in-Council. Any person may apply to the Minister to put up for sale by auction any lot already surveyed on depositing 10 per cent. of the upset price, which is refunded in the event of the applicant being outbid at auction. The purchaser must pay 10 per cent. on the fall of the hammer, unless he has already paid a sufficient deposit on application, and must ordinarily pay the balance of the purchase-money, and the value of the improvements, if any, by four equal quarterly instalments. In the case of suburban lands, the purchaser must carry out certain improvements, which are more particularly referred to below. (See § 7. *Conditional Purchases*, 6, vii.) On payment of the first instalment of the purchase-money a license is issued to the purchaser, and his license may be transferred or mortgaged.

(i.) *Areas Sold by Auction, 1901 to 1907.* The following table shews the areas of town and suburban lands sold at auction during each year from 1901 to 1907 :—

WESTERN AUSTRALIA.—AUCTION SALES, 1901 to 1907.

| Year | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|----------------------|-------|-------|-------|-------|-------|-------|-------|
| Area sold .. Acres | 856 | 941 | 978 | 1,397 | 1,076 | 1,109 | 1,895 |
| Number of Allotments | 1,366 | 1,240 | 1,049 | 946 | 950 | 935 | 995 |

Particulars as to total areas alienated are given in a later part of this section. (See § 12 below.)

7. **Tasmania.**—Any town lands may be sold at auction or by private contract, either for cash or on credit, provided that no such lands may be sold on credit if the price is less than £15. Rural lands may also be sold at auction or by private contract, but lots of first-class land may not be sold on credit if less than fifteen acres in area. In the case of sales on credit both of town and rural lands, improvement conditions are imposed, and such sales are therefore classified for the purposes of this article as *Conditional Purchases*. (See § 7.) The area of any rural lot sold may not exceed: (a) 200 acres (nor be less than fifteen acres, if sold by private contract) of first-class land; (b) 250 acres, nor be less than thirty acres of second-class land; and (c) 500 acres, nor be less than 60 acres of third-class land.

(i.) *After-auction Sales.* All rural lands and town lands, not within five miles of any city, which have been offered at auction and not sold, may be purchased by private contract at the upset price, and subject to the conditions on which they were offered at auction.

(ii.) *Sale of Land in Mining Towns.* The surface of any Crown land within a mining town occupied as a residence area or a business area (see § 8, below) may be sold at auction. The holder of a residence or business license, who is in occupation and is the owner of buildings and improvements upon the area licensed of a value equal to the upset price of such area, is entitled to purchase the area at the upset price, which may not be less than £10, exclusive of improvements. The area so purchased may not in any case exceed half an acre. The areas may be sold on credit, one-third of the price being added as premium. The purchaser must pay a deposit of one-fourteenth of the price at the time of sale, and the remainder by thirteen annual instalments.

(iii.) *Areas Sold for Cash, 1901 to 1907.* The following table shews the areas sold for cash during each year from 1901 to 1907, inclusive:—

TASMANIA.—AUCTION AND SPECIAL SALES, 1901 to 1907.

| Year | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-------------------|-------|-------|-------|-------|-------|-------|-------|
| Area in acres ... | 1,915 | 4,021 | 6,411 | 162 | 404 | 463 | 504 |

Particulars of total areas alienated are given in a later part of this section. (See § 12.)

§ 7. Conditional Purchases.

1. **Introduction.**—In all the States of the Commonwealth the freehold of the land may be acquired under what are known as systems of conditional purchase by deferred payments of half-yearly or yearly instalments. Certain conditions, generally as to residence and improvements, have to be complied with before the freehold is granted, but these conditions are usually of a light nature and are inserted chiefly with the object of guaranteeing that the occupier will become of benefit to the community by making a reasonable effort to render his holding wealth-producing. Though there is a considerable similarity between some of the forms of tenure in the several States, the terms and conditions vary greatly in detail. As a rule a lease or license for a certain period is first issued to the selector, and upon fulfilment of the prescribed conditions and payment of the full amount of purchase-money the freehold is conveyed to him. In Queensland and Western Australia “free” homesteads may be acquired. Although under these tenures no purchase-money is payable, the grant is conditional on the performance of residential and improvement conditions; these tenures are therefore included here with conditional purchases rather than with free grants.

2. **New South Wales.**—The following are the methods by which land may be alienated by conditional purchase:—(i.) Residential conditional purchase; (ii.) non-residential conditional purchase; (iii.) conversion of conditional purchase; and (iv.) homestead selections.

(i.) *Residential Conditional Purchase.* Any vacant Crown lands in the “Eastern Division” and “Central Division” are available for conditional purchase, but only those set apart by proclamation as special areas are open in the “Western Division.” For a holding of this class an applicant must be not less than sixteen years of age, and must pay on application both the prescribed deposit and a survey fee according to a fixed scale.

The area which may be selected depends upon the division in which the land is situated. In the Eastern Division the minimum and maximum areas are respectively 40 and 640 acres; in the Central 40 and 2560 acres; and in a special area the maximum is 320 acres in the Eastern and 640 acres in the Central or Western Divisions. The deposit is 10 per cent. of the price of the land, which is ordinarily available at the statutory value of £1 an acre, subject to the applicant's right to apply for an appraisalment where he considers such price excessive. At the end of the third year from the date of application the purchaser must pay an instalment of 5 per cent. of the price of the land. This instalment includes interest at the rate of $2\frac{1}{2}$ per cent. on the outstanding balance of the purchase-money due to the Crown, and he must continue to pay a similar instalment annually until such balance and interest have been paid off.

The following conditions are attached to the holding, viz.:—That it must be fenced within three years, or be improved to the value of six shillings an acre within the same period, and to the value of ten shillings an acre at the end of the first five years. The settler must commence to reside on his holding within three months from the date of the confirmation of his application by the Land Board, and continue to do so for a period of ten years from the date of application, but for sufficient reason this condition may be suspended. Members of a family taking up land situated within working distance of each other, may fulfil the condition of residence in respect of their holdings by living on any one of them. The conditional purchase may be transferred after the issue of the first certificate of fulfilment of conditions. This certificate will be issued at the expiration of five years from the date of application if the required conditions have been fulfilled up to that date, and if the holding be transferred the transferee must reside thereon during the remainder of the unexpired residence term of ten years.

The holder of a conditional purchase may at any time, if land be available, apply for an additional conditional purchase (of unclassified land) the area of which, together with that of the original holding, may not exceed the maximum limits stated above. The Crown Lands Act of 1903, however, provides that the areas specified may be exceeded by allowing an applicant to acquire additional holdings of classified land, the area of which, together with that of all other lands held by the applicant other than under annual tenure, must not exceed such an area as, in the opinion of the Land Board, is sufficient for the maintenance of his home thereon in average seasons and circumstances. The additional holdings need not be contiguous to the original holding, but must be within reasonable working distance thereof.

(ii.) *Non-residential Conditional Purchase.* When land is conditionally purchased without residence the maximum area obtainable is 320 acres, and the minimum 40 acres. The price, deposit, and annual instalments are double those required under residential conditions. The selection must be enclosed with a fence within twelve months from the date of confirmation of application, and within five years improvements, other than boundary fencing, must be made to the value of £1 an acre, or, with the permission of the Local Board, other improvements to the value of thirty shillings an acre may be substituted for fencing. No person under twenty-one years of age may select land on non-residential terms, and anyone who has made a non-residential conditional purchase is not allowed to make any other conditional purchase.

(iii.) *Conversion of Conditional Purchase Leases.* Under the Crown Lands Amendment Act 1905, a conditional purchase lease, for which the term is forty years, carries with it a right of conversion into a conditional purchase at any time during its currency, and ultimately into a freehold. These leases are more particularly referred to below. (See § 8. *Leases and Licenses.*)

(iv.) *Applications Made and Confirmed and Decds Issued, 1901 to 1907.* During the year ended the 30th June, 1907, grants were issued on the completion of conditional purchases for 1,261,660 acres, making the total area for which such grants were issued up to the end of the financial year 10,264,221 acres. The following table gives particulars of conditional purchases for each year from 1901 to 1907:—

NEW SOUTH WALES.—CONDITIONAL PURCHASES. 1901 to 1907.

| Year. | Applications Made. | | Applications Confirmed. | | Areas for which Deeds have been Issued. | |
|-----------------------|--------------------|----------------------|-------------------------|---------------------|---|---------------------|
| | Number. | Area. | Number. | Area. | During the Year. | To end of Year. |
| 1862-1900 ... | 254,303 | Acres. 34,672,319 | 46,449 | Acres. 8,169,874 | Acres. ... | Acres. 3,711,635 |

1. Half-year ended 30th June. 2. Year ended 30th June.

Further particulars as to the total areas alienated and in process of alienation are given below. (See § 12.)

(v.) *Homestead Selection.* Under a principle of classification and measurement introduced by the Act of 1895 suitable land may be classified for homestead selection, which tenure is similar in many respects to perpetual leases in other States. (See § 8, *Leases and Licenses*, below.) In a homestead selection, however, the freehold of the land may be acquired, subject to the payment of an annual rent, whereas in a perpetual lease the freehold is not alienated. The areas set apart for homestead selection are either good agricultural lands, divided into blocks, each large enough for one family, or suitable lands, within easy access of towns, divided to suit the requirements of business people. Conditions as to area of blocks, capital value, etc., are published in the *Gazette*, and the selector is limited to one block, as gazetted, the area of which must not be greater than 1280 acres. The selector must reside continuously on the land for five years, on the expiration of which a grant will be issued. After the issue of the grant he must continue to reside on the holding for at least seven months in the year. The annual rent for the first six years will be an amount equal to $1\frac{1}{2}$ per cent. of the capital value of the land, after which the rent will be increased to $2\frac{1}{2}$ per cent. of the capital value, which is determined according to the character and situation of the holding, and is subject to re-appraisement every ten years. Should an area granted under this tenure be found to be insufficient for the maintenance of a home in average seasons and circumstances, it may be increased to a home maintenance area by additional homestead selection. The additional holding need not necessarily adjoin the original holding, but must, in the opinion of the Land Board, be situated within a reasonable working distance thereof. Any person who is eligible to take up a conditional purchase may apply for a homestead selection. The incoming tenant must pay for improvements at a price to be determined by the Land Board, but if the appraised value of such improvements be greater than 20 per cent. of the estimated value as notified in the *Gazette*, the applicant may withdraw his application and obtain a refund of all moneys paid. Tenant right in improvements may be obtained under certain circumstances, and the holding may be so protected that it cannot, under any circumstances, be taken from the selector. Holders of conditional purchases may convert their holdings into homestead selections.

During the year ended the 30th June, 1907, there were 291 homestead selections applied for, comprising an area of 89,426 acres. During the same period the total number of applications confirmed was 251, comprising 70,957 acres, and 391 homestead grants were issued for 160,854 acres. Further particulars for previous years are given in a later part of this section. (See § 12.)

3. **Victoria.**—The freehold of agricultural and grazing lands may be acquired by conditional purchase under the following tenures:—(i.) Agricultural allotments; (ii.) grazing allotments; (iii.) agricultural and grazing allotments by selection from grazing area or perpetual leases; (iv.) homestead selections from pastoral leases; (v.) Mallee agricultural licenses; and (vi.) swamp or reclaimed lands purchase leases. Numbers (i.), (ii.) and (v.) may be either on residential or on non-residential conditions.

A selection may be obtained by any person over the age of eighteen years, either by taking a grazing area lease or a perpetual lease and selecting thereout, as described below, or by obtaining directly (a) an agricultural allotment of first or second-class lands, or (b) a grazing allotment in the case of third-class lands, which tenures enable the freehold to be paid for in twenty or forty years at the option of the applicant. The minimum price for the freehold is, in the case of first-class land, £1 an acre; second-class land, fifteen shillings an acre; and third-class, ten shillings an acre, and the prices may be enhanced according to the valuation of the land. Any person may become the licensee of more than one agricultural or grazing allotment, provided the total acreage does not exceed the limit for its class of land, but no selector may pick out the best or any part of an allotment, leaving the balance unselected, and afterwards apply for an agricultural allotment elsewhere.

(i.) *Agricultural Allotments.* Either residential or non-residential licenses to occupy an agricultural allotment not exceeding in the whole 200 acres of first-class land or 320 acres of second-class land are issued to any person over the age of eighteen years, who has not already made a selection under the Land Acts, or has not taken up a pre-emptive right to the extent of the maximum number of acres in the first or second class (as the case may be), or who is not in respect of the license applied for an agent, servant, or trustee for any other person, or who has not, at the time of the application, entered into any agreement to permit any other person to acquire by purchase or otherwise the allotment in respect of which such application is made.

(a) *Residential Licenses* are granted for six years at a fee, according to the valuation of the land, of not less than one shilling an acre per annum in the case of first-class land, and not less than ninepence an acre per annum in the case of second-class land, payable half-yearly in advance. The licensee may not transfer, assign or sublet, but may give a lien up to half the value of the improvements effected to any person for money advanced; he must destroy vermin on the land, and must within six years from the issue of his license enclose the land with a fence, or he may, if he prove to the satisfaction of the Board that such a fence is impracticable or is not required, expend in permanent improvements an amount equivalent to the cost of fencing. The licensee must enter into occupation within twelve months from the issue of the license, and must occupy the allotment thenceforward during the continuance of the license. Any licensee may during each year, however, absent himself from his allotment for not more than three months, by registering with the district land officer a notice of his intention to so absent himself; and if his home is situated upon the allotment the Board may consent for a specified period to substituted occupation by the wife or by a child over the age of eighteen years; or, if he has no wife or child, by the father or mother of the licensee, provided that he or she is dependent upon him for support. During the currency of the license the Crown reserves the right to resume possession of any of the land required for reserves or for public or mining purposes, subject to repayment to the licensee of all moneys paid by him as rent to the Crown, and of a reasonable sum as compensation for such resumption. Substantial and permanent improvements must be made to the value of £1 for every acre if of first-class land, or of the value of fifteen shillings for every acre if of second-class land, during the following periods and on the following basis:—If the land be first-class land, to the value of three shillings and fourpence for each acre before the end of the second year from the date of issue of the license, another three shillings and fourpence before the end of the third year, another three shillings and fourpence before the end of the fourth year, and the balance before the end of the sixth year; if the land be second-class, to the value of two shillings and sixpence for each of the same periods as in the

case of first-class land. Upon satisfying the Board that all conditions of the license have been fulfilled, the licensee is entitled at any time within twelve months after six years from the commencement of the license to obtain a grant upon payment of the balance of the purchase-money; or otherwise he may obtain a lease of the allotment for a term of fourteen years at the same rental as the fee paid under license. The lessee is entitled upon payment at the end of the term of the last instalment due on account of the rent reserved, or at any time during the currency of the lease by payment of the difference between the amount of rent actually paid and the entire sum payable for the purchase of the land, to obtain a grant in fee of the lands leased.

Residential licenses are also granted, subject to the same covenants and conditions as stated above, but varied with regard to the term and to the amount of the fee and rent reserved, as follows, being double the term at half the yearly payment:—The fee for occupation to be, according to the valuation of the land, not less than sixpence nor fourpence halfpenny an acre per annum in the case respectively of first or second-class land, the term of a lease to be thirty-four years' annual rent of the same amounts, instead of only fourteen years at double the rental.

(b) *Non-residential Licenses* for both agricultural and grazing (see below) allotments may be issued on conditions identical with the above, with the exception that the term of the lease granted after the license period must be on the fourteen years basis only. The improvements which may be effected are as follows:—(a) In the case of agricultural allotments, to the value of six shillings and eightpence an acre during each year of the license for first-class land, and five shillings an acre during each of the first three years of the license for second-class land. (b) In the case of grazing allotments, three shillings and fourpence an acre during each of the first three years, for third-class land. During any one year non-residential licenses may not be issued for more than 50,000 acres.

(ii.) *Grazing Allotments.* Licenses for grazing allotments of third-class lands are issued similarly to agricultural allotment licenses. The area of a grazing allotment must not exceed 640 acres of third-class land; the period of license is six years at an annual occupation fee, according to the valuation of the land, of not less than sixpence an acre for the twenty-year term, or threepence for the forty-year term. The licensee must enter into occupation within six months after the issue of the license. Improvements must be effected to the value of ten shillings an acre (five shillings per acre before the end of the third year and the balance before the end of the sixth year). Other conditions are similar to those in case of agricultural allotments. If the conditions be complied with the licensee is entitled, at any time within twelve months after six years from the commencement of the license, to obtain a grant in fee upon payment of the balance of the purchase-money; otherwise he may obtain a lease of the allotment for a term of fourteen years, or thirty-four years at the same rental as the fee paid under license. The Crown grant will be issued at the end of the term or at any time sooner by payment of the entire purchase-money.

As to non-residential licenses see *Agricultural Allotments* (b) above.

(iii.) *Agricultural and Grazing Allotments by Selection from Grazing Area, Perpetual, or Auriferous Lands Leases.* The lessee of a grazing area lease may select thereout, if the grazing area consist of first-class land, an agricultural allotment of not more than 200 acres; if of second-class land, an agricultural allotment of not more than 320 acres; or if of third-class land, a grazing allotment of not more than 640 acres. If the residence and improvement conditions necessary under a license have already been complied with, the license may be antedated any period, not exceeding 6 years, upon payment of the difference in the rent for such period and a grant may, therefore, be obtained immediately (see 3. (i.) (a) above). Grazing area leases are more particularly referred to below, under the heading of *Leases*. (See § 8, 3. i.) Either residential or non-residential, agricultural or grazing allotments may also be selected under certain circumstances by holders of perpetual leases, or of auriferous lands leases, out of the land leased. (See § 8, 3. ii. and iv.)

(iv.) *Homestead Selections from Pastoral Leases.* A lessee of a pastoral allotment, upon compliance with all conditions, may at any time during the currency of the lease select any portion of the allotment as a homestead not exceeding 200, 320 or 640, acres of first, second or third-class land respectively on payment therefor at the rate of £1, fifteen shillings or ten shillings per acre, according to the class of the land. Further particulars of pastoral allotments are given below, under the heading of *Leases*. (See § 8, 3, vi.)

(v.) *Mallee Agricultural Licenses.* These licenses are issued for first, second, and third-class Mallee lands, similarly to licenses for agricultural and grazing lands explained above, but for larger areas, the maximum being 640, 1000, and 1280 acres of first, second, and third-class land respectively. Selections must form one continuous area, separated only by roads. The purchase price for selection is fixed at £1 an acre for first-class, fifteen shillings for second-class, and ten shillings for third-class land, unless the value of the land is greater than the amounts stated. The licenses are for six years, and are issued subject to similar conditions (both residential and non-residential) as agricultural allotments. (See above.) At the expiration of a license, or on obtaining a lease, if all conditions have been complied with, the selector is entitled to a grant upon payment of the difference between the amount of rent actually paid and the entire purchase-money. Holders of Mallee perpetual leases may select thereout an agricultural allotment. (See § 8, 3, iii.)

(i.) *Swamp or Reclaimed Lands Purchase Leases.* The special conditions attached to conditional purchase leases of swamp or reclaimed lands are referred to below. (See § 8, 3, v.)

(vii.) *Area Selected Conditionally and Area Sold, 1901 to 1907.* The subjoined table gives particulars shewing the areas selected conditionally during each year from 1901 to 1907. A large proportion of the areas shewn has reverted to the Crown in consequence of non-fulfilment of conditions. The particulars given include conditional purchases under Closer Settlement and similar Acts. (See § 9, below.)

VICTORIA.—AREAS PURCHASED CONDITIONALLY, 1901 to 1907.

| Particulars. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

| With residence ... | 466,155 | 281,387 | 249,793 | 226,925 | 189,442 | 149,893 | 151,865 |
| Without residence ... | 50,257 | 18,115 | 84,797 | 26,667 | 27,977 | 23,220 | 39,367 |
| Total ... | 516,412 | 299,502 | 334,590 | 253,592 | 217,419 | 173,113 | 191,232 |
| No. of selectors ... | 2,979 | 1,586 | 1,756 | 1,611 | 1,448 | 1,579 | 1,518 |

Particulars as to total areas alienated and in process of alienation are given in a later part of this section. (See § 12.)

4. **Queensland.**—The several types of selections under which the freehold may be acquired by conditional purchase are as follows:—(i.) Agricultural farms; (ii.) agricultural homesteads; (iii.) prickly pear selections and (iv.) free homesteads.

Land is made available for selection by proclamation in the *Gazette*, specifying the modes in which the land may be selected, the area, rent, price and conditions. Any person of either sex over the age of sixteen years, who does not seek to acquire the land merely as the agent or servant of another, is allowed to select; but a single girl under the age of twenty-one is debarred from selecting an agricultural or grazing homestead, as also is a married woman, unless she is judicially separated, or possesses separate estate, or is living apart from her husband and has been specially empowered by the Land Court to select a homestead. A married woman may, however, acquire a grazing homestead

by transfer after the expiration of five years of the term of the lease. An alien may, under certain circumstances, acquire a selection, but must become a naturalised British subject within three years.

Applications for selections must be made in the prescribed form, in triplicate, and be lodged with the land agent for the district in which the land is situated, and must be accompanied by the prescribed deposit. In the case of a prickly pear selection the deposit must be the full amount of the survey fee, and in other cases, except free homesteads, a year's rent and one-fifth of the survey fee. In the case of a free homestead application the deposit consists of an application fee of £1 and one-fifth of the survey fee. If land is open for selection in two or more modes alternatively, and there are simultaneous applications to select it under different modes, priority among such applications is given to an application for the land as an agricultural homestead, as against an application for it as an agricultural farm; to an application for it as an agricultural farm as against an application for it as an unconditional selection; and to an application for it as a grazing homestead, as against an application for it as a grazing farm. In the case of simultaneous applications for the same land as an agricultural farm, priority is secured by an applicant other than a married woman or a single girl under twenty-one years of age, who, when making application, undertakes to personally reside on the land during the first five years of the lease. When an application has been accepted by the Land Commissioner and approved by the Land Court, and the applicant has paid for any improvements there may be on the land, he becomes entitled to receive a license to occupy the land in the case of an agricultural selection or a grazing selection, or a lease in the case of a scrub selection, unconditional selection, or prickly pear selection. Within six months after the issue of a license, the selector must commence to occupy the land, and thereafter continue to occupy it in the manner prescribed. Selectors may, under certain conditions, by application to the Under Secretary for Public Lands, obtain concessions in respect of the carriage by rail to the railway station nearest to his selection of himself, his family and his effects, and in respect of the carriage of any such material intended for use in improving the selection.

(i.) *Agricultural Farms.* The more accessible lands are usually set apart for agricultural selection up to the maximum area of 1280 acres allowed to each selector of an agricultural farm. If the same person be the selector of both an agricultural farm and an agricultural homestead, the joint areas must not exceed 1280 acres. The term is twenty years and the price ranges from ten shillings per acre upwards, as may be fixed by the proclamation. The annual rent is one-fortieth of the purchasing price, and the payments are credited as part of the price. The selector must occupy the land continuously, either in person or by agent, for the whole term of the lease. The cost of survey, ranging from about £10 to £12 for a farm of 160 acres to about £20 to £40 for a farm of 1280 acres, must be borne by the selector.

Within five years from the issue of the license to occupy, the selector must enclose his land with a substantial fence, or make permanent improvements of equivalent value. On the completion of the improvements the selector becomes entitled to a lease of the farm, and may thereafter mortgage it; or, with the permission of the Minister, may subdivide or transfer it; or, with the approval of the Court, may sublet it. After five years of the term have elapsed, the prescribed conditions of occupation and improvement having been duly performed, a deed of grant may be obtained on payment of the balance of the purchase-money.

(ii.) *Agricultural Homesteads.* When land is taken up as an agricultural homestead, the maximum area is restricted to 160 acres, 320 acres, or 640 acres, according as the price specified in the proclamation is determined at not less than twenty shillings; less than twenty shillings but not less than fifteen shillings; or less than fifteen shillings per acre respectively. The price for a homestead is two shillings and sixpence an acre, the annual rent threepence an acre, and the term ten years. The selector must himself reside continuously on the land, and within five years from the issue of the license to occupy, must also fence the land, or must make permanent improvements of equivalent value. On the completion of the improvements the selector is entitled to a lease.

At any time after five years from the commencement of the term, on the selector proving that the conditions have been performed and that the sum expended in improvements on the land has been at the rate of ten shillings, five shillings, or two shillings and sixpence an acre respectively according to the value of the land, he may pay up the remaining rent, so as to make his total payments equal to two shillings and sixpence an acre, and obtain a deed of grant of the land in fee simple. Under the amending Act of 1905 agricultural homesteads may, on certain conditions, be converted into agricultural farms.

(iii.) *Prickly Pear Selections.* Prickly pear infested selections comprise areas thickly covered with prickly pear. The area selected must not exceed 5000 acres. The term is thirteen years, with a peppercorn rental for the first ten years, and an annual rent of one-third of the purchasing price for the remaining three years. During the first ten years of the term the land must be absolutely cleared of prickly pear (one-tenth during each year), and must be kept clear for the remainder of the term.

Prickly pear frontage selections are confined to prickly pear frontage areas, comprising lands free from or only lightly infested with prickly pear, but which adjoin and do not extend for more than seven miles from lands heavily infested. The greatest area allowed is 5000 acres. The term is eight years, with a peppercorn rental during the first five years, and an annual rent of one-third of the purchasing price during the remaining three years. During the first five years the land must be absolutely cleared of prickly pear (one-fifth each year), and must be kept clear during the balance of the term.

In the case of prickly pear (bonus) selections, the freehold of the land, and a bonus in addition, are granted in return for the complete eradication of the pear. The maximum amount payable as bonus is stated in the opening proclamation, but each applicant must lodge a tender specifying a bonus per acre not in excess of that mentioned in the proclamation. The size of the portions opened out must not exceed 2560 acres. The term of the lease is ten years, at a peppercorn rental throughout. The land must be absolutely cleared of prickly pear during the first seven years (one-seventh each year), and the land must be maintained clear till the end of the lease. One-seventh of the bonus payable may be claimed at the end of each of the first seven years of the term on proof to the satisfaction of the Commissioner that the condition of eradication has been complied with. If the eradication be completed at an earlier date than is required by the condition of the lease, the balance of the bonus will then become payable. In all prickly pear selections the freehold may be obtained prior to the expiry of the term on proof being made that the land has been maintained free from prickly pear for three years consequent on the eradication having been completed in advance of the prescribed period.

(iv.) *Number and Area of Conditional Purchases, 1901 to 1907.* The following table shows the number and area of conditional purchases for which applications were accepted during each year from 1901 to 1907:—

**QUEENSLAND.—CONDITIONAL PURCHASES (APPLICATIONS ACCEPTED),
1901 to 1907.**

| Year. | Agricultural Farms. | | Agricultural Homesteads. | | Prickly Pear Selections. | | Total. | |
|----------|---------------------|-------------------|--------------------------|-------------------|--------------------------|------------------|---------|-------------------|
| | Number. | Area. | Number. | Area. | Number. | Area. | Number. | Area. |
| 1901 ... | 661 | Acres. 160,804 | 669 | Acres. 155,512 | 19 | Acres. 48,450 | 1,349 | Acres. 364,766 |
| 1902 ... | 688 | 168,301 | 523 | 118,246 | 10 | 51,058 | 1,216 | 337,605 |
| 1903 ... | 499 | 124,026 | 424 | 89,037 | 6 | 5,423 | 929 | 218,486 |
| 1904 ... | 516 | 136,092 | 355 | 73,705 | 1 | 200 | 872 | 209,997 |
| 1905 ... | 962 | 254,117 | 448 | 97,543 | 7 | 31,457 | 1,417 | 383,117 |
| 1906 ... | 1,427 | 438,605 | 392 | 96,561 | 3 | 9,562 | 1,822 | 544,728 |
| 1907 ... | 1,948 | 689,916 | 267 | 68,464 | 439 | 524,956 | 2,654 | 1,283,336 |

Particulars as to total areas alienated and in process of alienation may be found below. (See §'12.)

(v.) *Free Homesteads.* This form of tenure was introduced by the Land Acts Amendment Act, 1908. Any country lands may be proclaimed open for free homestead selection. The maximum area which may be selected in this manner is 160 acres. The term is five years, and during that period the selector must occupy the land by personally residing on it, and must effect improvements to the total value of ten shillings per acre. A free homestead cannot be sold or mortgaged until a deed of grant is obtained.

5. **South Australia.**—The types of conditional purchases under which land may be alienated in this State (exclusive of the Northern Territory) are as follows:—(i.) Agreement to purchase, and (ii.) Agreement under the Pinnaroo Railway Act 1903. The Land Board, composed of three members, arranges the subdivision of lands and fixes the price at which each block is to be offered. When approved by the Commissioner the lands are gazetted as open to application, which must be made in writing, and must specify the name, address, and occupation of the applicant, and the land applied for. A month's notice is usually given, during which applications may be made. No person under eighteen years of age can hold a lease, agreement, or license under the Act. The applicant has the choice as to whether he will take the land on perpetual lease or on an agreement to purchase, except in the case of repurchased lands and lands within the schedule to the Pinnaroo Railway Act, which are offered on agreement to purchase only. As early as possible after the date for receiving applications the Board meets, takes the evidence of applicants, and allots the blocks to each applicant who, in the opinion of the Board, should have the block. Preference is given to applicants who will reside on the land applied for, involving continuous residence on the land for at least nine months in each year. Other considerations which assist the Board to come to a decision are the ability, through means and experience, to utilise and improve the land applied for, and the number of members of the family which would become settled on the land. Any blocks not allotted on the date fixed may be applied for, and may be allotted on application. Agreements and leases are liable to forfeiture if payments due thereunder are six months in arrear and remain unpaid for three months after the same have been demanded, or for breach of any of the covenants or conditions. In place of forfeiture of any lease or agreement the holder's interest therein may be sold by auction, the proceeds to pay all arrears on the land and expenses of sale. If any balance remain the outgoing holder may be paid for substantial improvements made by him on the land. Any purchase-money the outgoing holder may have paid on the land sold may also be reimbursed to him if the proceeds of the sale admit. Interest at the rate of 5 per cent. is charged on arrears due under leases and agreements; if over two months in arrears the Commissioners may recover the same in court. No perpetual lease or agreement to purchase is granted for lands the unimproved value of which exceeds £5000, or in such a way that the lessee or purchaser would hold lands under any tenure, except under pastoral lease, the aggregate unimproved value whereof would, in the opinion of the Board, exceed £5000. Exceptions are made in cases where land to be included in the lease or agreement is suitable only for pastoral purposes, the carrying capacity thereof unimproved, and of all other lands held by the lessee or purchaser under any tenure not exceeding 5000 sheep; if the land is outside Goyder's line¹ the limitation may be increased to a carrying capacity of 10,000 sheep. Municipal Corporations and District Councils may apply for land in the same manner as individuals.

(i.) *Agreement to Purchase.* No lands may be held under this form of tenure unless they have been surveyed, or their boundaries delineated on the public maps. The Commissioner, on the recommendation of the Land Board, determines the area of blocks.

1. Goyder's line is not exactly based on rainfall, but on the evidence of vegetation ("salt-bush" and "blue-bush," etc.), and marked the northern limit of what was thought to be fit land for agricultural pursuits. The vegetation which was supposed incapable of flourishing in regions of regular rainfall afforded the indications for locating the line.

and the price and annual rent at which each block may be taken up on lease with the right of purchase. Applications must be made in writing to the Commissioner, and must be accompanied by a deposit equal to the first half-yearly instalment of the purchase-money of the land and improvements. The purchaser must covenant to pay for his block at the price fixed by the Land Board, and to pay the purchase-money and interest for land and improvements, if any, at not less than the rate of 2 per cent. per annum by sixty equal half-yearly instalments payable in advance. The land must be fenced within five years, and vermin and weeds must be destroyed. Having complied with the terms and conditions of the agreement, the purchaser has the option of completing the purchase of his block at any time after the expiration of six years, on paying all principal due under his agreement and all interest due up to the time of purchase. Where the land is allotted on personal residence, each agreement must contain a covenant for personal residence by the purchaser on the lands purchased for nine months during each year. The conditions as to reservation of Crown rights, and also as to subletting, are the same as in the case of perpetual leases. (See § 8 below.)

(ii.) *Pinnaroo Railway Lands.* Under the Pinnaroo Railway Act 1903 provision was made for opening up to conditional purchase certain scheduled lands, amounting to about 1,500,000 acres of good agricultural country in the vicinity of a line from Pinnaroo to Tailern Bend, a distance of eighty-seven miles. The line was opened for traffic in 1906. The lands scheduled may be sold by the Crown under agreement, with a covenant to purchase the same at the price fixed by the Land Board, together with interest thereon at the rate of 2 per cent. per annum, by sixty half-yearly payments, payable in advance. Any purchaser may complete his purchase at any time. Application is to be made, the price fixed and accepted, the agreement entered into and executed, and all matters in connection with the sale, transfer, resale, surrender, and forfeiture of any of the lands are to be carried out, as far as practicable, as if the lands were taken up under the existing regulations as to the acquisition of land for the purposes of closer settlement.

(iii.) *Particulars of Conditional Purchases, 1901 to 1907.* The subjoined table gives particulars of the areas alienated by conditional purchase, on fulfilment of the conditions, during each year from 1901 to 1907, inclusive.

**SOUTH AUSTRALIA.—AREAS ALIENATED UNDER AGREEMENTS TO PURCHASE,
1901 to 1907.**

| Year | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|---------------|--------|---------|---------|---------|--------|-------|--------|
| Area in acres | 57,460 | 101,393 | 114,431 | 189,427 | 16,106 | 6,439 | 57,890 |

The figures given in the above table include areas sold under credit agreements, none of which have, however, been issued since the year 1903. Particulars as to the total areas alienated and in process of alienation are given in a later part of this section. (See § 12.)

6. **Western Australia.**—The various types of selections under which the freehold can be alienated by conditional purchase in this State are as follows:—(i.) Residential conditional purchase; (ii.) non-residential conditional purchase; (iii.) conditional purchase by direct payment; (iv.) conditional purchase of blocks for vineyards, orchards, or gardens; (v.) conditional purchase of grazing lands; and (vi.) free homestead farms.

All applications must be lodged, with the prescribed deposit and fees, at the agency in which the land is situated. No person may acquire under homestead farm, conditional purchase, and grazing lease, collectively, or any two or more of them, either as lessee or transferee, more than 2000 acres of cultivable land (that is, land acquired as homestead farm and by conditional purchase), or an equivalent area of grazing land, or cultivable

and grazing land mixed. Where a man has selected up to the maximum allowed, his wife may hold a further area of 1000 acres of cultivable land or its equivalent area of grazing or of cultivable and grazing land. Five acres of grazing land are deemed to be an equivalent of two acres of cultivable land, and all unclassified land disposed of prior to the 1st February, 1907, is deemed to be cultivable land until otherwise classified by the Lands Department. If the holder require the land to be classified he must pay the prescribed fee.

(i.) *Residential Conditional Purchase.* Under this form of tenure any person over the age of sixteen years may select from a minimum area of 100 acres to a maximum of 1000 acres in any part of the State. The usual price of the land is ten shillings an acre, payable in twenty years by half-yearly instalments, or sooner, at the occupier's option. Applications must be accompanied by a deposit of a half or a quarter-year's rent, as the case may be; that is to say, if the application be made during the first quarter of the half-year, a half-year's rent is required; if in the second quarter, only a quarter-year's rent need be deposited. In the event of the application not being approved the deposit is refunded. Half the cost of survey must be paid by the selector in two instalments, the first with the application and the second within twelve months. The selector is required to take up residence on his allotment within six months from the date of survey, and to reside thereon for at least six months during each of the first five years; the residence condition may, however, be performed on any rural land held by the selector within twenty miles. Residence by the wife, parent, or a child of over sixteen years of age, may also be accepted. Improvements must be effected equal in value to the amount of the purchase-money, and must be at the rate of one-fifth of the purchase-money every two years of the first ten years, but are not required to be more than £1 per acre in value should the price of the land exceed that amount. One-half of the land must be fenced within five years and the whole within ten years. Half the value of great and small stock-proof fencing is allowed towards the improvements required, and two-thirds of the value of a dog or rabbit-proof fence; but no allowance in respect to the fencing is made until after the fourth year of the term of the lease. A lease fee of ten shillings is payable with every application for a lease, at the expiration of which, or at any time after five years from the date of which, provided that all the conditions of residence and improvements have been complied with and the purchase-money paid, the lessee may obtain a Crown grant of the land on payment of the grant fee of thirty shillings.

(ii.) *Non-residential Conditional Purchase.* If the selector does not wish to reside upon the land he may take up from 100 to 1000 acres, subject to the same conditions with regard to improvements, purchase-money, and survey, lease, and grant fees as in the case of residential purchases, with the exception that the total value of the improvements required is 50 per cent. over and above the amount of the purchase-money, but not more than thirty shillings per acre need be spent on improvements, although the price of the land may be over £1 per acre.

(iii.) *Conditional Purchase by Direct Payment.* Any unalienated Crown lands may be acquired by conditional purchase by direct payment. The price is not less than ten shillings an acre, payable within twelve months; the maximum area that may be selected by one person is 1000 acres, and the minimum is 100 acres. An amount equal to 10 per cent. of the purchase-money must be deposited with the application, on the approval of which by the Minister a license is issued for seven years, dating from the first day of the quarter next preceding the date of the approval of the application. The balance of the purchase-money must be paid within twelve months by four equal quarterly instalments, or sooner, at the option of the selector, but no Crown grant will be issued until the Minister is satisfied that the prescribed conditions have been fulfilled. The licensee must within three years fence in the whole of the land, and within seven years must expend upon the land in prescribed improvements at least ten shillings an acre in addition to the cost of fencing. Half the cost of survey must be paid by the purchaser, as previously explained. The Crown grant may be obtained at any time,

provided that all the conditions have been complied with and the purchase-money and fee have been paid.

(iv.) *Conditional Purchase of Small Blocks for Vineyards, Orchards or Gardens.* Areas of from five to fifty acres may be selected for any of these purposes on the following terms:—The price of the land is not less than £1 an acre; a deposit of 10 per cent. of the purchase-money must be made upon application, and the balance must be paid within three years from the date of the approval of the application by equal half-yearly instalments. A lease is granted for three years, during which time the whole of the land must be fenced with a great and small stock-proof fence, and at least one-tenth of the area must be planted with vines or fruit trees, or cultivated *bona-fide* as a vegetable garden. A Crown grant will be issued as soon as all the conditions have been complied with and the purchase completed.

(v.) *Conditional Purchase of Grazing Lands.* The Governor may declare any lands which, in the opinion of the Minister are unsuitable for agriculture, but suitable for grazing purposes, and which are not within an agricultural area, as open for selection as grazing leases. The application must be accompanied by the usual deposit of rent, as explained above with reference to conditional purchase with residence, together with the first instalment of the survey fee and the lease fee of ten shillings. An inspection fee may be charged if the Minister so directs. The land is inspected and reported on by a surveyor, and the price is fixed by the Governor, but may not be less than three shillings and ninepence per acre, and must be paid half-yearly at the rate of one-twentieth of the total purchase-money per annum. The maximum area allowed is 5000 acres, and the minimum 500 acres, but if the land applied for adjoins a holding of the applicant the minimum may be 300 acres. Within six months the lessee must take possession of his lease, and residence is required for six months of the first year and for nine months during each of the next four years. These conditions as to residence may be performed by an agent or servant of the lessee, and if the lessee be the owner of any rural lands within twenty miles, and reside thereon, such residence is sufficient. Expenditure on improvements to the extent of one-fifth of the purchase-money is required during every two years of the first ten years of the lease, and the whole of the land must be fenced within the first ten years. Half the value of a great and small stock-proof fence, and two-thirds of the value of a dog or rabbit-proof fence, may be allowed towards the value of the improvements required after the fourth year of the lease. At the expiration of the term of the lease, or at any time after five years from the date of the lease, a Crown grant will be issued, provided that all conditions have been complied with and the full purchase-money paid.

(vi.) *Free Homestead Farms.* Every person who is not already the holder of more than 100 acres of land within the State, and being the head of a family, or a male of sixteen years of age and upwards, may select an area of from 10 to 160 acres as a free homestead farm, on lands declared open for such selection within the South-West, Central, or Eucla Divisions, not being within a goldfield. The application must be accompanied by a statutory declaration with a one-shilling duty stamp and a fee of twenty shillings; half the cost of survey must be paid in two instalments of thirty shillings each, the first instalment with the application and the second within twelve months. Upon approval of the application an occupation certificate for seven years is issued; the selector must take personal possession of the land within six months from the date of such certificate, and must reside thereon for at least six months in each of the first five years of the term, but residence on rural land held by the same person within twenty miles of the free homestead farm is sufficient compliance with the above residence condition. Residence of the holder's wife, parent, or child over sixteen years of age, may be accepted at the Minister's discretion. Four shillings per acre must be spent in prescribed improvements during the first two years; a further six shillings per acre during the next three years; and an additional four shillings per acre during the last two years. Not more than £30 of the amount spent on a habitable house will be allowed

towards the total amount of fourteen shillings per acre required to be expended upon improvements. Half of the land must be fenced during the first five years, and the whole must be enclosed with a great and small stock-proof fence by the end of the term of seven years. Half the value of a sheep and cattle-proof exterior fence, and two-thirds of the value of a rabbit or dog-proof exterior fence will be allowed towards the amount required to be spent upon improvements after the fourth year of the term. A Crown grant will be issued upon compliance with all the conditions and upon payment of a fee of thirty shillings at the expiration of the term of seven years, but may be issued earlier if the holder has completed twelve months' residence, has made all the required improvements, and pays the sum of five shillings per acre for the land.

(vii.) *Conditional Auction Sales.* Sales of town and suburban lands at auction have already been referred to. (See § 6, vi., above.) In the case of suburban lands the sale is of the nature of a conditional purchase, inasmuch as the land must be fenced within two years. In the case of the sale at auction of suburban lands set apart for cultivation, the balance of the purchase-money, after paying a deposit of 10 per cent., must be paid by half-yearly instalments within five years; the land must be fenced within two years, and within three years at least one-tenth of the area must be planted as an orchard or vineyard, or cultivated as a vegetable garden, or one-quarter of the area must be cultivated otherwise. The purchaser may pay the balance of the purchase-money at an earlier date, if he so desire, but no grant may issue until the prescribed improvements have been effected.

(viii.) *Areas Alienated Absolutely under Forms of Conditional Purchase, 1901 to 1907.* The following table shews the area of the selections for which grants were issued, the prescribed conditions having been fulfilled, during each year from 1901 to 1907:—

WESTERN AUSTRALIA.—AREAS SELECTED CONDITIONALLY FOR WHICH CROWN GRANTS WERE ISSUED, 1901 to 1907.

1. For financial year ended the 30th June 2. Not available.

Particulars as to the total areas alienated absolutely, and in process of alienation, are given in a later part of this section. (See § 12.)

(ix.) *Area Conditionally Alienated, 1901 to 1907.* The following table shews the areas conditionally alienated under various methods of selection during each year from 1901 to 1907:—

Particulars as to the total areas in process of alienation are given in a later part of this section. (See § 12.)

State, and from the Crown Lands Office, Hobart, and Lands Branch Office, Launceston. Intending selectors can obtain ready assistance in making their choice of lands from the District Surveyors or from the officers of the Crown Lands Office. The price of first-class land is not less than £1 an acre, with one-third of that price added as a premium for credit, which extends over a period of eighteen years. For second-class land ten shillings an acre is the minimum price, with one-third added for credit, the period of which is fourteen years. For third-class land the price is not less than five shillings an acre, with one-third added for credit for fourteen years.

In the case of first-class land the purchaser must pay a deposit of twopence an acre, and must pay the residue by eighteen annual instalments at the following rates per acre:—Threepence during the first and second years; one shilling during each year from the third to the sixth; one shilling and sixpence during each year from the seventh to the tenth, and two shillings during each of the remaining eight years. For second or third-class land the purchaser must pay a deposit of one-fortieth part of the purchase-money, and must pay the residue by fourteen annual instalments, of which the first two instalments must equal one-twenty-sixth part of the residue, and each remaining instalment must equal one-thirteenth part of the residue. The conditions as to residence on first-class land and as to improvements on all classes are as stated above.

(ii.) *Selection of Homestead Areas.* Any person of the age of eighteen years or over who has not previously purchased land in Tasmania may make a selection of a homestead area of first-class land not exceeding fifty acres, at the price of £1 an acre, with one-third added for credit. The selector of a homestead area must pay a cash deposit of twopence an acre at the time of purchase, but need pay nothing further towards the purchase-money until the fourth year, when the payments for that year and for the fifth year are at the rate of tenpence an acre, and for the remaining fourteen years, during which the credit extends, the annual payment is at the rate of two shillings an acre. The selector must reside on his homestead for a term of five years commencing to run one year after the date of contract, and must effect improvements to the value of £1 an acre before a grant is issued.

(iii.) *Selection in Mining Areas.* A "Mining Area," under the Crown Lands Act, comprises land in the vicinity of a mining field, and which is specially proclaimed a mining area. The land so proclaimed may be selected as first-class agricultural land, not exceeding 100 acres, on the terms provided for the purchase of these lands; but if the land is within one mile of a town the maximum area is twenty acres and the minimum ten acres. Second-class lands within a mining area can be sold at auction, but no lands within a mining area can be sold as third-class. All lands purchased within a mining area are open to any person to search or mine for minerals, gold, or other metals; but before any such person can commence searching or mining he must obtain permission in writing from the Secretary for Mines or the nearest Commissioner of Mines. The terms as to payment of purchase-money for mining area selections are the same as in the case of selections of rural lands, mentioned above.

(iv.) *Conditional Sales on Credit.* Both town and rural lands may be sold on credit, either at auction or by private contract, subject to certain conditions. The maximum and minimum area which may be so sold have already been specified. (See above § 6. *Sales by Auction*, 7.) In the case of sales of town lands on credit, the purchaser may not receive a grant until he has effected improvements to the value of a sum equal to the purchase-money. When first-class rural lands (except lands within mining areas) are sold on credit, the purchaser must reside thereon for at least five years, commencing two years after the date of contract, and must effect substantial improvements to the value of £1 an acre before a grant will issue. In the case of the sale of second and third-class land similar improvement conditions to the value of five shillings and two shillings and sixpence an acre in each class respectively are imposed. A sum equal to one-third of the price is added for credit. The purchaser must pay a deposit of one-fortieth, and the remainder by fourteen annual instalments.

(v.) *Areas Sold Conditionally, 1901 to 1907.* The following table shews the areas alienated absolutely under systems of conditional purchases and sales on credit, the conditions having been fulfilled, and also shews the areas sold conditionally and the applications for conditional purchases received and confirmed, during each year from 1901 to 1907, inclusive:—

TASMANIA.—CONDITIONAL PURCHASES, 1901 to 1907.

1. Including selections and sales on credit.

Particulars of total areas alienated and in process of alienation are given below.
(See § 12.)

§ 8. Leases and Licenses.

1. **Introduction.**—Leases and licenses are issued in all the States for various terms and upon various conditions. In Victoria, Queensland, and South Australia perpetual leases are issued for an indefinitely long period upon payment of an annual rent, while in all the States leases or licenses of comparatively large areas may be obtained for pastoral purposes. Provisions have also been made in all the States for convenient forms of leases and licenses for various special purposes, and also of special classes of lands. The leases and licenses dealt with below are exclusive of those issued under Closer Settlement and kindred Acts, and also of those issued for mining and auxiliary purposes. (See § 9 and § 10 below).

2. **New South Wales.**—The following are the various types of leases and licenses issued in this State:—(i.) Conditional leases; (ii.) conditional purchase leases; (iii.) settlement leases; (iv.) improvement leases; (v.) annual leases; (vi.) residential leases; (vii.) special leases; (viii.) snow leases; (ix.) leases under Section 18, Act of 1903; (x.) scrub leases; (xi.) inferior lands leases; and (xii.) Western lands leases.

(i.) *Conditional Leases.* Conditional leases may be granted to any selector of a conditional purchase, other than a non-residential one, or one whose selection is within a special area in the Eastern Division. In other words, before applying for a conditional lease it is necessary to apply for a residential conditional purchase, in virtue of which such a lease may be held. The provisional deposit with application is, if the amount of rent has been notified prior to the date of application, a sum equal to half a year's rent, and if not so notified, is at the rate of twopence an acre, but is subject to appraisalment by the Local Board. A survey fee in accordance with a fixed scale must also be lodged with the application.

The area of land which may be conditionally leased must not be less than 40 acres, nor more than three times the area of the conditional purchase, and the two together must not amount to more than 1280 acres in the Eastern, or 2560 acres in the Central

Division, except in cases where the Land Board has allowed either of these areas to be exceeded by virtue of the power vested in them under the Crown Lands Act 1903 or 1905, as stated above. The lease is for a period of forty years, and this term is divided into four periods of ten years each. The annual rent for each period may, on application by the lessee, or on a reference by the Minister, be separately determined by appraisalment in accordance with Section 6 of the Crown Lands Act of 1889. The lessee may at any time during the currency of the lease convert the whole or part into an additional conditional purchase.

(ii.) *Conditional Purchase Leases.* This tenure was created by the Crown Lands Amendment Act of 1905, and its chief advantages are that the intending settler can for a small initial outlay by way of deposit, for a moderate rent and under easy conditions, obtain a lease for forty years, together with a right of converting it into a conditional purchase at any time during its currency, and ultimately into a freehold. These leases can only be acquired within areas subdivided and specially set apart by proclamation in the *Government Gazette* for holdings of this class, and an applicant, if a male, must not be under the age of eighteen years, or of twenty-one years if a female. No one may apply who already holds any land, other than town or suburban land under the Crown Lands Acts, or land leased from a private individual, or who is either disqualified under the provisions of sec. 40 of the Crown Lands Act of 1895, or is subject to any of the disabilities specified in sec. 14 of the Act of 1905. These sections should be carefully read by intending applicants, as it is impracticable, within the limits of this summary, to fully explain all the details of the qualification clauses. The deposit, which must be lodged with an application for a conditional purchase lease, is always the half of one year's rent of the land, the rent being calculated at the rate of $2\frac{1}{2}$ per cent. of the capital value of the land. The amounts of the annual rent and of the survey fee required for each block are always stated in the *Gazette*, and on the lithographs issued by the Lands Department shewing the subdivision. Only one-fifth of the survey fee need be lodged with the application, although two or more instalments of one-fifth of the full amount may be deposited, and the balance may be paid subsequently in equal annual instalments, with interest at the rate of 4 per cent. The capital value of the land is fixed by the Minister for the first ten years of the lease, but the lessee may, within six months after confirmation of his application for the lease, apply in the prescribed manner to have such capital value determined by appraisalment, and for each succeeding period of ten years the capital value is determined by the Local Land Board on a similar basis.

A condition of ten years' personal continuous residence is attached to holdings of this class, and such residence must, under ordinary circumstances, be commenced within twelve months from the date of confirmation of the application, but the Local Board may, if the circumstances of the case warrant the concession, permit the commencement of residence to be extended to any date within five years of such confirmation, and on such terms and conditions as to improvements and cultivation as may be agreed upon between the Board and the lessee, and the Board may also, on application in the prescribed manner, permit the residence condition to be performed in any adjacent village or town.

The following statement gives particulars of conditional purchase leases applied for and confirmed during the year ended the 30th June, 1907 :—

NEW SOUTH WALES—CONDITIONAL PURCHASE LEASES,
YEAR ENDED 30TH JUNE, 1907.

| Applications Received. | | Applications Confirmed. | | | |
|------------------------|---------|-------------------------|---------|----------------|--------------|
| Number. | Area. | Number. | Area. | Capital Value. | Annual Rent. |
| | Acres. | | Acres. | £ | £ |
| 356 | 182,485 | 319 | 157,241 | 228,835 | 5,483 |

(iii.) *Settlement Leases.* Under the Lands Act of 1895 provision was made for a convenient form of tenure by way of settlement leases for persons who require a considerable area for agricultural or grazing purposes, or for these purposes combined. The area which might be taken up as a settlement lease was originally limited to 1280 acres for agricultural and to 10,240 acres for grazing purposes, but provision has now been made under which larger areas may be taken as additional settlement leases, in cases where the Local Land Board is of the opinion that the area sought to be acquired, together with other lands held by the applicant, does not in the aggregate exceed such an area as is sufficient to enable him to maintain his home thereon in average seasons and under ordinary circumstances. The additional holding need not necessarily adjoin the original holding, but must, in the opinion of the Board, be situated within a reasonable working distance thereof. The lease is for a term of forty years, which is divided into four periods of ten years each. The annual rent for the first ten years is fixed by the Minister before the land is made available for lease, and the lessee may, if dissatisfied with the amount, apply to have it determined by appraisal. The rent for each succeeding period of ten years may, on the application of the lessee or on a reference by the Minister, be separately determined in a similar manner. The lessee must make the holding his *bonâ-fide* residence during the whole term of the lease. He must fence the holding within five years, must conform to any regulations made by the Minister for the destruction of vermin, noxious weeds, scrub, etc., and may not assign or sublet his holding without the Minister's consent. Tenant right in improvements is secured to an outgoing lessee, and the lessee may apply at any time after the first five years of the lease for an area not exceeding 1280 acres, not being reserved from sale, on which his house is situated, as a homestead grant.

The following statement gives particulars of applications for settlement leases received and confirmed during the year ended the 30th June, 1907 :—

**NEW SOUTH WALES—SETTLEMENT LEASES,
YEAR ENDED 30TH JUNE, 1907.**

| Applications Received. | | Applications Confirmed. | | | |
|------------------------|------------------|-------------------------|-------------------|--------------------------|------------|
| Number. | Area. | Number. | Area. | Capital Value. | Rent. |
| 215 | Acres 680,187 | 171 | Acres. 503,795 | £ 58,657 ¹ | £ 5,793 |

1. The capital value was not determined in respect of 371,015 acres in the Central Division.

(iv.) *Improvement Leases.* Improvement leases may comprise any scrub or inferior land in the Eastern or Central Divisions, and can only be let by auction or tender on the recommendation of the Land Board, or, if not taken up, may be tendered for afterwards at the upset rental. Leases of large areas at moderate rentals can be obtained of lands which are not suitable for settlement until improved, and in the improvement of which it would be necessary to spend large sums before they could be rendered suitable for settlement. The lease is for a term not exceeding twenty-eight years, the rent being payable annually. During the last year of the lease, the lessee may convert into a homestead selection 640 acres not being reserved land, on which his dwelling-house may be erected; he has tenant right in certain improvements, except when such right is stated to be barred. During the year ended the 30th June, 1907, there were 96 improvement leases, comprising an area of 370,886 acres, either sold by auction or let by tender, the total annual rent of these leases amounting to £2409.

(v.) *Annual Leases.* These are leases from year to year, renewable by payment of a year's rent in advance before the termination of the current year. The area is restricted to 1920 acres under any one lease, but there is no limit to the number of leases which one individual may hold. The deposit is thirty shillings for each 320 acres or part thereof

applied for, and the annual rent is as appraised and notified in the *Gazette*. No conditions as to residence or improvements are attached to these leases, but security of tenure is not guaranteed, and the land may be alienated by conditional purchase or lease, etc.

(vi.) *Residential Leases*. Only lands situated within proclaimed gold or mineral fields are available for holdings of this class. An applicant must be a holder of what is termed a "miner's right," or "mineral license," and must pay a deposit of £1, a provisional rental of one shilling per acre applied for, and the survey fee. The maximum area that may be leased is twenty acres, and the term may not exceed twenty-eight years. The annual rent will be appraised by the Local Land Board, and a condition of perpetual residence is attached to the lease. Within twelve months from the commencement of the lease, fences and buildings of a character suitable for the beneficial occupation of the land must be erected. Tenant right in improvements is conferred upon the lessee.

(vii.) *Special Leases*. These leases are issued chiefly to meet cases where land is required for some industrial or business purpose, or for such purpose as the Governor, by proclamation in the *Gazette*, may declare, such as the erection of dams, tanks, irrigation works, saw-mills, etc. The area may not exceed 320 acres, except in the case of leases under secs. 89 and 92 of the Act of 1884, for such purposes as wharves, jetties, tramways, and irrigation works, and the term of a special lease may not exceed twenty-eight years. One person may, however, hold more than one special lease. The annual rent, if the land has not been notified for lease in the *Gazette*, is determined after report by the Local Board. Special leases may be obtained either by application, purchase at auction, or by tender. If the lease be sold at auction or let by tender, the rent will be the amount bid at auction, or offered by the successful tenderer, but must not be less than the upset rent. Leases of this kind which have been offered at auction and not sold, or for which tenders have been invited without any being lodged, may be obtained by after-auction tender. In such cases the rent will be the upset rent as notified, and the application will be subject to the approval of the Minister.

(viii.) *Snow Leases*. Lands not held under pastoral or other lease, which may be usually covered with snow for a part of each year, and which are consequently unfit for continuous occupation, may be leased in areas of not less than 1280 acres, nor more than 10,240 acres, and during the currency of such lease the land is exempt from sale or from other lease under the Lands Acts. Such leases are sold by auction or let by tender or by after-auction tender for terms not exceeding seven years, but may be extended for a term of three years by giving twelve months' notice prior to the expiration of the lease. The upset rental is fixed by the Minister after report by the Local Land Board, and the annual rent payable will be the amount bid at auction or tendered. If the lease be applied for after auction or after the time for lodging tenders has expired, the amount will be the notified upset rent.

(ix.) *Leases under Section 18, Act of 1903*. Under the provisions of the amending Act of 1903, Section 18, leases may, on the recommendation of the Local Land Board, be granted to the registered holder of any pastoral lease, occupation license, or preferential occupation license, for an area not exceeding one-third of the total area comprised within the lease, license, or lease and license, at the date of expiration of the pastoral lease. The term of the lease may not exceed twenty-eight years, and the lease is subject to rent and conditions determined by the Governor.

(x.) *Scrub Leases*. The Minister has power, on the recommendation of the Local Land Board (a) to declare as "Scrub Lands" any Crown lands wholly or partly covered by scrub or noxious undergrowth, and (b) to grant leases of such lands on application, or sell the same by auction or tender for a term not exceeding twenty-one years, which term may be extended by the Governor to twenty-eight years.

(xi.) *Inferior Lands Leases.* The Minister may, after report by the Local Land Board, lease by auction or tender for a period not exceeding twenty years (which term may be extended by the Governor to twenty-eight years) such lands as, in consequence of their inferior character or isolated position, may not have been held under any tenure, or, having been held, have been abandoned.

(xii.) *Western Lands Leases.* Subject to existing rights and to the extension of tenure to the 30th June, 1943, which might be granted to a lessee on bringing his lease within the provisions of the Western Lands Act 1901 (see § 2. 1. iii., above), all forms of alienation, other than by auction and leases, prescribed by the Crown Lands Act, ceased to operate within this division from the 1st January, 1902. Lands are declared open for lease by notice in the *Government Gazette*, and applications therefor may be made in the prescribed form, accompanied by a deposit of 20 per cent. on the amount of the first year's rent. Within one month from the date of issue of the lease the successful applicant must pay the balance of the first year's rent and execute the lease. The annual rent is determined by the Commissioners for periods not exceeding ten years, and the rent fixed for the first period cannot on reappraisal be either increased or decreased more than 25 per cent. on the first reappraisal, and this provision applies at each subsequent reappraisal to the rent last determined. The Minister may, on application and after report from the Commissioners, extend over a period not exceeding five years the payment of any money due to the Crown. All lands leased must be fenced within such period and with such class of fencing, not being a rabbit-proof fence, as the Commissioners may determine.

(xiii.) *Leases Current, 1903 to 1907.* On the 30th June, 1907, there were 54,673 leases current under the Lands Department and the Western Land Board, comprising 125,904,700 acres of Crown lands. Of these leases there were 36,194, comprising 21,922,399 acres, in the Eastern Division; 15,990, comprising 28,167,598 acres, in the Central; and 2489, comprising 75,814,703 acres, in the Western Division.

The following table shews the areas held under various descriptions of leases and licenses at the end of each of the years 1901 to 1904, and on the 30th June, 1906 and 1907:—

NEW SOUTH WALES.—AREAS OCCUPIED UNDER LEASES AND LICENSES.

1901 to 1907.

The total annual rent derived from the leases and licenses issued by the Lands Department and the Western Lands Board amounted to £547,312. Particulars regarding leases and licenses issued by the Mines Department are given in a later part of this section. (See § 10. *Occupation of Crown Lands for Mining Purposes.*)

3. **Victoria.**—The various types of leases and licenses (exclusive of Closer Settlement and Mines Department leases and licenses) under which Crown lands in this State may be issued are as follows:—(i.) Grazing area leases; (ii.) perpetual leases; (iii.) Mallee perpetual leases; (iv.) licenses of auriferous lands; (v.) swamp or reclaimed lands leases; (vi.) grazing licenses and pastoral leases; (vii.) leases and licenses for other than pastoral purposes; and (viii.) State forests and timber reserves licenses.

(i.) *Grazing Area Leases.* These leases may be granted for any term of years expiring not later than the 29th December, 1920. The area leased must not exceed 200, 640, or 1280 acres of first, second, or third-class land respectively, but may comprise two or more grazing areas, provided that the total acreage does not exceed the limit in each class. The annual rent is, according to the valuation and classification, not less than threepence an acre for first-class, twopence an acre for second, and one penny an acre for third-class land, payable half-yearly in advance. The lessee must fence the land within three years, or he may, if he prove to the Board that such fence is impracticable, or is not required, expend on permanent improvements a sum equal to the cost of fencing. The written consent of the Board must be obtained before the lessee can assign, sublet, or divide his land, and before he can use growing timber for other purposes than for erecting fences and buildings on the land. The lessee must destroy all vermin, keep down the growth of all noxious weeds, and keep all improvements in good repair. He is also required to erect swing gates in places where there is a fence across any track required by any other pastoral lessee, or by the public. The right is reserved to the Crown to take at any time any portion of the area which may be required for railways or other public purposes, and to issue licenses to enter on the land for the purpose of obtaining timber, coal, stone, etc. The Crown also has a right to resume possession, after having given two years' notice in writing, upon payment to the lessee for his interest in such lease, together with the value of houses, fences, wells, reservoirs, tanks, dams, and all permanent improvements constructed by the lessee prior to such notice and during the currency of his lease. An outgoing lessee is entitled to payment from an incoming tenant for all fences, wells, reservoirs, tanks and dams constructed during the currency of his lease, but the sum to be paid in respect of such improvements must in no case exceed ten shillings, seven shillings and sixpence, or five shillings an acre for first, second, or third-class land respectively.

The lessee may select an agricultural or grazing allotment out of the land leased in the manner indicated above. (See § 7, 3, iii.)

(ii.) *Perpetual Leases.* Perpetual leases of any Crown lands available as agricultural or grazing lands, swamp or reclaimed lands, and mallee lands may be granted to any person who is entitled to take up an agricultural or grazing allotment license in similar areas according to the classification of the land, but no person may hold under perpetual lease directly, or by transfer or otherwise, more than three times the areas that may be selected from the Crown. The lessee must destroy all vermin within two years, and must within six years from the date of issue of the lease enclose his land with a fence and keep the same in repair, or, if proved to the satisfaction of the Board that the erection of such fence is impracticable or not necessary, may expend on permanent improvements a sum equal to the cost of fencing. The lessee must reside on the land, or within five miles thereof, for at least six months during the first year of his term, and for at least eight months during each of the following four years; but this covenant as to residence does not operate in the event of the cultivation by the lessee of at least one-fourth of his allotment within the first two years of his lease, and at least one-half thereof before the end of the fourth year. Permanent improvements must be made to the value of ten shillings an acre for first-class land, seven shillings and sixpence an acre for second-class land, and five shillings an acre for third-class land, before the end of

the third year, and further improvements to the same values before the end of the sixth year of the lease. The lessee may not transfer, assign, mortgage, sublet, or part with the possession of the whole or any part of his allotment within the first six years of his lease, but at the end of that period, if no rent be owing and all conditions have been fulfilled, the lessee may, with the written consent of the Board, transfer, mortgage, sublet, or part with the land. The Crown reserves the right to resume any part of the lands demised, required for public or mining purposes, on payment to the lessee of the cost of moving and re-erecting his improvements and the loss sustained in relinquishing improvements not removable.

The rent payable by every perpetual lessee (other than for mallee and swamp or reclaimed lands, which is specially dealt with under the respective headings) is 4 per cent. on the unimproved value of the land, which is deemed to be twenty shillings an acre for first-class, fifteen shillings an acre for second-class, ten shillings an acre for third-class land until 29th December, 1909. For every successive period of ten years the unimproved value will be fixed by the Board, and the rent will be 4 per cent. of such value. The rent must be paid yearly in advance. Any lessee whose rent is not in arrear may surrender his lease by making written application to the Board within six months after the expiration of a period of ten years from the 29th December, 1909, or within six months after any successive period of ten years, and if the Board is satisfied that the applicant holds the allotment *bonâ-fide* for his sole use and benefit, he may obtain a residential or non-residential agricultural or grazing allotment license. (See § 7, 3, i. and ii.) The value of all permanent improvements will be credited to the licensee.

(iii.) *Mallee Perpetual Leases.* Perpetual leases of mallee land may be granted to any person who is entitled to select under agricultural license in similar areas according to the classification of the land. The rent payable is $1\frac{1}{4}$ per cent. per annum on the estimated unimproved value of the land reviewed every ten years, and is payable annually in advance. The lessee must fence the land within six years, take up his residence on the land within six months after the grant of the lease, and continue to reside on or within five miles thereof for at least six months during the first year of his lease, and for at least eight months during each of the four following years. If, however, at least one-fourth of the allotment be cultivated within the first four years, and at least one-half before the end of the sixth year, or the allotment improved to the extent of ten shillings, seven shillings and sixpence, or five shillings per acre for first, second, or third-class lands respectively, the condition as to residence will not be enforced. The lessee must not cut or remove any live pine, box, or gum trees, and must protect all belts or clumps of such trees from fire. The perpetual lease conditions (previously explained) apply except that a perpetual lessee who so selects out of a Mallee allotment lease is entitled to transfer or mortgage within the first six years, and a Mallee perpetual lessee may at any time surrender and obtain a Mallee agricultural license (see above, § 7, 3, v.), or if the necessary conditions required under license have already been fulfilled, including improvements and residence, a Mallee agricultural lease may be issued.

(iv.) *Licenses of Auriferous Lands.* The "auriferous lands" are distributed over various parts of the State. Annual licenses are issued for areas not exceeding twenty acres, entitling the holders to reside on or cultivate the area upon payment of a license fee of five shillings for areas of three acres or under, ten shillings for areas from three to ten acres, and one shilling per acre for areas over ten acres. Not more than one such license may be granted to or held by any one and the same person. The licensee is required to reside on the land during the continuance of the license, or to fence the land within four months from the date of issue of the license, and cultivate one-fifth of the area, allowance being made for any portion occupied by buildings; he cannot assign or sublet without permission. Notices must be posted on the land indicating that it is auriferous, and subject to Mining conditions. If the land has been improved to the value of £1 an acre, and if, in the opinion of the Board, the occupation is *bonâ-fide*, the licensee may, with the consent of the Minister of Mines, surrender his annual license and obtain in lieu thereof a license for an agricultural or

grazing allotment (see above, § 7, 3, ii. and iii.), which will enable the freehold to be obtained. All rents paid and improvements effected may be credited, and the license will be antedated if the residence condition has been complied with.

(v.) *Swamp or Reclaimed Lands.* Swamp or reclaimed lands comprise the areas so classed under the Land Act 1901, and such other areas as may from time to time be drained or reclaimed, and proclaimed as swamp or reclaimed lands in the *Government Gazette*. The Governor-in-Council is empowered to cause any swamp lands to be drained and reclaimed by prison or other labour, and the Board and other persons authorised by them may enter upon any lands whatsoever for the purpose of making surveys and taking levels, and may also appropriate such parts of any lands as may be necessary for the construction of any canals or drainage works, provided that full satisfaction be made under the Lands Compensation Act 1890 to the owner or occupier of such lands for all damage sustained through the exercise of such powers.

These swamp or reclaimed lands are divided into allotments not exceeding 160 acres, and the value of each allotment is provisionally determined by a Land Classification Board; an allotment may be leased either for a term of twenty-one years, or under a perpetual lease, or under a conditional purchase lease (see § 7, 3, vi.), or may be disposed of by public auction. Every lease for twenty-one years, every perpetual lease, every conditional purchase lease, and every contract for sale of an allotment of swamp or reclaimed lands, must *inter alia* contain (a) a condition that the lessee or purchaser will keep open all canals, ditches and drainage works on the land and adjacent to the land; and also (b) a condition that the lessee or purchaser will make permanent improvements on the land to the extent of ten shillings an acre in each of the three first years, unless the Minister is of opinion that such expenditure would not be advantageous or profitable, in which case the condition may be omitted or modified. The rent payable by the perpetual lessee of any swamp or reclaimed land for the period ending on the 29th December, 1909, is at the rate of four per cent. per annum on the value of the land, as fixed by the Classification Board and reassessed every ten years, not including any improvements which do not belong to the Crown. Conditional purchase leases are issued for a period of 31½ years, providing for the payment of the value of the allotment together with interest thereon at 4½ per cent. per annum, which, calculated over the whole term, is £3 half-yearly for every £100, and in sixty-three instalments pays off the purchase-money and interest. Residence is not necessary. Stringent conditions are imposed preventing assignment during the first six years. At any time after the expiration of six years from date of lease, if all conditions have been complied with, assignment is allowed on obtaining consent, and on payment of the balance of purchase-money at the end of any half-year, less interest for the unexpired term, the Crown grant may be obtained.

(vi.) *Grazing Licenses and Pastoral Leases.* Large areas of pastoral lands still remain in Victoria, chiefly in the north-eastern districts, but a considerable proportion of these areas, being mountainous, is difficult of access, and will be only made available for selection as the advancement of settlement demands. Provision is made in the Land Act for pastoral leases, but only a few such leases were issued, and no others are to be issued in the future.

Annual grazing licenses are granted for pastoral lands, reserves, and other Crown lands not required for other purposes. There is no limit to the area which may be so held, the rental charged varying according to the grazing value. Licenses may be renewed annually for any term not exceeding seven years, with the right to fence and make dams, but are subject to cancellation at any time if the land be required for other purposes.

(vii.) *Leases and Licenses for other than Pastoral or Agricultural Purposes.* Leases are granted of any Crown lands not exceeding (except in the case of leases for guano or other manure) three acres, for a term of not more than twenty-one years, and at an annual rent of not less than £5. These leases are granted for various purposes, such as—For obtaining guano, stone or earth; for sites of inns, stores, bridges, ferries, factories,

quays, or landing places; for the working of mineral springs, and for the manufacture of salt. If the lessee fail to use the land *bona-fide* for the purpose for which he leased it, the lease may be cancelled at any time. Leases are also granted to persons who are willing to construct canals, docks, roads or tramways. Annual licenses are issued for any of the purposes for which leases are granted as above, and if the licensee has been in possession for five years and has constructed improvements on the land, provided that there are no objections to the alienation of the land on the ground of being auriferous or other reasons of a public nature, he may purchase the allotment at an appraised price and receive credit for all rent paid. Similar holdings under miner's right for areas not exceeding one acre may be purchased under Sec. 36, Mines Act 1890, after two and a half years' possession.

Any unalienated Crown lands may be proclaimed as available for being licensed for the purpose of being used for bee-range areas. Annual licenses are granted of areas, to be used as bee-range areas, at a rent of not less than one half-penny for every acre within one mile of the site of the apiary as specified in the license. Annual licenses may also be granted at a rental of one shilling an acre for the purpose of a bee farm upon any Crown lands or upon any lands held under a pastoral or grazing lease or under an annual grazing license. No person may hold more than three bee-farm licenses, nor more than a total area of ten acres, and the holder of a grazing area or pastoral lease or of a grazing license may not keep more than ten hives of bees on his holding unless he is also the holder of a bee-farm license. The licenses may be renewable annually for seven years and cannot be sublet or transferred without consent. A bee-farm licensee may, at his own risk, erect buildings, fences, and improvements, but must remove same at any time if directed. No dog may be kept or allowed to remain on a bee-farm site.

(viii.) *State Forests and Timber Reserves Licenses.* Grazing licenses, residence licenses, and licenses to cut timber are issued for lands situated within State forests and timber reserves, which are now controlled by the Forest Branch of the Department of Mines under the Forests Act 1907.

(ix.) *Areas held under Leases and Licenses, 1901 to 1907.* The following statement shows the areas of Crown lands occupied under leases and licenses at the end of each year, from 1901 to 1907 inclusive:—

**VICTORIA.—OCCUPATION OF CROWN LANDS UNDER LEASE OR LICENSE,
1901 to 1907.**

| Tenure. | Area in Acres. | | | | | | |
|--|-------------------|-------------------|------------------|-------------------|-------------------|-------------------|-------------------|

4. *Queensland.*—In this State Crown lands may be occupied under the following types of leases and licenses:—(i.) Grazing farms; (ii.) grazing homesteads; (iii.) scrub selections; (iv.) occupation licenses; (v.) special leases; (vi.) perpetual lease selections;

and (vii.) pastoral leases. General conditions as to applications for selections have been mentioned above. (See § 7, 4.)

(i.) *Grazing Farms.* Areas of land already surveyed are available for selection as grazing farms over a great extent of territory. The greatest area which may be applied for under any circumstances is 60,000 acres, but each proclamation opening land for grazing selection declares the maximum area which may be selected in the area to which it applies. In the event of lands open under different proclamations, and of a total area exceeding 20,000 acres being applied for by the same person, a rental limitation of £200 per annum must be observed. Thus, of lands open at twopence per acre, the maximum area obtainable would be 24,000 acres; at three halfpence per acre, 32,000 acres, and so on. The term may be fourteen, twenty-one, or twenty-eight years, as the opening proclamation may declare. The annual rent for the first period of seven years may range from one halfpenny an acre upwards, as may be proclaimed or tendered. The rent for each subsequent period of seven years will be determined by the Land Court.

A grazing farm must be continuously occupied by the selector residing personally on it, or by his manager or agent doing so. Within three years of the issue of the license to occupy, the selector must enclose the land with a substantial fence, and must keep it so fenced during the whole of the term. In the case of two or more contiguous farms, not exceeding in the aggregate 20,000 acres, the Court may permit the selectors to fence only the outside boundaries of the whole area. If so declared by proclamation, the enclosing fence must be of such a character as to prevent the passage of rabbits.

The selectors of a group of two or more grazing farms, the area of none of which exceeds 4000 acres, may associate together for mutual assistance, and on making proof of *bona fides* to the Commissioner, may receive from him a special license, enabling not less than one-half of the whole number by their personal residence on some one or more of the farms to perform the condition of occupation in respect of all the farms. The applicant for a grazing farm must first obtain an occupation license, and as soon as the land is fenced in the manner prescribed, the selector becomes entitled to a lease of it, and may thereafter mortgage it; or, with the permission of the Minister may subdivide or transfer it; or with the consent of the Land Court, may underlet it. The cost of survey—of which one-fifth must be paid when application is made—ranges from about £30 for a farm of 2560 acres to about £65 for 20,000 acres.

(ii.) *Grazing Homesteads.* Lands available as grazing farms are also available for selection as grazing homesteads at the same rental and for the same term of lease. As already stated, an application to select as a grazing homestead takes precedence of a simultaneous application to select the land as a grazing farm. The conditions and provisions stated above in respect of grazing farms are applicable also to grazing homesteads, with the following two exceptions:—(a) During the first five years of the term of a grazing homestead the condition of occupation must be performed by the continuous personal residence of the selector on the land. (b) Before the expiration of five years from the commencement of the term, or the death of the original lessee, whichever first happens, a grazing homestead is not capable of being assigned or transferred. Unless with the special permission of the Minister, a grazing homestead may not be mortgaged.

(iii.) *Scrub Selections.* Lands which are entirely or extensively overgrown with scrub are available for selection in different classes according to the proportion of the land covered with scrub. The area selected must not exceed 10,000 acres, and the term of the lease is thirty years, the rent ranging from a peppercorn an acre in the first five years, one halfpenny an acre for the next succeeding ten years, and one penny an acre for the remaining fifteen years in respect of lands in the first class; to a peppercorn for the first twenty years, and one penny an acre for the remaining ten years in respect of those in the fourth class. During the first period in which the selector pays a peppercorn rent he must clear the whole of the scrub in equal proportions each year, and must keep it cleared, and must enclose the selection with a good and substantial fence. A negotiable lease is issued to the selector when his application is approved.

The following table shews the number of grazing farms, grazing homesteads, and scrub selections, for which applications were accepted during each year from 1901 to 1907:—

**QUEENSLAND.—GRAZING FARMS, HOMESTEADS AND SCRUB SELECTIONS,
1901 to 1907.**

| Year. | Grazing Farms. | | Grazing Homeste'ds. | | Scrub Selections. | | Total. | |
|----------|----------------|-----------|---------------------|---------|-------------------|--------|--------|-----------|
| | No. | Area. | No. | Area. | No. | Area. | No. | Area. |
| | | Acres. | | Acres. | | Acres. | | Acres. |
| 1901 ... | 247 | 1,371,283 | 47 | 290,785 | 19 | 48,450 | 313 | 1,710,518 |
| 1902 ... | 245 | 1,410,364 | 38 | 171,104 | 10 | 51,058 | 293 | 1,632,526 |
| 1903 ... | 106 | 709,183 | 25 | 123,026 | 6 | 5,423 | 137 | 837,632 |
| 1904 ... | 150 | 1,244,072 | 21 | 176,435 | 1 | 200 | 172 | 1,420,707 |

| 1906 ... | 262 | 2,067,275 | 56 | 404,499 | 3 | 9,562 | 321 | 2,481,336 |
| 1907 ... | 374 | 3,028,696 | 54 | 315,444 | 8 | 58,954 | 436 | 3,403,094 |

Particulars of total areas held under leases and licenses are given in a later part of this section. (See § 12.)

(iv.) *Occupation Licenses.* Annual licenses are granted to occupy Crown lands which have been declared open for such occupation by notification in the *Gazette*. The rent is as specified by the notification or as bid by the licensee, but the Minister may by notice before the 1st September in any year increase the rent by an amount not exceeding 25 per cent. The licensee is entitled to compensation for improvements effected of which the Land Court has approved. The total number of licenses in force at the end of the year 1907 was 1690, comprising an area of 67,287½ square miles, the total rent being £31,051. Particulars of the area held under license for previous years are given in a later part of this section. (See § 12.)

(v.) *Special Leases.* Leases of any land not exceeding fifty acres in area may be issued for the erection of wharves, store-houses, ship-building yards, baths, waterworks, gas or electricity works, or for any manufacturing, industrial, residential, or business purposes, for a term not exceeding thirty years, and upon conditions to be determined by the Governor-in-Council. Leases for a similar term may be issued for any country lands reserved for public purposes and which are infested with noxious weeds, on the conditions that steps are taken to destroy such weeds and that the land is held so that it may be used for the public purpose for which it was reserved without undue obstruction.

Under Section 30 of the Land Act 1905 special leases of lands infested with noxious animals or plants may be issued on easy terms.

During the year 1907 there were 1690 leases for special purposes granted, comprising an area of 67,287½ square miles, the total annual rent being £31,051. Particulars of special leases for previous years are given in a later part of this section. (See § 12.)

(vi.) *Perpetual Lease Selections.* This form of tenure was introduced by the Lands Act Amendment Act 1908. Land proclaimed to be open for agricultural farm selection (see § 7, 4, above) may also be opened for perpetual lease selection, and the latter mode may be conceded priority of application over the former. The rent for the first period of ten years of the lease is 1½ per cent. on the proclaimed purchasing price of the land for agricultural farm selection. The rent for each succeeding period of ten years is determined by the Land Court. The same conditions of occupation and improvement as are prescribed for agricultural farms are attached to perpetual lease selections, and, except as specially prescribed, the provisions relating to agricultural farms apply to them also. As the name implies, the selections are leases in perpetuity, and are not capable of being converted to freeholds.

(vii.) *Special Licenses*: Licenses to cut timber or to dig for any stone, gravel, earth, shells, or guano, may^a be issued. The prescribed fees and a royalty must be paid.

(viii.) *Pastoral Leases*. By far the greater number of pastoral leases are now held under the Land Act 1902 in conjunction with the Act of 1897. Under the former Act existing lessees could surrender their leases and obtain new leases for terms varying from ten to forty-two years. The Governor-in-Council was empowered to grant leases of lands according to the areas and terms to be notified in the *Gazette*. The term may not, however, in any case exceed forty-two years.

The following table shews the total areas of pastoral leases (including resumed parts) occupied under the various Acts at the end of each year from 1901 to 1907, inclusive:—

QUEENSLAND.—PASTORAL LEASES OCCUPIED UNDER VARIOUS ACTS, 1901 to 1907.

| Particulars. | Area in Square Miles. | | | | | | |
|---|-----------------------|----------|----------|----------|----------|----------|----------|
| | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
| Pastoral Leases Act 1869 ... | 39,306½ | 41,931½ | 35,938½ | 16,259½ | 11,423½ | 5,494 | 3,524½ |

5. **South Australia.**—The following are the various types of leases and licenses which are issued in this State:—(i.) Perpetual leases; (ii.) miscellaneous leases; (iii.) grazing and cultivation leases; (iv.) reclaimed swamp leases; (v.) licenses for special purposes; (vi.) leases under the Pastoral Act 1904; and (vii.) leases with right of purchase. General information regarding applications for leases and agreements has been given above. (See § 7, 5.) Leases of lands in the Northern Territory are dealt with in the next succeeding part of this sub-section.

(i.) *Perpetual Leases*. Any Crown lands which have been surveyed, or the boundaries thereof delineated on the public maps, are available for perpetual lease. The area and rent are determined by the Commissioner on the recommendation of the Land Board, and applications therefor must be accompanied by a deposit of 20 per cent. of the first year's rent, as notified in the *Gazette*. The lessee is required to execute and deliver the lease within twenty-eight days, and to pay the balance of the first year's rent and the prescribed fees within the same period. The land is vested in the lessee in perpetuity, and the rent is determined by the Board for each term of fourteen years, at least twelve months before the expiration of such period of fourteen years. If the lessee does not accept a revaluation of the rent within six months his lease determines at the then current period of fourteen years of his lease. All perpetual leases not subject to revaluation of rent are liable to the land tax, and the rent originally reserved shall be payable during the whole of the term. In respect of any land which, on account of deficiency of rainfall, is only suitable for pastoral purposes, the rent of such land is fixed at pastoral rates. The Crown reserves the right to resume any part of the land for the purposes of roads, tramways, railways, mining, etc., on making reasonable compensation to the lessee, and there is also in all leases a reservation to the Crown of all minerals, precious stones, coal, and mineral oils. The lessee may, after six years, with the consent of the Commissioner, sublet the whole or any part of his holding for a period not exceeding three years.

(ii.) *Miscellaneous Leases*. Leases of Crown lands, not exceeding 640 acres in extent, may be granted on such terms and conditions as the Governor may think fit to any *bonâ-fide* discoverer of any guano or other valuable substance or deposit (not including minerals).

The Governor has power to resume possession of any well or place where water has been found, and also of not more than one square mile of land contiguous thereto. If the water so found is artesian the area resumed may be increased to five square miles. The Governor may offer a lease of such land resumed by private contract or public auction.

Leases may also be granted by sale by auction for a term not exceeding twenty-one years of any Government buildings not required for Government purposes or of any Crown lands, for a variety of purposes, such as—for obtaining guano, stone, clay, or earth; for sites for inns, stores, factories, wharves, or for any other purpose approved by the Commissioner. Leases of lands comprised within any forest reserve may also be granted for any term not exceeding forty-two years.

(iii.) *Grazing and Cultivation Leases.* Every miscellaneous lease under any of the Crown Lands Acts for grazing and cultivation purposes, or grazing purposes only, is held to have been lawfully granted, and the power of resumption, if required for any purpose of public utility, is reserved to the Crown. Any lessee under any such miscellaneous lease may, with the consent of the Commissioner, cultivate the whole of the land without rendering the lease liable to forfeiture, provided that no trees be injured or timber be cut down or destroyed without the consent of the Commissioner.

(iv.) *Reclaimed Swamp Lands.* These are subdivided and offered on perpetual lease in the same manner as other lands are offered. The rent may not be less than 4 per cent. per annum on the cost of reclaiming and the unimproved value of the land. During the first year only one-quarter of the annual rent need be paid, one-half during the second year, three-quarters during the third year; afterwards the whole annual rent must be paid yearly. No person may hold more than two blocks of reclaimed lands. Any of these lands remaining unallotted for a year may be let at reduced rental, or on miscellaneous lease.

(v.) *Licenses.* Licenses to remove timber, stone, guano, manure, shell or seaweed from Crown lands, and for fishermen's residences and drying grounds, for manufactures, slaughter-houses or saw mills, for depasturing stock, or other approved purposes for any term not exceeding a year, may be granted by the Commissioner or any person authorised by him on payment of fee as fixed by regulation.

(vi.) *Leases under the Pastoral Act 1904.* This Act deals with Crown lands which do not come within the scope of the Lands Acts. The Act is administered, under the Commissioner of Crown Lands, by a Board consisting of three members appointed by the Governor. The duties of the Board are to decide upon the area, rent, and term of lease of land, and to allot the same. In fixing the size of the blocks allotted regard is paid to natural features, so as to utilise improvements and waters to each block as equally as possible. The amount to be paid for any improvement is fixed, distinguishing between amounts payable to the Crown and to the outgoing lessee.

(a) *General Provisions.* Notice of land available is published in the *Gazette*, shewing the area, situation, term of rent of each block, price to be paid for improvements, and the cost of valuing such improvements. Any land not applied for within a month of the date of the notice may be reoffered at a reduced price, and so on at intervals of three months until applied for. Each application must be accompanied by a quarter of a year's rent and 5 per cent. of the price payable for improvements, or 10 per cent. if the improvements do not belong to the Crown. The successful applicant must pay the balance of the first year's rent and the lease fee within one month after allotment. A lease does not entitle the holder to mining rights, or to remove timber, but only to use the surface of the land for pastoral purposes, or for other purposes approved by the Commissioner. The cost at the nearest port or railway station of barbed wire and netting required for vermin-proof boundary fences may be advanced to the lessee by the Commissioner in certain cases, upon the recommendation of the Board, after wire and netting

to the amount of such cost have been utilised in vermin-proofing boundary fences. These advances bear interest at 4½ per cent. per annum, principal and interest being repaid in twenty equal annual instalments of £7 13s. 9d. for every £100 advanced. Leases may be granted to charitable incorporated bodies for any term not over twenty-one years, at such rent and terms as the Governor may think fit, of land for aboriginal reserves, in blocks not exceeding 1000 square miles, with right of renewal so long as the land is used for the aboriginals.

- (b) *Terms and Conditions.* The term of the lease is forty-two years, unless the land is likely to be required for closer settlement, when the term is twenty-one years; forty-two-year leases are subject to revaluation of rent for the latter twenty-one years. In determining the rent the Board must in all cases have regard to the land's carrying capacity for stock, its value for other purposes, its proximity and facility of approach to railways, ports, rivers, or markets. Within twelve months of the expiry of a lease all improvements on the land must be valued, and their position indicated on a plan. Unless already improved up to £3, every lessee is required to expend in improvements on the land a sum fixed by the Board, not exceeding ten shillings per mile per annum, until at least £3 per mile has been so expended. Payment for improvements belonging to the Crown may be made by annual instalments, extending if desired over forty-two years, the lessee meanwhile keeping such improvements in repair. Improvements must consist of wells, tanks, dams of a permanent character, machinery, and appliances for raising water, vermin-proof or other fences, huts or sheds erected for residence or shearing or other purposes required in connection with live stock. The lessee must stock his holding in the proportion of five head of sheep or one head of cattle for every square mile within three years, and within seven years in the proportion of twenty head of sheep or four head of cattle for every square mile. The average annual rental of pastoral lands is about three shillings and twopence per square mile.

- (c) *Resumption and Free Leases of Pastoral Lands.* Any run may be resumed for public works, sites for a town or cemetery, for mining, or for park lands, on a month's notice; or for intense culture, after the first ten years of the term, after a year's notice. The lessee is entitled to compensation for land resumed from his run, or for loss or depreciation in value of his lease caused by such resumption, and for improvements. The Commissioner or any person authorised by him, may enter on any run to sink bores or wells, or to construct dams or other water conservation works, outside of one mile from any improvements consisting of well, dam, or building worth £100. If water is so discovered, an area of one square mile may be resumed, and a lease thereof granted to the discoverer. Where artesian water is discovered, five square miles may be resumed. If a lessee discover artesian water on his run, at least ten miles from any other artesian supply on his run, which yields not less than 5000 gallons per day of water suitable for stock, he is entitled to 100 square miles of land surrounding the well, rent free for ten years, for each well so discovered up to four.

(vii.) *Leases with Right of Purchase.* Under the Crown Lands Act of 1888, now repealed by the Crown Lands Act 1903, and the Pastoral Act 1904, leases were granted with a right of purchase for a term of twenty-one years, containing a right of renewal for a further term of twenty-one years and a right of purchase, exercisable at any time after the first six years at a price of not less than five shillings an acre. The renewed leases are now governed by Part V. Division V. of the Act of 1903. The rent for the term of any renewed lease with a right of purchase is fixed by the Board by revaluation at least twelve months before the expiration of the original lease, and the renewed lease contains a right of purchase exercisable at any time during the term of the renewed lease. In

fixing the purchase-money and rent for a renewed lease the Board, in cases of revaluation, does not consider the value of the improvements made.

(viii.) *Area held under Lease, 1901 to 1907.* The following table shows the area held under leases and licenses at the end of each year from 1901 to 1907 :—

SOUTH AUSTRALIA (Proper).—AREA UNDER LEASES AND LICENSES, 1901 to 1907.

| Particulars. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

6. **Northern Territory.**—In the Northern Territory the freehold of the land may only be acquired either by purchase at auction or by private agreement (see § 6, 5, (iii.) above) or by first taking a lease with right of purchase. The various types of leases issued are as follows:—(i.) Agricultural leases; (ii.) pastoral leases; (iii.) special leases; (iv.) Leases with right of purchase; and (v.) perpetual leases. No person may hold more than 3000 acres under lease.

(i.) *Agricultural Leases.* Leases may be granted for a term of five years at an annual rent of sixpence an acre for blocks, not exceeding 640 acres, of any lands north of 17° Lat. S. for the production of rice, sugar, coffee, tea, indigo, tobacco, cotton, or of any other agricultural product which may be allowed by the regulations. Leases for blocks not exceeding 160 acres may be granted, on residential conditions, at a rent of threepence an acre. The lessee must fence his holding during the term of the lease; within two years from the date of the lease he must cultivate at least one-tenth of the land, and during the third and every subsequent year must cultivate at least one-twentieth additional part of the area.

(ii.) *Pastoral Leases.* Leases for pastoral purposes are regulated by the Pastoral Act of 1899, which provides that leases may be granted for a term of forty-two years at an annual rental of sixpence per mile for the first seven years, not less than one shilling per mile for the second period of seven years, and two shillings for the third period of seven years; the rent for the remainder of the term is fixed by valuation. It is also provided that land which has been once leased for pastoral purposes may not be leased again for the same purposes unless a lease thereof has been offered for sale by auction at an upset yearly rent of sixpence per square mile. The lessee must stock the land before the end of the third year with five head of sheep or one head of cattle per square mile, and before the end of the seventh year must increase the stock to ten sheep or two head of cattle per square mile. The land may be resumed for public purposes upon three months' notice, or for other purposes upon two years' notice. Since the year 1902 long leases for pastoral purposes have not been granted. Land has been let only on annual permits; if the holder of a permit can shew that he is making good use of the land, and if no application has been made for it for agricultural purposes, the permit is extended.

(iii.) *Special Leases.* Discoverers' leases may be granted, on such terms as the Minister may think fit, for areas not exceeding 640 acres for coal, petroleum, guano, or other valuable substance (excluding minerals). Special leases may be sold at auction for the purpose of obtaining clay and stone as sites for stores, inns, wharves, factories, etc.

(iv.) *Leases with Right of Purchase.* These leases are granted for twenty-one years, with a right of renewal for a further period of twenty-one years and a right of purchase

at a price to be fixed by the District Land Board, not being less than five shillings an acre. The rent is as notified in the *Gazette*. The land must be fenced within seven years.

(v.) *Perpetual Leases*. These leases are granted at a rent for the first fourteen years as notified in the *Gazette*, and for every subsequent period of fourteen years as fixed by the Board on revaluation. The land must be fenced within seven years.

(vi.) *Area held under Lease, 1901 to 1907*. The following table shows the total area held under lease at the end of each year from 1901 to 1907:—

NORTHERN TERRITORY.—AREAS HELD UNDER LEASE, 1901 to 1907.

| Particulars. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------------------|--------------------|--------------------|--------------------|--------------------|--------------------|--------------------|--------------------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| Right of Purch. Leases | 1,067 | 1,227 | 1,407 | 1,567 | 2,087 | 2,397 | 2,771 |
| Pastoral Leases | 111,476,240 | 113,755,920 | 104,609,200 | 104,641,200 | 102,030,240 | 108,347,680 | 105,918,880 |
| Other Leases | 1,176,981 | 108,821 | 28,181 | 28,181 | 1,248,019 | 1,376,010 | 1,347,858 |
| Total Leased | 112,654,288 | 113,865,968 | 104,638,788 | 104,670,948 | 103,280,346 | 109,726,067 | 107,269,509 |

7. **Western Australia.**—The following are the various types of leases and licenses issued in this State:—(i.) Pastoral leases; (ii.) permits and licenses to cut timber; (iii.) special leases; and (iv.) licenses for quarrying.

(i.) *Pastoral Leases*. Leases are granted for pastoral purposes throughout the State, but such leases give no right to the soil, or to the timber, except to such timber as may be required for domestic purposes or for the construction of improvements, and the lands leased may be reserved, sold, or otherwise disposed of by the Crown at any time during the currency of the term. All pastoral leases expire on the 31st December, 1928; the following are the conditions upon which such leases are issued in the various divisions of the State:—(a) In the South-west Division in blocks of not less than 3000 acres, at an annual rent of £1 for each 1000 acres or part thereof. (b) In the Central and North-west Divisions, in blocks of not less than 20,000 acres at an annual rent of ten shillings for each 1000 acres or part thereof. (c) In the Eucla Division, in blocks of not less than 20,000 acres at an annual rent of three shillings for each 1000 acres or part thereof. (d) In the Eastern Division, in blocks of not less than 20,000 acres at an annual rent of five shillings for each 1000 acres or part thereof. (e) In the Kimberley Division, in blocks of not less than 50,000 acres when on a frontage, nor less than 20,000 acres when no part of the boundary is on a frontage, at an annual rent of ten shillings for each 1000 acres or part thereof. Any lessee in the Kimberley Division may obtain a reduction of one-half the rent due for the remaining years of his lease, who at any time during the term of his lease has, and for so long as he has in his possession on the land the subject of the lease, or of any other lease not separated by a greater distance than twenty-five miles, owned and worked by the lessee as one station, ten head of sheep or one head of large stock for each 1000 acres leased. Under the Amendment Act of 1906, which is not retrospective, it is provided that if any pastoral lease or group of leases worked as one station is not kept stocked, after the first two years from the commencement of the term, at the rate of at least ten head of sheep or one head of large stock for every 1000 acres comprised therein, such lease or leases are liable to forfeiture.

(ii.) *Permits and Licenses to Cut Timber*. The alienation of forests and timber lands is now regulated by the Lands Act Amendment Acts of 1904 and 1906, under which the Governor is authorised to appoint an Inspector-General of Forests and an Advisory Board consisting of three persons, whose duty it is to advise the Minister upon all matters relating to forest conservation and timber lands. The Governor is authorised to declare any Crown Lands to be a State forest or timber reserve, and to grant to persons desirous of erecting saw-mills permits to cut timber in any State forest or timber reserves, or on

any Crown land, upon the following conditions:—(a) That the right of cutting timber is granted over an area proportional to the horse-power of the mill proposed to be erected on the basis of the provision of ten years' cutting; (b) that the railway or tramway connecting such mill with any Government railway shall be located in such manner as will best serve the country requiring an outlet in that vicinity; (c) that the permit is liable to forfeiture in the event of the mill being closed for a period of one month without the consent of the Governor, or in the event of any breach of any condition or provision; (d) such other conditions as may be prescribed. Licenses may also be granted to hew and fell timber for piles, poles, or baulks, subject to the payment by the licensee of royalties proportional to the measurement of the timber hewn or felled. The amount of all fees or royalties is fixed by the Governor.

(iii.) *Special Leases.* On receiving an application in the prescribed form the Governor may grant leases of any Crown land for any area not exceeding (except in the cases of leases for guano or other manure, or for the collection or manufacture of salt) twenty-five acres, for a term not exceeding twenty-one years, at a yearly rental of not less than £2, for a variety of purposes, such as:—For obtaining guano, stone, or earth; for sites for inns, stores, bridges, factories, wharves, and jetties; for the working of mineral springs; for the collection and manufacture of salt; for works for supplying water, gas, or electricity; or for any other purpose approved by the Governor. The lessee must pay a deposit of one-half of the first year's rent, and must also pay for the cost of survey. In all cases where it is proposed to grant a lease for a longer period than ten years, notice of the application for such lease and of the purpose and term thereof must be published in four consecutive numbers of the *Gazette*.

(iv.) *Licenses for Quarrying.* Licenses are granted to any person to quarry and dig for any rock, soil, or other material, on any lands vested in the Crown, not being on a goldfield or in a mining district, for building purposes and to make bricks or any other commodity. The fee to be paid for such license is determined by the Governor, not being, however, less than five shillings per month for each man employed.

(v.) *Areas Held under Leases and Licenses, 1901 to 1907.* The following table shows the number and area of leases and licenses issued during each year from 1901 to 1907:—

WESTERN AUSTRALIA.—LEASES AND LICENSES ISSUED, 1901 to 1907.

| Particulars. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. ¹ | 1907. ¹ |

1. For financial year ended the 30th June. 2. No timber leases granted since 1903.

Particulars as to the total area occupied under leases and licenses are given in a later part of this section. (See § 12.)

8. *Tasmania.*—The several forms of leases and licenses in this State are as follows:—(i.) Grazing leases; (ii.) miscellaneous leases; (iii.) timber licenses; and (iv.) occupation licenses.

(i.) *Grazing Leases.* Grazing leases of unoccupied country may be offered at auction, but such runs are liable at any time to be sold or occupied by virtue of a license for other than pastoral purposes, and to be otherwise alienated and dealt with. The rent

is fixed by the Commissioner, and the run is put up for auction, the highest bidder receiving a lease to occupy the same for fourteen years, which may be transferred by the lessee with consent of the Commissioner, and on payment of a fee of one shilling in the pound on the annual rental. The rent is payable half-yearly in advance, and the lease is determinable, should the rent not be paid within one month of becoming due. In the event of the land being required for sale or for any public purpose, six months' notice must be given to the lessee, who becomes entitled to receive from the Crown compensation for the value of all permanent improvements he may have made during the currency of his lease.

(ii.) *Miscellaneous Leases.* The Governor-in-Council may grant leases for a period not exceeding fourteen years of any land bordering upon a navigable river, or on the sea, if required for the purpose of constructing wharves, docks, jetties, or any other works of public utility. For whatever purpose the land is leased, the lease may be determined in case of non-completion of the works. Leases may also be granted, on similar conditions and terms, for the purpose of constructing watercourses, or of erecting a manufactory, mill, or such other work, or for constructing railways or tramways.

(iii.) *Timber Licenses.* Temporary licenses for a period not exceeding five years may be granted for the purpose of felling timber, or for removing gravel, clay, or stone, etc., on or from particular localities.

(iv.) *Occupation Licenses.* Occupation licenses may be issued by the Commissioner for a period not exceeding twelve months, to any person of the age of twenty-one or over, upon payment of a fee of five shillings. The license must describe the position and area of the land; no person can hold more than one such license at any time. Any person holding an occupation license is entitled to occupy, during the current year, the surface of any Crown land within any mining area not exceeding one-quarter of an acre. An occupation license is not transferable, and the holder thereof is not entitled to any compensation in respect of any improvements effected on the land, should the same be resumed by the Crown. The license is terminable at any time by three months' notice.

Residence licenses are granted on similar terms upon payment of a fee of ten shillings, and any person holding a residence license is entitled to occupy as a domicile, during the current year, the surface of the land described, which cannot exceed one-quarter of an acre in extent, within any town situate within a mining area.

Business licenses are also granted on similar conditions upon payment of a fee of twenty shillings, and entitle the holder to occupy, during the current year, the surface of any Crown land situate within any mining area not exceeding one-quarter of an acre, not being within a town. Residence and business licenses may be transferred by endorsement to any person eligible.

(v.) *Area held under Leases and Licenses.*—The following table shews the areas of Crown lands occupied under leases and licenses at the end of each year from 1901 to 1907 :—

TASMANIA.—LEASES AND LICENSES, 1901 to 1907.

| Particulars. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

| Total | 1,470,621 | 1,471,203 | 1,536,988 | 1,345,302 | 1,259,786 | 1,295,259 | 1,343,389 |

§ 9. Closer Settlement.

1. **Introduction.**—In all the States, Acts have been passed authorising the Governments to repurchase alienated lands for the purpose of cutting them up into blocks of suitable size and throwing them open to settlement on easy terms and conditions. Special Acts have also been passed in several of the States authorising the establishment on particular lines of co-operative communities, village settlements, and labour colonies.

2. **Government Loans to Settlers.**—For the purpose of promoting pastoral, agricultural, and similar pursuits, and with the object of assisting settlers in erecting buildings and carrying out improvements on their holdings, general systems have been established in all the States, under which financial aid is rendered to settlers by the State Governments. These general systems are more particularly referred to in the section in this book dealing with "Agriculture." In many of the Closer Settlement and similar Acts, however, special provisions have been inserted with the object of lending money to settlers taking up land under these Acts, with which to build homes or effect improvements. The principal features of these provisions are referred to below.

3. **New South Wales.**—Under the Closer Settlement Act of 1901 provision was made for the acquisition of private lands or of Crown lands held under lease, for the purpose of closer settlement. No power of compulsory resumption was conferred by the Act, which was consequently practically inoperative. Under the Closer Settlement Act of 1904, as amended in 1906 and 1907, the Government is empowered to resume private lands, either by agreement or by compulsory purchase, and to alienate them on favourable terms to persons who desire to settle and make homes for themselves and their families on the soil. Land acquired under the Act is subdivided into blocks or farms, and by notification in the *Government Gazette* is declared to be a settlement purchase area available for application. The *Gazette* notice also gives all necessary information as to the class and character of the land, and the capital value, area, etc., of each block or farm.

(i.) *Closer Settlement Purchase.* Under this tenure a settler may acquire the freehold of the land under a system of deferred payments. A male applicant must not be under the age of eighteen years, or female twenty-one years. A deposit of 5 per cent. of the notified value of the settlement purchase must be lodged with the application, and a similar amount by way of instalment, paid annually until the purchase money, together with interest at the rate of 4 per cent., is paid off. Under this system the balance due to the Crown will be paid off in thirty-eight years, the holding then becoming a freehold. A condition of residence for ten years attaches to every settlement purchase, and the purchaser must commence to reside on his holding within twelve months after the date of the Land Board's decision allowing the purchase, unless the commencement of residence is extended to some date within five years from the date of purchase, on such terms and conditions as to improvements and cultivation as may be agreed on between the Local Board and the purchaser. With the Board's permission, residence may be performed in any adjacent village or town.

(ii.) *Closer Settlement Annual Leases.* Leases for areas not exceeding 320 acres may be obtained under the Closer Settlement Acts, subject to such conditions as the Governor may prescribe. Land so leased may not be improved without the written consent of the Minister, or of the Chairman of the Local Land Board, which Board fixes the annual rent. These leases expire on the 31st day of December of the year in which they are granted, but may be renewed from year to year on payment of the yearly rent in advance, not later than the 10th December of each year. The granting of a lease of this kind will not exempt the land held thereunder from being granted as a settlement purchase, and on a valid application for a settlement purchase the lease of so much of the land as is

applied for is thereby determined from the date of that application. In such cases the rent will be adjusted, and any balance paid in excess refunded. The Minister has power to cancel the lease at any time by giving not less than three months' notice in the *Gazette* of his intention to do so.

(iii.) *Sales by Auction.* Areas within closer settlement districts necessary for township settlement may be set apart by notification in the *Gazette*. Allotments, each of which may not exceed half an acre in extent, within such areas may be sold by auction.

(iv.) *Areas Acquired and Disposed of, 1901 to 1908.* Up to the 30th June, 1908, three areas—namely, those at Myall Creek, Gobbagombalin, and Marrar—had been opened for settlement under the Closer Settlement Acts.

The following statement gives particulars of the areas opened up to the 30th June, 1906 to 1908:—

NEW SOUTH WALES.—CLOSER SETTLEMENT AREAS, 1906 to 1908.

| Year Ended the 30th June. | Areas. | | | Capital Values. | | |
|---------------------------|-----------------|------------------------|---------|-----------------|------------------------|---------|
| | Acquired Lands. | Adjoining Crown Lands. | Total. | Acquired Lands. | Adjoining Crown Lands. | Total. |
| | Acres. | Acres. | Acres. | £ | £ | £ |
| 1906 ... | 53,523 | 13,166 | 66,689 | 137,795 | 24,589 | 162,384 |
| 1907 ... | 142,403 | 25,712 | 168,115 | 438,490 | 37,178 | 475,668 |
| 1908 ... | 145,365 | 25,757 | 171,122 | 448,235 | 37,351 | 485,586 |

The total area thus set apart has been divided into 326 farms comprising 157,866 acres, the remaining 10,249 acres being reserved for recreation areas, roads, stock routes, schools, etc. Up to the 30th June, 1907, 320 farms, comprising an area of 154,922 acres and valued at £470,787, had been allotted. At the same date the improvements effected by settlers were valued at £22,932. The following table gives particulars as to the disposal of the farms by closer settlement purchase for each year ended the 30th June, 1905 to 1908:—

NEW SOUTH WALES.—CLOSER SETTLEMENT ALLOTMENTS, 1905 to 1908.

| Year. | Farms Alloted by Board to Date. | | | Total Amount received in respect of Settlement Purchases. | Total Number of Applications received. |
|------------|---------------------------------|---------------|----------|---|--|
| | Number. | Area. | Value. | | |
| 1904-5 ... | No. 49 | Acres. 18,568 | £ 56,235 | £ 2,817 | No. 50 |
| 1905-6 ... | 98 | 48,567 | 120,445 | 6,560 | 120 |
| 1906-7 ... | 319 | 154,922 | 470,787 | 24,698 | 551 |
| 1907-8 ... | 326 | 157,642 | 475,540 | 31,793 | 558 |

(v.) *Labour Settlements.* These settlements were founded by the Labour Settlements Acts 1893 and 1894, which have now been amended and repealed by the Labour Settlements Act 1902. Land may be set apart for lease for a period of 28 years as a labour settlement under the superintendence of a Board of Control, consisting of from eight to sixteen members appointed by the Governor. The rent is fixed by the Minister after appraisalment by the local board. The functions of the Board of Control are to enrol members of the settlement; to make regulations concerning the work to be done; to apportion the work among the members; and to distribute the wages and profits. The Board may establish any trade or industry, and must distribute the profits among the enrolled members.

(a) *Government Aid to Settlers.* The Minister is empowered to grant financial assistance to the Board of Control to an amount not exceeding £50 for each

enrolled member, who is the head of a family dependent upon him; £40 for each married person without a family; and £30 for each unmarried person. On the expiration of four years from the commencement of the lease, and at the end of each year following, 8 per cent. of the total sum advanced to the Board is a charge on its revenue, until the total amount, with interest at 4 per cent., is repaid.

(b) *Settlements Established.* Only two settlements had been established under the Act up to the 30th June, 1907. Particulars are given in the following statement:—

NEW SOUTH WALES.—PARTICULARS OF LABOUR SETTLEMENTS, 30th JUNE, 1907.

| Settlement. | Date of Establishment. | Area. | Population. | | | | Value of Improvements. | Loans Advanced by the Government. |
|-----------------|------------------------|-----------------|---------------|--------|-----------|--------|------------------------|-----------------------------------|
| | | | Men Enrolled. | Women. | Children. | Total. | | |
| Bega ... | 1893 | Acres. 1,360 | 31 | 29 | 140 | 200 | £ 2,296 | £ 2,421 |
| Wilberforce ... | 1893 | 409 | 11 | 9 | 32 | 52 | 2,360 | 2,495 |
| Total ... | — | 1,769 | 42 | 38 | 172 | 252 | 4,656 | 4,916 |

4. *Victoria.*—(i) *Closer Settlement Acts, 1898 to 1907.* All private lands acquired either compulsorily or by agreement by the Lands Purchase and Management Board (see § 3, above) must be paid for at the option of the owner by money, debentures, or stock. The Governor is authorised from time to time during the first five years from the date on which the Act came into force to increase the amount of Victorian Government Stock by an amount not exceeding £500,000 in any one year, or he may issue debentures for the whole or any part of such sum in lieu of increasing the amount of stock. The Board may dispose of all lands acquired, either Crown lands or repurchased lands, on conditional purchase leases either as farm allotments, workmen's homes allotments, or agricultural labourers' allotments. The price of the land disposed of is to be so fixed as to cover the cost of original purchase, the cost of survey and subdivision, the value of lands absorbed by roads and reserves, and the cost of clearing, draining, fencing, or of other improvements which the Board may effect prior to the disposal of the land. The land to be disposed of is divided into (a) farm allotments not exceeding £1500 in value, (b) workmen's homes allotments not exceeding £100 in value, and (c) agricultural labourers' allotments not exceeding £200 in value. Land acquired by the Board may also be sold in small areas in fee simple as sites for churches, public halls, butter factories, creameries, or recreation reserves, and if any land is not taken up under lease within one year after being declared available, it may be sold by auction.

(b) *Closer Settlement Leases.* An application for a lease must be accompanied by a deposit equal to one instalment, equal to 3 per cent., of the purchase money of the allotment of the highest value of those applied for, and the registration and lease fees thereof. Not more than one allotment may be held by one lessee. Every conditional purchase lease is for such a term of years as may be agreed upon by the lessee and the Board, and payment must be made with interest at 4½ per cent. per annum by sixty-three half-yearly instalments, or such lesser number as may be agreed upon. The lease is subject to the following conditions:—The lessee must destroy vermin and noxious weeds to the satisfaction of the Board within three years; he must enclose the land within one year, or if he use the allotment for grazing purposes only, within three months; he must personally reside during eight months in each year, during the currency of the lease, on his allotment; he must make improvements equivalent in value to at least two instalments payable for the land before the end of the first

year; to the value of 10 per cent. of the purchase-money before the end of the third year, and to the value of a further 10 per cent. before the end of the sixth year, being a total of one-fifth of the value of the land. If all covenants and conditions have been duly complied with the lessee may, after six years, and with the written consent of the Board, transfer, assign, mortgage, or sublet his allotment. A Crown grant may be issued after the expiration of twelve years on payment of the balance of the purchase-money, if all conditions have been complied with. Any land may be resumed by the Crown for public purposes upon payment of compensation to the lessee for the loss of his allotment or part thereof, and for any improvements erected by him thereon. In the case of workmen's homes allotments the land must be fenced within one year, and a dwelling-house to the value of at least £50 must be erected within the same time; within two years further improvements must be made to the value of at least £25. As regards agricultural labourers' allotments, a dwelling-house to the value of at least £30 must be erected within one year, and in two years the allotment must be fenced.

(b) *Advances to Settlers.* The Board may make advances for the purpose of fencing and building dwelling-houses, and is empowered to erect dwelling-houses, outbuildings, or improvements on any allotment at a cost not exceeding £250 for any one allotment. Any sum so expended, together with interest at 5 per cent. per annum, is repayable by equal half-yearly, quarterly, or monthly instalments, extending over such a period not greater than twenty years as may be prescribed. Provision has been made to enable lessees, who, through unpropitious seasons or other adverse circumstances, are unable to meet their instalments as they fall due, to have them deferred, and those lessees who have expended all their available capital in improving their holdings, are enabled to obtain an advance to continue working and improving their allotments. All such deferred payments or moneys advanced carry interest at 5 per cent.

(c) *Loans to Municipalities.* The Amendment Act of 1907 provides that by approval of the Minister of Lands and under the certificate of the Inspector-General of Public Works, loans may be made to the council of any municipality out of the Closer Settlements Fund for the purpose of carrying out any road-making or other public works within the boundaries of an estate.

(d) *Areas acquired and made available for Closer Settlement, 1901 to 1908.* The following statement shews the operations which have taken place in Victoria under the provisions of the Closer Settlement Acts, 1898 to 1906, up to the 30th June in each year from 1901 to 1908, inclusive:—

VICTORIA.—CLOSER SETTLEMENT, 1901 to 1908.

| Year ended 30th June. | Total Area Acquired by Government to Date. | Total Cost to Date. | How Made Available for Settlement. | | | | | | Number of Applications Granted to Date. | Total Receipts to Date. | Repayments of Principal to Date. | Area Available for Settlement. |

(ii.) *The Small Improved Holdings Act 1906.* The object of this Act is to assist deserving persons to acquire small improved holdings in rural districts as close as possible to centres of population, where industrial employment may be obtained. The Governor is authorised to set apart any unoccupied Crown lands, or any land acquired under the Closer Settlements Acts, for the purpose of small improved holdings, and is empowered during the first three years in which the Act is in force to raise money, by the issue of Victorian Government stock, to the extent of not more than £150,000 in any one financial year, for the purpose of acquiring private land adapted for small holdings. All lands so set apart are divided into holdings not exceeding £200 in value, and the Minister may direct that the land be adapted for any purposes of husbandry by erecting improvements to the value of not more than £150 on any one allotment, which sum is paid out of a fund created for the purpose.

- (a) *Permissive Occupancy.* Any person who is over twenty-one years of age, is of good repute, and is unable by his personal means to acquire land suited to his requirements, may become a probationary tenant of a holding by making application to the Minister, who will grant a permissive occupancy. The occupant must, if required, enter into employment under the direction of a foreman, upon improvement works on his allotment. In case of such employment being required the occupant will be paid twenty shillings per week during the first six months, fifteen shillings a week during the second six months, and ten shillings a week during the third six months of such employment.
- (b) *Leases of Holdings.* At the expiration of six, twelve, or eighteen months from the time when permissive occupancy was granted, the tenant may obtain a conditional purchase lease, on payment of the registration and lease fees, for a term of 31½ years. The lessee must pay the value of the allotment and of any improvements effected out of the fund referred to above. He must destroy vermin and noxious weeds, and must within one year from the date of issue of the lease enclose his holding with a fence. Either the lessee or an approved member of his family must, during the currency of the lease, reside personally for at least eight months in each year on the allotment; he must insure buildings and improvements against fire, and he may not transfer, assign, mortgage, or sublet his holdings during the first six years of the lease. If at any time after the expiration of twelve years of the lease the Minister is satisfied that all conditions have been complied with, and that the full purchase-money has been paid, a Crown grant may be issued to the lessee.

(c) *Areas Made Available for Settlement.* Land for settlement has been purchased at Mordialloc, Thomastown, Geelong, Wangaratta, Bellarine, Daylesford, and Warragul, comprising in all 2822 acres of land at a cost of £53,568. Up to the 30th June, 1908, a total of 2745 acres had been subdivided into 249 allotments, and eleven lots were provided out of Crown lands. For these allotments 3126 applications were received. The work of building houses for the settlers was undertaken by the Government, the settlers being employed on the work. The Government has also hired out the necessary teams and implements to the settlers, thereby assisting them in making the land immediately productive.

(iii.) *Village Communities.* Under the Settlement on Lands Act 1893, as amended by the Land Acts, any unalienated Crown lands, provided they are not auriferous or are not permanently reserved for any purpose, may be proclaimed and appropriated for the purposes of village communities. Such lands were originally surveyed into allotments of from one to twenty acres, according to the quality of the soil and the situation of the land, and the price fixed at not less than twenty shillings an acre, but under the Land Act 1901 (Secs. 344-346), additional areas may be acquired by conditional purchase, the value of which, together with the original holding, may not exceed £200. An applicant must not be under the age of eighteen years, nor the owner of the fee simple of two acres or over, nor the lessee of a pastoral allotment or grazing area, nor the holder of an agricultural allotment license. Permits to occupy may be granted for a period not exceeding three years at a nominal rental, and it is provided that monetary assistance not exceeding £50 may be advanced for the purpose of erecting buildings and improvements, but Parliament has not voted any money for this of recent years. Such loan is repayable in twenty equal annual instalments. The total amount of monetary aid advanced up to the 30th June, 1908, was £67,379, of which sum the amount repaid to date was £29,887. On the expiration of the period for which the permit is granted a lease may be obtained, provided that the conditions of occupancy have been fulfilled. The lessee must pay the value of the allotment by forty equal half-yearly instalments and must also pay within five years the cost of survey in ten equal half-yearly instalments. A Crown grant of the freehold may be obtained at any time after six years from date of lease on payment of the balance of amounts due if all the conditions have been fully complied with. Within one year from the date of the lease the land must be enclosed by a fence, and within two years one-tenth of the area must be cultivated, which must be increased to one-fifth by the end of the fourth year. Within six years, in addition to the cultivation, permanent improvements to the value of £1 for each acre must be effected. Any person in occupation of an allotment under permit or lease may surrender the same and acquire the land under a perpetual lease or a conditional purchase lease, when rents paid and improvements effected may be credited.

Homestead Associations and Labour Colonies, originally provided for under the Settlement on Lands Act 1893, did not prove successful. The provisions relating thereto were therefore repealed in 1904.

The area originally made available under the Settlement on Lands Act was 156,020 acres in eighty-five different localities in the State. A large portion of that area was, however, found to be unsuitable for village settlement purposes, and has been withdrawn from the operation of the Act. Particulars of areas in process of alienation under the Act are given below. (See § 12, 3).

On the 30th June, 1908, there were 1546 settlers actually residing, and there were 146 not residing, but improving, making a total of 1692 in occupation. Including wives and children the total number in residence was 7628. At the same date the area under cultivation was 24,033 acres; the value of live stock £72,636, and of improvements £267,385.

5. *Queensland.*—Under the provisions of the Closer Settlement Act of 1906 private lands may be repurchased by the Crown, either by agreement or compulsorily. The price of all land so acquired is paid for in cash from the Consolidated Revenue Fund, or in cash the proceeds of the sales of debentures, or at the option of the Minister, and with the consent of the owner, wholly or in part by the issue to the owner of debentures. Any

land which it is proposed to acquire under the provisions of the Act must be inspected by a member of the Land Court, who must furnish a report to the Minister; the land may thereupon be acquired by agreement, with the approval of the Governor-in-Council, at a price not exceeding by more than one-tenth the value thereof stated in the said report.

(i.) *Compulsory Acquisition.* The compulsory provisions of the Act only apply where the private land proposed to be acquired exceeds £20,000 in value, exclusive of improvements. All claims for compensation are determined by the Land Appeal Court, whose award is final and without appeal. The owner of an estate in possession, the whole of which is proposed to be taken compulsorily, has the right to retain in one block out of the estate, for the purposes of residence or business, land the value of which (exclusive of improvements) does not exceed £10,000, or £15,000 in the case of an estate the unimproved value whereof exceeds £50,000, or £20,000 in the case of an estate the unimproved value whereof exceeds £100,000. The maximum sum which may be expended on the acquisition of land for the purposes of closer settlement is £500,000 in any one year.

(ii.) *Disposal of Land.* A sufficient part of the land acquired must be set apart for roads, public reserves, and townships, and the remainder is proclaimed open for selection as agricultural farms under the Land Acts 1897 to 1902; the term of the lease is, however, twenty-five years instead of twenty years as provided by the Land Acts. The selector must fence the land within two years from the issue of the license to occupy, or must make permanent improvements of an equivalent value. The rent to be paid for the first year is equal to £10 for every £100 of the purchasing price; and (no payment being required during the second, third, or fourth years) an annual payment of £8 2s. 7d. for every £100, continued from the fifth to the twenty-fifth year will, at the end of the term, have paid off the principal sum together with interest. Payment of the balance of the purchase-money may be made at any time after the expiration of the fifth year of the lease, and a rebate of interest will be made accordingly. Land remaining open for selection as agricultural farms for at least twelve months may thereafter be proclaimed also open for selection as unconditional selections. Areas set apart for townships may be sold at auction.

(iii.) *Areas Acquired and Selected, 1901 to 1907.*—The operations under the Agricultural Lands Purchase Acts 1894 to 1905 (now repealed by the Closer Settlement Act 1906) resulted up to the end of the year 1907 in the acquisition by the Government of twenty-six estates, of a total area of 409,563 acres, at a total cost of £1,057,463. The following table gives particulars of the operations under the above Acts at the end of each year from 1901 to 1907, inclusive:—

QUEENSLAND.—CLOSER SETTLEMENT, 1901 to 1907.

| Year. | Number of Estates Acquired. | Total Area Acquired to Date. | Total Amount of Purchase Money. | Total Area Selected to Date. |
|-------|-----------------------------|------------------------------|---------------------------------|------------------------------|
| | | Acres. | £ | Acres. |
| 1901 | 15 | 132,760 | 335,056 | 124,710 |
| 1902 | 19 | 266,925 | 699,815 | 230,149 |
| 1903 | 20 | 286,952 | 790,445 | 253,096 |
| 1904 | 21 | 308,605 | 877,058 | 277,939 |
| 1905 | 21 | 308,605 | 877,058 | 289,873 |
| 1906 | 24 | 381,724 | 968,844 | 301,908 |
| 1907 | 26 | 409,563 | 1,057,463 | 340,405 ¹ |

1. In addition there were at the end of the year 1907, 10,442 acres sold at auction and 2700 acres retained by the Government for experimental farms.

The total area opened for selection up to the end of the year 1907 was 359,364 acres, of which 340,405 acres had been selected by 1576 selectors at a total purchasing price of £966,467. There remained 18,959 acres unselected or reserved. The total amount of rent paid up to the same date was £400,092, the amount in arrear being £3009.

(v.) *The Special Agricultural Selections Act 1901.* Under the Special Agricultural Selections Act 1901, as amended in 1904, land may be set apart as homesteads, farms, or prickly pear selections, for any body of settlers, who, having some measure of common interest or capacity for mutual help, are desirous of acquiring land in the same locality. The procedure to be followed is for a request to be made to the Minister by the members of the body, explaining the grounds on which they are co-operating, and setting out the land they desire to acquire. Should the request be acceded to the land will be opened for selection in the usual way, but for a period to be stated in the proclamation it will only be available for the members of the body of settlers for whom it has been set apart. By the Lands Act Amendment Act 1905 a new departure has been made in providing that lands may be set apart for exclusive selection in Great Britain. Application to select such lands should be made at the office of the Agent-General, and selectors of such lands will have credited towards the purchasing price the money paid for the passages of themselves and families to Queensland, not exceeding, however, £17 per "statute adult."

6. **South Australia.**—Under the provisions of the Crown Lands Acts the Commissioner may repurchase land for the purposes of closer settlement, at a cost not exceeding £200,000 in any one year, subject to the conditions (1) that the repurchase be recommended and the improvements valued by the Board and the Surveyor-General, and (2) that full particulars as to the locality, area, and quality of the land, and the price paid, be laid before Parliament.

(i.) *Disposal of Land.* Repurchased areas, except such portions as may be required for town lands, which are sold by auction, or for reservation for public purposes, are cut up into blocks, each of which does not exceed £2000 in unimproved value, or in the case of improved blocks or grazing land does not exceed £4000. These blocks are offered for sale, and the purchaser must enter into an agreement to purchase his block and the improvements at the price fixed by the Board, and to pay the purchase-money and interest thereon at 4 per cent. per annum by seventy half-yearly instalments, the first ten payments being interest only. Purchase may be completed by paying the balance of the purchase-money after holding the land for nine years. Each person holding an agreement to purchase repurchased lands must spend in substantial improvements on his block, during each year for the first five years, a sum equal to £3 for every £100 of his purchase-money. Should any repurchased land remain unallotted over a year after being offered, it may be offered on miscellaneous lease on terms fixed by the Board, or, if the Board so recommend and the Commissioner approve, it may be sold by public auction, a reserve being fixed by the Board, the terms being 25 per cent. of the purchase-money in cash, and the balance in five yearly instalments, bearing interest at 4 per cent. per annum. Any amount in arrear on repurchased lands may, with interest at 5 per cent., be sued for in court by the Receiver of Rents.

(ii.) *Areas Acquired and Selected.* The following table shews the area of land acquired by the Government in South Australia for the purposes of closer settlement, and the manner in which the same has been disposed of under the provisions of the Crown Lands Acts:—

SOUTH AUSTRALIA (PROPER).—CLOSER SETTLEMENT, 1902 to 1907.

| Particulars. | Area in Acres | | | | | |
|--|---------------|---------|---------|---------|---------|---------|
| | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
| 1. <i>Area of Lands Repurchased to Date</i> ... | 156,481 | 156,481 | 174,963 | 214,752 | 260,355 | 326,576 |
| 2. <i>Agreements with Covenants to Purchase</i> ... | — | 60,331 | 81,556 | 116,854 | 168,930 | 235,673 |
| 3. <i>Total Area Leased as Homestead Blocks—</i> | | | | | | |
| (i.) <i>Right of Purchase</i> ... | 2,717 | 2,487 | 2,268 | 2,057 | 1,930 | 1,758 |
| (ii.) <i>Perpetual Lease</i> ... | 3,073 | 2,895 | 2,795 | 2,907 | 2,482 | 2,306 |
| 4. <i>Perpetual Leases</i> ... | 90,128 | 89,378 | 86,881 | 82,431 | 78,642 | 77,017 |
| 5. <i>Miscellaneous Leases</i> ... | 309 | 274 | 295 | 285 | 295 | 211 |
| 6. <i>Sold</i> ... | 403 | 566 | 626 | 736 | 1,987 | 4,806 |
| 7. <i>Remainder Unoccupied (including Roads)</i> ... | 59,851 | 550 | 542 | 9,472 | 6,069 | 4,803 |

(iii.) *Village Settlements.* Out of the reserved lands the Commissioner is directed to set apart for the purpose of village settlement such land as he shall consider fit (1) for horticultural purposes, to be termed "horticultural land"; (2) for agricultural purposes, to be termed "commonage land"; and (3) land whereon any irrigation works are situated. Land so set apart is to be divided as follows:—Horticultural lands into blocks of as nearly as practicable equal unimproved value, and of about ten acres in extent; and the commonage lands into one or more blocks of such area as the Commissioner may determine, and the lands so set apart in each case form the district of the association. Upon such subdivision separate valuations are to be made of the irrigation works in each district, of the improvements on each block, and of all the personal estate belonging to each association. In the event of the Commissioner and any association not agreeing as to valuation, provision is made for arbitration under the Arbitration Act of 1891. When the valuation in a district is agreed or fixed, the Governor has power to determine the occupancy by any person or association of any reserved land, which thereupon reverts to the Crown. The Commissioner may forthwith lease such of the horticultural blocks within an area which has reverted to the Crown as he may think fit to individual members of the association on perpetual lease, or to a person not a member of any association, and thereupon such person becomes a member of the association in whose district the block is situated. No person may hold more than two blocks. Commonage lands may only be leased to the association on perpetual lease, and all unleased horticultural blocks are under the control of the association. The annual rent reserved by any lease is fixed by the Board, and commences at a date fixed by the Commissioner. The value of the improvements on each horticultural block, and the value of irrigation works and of improvements on commonage lands, and interest thereon at $4\frac{1}{2}$ per cent. per annum, are first charges upon the block and upon the property of the association respectively, and are to be paid by forty-two annual instalments. The Commissioner is empowered to expel any member from any association; to control the expenditure of any moneys by associations; to call upon any trustee of an association to retire; to require an association to increase the number of its members; to make, amend, and repeal rules for the management of an association, and for the regulation of any irrigation works. Every member of each association must provide or contribute towards the maintenance and regulation of irrigation works and the care and cultivation of the commonage lands, such labour (not being less than thirty-six days every six months) as the Commissioner may require, or an equivalent sum in cash. Every association must prepare an account once a year of the working of the commonage land, shewing all expenditure and income in connection therewith, and after providing for rent, working expenses, and for depreciation and renewal of plant, the surplus, after deducting 25 per cent. for sinking fund for renewal of plant, etc., may be divided among the members of the association.

On the 30th June, 1907, there were four village settlements in existence, viz., Lyrup, Kingston, Ramco, and Waikerie. The number of lessees was 77 and the population 311, while the area under orchards and vineyards was 582 acres, and under cereals 724 acres.

(iv.) *Homestead Blocks.* The Commissioner may cause any Crown lands reserved for the use of aboriginals, except such lands as are reserved for the occupation of aboriginals at Point McLeay or Point Pearce, to be surveyed and offered as homestead blocks on perpetual lease or lease with a right of purchase, and may, subject to the approval of Parliament, by purchase, exchange, or otherwise, acquire lands suitable for homestead blocks, and lease them in a similar manner. Each block must not exceed £100 in value, and must be resided on at least nine months every year by the lessee or purchaser, or by his wife or a member of his family. The holder may have his lease or agreement endorsed "Protected Homestead Block," and the effect of such endorsement will be that no subsequent encumbrance on the land by the holder will be valid, nor will the block be liable to seizure for debt, except for rates and taxes, nor, unless so willed, will it become assets for payment of debts after the death of the holder. If a holder is unable to continue in occupation of his block he may, on the recommendation of the Land Board, and with the Commissioner's consent, assign or sublet it.

- (a) *Advances to Blockholders.* Advances up to £50 may be made by the Commissioner to any homestead blockholder who has complied with the conditions of his lease or agreement, to assist in erecting permanent buildings on the blocks and other improvements which permanently increase the capital value thereof, such as clearing the land, fencing the same, erecting or making thereon permanent water improvements, such as dams, wells, reservoirs, watercourses, windmills, etc. The advances must not exceed half the cost to the blocker of the improvements then in good repair on the land. Advances must be repaid, with interest at 4 per cent. per annum, by twenty equal instalments, commencing twelve months from the date of advance. The whole amount may, however, be repaid at an earlier date. Failure to repay renders the holding liable to cancellation, and a grant of the land cannot issue until the advance is repaid. The Commissioner may, in case of hardship, extend the time for repayment, deferred payments bearing interest at 5 per cent. per annum. The total amount advanced to blockholders up to the 30th June, 1907, was £39,227, of which £29,817 had been repaid.
- (b) *Particulars of Homestead Blocks.* The total number of leases and agreements of which purchase had been completed to the 30th June, 1907, was 1056, comprising 15,944 acres, at a purchase price of £34,511 or an average of £2 3s. 3d. per acre, the average of each holding of which purchase was completed being 15 acres.

7. *Western Australia.*—Under the Agricultural Lands Purchase Act 1896 to 1904, the Colonial Treasurer, with the approval of the Governor, is authorised to expend from time to time sums not exceeding in the whole £200,000 on the repurchase of Crown lands near the railways, suitable for immediate cultivation.

(i.) *Acquisition of Land by the Government.* For the purpose of carrying out the provisions of the Acts, a Land Purchase Board, consisting of not more than five persons, appointed by the Governor, is constituted. The duties of this Board are to report on various matters in connection with the repurchase of any lands, such as the fair value of the land to the owner; the demand for land in the neighbourhood for agricultural settlement; and the suitability for agricultural settlement, and the distance from a railway of the land proposed to be acquired. If the report of the Board be favourable, the Minister, with the approval of the Governor, may make a contract for the acquisition of the land by surrender at the price fixed by the Board, or at any lesser price.

(ii.) *Sale of Repurchased Land.* All land repurchased may be improved prior to disposing of it and the cost of the improvements is added to the price to be paid for the land when sold. Reserves may be set aside for public purposes, roads, and town sites; and town and suburban lands may be disposed of in the same way as such lands are alienated under the provisions of the Land Acts 1898 to 1906. The remainder of the land is thrown open to selection. The maximum quantity held by one person must not exceed 1000 acres. No person under the age of eighteen years is eligible as a selector, nor is any person who is the beneficial owner of land exceeding 1000 acres in area held either in freehold or under any of the provisions of the Land Acts. If, however, the land at the time of its surrender was classified as second or third-class land, the maximum area may be increased to 3000 and 5000 acres of each class respectively, or to 4000 acres if the land is partly second and partly third class. If land thrown open to selection is not applied for, it may be put up for sale by public auction.

(iii.) *Conditions of Sale to Selectors.* The selling price of any repurchased land is ascertained by adding a sum equal to one-tenth part of the price actually paid for the land and for any improvements made upon it, and the total is the least price at which it may be selected. Applications must be in the prescribed form and must be accompanied

by the first half-year's instalment of the purchase-money, at the rate of £7 12s. 10d. per annum for each £100 of the selling price; on approval of the application, a lease for twenty years is issued at an annual rent, at the same rate at which the first year's instalment was paid. The lessee must, within two years, fence in at least one-fourth of his selection, and within five years the whole must be fenced, and at least one-tenth of the land must be cleared and cropped. Within ten years he must spend upon prescribed improvements an amount equal to the full purchase-money, which amount includes the cost of the exterior fencing. Improvements existing on the land at the time of sale are counted in the lessee's favour. At the expiration of the lease, or at any time during the currency of the lease, if all conditions have been complied with and the full purchase-money paid, a Crown grant may be obtained. Loans may be granted under the provisions of the Agricultural Bank Acts to any selectors under the Agricultural Land Purchase Acts, who have fenced in the whole of their selection and have cleared and cropped at least one-tenth of it.

(iv.) *Areas Acquired and Selected, 1901 to 1907.* The transactions conducted under the provisions of the Agricultural Lands Purchase Acts are shewn for each year since 1901 in the subjoined table:—

WESTERN AUSTRALIA.—CLOSER SETTLEMENT, 1901 to 1907.¹

| Particulars. | 1901. | 1902. | 1903. | 1904. | 1905-6. | 1906-7. |
|---|--------|--------|--------|---------|---------|---------|
| Total area of estates acquired ... Acres | 46,624 | 55,439 | 72,372 | 131,283 | 165,945 | 170,881 |
| Total amount of purchase-money ... £ | 52,764 | 60,514 | 73,395 | 82,580 | 100,811 | 109,373 |
| Set aside for roads, reserves, etc. ... Acres | 1,459 | 1,712 | 2,665 | 4,734 | 9,009 | 8,624 |
| Area originally available for selection .. | 45,165 | 53,727 | 69,707 | 126,549 | 156,936 | 157,321 |
| Area selected during the year | 4,295 | 11,540 | 16,232 | 42,305 | 24,933 | 11,673 |
| Total area occupied to date | 37,235 | 48,616 | 65,368 | 105,106 | 139,553 | 147,817 |
| Balance of area available for selection .. | 7,929 | 5,111 | 4,339 | 21,443 | 17,383 | 9,504 |
| Total revenue received to date ... £ | 14,451 | 23,538 | 29,815 | 37,371 | 52,445 | 65,420 |

1. Since the year 1904 the figures are given as up to the 30th June instead of the 31st December; 1905 figures are therefore, omitted.

On the 30th June, 1907, the total expenditure was £32,955, which left a balance of £32,465. At the same date the amount invested as sinking fund was £29,844. During the year 1907, two properties, namely those at Brunswick and Wannaru, having a total area of 4936 acres, were thrown open to settlement.

(v.) *Working Men's Blocks.* Any person not already holding land within the State is entitled to obtain a lease of lands which have been surveyed and thrown open for selection as working men's blocks. The maximum area that may be selected by one person is, if within any town or goldfield, half an acre, or five acres elsewhere. The price is not less than twenty shillings per acre, payable in ten years by half-yearly instalments. The application must be in the prescribed form and must be accompanied by the first instalment of the purchase-money and a lease fee of ten shillings. The selector must take personal possession within three months, and must reside upon the land for nine months in each of the first five years, but residence by the wife, parent, or child over sixteen years of age, may be accepted. Within three years the land must be fenced with a great and small stock-proof fence, and within five years an amount equal to double the purchase-money must be expended upon prescribed improvements, in addition to the cost of the exterior fencing. One-half the cost of any house may be allowed towards the improvements required. At the expiration of the lease, or at any time after five years from the date of the commencement of the lease, upon compliance with all conditions and upon payment of the full purchase-money and fee, a Crown grant will be issued. No person who has once held a working man's block is allowed to select another, except under very special circumstances.

The following table shows the number and area of accepted applications for working men's blocks during each year, as well as the total number and area in existence at the end of each year from 1901 to 1907, inclusive:—¹

**WESTERN AUSTRALIA.—PARTICULARS OF WORKING MEN'S BLOCKS,
1901 to 1907.**

| Year | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. ¹ | 1907. ¹ |
|-------------|-------|-------|-------|-------|-------|--------------------|--------------------|
|-------------|-------|-------|-------|-------|-------|--------------------|--------------------|

| | | | | | | | |
|------------------|---|----|----|-----|-----|-----|-----|
| Number | 2 | 33 | 17 | 196 | 45 | 37 | 201 |
| Area in Acres... | 6 | 99 | 59 | 154 | 106 | 104 | 149 |

NUMBER AND AREA OF BLOCKS OCCUPIED AT END OF YEAR.

| | | | | | | | |
|------------------|----|-----|-----|-----|-----|-----|-----|
| Number | 7 | 40 | 49 | 228 | 211 | 229 | 401 |
| Area in Acres... | 31 | 130 | 158 | 273 | 333 | 393 | 489 |

1. For financial year ended the 30th June.

During the year 1907 residential blocks on the goldfields were made available as workingmen's blocks, instead of under residential lease, as before.

8. **Tasmania.**—The principles of closer settlement were not introduced into Tasmania until the Closer Settlement Act of 1906 was passed. Under this Act power is given to the Minister for Lands, on the recommendation of the Closer Settlement Board, to purchase by agreement private land in any part of Tasmania for the purpose of closer settlement, and also to deal with and dispose of any unoccupied Crown land for the same purpose. Repurchased lands are to be paid for at the option of the owner by debentures, stock, or money, which may be raised by the Treasurer up to an amount not exceeding £50,000 in each financial year, provided that the total amount so raised may not exceed £250,000.

(i.) *Lease of Allotments.* Lands so bought under the Act are subdivided into farm allotments of a suitable size—not exceeding £1500 in value—and are disposed of by way of lease for ninety-nine years. The capital value of each allotment is fixed by the Closer Settlement Board, and the rental is determined by the Board at a rate not exceeding 5 per cent. per annum on the capital value of the land. In the case of the Cheshunt Estate, which has recently been subdivided for disposal under the Act, the rent was fixed at the rate of 4 per cent. on the capital value. Although the allotments are in the first place leased, any lessee, after the expiration of ten years of the term of his lease, may acquire and purchase the land leased to him, provided that he does not then hold land (exclusive of the land leased under the Act) of a value exceeding £1500, and that he has duly complied with the terms and conditions imposed by the Act, regulations, and his lease. At the expiration of five years from the date of lease, a lessee may dispose of his interest to any eligible person, the consent of the Board being first obtained.

(ii.) *Qualifications of Lessees.* Persons who apply for land under the provisions of the above Act must not be less than eighteen years of age, and those applicants who are landless have preference over those who are not. A person is deemed to be landless, if, at the time of making his application, he does not hold, under any tenure, such area of land as is, in the opinion of the Board, sufficient for the maintenance of himself and his.

family (if any). In the case of husband and wife, if either of them is not landless, neither of them is deemed to be landless. Only one allotment is granted to one person.

(iii.) *Advances to Settlers.* Under the Act provision is also made for advances to lessees, in aid of the cost of fencing the allotments and building dwelling-houses thereon; the total advance to any one lessee must not exceed one-fifth of the capital value of such lessee's allotment, and must not exceed pound for pound the sum expended by him in fencing and building. Such advances must be repaid, together with interest at 5 per cent., in equal half-yearly instalments.

(iv.) *Special Sales.* The fee-simple of land acquired may be disposed of by sale on the recommendation of the Board as sites for churches, public halls, dairy factories, fruit-preserving factories, mills, or creameries. The area sold may not exceed one acre in the case of a church or public hall, or five acres in other cases.

(v.) *Areas Acquired and Selected.* Up to the 30th June, 1907, one area—the Cheshunt estate—had been opened up for closer settlement. Particulars are given in the following statement:—

TASMANIA.—CLOSER SETTLEMENT, 1907.

| Number of Farms Available. | Number of Farms Allotted. | Area of Farms Allotted. | Rental of Farms Allotted. | Total Area Purchased. |
|----------------------------|---------------------------|-------------------------|---------------------------|-----------------------|
| 61 | 54 | Acres. 10,365 | £ 1,923 | Acres. 13,397 |

§ 10. Occupation of Crown Lands under Leases and Licenses Issued by Mines Departments.

1. **Introduction.**—Leases and licenses for the occupation of Crown lands for mining and other purposes are issued by the Mines Departments in all the States. Such leases and licenses may be issued with respect to all Crown lands, whether otherwise unoccupied or whether occupied also under leases and licenses issued by the Lands Departments. Certain Crown lands, such as reserves, etc., are, however, subject to special conditions.

(i.) *Mining on Private Lands.* Certain of the Crown lands of the several States have been alienated from time to time, subject to various reservations in respect of gold and other minerals which might afterwards be found therein. Other lands have been alienated without such reservation, but as the mineral gold does not pass from the Crown unless by express conveyance, it has remained the property of the State on all alienated lands. All lands alienated or in process of alienation are open to mining for gold, but to mining for other minerals, those lands only are open in respect of which the rights are reserved in the grants. There are, however, generally certain reservations, such as those with reference to town or village lands and lands which have been built on or are used for special purposes. The working of minerals on private lands is regulated in the several States either by special Acts or by special provisions of the Acts relating to mining.

(ii.) *Leases and Licenses Issued and Total Areas of Crown Lands Occupied, 1901 to 1907.* The following tables shew the total areas of Crown lands for which leases and licenses for mining purposes were issued in each State during each year from 1901 to 1907, inclusive, and also the total areas of Crown lands occupied for mining purposes at the end of each year during the same period:—

CROWN LANDS, LEASES AND LICENSES FOR MINING PURPOSES, 1901 to 1907.

| Year | ... | ... | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

| Tasmania | ... | 50,362 | 47,692 | 45,298 | 44,341 | 45,075 | 53,122 | 79,163 |
| Total | ... | 389,575 | 600,656 | 1,280,015 | 570,301 | 585,381 | 708,740 | 741,013 |

1. Not available. 2. Exclusive of lands held under miner's rights only, amounting in 1907 to approximately 27,000 acres. 3. Including private lands. Leases only. 4. Exclusive of miners' rights. 5. Excluding Victoria.

The increase in the area held during 1903 is due to the unusually large number of search licenses issued in South Australia during that year, no less than 466 being registered with areas varying from 640 to 3200 acres each,

2. **New South Wales.**—Under the provisions of the Mining Act 1906 and the regulations made thereunder, Crown lands may be occupied for mining or other purposes by virtue of (i.) miners' rights; (ii.) business licenses; (iii.) authorities to prospect; or (iv.) leases.

(i.) *Miners' Rights.* A miner's right may be issued for a period of twelve months upon payment of the sum of five shillings. The holder is entitled to take possession of and exclusively occupy for mining purposes Crown lands not expressly exempted from such occupation. Areas so occupied are styled tenements, which are divided into nine classes, viz.:—(a) prospecting areas; (b) dams or reservoirs; (c) roads; (d) claims; (e) races; (f) machinery areas; (g) tramways; (h) water rights; and (i) tunnel sites. Any holder of a miner's right may occupy one tenement of any or each of the foregoing classes, but for every additional tenement of the same class he must hold an additional miner's right. The holder of a miner's right may, in addition to the above, occupy a residence area not exceeding one-quarter acre within the boundaries of a town or village, or two acres outside such boundaries.

(ii.) *Business Licenses.* These licenses are issued upon payment of an annual sum of £1, and entitle the holder to occupy as a business area not more than one-quarter acre within the boundaries of a town or village, or one acre outside such boundaries.

(iii.) *Authorities to Prospect.* The Minister for Mines may grant to the holder of a miner's right an authority to prospect upon any area of Crown lands, whether exempted from ordinary occupation under a miner's right or not.

(iv.) *Leases.* The Governor may grant leases of Crown lands for (a) mining, (b) mining purposes, or (c) dredging.

(a) *Mining Leases.* These leases may be either *gold-mining leases*, for which the rental is at the rate of five shillings per acre per annum, the maximum area which may be demised being twenty-five acres; *mineral leases* (other than coal or shale), for which the rental is at the rate of five shillings per acre per annum, the maximum area being eighty acres; *coal or shale leases*, for which the rental is at the rate of one shilling per acre per annum, with a royalty of sixpence per ton on all shale or large coal, and threepence per ton on all small coal raised, the maximum area being 640 acres. *Special leases* may be granted for gold or minerals, other than shale or coal, if by reason of unusual circumstances the Minister is of the opinion that it is necessary that an area in excess of the limit prescribed for ordinary leases should be leased.

(b) *Leases for Mining Purposes* are granted for the surface of the land and to a limited depth below the surface. Such leases do not authorise mining on the land, but are for such purposes as the construction of dams and reservoirs, tramways, buildings, and machinery.

(c) *Dredging Leases* may be granted for the purpose of mining for gold or any other mineral by dredging, pumping, sluicing, etc., on any Crown lands forming the bed of any river or other suitable land. The rent is two shillings and sixpence per acre per annum, and a royalty of 1 per cent. on the value of all gold and other minerals won must be paid to the Crown. Labour and capital expenditure conditions are attached to dredging leases.

(v.) *Particulars of Leases and Licenses Issued, 1907.* The following table gives particulars of leases and licenses of Crown lands issued by the Mines Department during the year 1907:—

NEW SOUTH WALES.—LEASES AND LICENSES

ISSUED BY MINES DEPARTMENT DURING YEAR 1907.

| Particulars. | Act under which Issued. | Purpose for which Issued. | Area. |
|----------------------------------|-------------------------------------|--|---------------|
| <i>Leases—</i> | Mining Act 1874 & amending Acts | To mine for— | Acres. |

| Total | 134,209 | 131,690 | 127,514 | 124,773 | 147,074 | 134,723 | 183,916 |

3. **Victoria.**—Leases of Crown lands for mining and auxiliary purposes in this State are issued by the Department of Mines and Forests under the Mines Acts 1890 to 1907. Miners' rights are issued by the Treasury under the authority of the same Acts.

(i.) *Mining Leases.* These are of three kinds—(a) Gold mining leases; (b) mineral leases, and (c) dredging leases. (a) *Gold-mining Leases* are granted for a term of fifteen years in such areas as the Minister may recommend. The annual rent is two shillings and sixpence an acre. (b) *Mineral Leases* are granted for a term of 15 years, the maximum area being 640 acres. The annual rent varies from one shilling to £1 per acre. (c) *Dredging Leases* are issued upon the recommendation of the Sludge Abatement Board and on the approval of the Minister. The annual rent is five shillings an acre.

(ii.) *Special Licenses.* Special licenses are also granted by the Department of Mines and Forests. (a) *Searching Licenses* are granted to search for minerals over Crown lands for a term of three months at a minimum rent of £1. (b) *Tailings Licenses* are issued over tailings, which have become the property of the Crown, for a term of five years at a rent of one penny per 100 cubic yards, the minimum rent being ten shillings. (c) *Water-right Licenses* are issued, to divert water by cutting races, etc., over Crown lands, for a term of fifteen years, at a rent fixed according to the length of race, the quantity of water diverted, and the size of the reservoir.

(iii.) *Miners' Rights, Business Licenses, and Residence Areas.* Miners' rights are issued by the Treasury Department upon payment of a fee of two shillings and sixpence, and are available for a period of twelve months. The holder is entitled to take possession for mining purposes of Crown lands, not otherwise exempted, in any mining district. Upon registration and payment of the prescribed fees the holder of a miner's right may occupy not more than one acre of Crown lands on any goldfield as a business or residence area. Particulars of areas occupied, other than those given in paragraph 1, above, are not available.

Licenses of auriferous lands not for mining purposes may be issued by the Lands Department. (§ 8. 3. iv.)

4. **Queensland.**—The occupation of Crown lands for mining purposes in this State is regulated by the Mining Acts 1898 to 1902. Under these Acts the Department of Mines

is authorised to issue—(i.) Miners' rights; (ii.) mining leases; (iii.) coal-mining leases and licenses; and (iv.) miners' homestead leases.

(i.) *Miners' Rights.* The foundation of title under a miner's right is prior appropriation, and the permanency of any such title depends upon compliance by the occupier with certain prescribed conditions of use and working. The ground occupied under a miner's right is known as a "claim," which term may include an area taken up for purposes auxiliary to the actual operation of mining, such as machine areas. Water rights and residence areas do not come within the definition of "claim," being licenses which may be granted or refused. The forfeiture of a claim on account of non-compliance with the prescribed conditions may be decreed by the Warden on the application of any holder of a miner's right. The forfeiture of water rights or of residence areas may be declared only by the Crown, who alone can challenge the title of the occupier.

(ii.) *Mining Leases.* These leases are divided into two classes—(a) Gold-mining leases, and (b) mineral leases. Both classes contain certain covenants as to rent and the employment of labour and other matters. Special leases may be granted for auxiliary purposes, such as constructing tramways, erecting buildings, cutting water-races, etc. (a) *Gold-mining Leases.* The maximum area is fifty acres, the term twenty-one years, renewable for a further term of like duration, and the annual rent is £1 an acre. (b) *Mineral Leases.* The maximum area is 160 acres (except for coal, as mentioned hereinafter), the term twenty-one years, renewable for a like period, and the annual rent is ten shillings an acre.

(iii.) *Coal-mining Leases and Licenses.* Mineral leases for coal may be granted for a term of twenty-one years at an annual rent of sixpence an acre, together with a royalty of threepence per ton of coal raised during the first ten years of the lease and of sixpence per ton during the remainder of the term. Special concessions may be granted to discoverers of payable seams of coal. Licenses to occupy not more than 640 acres may be granted to any person desiring to prospect Crown lands for coal upon payment of sixpence for every acre comprised in the application.

(iv.) *Miners' Homestead Leases.* These leases are issued to holders of miners' rights who reside on gold or mineral fields, for the purpose of residence or carrying on business, and range in area from one to eighty acres, in accordance with the proximity to a proclaimed township. The rent ranges from sixpence to five shillings an acre. In the case of homesteads situated outside the limits of a township, after thirty years' rent has been paid the rent ceases to be payable, and in lieu thereof the rent shall be one shilling, if demanded.

(v.) *Particulars of Leases and Licenses Issued, 1907.* The following table gives particulars of the leases and licenses issued for mining purposes during the year 1907:—

QUEENSLAND.—MINING LEASES AND LICENSES ISSUED, 1907.

| Lease or License. | Mining Leases. | | | | Miners' Homestead Leases. | Coal Prospecting Licenses. | Miscellaneous Rights & Licenses. |
|-------------------|--------------------------|------------------|--------------------------------------|----------|---------------------------|----------------------------|----------------------------------|
| | Purpose for which Issued | To mine for gold | To mine for minerals other than gold | Tramways | | | |
| Area in acres ... | 2,333 | 7,465 | 19 | 114 | 2,225 | 13,177 | *27,000 |

* Approximate.

(vi.) *Particulars of Areas Occupied, 1901 to 1907.* The following table shews the areas for which leases and licenses were issued during each year, and the total area occupied at the end of each year from 1901 to 1907, inclusive:—

QUEENSLAND.—LEASES AND LICENSES
ISSUED BY MINES DEPARTMENT, 1901 TO 1907.

* Exclusive of lands held under miners' rights only.

5. South Australia.—In this State leases and licenses for mining purposes are issued by the Department of Mines under the authority of the Mining Act 1893, as amended in 1900. Under these Acts mining and prospecting are permitted in virtue of (i) miners' rights; (ii.) mining leases; (iii.) coal or oil leases; and (iv.) miscellaneous leases, and in addition occupation of Crown lands is permitted by virtue of (v.) business claims, and (vi.) occupation licenses.

(i.) *Miners' Rights.* These rights are issued for a period of one year upon payment of five shillings. The holder is authorised to prospect for any mineral or oil, and to peg out a claim in the prescribed manner on any Crown lands. Under the Amendment Act of 1900, special licenses to search, on specific mineral lands not exceeding five square miles in extent, may be granted for (a) precious stones; (b) mineral phosphates; (c) oil; and (d) rare metals, minerals, and earths, the mining for which has not proved payable in any portion of the State.

(ii.) *Mining Leases.* These leases are of two classes—(a) Gold leases and (b) mineral leases. (a) *Gold Leases* may be issued for a term not exceeding forty-two years to holders of miners' rights at an annual rent of one shilling an acre. The maximum area which may be so leased is twenty acres. (b) *Mineral Leases* may be issued to holders of miners' rights for lands not comprised in a goldfield. The area leased may not exceed forty acres, nor the term forty-two years. The annual rent is one shilling an acre, together with a royalty of sixpence in the pound on the net profits.

(iii.) *Coal or Oil Leases.* These leases are issued to holders of miner's rights for Crown lands not comprised in goldfields. The maximum area is 640 acres, and the maximum term forty-two years. The rent and conditions are as prescribed. In addition to the rent a royalty of sixpence in the pound on the net profits must be paid.

(iv.) *Miscellaneous Leases.* Leases for any term not exceeding forty-two years may be granted to holders of miners' rights on the prescribed terms and conditions (a) for manufacturing or obtaining salt or gypsum; (b) as sites for smelting or mining works. The maximum area, if the land leased is on a water frontage, is twenty-one acres. A royalty of sixpence in the pound on the net profits must be paid.

(v.) *Business Claims.* Business licenses are granted on payment at the rate of ten shillings for six months, entitling the holder to peg out and occupy for business and resi-

dential purposes a claim not exceeding a quarter of an acre in extent, if within a township, or one acre on other lands.

(vi.) *Occupation Licenses.* Licenses are granted authorising the holder to occupy, for purposes of residence and cultivation, any Crown lands not exceeding half an acre in extent for a term of fourteen years at an annual rent not exceeding two shillings an acre.

(vii.) *Particulars of Leases and Licenses, 1907.* The following table gives particulars of leases and licenses of Crown lands issued by the Mines Department during the year 1907:—

SOUTH AUSTRALIA.—LEASES AND LICENSES

ISSUED BY THE MINES DEPARTMENT DURING YEAR 1907.

| Particulars. | Act under which Issued. | Purpose for which Issued. | Area. |
|---|-----------------------------------|--|-----------------|

6. **Western Australia.**—The issue of leases and licenses by the Mines Department is regulated by the Mining Act 1904. Under this Act Crown lands may be occupied by virtue of (i.) Miners' rights; (ii.) mining leases; and (iii.) miners' homestead leases.

(i.) *Miners' Rights.* Any holder of a miner's right may take up and occupy ground, subject to the approval of the Warden, for the following purposes:—Prospecting for any

minerals; claims, water rights, residence and business areas, and machinery, tailings, washing, or market garden areas. Lands may be occupied by the holder of a miner's right for the purpose of mining for alluvial gold without registration, the only restriction being that the occupier must peg out his holding according to the prescribed regulations.

(ii.) *Mining Leases.* These leases are granted for mining and auxiliary purposes, and are of three descriptions, viz.:—(a) Gold-mining leases; (b) mineral leases; and (c) coal leases. (a) *Gold-mining Leases.* The maximum area is twenty-four acres, except in the case of a mine which has already been worked and abandoned, is excessively wet, or requires costly appliances, when the maximum area is forty-eight acres. (b) *Mineral Leases.* The maximum area is forty-eight acres, except under the special circumstances referred to in the case of gold-mining leases, when the maximum area is ninety-six acres. (c) *Coal Leases.* The maximum area is 320 acres, but special leases of larger areas may be granted to the discoverer of a payable seam.

(iii.) *Miners' Homestead Leases.* These leases are granted for agricultural purposes on land within goldfields. The area is restricted to twenty acres, if within two miles of a township, and if beyond that distance to 500 acres. Improvement conditions are imposed.

(iv.) *Particulars of Leases and Licenses Issued, 1907.* The following table gives particulars of mining leases and licenses issued during 1907:—

WESTERN AUSTRALIA.—MINING LEASES AND LICENSES ISSUED, 1907.

| Particulars. | Gold-Mining. | Minerals other than Gold. | Miners' Homesteads. | Miscellaneous. | Total. |
|--------------|--------------|---------------------------|---------------------|----------------|--------|

7. *Tasmania.*—Under the provisions of the Mining Act 1905, Crown lands in this State may be occupied for mining and auxiliary purposes by virtue of (i.) prospectors' licenses; (ii.) miners' rights; (iii.) mining leases; and (iv.) miscellaneous licenses. Busi-

ness and residence licenses within mining areas may be issued by the Lands Department. (See § 8, 8, iv.)

(i.) *Prospectors' Licenses.* These licenses are granted to the end of the calendar year in which they are applied for, upon payment of the sum of ten shillings if applied for before the 30th June, or five shillings if after that date. They confer the right to prospect upon prescribed Crown lands, and any discoveries made may be protected in the prescribed manner.

(ii.) *Miners' Rights.* These rights are also issued each year upon payment of five shillings if applied for before the 30th June, or of two shillings and sixpence after that date. They confer the right to occupy specified Crown lands and to mine thereon.

(iii.) *Mining Leases.* Mining leases are of three kinds—(a) gold-mining leases; (b) mineral leases; and (c) miscellaneous leases. (a) *Gold-mining Leases* are granted for a term not exceeding twenty-one years at an annual rent of £1 an acre. The maximum area which may be so leased is forty acres. The lessee has the exclusive right to mine for gold and other minerals on the land demised. (b) *Mineral Leases* are issued for mining for minerals other than gold on areas not exceeding eighty acres for a term of not more than twenty-one years, and at an annual rent of five shillings an acre. Leases to mine for coal, shale, slate, freestone, or limestone, may be issued for areas not exceeding 320 acres at an annual rent of two shillings and sixpence an acre. (c) *Miscellaneous Leases.* The Minister may grant leases for mining purposes, for a term not exceeding ten years, of the bed or banks of any river flowing through Crown lands, at a rent of five shillings an acre. The area leased may not exceed forty chains in length by five chains on either side from the centre of the river. Special leases may be granted by the Governor upon resolutions assenting thereto passed by both Houses of Parliament.

(iv.) *Miscellaneous Licenses.* Licenses granting easements for various purposes may be issued, for a term not exceeding twenty-one years, to persons holding mining leases or miner's right for the more advantageous working of the land occupied.

(v.) *Particulars of Leases and Licenses Issued, 1907.* The following table shows particulars of leases and licenses of Crown lands, exclusive of prospectors' licenses and miners' rights, issued by the Mines Department during the year 1907 :—

1. See note to preceding table.

§ II. Resumption by Crown of Alienated Lands.

1. **General.**—Under various Acts alienated lands may be compulsorily resumed by the Crown in the several States for certain purposes, generally connected with works of a public nature. Resumptions for closer settlement purposes have already been referred to (see § 9, above). In most of the States there are Lands Clauses or similar Acts providing the machinery, and indicating the procedure to be adopted in assessing the compensation to be paid by the Crown to private owners in cases where the parties have failed to agree as to the amount to be paid. The provisions of these Acts are generally incorporated in the special Acts specifying the purposes for which alienated lands may be resumed. Lands leased for pastoral purposes may generally be resumed by the Crown on short notice. The lessee is ordinarily entitled to compensation for land resumed, for loss or depreciation in value of the lease caused by such resumption, and for improvements.

(a) *New South Wales.* Alienated lands may be recovered by the Crown for authorised works and certain public purposes under the provisions of the Public Works Act 1900, and in other cases may be acquired by the Crown by purchase, gift, or surrender under Executive authority. Alienated lands required for public roads may be resumed under the Public Roads Act 1902, and if containing gold may be resumed for mining under Section 72 of the Mining Act 1906. Lands dedicated or granted by the Crown for public purposes may be resumed under Section 105 of the Crown Lands Act, 1884, Section 41 of the Crown Lands Act 1889, and Section 1 of the Public Trusts Act 1897. Surrender and exchange of lands alienated or in process of alienation may be carried out under Section 47 of the Crown Lands Act 1895.

(b) *Victoria.* In Victoria lands may be resumed in accordance with the provisions of the Lands Compensation Act 1890, the Public Works Act 1890, the Railways Acts,

the Land Act 1901, the Local Government Act 1903, the Water Act 1905, the Vacant Unclaimed Lands Act 1906, and the Forests Act 1907.

(c) *Queensland.* In this State alienated lands may be resumed under the provisions of the Public Works Land Resumption Act 1906, for any of the purposes specified in section 4 of that Act.

(d) *South Australia.* In this State the principal Acts under which land is re-purchased for public works are the Railways Commissioners Act 1887, the Water Conservations Acts 1886, 1889, and 1900, the Waterworks Act 1882, and the Sewers Act 1878.

(e) *Western Australia.* In Western Australia private lands may be resumed under the provisions of the Land Act 1898, the Roads Act 1902, and the Public Works Act 1902.

(f) *Tasmania.* In the greatest number of cases private lands have been resumed in this State for the purpose of roads by agreement under the Lands Vesting Act 1894 and the Roads Acts, which were to a large extent repealed and consolidated by the Local Government Act 1906. In case of the owners failing to agree as to price, the land is acquired under the Lands Clauses Act 1857, incorporated in the Public Works and the Crown Land Acts. The Lands Resumption Act 1891 provides for the compulsory acquisition of land without waiting for the usual formalities. Under that Act a notification may be given to the owner that the land is required; after the expiration of thirty days the land may be resumed by notification in the *Gazette*, the amount of purchase money being afterwards decided by arbitration, as provided by the Lands Clauses Act.

2. **Areas Resumed, 1901 to 1907.**—The subjoined table shews, so far as particulars are available, the areas of private lands resumed, exclusive of resumptions for closer settlement purposes, in each State during each year from 1901 to 1907, inclusive:—

AREAS OF PRIVATE LANDS RESUMED BY THE CROWN
(EXCLUSIVE OF RESUMPTIONS FOR CLOSER SETTLEMENT), 1901 TO 1907.

* Exclusive of resumptions for railway purposes, which for the years 1901 to 1906, inclusive, amounted to 13,081 acres. † Not available. ‡ Exclusive of South Australia.

§ 12. Alienation and Occupation of Crown Lands in the Several States.

1. **Introduction.**—The tables given in the previous parts of this section shew separately the areas alienated, in process of alienation, and occupied under various tenures in the several States. The tables given below shew collectively the general condition of the public estate in each State, having regard to (a) the area alienated absolutely, which includes free grants, sales, and conditional purchases for which grants have issued, the conditions having been complied with; (b) the area in process of alien-

ation, comprising holdings for which the fee-simple has not yet been alienated, but which are in process of sale under systems of deferred payments; (c) the area occupied under all descriptions of leases and licenses; and (d) the area unoccupied, which, unless otherwise stated, includes roads, reserves, forests, etc. It should be observed that in many cases lands occupied under leases or licenses for pastoral purposes are held on short tenures only, and could thus be made available for settlement practically whenever required.

2. **New South Wales.**—The total area of the State of New South Wales is 198,638,080 acres, of which on the 30th June, 1907, 33,921,508 acres, or about one-sixth, were alienated absolutely, 50,486,733 acres, or about one-quarter, were in process of alienation, 126,081,293 acres, or about three-fifths, were occupied under Lands Department, Western Land Board, or Mines Department leases and licenses, and the remaining 22,070,054 acres, or about one-ninth, were unoccupied. The following table shows the areas alienated, in process of alienation, held under leases and licenses, and unoccupied for each year from 1901 to 1907 :—

NEW SOUTH WALES.—ALIENATION AND OCCUPATION OF CROWN LANDS,

1901 TO 1907.¹

| Particulars. | Area in Acres. | | | | | |
|--|--------------------|--------------------|--------------------|--------------------|--------------------|--------------------|

| Under system of homestead selections (including leases converted, but excluding grants issued) | 1,550,985 | 1,673,966 | 1,734,949 | 1,195,970 | 964,426 | 873,319 |
| Total area in process of alienation | 21,595,688 | 21,042,993 | 20,558,609 | 19,296,487 | 17,484,249 | 16,565,225 |
| 3. Held under Leases and Licenses. | | | | | | |
| Total under Lands Department and Western Land Board | 126,921,161 | 131,649,639 | 128,334,418 | 123,002,033 | 124,088,680 | 125,904,700 |
| Mineral and auriferous leases and licenses (Mines Department) | 134,209 | 131,690 | 127,514 | 124,773 | 148,351 | 176,593 |
| Total leases under all Government Departments | 127,055,370 | 131,781,329 | 128,461,932 | 124,027,706 | 124,237,031 | 126,081,293 |
| 4. Unoccupied | 23,543,468 | 18,154,857 | 20,852,449 | 25,345,570 | 24,430,714 | 22,070,054 |

Area of State—198,638,080 acres.

1. The figures for 1906 and 1907 are up to the 30th June, while for the other years given they are up to the 31st December; 1905 figures are therefore omitted.

3. **Victoria.**—The total area of the State of Victoria is 56,245,760 acres, of which 22,940,143 acres, or about three-eighths, had been alienated absolutely up to the end of the year 1907; 4,488,346 acres, or about one-twelfth, were in process of alienation under deferred payments; and 16,632,965 acres were occupied under leases and licenses, the remainder consisting of reserves, roads, and other unalienated Crown lands. The following table shows the areas alienated and in process of alienation, together with the areas reserved, leased, and available for occupation at the end of each year from 1901 to 1907, inclusive. The corresponding table given in Year Book No. 1 was exclusive of particulars of operations under the Closer Settlement Acts. These particulars have now been included where available:—

VICTORIA.—ALIENATION AND OCCUPATION OF CROWN LANDS,

1901 TO 1907.

Total area of State—56,245,760 acres.

† Not available. * Leases only.

4. **Queensland.**—The total area of this State is 429,120,000 acres, of which, on the 30th June, 1907, 14,924,417 acres, or about one-thirtieth, were alienated absolutely; 4,778,908 acres, or about one-ninetieth, were in process of alienation; 264,219,200, or about five-eighths, were occupied under leases and licenses, the remaining 145,197,475 acres, or about five-sixteenths, being unoccupied. The following table shows the area alienated absolutely, the area in process of alienation, and the area held under various forms of lease and license at the end of each year from 1901 to 1905, inclusive, and on the 30th June, 1906 and 1907:—

QUEENSLAND.—ALIENATION AND OCCUPATION OF CROWN LANDS, 1901 to 1907.

Total area of State (proper), south of lat. 26° S.,—243,244,800 acres.

* Exclusive of miners' rights.

The area of the State of South Australia south of lat. 26° S. is 243,244,800 acres, and of the Northern Territory, 335,116,800 acres, making a total of 578,361,600 acres. In South Australia (proper) at the end of the year 1907, there were 8,316,059 acres, or about one-thirtieth, alienated absolutely; 1,134,424 acres, or about one-two hundred and fortieth, were in process of alienation; 98,692,304 acres, or about two-fifths were occupied under leases and licenses; while the remaining 135,102,013 acres were unoccupied.

In the Northern Territory at the end of the year 1907, there were 473,230 acres, or only about one-seven-hundredth part alienated absolutely: 107,269,509 acres or nearly one-third were held under leases and licenses, while the remaining 227,374,011 acres, or over two-thirds, were unoccupied.

**NORTHERN TERRITORY.—ALIENATION AND OCCUPATION OF CROWN LANDS,
1901 to 1906.**

Total area of Northern Territory—335,116,800 acres

6. Western Australia.—The total area of Western Australia is 624,588,800 acres, of which on the 30th June, 1907, 3,969,965 acres, or about a one hundred and fiftieth part, were alienated absolutely; 9,100,041 acres, or about one-seventieth part, were in process of alienation; while 160,205,944 acres, or about one-quarter, were occupied under leases and licenses issued either by the Lands or the Mines Departments. The remaining 451,312,850 acres, or about two-thirds, were unoccupied.

The table on page 348 shews the area alienated absolutely and conditionally, and the areas held under leases and licenses at the end of each year, from 1901 to 1905, inclusive, and on 30th June, 1906 and 1907.

7. Tasmania.—Of the total area of Tasmania, namely, 16,777,600 acres, there were at the end of the year 1907, 4,805,697 acres, or about one-quarter, alienated absolutely; 796,725 acres, or about one-twentieth, were in process of alienation; 1,432,917 acres, or about one-eighth, were occupied under leases and licenses for either pastoral, agricultural, timber, or mining purposes; the remaining 9,742,261 acres, or about five-eighths, being unoccupied. The table on page 348 shews the areas alienated, in process of alienation, and held under lease or license, and the area unoccupied at the end of each year from 1901 to 1907.

Total area of State—16,777,600 acres.

§ 13. Classification of Holdings according to Size.

1. **General.**—The classification of holdings according to their area is of interest chiefly in relation to the efforts made by the several States in recent years to promote settlement on the land on blocks of suitable size, especially by means of the Closer Settlement Acts. Returns shewing such a classification are only available for three of the States, viz., New South Wales, Victoria, and Western Australia.

2. **New South Wales.**—The total number of holdings of one acre and over in area in this State on the 31st March, 1901, was 69,439. On the 31st March, 1907, the corresponding number was 79,026, shewing an increase of 9587, or about 13.8 per cent. The following table shews the number of holdings of various sizes alienated absolutely, and in process of alienation, on the 31st March of each year from 1903 to 1907, together with the total area occupied by each class on the 31st March, 1907 :—

3. **Victoria.**—Lands alienated absolutely and in process of alienation in this State were classified according to size in March, 1908. In the instances where Crown lands were held in conjunction therewith the area was distributed, regardless of its size, as held by the different occupiers of lands alienated or in process of alienation. The following table shews the number and area of holdings of lands alienated absolutely and in process of alienation, together with the area of Crown land held under lease or license in conjunction therewith, on the 1st March, 1908 :—

VICTORIA.—CLASSIFICATION OF PRIVATE HOLDINGS, 1908.

In the above table the Crown land is not classified according to area, but is simply the total Crown land held in conjunction with each group of holdings. In addition to the areas of Crown land specified above, there are 1,162,930 acres held under various forms of leases and licenses. Particulars as to the number and size of the holdings are given in the subjoined table:—

VICTORIA.—CLASSIFICATION OF HOLDINGS UNDER LEASE OR LICENSE, 1908.

4. **Western Australia.**—In this State the number of holdings of one acre and over in area was 5699 for the season 1900-1 (see "Year Book" No. 1), and was 9157 for the season 1906-7, shewing an increase of 3458, or about 37.76 per cent. The subjoined table shews the number of holdings of lands alienated absolutely, and in process of alienation, from which returns were received for the different seasons since the season 1900-1901, classified according to size.

WESTERN AUSTRALIA.—NUMBER OF HOLDINGS OF ALIENATED LANDS, AND LANDS IN PROCESS OF ALIENATION, 1901 to 1907.

1. Number of holdings of 30,001 acres and upwards.

§ 14. The Progress of Land Settlement, 1897 to 1907.

1. **Recent Progress.**—The progress of settlement and the growth of land alienation in the States of the Commonwealth under recent legislation is seen in the subjoined statement which shews concisely the condition of the public estate in each State and in the Commonwealth at the end of each year from 1897 to 1907, inclusive. The effect of the land laws during that period has been generally to diminish the number of large holdings, at the same time decreasing the area held under lease, while both the area alienated and the area in process of alienation have increased. As leases of large areas fall in or are otherwise terminated they are in many cases not renewed, but the land leased is cut up for the purpose of settlement under systems of deferred payment; the State Governments, also, have in many cases acquired by repurchase considerable areas under the provisions of the various Closer Settlement Acts. Further, greater facilities have been granted to the working classes to acquire possession of the soil, and special inducements have been offered to *bonâ fide* settlers by the introduction of new forms of tenure on easy terms and conditions.

**TOTAL AREAS ALIENATED, IN PROCESS OF ALIENATION,
HELD UNDER LEASE OR LICENSE, AND UNOCCUPIED, IN EACH STATE AND IN
THE COMMONWEALTH AT THE END OF EACH YEAR FROM 1897 TO 1907,
INCLUSIVE, EXPRESSED ABSOLUTELY AND AS PERCENTAGES OF AREA OF
ENTIRE STATE.**

2. **Diagram shewing Condition of Public Estate.**—The following diagram shews the condition of the public estate in the Commonwealth at the end of the year 1907. The square itself represents the total area of the Commonwealth, while the relative areas of individual States are shewn by the vertical rectangles. The areas alienated absolutely, in process of alienation under systems of deferred payments, and the areas held under leases or licenses, are designated by the differently-shaded areas as described in the reference given below the diagram, while the areas unoccupied are left unshaded:—

| | | | |
|-------------------------------|---|-----------------------------|---|
| Area alienated absolutely |  | Area held under lease, etc. |  |
| Area in process of alienation |  | Area unoccupied |  |

SECTION VII.

PASTORAL PRODUCTION.

§ 1. Initiation and Growth of Pastoral Industry.

1. **Early Statistics.**—The live stock which Captain Phillip brought with him when establishing the first settlement in Australia, in January, 1788, is stated to have comprised seven horses, six cattle, twenty-nine sheep, twelve pigs, and a few goats. Later in the same year, in a letter from Captain Phillip to Lord Sydney, then Secretary of State for the Colonies, an enclosure signed by "Andrew Miller, Commissary," sets forth in detail the numbers of each kind of live stock in the colony on 1st May, 1788. A summary of the particulars supplied is as follows:—Horses, 7; cattle, 7; sheep, 29; pigs, 74; rabbits, 5; turkeys, 18; geese, 29; ducks, 35; fowls, 209. In view of the depredation since caused by rabbits their inclusion in this return as part of the live stock of the Commonwealth is of interest.

2. **Subsequent Development.**—During the years immediately succeeding the first settlement the growth of the number of live stock was slow, and notwithstanding importations from India and the Cape of Good Hope the total of the flocks and herds of Australia amounted in 1800 to only 203 horses, 1044 cattle, 6124 sheep, and 4017 pigs. During the next fifty years, however, the pastoral industry made rapid strides, and at the end thereof (1850) the totals reached were 159,951 horses, 1,894,834 cattle, 15,993,954 sheep, and 114,000 pigs.

The statistical records of live stock in Australia prior to the year 1860 are somewhat defective, but from that year onwards fairly complete particulars are available in most of the States. At the present time statistics of live stock are collected annually in all the States, principally through the agency of the police, but in the years 1885 to 1888 inclusive, and 1893 to 1895 inclusive, no such particulars were collected in South Australia, and similar gaps occur in the Victorian records for the periods 1895 to 1899 inclusive, and 1901 to 1903. In order to obtain totals for the Commonwealth for these years the missing numbers have been supplied by interpolation. The results so obtained probably differ but slightly from the actual numbers for the respective years.

3. **Increase in Numbers.**—Particulars concerning the numbers of each kind of live stock in the Commonwealth from 1860 to 1900 at quinquennial intervals, and thence onwards in single years, are given in the following table, and are shewn continuously in the graphs as given hereinafter.

During the forty-seven years covered by the table on the next page the live stock of the Commonwealth increased considerably, horses by 334 per cent., cattle 157 per cent., sheep 335 per cent., and pigs 115 per cent. The average annual increases which these aggregates represent are as follows:—Horses, 3.17 per cent. per annum; cattle, 2.03 per cent.; sheep, 3.18 per cent.; and pigs, 1.64 per cent.

COMMONWEALTH LIVE STOCK, 1860 to 1907.

| Year. | Horses. | Cattle. | Sheep. | Pigs. |
|-------------|-----------|------------|------------|-----------|
| 1860 | 431,525 | 3,957,915 | 20,135,286 | 351,096 |
| 1865 | 566,574 | 3,724,813 | 29,539,928 | 345,704 |
| 1870 | 716,772 | 4,276,326 | 41,593,612 | 543,388 |
| 1875 | 835,393 | 6,389,610 | 53,124,209 | 549,808 |
| 1880 | 1,068,402 | 7,527,142 | 62,186,702 | 815,776 |
| 1885 | 1,143,064 | 7,397,947 | 67,491,976 | 748,908 |
| 1890 | 1,521,588 | 10,299,913 | 97,881,221 | 891,138 |
| 1895 | 1,680,419 | 11,767,488 | 90,689,727 | 822,750 |
| 1900 | 1,609,654 | 8,640,225 | 70,602,995 | 950,349 |
| 1901 | 1,620,420 | 8,493,678 | 72,040,211 | 931,309 |
| 1902 | 1,524,601 | 7,067,242 | 53,668,347 | 777,289 |
| 1903 | 1,546,054 | 7,254,258 | 56,932,705 | 837,368 |
| 1904 | 1,595,256 | 7,849,520 | 65,823,918 | 1,062,703 |
| 1905 | 1,673,805 | 8,525,025 | 74,403,704 | 1,014,853 |
| 1906 | 1,765,186 | 9,349,409 | 83,687,655 | 813,569 |
| 1907 | 1,871,714 | 10,180,214 | 87,650,263 | 754,101 |

4. **Fluctuations.**—The increases referred to, however, have not been continuous, marked fluctuations having taken place during the period, mainly on account of the droughts which have from time to time left their impress on the pastoral history of Australia. These were in evidence in 1869, 1877, 1884, 1895 and subsequent years, and in 1902. The last-mentioned was one of the most severe experienced in Australia, the number of sheep in the Commonwealth diminishing under its influence from 72,040,211 on 31st December, 1901, to 53,668,347 at the same date in 1902—a decrease of more than 25 per cent.

The extraordinary recuperative power of Australia is evidenced by the large increases in the numbers of stock which the good seasons, supervening on the various droughts, have witnessed. Thus, in the five years from 1902 to 1907, horses increased by 347,113, cattle by 3,112,972, and sheep by 33,981,916, the corresponding increases per cent. being horses 22.77 per cent., cattle 44.05 per cent., and sheep 63.32 per cent.

The number of horses in the Commonwealth at the end of 1907 was higher than for any previous year. The number of cattle was higher than for any year since 1898, and the number of sheep higher than for any year since 1896. The years in which the numbers of live stock attained their maxima are as follows:—Horses, 1907, 1,871,714; cattle, 1894, 12,311,617; sheep, 1891, 106,421,068; and pigs, 1904, 1,062,703.

5. **Live Stock in Relation to Population.**—The number of each kind of live stock per head of the population of the Commonwealth has varied during the past forty-seven years in the manner shewn in the succeeding table:—

NUMBER OF LIVE STOCK PER HEAD OF POPULATION, 1860 to 1907.

| Year. | Horses. | Cattle. | Sheep. | Pigs. | Year. | Horses. | Cattle. | Sheep. | Pigs. |
|----------|---------|---------|--------|-------|----------|---------|---------|--------|-------|
| 1860 ... | 0.38 | 3.45 | 17.58 | 0.31 | 1900 ... | 0.43 | 2.29 | 18.75 | 0.25 |
| 1865 ... | 0.41 | 2.68 | 21.25 | 0.25 | 1901 ... | 0.42 | 2.22 | 18.83 | 0.24 |
| 1870 ... | 0.43 | 2.60 | 25.24 | 0.33 | 1902 ... | 0.39 | 1.82 | 13.82 | 0.20 |
| 1875 ... | 0.44 | 3.37 | 27.99 | 0.29 | 1903 ... | 0.39 | 1.85 | 14.50 | 0.21 |
| 1880 ... | 0.48 | 3.37 | 27.87 | 0.37 | 1904 ... | 0.40 | 1.97 | 16.52 | 0.27 |
| 1885 ... | 0.42 | 2.75 | 25.05 | 0.28 | 1905 ... | 0.41 | 2.10 | 13.36 | 0.25 |
| 1890 ... | 0.48 | 3.27 | 31.06 | 0.28 | 1906 ... | 0.43 | 2.27 | 20.31 | 0.20 |
| 1895 ... | 0.48 | 3.36 | 25.93 | 0.24 | 1907 ... | 0.45 | 2.43 | 20.88 | 0.18 |

Considered in relation to population, the live stock attained its maximum in the period 1890-5, and its minimum in the year 1902. During the period of forty-seven years under review, the number of horses varied but slightly in proportion to population, the range being from 0.38 to 0.48 per head. In the case of cattle, the limits of variation were 1.82 and 3.45; sheep, 13.82 and 31.06; and pigs, 0.18 and 0.37.

6. **Live Stock in Relation to Area.**—The numbers of live stock per square mile in the several States of the Commonwealth on 31st December, 1907, were as follows:—

NUMBER OF LIVE STOCK PER SQUARE MILE, 31st DECEMBER, 1907.

| State. | Horses. | Cattle. | Sheep. | Pigs. |
|--------------------|---------|---------|--------|-------|
| New South Wales | 1.86 | 8.86 | 143.26 | 0.70 |
| Victoria | 4.83 | 20.97 | 160.97 | 2.40 |
| Queensland | 0.73 | 5.80 | 24.96 | 0.20 |
| South Australia... | 0.25 | 0.78 | 7.61 | 0.10 |
| Western Australia | 0.12 | 0.79 | 3.78 | 0.05 |
| Tasmania | 1.54 | 8.22 | 66.56 | 1.78 |
| Commonwealth | 0.63 | 3.42 | 29.47 | 0.25 |

7. **Net Exports of Principal Pastoral Products.**—The quantities by which the exports of the principal pastoral products of the Commonwealth exceeded the imports for the years 1901 to 1907 are as follows:—

QUANTITIES OF NET EXPORTS OF PRINCIPAL PASTORAL PRODUCTS OF THE COMMONWEALTH, 1901 to 1907.

| Products. | Unit of Quantity. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

* Quantity not available. † Including lamb. Note. — signifies net imports.

The values of the net exports for the same seven years are furnished in the table on the next page and amount to no less a total than £162,813,452 for the period, or an average of £23,259,065 per annum, of which wool represents about 80 per cent. Skins, meats, and tallow, rank next in order of importance.

§ 2. Horses.

1. Suitability of Australia for Horse-breeding.—From the earliest times the suitability of the climate and pastures of Australia for the production of serviceable breeds of horses has been fully recognised. By the importation of high-class sires, and the careful selection of breeding mares, these natural advantages were utilised to the fullest extent, all classes of horses being bred. As a consequence of this combination of advantages the Australian horse, whether of the heavy draught, medium weight or light saddle and carriage variety, compares more than favourably with the product of other lands. The Australian horse has been found suitable for the army in India, and large numbers are obtained annually for remount purposes.

2. Distribution throughout the Commonwealth.—As regards numbers, the State of New South Wales, the earliest settled of the group, established a lead, which it has ever since retained. The figures for the several States for a series of years are as follows:—

NUMBER OF HORSES, STATES AND COMMONWEALTH, 1860 to 1907.

| Year. | New South Wales. | Victoria. | Queensland. | South Australia. | Western Australia. | Tasmania. | Commonwealth. |
|----------|------------------|-----------|-------------|------------------|--------------------|-----------|---------------|
| 1860 ... | 251,497 | 76,536 | 23,504 | 49,399 | 9,555 | 21,034 | 431,525 |
| 1865 ... | 282,587 | 121,051 | 51,091 | 73,993 | 15,700 | 22,152 | 566,574 |

| 1901 ... | 486,716 | 387,277 | 462,119 | 178,199 | 73,710 | 32,399 | 1,620,420 |
| 1902 ... | 450,125 | 382,317 | 399,122 | 179,413 | 80,158 | 33,466 | 1,524,601 |
| 1903 ... | 458,014 | 377,357 | 401,984 | 192,411 | 82,747 | 33,541 | 1,546,054 |
| 1904 ... | 482,663 | 372,397 | 413,165 | 200,241 | 90,225 | 36,565 | 1,595,256 |
| 1905 ... | 506,884 | 385,513 | 430,565 | 216,345 | 97,397 | 37,101 | 1,673,805 |
| 1906 ... | 537,762 | 406,840 | 452,916 | 224,447 | 104,922 | 38,299 | 1,765,186 |
| 1907 ... | 573,326 | 424,648 | 488,486 | 226,532 | 113,330 | 40,392 | 1,871,714 |

3. **Proportion in the Several States.**—The percentages of the numbers of horses in the several States on the totals for the Commonwealth for the past seven years are as follows:—

**PERCENTAGE OF HORSES IN EACH STATE ON TOTAL FOR COMMONWEALTH,
1901 TO 1907.**

| Year. | New South Wales. | Victoria. | Queensland. | South Australia. | Western Australia. | Tasmania. | Commonwealth. |
|----------|------------------|-----------|-------------|------------------|--------------------|-----------|---------------|
| | % | % | % | % | % | % | % |
| 1900 ... | 29.91 | 24.37 | 28.38 | 11.14 | 4.24 | 1.96 | 100.00 |
| 1901 ... | 30.03 | 23.90 | 28.52 | 11.00 | 4.55 | 2.00 | 100.00 |
| 1902 ... | 29.52 | 25.08 | 26.18 | 11.77 | 5.26 | 2.19 | 100.00 |
| 1903 ... | 29.62 | 24.41 | 26.00 | 12.45 | 5.35 | 2.17 | 100.00 |
| 1904 ... | 30.26 | 23.34 | 25.90 | 12.55 | 5.66 | 2.29 | 100.00 |
| 1905 ... | 30.28 | 23.03 | 25.72 | 12.93 | 5.82 | 2.22 | 100.00 |
| 1906 ... | 30.47 | 23.05 | 25.66 | 12.71 | 5.94 | 2.17 | 100.00 |
| 1907 ... | 30.90 | 22.69 | 26.10 | 12.10 | 6.05 | 2.16 | 100.00 |

During the period under review, the proportions in New South Wales, South Australia, Western Australia and Tasmania have increased, while those in Victoria and Queensland have diminished.

4. **Export Trade in Horses.**—Australia's export trade in horses is a fairly considerable, though somewhat fluctuating, one. During the past seven years it has varied in number between 9527 for the year 1903 and 32,474 in 1901, and in value between £164,224 and £438,248 respectively for the same two years. The total number of horses exported during the seven years amounted to 116,752, an average of 16,679 per annum. The total value of the exports for the period was £2,015,374 or £287,911 per annum. The average export value per head for the period was £17 5s. 3d. The numbers exported to the principal countries concerned in this trade are as follows:—

NUMBER AND DESTINATION OF HORSES EXPORTED, 1901 to 1907.

| Country to which Exported. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

| Japan | 100 | ... | 715 | 8,095 | 30,215 | 1,990 | 11,715 |
| New Zealand | 6,934 | 2,786 | 22,051 | 19,310 | 13,206 | 8,261 | 4,020 |
| Philippine Islands ... | 190 | 369 | 8,087 | 3,827 | 10,151 | 2,603 | 4,949 |
| China | 4,460 | 2,330 | 440 | 851 | 2,671 | 5,942 | 3,299 |
| Other Countries | 10,530 | 3,747 | 14,358 | 13,505 | 17,754 | 12,714 | 14,391 |
| Total | 438,248 | 242,666 | 164,224 | 225,780 | 366,730 | 258,256 | 319,470 |

It will be seen from the foregoing tables that the export trade in horses with India, the Straits Settlements, and Java has been fairly uniform throughout the seven years under review, but that the particulars for some of the other countries specified exhibit marked fluctuations. Thus in the case of Natal and Cape of Good Hope a large export trade took place in 1901 and 1902, which, on the cessation of the South African war, dropped to comparative insignificance. The exports to Hong Kong and Japan also were exceptionally large in 1905.

The number of horses imported into the Commonwealth is comparatively small, consisting mainly of valuable animals introduced for breeding purposes, and imported principally from New Zealand and the United Kingdom. The average value per head of the horses imported during the seven years was £110 14s. 9d., as compared with £17 5s. 3d. per head for the exports for the same period. The average number imported per annum was, however, only 310, and the average annual value £34,296. The following table furnishes a comparison of imports and exports of horses during the seven years 1901 to 1907:—

COMMONWEALTH IMPORTS AND EXPORTS OF HORSES, 1901 to 1907.

| Year. | Imports. | | Exports. | | Net Exports. | |
|--------------------------|--------------|----------------|----------------|------------------|----------------|------------------|
| | No. | Value. | No. | Value. | No. | Value. |
| | | £ | | £ | | £ |
| 1901 | 246 | 19,601 | 32,474 | 438,248 | 32,228 | 418,647 |
| 1902 | 188 | 24,280 | 17,437 | 242,666 | 17,249 | 218,386 |
| 1903 | 181 | 14,278 | 9,527 | 164,224 | 9,346 | 149,946 |
| 1904 | 290 | 37,238 | 13,102 | 225,780 | 12,812 | 188,542 |
| 1905 | 321 | 39,283 | 20,808 | 366,730 | 20,487 | 327,447 |

1. Austria, 1900; Hungary, 1895. 2. Employed on farms and in Paris. 3. Agricultural horses, unbroken horses, and breeding mares only. 4. Exclusive of Formosa. 5. Exclusive of Bengal. 6. Exclusive of cavalry horses and horses for the Royal household.

6. **Relation to Population.**—In proportion to population, horses are much more numerous in Queensland than in any of the other States. South Australia is next in order, while Tasmania has the smallest number of horses per head. In all the States except Queensland the number of horses per head of population was somewhat higher in 1907 than in 1900. Particulars for the past eight years are as follows:—

**NUMBER OF HORSES PER HEAD OF POPULATION, COMMONWEALTH AND STATES,
1900 TO 1907.**

| Year. | N.S.W. | Vic. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|----------|--------|------|---------|----------|----------|------|-----------|
| 1900 ... | 0.35 | 0.33 | 0.92 | 0.50 | 0.38 | 0.18 | 0.43 |

| 1907 ... | 0.37 | 0.34 | 0.90 | 0.58 | 0.43 | 0.22 | 0.45 |

7. **Value of Australian Horses.**—An accurate valuation of the horses in Australia cannot readily be obtained, but the following estimate may be taken as furnishing a rough approximation to the values as at 31st December, 1907:—

ESTIMATED VALUE OF HORSES IN AUSTRALIA, 31st DECEMBER, 1907.

| State ... | N.S.W. | Victoria. | Q'nsland. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|-----------|-----------|-----------|-----------|-----------|-----------|---------|------------|
| Value... | £ | £ | £ | £ | £ | £ | £ |
| | 5,780,000 | 5,100,000 | 3,910,000 | 2,270,000 | 1,360,000 | 480,000 | 18,900,000 |

§ 3. Cattle.

1. Purposes for which Raised.—In all the States of the Commonwealth cattle-raising is carried out on a more or less extensive scale, the main object in certain States being the production of stock suitable for slaughtering purposes, and in others the raising of profitable dairy herds. The great impetus which the development of the export trade in Australian butter gave to the dairying industry in the Commonwealth led to a considerable increase in the numbers and quality of the dairy herds of the States of Victoria and New South Wales in particular, the sub-tropical portion of Australia being apparently the best adapted to this industry. On the other hand, by far the finest specimens of beef-producing cattle are those raised in the tropical districts of the Commonwealth, *i.e.*, in the northern parts of Queensland, in the Northern Territory of South Australia, and in the Kimberley districts in the north of Western Australia.

2. Distribution throughout Commonwealth.—Until 1880 New South Wales occupied the leading position in the Commonwealth group as a cattle-raising State, but in that year Queensland forged ahead and obtained a lead which it has since maintained. The extent of this lead has, however, varied considerably, owing principally to the effects produced by the tick fever and droughts, from both of which causes the Queensland herds suffered more severely than those of the other States. In fact, during the period from 1894, when the number of cattle in Queensland attained its maximum of rather more than 7,000,000, to 1903, when the number recorded was less than 2,500,000, an uninterrupted decline was experienced. During the past four years, however, a rapid improvement has taken place, and the total reached on 31st December, 1907, was nearly 3,900,000.

The numbers of cattle in the several States at quinquennial intervals from 1860 to 1900 and thence onwards for each year are as follows:—

NUMBER OF CATTLE IN STATES AND COMMONWEALTH, 1860 to 1907.

| Year. | N.S.W. | Victoria. | Queensland. | S. Aust. | W. Aust. | Tasmania. | C'wealth. |
|-------|-----------|-----------|-------------|----------|----------|-----------|------------|
| 1860 | 2,408,586 | 722,332 | 432,890 | 278,265 | 32,476 | 83,366 | 3,957,915 |
| 1865 | 1,961,905 | 621,337 | 848,346 | 158,057 | 45,148 | 90,020 | 3,724,813 |
| 1870 | 2,195,096 | 721,096 | 1,076,630 | 136,832 | 45,213 | 101,459 | 4,276,326 |
| 1875 | 3,134,086 | 1,054,598 | 1,812,576 | 219,240 | 50,416 | 118,694 | 6,389,610 |
| 1880 | 2,580,040 | 1,286,267 | 3,162,752 | 307,177 | 63,719 | 127,187 | 7,527,142 |
| 1885 | 1,317,315 | 1,290,790 | 4,162,652 | 418,140 | 70,408 | 138,642 | 7,397,947 |
| 1890 | 2,091,229 | 1,782,978 | 5,553,264 | 574,032 | 130,970 | 162,440 | 10,299,913 |
| 1895 | 2,150,057 | 1,795,314 | 6,822,401 | 636,824 | 200,091 | 162,801 | 11,767,488 |
| 1900 | 1,983,116 | 1,602,384 | 4,078,191 | 472,428 | 338,590 | 165,516 | 8,640,225 |
| 1901 | 2,047,454 | 1,625,532 | 3,772,707 | 480,777 | 398,547 | 168,661 | 8,493,678 |
| 1902 | 1,741,226 | 1,648,680 | 2,543,471 | 519,163 | 437,136 | 177,566 | 7,067,242 |
| 1903 | 1,880,578 | 1,671,828 | 2,481,717 | 536,580 | 497,617 | 185,938 | 7,254,258 |
| 1904 | 2,149,129 | 1,694,976 | 2,722,340 | 520,379 | 561,490 | 201,206 | 7,849,520 |
| 1905 | 2,337,973 | 1,737,690 | 2,963,695 | 647,631 | 631,825 | 206,211 | 8,525,025 |
| 1906 | 2,549,944 | 1,804,323 | 3,413,919 | 680,095 | 690,011 | 211,117 | 9,349,409 |
| 1907 | 2,749,193 | 1,842,807 | 3,892,232 | 709,352 | 771,107 | 215,523 | 10,180,214 |

3. Proportion in each State.—During the period elapsing between 1900 and 1907 the proportion of cattle in the several States has varied considerably, as shewn hereunder:—

**PERCENTAGE OF CATTLE IN EACH STATE ON TOTAL FOR COMMONWEALTH,
1900 TO 1907.**

| Year. | N.S.W. | Vic. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|----------|--------|-------|---------|----------|----------|------|-----------|
| | % | % | % | % | % | % | % |
| 1900 ... | 22.95 | 18.55 | 47.20 | 5.47 | 3.92 | 1.91 | 100.00 |
| 1901 ... | 24.10 | 19.14 | 44.42 | 5.66 | 4.69 | 1.99 | 100.00 |
| 1902 ... | 24.64 | 23.33 | 35.99 | 7.35 | 6.18 | 2.51 | 100.00 |
| 1903 ... | 25.92 | 23.05 | 34.21 | 7.40 | 6.86 | 2.56 | 100.00 |
| 1904 ... | 27.38 | 21.59 | 34.68 | 6.63 | 7.15 | 2.57 | 100.00 |
| 1905 ... | 27.42 | 20.38 | 34.77 | 7.60 | 7.41 | 2.42 | 100.00 |
| 1906 ... | 27.27 | 19.30 | 36.52 | 7.27 | 7.38 | 2.26 | 100.00 |
| 1907 ... | 27.00 | 18.10 | 38.23 | 6.97 | 7.58 | 2.12 | 100.00 |

A comparison of the positions of the several States in 1900 and 1907 shows that, while Queensland's proportion of the Commonwealth herds has suffered a marked diminution, and that of Victoria a slight diminution, the Tasmanian proportion was slightly higher in the latter than in the former year, and fairly large increases were in evidence in New South Wales, South Australia and Western Australia. The most noticeable increase in proportion is that of Western Australia, from 3.92% in 1900 to 7.58% in 1907.

4. Imports and Exports of Cattle.—Although the various products of the cattle-raising industry bulk largely in the export trade of the Commonwealth, the export of live cattle from Australia has never been considerable. The number of cattle imported is also small, consisting, as in the case of horses, mainly of valuable animals for breeding. One effect of this is that although more than twice as many cattle were exported during the past seven years as were imported, the value of imports exceeded the value of exports by no less than £10,761. Details are as follows:—

COMMONWEALTH IMPORTS AND EXPORTS OF CATTLE, 1901 to 1907.

| Year. | Imports. | | Exports. | | Net Exports. | |
|----------|----------|--------|----------|--------|--------------|----------|
| | No. | Value. | No. | Value. | No. | Value.* |
| | | £ | | £ | | £ |
| 1901 ... | 114 | 3,591 | 2,413 | 22,088 | 2,299 | 18,497 |
| 1902 ... | 2,929 | 49,231 | 4,489 | 19,002 | 1,560 | — 30,229 |
| 1903 ... | 161 | 9,569 | 939 | 9,302 | 778 | — 267 |
| 1904 ... | 145 | 7,903 | 770 | 7,115 | 625 | — 788 |
| 1905 ... | 1,022 | 10,591 | 1,280 | 15,451 | 258 | — 4,860 |
| 1906 ... | 161 | 6,762 | 552 | 5,373 | 391 | — 1,389 |
| 1907 ... | 183 | 10,204 | 687 | 8,759 | 504 | — 1,445 |
| | 4,715 | 97,851 | 11,130 | 87,090 | 6,415 | — 10,761 |

* — Signifies net imports.

The comparatively large export figures for 1901 and 1902 were due to exports to Natal and Cape of Good Hope.

5. Cattle Slaughtered.—Complete returns of the number of cattle slaughtered annually in the Commonwealth are not obtainable, as these particulars are collected in Tasmania for Hobart and Launceston only, and were collected in South Australia for

the first time in 1908. Estimates for the missing years for these States have, however been made, as shewn in the following table :—

**CATTLE (INCLUDING CALVES) SLAUGHTERED, COMMONWEALTH AND STATES,
1901 TO 1907.**

| Year. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|----------|---------|-----------|---------|----------|----------|--------|-----------|
| 1901 ... | 335,823 | 251,477 | 377,433 | 72,000 | 39,424 | 34,000 | 1,110,157 |
| 1902 ... | 288,131 | 233,206 | 344,731 | 72,000 | 43,882 | 34,000 | 1,015,950 |
| 1903 ... | 275,199 | 235,284 | 262,423 | 73,000 | 40,501 | 35,000 | 921,407 |
| 1904 ... | 299,089 | 243,937 | 210,715 | 73,000 | 44,199 | 35,000 | 905,940 |
| 1905 ... | 320,857 | 249,454 | 214,462 | 74,000 | 51,758 | 35,000 | 945,531 |
| 1906 ... | 358,877 | 261,034 | 223,469 | 75,000 | 55,034 | 35,000 | 1,008,414 |
| 1907 ... | 395,370 | 289,709 | 227,814 | 60,527 | 56,000 | 36,000 | 1,065,420 |

For Hobart and Launceston only, the figures for the years 1901 to 1907 were, respectively, 8815, 10,193, 9842, 10,708, 12,035, 10,503, and 12,037.

6. Export of Frozen Beef.—A large export trade in beef preserved by cold process is carried on by the Commonwealth, mainly with South Africa, the United Kingdom, and the Philippine Islands. The quantities so exported during the seven years 1901 to 1907 are as follows:—

QUANTITY OF FROZEN BEEF EXPORTED FROM AUSTRALIA, 1901 to 1907.

| Country to which Exported. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|----------------------------|------------|------------|------------|------------|------------|------------|------------|

| Philippine Islands ... | 137,540 | 102,522 | 93,751 | 84,287 | 140,350 | 112,546 | 108,505 |
| Russia ... | ... | ... | ... | ... | ... | 105,445 | 112,098 |
| Malta ... | 12,323 | 9,944 | 18,852 | 20,318 | 10,540 | ... | 8,852 |
| Egypt ... | 5,132 | 1,710 | 10,724 | 3,954 | 16,861 | 22,027 | 19,135 |
| Straits Settlements ... | ... | 22,716 | ... | ... | 7,553 | 8,080 | 11,515 |
| Gibraltar ... | 10,361 | 2,090 | 242 | ... | 1,490 | 12,204 | 4,432 |
| Mauritius ... | ... | 22,350 | 5,541 | 4,748 | 3,296 | 4,665 | ... |
| Other countries ... | 10,498 | 4,966 | 477 | 2,656 | 9,485 | 6,713 | 7,204 |
| Total ... | 1,175,145 | 1,050,828 | 827,501 | 442,437 | 441,925 | 434,455 | 575,732 |

During the seven years under review the most consistent of Australia's leading customers for frozen beef has been the Philippine Islands. Cape of Good Hope and Natal are the countries to which the largest export took place during the period, while the United Kingdom was third in this respect. A considerable trade with Russia has also sprung into existence during the last few years.

7. **Comparison with other Countries.**—In the following comparison of the herds of Australia with those of some of the principal cattle-raising countries of the world, the latest available figures have been inserted in each case:—

NUMBER OF CATTLE IN VARIOUS COUNTRIES.

| Country. | Date. | No. of Cattle. | Country. | Date. | No. of Cattle. |
|----------------------------------|----------------|-------------------|---------------------------|-------|----------------|
| British India ¹ ... | 1904-5 | 90,597,053 | Spain ... | 1891 | 2,217,659 |
| United States of America ... | 1906 | 72,533,996 | Cape of Good Hope ... | 1904 | 1,954,390 |
| Russian Empire ... | 1906 | 43,203,711 | New Zealand ... | 1906 | 1,851,750 |

1. Exclusive of Bengal. 2. Inclusive of buffaloes. 3. Austria 1900, Hungary 1895. 4. Exclusive of Formosa.

8. **Relation to Population.**—The number of cattle per head of population differs considerably in the several States, and is also subject to marked variation from year to year in the same State. Particulars for the past eight years are as follows:—

NUMBER OF CATTLE PER HEAD OF POPULATION, 1901 to 1907.

| Year. | N.S.W. | Victoria. | Q'land. | S. Aust. | W.Aust. | Tas. | C'wealth. |
|----------|--------|-----------|---------|----------|---------|------|-----------|
| 1900 ... | 1.46 | 1.34 | 8.26 | 1.30 | 1.88 | 0.96 | 2.29 |
| 1901 ... | 1.49 | 1.34 | 7.46 | 1.31 | 2.05 | 0.97 | 2.22 |
| 1902 ... | 1.24 | 1.37 | 4.98 | 1.42 | 2.05 | 1.00 | 1.82 |
| 1903 ... | 1.32 | 1.38 | 4.81 | 1.45 | 2.19 | 1.04 | 1.85 |
| 1904 ... | 1.47 | 1.40 | 5.22 | 1.40 | 2.32 | 1.12 | 1.97 |
| 1905 ... | 1.57 | 1.43 | 5.61 | 1.71 | 2.48 | 1.14 | 2.10 |
| 1906 ... | 1.67 | 1.46 | 6.38 | 1.77 | 2.64 | 1.17 | 2.27 |
| 1907 ... | 1.75 | 1.48 | 7.18 | 1.81 | 2.95 | 1.17 | 2.43 |

For the Commonwealth as a whole the ratio of cattle to population is slightly greater for 1907 than for 1900. This excess of the 1907 figures over those for 1900 is in evidence in all the States except Queensland, and is most marked in the case of Western Australia. In Queensland also the ratio has increased very rapidly during the past four years.

9. **Value of Australian Cattle.**—The value of the cattle in the several States of the Commonwealth on the 31st December, 1907, was approximately as follows:—

VALUE OF CATTLE IN AUSTRALIA, 31st DECEMBER, 1907.

| State. | N.S.W. | Victoria. | Q'sland. | S. Aust. | W. Aust. | Tasmania. | C'wealth. |
|--------|--------------|--------------|--------------|-------------|-------------|-------------|--------------|
| Value | £ 16,500,000 | £ 11,980,000 | £ 17,520,000 | £ 4,260,000 | £ 5,010,000 | £ 1,620,000 | £ 56,890,000 |

§ 4. Sheep.

1. **The Founding of the Commonwealth Pastoral Industry.**—Fortunately for Australia, the suitability of its climate and general conditions for the production of a high class of wool was, at an early date in the history of its settlement, surmised and tested by Captain Macarthur, one of the pioneer sheep-breeders of New South Wales. To the energy of this enterprising pastoralist is due in large measure the rapid and extremely satisfactory development of Australia as a producer of fine wool, and though it would appear that the introduction of the Merino sheep into Australia was not due to Macarthur, a great deal of the credit for having successfully established the pastoral industry in Australia must certainly be his.

2. **Distribution throughout Commonwealth.**—With the exception of a short period in the early sixties, when the flocks of Victoria outnumbered those of the mother State, New South Wales has maintained amongst the Commonwealth group the lead in sheep production which naturally attached to it as the portion of the Commonwealth in which settlement was first effected. From 1878 onwards, the number of sheep in New South Wales has, in every year except 1902, represented more than half the total for the Commonwealth.

The number of sheep in the several States at quinquennial intervals from 1860 to 1900, and for each year onwards to 1907, are as follows:—

NUMBER OF SHEEP IN AUSTRALIA, 1860 to 1907.

| Year. | New South Wales. | Victoria. | Queensland. | South Australia. | Western Australia. | Tasmania. | Total C'wealth. |
|-------|------------------|------------|-------------|------------------|--------------------|-----------|-----------------|
| 1860 | 6,119,163 | 5,780,896 | 3,449,350 | 2,824,811 | 260,136 | 1,700,930 | 20,135,286 |
| 1865 | 8,132,511 | 8,835,380 | 6,594,966 | 3,779,308 | 445,044 | 1,752,719 | 29,539,928 |
| 1870 | 16,308,585 | 10,761,887 | 8,163,818 | 4,400,655 | 608,892 | 1,349,775 | 41,593,612 |
| 1875 | 25,353,924 | 11,749,532 | 7,227,774 | 6,179,395 | 881,861 | 1,731,723 | 53,124,209 |
| 1880 | 35,398,121 | 10,360,285 | 6,935,967 | 6,463,897 | 1,231,717 | 1,796,715 | 62,186,702 |
| 1885 | 37,820,906 | 10,681,837 | 8,994,322 | 6,643,565 | 1,702,719 | 1,648,627 | 67,491,976 |
| 1890 | 55,986,431 | 12,692,843 | 18,007,234 | 7,050,544 | 2,524,913 | 1,619,256 | 97,881,221 |
| 1895 | 47,617,687 | 12,791,084 | 19,856,959 | 6,604,319 | 2,295,832 | 1,523,846 | 90,689,727 |
| 1900 | 40,020,506 | 10,841,790 | 10,339,185 | 5,283,247 | 2,434,311 | 1,683,956 | 70,602,995 |
| 1901 | 41,857,099 | 10,673,265 | 10,030,971 | 5,060,540 | 2,625,855 | 1,792,481 | 72,040,211 |
| 1902 | 26,649,424 | 10,504,741 | 7,213,985 | 4,922,662 | 2,704,880 | 1,672,655 | 53,668,347 |
| 1903 | 28,656,501 | 10,336,216 | 8,392,044 | 5,350,258 | 2,600,633 | 1,597,053 | 56,932,705 |
| 1904 | 34,526,894 | 10,167,691 | 10,843,470 | 5,874,979 | 2,853,424 | 1,557,460 | 65,823,918 |
| 1905 | 39,506,764 | 11,455,115 | 12,535,231 | 6,202,330 | 3,120,703 | 1,583,561 | 74,403,704 |
| 1906 | 44,132,421 | 12,937,440 | 14,886,438 | 6,661,217 | 3,340,745 | 1,729,394 | 83,687,655 |
| 1907 | 44,461,839 | 14,146,734 | 16,738,047 | 6,873,869 | 3,684,974 | 1,744,800 | 87,650,263 |

3. **Proportion in the Several States.**—Particulars concerning the relative positions of the several States with respect to the total flocks of Australia, and the variations in such positions which have taken place during the past seven years, are as hereunder:—

**PERCENTAGE OF SHEEP IN EACH STATE ON TOTAL FOR COMMONWEALTH,
1900 TO 1907.**

| Year. | N.S.W. | Vic. | Q'nsland. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|----------|--------|-------|-----------|----------|----------|------|-----------|
| | % | % | % | % | % | % | % |
| 1900 ... | 56.68 | 15.36 | 14.64 | 7.48 | 3.45 | 2.39 | 100.00 |
| 1901 ... | 58.10 | 14.82 | 13.92 | 7.02 | 3.65 | 2.49 | 100.00 |
| 1902 ... | 49.66 | 19.57 | 13.44 | 9.17 | 5.04 | 3.12 | 100.00 |
| 1903 ... | 50.33 | 18.16 | 14.74 | 9.40 | 4.57 | 2.80 | 100.00 |
| 1904 ... | 52.45 | 15.45 | 16.47 | 8.93 | 4.33 | 2.37 | 100.00 |
| 1905 ... | 53.10 | 15.40 | 16.85 | 8.33 | 4.19 | 2.13 | 100.00 |
| 1906 ... | 52.73 | 15.46 | 17.79 | 7.96 | 3.99 | 2.07 | 100.00 |
| 1907 ... | 50.73 | 16.14 | 19.10 | 7.84 | 4.20 | 1.99 | 100.00 |

During 1907 the New South Wales proportion of total Commonwealth flocks declined considerably, smaller decreases being also in evidence in the cases of South Australia and Tasmania. In the other three States an advance in proportion was experienced, being most marked in the case of Queensland.

4. **Imports and Exports of Sheep.**—As in the case of cattle, the exports of live sheep from Australia are of comparatively small importance. The principal countries to which such exports have been consigned during recent years are Natal, Cape of Good Hope, Straits Settlements, and New Caledonia. The following are the particulars of the imports and exports for the past seven years:—

COMMONWEALTH IMPORTS AND EXPORTS OF SHEEP, 1901 to 1907.

| Year. | Imports. | | Exports. | | Net Exports. | |
|-------------------|----------|---------|----------|---------|--------------|---------|
| | No. | Value. | No. | Value. | No. | Value. |
| | | £ | | £ | | £ |
| 1901 ... | 553 | 12,134 | 12,094 | 12,104 | 11,541 | —30 |
| 1902 ... | 47,654 | 66,042 | 24,296 | 15,558 | —23,358 | —50,484 |
| 1903 ... | 4,727 | 9,840 | 18,111 | 24,468 | 13,384 | 14,628 |
| 1904 ... | 2,614 | 13,056 | 7,746 | 11,219 | 5,132 | —1,837 |
| 1905 ... | 5,521 | 24,263 | 12,090 | 17,429 | 6,569 | —6,834 |
| 1906 ... | 11,502 | 51,403 | 17,979 | 48,699 | 6,477 | —2,704 |
| 1907 ... | 11,759 | 42,167 | 11,361 | 40,040 | —398 | —2,127 |
| Total for 7 years | 84,330 | 218,905 | 103,677 | 169,517 | 19,347 | —49,388 |

Note. — signifies net imports.

5. **Sheep Slaughtered.**—The numbers of sheep slaughtered in those States for which slaughtering statistics are available, are as follows:—

SHEEP (INCLUDING LAMBS) SLAUGHTERED, 1901 to 1907.

| Year. | N.S.W. | Victoria. | Q'sland. | Sth. Aust. ¹ | West Aust. | Tasmania. ² | C'wealth. |
|-------|-----------|-----------|----------|-------------------------|------------|------------------------|------------|
| 1901 | 4,519,133 | 2,469,797 | 554,705 | 678,000 | 428,534 | 322,000 | 8,972,169 |
| 1902 | 4,635,850 | 2,827,938 | 715,443 | 681,000 | 482,882 | 325,000 | 9,668,113 |
| 1903 | 3,277,120 | 2,652,569 | 453,666 | 684,000 | 412,549 | 332,000 | 7,811,904 |
| 1904 | 3,058,536 | 2,305,729 | 400,688 | 691,000 | 499,585 | 334,000 | 7,289,538 |
| 1905 | 4,283,631 | 2,576,316 | 587,406 | 700,000 | 476,010 | 335,000 | 8,958,363 |
| 1906 | 4,482,055 | 2,826,144 | 449,547 | 710,000 | 468,759 | 335,000 | 9,271,505 |
| 1907 | 6,304,692 | 3,226,141 | 642,730 | 1,020,355 | 470,000 | 336,000 | 11,999,918 |

1. Estimated for years 1901 to 1906.

2. Estimated.

For Hobart and Launceston only the figures for the years 1901 to 1907 were respectively:—101,627, 114,900, 122,223, 109,992, 101,863, 104,081, and 107,859.

6. Exports of Frozen Mutton and Lamb.—Australia's export trade in mutton and lamb preserved by cold process is one which has, in recent years, advanced rapidly, and at the present time amounts to nearly £1,400,000 per annum. In all the States considerable attention is now being paid to the breeding of a class of sheep that will best meet the requirements of consumers. Crosses between the Merino and the Lincoln, or between the Merino and the Leicester breeds, have proved exceedingly valuable, as they furnish both a good quality of wool and also an excellent carcase for export purposes. The breeding of Shropshire and Southdown sheep with a view to combining meat production with that of wool is also on the increase. Special attention is being paid to the raising of lambs for the home markets, as it is becoming very widely recognised that with suitable breeds, the export trade in lambs is a very profitable one.

Australia's principal customers in this trade are the United Kingdom and South Africa, while in Egypt and Canada a demand for Australian frozen mutton and lamb has developed in recent years, the exports to Canada for 1907 reaching a total of over £30,000. A regular, though not very extensive, trade is also done with the Philippine Islands. The quantities exported to various countries are as follows:—

**QUANTITY OF FROZEN MUTTON AND LAMB EXPORTED FROM AUSTRALIA,
1901 TO 1907.**

| Country to which Exported. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

7. **Comparison with other Countries.**—As regards the size of its flocks and the quantity and quality of wool produced, Australia occupies the foremost position amongst the sheep-raising countries of the world. The following comparison gives the latest available figures relative to the number of sheep in the principal wool-producing countries:—

NUMBER OF SHEEP IN VARIOUS COUNTRIES.

| Country. | Date. | No. of Sheep | Country. | Date. | No. of Sheep. |
|---------------------------------|--------|--------------|---------------------|-------|---------------|
| Australia ... | 1907 | 87,650,263 | Bulgaria ... | 1893 | 6,868,291 |

1. Including goats. 2. Exclusive of Bengal. 3. Austria 1900, Hungary 1895.

8. **Relation to Population.**—The relation of the flocks of the several States to the populations at the end of each of the past eight years is as follows:—

NUMBER OF SHEEP PER HEAD OF POPULATION.

| Year. | N.S.W. | Vic. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|----------|--------|-------|---------|----------|----------|-------|-----------|
| 1900 ... | 29.42 | 9.06 | 20.94 | 14.59 | 13.53 | 9.74 | 18.75 |
| 1901 ... | 30.44 | 8.81 | 19.83 | 13.84 | 13.53 | 10.28 | 18.83 |
| 1902 ... | 18.99 | 8.67 | 14.12 | 13.43 | 12.68 | 9.43 | 13.82 |
| 1903 ... | 20.08 | 8.55 | 16.28 | 14.51 | 11.46 | 8.90 | 14.50 |
| 1904 ... | 23.69 | 8.40 | 20.79 | 15.76 | 11.78 | 8.64 | 16.52 |
| 1905 ... | 26.48 | 9.40 | 23.74 | 16.40 | 12.25 | 8.74 | 18.36 |
| 1906 ... | 28.91 | 10.50 | 27.82 | 17.35 | 12.76 | 9.60 | 20.31 |
| 1907 ... | 28.34 | 11.33 | 30.90 | 17.51 | 14.09 | 9.48 | 20.88 |

9. **Value of Australian Sheep.**—The total value on the 31st December, 1907, of the sheep in the Commonwealth and its several States is approximately as follows:—

ESTIMATED VALUE OF AUSTRALIAN SHEEP, 31st DECEMBER, 1907,

| State ... | N.S.W. | Victoria. | Q'nsland. | Sth. Aust. | W. Aust. | Tasmania. | C'wealth. |
|-------------|------------|-----------|-----------|------------|-----------|-----------|------------|
| Value ... £ | 22,230,000 | 8,490,000 | 7,530,000 | 3,440,000 | 2,210,000 | 1,050,000 | 44,950,000 |

§ 5. Wool.

1. **Importance of Wool Production.**—The chief contributing factor to the pastoral wealth of Australia is the production of wool, the value of the output for the year 1907 being about £29,000,000. Most of the wool produced in the Commonwealth is exported, but with the increased activity of the local woollen mills there has, in recent years, been an increasing quantity used in Australia, although even now the quantity so used represents only $1\frac{1}{4}$ per cent. of the whole clip.

2. **Greasy and Scoured Wool.**—In the returns of imports and exports of wool furnished to the Customs Department the quantities are shewn as “greasy,” or as “scoured and washed,” but for the purposes of comparing the clips of the several States or of the Commonwealth as a whole for a series of years, it is convenient to have the total production expressed in terms of greasy wool.

The total quantity of Australian wool, scoured and washed before export, is usually only about 25 per cent. of the total clip. The ratio of loss of weight in scouring, however, varies largely with season, locality, breed, and condition. It seems preferable to express “scoured and washed” wool in terms of “greasy” rather than *vice versa*, since the absolute error arising from any uncertainty as to the average loss of weight has thus the least effect.

3. **Total Production.**—In the following tables, relative to the production of wool in the several States for the seven years 1901 to 1907, wool returned as “scoured and washed” has been converted into the estimated equivalent amount of “greasy” on the assumption that two pounds of “greasy” wool are on the average required to produce one pound of “scoured and washed.” On this basis the estimated total production of wool (in the grease) in the several States of the Commonwealth for the years 1901 to 1907 may be said to be as in the following table:—

PRODUCTION OF WOOL, ESTIMATED AS “GREASY,” COMMONWEALTH AND STATES, 1901 TO 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-------------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|
| | lbs. | lbs. | lbs. | lbs. | lbs. | lbs. | lbs. |
| New South Wales | 311,318,648 | 218,505,670 | 228,173,045 | 252,194,736 | 298,490,955 | 326,999,426 | 369,130,784 |
| Victoria | 81,227,029 | 71,109,528 | 55,044,659 | 80,036,363 | 66,118,195 | 67,426,109 | 109,555,748 |
| Queensland | 70,872,670 | 42,100,238 | 53,908,667 | 66,037,701 | 70,393,840 | 86,363,630 | 102,396,272 |
| South Australia | 40,415,378 | 37,285,621 | 37,766,673 | 36,727,324 | 37,262,504 | 44,602,680 | 53,547,076 |
| Western Australia | 14,290,156 | 13,380,181 | 13,312,326 | 12,513,185 | 17,732,597 | 15,405,132 | 20,465,045 |
| Tasmania | 9,805,154 | 9,167,911 | 5,731,783 | 11,539,735 | 10,666,430 | 11,359,760 | 9,840,944 |
| Commonwealth | 527,929,035 | 391,549,149 | 393,937,153 | 459,049,044 | 500,664,521 | 552,156,737 | 664,935,869 |

4. **Wool Locally Used.**—Of this production the quantity used in the local manufacturing of the several States of the Commonwealth was approximately as follows:—

QUANTITY OF WOOL, ESTIMATED AS “GREASY,” COMMONWEALTH AND STATES, 1901 TO 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-------------------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
| | lbs. | lbs. | lbs. | lbs. | lbs. | lbs. | lbs. |
| New South Wales | 1,343,070 | 1,358,920 | 1,293,600 | 726,900 | 729,470 | 836,730 | 963,408 |
| Victoria | 3,408,526 | 3,473,635 | 3,772,390 | 4,027,080 | 4,493,041 | 4,765,687 | 5,600,873 |
| Queensland | 312,000 | 219,292 | 164,234 | 185,802 | 224,860 | 253,842 | 211,362 |
| South Australia | 184,846 | 201,657 | 271,285 | 311,469 | 376,615 | 387,264 | 603,848 |
| Western Australia | ... | ... | ... | ... | ... | ... | ... |
| Tasmania | 776,000 | 780,000 | 812,000 | 811,500 | 1,067,050 | 1,005,628 | 929,572 |
| Commonwealth | 6,024,442 | 6,033,704 | 6,313,509 | 6,062,751 | 6,891,036 | 7,249,151 | 8,309,063 |

5. Exports of Wool.—Nearly half of the exports of wool from the Commonwealth are despatched to the United Kingdom, the other leading consignees being France, Germany, Belgium, and the United States of America. The following table shews for the years 1901 to 1907, the quantities of "greasy" wool exported from the Commonwealth to the principal countries of destination :—

COMMONWEALTH EXPORTS OF WOOL IN THE GREASE, 1901 to 1907.

| Country to which Exported. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|----------------------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|
| | lbs. | lbs. | lbs. | lbs. | lbs. | lbs. | lbs. |
| United Kingdom | 234,671,708 | 171,255,911 | 131,981,041 | 170,961,234 | 167,675,702 | 193,740,722 | 227,246,663 |
| France | 54,651,054 | 48,207,243 | 52,700,279 | 71,302,579 | 95,812,717 | 85,755,279 | 130,937,517 |

| Italy | 90,842 | 55,367 | 92,377 | 94,268 | 143,985 | 58,971 | 77,413 |
| Japan | 48,653 | 55,802 | 71,582 | 332,602 | 140,704 | 279,860 | 481,771 |
| India | 5,915 | 6,483 | 13,671 | 10,518 | 7,928 | 12,084 | 20,115 |
| New Zealand | 17,461 | 3,784 | 3,950 | 4,992 | 5,218 | 8,565 | 2,860 |
| Canada | ... | ... | 1,756 | 2,620 | 5,459 | 8,215 | 11,903 |
| Other Countries | 2,050 | 850 | 95 | 15,338 | 18,070 | 5,816 | 9,546 |
| Total | 15,237,454 | 12,744,463 | 14,001,599 | 17,122,270 | 19,822,216 | 22,645,769 | 28,891,830 |

6. **Care needed in Comparing Clips.**—The Customs returns, from which statistics of wool production are usually compiled, do not furnish a reliable indication of increase or decrease in successive clips, since in each case they relate to the year ended 31st December. Ordinarily, therefore, they include for any year imports and exports of wool belonging to two distinct clips. A further defect in the comparability of successive clips arises as follows:—Owing to climatic or other conditions the time of shearing is so far delayed that one clip may include almost thirteen months' growth of wool, while the succeeding one may include little more than eleven months' growth. An instance of this occurred in some portions of the Commonwealth in connection with the clips of 1906 and 1907. The shearing in the former case was somewhat late, while in the latter it took place at the usual time, the result being that the 1906 clip was above and that of 1907 below the normal.

7. **Wool-producing Countries in Southern Hemisphere.**—The next table, compiled by Messrs. Helmut Schwartze and Co., the well-known firm of English wool brokers, furnishes interesting evidence of the relative importance of the three great wool-producing countries of the Southern Hemisphere. The figures given represent for the respective years the imports of wool into Europe and North America:—

IMPORTS OF WOOL INTO EUROPE AND NORTH AMERICA.

| Year. | Commonwealth and New Zealand. | Cape of Good Hope. | River Plate. | Total |
|-------------|----------------------------------|-----------------------|--------------|-----------|
| | Bales. | Bales. | Bales. | Bales. |
| 1901 | 1,745,000 | 217,000 | 532,000 | 2,494,000 |
| 1902 | 1,699,000 | 234,000 | 512,000 | 2,445,000 |
| 1903 | 1,451,000 | 234,000 | 558,000 | 2,243,000 |
| 1904 | 1,371,000 | 201,000 | 476,000 | 2,048,000 |
| 1905 | 1,633,000 | 209,000 | 488,000 | 2,330,000 |
| 1906 | 1,833,000 | 238,000 | 487,000 | 2,558,000 |
| 1907 | 2,103,000 | 287,000 | 478,000 | 2,868,000 |

It will be seen that of the total importations shewn in this table, the Commonwealth of Australia and the Dominion of New Zealand account for about 70 per cent.

8. **England's Importation of Wool.**—The quantity and value of wool imported into the United Kingdom during the year 1907 from the principal wool-producing countries, furnish evidence of the important position which the Commonwealth occupies in the supply of wool to the mother country. This is shewn in the following table:—

IMPORTS OF WOOL INTO THE UNITED KINGDOM, 1907.

| Country from which Imported. | Quantity. | Value. | Country from which Imported. | Quantity. | Value. |
|---------------------------------|-------------|------------|---------------------------------|-------------|------------|
| | lbs. | £ | | lbs. | £ |
| Australia | 321,470,554 | 14,587,701 | Uruguay | 5,592,538 | 251,113 |
| New Zealand | 158,406,255 | 7,657,013 | China | 3,905,062 | 134,713 |
| Cape of Good Hope | 73,469,469 | 2,736,989 | Falkland Islands | 3,650,475 | 136,752 |
| British India | 46,683,905 | 1,449,955 | Egypt | 3,502,747 | 96,257 |
| Argentine Republic | 40,554,965 | 1,689,639 | Peru | 2,371,447 | 102,695 |
| France | 24,486,763 | 1,188,060 | Portugal | 2,042,997 | 69,213 |
| Chile | 20,704,208 | 715,289 | U.S. of America ... | 1,957,512 | 84,746 |
| Natal | 18,136,669 | 570,598 | Morocco | 1,294,988 | 49,389 |
| Turkey | 8,893,460 | 303,995 | Italy | 1,281,704 | 46,207 |
| Belgium | 7,720,075 | 335,574 | Other Countries ... | 2,829,881 | 102,102 |
| Russia | 6,385,272 | 224,320 | | | |
| Germany | 3,896,299 | 160,691 | Total | 759,237,245 | 32,693,011 |

It will be seen that of the total importations of wool into the United Kingdom, Australian wool represented about 42 per cent. of the quantity and nearly 46 per cent. of the value.

9. **The Wool Market.**—The clip of 1906 was an exceptional one from two points of view—the number of bales of wool exceeded 2,000,000 for the first time in the history of Australia, and the prices realised were on the average considerably higher than have been touched for many years, with the result that the wool season of 1906-7 was one of the most prosperous experienced in the Commonwealth.

Notwithstanding the variations in shearing time in 1906 and 1907 previously referred to, the clip for 1907 was an excellent one, and has been estimated to have fallen short of that for 1906 by only about 3 per cent. The prices realised for the clip, however, were not nearly so satisfactory, owing largely to the world-wide influence of the disastrous financial crisis which occurred in America during the latter portion of 1907.

The following particulars concerning the prices of greasy Merino wool which ruled in the Australian markets in June, 1908, at the close of the wool season 1907-8 are taken from Dalgety's *Review* for July, 1908 :—

GREASY MERINO WOOL, 1907-8.

| Class of Wool. | State. | | | | |
|-----------------|---------|-----------|-------------|-------------|-----------|
| | N.S.W. | Victoria. | Queensland. | South Aust. | Tasmania. |
| | d. | d. | d. | d. | d. |
| Super | 10 — 11 | 12 — 14 | 10 — 11½ | 11½ — 12½ | 11 — 11½ |
| Good | 8½ — 9½ | 10½ — 11½ | 8½ — 9½ | 7½ — 9 | 8½ — 9½ |
| Inferior | 5 — 7 | 5½ — 9 | 5½ — 7 | 5 — 6 | 6 — 6½ |

The fluctuations in the prices of greasy and scoured wool of good average quality from 1895-6 to 1907-8, shewn by the graphs hereinunder, are in agreement with the results given in Dalgety's *Review* for 1908 :—

AVERAGE PRICES OF AUSTRALIAN WOOL, 1895-6 to 1907-8.

The upper line and lower line shew respectively the average prices of scoured and greasy Merino fleece of good average quality.

§ 6. Graphical Representation of Pastoral Production.

1. **General.**—(See *graphs, page 375.*) The figures for the total number of horses, cattle, sheep and pigs being known with considerable accuracy only from 1860 onwards, the graphs are restricted to the period indicated. It will be observed on a general survey of these that up to 1890 there was a fairly uniform increase in the number of each class of animals, or, more exactly, the number of horses increased up to 1895, of cattle to 1894, of sheep to 1891, of pigs say up to 1904. This, however, was followed by diminutions, a small one of horses till 1902—followed by a rapid recovery, and enormous ones also till 1902 in the number of cattle and sheep—again followed by very rapid recovery.

It is worthy of notice that the rate of recovery is very satisfactory. There has never been a quadrennium in Australian history when the number of sheep increased as it did from 1903 to 1907; the increases of cattle and of horses for the same period are similar to the very remarkable increases between 1889 and 1892 and 1888 and 1891 respectively. The year 1902 shews a great falling-off in all four classes, due to the prolonged drought conditions which culminated in that year. The fact that after so prolonged an adverse condition the numbers should increase as rapidly as they have, points to the elasticity of the natural resources of Australia, and its great recuperative power.

2. **Graph for Cattle.**—For the Commonwealth, the number of cattle declined from 1862 to 1866, from 1881 to 1885, and again from 1894 to 1901, but increased very rapidly for the intermediate periods and since. Among the States the increases for Queensland are the most remarkable, and the figures for that State have a predominating influence on the result.

3. **Graph for Horses.**—For the Commonwealth, the graph shews that the number of horses increased with considerable regularity practically from 1860 to 1895, and then again from 1902 onwards. No one State's figures have a predominating influence on the graph for the Commonwealth, since the largest, viz., those of New South Wales, Queensland, and Victoria, are all comparable in magnitude.

4. **Graph for Sheep.**—For the Commonwealth, the figures for the total number of sheep shew a fairly steady and rapid progression from 1860 to 1891, a decline from 1891 to 1902, and again a rapid progression from that last date onwards. The figures for New South Wales have a predominating influence.

5. **Graph for Pigs.**—The graph for the Commonwealth, while shewing marked fluctuations every two or three years, shews also a steady increase on the whole. The form of this graph is profoundly influenced by the numbers for New South Wales and Victoria.

GRAPHS SHEWING NUMBER OF HORSES, CATTLE, SHEEP, AND PIGS IN AUSTRALIA
FROM 1860 TO 1907.

EXPLANATION OF GRAPH.—The base of each small square represents an interval of one year. The total of the sheep, cattle, horses, and pigs for the Commonwealth is indicated by the several curves or graphs, the vertical side of a small square representing 2,000,000 in the case of sheep; 200,000 for cattle; 30,000 for horses; 40,000 for pigs.

GRAPHS SHEWING THE PRODUCTION OF BUTTER AND CHEESE, AND BACON AND HAM, IN THE COMMONWEALTH, FROM 1896 TO 1907.

EXPLANATION OF GRAPH.—The base of each small rectangle represents an interval of one year, and the vertical height of each rectangle denotes in the case of butter 10,000,000 lbs.; in the case of bacon and ham, 4,000,000 lbs.; and in the case of cheese, 3,000,000 lbs.

GRAPHS SHEWING THE QUANTITY AND VALUE OF NET EXPORTS OF BUTTER FROM THE COMMONWEALTH, FROM 1901 TO 1907.

EXPLANATION OF GRAPH.—The base of each small rectangle represents an interval of one year, and the vertical height of each small rectangle represents 5,000,000 lbs. in weight, or £1,000,000 in value.

SECTION VIII.

AGRICULTURAL PRODUCTION.

§ 1. Introductory:

1. Early Attempts at Agriculture.—The instructions issued to Captain Phillip on the 25th April, 1787, directed him, amongst other things, to proceed as soon as possible to the cultivation of the soil “under such regulations as may appear to be necessary and best calculated for securing supplies of grain and provisions.” When the settlers landed at Botany Bay, however, it was found that the glowing accounts published in England by members of Captain Cook’s expedition of the fertility of the soil in the vicinity of the existing settlement were considerably overdrawn. Even when Phillip and his company moved round to Port Jackson on the 26th January, 1788, matters were for a time in no better case. The ground in the immediate neighbourhood of the settlement was not suitable for the cultivation of cereal crops, and when the time came to cultivate the soil it was found that there were very few who possessed the slightest acquaintance with the art of husbandry.

2. The First Sowing.—In his despatch of the 15th May, 1788, Captain Phillip states that it was proposed to sow eight acres with wheat and barley, although, owing to the depredations of field mice and ants, he was doubtful of the success of the crops.

3. Discovery of Suitable Agricultural Land.—A branch settlement was formed at Rosehill, on the Parramatta River, towards the close of 1788, and here corn crops were successfully raised. In his despatch of 12th February, 1790, Phillip refers to the harvest at Rosehill at the end of December, 1789, as consisting of 200 bushels of wheat and sixty of barley, in addition to small quantities of oats, Indian corn, and flax. By the year 1791 there were 213 acres under crop in this locality. In 1792 a new settlement was formed at Toongabbie, about three miles westward of Parramatta, where Phillip states “there are several thousand acres of exceeding good ground.” The Hawkesbury Valley, which probably contains some of the richest land in the world, was first settled in 1794. For a long time agricultural operations in Australia were restricted to the narrow belt of country between the tableland and the east coast of New South Wales, as it was not until the year 1813 that a passage was discovered across the Blue Mountains to the fertile plains of the west.

§ 2. Progress of Agriculture.

1. Early Records.—In an “Account of Live Stock and Ground under Crop in New South Wales, 19th August, 1797,” Governor Hunter gives the acreage under crop as follows:—Wheat, 3361 acres; maize, 1527 acres; barley, 26 acres; potatoes, 11 acres; and vines, 8 acres.

At a muster taken in 1808 the following was the return of crops:—Wheat, 6877 acres; maize, 3389 acres; barley, 544 acres; oats, 92 acres; peas and beans, 100 acres; potatoes, 301 acres; turnips, 13 acres; orchards, 546 acres; and flax and hemp, 34 acres.

By the year 1850 the area under crop had increased to 491,000 acres, of which 198,000 acres were cultivated in what is now the State of New South Wales, and 169,000 acres in Tasmania. At the end of 1850 the area under cultivation in Victoria, which was then the Port Phillip District of New South Wales, was 52,190 acres.

The gold discoveries of 1851 and subsequent years had at first a very disturbing effect on agricultural progress, the area under crop declining from 491,000 acres in 1850 to 458,000 acres in 1854; the area under cultivation in New South Wales decreased by nearly 66,000 acres, while in Tasmania a falling-off of over 41,000 acres was experienced. The demand for agricultural products occasioned by the large influx of population was, however, soon reflected in the increased area cultivated, for at the end of 1858 the land under crop in Australia totalled over a million acres. The largest increase took place in Victoria, which returned an area of 299,000 acres, South Australia had 264,000 acres in cultivation, Tasmania 229,000 acres, and New South Wales 223,000 acres.

2. Progress of Cultivation since 1860.—The following table shews the area under cultivation in each of the Commonwealth States at various periods since 1860 and during each year of the period 1901-8. The area under permanent artificially-sown grasses is excluded in all the States, except for the years 1860-79 in the case of New South Wales, where the acreage cannot be separated. During those years, however, the area laid down under permanent grasses could not have been very large:—

AREA UNDER CROP IN AUSTRALIA, 1860-1 to 1907-8.

| Season. | New South Wales. | Victoria. | Queensland. | South Australia. | Western Australia. | Tasmania. | Commonwealth. |
|------------|------------------|-----------|-------------|------------------|--------------------|-----------|---------------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| 1860-1 ... | 260,798 | 387,282 | 3,353 | 359,284 | 24,705 | 152,860 | 1,188,282 |
| 1865-6 ... | 378,255 | 448,194 | 14,414 | 547,124 | 38,180 | 159,547 | 1,585,714 |
| 1870-1 ... | 426,976 | 692,840 | 52,210 | 801,571 | 54,527 | 157,410 | 2,185,534 |
| 1875-6 ... | 451,139 | 736,520 | 77,347 | 1,111,882 | 47,571 | 142,547 | 2,567,006 |
| 1880-1 ... | 629,180 | 1,548,809 | 113,978 | 2,087,287 | 57,707 | 140,788 | 4,577,699 |
| 1885-6 ... | 737,701 | 1,867,496 | 198,334 | 2,298,412 | 60,058 | 144,761 | 5,306,762 |
| 1890-1 ... | 852,704 | 2,031,955 | 224,993 | 2,093,515 | 69,678 | 157,376 | 5,430,221 |
| 1895-6 ... | 1,348,600 | 2,413,235 | 285,319 | 2,092,942 | 97,821 | 212,703 | 6,450,620 |
| 1900-1 ... | 2,445,564 | 3,114,132 | 457,397 | 2,369,680 | 201,338 | 224,352 | 8,812,463 |
| 1901-2 ... | 2,278,370 | 2,965,681 | 483,460 | 2,236,552 | 217,441 | 232,550 | 8,414,054 |
| 1902-3 ... | 2,249,092 | 3,246,568 | 275,383 | 2,224,593 | 229,992 | 246,923 | 8,472,551 |
| 1903-4 ... | 2,545,940 | 3,389,069 | 566,589 | 2,256,824 | 283,752 | 259,611 | 9,301,785 |
| 1904-5 ... | 2,674,896 | 3,321,785 | 539,216 | 2,275,506 | 327,391 | 226,228 | 9,365,022 |
| 1905-6 ... | 2,840,235 | 3,219,962 | 522,748 | 2,255,569 | 364,704 | 230,237 | 9,433,455 |
| 1906-7 ... | 2,826,657 | 3,303,586 | 559,753 | 2,150,291 | 460,825 | 244,744 | 9,545,856 |
| 1907-8 ... | 2,572,873 | 3,232,523 | 532,624 | 2,265,017 | 494,987 | 257,028 | 9,355,052 |

The increase in the area under crop during the past seven years has been most marked in the case of Western Australia, the total advancing from 201,338 acres in the season 1900-1 to 494,987 acres in 1907-8, an increase of 293,649 acres. During the same period an increase of 127,309 acres was experienced in New South Wales, 118,391 acres in Victoria, 75,227 acres in Queensland, and 32,676 acres in Tasmania, while the area under crop in South Australia exhibited a decline of 104,663 acres. The total area under crop in the Commonwealth increased during the period by 542,589 acres. In the case of New South Wales, Victoria, and Queensland the drought conditions prevailing resulted in a smaller area being cropped for 1907-8 than for 1906-7. In the other three States the area under crop in 1907-8 was larger than in 1906-7.

3. Relation to Population.—From the following table it will be seen that for the Commonwealth as a whole the area under crop has, during the past seven seasons, increased at a rate which is only slightly greater than that at which the population of

the Commonwealth has increased. Only in the case of Western Australia has the ratio of area under crop to total population made any marked advance during the period, while in South Australia a decline in ratio, though not in actual area, took place. Details for the seven seasons are as follows:—

TOTAL AREA UNDER CROP PER 1000 OF POPULATION.

| Season. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|---------------|--------|-----------|---------|----------|----------|--------|-----------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| 1901-2 | 1,671 | 2,463 | 964 | 6,164 | 1,154 | 1,349 | 2,219 |
| 1902-3 | 1,617 | 2,682 | 540 | 6,103 | 1,117 | 1,419 | 2,197 |
| 1903-4 | 1,798 | 2,804 | 1,105 | 6,168 | 1,282 | 1,463 | 2,384 |
| 1904-5 | 1,855 | 2,751 | 1,039 | 6,157 | 1,384 | 1,265 | 2,368 |
| 1905-6 | 1,926 | 2,656 | 994 | 6,020 | 1,457 | 1,285 | 2,348 |
| 1906-7 | 1,872 | 2,699 | 1,051 | 5,660 | 1,773 | 1,368 | 2,337 |
| 1907-8 | 1,659 | 2,609 | 988 | 5,872 | 1,887 | 1,433 | 2,251 |

4. **Relation to Total Area.**—The next table furnishes a comparison of the area under crop in the Commonwealth and the several States with the respective total areas. For the Commonwealth as a whole the area under crop represented for 1907-8 only about one acre in every 204. In Victoria the area under crop was about one acre in every 17½, in Tasmania one in 65, in New South Wales one in 77, in South Australia one in 255, in Queensland one in 806, and in Western Australia one in 1266.

PERCENTAGE OF AREA UNDER CROP TO TOTAL AREA OF EACH STATE AND OF COMMONWEALTH FOR SEASONS 1901-2 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|---------------|--------|-----------|---------|----------|----------|-------|-----------|
| | % | % | % | % | % | % | % |
| 1901-2 | 1.147 | 5.273 | 0.113 | 0.387 | 0.035 | 1.336 | 0.442 |
| 1902-3 | 1.132 | 5.772 | 0.064 | 0.385 | 0.037 | 1.472 | 0.445 |
| 1903-4 | 1.282 | 6.025 | 0.132 | 0.390 | 0.045 | 1.547 | 0.489 |
| 1904-5 | 1.347 | 5.906 | 0.126 | 0.393 | 0.052 | 1.348 | 0.492 |
| 1905-6 | 1.430 | 5.725 | 0.122 | 0.390 | 0.058 | 1.372 | 0.496 |
| 1906-7 | 1.423 | 5.873 | 0.130 | 0.372 | 0.074 | 1.459 | 0.501 |
| 1907-8 | 1.295 | 5.747 | 0.124 | 0.392 | 0.079 | 1.532 | 0.491 |

5. **Artificially-Sown Grasses.**—Complete statistics regarding the area under sown grasses are available for the whole of the States only since the year 1896, and are as shewn hereunder:—

AREA UNDER SOWN GRASSES, 1896-7 to 1907-8.

| Season. | New South Wales. | Victoria. | Queensland. | South Australia. | Western Australia. | Tasmania. | Commonwealth. |
|---------|------------------|-----------|-------------|------------------|--------------------|-----------|---------------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| 1896-7 | 384,016 | 172,582 | 11,960 | 20,027 | 4,044 | 253,306 | 845,935 |
| 1901-2 | 467,839 | 162,954 | 34,679 | 23,510 | 3,711 | 314,422 | 1,007,115 |
| 1902-3 | 477,629 | 565,635 | 24,286 | 23,636 | 3,228 | 319,090 | 1,413,504 |
| 1903-4 | 552,501 | 962,665 | 15,639 | 24,118 | 2,952 | 343,284 | 1,901,159 |
| 1904-5 | 607,997 | 953,543 | 35,589 | 24,912 | 3,964 | 378,346 | 2,004,351 |
| 1905-6 | 627,530 | 1,040,335 | 40,802 | 26,082 | 5,456 | 404,653 | 2,144,858 |
| 1906-7 | 697,631 | 1,095,642 | 45,990 | 23,679 | 6,787 | 432,128 | 2,301,857 |
| 1907-8 | 736,080 | 1,095,471 | 76,943 | 34,635 | 7,990 | 465,673 | 2,416,792 |

The considerable increase in the area of the grass lands of the Commonwealth is due in large measure to the great development of the dairying industry which has taken place during the last ten years, and which is referred to in the succeeding section.

§ 3. Relative Importance of Crops.

1. **Various Crops.**—The following table has been compiled in order to show the relative importance of the various crops in each State and in the Commonwealth as a whole. The figures refer to the season 1907-8:—

DISTRIBUTION OF CROPS IN AUSTRALIA, 1907-8.

| Crop. | N.S.W. | Victoria. | Qsl'd. | S. Aust. | W. Aust. | Tas. | Total for C'wealth. |
|---------------------|-----------|-----------|---------|-----------|----------|---------|---------------------|

2. **Relative Areas of Crops in States.**—Taking the principal crops, *i.e.*, those in the case of which the cultivation amounts to more than 50,000 acres in the Commonwealth, the proportion of each in the various States to the total area under crop for the season 1907-8 is shewn in the table on the next page. In four of the States, *viz.*, New South Wales, Victoria, South Australia, and Western Australia, wheat-growing for grain is by far the most extensive form of cultivation, while in each of these States the hay crop is second in importance. In New South Wales green forage ranks third, but in Victoria, South Australia, and Western Australia, and also in the Commonwealth as a whole, the oat crop occupies third position. In Queensland, on the other hand, the three principal crops in the order of importance are maize, sugar cane, and green forage, while in Tasmania hay, oats, and potatoes occupy the leading positions. For the Commonwealth as a whole, the wheat, hay, and oat crops represent nearly 84 per cent. of the total area under crop.

PROPORTION OF AREA UNDER CHIEF CROPS, 1907-8.

| Crop. | N.S.W. | Victoria. | Qsl'd. | S. Aust. | W. Aust. | Tas. | C'wealth. |

| Total ... | 8,414,054 | 8,472,551 | 9,301,785 | 9,365,022 | 9,433,455 | 9,545,856 | 9,355,052 |

During the period under review the area under the various crops has fluctuated considerably, that under wheat attaining a maximum for the period in the season 1904-5, and a minimum in 1901-2, while hay reached its maximum area in 1903-4 and its minimum in 1904-5. It is of interest to note that notwithstanding individual fluctuations of considerable extent in the three principal Commonwealth crops, viz., wheat, hay, and oats, the aggregate area under these three crops has, during the past five seasons, varied within comparatively narrow limits, the figures being:—1903-4, 8,041,060 acres; 1904-5, 8,130,416 acres; 1905-6, 8,163,725 acres; 1906-7, 8,214,036 acres; 1907-8, 7,838,304 acres.

§ 4. Wheat.

1. **Progress of Wheat-Growing.**—(i.) *Acreage.* The area under wheat for grain is given below for each State at various periods since 1860, and is shewn diagrammatically in the graph hereinafter:—

AREA UNDER WHEAT, 1860-1 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'sland. | Sth. Aust. | West Aust. | Tasmania. | C'wealth. |
|---------|-----------|-----------|----------|------------|------------|-----------|-----------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| 1860-1 | 128,829 | 161,252 | 196 | 273,672 | 13,584 | 66,450 | 643,983 |
| 1865-6 | 131,653 | 178,628 | 2,068 | 410,608 | 22,249 | 73,270 | 818,476 |
| 1870-1 | 147,997 | 284,167 | 2,892 | 604,761 | 26,640 | 57,382 | 1,123,839 |
| 1875-6 | 133,609 | 321,401 | 4,478 | 898,820 | 21,561 | 42,745 | 1,422,614 |
| 1880-1 | 253,138 | 977,285 | 12,632 | 1,733,542 | 27,686 | 50,022 | 3,054,305 |
| 1885-6 | 264,867 | 1,020,082 | 10,093 | 1,922,555 | 29,511 | 30,266 | 3,277,374 |
| 1890-1 | 333,233 | 1,145,163 | 10,390 | 1,673,573 | 33,820 | 32,452 | 3,228,631 |
| 1895-6 | 596,684 | 1,412,736 | 27,090 | 1,649,929 | 23,241 | 64,652 | 3,774,332 |
| 1900-1 | 1,530,609 | 2,017,321 | 79,304 | 1,913,247 | 74,308 | 51,825 | 5,666,614 |
| 1901-2 | 1,392,070 | 1,754,417 | 87,232 | 1,743,452 | 94,710 | 44,084 | 5,115,965 |
| 1902-3 | 1,279,760 | 1,994,271 | 1,880 | 1,746,842 | 92,398 | 40,898 | 5,156,049 |
| 1903-4 | 1,561,111 | 1,968,599 | 138,096 | 1,711,174 | 137,946 | 49,414 | 5,566,340 |
| 1904-5 | 1,775,955 | 2,277,537 | 150,958 | 1,840,157 | 182,080 | 43,091 | 6,269,778 |
| 1905-6 | 1,939,447 | 2,070,517 | 119,356 | 1,757,036 | 195,071 | 41,319 | 6,122,746 |
| 1906-7 | 1,866,253 | 2,031,893 | 114,575 | 1,681,982 | 250,283 | 32,808 | 5,977,794 |
| 1907-8 | 1,390,171 | 1,847,121 | 82,461 | 1,753,755 | 279,609 | 30,794 | 5,383,911 |

The great reduction in the area under wheat for grain during 1907-8 was mainly due to the unfavourable nature of the season, which affected the acreage in two ways—(a) by diminishing the total area placed under wheat, and (b) by increasing the proportion cut for hay. It will be seen that in New South Wales and Queensland the area under wheat for grain was lower than in any season since 1902-3, and that in Victoria it was lower than for any season since 1901-2. In South Australia and Western Australia, which were unaffected by the drought conditions of the eastern States, satisfactory increases in area are shewn.

(ii.) *Yield.* The production during the same period for each State and for the Commonwealth as a whole is given below:—

PRODUCTION OF WHEAT, 1860-1 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'sland. | Sth. Aust. | W. Aust. | Tasmania. | C'wealth. |
|---------|------------|------------|-----------|------------|-----------|-----------|------------|
| | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. |
| 1860-1 | 1,581,598 | 3,459,914 | 3,136 | 3,576,593 | 208,332 | 1,415,896 | 10,245,469 |
| 1865-6 | 1,013,863 | 3,514,227 | 33,088 | 3,587,800 | 231,594 | 1,273,766 | 9,654,338 |
| 1870-1 | 999,595 | 2,870,409 | 39,787 | 6,961,164 | 316,769 | 896,881 | 12,084,605 |
| 1875-6 | 1,958,640 | 4,978,914 | 97,400 | 10,739,834 | 237,171 | 700,092 | 18,712,051 |
| 1880-1 | 3,717,355 | 9,727,369 | 223,243 | 8,606,510 | 332,232 | 750,040 | 23,356,749 |
| 1885-6 | 2,733,133 | 9,170,538 | 51,598 | 14,612,876 | 339,376 | 524,348 | 27,431,869 |
| 1890-1 | 3,649,216 | 12,751,295 | 207,990 | 9,399,389 | 467,389 | 642,980 | 27,118,259 |
| 1895-6 | 5,195,312 | 5,669,174 | 123,630 | 5,929,300 | 188,077 | 1,164,855 | 18,270,348 |
| 1900-1 | 16,173,771 | 17,847,321 | 1,194,088 | 11,253,148 | 774,653 | 1,110,421 | 18,353,402 |
| 1901-2 | 14,808,705 | 12,127,332 | 1,692,222 | 8,012,762 | 956,886 | 963,662 | 38,561,619 |
| 1902-3 | 1,585,097 | 2,569,364 | 6,165 | 6,354,912 | 985,559 | 876,971 | 12,378,068 |
| 1903-4 | 27,334,141 | 28,525,579 | 2,436,799 | 13,209,465 | 1,876,252 | 767,398 | 74,149,634 |
| 1904-5 | 16,464,415 | 21,092,139 | 2,149,663 | 12,023,172 | 2,013,237 | 792,956 | 54,535,582 |
| 1905-6 | 20,737,200 | 23,417,670 | 1,137,321 | 20,143,798 | 2,308,305 | 776,478 | 68,520,772 |
| 1906-7 | 21,817,938 | 22,618,043 | 1,108,902 | 17,145,796 | 2,753,567 | 651,408 | 66,100,654 |
| 1907-8 | 9,155,884 | 12,100,780 | 693,527 | 19,135,557 | 2,925,690 | 644,235 | 44,655,673 |

It may be noted that notwithstanding the fact that owing to unfavourable conditions in some of the States the total wheat yield of the Commonwealth for 1907-8 fell considerably short of the total for the preceding season, it was yet in excess of the highest aggregate yield obtained in the Commonwealth for any season prior to 1900-1. On seven occasions only has the aggregate yield exceeded 40,000,000 bushels, viz., in 1898-9, 1900-1, 1903-4, 1904-5, 1905-6, 1906-7, and 1907-8. The prospects for an abundant harvest in the forthcoming season, 1908-9, are excellent, and it appears probable that an aggregate of considerably more than 60,000,000 bushels will be reaped.

(iii.) *Average Yields.* In the next table will be found the average yield of wheat per acre in each of the last seven seasons :—

YIELD OF WHEAT PER ACRE, 1901-2 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'nsland. | Sth. Aust. | W. Aust. | Tasmania. | C'wealth. |
|---------|----------|-----------|-----------|------------|----------|-----------|-----------|
| | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. |
| 1901-2 | 10.64 | 6.91 | 19.40 | 4.60 | 10.10 | 21.86 | 7.54 |
| 1902-3 | 1.24 | 1.29 | 3.28 | 3.64 | 10.67 | 21.44 | 2.40 |
| 1903-4 | 17.51 | 14.49 | 17.65 | 7.72 | 13.60 | 15.53 | 13.32 |
| 1904-5 | 9.27 | 9.26 | 14.24 | 6.53 | 11.06 | 18.40 | 8.70 |
| 1905-6 | 10.69 | 11.31 | 9.53 | 11.46 | 11.83 | 18.79 | 11.19 |
| 1906-7 | 11.69 | 11.13 | 9.68 | 10.19 | 11.02 | 19.86 | 11.06 |
| 1907-8 | 6.59 | 6.55 | 8.41 | 10.91 | 10.46 | 20.92 | 8.29 |

As the above figures shew, there were remarkable variations in the average yields, chiefly of course due to the vagaries of the season. The season 1902-3 was an especially lean one in all the States except Western Australia and Tasmania. A large proportion of the area sown with wheat had to be ploughed in or else fed off by stock, but the comparatively heavy yields in the succeeding year shew that this additional cultivation was very beneficial.

(iv.) *Relation to Population.* During the past seven seasons the Commonwealth's production of wheat per head of population has varied between 3½ bushels in 1902-3 and 19 bushels in 1903-4. The State in which wheat growing occupies the most important position relatively to population is South Australia, which in 1905-6 had a yield which averaged 53½ bushels per head. Queensland is the State in which the average production of wheat per head is least. Particulars for the past seven seasons are as follows:—

AUSTRALIAN WHEAT PRODUCTION PER 1000 OF POPULATION.

| Season. | N.S.W. | Victoria. | Queensland. | South Aust. | West Aust. | Tasmania. | C'wealth. |
|---------|----------|-----------|-------------|-------------|------------|-----------|-----------|
| | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. |
| 1901-2 | 10,860 | 10,073 | 3,375 | 22,082 | 5,077 | 5,591 | 10,168 |
| 1902-3 | 1,140 | 2,122 | 12 | 17,433 | 4,787 | 5,041 | 3,210 |
| 1903-4 | 19,311 | 23,598 | 4,753 | 36,099 | 8,476 | 4,324 | 19,005 |
| 1904-5 | 11,415 | 17,469 | 4,141 | 32,530 | 8,509 | 4,435 | 13,793 |
| 1905-6 | 14,065 | 19,314 | 2,163 | 53,760 | 9,222 | 4,332 | 17,058 |
| 1906-7 | 14,448 | 18,481 | 2,081 | 45,127 | 10,614 | 3,642 | 16,180 |
| 1907-8 | 5,905 | 9,767 | 1,287 | 49,616 | 11,154 | 3,592 | 10,746 |

2. *Australian and Foreign Wheat Yields.*—In the next table will be found a statement of the average return per acre in the principal wheat-growing countries of the world. The figures are, wherever possible, based on the average of the latest available quinquennial periods.

The average for New Zealand for the past five years was 31.50 bushels per acre, but the acreage sown is comparatively small, amounting in 1907 to only 193,000 acres.

AVERAGE YIELDS OF WHEAT IN VARIOUS COUNTRIES.

| Country. | Average yield in bushels per acre. | Country. | Average yield in bushels per acre. |
|------------------------------|------------------------------------|---------------------------|------------------------------------|
| Belgium | 34.02 | Japan | 15.20 |
| Holland | 31.61 | United States | 13.47 |
| New Zealand... .. | 31.50 | Spain | 13.00 |
| United Kingdom | 30.77 | Italy | 12.75 |
| Germany | 28.39 | Servia | 12.28 |
| Sweden | 24.32 | Caucasia (Russia) | 11.22 |
| Saskatchewan (Canada) | 21.26 | India | 11.21 |
| Manitoba (Canada) | 20.66 | Argentine Republic | 10.58 |
| Ontario (Canada) | 20.54 | Australia | 10.50 |
| France | 19.54 | Siberia (Russia) | 10.49 |
| Austria | 18.09 | Russia in Europe | 10.06 |
| Hungary | 17.89 | Algeria | 9.00 |
| Rumania | 17.70 | Uruguay | 8.32 |

3. **Wheat Crop of the World.**—According to “Beerbohm’s,” the wheat crop of the world during the last five years was as follows:—

THE WHEAT CROP OF THE WORLD.¹

| Country. | 1903. | 1904. | 1905. | 1906. | 1907. | Country. | 1903. | 1904. | 1905. | 1906. | 1907. |

| United Kd. | 6,000 | 4,750 | 7,550 | 7,580 | 7,000 | Grand total | 411,445 | 401,860 | 422,485 | 441,580 | 394,275 |
| Total for Europe | 232,270 | 223,010 | 232,660 | 231,530 | 206,335 | | | | | | |

1. In quarters of 480lb. Add 000 to the figures in columns for number of quarters.

The figures given for Australasia in the above total are considerably overstated for the year 1906, the actual return being about 8,964,000 quarters as against 10,000,000 quoted in the table. Taking the average of the five years the yield of wheat in the Commonwealth constitutes about 2 per cent. of the world’s production.

4. **Prices of Wheat.**—(i.) *British Wheat.* As the United Kingdom is the largest importer of wheat, the price of the cereal in the British markets naturally has a considerable influence on the price in the local markets, especially since the position of Australia as an exporting country became assured. The table below gives the average price per

Imperial quarter of British wheat at various intervals since 1861, together with the highest and lowest weekly average:—

PRICES OF BRITISH WHEAT, 1861 to 1907.

| Year. | Average for Year. | | Highest Weekly Average. | | Lowest Weekly Average. | | Year. | Average for Year. | | Highest Weekly Average. | | Lowest Weekly Average. | |
|----------|-------------------|----|-------------------------|----|------------------------|----|----------|-------------------|----|-------------------------|----|------------------------|----|
| | s. | d. | s. | d. | s. | d. | | s. | d. | s. | d. | s. | d. |
| 1861 ... | 55 | 4 | 61 | 6 | 50 | 0 | 1903 ... | 26 | 9 | 30 | 3 | 24 | 11 |
| 1871 ... | 56 | 8 | 60 | 0 | 52 | 6 | 1904 ... | 28 | 4 | 30 | 6 | 26 | 3 |
| 1881 ... | 45 | 4 | 55 | 2 | 40 | 9 | 1905 ... | 29 | 8 | 32 | 3 | 26 | 8 |
| 1891 ... | 37 | 0 | 41 | 8 | 32 | 3 | 1906 ... | 28 | 3 | 30 | 9 | 25 | 9 |
| 1901 ... | 26 | 9 | 27 | 8 | 25 | 8 | 1907 ... | 30 | 7 | 36 | 3 | 26 | 0 |
| 1902 ... | 28 | 1 | 31 | 8 | 24 | 10 | | | | | | | |

(ii.) *Australian and other Wheat.* Generally speaking, Australian wheat shows a grain of bright clear texture, rich in gluten, and of fine milling quality. Its excellence is attested by the high price which it realises in the Home markets. The statement below shews, for the last four years, the average value per Imperial quarter of the wheat imported into the United Kingdom from the chief producing countries:—

AVERAGE PRICE OF FOREIGN WHEAT IMPORTED INTO THE UNITED KINGDOM,

1904 TO 1907.

| Country. | Average Price per Imperial Quarter. | | | | Country. | Average Price per Imperial Quarter. | | | | | | | |
|--------------------|-------------------------------------|-------|-------|-------|----------|-------------------------------------|-------|-------|--------------------|----|----|----|---|
| | 1904. | 1905. | 1906. | 1907. | | 1904. | 1905. | 1906. | 1907. | | | | |
| | s. d. | s. d. | s. d. | s. d. | | s. d. | s. d. | s. d. | s. d. | | | | |
| Argentina ... | 30 | 1 | 30 | 7 | 29 | 10 | 31 | 6 | United States— | | | | |
| Bulgaria ... | 28 | 7 | 29 | 4 | 27 | 5 | 25 | 9 | Atlantic Coast ... | 30 | 7 | 31 | 9 |
| Chile ... | 30 | 8 | 30 | 4 | ... | ... | 36 | 8 | Pacific Coast ... | 30 | 9 | 31 | 7 |
| Germany ... | 31 | 2 | 31 | 11 | 27 | 7 | 25 | 0 | Canada ... | 30 | 10 | 31 | 8 |
| Rumania ... | 29 | 5 | 31 | 0 | 28 | 11 | 30 | 2 | British India ... | 28 | 7 | 29 | 8 |
| Russia— | | | | | | | | | New Zealand ... | 29 | 7 | 30 | 1 |
| Northern Ports ... | 30 | 9 | 31 | 2 | 28 | 6 | 32 | 11 | Australia ... | 31 | 4 | 32 | 4 |
| Southern Ports ... | 30 | 9 | 31 | 9 | 29 | 10 | 32 | 8 | | | | | |

In the next table will be found a statement of the export prices of Australian wheat during each of the last seven years:—

EXPORT PRICES OF AUSTRALIAN WHEAT, 1901 to 1907.

| Year | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------------|---------|---------|---------|---------|---------|---------|---------|
| Price per bushel | 2s. 9d. | 3s. 1d. | 3s. 1d. | 3s. 2d. | 3s. 5d. | 3s. 3d. | 3s. 4d. |

The export prices here shewn are the average declared values for the successive years at the several ports of shipment in the Commonwealth.

5. **Imports and Exports of Wheat and Flour.**—(i.) *Quantities.* The table hereunder shews the imports, exports, and net exports of wheat and flour during each year of the period 1901-7. For the sake of convenience flour has been expressed at its equivalent in wheat, one ton of flour being taken as equal to 50 bushels of grain:—

**IMPORTS AND EXPORTS OF WHEAT AND FLOUR, COMMONWEALTH,
1901 TO 1907.**

| Year. | Imports. | | | Exports. | | | Net Exports. |
|-------|-----------|-------------------------|------------|------------|-------------------------|------------|--------------------------|
| | Wheat. | Flour. | Total. | Wheat. | Flour. | Total. | |
| | Bushels. | Eq. Bshls. ¹ | Bushels. | Bushels. | Eq. Bshls. ¹ | Bushels. | Bushels. |
| 1901 | 22,992 | 302,550 | 325,542 | 20,260,058 | 4,840,700 | 25,100,758 | 24,775,216 |
| 1902 | 176,133 | 553,650 | 729,783 | 8,999,282 | 1,659,150 | 10,658,432 | 9,928,649 |
| 1903 | 9,114,490 | 3,493,450 | 12,607,940 | 1,530,143 | 402,500 | 1,932,643 | -10,675,297 ² |
| 1904 | 618 | 58,200 | 58,818 | 33,346,066 | 5,247,500 | 38,593,566 | 38,534,748 |
| 1905 | 258 | 55,550 | 55,808 | 24,648,182 | 7,715,850 | 32,364,032 | 32,308,224 |
| 1906 | 745 | 43,800 | 44,545 | 30,262,335 | 8,344,050 | 38,606,385 | 38,561,840 |
| 1907 | 2,010 | 18,700 | 20,710 | 28,784,130 | 8,171,900 | 36,956,030 | 36,935,320 |

1. Equivalent in bushels of wheat. 2. — Denotes net imports.

As shewn above, the Commonwealth imports of wheat and flour during 1903 were equivalent to 12,607,940 bushels of wheat. This importation was necessitated by the failure of the crop in the preceding season. The principal sources of supply were the United States, which contributed 5,000,000 bushels of wheat and 56,000 tons of flour, the Argentine which sent 3,000,000 bushels of wheat and 2000 tons of flour, and Canada which sent 57,000 bushels of wheat in addition to 11,000 tons of flour. Wheat to the extent of 134,000 bushels was obtained from India, while Brazil furnished 122,000 bushels.

(ii.) *Destination of Exported Breadstuffs.* In the next two tables will be found the principal countries to which the Commonwealth exported wheat and flour during each year of the period 1901-7. The countries are as shewn in the Australian Customs returns, but owing to the fact that wheat ships are frequently instructed to call for orders at various African ports, some of these African countries cannot be properly considered as the ultimate destination of the whole of the wheat said to be exported to them.

EXPORTS OF WHEAT FROM THE COMMONWEALTH, 1901 to 1907.

(iii.) *Interstate Trade in Wheat.* A fairly considerable trade in wheat is carried on between the several States, the net result for 1907 shewing New South Wales, South Australia, and Western Australia as exporters, and Tasmania, Victoria, and Queensland as importers. The total quantity of wheat consigned from the several States to other States of the Commonwealth during 1907 was 2,316,490 bushels. Details for the year are as follows:—

INTERSTATE TRADE IN WHEAT, 1907.

| State. | Imports from other States of the C'wealth. | | Exports to other States of the Commonwealth. | | Net Interstate Exports.* | |
|---------------------|--|---------|--|---------|--------------------------|----------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |

* — Denotes net imports.

(iv.) *Interstate Trade in Flour.* In the case of flour the importing States are Queensland, Western Australia, and Tasmania, while the exporters are South Australia,

New South Wales, and Victoria. The following table contains particulars for the year 1907:—

INTERSTATE TRADE IN FLOUR, 1907.

| State. | Imports from other States of the C'wealth. | | Exports to other States of the Commonwealth. | | Net Interstate Exports.* | |
|---------------------|--|---------|--|---------|--------------------------|----------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| | Tons. | £ | Tons. | £ | Tons. | £ |
| New South Wales | 13,860 | 121,250 | 22,465 | 188,668 | 8,605 | 67,418 |
| Victoria ... | 1,635 | 13,715 | 6,908 | 55,597 | 5,273 | 41,882 |

| Tasmania ... | 1,332 | 10,328 | 141 | 1,404 | —1,191 | —8,924 |

* — Denotes net imports.

(v.) *Interstate Trade in Bran, Pollard, and Sharps.* Bran, pollard, and sharps, collectively known as wheat offal, represent about 30 per cent. of the total wheat ground, and figure somewhat largely in the interstate exports of South Australia and the interstate imports of Western Australia for 1907. Queensland is also an interstate importer, and Victoria and New South Wales exporters. In the case of Tasmania it is peculiar that this State appears for 1907 as an importer of wheat and flour and an exporter of wheat offal. Details for 1907 are as follows:—

INTERSTATE TRADE IN BRAN, POLLARD, AND SHARPS, 1907.

| State. | Imports from other States of the C'wealth. | | Exports to other States of the Commonwealth. | | Net Interstate Exports.* | |
|-------------------|--|--------|--|--------|--------------------------|---------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| | Bushels. | £ | Bushels. | £ | Bushels. | £ |
| New South Wales | 467,990 | 25,701 | 816,565 | 32,497 | 348,635 | 6,796 |
| Victoria ... | 267,090 | 12,015 | 479,975 | 21,197 | 212,885 | 9,182 |
| Queensland ... | 254,650 | 10,231 | 350 | 16 | —254,300 | —10,215 |

| Tasmania ... | 50,135 | 1,876 | 55,535 | 2,962 | 5,400 | 1,086 |

* — Denotes net imports.

(vi.) *Exports of Wheat and Flour.* From the foregoing returns it will be seen that the quantity of Australian wheat exported in the form of flour does not represent, on the average, more than 20 per cent. of the total wheat export of the Commonwealth. One cause of this, and probably the chief one, is the fact that Australian wheats are in considerable demand with the English millers for mixing purposes, while the Australian flour has not, up to the present, received that consideration from the English bakers which its admitted qualities undoubtedly merit. Steps which have recently been taken for bringing these qualities before the British public may possibly have the effect of increasing the proportion of wheat exported in the form of flour.

A point of some interest in connection with the export of wheat, and one which bears also on the proportions of wheat and flour exports just referred to, is that concerning the quantity of phosphoric acid which this export has the effect of removing from the Commonwealth, and the necessity which exists for the return to the soil of this substance in some form.

According to an estimate furnished by the chemist to the New South Wales Department of Agriculture (F. B. Guthrie, Esq., F.C.S., etc.), the proportions of milled product from a bushel (60 lbs.) of wheat are, approximately, 42 lbs. of flour, 9 lbs. of bran, and 9 lbs. of pollard, while the percentage of phosphoric acid contained in these products is as follows:—

| | |
|----------------|--|
| Flour | 0.32 per cent., or 0.13 lbs. per bushel. |
| Bran | 3.00 " 0.27 " |
| Pollard | 0.90 " 0.08 " |

The total amount of phosphoric acid contained in a bushel of wheat is, therefore, 0.48 lbs., of which 0.13 lbs. is in the flour and 0.35 lbs. in the offal.

During the past seven years the net exports from the Commonwealth of wheat and its milled products have amounted to 138,512,950 bushels of wheat, 637,113 tons of flour, and 3,036,183 bushels of bran, pollard, and sharps. On the basis of the figures quoted above this export would contain no less than 71,736,000 lbs. of phosphoric acid, the value of which as a fertiliser would be about £448,350.

6. Value of the Wheat Crop.—The estimated value of the wheat crop in each State and in the Commonwealth during the season 1907-8 is shewn below:—

VALUE OF THE WHEAT CROP, 1907-8.

| State. | N.S.W. | Vic. | Q'land. | S. Aust. | W. Aust. | Tas. | C'w'lh. |
|------------------------|-------------|-------------|-----------|-------------|-----------|-----------|-------------|
| Aggregate value | £ 2,021,920 | £ 2,596,625 | £ 121,367 | £ 3,747,380 | £ 621,709 | £ 136,899 | £ 9,245,900 |
| Value per acre | £1/9/1 | £1/8/1 | £1/9/5 | £2/2/8 | £2/4/6 | £4/8/11 | £1/14/4 |

§ 5. Oats.

1. Progress of Cultivation.—Oats comes next in importance to wheat amongst the cereal crops cultivated last season, but while wheat grown for grain accounted for more than 57½ per cent., oats represented less than 7 per cent. of the area under crop in the Commonwealth. The progress of cultivation since 1860 is shewn in the table hereunder, and more fully in the graphs hereinafter:—

CULTIVATION OF OATS, 1860-1 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'nsland. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|---------------|--------|-----------|-----------|----------|----------|--------|-----------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| 1860-1 | 6,535 | 86,337 | 7 | 2,273 | 507 | 30,303 | 125,962 |
| 1865-6 | 10,939 | 102,817 | 348 | 2,872 | 1,232 | 28,538 | 146,746 |
| 1870-1 | 10,683 | 149,309 | 122 | 6,188 | 2,095 | 30,946 | 199,343 |
| 1875-6 | 18,856 | 124,100 | 114 | 3,640 | 1,256 | 32,556 | 180,522 |
| 1880-1 | 17,923 | 134,089 | 116 | 4,355 | 1,319 | 19,853 | 177,655 |
| 1885-6 | 14,117 | 215,994 | 208 | 7,871 | 1,596 | 29,247 | 269,033 |
| 1890-1 | 14,102 | 221,048 | 411 | 12,475 | 1,934 | 20,740 | 270,710 |
| 1895-6 | 23,750 | 255,503 | 922 | 34,098 | 1,880 | 32,699 | 348,852 |
| 1900-1 | 29,383 | 362,689 | 385 | 27,988 | 4,790 | 45,073 | 470,338 |
| 1901-2 | 32,245 | 329,150 | 1,535 | 34,660 | 9,751 | 54,039 | 461,430 |
| 1902-3 | 42,992 | 433,489 | 78 | 50,296 | 10,334 | 55,058 | 592,247 |
| 1903-4 | 51,621 | 433,638 | 2,808 | 57,558 | 14,568 | 63,663 | 620,856 |
| 1904-5 | 40,471 | 344,019 | 643 | 50,630 | 13,864 | 43,630 | 493,317 |
| 1905-6 | 38,543 | 312,052 | 533 | 56,950 | 15,713 | 42,776 | 466,567 |
| 1906-7 | 56,431 | 380,493 | 1,236 | 57,000 | 28,363 | 58,320 | 581,843 |
| 1907-8 | 75,762 | 398,749 | 715 | 66,297 | 46,687 | 54,625 | 642,815 |

2. **Total Yield.**—The total oats crop of the several States for the same period is furnished in the following table:—

COMMONWEALTH OATS CROP, 1860-1 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tasmania. | C'wealth. |
|------------|-----------|------------|----------|----------|----------|-----------|------------|
| | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. |
| 1860-1 ... | 98,814 | 2,633,693 | 91 | 52,989 | 11,925 | 926,418 | 3,723,930 |
| 1865-6 ... | 116,005 | 2,279,468 | 4,524 | 42,642 | 19,005 | 688,740 | 3,150,384 |
| 1870-1 ... | 119,365 | 2,237,010 | 1,586 | 88,383 | 39,974 | 691,250 | 3,177,568 |
| 1875-6 ... | 352,966 | 2,719,795 | 1,482 | 60,749 | 18,840 | 827,043 | 3,980,875 |
| 1880-1 ... | 356,121 | 2,362,425 | 2,081 | 50,070 | 21,104 | 439,446 | 3,231,247 |
| 1885-6 ... | 279,107 | 4,692,303 | 1,006 | 97,201 | 23,142 | 784,325 | 5,877,084 |
| 1890-1 ... | 256,659 | 4,919,325 | 8,967 | 116,229 | 38,791 | 519,395 | 5,859,366 |

| 1901-2 ... | 687,179 | 6,724,900 | 42,208 | 469,254 | 163,654 | 1,702,659 | 9,789,854 |
| 1902-3 ... | 351,758 | 4,402,982 | 520 | 620,823 | 167,882 | 1,752,745 | 7,296,710 |
| 1903-4 ... | 1,252,156 | 13,434,952 | 70,713 | 902,936 | 258,503 | 1,621,950 | 17,541,210 |
| 1904-5 ... | 652,646 | 6,203,429 | 15,137 | 555,696 | 226,318 | 1,178,819 | 8,832,045 |
| 1905-6 ... | 883,081 | 7,232,425 | 5,858 | 869,146 | 283,987 | 1,200,024 | 10,474,521 |
| 1906-7 ... | 1,404,554 | 8,845,654 | 28,884 | 896,166 | 457,155 | 1,979,574 | 13,611,987 |
| 1907-8 ... | 851,776 | 5,201,408 | 9,900 | 874,388 | 721,753 | 1,526,002 | 9,185,227 |

The principal oat-growing State of the Commonwealth is Victoria. During the past eight seasons it has produced nearly 70 per cent. of the total quantity of oats grown in the Commonwealth; Tasmania, New South Wales, and South Australia come next in order of importance. In Western Australia, the highest production of oats for any season was that of 1907-8, while Victoria, South Australia, and Queensland experienced a maximum yield in 1903-4, and Tasmania and New South Wales, in 1906-7. For the Commonwealth as a whole the record yield was that of 17,541,210 bushels in the season 1903-4.

3. **Average Yield.**—The average yield per acre of the oats crop of the Commonwealth varies considerably in the different States, being highest in Tasmania and lowest in South Australia. Particulars as to average yield for the past seven seasons are given in the succeeding table:—

AVERAGE YIELD OF OATS PER ACRE.

| Season. | N.S.W. | Victoria. | Q'nsland. | S. Aust. | W. Aust. | Tasmania. | C'wealth. |
|------------|----------|-----------|-----------|----------|----------|-----------|-----------|
| | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. |
| 1901-2 ... | 21.31 | 20.43 | 27.50 | 13.54 | 16.78 | 31.48 | 21.22 |
| 1902-3 ... | 8.18 | 10.16 | 6.67 | 12.34 | 16.25 | 31.83 | 12.32 |
| 1903-4 ... | 24.26 | 30.98 | 25.18 | 15.69 | 17.74 | 26.74 | 28.25 |
| 1904-5 ... | 16.13 | 18.03 | 23.54 | 10.98 | 16.32 | 26.93 | 17.90 |
| 1905-6 ... | 22.91 | 23.18 | 10.99 | 15.26 | 18.07 | 28.05 | 22.45 |
| 1906-7 ... | 24.89 | 23.25 | 23.37 | 15.72 | 16.12 | 33.94 | 23.39 |
| 1907-8 ... | 11.24 | 13.04 | 13.85 | 13.19 | 15.47 | 27.94 | 14.29 |

It will be seen that as in the case of the wheat crop, the smallest average yield per acre for the Commonwealth for the period was that experienced in the season 1902-3, while the largest was that of the succeeding season.

4. **Relation to Population.**—The State in which oats production occupies the most important position in relation to population is Tasmania, the yield for that State representing for 1907-8 about eight and a-half bushels per head, as compared with two and

a-quarter bushels per head for the Commonwealth as a whole. Particulars for the past seven seasons are furnished in the succeeding table:—

OATS PRODUCTION PER 1000 OF POPULATION.

| Season. | N.S.W. | Victoria. | Q'land. | Sth. Aust. | W. Aust. | Tas. | C'wealth. |
|---------|----------|-----------|----------|------------|----------|----------|-----------|
| | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. |
| 1901-2 | 504 | 5,586 | 84 | 1,293 | 868 | 9,879 | 2,581 |
| 1902-3 | 253 | 3,637 | 1 | 1,703 | 815 | 10,076 | 1,892 |
| 1903-4 | 885 | 11,114 | 138 | 2,467 | 1,168 | 9,139 | 4,496 |
| 1904-5 | 453 | 5,138 | 29 | 1,503 | 957 | 6,593 | 2,234 |
| 1905-6 | 599 | 5,965 | 11 | 2,320 | 1,135 | 6,695 | 2,608 |
| 1906-7 | 930 | 7,228 | 54 | 2,359 | 1,759 | 11,068 | 3,332 |
| 1907-8 | 549 | 4,198 | 18 | 2,267 | 2,752 | 8,508 | 2,210 |

5. **Value of Oats Crop.**—The estimated value of the oats crop of the several States of the Commonwealth for the season 1907-8 is as follows:—

VALUE OF OATS CROP, 1907-8.

| State. | N.S.W. | Victoria. | Q'sland. | Sth Aust. | West Aus. | Tas. | C'wealth. |
|---------------------|----------|-----------|----------|-----------|-----------|----------|------------|
| Aggregate Value ... | £138,410 | £823,560 | £1,485 | £131,158 | £132,321 | £228,900 | £1,455,834 |
| Value per Acre ... | £1/16/1 | £2/1/4 | £2/1/6 | £1/19/7 | £2/16/8 | £4/3/10 | £2/5/4 |

6. **Imports and Exports.**—The production of oats in the Commonwealth has not yet reached such a stage as to admit of a regular export trade in this cereal; in fact in certain years the imports have exceeded the exports, notably in 1903 and 1906. The quantities and values of oats imported into and exported from the Commonwealth during the seven years 1901 to 1907 are given hereunder:—

COMMONWEALTH IMPORTS AND EXPORTS OF OATS, 1901 to 1907.

| Year. | Imports. | | Exports. | | Net Exports.* | |
|-------|-----------|---------|-----------|---------|---------------|----------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| | Bushels. | £ | Bushels. | £ | Bushels. | £ |
| 1901 | 1,526,599 | 153,674 | 2,874,334 | 285,347 | 1,347,735 | 131,673 |
| 1902 | 1,037,596 | 157,981 | 1,427,620 | 181,450 | 390,024 | 23,469 |
| 1903 | 2,066,365 | 229,395 | 184,823 | 23,305 | -1,881,542 | -206,090 |
| 1904 | 185,652 | 15,921 | 1,713,578 | 115,659 | 1,527,926 | 99,738 |
| 1905 | 392,400 | 45,460 | 882,740 | 83,479 | 490,340 | 38,019 |
| 1906 | 215,330 | 27,445 | 154,063 | 18,559 | -61,267 | -8,886 |
| 1907 | 21,945 | 2,850 | 533,485 | 60,204 | 511,540 | 57,354 |

* — Signifies net imports.

The principal country from which the Commonwealth imports of oats have been obtained is the Dominion of New Zealand, while the principal countries to which oats were exported during the period under review were the South African colonies in the earlier, and New Zealand in the later years.

7. **Oatmeal, etc.**—Importations of oatmeal, etc., into the Commonwealth take place principally from the United Kingdom, the United States and Canada. The

total importations of groats, oatmeal, wheatmeal, and rolled oats during 1907 amounted to 1,314,483 lbs., and represented a value of £20,237.

8. **Comparisons with other Countries.**—A comparison of the Australian production of oats with that of the leading oat-producing countries of the world, is furnished in the following table:—

PRODUCTION OF OATS IN VARIOUS COUNTRIES, 1906.

| Country. | Quantity of Oats produced. | Country. | Quantity of Oats produced. | Country. | Quantity of Oats produced. |
|--------------------|----------------------------|---------------------|----------------------------|---------------------------|----------------------------|
| | Bushels. | | Bushels. | | Bushels. |
| United States ... | 935,571,424 | Austria ... | 130,886,880 | Saskatchewan (Canada) ... | 23,965,528 |
| Russian Empire ... | 583,152,920 | Ontario (Can.) ... | 108,341,456 | Netherlands ... | 18,230,432 |
| Germany ... | 476,481,008 | Sweden ... | 66,509,576 | Australia ... | 13,611,987 |
| France ... | 250,466,816 | Manit'ba (Can.) ... | 50,692,976 | New Zealand ... | 11,201,789 |
| United Kingdom ... | 174,872,608 | Rumania ... | 25,356,336 | | |

9. **Comparison of Yields.**—The average yield per acre of oats in Australia is a somewhat low one compared with the results obtained in other countries, where the cultivation of this cereal is more extensively carried on. Arranging the countries contained in the foregoing table according to the magnitude of the average yield of oats for a period of five years, the results are as follows:—

AVERAGE YIELD OF OATS PER ACRE.

| Country. | Average per Acre. | Country. | Average per Acre. | Country. | Average per Acre. |
|-----------------------|-------------------|---------------------------|-------------------|----------------------|-------------------|
| | Bushels. | | Bushels. | | Bushels. |
| Netherlands ... | 52.29 | Germany ... | 38.06 | France ... | 27.17 |
| Manitoba (Canada) ... | 41.71 | Saskatchewan (Canada) ... | 37.06 | Austria ... | 22.90 |
| New Zealand ... | 41.27 | United States ... | 30.00 | Rumania ... | 21.97 |
| United Kingdom ... | 41.17 | Sweden ... | 27.72 | Australia ... | 20.97 |
| Ontario (Canada) ... | 39.03 | | | Russia ... | 16.32 |

10. **Interstate Trade.**—Particulars concerning the interstate trade in oats for the year 1907 are contained in the following table. These show that Victoria and Tasmania are the largest exporters, while New South Wales and Western Australia are the largest importers of oats:—

INTERSTATE TRADE IN OATS, 1907.

| State. | Imports from Other States of the Commonwealth. | | Exports to Other States of the Commonwealth. | | Net Interstate Exports.* | |
|-----------------------|--|---------|--|---------|--------------------------|----------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| | Bushels. | £ | Bushels. | £ | Bushels. | £ |
| New South Wales ... | 827,590 | 112,018 | 18,925 | 2,343 | —808,665 | —109,675 |
| Victoria ... | 147,128 | 20,274 | 603,620 | 71,099 | 456,492 | 50,825 |
| Queensland ... | 101,276 | 12,772 | 223 | 27 | —101,053 | —12,745 |
| South Australia ... | 4,278 | 531 | 211,288 | 25,282 | 207,010 | 24,751 |
| Western Australia ... | 618,655 | 72,015 | 113 | 12 | —618,542 | —72,003 |
| Tasmania ... | 11,302 | 1,229 | 876,060 | 120,076 | 864,758 | 118,847 |

* — Signifies net imports.

11. **Price of Oats.**—The average wholesale prices of oats in the Melbourne market for each of the years 1903 to 1907 are given in the following table:—

AVERAGE WHOLESALE PRICE OF OATS PER BUSHEL.

| Particulars. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-------------------|-------|-------|-------|-------|-------|
| | s. d. | s. d. | s. d. | s. d. | s. d. |
| Algerian Oats ... | 2 5 | 1 3 | 1 10 | 2 4 | 2 5 |
| White Oats ... | 2 8 | 1 11 | 2 7 | 2 8 | 2 6 |

§ 6. Maize.

1. **States Growing Maize.**—The only States in which maize is at all extensively grown for grain are those of New South Wales and Queensland, the area so cropped in these two States during the season 1907-8 being 288,099 acres, or more than 96 per cent. of the total for the Commonwealth. Of the balance, Victoria contributed 10,844 acres, South Australia 549 acres, and Western Australia 87 acres. The climate of Tasmania prevents the growing of maize for grain in that State. In South Australia prior to 1903 particulars concerning maize had not been specially asked for on the form used in the collection of agricultural statistics. In all the States maize is grown to a greater or less extent as green forage, particularly in connection with the dairying industry.

2. **Area under Maize.**—The area devoted to the growing of maize for grain in each State, with the total for the Commonwealth, from 1875 onwards, is as follows:—

AREA UNDER MAIZE, STATES AND COMMONWEALTH, 1875-6 to 1907-8.

| Season. | N.S.W. | Victoria. | Queensland. | South Aust. | West Aust. | C'wealth. |
|---------|---------|-----------|-------------|-------------|------------|-----------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| 1875-6 | 117,582 | 2,346 | 38,711 | ... | 60 | 158,699 |
| 1880-1 | 127,196 | 1,769 | 44,109 | ... | 32 | 173,106 |
| 1885-6 | 132,709 | 4,530 | 71,741 | ... | 120 | 209,100 |
| 1890-1 | 191,152 | 10,357 | 99,400 | ... | 81 | 300,990 |
| 1895-6 | 211,104 | 7,186 | 100,481 | ... | 23 | 318,794 |
| 1900-1 | 206,051 | 9,389 | 127,974 | ... | 91 | 343,505 |
| 1901-2 | 167,333 | 10,020 | 116,983 | ... | 513 | 294,849 |
| 1902-3 | 202,437 | 10,906 | 89,923 | ... | 109 | 303,375 |
| 1903-4 | 226,834 | 11,810 | 133,099 | ... | 163 | 371,906 |
| 1904-5 | 193,614 | 11,394 | 119,171 | ... | 86 | 324,265 |
| 1905-6 | 189,353 | 11,785 | 113,720 | ... | 43 | 314,901 |
| 1906-7 | 174,115 | 11,559 | 139,806 | ... | 101 | 325,581 |
| 1907-8 | 160,980 | 10,844 | 127,119 | 549 | 87 | 299,579 |

The actual fluctuations from year to year are shown more fully on the graph hereinafter.

The total area under maize in the Commonwealth exceeded 300,000 acres for the first time in the season 1890-1, and although it has fluctuated somewhat since then, it may be considered to have remained practically stationary at about that figure. The greatest divergence occurred in 1903-4, when a record total of 371,906 acres was harvested. The area cropped with maize appears to be on the decline in New South Wales, the maximum cropping being that of 1903-4, while each subsequent season furnished a smaller area than the preceding. In Queensland, on the other hand, the area appears

to be on the increase, and that for 1906-7 was the highest ever attained in that State. The area under maize in New South Wales in 1907-8 represents about $6\frac{1}{2}$ per cent. of that State's total area under crop, while in the case of Queensland the maize crop amounts to nearly 24 per cent. of the total.

3. **Total Yield.**—Notwithstanding the fact that the area under maize in the Commonwealth for 1906-7 fell considerably short of that for some of the previous seasons, the 1906-7 production established a record, the total attained being 10,172,154 bushels. Only once previously had a total exceeding ten millions been reached, viz., in the season 1897-8, when 10,036,083 bushels were harvested. For the season 1907-8, both the area under maize and also the average yield per acre were lower in all the States than for the preceding season, the consequence being that the total production reached only 8,137,745 bushels. Particulars concerning the yield from 1875 onwards are as hereunder :—

MAIZE CROP, STATES AND COMMONWEALTH, 1875-6 to 1907-8.

| Season. | N.S.W. | Victoria. | Queensland. | S. Aust. | W. Aust. | C'wealth. |

* Particulars for previous years not available.

4. **Average Yield.**—In the following table particulars are given of the average yield per acre of the maize crops of the several States for the seven seasons, 1901-2 to 1907-8 :—

AVERAGE YIELD OF MAIZE PER ACRE, COMMONWEALTH AND STATES,

1901-2 TO 1907-8.

| Season. | N.S.W. | Victoria. | Queensland | S. Aust. | W. Aust. | C'wealth. |
|------------|----------|-----------|------------|----------|----------|-----------|
| | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. |
| 1901-2 ... | 22.98 | 61.42 | 21.96 | ... | 10.16 | 23.86 |
| 1902-3 ... | 15.06 | 68.32 | 11.49 | ... | 19.36 | 15.94 |
| 1903-4 ... | 30.14 | 76.57 | 14.45 | ... | 15.26 | 25.99 |
| 1904-5 ... | 25.57 | 54.74 | 21.34 | ... | 10.42 | 25.04 |
| 1905-6 ... | 29.26 | 54.41 | 19.04 | ... | 9.95 | 26.50 |
| 1906-7 ... | 33.10 | 60.99 | 26.49 | ... | 9.10 | 31.24 |
| 1907-8 ... | 28.13 | 46.92 | 24.34 | *11.41 | 12.41 | 27.16 |

* Particulars for previous years not available.

The extraordinarily high average yield obtained in Victoria is due, in large measure, to the fact that the area under maize in that State is comparatively small and is situated in districts that are peculiarly suited to the production of this grain. The yield in New South Wales is appreciably higher than that obtained in Queensland.

5. **Value of Maize Crop.**—The value of the Commonwealth maize crop for the season 1907-8 has been estimated at £1,518,577, made up as follows:—

VALUE OF MAIZE CROP, 1907-8.

| State | New South Wales. | Victoria. | Queensland. | S. Aust. | Western Australia. | Commonwealth. |
|-----------------|------------------|-----------|-------------|----------|--------------------|---------------|
| Aggregate value | £1,018,770 | £111,820 | £386,724 | £939 | £324 | £1,518,577 |
| Value per acre | £6 6/7 | £10 6/3 | £3 0/10 | £1 14/2 | £3 14/6 | £5 1/5 |

6. **Relation to Population.**—During the past seven seasons the Commonwealth production of maize has ranged between 1½ bushels per head of population in 1902-3 and 2½ bushels per head in 1906-7. The production in Queensland, the State in which the maize yield per head of population is highest, ranged during the same period between 2 bushels per head in 1902-3 and 7 bushels per head in 1906-7. Details for the several States for the seven seasons are as follows:—

MAIZE PRODUCTION PER 1000 OF POPULATION.

| Season. | N.S.W. | Victoria. | Qsld. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|---------------|----------|-----------|----------|----------|----------|---------|-----------|
| | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels | Bushels. |
| 1901-2 | 2,820 | 511 | 5,125 | ... | 28 | ... | 1,855 |
| 1902-3 | 2,192 | 620 | 2,027 | ... | 10 | ... | 1,254 |
| 1903-4 | 4,830 | 748 | 3,753 | ... | 11 | ... | 2,478 |
| 1904-5 | 3,433 | 517 | 4,898 | ... | 4 | ... | 2,053 |
| 1905-6 | 3,757 | 529 | 4,117 | ... | 2 | ... | 2,078 |
| 1906-7 | 3,816 | 576 | 6,951 | ... | 4 | ... | 2,490 |
| 1907-8 | 2,920 | 411 | 5,740 | *16 | 4 | ... | 1,958 |

* Particulars for previous years not available.

7. **Imports and Exports.**—Except in the years 1902 and 1903, when, owing to the severe drought experienced in Australia, many of the maize crops failed, the Commonwealth trade in maize has been practically insignificant. In the former of the years mentioned nearly two million, and in the latter considerably more than a million bushels were imported. Details of the imports and exports for the past seven years are as follows:—

COMMONWEALTH IMPORTS AND EXPORTS OF MAIZE, 1901 to 1907.

| Year. | Imports. | | Exports. | | Net Exports.* | |
|-------------|-----------|---------|-----------|--------|---------------|---------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| | Bushels. | £ | Bushels. | £ | Bushels. | £ |
| 1901 | 188,423 | 24,764 | 533 | 75 | 187,890 | 24,689 |
| 1902 | 1,910,587 | 319,859 | 1,450 | 351 | 1,909,137 | 319,508 |
| 1903 | 1,346,702 | 204,484 | 17,296 | 2,749 | 1,329,406 | 201,735 |
| 1904 | 35,096 | 3,018 | 48,109 | 5,421 | 13,013 | 2,403 |
| 1905 | 9,785 | 1,922 | 7,033 | 985 | 2,752 | 937 |
| 1906 | 24,727 | 3,243 | 63,168 | 9,256 | 38,441 | 6,013 |
| 1907 | 31,327 | 5,541 | 43,429 | 6,220 | 12,102 | 679 |

* — Signifies net imports.

The principal countries to which maize has been exported from the Commonwealth are South Africa, New Zealand, and China, while the principal countries from which importations have taken place are the Argentine Republic, New Zealand, the United States, and the New Hebrides.

8. **Prepared Maize.**—A fairly large quantity of maizena and corn-flour is imported annually into the Commonwealth, the principal countries of supply being the United Kingdom and the United States. During the year 1907 these importations amounted to 1,851,582 lbs., and represented a value of £19,667.

9. **Maize-growing in other Countries.**—The world's production of maize for the year 1906 has been estimated at 3,520,000,000 bushels, and of this amount the United States of America was responsible for 2,840,000,000, or slightly more than 80 per cent. The other leading maize-producing countries of the world are Mexico, the Argentine Republic, India, Italy, and Austria-Hungary.

10. **Interstate Trade in Maize.**—In addition to being the largest producer of maize in the Commonwealth, New South Wales is also the largest importer from the other States. Particulars of the Interstate imports and exports are contained in the table given hereunder:—

INTERSTATE TRADE IN MAIZE, 1907.

| State. | Imports from other States of the Commonwealth. | | Exports to other States of the Commonwealth. | | Net Interstate Exports.* | |
|-----------------------|--|--------------|--|------------|--------------------------|---------------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| New South Wales ... | Bushels. 898,942 | £ 117,901 | Bushels. 20,956 | £ 3,564 | Bushels. —877,986 | £ —114,337 |
| Victoria ... | 6,103 | 1,033 | 91,327 | 17,315 | 85,224 | 16,282 |
| Queensland ... | 13,828 | 2,975 | 839,559 | 105,977 | 825,731 | 108,002 |
| South Australia ... | 21,184 | 3,045 | 34 | 7 | —21,150 | —3,038 |
| Western Australia ... | 8,591 | 1,354 | ... | ... | —8,591 | —1,354 |
| Tasmania ... | 3,228 | 555 | ... | ... | —3,228 | —555 |

* — Signifies net imports.

11. **Price of Maize.**—The average wholesale price of maize in the Sydney market is given in the following table for each of the years 1901 to 1907:—

AVERAGE PRICE OF MAIZE PER BUSHEL.

| Year | ... | ... | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

| | | | s. d. | s. d. | s. d. | s. d. | s. d. | s. d. | s. d. |
| Average price per bushel | | | 2 9 | 4 10 | 4 1 | 2 4 | 3 3 | 3 0 | 3 2 |

§ 7. Barley.

1. **Area under Barley.**—The barley crop of the Commonwealth is one which has fluctuated very considerably as regards area, but the net result of these fluctuations has left it in practically the same position as that which it occupied twenty-six years ago. The area harvested for the season 1907-8 is certainly higher than for any previous season since 1894-5, when a total of 133,175 acres was reaped, but the area under barley in 1905-6 was less and that in 1906-7 only slightly more than was harvested at as early a period as 1880-1. The principal barley-growing State of the Commonwealth is Victoria,

which, for the season 1907-8, accounted for nearly 50 per cent. of the Commonwealth area devoted to this crop. The figures here given relate to the areas harvested for grain; only small areas are cropped for hay, while more considerable quantities are cut for green forage. These, however, are not included in this sub-section. The area under barley for grain in the several States from 1875 onwards is shewn in the following table:—

COMMONWEALTH AREA UNDER BARLEY 1875-6 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'nsland. | Sth. Aust. | W. Aust. | Tasmania. | C'wealth. |
|---------|--------|-----------|-----------|------------|----------|-----------|-----------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| 1875-6 | 4,817 | 31,568 | 613 | 13,969 | 5,014 | 5,939 | 61,920 |
| 1880-1 | 8,056 | 68,630 | 1,499 | 13,074 | 6,363 | 3,297 | 105,919 |
| 1885-6 | 5,298 | 74,112 | 406 | 16,493 | 6,178 | 6,833 | 109,320 |
| 1890-1 | 4,937 | 87,751 | 584 | 14,472 | 5,322 | 4,376 | 117,442 |
| 1895-6 | 7,590 | 78,438 | 721 | 14,184 | 1,932 | 6,178 | 109,043 |
| 1900-1 | 9,435 | 58,853 | 7,533 | 15,352 | 2,536 | 4,502 | 98,211 |
| 1901-2 | 6,023 | 32,423 | 11,775 | 15,517 | 2,669 | 6,104 | 74,511 |
| 1902-3 | 4,557 | 37,716 | 430 | 21,493 | 3,783 | 8,281 | 76,260 |
| 1903-4 | 10,057 | 47,760 | 22,881 | 28,697 | 3,609 | 8,084 | 121,088 |
| 1904-5 | 14,930 | 46,089 | 17,387 | 23,904 | 3,251 | 7,646 | 113,207 |
| 1905-6 | 9,519 | 40,938 | 5,201 | 26,250 | 3,665 | 5,372 | 90,945 |
| 1906-7 | 7,979 | 52,816 | 8,601 | 28,122 | 3,590 | 5,328 | 106,436 |
| 1907-8 | 11,890 | 63,074 | 6,943 | 37,321 | 6,019 | 5,852 | 131,099 |

The only State in which a comparatively consistent increase in the area devoted to this crop is in evidence is that of South Australia.

2. **Malting and other Barley.**—In recent years the statistics of all the States, except South Australia, have distinguished between "malting" and "other" barley and for 1907-8 this distinction has also been made in South Australia. Particulars for the Commonwealth are as follows:—

AREA UNDER MALTING AND OTHER BARLEY, COMMONWEALTH, 1907-8.

| State ... | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|------------------|--------|-----------|---------|----------|----------|--------|-----------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| Malting barley | 9,932 | 41,940 | 5,846 | 23,199 | 3,162 | 5,079 | 89,157 |
| Other barley ... | 1,958 | 21,134 | 1,097 | 14,122 | 2,857 | 774 | 41,942 |
| Total ... | 11,890 | 63,074 | 6,943 | 37,321 | 6,019 | 5,852 | 131,099 |

It will be seen that taking the Commonwealth as a whole, about 68 per cent. of the area devoted to this grain is cropped with malting barley. The proportion varies considerably in the several States.

3. **Total Yield.**—The total production of barley in the Commonwealth for the season 1907-8 was 1,991,652 bushels, and fell short of the preceding season's harvest by 256,780 bushels. An increased output occurred in South Australia, Western Australia, and Tasmania, but extensive shortages were experienced in New South Wales, Victoria, and Queensland. Particulars concerning the yields of the several States from 1875 onwards are as follows:—

COMMONWEALTH BARLEY CROP, 1875-6 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'sland. | Sth. Aust. | West Aust. | Tasmania. | C'wealth. |
|---------|----------|-----------|----------|------------|------------|-----------|-----------|
| | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. |
| 1875-6 | 98,576 | 700,665 | 12,260 | 197,315 | 70,196 | 165,357 | 1,244,369 |
| 1880-1 | 163,395 | 1,068,830 | 31,433 | 151,886 | 89,082 | 169,156 | 1,673,782 |
| 1885-6 | 85,606 | 1,302,854 | 9,826 | 218,334 | 89,581 | 176,466 | 1,882,667 |
| 1890-1 | 81,383 | 1,571,599 | 12,673 | 175,583 | 85,451 | 99,842 | 2,026,531 |
| 1895-6 | 96,119 | 715,592 | 7,756 | 140,391 | 18,691 | 138,833 | 1,117,382 |
| 1900-1 | 114,228 | 1,215,478 | 127,144 | 211,102 | 29,189 | 116,911 | 1,814,052 |
| 1901-2 | 103,361 | 693,851 | 277,037 | 243,362 | 34,723 | 167,485 | 1,519,819 |
| 1902-3 | 18,233 | 561,144 | 3,595 | 317,155 | 46,255 | 201,133 | 1,147,515 |
| 1903-4 | 174,147 | 1,218,003 | 510,557 | 487,920 | 53,227 | 212,459 | 2,656,313 |
| 1904-5 | 266,781 | 874,099 | 331,772 | 346,718 | 37,332 | 163,194 | 2,019,896 |
| 1905-6 | 111,266 | 1,062,139 | 61,816 | 505,916 | 49,497 | 106,042 | 1,896,676 |
| 1906-7 | 152,739 | 1,255,442 | 158,283 | 491,246 | 48,827 | 141,895 | 2,248,432 |
| 1907-8 | 75,148 | 1,059,295 | 64,831 | 566,937 | 76,205 | 149,186 | 1,991,652 |

4. **Value of Barley Crop.**—The estimated value of the total barley crop of the Commonwealth for the season 1907-8 was £467,294, the extent to which the several States have contributed to this total being shewn in the following table:—

VALUE OF BARLEY CROP.

| State | N.S.W. | Victoria. | Q'sland. | Sth. Aust. | Wst. Aus. | Tas. | C'wealth. |
|-----------------|---------|-----------|----------|------------|-----------|---------|-----------|
| Total value ... | £18,040 | £257,400 | £16,221 | £130,241 | £15,836 | £29,556 | £467,294 |
| Value per acre | £1/10/4 | £4/1/7 | £2/6/9 | £3/9/10 | £2/12/7 | £5/1/0 | £3/11/3 |

5. **Relation to Population.**—During the seven seasons, 1901-2 to 1907-8, the quantity of barley produced in the Commonwealth has averaged about half a bushel per head of population. Details for the period are as follows:—

BARLEY PRODUCTION PER 1000 OF POPULATION.

| Season. | N.S.W. | Victoria. | Qsld. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|---------------|----------|-----------|---------|----------|----------|---------|-----------|
| | Bushels. | Bushels. | Bushels | Bushels. | Bushels | Bushels | Bushels. |
| 1901-2 | 76 | 576 | 553 | 671 | 184 | 972 | 401 |
| 1902-3 | 13 | 464 | 7 | 870 | 225 | 1,156 | 298 |
| 1903-4 | 123 | 1,008 | 996 | 1,333 | 240 | 1,197 | 681 |
| 1904-5 | 184 | 724 | 639 | 938 | 158 | 913 | 511 |
| 1905-6 | 75 | 876 | 118 | 1,350 | 198 | 517 | 469 |
| 1906-7 | 101 | 1,026 | 297 | 1,293 | 188 | 793 | 550 |
| 1907-8 | 48 | 855 | 120 | 1,470 | 291 | 832 | 479 |

6. **Imports and Exports Oversea.**—The Commonwealth oversea trade in barley is not extensive, and in most years the imports exceed the exports. In 1902 and 1903 somewhat extensive importations of barley from the United States and New Zealand took place, owing to the shortage in local supply resulting from the severe drought of that period. In 1904, the record crop of the season 1903-4 furnished the material for a heavy exportation to Japan, the total exported thither during that year being 551,825 bushels. Particulars of the Commonwealth oversea imports and exports of barley for the seven years 1901 to 1907 are contained in the following table:—

OVERSEA IMPORTS AND EXPORTS OF BARLEY, 1901 to 1907.

| Year. | Imports. | | Exports. | | Net Exports.* | |
|----------|-----------|---------|-----------|--------|---------------|----------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| | Bushels. | £ | Bushels. | £ | Bushels. | £ |
| 1901 ... | 55,508 | 7,208 | 17,474 | 1,942 | — 38,034 | — 5,266 |
| 1902 ... | 686,478 | 123,194 | 8,267 | 1,465 | —678,211 | —121,729 |
| 1903 ... | 731,494 | 136,997 | 14,286 | 5,561 | —717,208 | —131,436 |
| 1904 ... | 246,908 | 39,012 | 568,640 | 65,950 | 321,732 | 26,938 |
| 1905 ... | 124,850 | 19,672 | 244,456 | 28,618 | 119,606 | 8,946 |
| 1906 ... | 210,586 | 34,468 | 3,150 | 562 | —207,436 | — 33,906 |
| 1907 ... | 232,154 | 53,802 | 38,350 | 5,533 | —193,804 | — 48,269 |

* — Signifies net imports.

It will be seen that in only two years out of the seven dealt with have the Commonwealth exports of barley exceeded the imports, viz., in 1904 and 1905. During the seven years the total importations amounted to 2,237,978 bushels, valued at £414,353, and the total exports to 894,923 bushels, valued at £109,631, giving a net importation of 1,393,355 bushels in quantity and £304,722 in value.

In addition to the above, which relates to the unprepared grain, there is a small importation into the Commonwealth of pearl and Scotch barley, mainly from the United Kingdom, Germany, and China. The total imported during 1907 amounted to only 14,579 lbs. in weight, with a value of £302.

7. Oversea Imports and Exports of Malt.—The importations of malt into the Commonwealth are fairly extensive, the bulk of the supply being obtained from the United Kingdom and Germany, principally from the former. Details of imports and exports for the past seven years are given hereunder :—

OVERSEA IMPORTS AND EXPORTS OF MALT, 1901 to 1907.

| Year. | Imports. | | Exports. | | Net Imports. | |
|----------|-----------|---------|-----------|--------|--------------|---------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| | Bushels. | £ | Bushels. | £ | Bushels. | £ |
| 1901 ... | 516,135 | 140,615 | ... | ... | 516,135 | 140,615 |

8. Interstate Trade in Barley and Malt.—Victoria, as well as being the largest grower of barley in the Commonwealth, is also the largest importer from the other States, the supply being chiefly obtained from South Australia, the principal interstate exporter during 1907. In the cases of both pearl barley and malt New South Wales was the largest importer from the other States and Victoria the largest exporter.

9. Comparison with other Countries.—In comparison with the barley production of other countries of the world that of Australia appears very small indeed. Particulars for some of the leading countries for the year 1906 are as follows, the Australian figures being added for the sake of comparison:—

PRODUCTION OF BARLEY IN VARIOUS COUNTRIES, 1906.

| Country. | Production of Barley. | Country. | Production of Barley. |
|--------------------|-----------------------|----------------------|-----------------------|
| | Bushels. | | Bushels. |
| Russian Empire ... | 298,622,880 | Rumania ... | 32,502,616 |
| United States ... | 173,477,424 | Ontario (Canada) ... | 25,253,008 |
| Germany ... | 137,146,496 | Manitoba ... | 17,532,552 |
| Austria ... | 69,406,840 | Sweden ... | 14,490,024 |
| United Kingdom ... | 67,479,688 | Netherlands ... | 3,159,384 |
| France ... | 35,859,920 | Australia ... | 2,248,432 |

10. **Average Yield.**—The average yield per acre of barley varies considerably in the different States, being highest in Tasmania and Victoria, and lowest in Western Australia and Queensland. Details for each State for the seven seasons 1901-2 to 1907-8 are given in the following table :—

AVERAGE YIELD PER ACRE OF BARLEY, 1901-2 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'sland. | Sth. Aust. | West Aust. | Tas. | C'wealth. |
|------------|----------|-----------|----------|------------|------------|----------|-----------|
| | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. | Bushels. |
| 1901-2 ... | 17.16 | 21.40 | 23.53 | 15.68 | 13.01 | 27.44 | 20.40 |
| 1902-3 ... | 4.00 | 14.88 | 8.36 | 14.76 | 12.23 | 24.29 | 15.05 |
| 1903-4 ... | 17.32 | 25.50 | 22.31 | 17.00 | 14.75 | 26.28 | 21.94 |
| 1904-5 ... | 17.87 | 18.97 | 19.08 | 14.50 | 11.48 | 21.94 | 17.84 |
| 1905-6 ... | 11.69 | 25.95 | 11.89 | 19.27 | 13.51 | 19.74 | 20.86 |
| 1906-7 ... | 19.14 | 23.77 | 18.40 | 17.47 | 13.60 | 26.63 | 21.12 |
| 1907-8 ... | 6.32 | 16.79 | 9.34 | 15.19 | 12.66 | 25.49 | 15.19 |

11. **Price of Barley.**—The average prices of barley in the Melbourne market during each of the years 1903 to 1907 are given in the following table :—

AVERAGE PRICE OF BARLEY PER BUSHEL 1903 to 1907.

| Particulars. | 1903. | 1904. | 1905. | 1906. | 1907. |
|--------------------|-------|-------|-------|-------|-------|
| | s. d. | s. d. | s. d. | s. d. | s. d. |
| Malting barley ... | 3 11 | 3 6 | 4 0 | 4 5 | 4 8 |
| Cape barley ... | 3 1 | 1 9 | 2 7 | 2 4 | 2 8 |

§ 8. Other Grain and Pulse Crops.

In addition to the grain crops already specified, the only grain and pulse crops at all extensively grown in the Commonwealth are beans, peas and rye. The total area under the two former for the season 1907-8 was 34,824 acres, giving a total yield of 597,251 bushels, or an average of 17.15 bushels per acre. The States in which the greatest area is devoted to beans and peas are Victoria, Tasmania and South Australia. The total area under rye in the Commonwealth during the season 1907-8 was 8560 acres, yielding 100,072 bushels, and giving an average of 11.69 bushels per acre. More than half the rye grown during the season was produced in New South Wales. In addition to these grain crops a small area of rice has for some years past been cultivated in Queensland. The results obtained, however, have not offered sufficient inducement to growers to continue this crop, and the total area devoted to it has declined from 863 acres in 1898-9 to 14 acres in 1907-8. Should rice-growing ever be seriously taken up in Australia, it is probable that large tracts of country in the northern parts of Western Australia and in the Northern Territory will be found well suited to its cultivation.

§ 9. Potatoes.

1. **Area.**—The principal potato-growing State of the Commonwealth, as regards area is Victoria, Tasmania ranking second and New South Wales third. The area devoted to this crop in the Commonwealth, which has fluctuated somewhat, reached its highest point in the season 1906-7, with a total of 146,681 acres, while the area under potatoes for 1907-8 fell but little short of the 1906-7 record. The largest areas planted

in any previous seasons were 139,397 acres in 1899-1900, and 127,592 acres in 1894-5. The area under potatoes in each State from 1890 onwards is given hereunder :—

COMMONWEALTH AREA UNDER POTATOES, 1890-1 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'nsland. | Sth. Aust. | W. Aust. | Tasmania. | C'wealth. |
|---------|--------|-----------|-----------|------------|----------|-----------|-----------|
| | Acres. | Acres | Acres. | Acres | Acres. | Acres. | Acres. |
| 1890-1 | 19,406 | 53,818 | 6,270 | 6,626 | 511 | 20,133 | 106,764 |
| 1895-6 | 24,722 | 43,895 | 9,240 | 6,448 | 668 | 19,247 | 104,220 |
| 1900-1 | 29,408 | 38,477 | 11,060 | 6,628 | 1,794 | 23,068 | 110,435 |
| 1901-2 | 26,158 | 40,058 | 9,948 | 6,248 | 1,829 | 25,444 | 109,685 |
| 1902-3 | 19,444 | 49,706 | 2,899 | 7,763 | 2,084 | 34,625 | 116,521 |
| 1903-4 | 20,851 | 48,930 | 6,732 | 8,616 | 1,823 | 29,160 | 116,112 |
| 1904-5 | 23,855 | 46,912 | 9,771 | 8,315 | 1,906 | 25,948 | 116,707 |
| 1905-6 | 26,374 | 44,670 | 7,170 | 9,540 | 2,145 | 28,634 | 118,533 |
| 1906-7 | 36,815 | 55,372 | 8,031 | 9,894 | 2,264 | 34,305 | 146,681 |
| 1907-8 | 31,917 | 54,149 | 7,889 | 9,062 | 1,854 | 38,640 | 143,511 |

2. **Total Yield.**—Although only second amongst the States in respect of area under potatoes, Tasmania has, in several recent years, occupied the leading position in point of production. For the season 1907-8, Tasmania's production represented nearly 39 per cent. of the total for the Commonwealth, Victoria and New South Wales coming next in order. The total Commonwealth production for the season 1906-7, viz., 507,153 tons, was the highest ever attained, the yield which most nearly approached it being 449,383 tons in 1903-4. Details as to production in the several States during the period from 1890 onwards are as follows :—

COMMONWEALTH PRODUCTION OF POTATOES, 1890-1 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'nsland. | Sth. Aust. | W. Aust. | Tasmania. | C'wealth. |
|---------|---------|-----------|-----------|------------|----------|-----------|-----------|
| | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. | Tons |
| 1890-1 | 52,791 | 204,155 | 13,112 | 23,963 | 1,900 | 73,153 | 369,079 |
| 1895-6 | 56,179 | 117,238 | 19,027 | 18,412 | 2,290 | 81,423 | 294,569 |
| 1900-1 | 63,253 | 123,126 | 20,014 | 14,566 | 4,836 | 93,862 | 319,657 |
| 1901-2 | 39,146 | 125,474 | 22,402 | 15,059 | 5,739 | 114,704 | 322,524 |
| 1902-3 | 30,732 | 168,759 | 3,257 | 28,312 | 6,488 | 163,518 | 401,066 |
| 1903-4 | 56,743 | 167,736 | 17,649 | 31,415 | 4,542 | 171,298 | 449,383 |
| 1904-5 | 48,754 | 92,872 | 19,231 | 19,521 | 5,614 | 110,547 | 296,539 |
| 1905-6 | 49,889 | 115,352 | 11,308 | 20,328 | 6,297 | 64,606 | 267,780 |
| 1906-7 | 114,856 | 166,839 | 15,830 | 22,277 | 5,028 | 182,323 | 507,153 |
| 1907-8 | 55,882 | 135,110 | 13,177 | 20,263 | 5,671 | 145,483 | 375,586 |

3. **Average Yield.**—The suitability of the soil, climate, and general conditions of Tasmania for potato growing is evidenced by the high yields per acre which are almost invariably obtained in the island State. The lowest average yield is that obtained in Queensland. Particulars for each State for the seven seasons 1901-2 to 1907-8 are given hereunder :—

**AVERAGE YIELD OF POTATOES, COMMONWEALTH AND STATES,
1901-2 TO 1907-8.**

| Season. | N.S.W. | Victoria. | Queensl'd. | S. Aust. | W. Aust. | Tasmania. | C'wealth. |
|---------|--------|-----------|------------|----------|----------|-----------|-----------|
| | Tons. | Tons | Tons. | Tons. | Tons. | Tons. | Tons. |
| 1901-2 | 1.50 | 3.13 | 2.25 | 2.41 | 3.14 | 4.51 | 2.94 |
| 1902-3 | 1.58 | 3.40 | 1.12 | 3.65 | 3.11 | 4.72 | 3.44 |
| 1903-4 | 2.72 | 3.43 | 2.62 | 3.65 | 2.49 | 5.87 | 3.87 |
| 1904-5 | 2.04 | 1.98 | 1.97 | 2.35 | 2.95 | 4.26 | 2.54 |
| 1905-6 | 1.89 | 2.58 | 1.58 | 2.13 | 2.94 | 2.26 | 2.26 |
| 1906-7 | 3.12 | 3.01 | 1.97 | 2.25 | 2.22 | 5.31 | 3.46 |
| 1907-8 | 1.75 | 2.50 | 1.67 | 2.24 | 3.06 | 3.77 | 2.62 |

4. **Value of Potato Crop.**—The estimated value of the potato crop of each State for the season 1907-8 is furnished in the following table together with the value per acre :—

VALUE OF POTATO CROP, 1907-8.

| State. | N.S.W. | Victoria. | Queensl'd. | S. Aust. | W. Aust. | Tasmania. | C'wealth. |
|----------------|----------|-----------|------------|----------|----------|-----------|------------|
| Total value | £263,420 | £489,770 | £59,296 | £70,920 | £34,025 | £436,449 | £1,353,880 |
| Value per acre | £8/5/1 | £9/0/11 | £7/10/4 | £7/16/6 | £18/7/0 | £11/5/11 | £9/8/8 |

5. **Relation to Population.**—The average production of potatoes per annum per head of the population of the Commonwealth for the past seven seasons has been approximately 1½ cwt. In Tasmania, where this crop is of far greater importance in relation to population than is the case in any other State, the production per head in 1906-7 was more than a ton, and in 1907-8 about 16½ cwt. Details for the past seven seasons are as follows :—

POTATO PRODUCTION PER 1000 OF POPULATION.

| Season. | N.S.W. | Victoria. | Q'land. | Sth. Aust. | W. Aust. | Tas. | C'wealth. |
|---------------|--------|-----------|---------|------------|----------|-------|-----------|
| | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. |
| 1901-2 | 29 | 104 | 45 | 42 | 30 | 665 | 85 |
| 1902-3 | 22 | 139 | 6 | 78 | 32 | 940 | 104 |
| 1903-4 | 44 | 139 | 34 | 86 | 25 | 965 | 115 |
| 1904-5 | 34 | 77 | 37 | 53 | 24 | 618 | 75 |
| 1905-6 | 34 | 95 | 22 | 54 | 25 | 360 | 67 |
| 1906-7 | 76 | 136 | 30 | 59 | 19 | 1,019 | 124 |
| 1907-8 | 36 | 109 | 24 | 53 | 22 | 811 | 90 |

6. **Oversea Imports and Exports.**—Under normal conditions there is usually a fairly large export trade in potatoes carried on by the Commonwealth, principally with New Zealand and New Caledonia. Thus, during 1907, out of a total export of 17,842 tons, 13,346 tons went to New Zealand and 4,496 tons to New Caledonia. On the other hand, when in 1902 and 1903 the drought of that period had brought about a shortage in the Australian supplies, importations from New Zealand took place to the extent of 11,471 tons in the former and 2279 tons in the latter year. The quantities and values of the Commonwealth oversea imports and exports of potatoes for the seven years 1901 to 1907 are contained in the following table :—

**COMMONWEALTH OVERSEA IMPORTS AND EXPORTS OF POTATOES,
1901 TO 1907.**

| Year. | Imports. | | Exports. | | Net Exports.* | |
|-------------|-----------|--------|-----------|--------|---------------|--------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| | Tons. | £ | Tons. | £ | Tons. | £ |
| 1901 | 17,655 | 86,067 | 6,028 | 45,485 | 11,627 | 40,582 |
| 1902 | 11,608 | 53,919 | 3,383 | 20,192 | 8,225 | 33,727 |
| 1903 | 2,367 | 7,752 | 3,407 | 12,336 | 1,040 | 4,584 |
| 1904 | 2,602 | 8,186 | 5,464 | 14,462 | 2,862 | 6,276 |
| 1905 | 428 | 3,181 | 4,058 | 29,730 | 3,630 | 26,549 |
| 1906 | 295 | 2,205 | 12,908 | 86,248 | 12,613 | 84,043 |
| 1907 | 150 | 981 | 17,842 | 53,452 | 17,692 | 52,471 |

* — Signifies net imports.

7. **Interstate Trade in Potatoes.**—A large trade in potatoes is carried on between the States of the Commonwealth, the principal exporters being Tasmania and Victoria, and the chief importers New South Wales, Western Australia and Queensland. Particulars for each State for the year 1907 are given hereunder :—

INTERSTATE TRADE IN POTATOES, 1907.

| State. | Imports to Other States of the Commonwealth. | | Exports from Other States of the Commonwealth. | | Net Interstate Exports.* | |
|---------------------|--|---------|--|---------|--------------------------|---------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| | Tons. | £ | Tons. | £ | Tons. | £ |
| New South Wales | 67,561 | 196,991 | 8,621 | 32,695 | 58,940 | 164,296 |

| South Australia ... | 3,999 | 13,705 | 2,649 | 8,357 | 1,350 | 5,348 |
| Western Australia | 14,736 | 39,251 | ... | ... | 14,736 | 39,251 |
| Tasmania ... | 139 | 459 | 89,301 | 244,903 | 89,162 | 244,444 |

* — Signifies net imports.

8. **Comparison with other Countries.**—The following table will furnish means for comparing the potato crop of Australia for 1907-8 with those of some of the leading potato-producing countries of the world. The figures given for these countries are the latest available, and relate in the majority of cases to the years 1905 and 1906 :—

POTATO CROPS OF VARIOUS COUNTRIES.

| Country. | Yield. | Country. | Yield. |
|---------------------|------------|----------------------|----------------|
| | Tons. | | Tons. |
| Germany ... | 42,246,648 | Netherlands ... | 2,313,784 |
| Russian Empire ... | 25,548,765 | Sweden ... | 1,537,113 |
| Austria-Hungary ... | 20,422,003 | Belgium ... | 1,530,611 |
| France ... | 14,028,424 | Denmark ... | 720,777 |
| United States ... | 7,466,850 | Australia ... | 375,586 |
| United Kingdom ... | 5,223,973 | | |

§ 10. Other Root and Tuber Crops.

1. **Nature and Extent.**—Root crops, other than potatoes, are not extensively grown in Australia, the total area devoted to them for the season 1907-8 being only 18,118 acres. The principal ones are onions, mangolds, turnips, and "sweet potatoes" (*Batatas edulis*). Of these onions are most largely grown in Victoria, mangolds in Tasmania and Victoria, turnips in Tasmania, and sweet potatoes in Queensland. The total area under onions in the Commonwealth during the season 1907-8 was 5133 acres, giving a total yield of 27,201 tons, and averaging 5.30 tons per acre. The area devoted in 1907-8 to root crops other than potatoes and onions, viz., 12,985 acres, yielded 109,790 tons, and gave an average of 8.46 tons per acre. The areas and yields here given are exclusive of the production of "market gardens," a reference to which will be made later.

2. **Oversea Imports and Exports.**—The only root crop, other than potatoes, in which any considerable oversea trade is carried on by the Commonwealth is that of onions. During the year 1907 oversea imports of onions amounted to 187 tons, the

principal countries from which they were obtained being Japan, India, and the Straits Settlements. For the same year the exports of onions totalled 4528 tons, the principal countries to which they were exported being the Philippine Islands, the United States of America, New Caledonia, and the Hawaiian Islands.

3. **Interstate Trade.**—A fairly extensive trade in onions is carried on between the several States of the Commonwealth. Victoria, the largest producer of onions, is also the largest exporter, while New South Wales, Queensland, and Western Australia are the principal importers. During the year 1907 the interstate onion trade was as follows:—

INTERSTATE TRADE IN ONIONS, 1907.

| State. | Imports from Other States of the Commonwealth. | | Exports to Other States of the Commonwealth. | | Net Interstate Exports.* | |
|-----------------------|--|--------|--|--------|--------------------------|----------|

§ II. Hay.

1. **Nature and Extent.**—As already stated, the most important crop of the Commonwealth is that of wheat grown for grain. Next to this in importance is the hay crop, which for the season 1907-8 represented rather more than 19 per cent. of the area under crop in the Commonwealth. In most European countries the hay crop consists almost entirely of meadow and other grasses, whilst in Australia a very large proportion of the area under hay comprises cereal crops, mainly wheat and oats. A considerable quantity of lucerne hay is also made, particularly in New South Wales and Queensland. The area under hay of all kinds in the several States from 1860 onwards is given hereunder:—

AREA UNDER HAY, 1860-1 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'land. | Sth. Aust. | W. Aust. | Tas. | Com'wealth. |
|---------|---------|-----------|---------|------------|----------|--------|-------------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| 1860-1 | 46,584 | 90,921 | 276 | 55,818 | 6,626 | 31,837 | 232,062 |
| 1865-6 | 61,909 | 97,902 | 1,449 | 101,996 | 8,824 | 30,244 | 302,324 |
| 1870-1 | 65,404 | 163,181 | 3,671 | 140,316 | 17,173 | 33,612 | 423,357 |
| 1875-6 | 77,125 | 155,274 | 8,531 | 161,429 | 17,319 | 34,758 | 454,436 |
| 1880-1 | 131,153 | 249,656 | 12,022 | 272,567 | 19,563 | 31,615 | 716,576 |

| 1900-1 | 466,236 | 502,105 | 42,497 | 341,330 | 104,254 | 61,541 | 1,517,963 |
| 1901-2 | 442,163 | 650,239 | 63,055 | 369,796 | 92,654 | 61,495 | 1,688,402 |
| 1902-3 | 491,918 | 580,884 | 20,068 | 325,789 | 105,791 | 66,038 | 1,590,488 |
| 1903-4 | 496,017 | 733,353 | 78,393 | 370,152 | 109,002 | 66,947 | 1,853,864 |
| 1904-5 | 435,704 | 452,459 | 48,740 | 269,626 | 105,247 | 55,545 | 1,367,321 |
| 1905-6 | 438,036 | 591,771 | 37,425 | 317,924 | 124,906 | 64,350 | 1,574,412 |
| 1906-7 | 458,072 | 621,139 | 64,498 | 295,895 | 149,830 | 64,965 | 1,654,399 |
| 1907-8 | 541,761 | 682,194 | 54,037 | 328,672 | 131,056 | 73,859 | 1,811,579 |

It will be seen from this table that in all the States marked fluctuations occur in the area devoted to the hay crop from year to year. These fluctuations are due to various causes, the principal being the variations in the relative prices of grain and hay, and the favourableness or otherwise of the season for a grain crop. Thus crops originally sown for grain are frequently cut for hay owing to the improved price of that commodity, or owing to the fact that the outlook for the due development of the grain is not a satisfactory one. On the other hand, improved grain prices or the prospect of a heavy yield will frequently cause crops originally intended for hay to be left for grain. In the season 1903-4, when 1,853,864 acres were devoted to this crop, the maximum area under hay for the Commonwealth was reached, the reason being the shortage and consequent high prices resulting from the poor yield of the previous season, 1902-3. The area cut for hay in the season 1907-8 exceeded that for any previous season except 1903-4.

2. **Kinds of Hay.**—Particulars concerning the kind of crop cut for hay are furnished for a series of years in the returns prepared by four of the States. Totals only were shewn in the cases of South Australia and Tasmania until the season 1907-8, when a specification of details was obtained in South Australia also. Details of the past seven seasons are given in the following table:—

KINDS OF HAY GROWN 1901-2 to 1907-8.

| Kind of Hay Crop. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |

| Other ... | | 1,540 | 1,692 | 1,420 | 1,367 | 1,145 | 2,079 |
| Total ... | 92,654 | 105,791 | 109,002 | 105,247 | 124,906 | 149,830 | 131,056 |

For the season 1907-8 the area cut for hay in South Australia, viz., 328,672 acres, comprised 271,067 acres of wheaten, 48,151 of oaten, 3767 of lucerne, and 5687 of other hay. It will be seen that wheat is the principal hay crop in New South Wales, South Australia, and Western Australia, oats in Victoria, and lucerne in Queensland. Details for Tasmania are not available.

3. **Total Yield.**—The Commonwealth hay crop for the season 1907-8 amounted to 1,739,858 tons, or 516,282 tons less than were produced in 1906-7. The production for the season 1906-7 had, however, only once been exceeded, viz., by the record yield of the season 1903-4, when the hay harvest resulted in a production of 2,903,160 tons. For many years past the State of Victoria has been the largest hay producer in the Commonwealth, and in the season 1907-8 accounted for nearly 40 per cent. of the total production. The total yields of the several States from 1860 onwards is given hereunder:—

COMMONWEALTH HAY CROP, 1860-1 to 1907-8.

| Season. | New South Wales. | Victoria. | Queensland. | South Australia. | Western Australia. | Tasmania. | Commonwealth. |
|---------------|------------------|-----------|-------------|------------------|--------------------|-----------|---------------|
| | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. |

4. **Value of Hay Crop.**—The following table furnishes particulars concerning the total value and the value per acre of the hay crop of the several States of the Commonwealth for the season 1907-8:—

VALUE OF HAY CROP, 1907-8.

| Particulars. | New South Wales. | Victoria. | Queensland. | South Australia. | Western Australia. | Tasmania. | Commonwealth. |
|----------------|------------------|------------|-------------|------------------|--------------------|-----------|---------------|
| Total value... | £2,150,820 | £3,411,850 | £277,488 | £1,523,488 | £589,813 | £442,827 | £8,396,286 |
| Value per acre | £3 19/5 | £5 0/0 | £5 2/8 | £4 12/8 | £4 10/0 | £5 19/11 | £4 12/8 |

5. **Average Yield per Acre.**—The States of the Commonwealth in which the highest average yields per acre have been obtained are those of Queensland and Tasmania, these being also the States in which the smallest areas are devoted to this crop. For the past seven seasons the lowest yield for the Commonwealth as a whole was that of 17 cwt. per acre in 1902-3, and the highest that of 31 cwt. in 1903-4. Particulars for the several States for the seasons 1901-2 to 1907-8 are given hereunder:—

AVERAGE YIELD OF HAY PER ACRE, 1901-2 to 1907-8.

| Season. | N.S.W. | Victoria. | Qld. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|---------------|--------|-----------|-------|----------|----------|-------|-----------|
| | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. |
| 1901-2 | 1.07 | 1.34 | 1.94 | 0.94 | 0.97 | 1.78 | 1.20 |
| 1902-3 | 0.49 | 1.04 | 1.16 | 0.95 | 0.89 | 1.35 | 0.86 |
| 1903-4 | 1.65 | 1.68 | 1.74 | 1.30 | 1.12 | 1.73 | 1.57 |
| 1904-5 | 0.84 | 1.14 | 1.65 | 1.09 | 1.08 | 1.32 | 1.06 |
| 1905-6 | 1.05 | 1.46 | 1.52 | 1.37 | 1.12 | 1.40 | 1.30 |
| 1906-7 | 1.36 | 1.42 | 1.46 | 1.34 | 1.06 | 1.61 | 1.36 |
| 1907-8 | 0.68 | 1.00 | 1.44 | 1.14 | 1.04 | 1.33 | 0.96 |

6. **Relation to Population.**—During the past seven seasons the Commonwealth hay production per head of population has varied between 7 cwt. in 1902-3 and 15 cwt. in 1903-4, averaging about 10 cwt. per head for the period. The State in which the hay production per head of population is highest is South Australia. Details for the past seven seasons are given hereunder :—

HAY PRODUCTION PER 1000 OF POPULATION.

| Season. | N.S.W. | Victoria. | Qld. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|---------------|--------|-----------|-------|----------|----------|-------|-----------|
| | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. |
| 1901-2 | 347 | 735 | 243 | 955 | 476 | 635 | 534 |
| 1902-3 | 175 | 497 | 45 | 847 | 457 | 513 | 353 |
| 1903-4 | 577 | 1,018 | 266 | 1,311 | 551 | 651 | 744 |
| 1904-5 | 254 | 426 | 155 | 796 | 481 | 411 | 365 |
| 1905-6 | 311 | 713 | 108 | 1,162 | 557 | 503 | 509 |
| 1906-7 | 412 | 720 | 177 | 1,042 | 608 | 586 | 552 |
| 1907-8 | 237 | 551 | 144 | 975 | 524 | 549 | 419 |

7. **Oversea Imports and Exports.**—Under normal conditions hay, whether whole or in the form of chaff, is somewhat bulky for oversea trade, and consequently does not in such circumstances figure largely amongst the imports and exports of the Commonwealth. In 1901 and 1902, however, the exceptional demand which was created by the South African war brought about a fairly large export of hay and chaff to Natal and the Cape of Good Hope. These colonies also took and are still taking a considerable quantity of Australian compressed fodder. During the year 1904, when the war between Japan and Russia was being carried on, the exports of compressed fodder to Hong Kong were valued at £42,759 and those to Japan at £23,608. The total value of the hay and chaff exported during 1901 was £406,455, as compared with £20,179 only in 1907, while the exports of fodder, which amounted in value to £142,472 in 1904, had shrunk to £30,166 in 1907.

During 1907 the principal consignees of the hay and chaff exported from the Commonwealth were India, Ceylon, and the Straits Settlements, while the principal countries to which fodder was exported were the Philippine Islands, New Zealand, and India.

8. **Interstate Trade in Hay and Chaff.**—A considerable trade in hay and chaff is carried on between the several States of the Commonwealth, the exporting States during the year 1907 being South Australia, Victoria, Tasmania, and Western Australia, and the importing States New South Wales and Queensland. Western Australia entered the ranks of the exporting States during 1907. Particulars of interstate imports and exports for 1907 are given in the following table :—

INTERSTATE TRADE IN HAY AND CHAFF, 1907.

| State. | Imports from other States of the Commonwealth. | | Exports to other States of the Commonwealth. | | Net Interstate Exports.* | |
|---------------------|--|---------|--|---------|--------------------------|----------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |

| Western Australia | 546 | 1,793 | 2,765 | 13,268 | 2,219 | 11,475 |
| Tasmania | 824 | 2,685 | 3,977 | 18,317 | 3,153 | 15,632 |

* — Signifies net imports.

9. **Hay Production in other Countries.**—As already noted, the hay crops of most European countries consist of grasses of various kinds, amongst which clover, lucerne, sainfoin and rye grass occupy a prominent place. The statistics of hay production in these countries are not prepared on a uniform basis, and consequently any attempt to furnish an extensive comparison of the production of hay in the various countries would probably be misleading. It may be noted, however, that in the United Kingdom the production of hay from clover, sainfoin, etc., was for the year 1907 represented by 5,441,563 tons from 3,077,173 acres, while from permanent grasses a yield of 10,161,617 tons of hay was obtained from 6,390,399 acres, giving a total of 15,603,180 tons from 9,467,572 acres, or about 93 cwt. per acre.

§ 12. Green Forage.

1. **Nature and Extent.**—In all the States of the Commonwealth a considerable area is devoted to the production of green forage, mainly in connection with the dairying industry. The total area so cropped during the season 1907-8 was no less than 439,725 acres. Of this total the New South Wales area represented about 60 per cent., while that in Queensland amounted to nearly 21 per cent. of the total. The principal crops cut for green forage are maize, sorghum, oats, barley, rye, rape, and lucerne, while small quantities of sugar-cane also are so used. Particulars concerning the area under green forage in the several States from 1890 onwards are furnished in the following table:—

AREA UNDER GREEN FORAGE, 1890-1 to 1907-8.

| Season. | N.S.W. | Vic. | Qld. | S. Aust. | W. Aust. | Tas. | C'wealth. |

2. **Value of Green Forage Crops.**—The value of these crops is variously estimated in the several States, and the Commonwealth total for the season 1907-8 may be taken approximately as £1,200,000 or about £2 15s. per acre.

3. **Relation to Population.**—Particulars concerning the area under green forage per 1000 of the population of the Commonwealth and the several States for the past seven seasons are given hereunder:—

AREA UNDER GREEN FORAGE PER 1000 OF POPULATION.

| Season. | N.S.W. | Victoria. | Qld. | S. Aust. | W. Aust. | Tas. | C'wealth. |

§ 13. Sugar-Cane.

1. **Area.**—Sugar-cane is grown for sugar-making purposes in only two of the States of the Commonwealth, viz., Queensland and New South Wales, and much more extensively in the former than the latter. Thus of the total area of 144,763 acres under sugar-cane in the Commonwealth for the season 1907-8 there were 126,810 acres or about 87½ per cent. in Queensland. Sugar-cane growing appears to have been started in the Commonwealth in or about 1862, as the earliest statistical record of sugar-cane as a crop is that which credits Queensland with an area of twenty acres for the season 1862-3. In the following season the New South Wales records shew that an area of two acres was devoted to the crop in the mother State. The area under cane in New South Wales reached its maximum in 1895-6 with a total of 32,927 acres. It then fell continuously to 1902-3, when it was lower than for any previous season since 1889-90. From 1902-3 to 1906-7 it remained practically stationary, but in 1907-8 fell to 17,953 acres, the lowest area under sugar-cane since 1888-9. In Queensland, on the other hand, although fluctuations in area are in evidence throughout, the general trend has been one of satisfactory and somewhat rapid increase, the area under cane for the season 1905-6 being the highest on record, and that for 1906-7 only a little short of it. In 1907-8 the area in Queensland declined to 126,810 acres, but was even then larger than for any season prior to 1905-6. The area under sugar-cane in the Commonwealth from 1865 onwards is given in the following table:—

AREA UNDER SUGAR-CANE, 1865-6 to 1907-8.

| Season. | N.S.W. | Queensland. | C'wealth. | Season. | N.S.W. | Queensland. | C'wealth. |
|---------|--------|-------------|-----------|---------|--------|-------------|-----------|
| | Acres. | Acres. | Acres. | | Acres. | Acres. | Acres. |
| 1865-6 | 141 | 450 | 591 | 1901-2 | 20,809 | 112,031 | 132,840 |
| 1870-1 | 4,082 | 6,342 | 10,424 | 1902-3 | 20,160 | 85,338 | 105,498 |
| 1875-6 | 6,454 | 13,459 | 19,913 | 1903-4 | 20,182 | 111,516 | 131,698 |
| 1880-1 | 10,971 | 20,224 | 31,195 | 1904-5 | 21,525 | 120,317 | 141,842 |
| 1885-6 | 16,419 | 59,186 | 75,605 | 1905-6 | 21,805 | 134,107 | 155,912 |
| 1890-1 | 20,446 | 50,922 | 71,368 | 1906-7 | 20,580 | 133,284 | 153,864 |
| 1895-6 | 32,927 | 77,247 | 110,174 | 1907-8 | 17,953 | 126,810 | 144,763 |
| 1900-1 | 22,114 | 108,535 | 130,649 | | | | |

2. **Productive and Unproductive Cane.**—The areas given in the preceding table represent the total area on which sugar-cane was grown during the seasons specified for purposes other than green forage. The whole area, however, was not in any case cut for crushing during that season, there being always a considerable amount of "stand over" cane, as well as a small amount required for plants. In the season 1907-8 the New South Wales total comprised 9916 acres of productive and 8037 acres of unproductive cane, while in the case of Queensland the productive cane amounted to 94,384 acres and the unproductive to 32,426 acres, the latter including 1338 acres for plants.

3. **Yield of Cane.**—Queensland statistics of the production of sugar-cane are not available for dates prior to the season 1897-8. In that season the total for the Commonwealth was 1,073,883 tons, as against 1,942,418 tons for 1907-8. The average yield per acre of productive cane is much higher in New South Wales than in Queensland, and during the six seasons 1901-2 to 1906-7 in the case of the former State remained practically constant at about twenty-one tons per acre. In 1907-8 the yield in New South Wales was so excellent that, notwithstanding the comparative smallness of the area cultivated, the aggregate amount of cane produced was the largest in that State since 1898-9. Particulars relative to the total and average yields of the Commonwealth sugar crops for the seasons 1901-2 to 1907-8 are as follows:—

YIELD OF SUGAR-CANE, 1901-2 to 1907-8.

| Season. | Total Yield of Cane. | | | Average Yield per Acre of Productive Cane. | | |
|------------|----------------------|-------------|-----------|--|-------------|-----------|
| | N.S.W. | Queensland. | C'wealth. | N.S.W. | Queensland. | C'wealth. |
| | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. |
| 1901-2 ... | 187,711 | 1,180,091 | 1,367,802 | 21.36 | 15.10 | 15.73 |
| 1902-3 ... | 183,105 | 641,927 | 825,032 | 20.90 | 10.86 | 12.16 |
| 1903-4 ... | 227,511 | 823,875 | 1,051,386 | 21.94 | 13.65 | 14.86 |
| 1904-5 ... | 199,640 | 1,326,989 | 1,526,629 | 20.43 | 16.04 | 16.50 |
| 1905-6 ... | 201,998 | 1,415,745 | 1,617,743 | 19.59 | 14.73 | 15.20 |
| 1906-7 ... | 221,560 | 1,728,780 | 1,950,340 | 21.35 | 17.61 | 17.96 |
| 1907-8 ... | 277,390 | 1,665,028 | 1,942,418 | 27.97 | 17.64 | 18.62 |

4. **Relation to Population.**—The sugar-cane production of the Commonwealth during the past seven seasons has averaged about $7\frac{1}{2}$ cwt. per head of population. In Queensland, the principal sugar-producing State, the production of cane per head has ranged between $1\frac{1}{2}$ tons in 1902-3 and $3\frac{1}{2}$ tons in 1906-7. Details for the period are as follows:—

SUGAR-CANE PRODUCTION PER 1000 OF POPULATION.

| State. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |
|---------------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|
| New South Wales ... | Tons. 138 | Tons. 131 | Tons. 161 | Tons. 138 | Tons. 137 | Tons. 147 | Tons. 179 |
| Queensland ... | 2,354 | 1,259 | 1,607 | 2,556 | 2,693 | 3,244 | 3,090 |
| Commonwealth ... | 361 | 214 | 269 | 386 | 403 | 477 | 467 |

5. **Quality of Cane.**—The quantity of cane required to produce a ton of sugar varies considerably not only with the district in which the cane is grown but also with the season. In Queensland, for instance, during the seasons 1902-3 to 1906-7 the sugar content of the cane crushed continuously diminished, so that whilst in 1902-3 the quantity of cane used in producing a ton of sugar was 8.38 tons, in the season 1906-7 the quantity required was 9.38 tons, the production in the former case being approximately 12 per cent. and in the latter 11 per cent. of the weight of cane crushed. For the season 1907-8, however, the cane was of much better quality, and the quantity required to produce a ton of sugar was only 8.84 tons, the sugar content representing in this case somewhat more than $11\frac{1}{2}$ per cent. of the weight of cane crushed. It should be noted also that in 1901-2 no less than 9.76 tons of cane were needed to produce a ton of sugar. It may be remarked in this connection that the systematic study of the beet in Germany shewed that by suitable culture its sugar content might be greatly increased, and this is by no means impossible in the case of sugar-cane.

6. **Sugar Bounties.**—The provision of bounties or similar aids to the sugar-growers of the Commonwealth early occupied the attention of the Commonwealth Parliament, the object in view being that of assisting the industry whilst at the same time diminishing the employment of coloured labour in connection therewith. The earliest legislative provision made with this object in view was that contained in the Exeise Tariff 1902, under which an excise duty of three shillings per cwt. of manufactured sugar was charged, and a rebate of four shillings per ton allowed on all sugar-cane delivered for manufacture in the production of which white labour only had been employed after 28th February, 1902. This rebate was calculated on the basis of cane giving 10 per cent. of sugar, and was increased or reduced proportionately according to any variation from this standard, that is to say, the rebate amounted to two shillings per cwt. of the sugar content of the cane treated.

In actual practice it was found that this system of rebates was producing effects that had not been anticipated at the time the legislation was passed, and that the greater part of the cost of substituting white for black labour in the sugar-growing industry was thereby being imposed upon the States engaged in the industry, viz., Queensland and New South Wales, instead of being a charge upon the whole Commonwealth. To remedy this state of affairs the Sugar Rebate Abolition Act of 1903 was passed on 30th July, 1903, and the Sugar Bounty Act 1903 received assent on the same day. The rate of bounty provided by this latter Act was, as in the case of the rebate mentioned above, four shillings per ton of cane grown by white labour giving 10 per cent. of sugar, the bounty to be increased or reduced proportionately according to any variation from this standard. This Act remained in force until 31st December, 1906, when it was superseded by the provisions of the Sugar Bounty Act 1905, which extended the principle of bounties to the end of the year 1912, but stipulated that during the years 1911 and 1912 the rates payable on cane delivered should be respectively two-thirds and one-third of the rates prevailing during the earlier years of the period. The rate of bonus allowed under this Act is six shillings per ton of cane of 10 per cent. quality grown by white labour, while under the Excise Tariff 1905, assented to on 21st December, 1905, the excise duty on sugar was, from 1st January, 1907, increased to four shillings per cwt. of manufactured sugar in place of three shillings formerly imposed.

7. **Cost of Bounties.**—The amounts paid by the Commonwealth Government in sugar bounties and the expenses in connection therewith during the six years 1902-3 to 1907-8, as well as the manner in which this expenditure was allocated to the several States, is shewn in the following table:—

EXPENDITURE ON SUGAR BOUNTIES AND EXPENSES, 1902-3 to 1907-8.

| Year. | N.S.W. | Victoria. | Qld. | S. Aust. | W. Aust. | Tas. | C'wealth. |

9. **Imports and Exports of Sugar.**—Notwithstanding the increase in the production of sugar in evidence in the Commonwealth during recent years, Australia's over-sea import trade in cane sugar remained fairly extensive until 1906, the principal countries engaged in supplying this commodity being Java, Mauritius, and Fiji. For the year 1907, however, the total importation was valued at only £77,259, obtained chiefly

from Mauritius and Fiji. In 1907 the Commonwealth oversea exports of cane sugar exceeded the imports, the principal countries of destination being the Cape of Good Hope, New Zealand, Canada, and Natal. Particulars concerning the imports and exports of cane sugar for the years 1901 to 1907 are as follows:—

IMPORTS AND EXPORTS OF CANE SUGAR, 1901 to 1907.

*— Signifies net exports.

10. Interstate Trade in Sugar.—The Interstate trade in sugar is an extensive one, the exports from Queensland to the other States of the Commonwealth representing a value of £1,771,719 for the year 1907. The manner in which this trade is distributed amongst the several States is furnished in the table given hereunder:—

INTERSTATE TRADE IN CANE SUGAR, 1907.

§ 14. Vineyards.

1. Nature and Extent.—The date of the introduction of the vine into Australia has been set down by different investigators at various dates, of which 1828 and 1815 appear to have had some measure of support. It would seem, however, that the vine really came out with the First Fleet, which initiated the colonisation of Australia, in 1788, and that consequently the Australian vine is as old as Australian settlement. From New South Wales the vine spread to Victoria and South Australia, and these States have now far outstripped the mother State in the area which they have devoted to its cultivation. In Queensland and Western Australia also, vine-growing has been carried on for many years, but in neither State has the industry progressed with the rapidity attained in Victoria and South Australia. In Tasmania the climate is not favourable to the growth of grapes. The purposes for which grapes are grown in Australia are three in number, viz.—(i.) for wine-making, (ii.) for table use, (iii.) for drying. The total area under vines in the several States from 1860 onwards is given in the following table:—

COMMONWEALTH VINEYARDS, 1860-1 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tasmania. | C'wealth. |

| 1904-5 ... | 8,840 | 28,016 | 2,194 | 23,210 | 3,413 | | 65,673 |
| 1905-6 ... | 8,754 | 26,402 | 2,044 | 23,603 | 3,541 | | 64,344 |
| 1906-7 ... | 8,521 | 25,855 | 2,070 | 22,575 | 3,525 | 62,546 | |
| 1907-8 ... | 8,483 | 26,465 | 1,973 | 21,080 | 3,231 | 61,232 | |

The area devoted to vines in the Commonwealth attained its highest point in the season 1904-5, when a total of 65,673 acres was reached. In the course of the three following seasons this area diminished by over 4400 acres, the decline being in evidence in all the States.

The wine-growing industry in Australia, more particularly in Victoria and New South Wales, received a severe check on account of various outbreaks of phylloxera which took place in different parts of these States. With a view to its eradication extensive uprooting of vineyards in the infested areas was undertaken, while further planting within such areas, except with phylloxera-resisting vines, was prohibited.

2. Wine Production.—The production of wine in Australia has not increased as rapidly as the suitability of soil and general favourableness of conditions would appear to warrant. The cause of this is probably twofold, being in the first place due to the fact that the Australians are not a wine-drinking people and consequently do not provide a local market for this product, and in the second to the fact that the new and comparatively unknown wines of Australia find it difficult to establish a footing in the markets of the old world, owing to the competition of well-known brands. Active steps are being taken in various ways to bring the Australian wines under notice, and it may be confidently asserted that when their qualities are duly recognised the wine production of Australia will exhibit much more rapid development than has taken place within recent years. Particulars concerning the quantity of wine produced in the several States during the past seven years are contained in the table given hereunder:—

AUSTRALIAN WINE PRODUCTION, 1901-2 to 1907-8.

| Season. | New South Wales. | Victoria. | Queensland. | South Australia. | Western Australia. | Tasmania. | Commonwealth. |
|------------|------------------|-----------|-------------|------------------|--------------------|------------------------------------|---------------|
| | Gallons. | Gallons. | Gallons. | Gallons. | Gallons. | No production of wine in Tasmania. | Gallons. |
| 1901-2 ... | 868,479 | 1,981,475 | 148,835 | 2,077,923 | 185,735 | | 5,262,447 |
| 1902-3 ... | 806,140 | 1,547,188 | 100,852 | 2,145,525 | 158,853 | | 4,758,558 |

3. Relation to Population.—In relation to population the area of the vineyards of the several States exhibits a well-marked decline during the past seven seasons, the

Commonwealth total having fallen during the period from 17 to 15 acres per 1000 of the population. Details for the period are furnished in the succeeding table:—

AREA OF VINEYARDS PER 1000 OF POPULATION.

| Season. | N.S.W. | Victoria. | Q'land. | Sth. Aust. | W. Aust. | Tas. | Total C'wealth. |
|---------------|--------|-----------|---------|------------|----------|--------|--------------------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| 1901-2 | 6 | 24 | 4 | 57 | 19 | ... | 17 |
| 1902-3 | 6 | 23 | 3 | 60 | 17 | ... | 17 |
| 1903-4 | 6 | 24 | 4 | 62 | 15 | ... | 17 |

| 1905-6 | 6 | 22 | 3 | 63 | 14 | ... | 16 |
| 1906-7 | 6 | 21 | 4 | 59 | 14 | ... | 15 |
| 1907-8 | 5 | 21 | 4 | 55 | 12 | ... | 15 |

4. Imports and Exports.—During recent years the importations of wine into the Commonwealth have fallen off considerably, the total value of the wine imported during 1907 being £120,946, as against a value of £161,945 in 1901. The principal countries of origin of wine imported into Australia are France, Spain, Portugal, and Germany, the greater portion of the sparkling wines coming from France and of still wines from Spain and Portugal. Particulars relative to the importations of wine into the Commonwealth during the past seven years are given hereunder:—

COMMONWEALTH IMPORTS OF WINE, 1901 to 1907.

| Year. | Quantity. | | Value. | | |
|-------|------------|----------|------------|--------|---------|
| | Sparkling. | Other. | Sparkling. | Other. | Total. |
| | Gallons. | Gallons. | £ | £ | £ |
| 1901 | 55,341 | 165,472 | 104,700 | 57,245 | 161,945 |
| 1902 | 46,824 | 134,513 | 80,941 | 46,828 | 127,769 |
| 1903 | 41,211 | 81,222 | 78,869 | 29,014 | 107,883 |
| 1904 | 38,738 | 70,982 | 69,643 | 27,227 | 96,870 |
| 1905 | 38,933 | 74,358 | 71,753 | 28,231 | 99,984 |
| 1906 | 43,324 | 71,980 | 81,448 | 24,685 | 106,133 |
| 1907 | 50,393 | 66,138 | 94,549 | 26,397 | 120,946 |

The principal countries to which wine is exported from Australia are the United Kingdom and New Zealand; a small but fairly regular export trade being also carried on with India, Ceylon, Fiji, and the South Sea Islands. Details concerning the exports of wine from Australia during the seven years 1901 to 1907, are given in the following table:—

COMMONWEALTH EXPORTS OF WINE, 1901 to 1907.

| Year. | Quantity. | | Value. | | |
|-------|------------|-----------|------------|---------|---------|
| | Sparkling. | Other. | Sparkling. | Other. | Total. |
| | Gallons. | Gallons. | £ | £ | £ |
| 1901 | 2,936 | 863,147 | 6,972 | 122,751 | 129,723 |
| 1902 | 3,201 | 1,075,713 | 5,989 | 142,994 | 148,983 |
| 1903 | 2,194 | 718,284 | 4,161 | 101,016 | 105,177 |
| 1904 | 2,525 | 789,032 | 4,440 | 103,272 | 107,712 |
| 1905 | 2,749 | 937,932 | 4,990 | 107,988 | 112,978 |
| 1906 | 2,439 | 717,821 | 4,637 | 93,046 | 97,683 |
| 1907 | 2,771 | 979,527 | 5,233 | 121,811 | 127,044 |

The sparkling wine included in the foregoing table consists mainly of foreign wine re-exported.

5. **Interstate Trade.**—A fairly extensive trade in wine is carried on between the States, South Australia being the principal exporting State. Particulars for the year 1907 are furnished hereunder:—

INTERSTATE TRADE IN WINE, 1907.

| State. | Imports from other States of the Commonwealth. | | Exports to other States of the Commonwealth. | | Net Interstate Exports.* | |
|-----------------------|--|--------|--|--------|--------------------------|----------|
| | Quantity | Value. | Quantity. | Value. | Quantity. | Value. |
| | Gallons. | £ | Gallons. | £ | Gallons. | £ |

* — Signifies net imports.

6. **Other Viticultural Products.**—In addition to grapes for wine-making purposes, large quantities are grown in all the States for table use, whilst, particularly in Victoria and South Australia, the drying of raisins and currants is also carried on. The quantities of table grapes grown in the several States during the past seven seasons are as follows:—

TABLE GRAPES, 1901-2 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'sland.* | S. Aust.* | W. Aust.* | Tasmania. | C'wealth. |

§ 15. Orchards and Fruit Gardens.

1. **Nature and Extent.**—Fruit-growing has made rapid progress in the Commonwealth during recent years, the area devoted thereto having increased in the past six years by no less than 25,167 acres. The States in which the increase was most marked were:—Western Australia, 8973 acres; Tasmania, 7956 acres; South Australia, 4421 acres; and Victoria, 4056 acres. During the same period the Queensland fruit-growing area increased slightly, while that in New South Wales exhibited a decline of nearly 1400 acres. The increased areas in Tasmania and Western Australia are mainly due to extensive plantings of apple trees with a view to the possibilities of the London market for fresh fruit. The total area devoted to orchards and fruit gardens in the several States is given hereunder:—

COMMONWEALTH ORCHARDS AND FRUIT GARDENS, 1901-2 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|------------|--------|-----------|---------|----------|----------|--------|-----------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| 1901-2 ... | 48,107 | 50,055 | 13,243 | 16,315 | 6,076 | 11,485 | 145,281 |
| 1902-3 ... | 47,584 | 50,478 | 11,690 | 17,376 | 6,872 | 12,675 | 146,675 |
| 1903-4 ... | 48,316 | 51,357 | 13,784 | 18,725 | 7,938 | 14,134 | 154,254 |
| 1904-5 ... | 47,340 | 52,751 | 14,424 | 18,872 | 9,756 | 15,461 | 158,604 |
| 1905-6 ... | 46,615 | 52,274 | 13,970 | 19,320 | 11,026 | 16,519 | 159,724 |
| 1906-7 ... | 46,177 | 54,021 | 13,310 | 18,199 | 12,517 | 18,050 | 162,274 |
| 1907-8 ... | 46,714 | 54,111 | 14,397 | 20,736 | 15,049 | 19,441 | 170,448 |

The varieties of fruit grown differ materially in various parts of the several States, and range between such fruits as the pineapple, paw-paw, mango, and guava of the tropics, and the strawberry, the raspberry, and the currant of the colder parts of the temperate zone. The principal varieties grown in Victoria are the apple, plum, peach, apricot, cherry, and pear. In New South Wales citrus fruits (orange, lemon, etc.) occupy the leading position, although apples, pears, peaches, plums, and apricots are also extensively grown. In Queensland the banana, the orange, the pineapple, the apple, the peach, the mango, and the plum are the varieties most largely grown. In South Australia, in addition to the apple, pear, peach, apricot, plum, orange, and lemon, the almond and the olive are also largely grown. In Western Australia the apple, orange, peach, pear, plum, fig, and apricot are the sorts chiefly grown, while in Tasmania, although the apple represents more than two-thirds of the area in that State devoted to fruit-growing, small fruits, such as the currant, raspberry, and gooseberry, are very extensively grown, and the balance of the area is mainly occupied with the pear, plum, apricot, peach, and cherry.

2. **Relation to Population.**—In relation to population the orchards and fruit gardens of the Commonwealth have exhibited an increase during the past seven seasons slightly greater than the decline, which was experienced in the case of vineyards. Taking the two in conjunction the relative area under vineyards and orchards has, during the period, remained practically stationary at about 55 acres per 1000 of population. Details for the seven seasons are as follows:—

AREA OF ORCHARDS AND FRUIT GARDENS PER 1000 OF POPULATION.

| Season. | N.S.W. | Victoria. | Q'land. | Sth. Aust. | W. Aust. | Tas. | C'wealth. |
|------------|--------|-----------|---------|------------|----------|--------|-----------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| 1901-2 ... | 35 | 42 | 26 | 45 | 32 | 67 | 38 |
| 1902-3 ... | 34 | 42 | 23 | 48 | 33 | 73 | 38 |
| 1903-4 ... | 34 | 42 | 27 | 51 | 36 | 80 | 40 |

| 1906-7 ... | 31 | 44 | 25 | 48 | 48 | 101 | 40 |
| 1907-8 ... | 30 | 44 | 27 | 54 | 57 | 108 | 41 |

3. **Oversea Imports and Exports.**—A very considerable fruit trade, both import and export, is carried on by the Commonwealth with oversea countries, the major portion of the importations consisting of dried fruits, while the bulk of the exports is made up of fresh fruits. Amongst the imports the principal dried fruits are currants, dates, sultanas, and raisins, and the principal fresh fruits bananas, oranges, lemons, and apples. The currants imported are mainly of Greek origin, the dates of Arabian, Persian, and Turkish, the raisins mainly of Spanish, and the sultanas of Turkish. Of the fresh fruit imported during 1907 the bananas were chiefly from Fiji, the oranges and lemons from Italy, and the apples from the United States. The dried fruit imported during the year was valued at £134,736, and the fresh at £95,015. The Commonwealth exports of dried fruits for 1906, representing in all a value of only £2752, consisted mainly of re-exports of currants, dates, etc. In 1907, however, a very marked development in the trade in Australian dried fruits took place, the total export for the year being valued at £76,872, of which £71,506 represented Australian fruits and £5366 re-exports of foreign fruits. The Australian dried fruit exported consisted mainly of raisins, the principal consignees being the United Kingdom, New Zealand, and Canada. The fresh fruit exported during the year was valued at £266,160, and consisted mainly of apples. The principal countries to which these were sent were the United Kingdom, Germany, New Zealand, and Natal. Particulars concerning the oversea imports and exports of dried fruits for the seven years 1901 to 1907 are as follows:—

**COMMONWEALTH OVERSEA IMPORTS AND EXPORTS OF DRIED FRUITS,
1901 TO 1907.**

| Year. | Oversea Imports. | | Oversea Exports. | | Net Imports. | |

* Not available.

4. **Jams and Jellies.**—A small oversea trade in jams and jellies is carried on by the Commonwealth, the value of the imports for the year 1907 amounting to £6967, and of

the exports to £24,561. The country of origin of the bulk of the importations is the United Kingdom, while the destinations of the exports are principally South Africa, Ceylon, the Philippine Islands, and Fiji. Particulars relative to imports and exports for the seven years 1901 to 1907 are as follows:—

COMMONWEALTH OVERSEA TRADE IN JAMS AND JELLIES, 1901 to 1907.

| Year. | Oversea Imports. | | Oversea Exports. | | Net Exports. | |

The trade carried on in jams and jellies between the States of the Commonwealth is a much more extensive one, the principal exporting States being Victoria and Tasmania; and the principal importing States Queensland and Western Australia. Details for the year 1907 are furnished in the table hereunder:—

INTERSTATE TRADE IN JAMS AND JELLIES, 1907.

| State. | Imports from other States of the Commonwealth. | | Exports to other States of the Commonwealth. | | Net Interstate Exports.* | |
|-----------------------|--|--------|--|--------|--------------------------|--------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| | lbs. | £ | lbs. | £ | lbs. | £ |
| New South Wales ... | 3,913,871 | 57,752 | 2,802,512 | 34,868 | 1,111,359 | 22,884 |
| Victoria ... | 1,861,580 | 25,583 | 6,023,141 | 81,628 | 4,161,561 | 56,045 |
| Queensland ... | 6,413,110 | 81,619 | 284,602 | 4,768 | 6,128,508 | 76,851 |
| South Australia ... | 721,071 | 10,376 | 1,321,032 | 18,507 | 599,961 | 8,131 |
| Western Australia ... | 4,166,862 | 55,797 | 66 | 2 | 4,166,796 | 55,795 |
| Tasmania ... | 464,331 | 5,582 | 7,109,472 | 96,936 | 6,645,141 | 91,354 |

* — Signifies net imports.

5. **Preserved Fruit.**—Details concerning the quantities and values of preserved fruit imported into and exported from the Commonwealth cannot readily be obtained, owing to the fact that in the Customs returns particulars concerning fruit and vegetables are in certain cases combined. The total value of fruit and vegetables, other than fresh and dried fruits, imported into Australia during 1907 was £30,294, and the corresponding value of exports was £45,594.

§ 16. Minor Crops.

1. **Nature and Extent.**—In addition to the leading crops which in the foregoing pages have been dealt with in some detail, there are many others which, owing either to their nature or to the fact that their cultivation has advanced but little beyond the experimental stage, do not occupy so prominent a position. Some of the more important of these are those which may be classed under the heads of Market Gardens, Nurseries, Grass Seed, Tobacco, Hops, and Millet, while the possibilities of cotton-growing in the tropical portions of the Commonwealth have in recent years received considerable attention, although the industry cannot yet be said to have assumed definite shape. The total area in the Commonwealth during the season 1907-8 devoted to minor crops was 64,704 acres, of which market gardens accounted for 29,734 acres.

2. Market Gardens.—Under this head are included all areas on which are grown mixed vegetables for sale. Where considerable areas are devoted to the production of one vegetable, such for instance as the potato, the onion, the melon, the tomato, etc., these crops are usually not included with market gardens, but are shewn either under some specific head, or under some such general head as "Other Root Crops," or "All other Crops." The area under market gardens in the several States of the Commonwealth during each of the seven seasons 1901-2 to 1907-8 are given in the table hereunder:—

COMMONWEALTH MARKET GARDENS, 1901-2 to 1907-8.

| Season. | N.S.W. | Victoria. | Q'sland. | S. Aust. | W. Aust. | Tasmania. | C'wealth. |
|------------|--------|-----------|----------|----------|----------|-----------|-----------|
| | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. | Acres. |
| 1901-2 ... | 7,834 | 8,752 | 2,328 | 9,005 | 2,142 | 1,746 | 31,807 |
| 1902-3 ... | 8,263 | 7,937 | 2,171 | 9,489 | 2,262 | 1,893 | 32,015 |
| 1903-4 ... | 8,754 | 8,455 | 2,563 | 9,964 | 2,463 | 1,685 | 33,884 |
| 1904-5 ... | 8,827 | 7,904 | 2,099 | 10,160 | 3,538 | 1,759 | 34,287 |
| 1905-6 ... | 9,119 | 7,333 | 2,089 | 10,688 | 3,550 | 1,778 | 34,557 |
| 1906-7 ... | 9,550 | 7,906 | 1,953 | 8,379 | 3,789 | 2,210 | 33,787 |
| 1907-8 ... | 10,052 | 9,022 | 2,365 | 2,961 | 3,543 | 1,791 | 29,734 |

The decline in the Commonwealth total for the season 1907-8 is due to the marked decrease in the area devoted to market gardens in South Australia, and to the smaller falling-off in the cases of Western Australia and Tasmania. In all the other States the area for 1907-8 was in excess of that for 1906-7. In the case of South Australia the falling-off is more apparent than real, being in large part due to a change in the classification of such crops introduced in connection with the new system of collection which came into force for 1907-8. It is believed that the figures for the earlier years are considerably in excess of the truth.

3. Grass Seed.—In only four of the States is the growing of grass seed considered of sufficient importance to be specially shewn in the statistical returns. These States are Tasmania, Victoria, Queensland, and South Australia, and the areas so cropped during 1907 were respectively 3105 acres, 1076 acres, 218 acres, and 141 acres. The total yield was 75,762 bushels, an average of 16.69 bushels per acre.

4. Tobacco.—The tobacco-growing industry is one which has experienced marked fluctuations in Australia, and one which at one time promised to occupy an important place amongst the agricultural industries of the Commonwealth. Thus, as early as the season 1888-9 the area under this crop amounted to as much as 6641 acres, of which 4833 were in New South Wales, 1685 in Victoria, and 123 in Queensland. This promise of prosperity was, however, not fulfilled, and after numerous fluctuations, in the course of which the Victorian area rose in 1895 to over 2000 acres, and that in Queensland to over 1000 acres, the total area under tobacco for the season 1907-8 was only 1337 acres, distributed as follows:—New South Wales, 533 acres; Victoria, 345 acres; and Queensland, 459 acres. This decline in production appears to have been due to the comparatively small demand which existed in Australia for the locally-produced leaf, and to the fact that the cost of production and preparation in the Commonwealth prevented the Australian leaf from obtaining a footing in the outside markets. Probably under more favourable circumstances, and with greater attention given to the production of leaf of the best quality only, the industry is one which will eventually, in Australia, assume considerable proportions. In all the States in which its cultivation has been tried the soil and climate appear to be very suitable for the growth of the plant, and the enormous importations of tobacco in its various forms into the Commonwealth furnish an indication of the extensive local market which exists for an article grown and prepared in such a manner as to meet with the requirements of consumers. The value of the net importations of tobacco into the Commonwealth during the year 1907 amounted to £653,505, comprising manufactured tobacco (£70,100), unmanufactured tobacco (£425,547), cigars (£109,562), cigarettes (£47,311), and snuff (£985).

5. **Hops.**—Hop-growing in the Commonwealth is practically confined to Tasmania and some of the cooler districts of Victoria, the total area for the season 1907-8 being 1261 acres, of which 1007 acres were in Tasmania, 248 acres in Victoria, and 6 acres in South Australia. The Tasmanian area, though still small, has increased rapidly during the past six years, the total for the season 1901-2 being only 599 acres. On the other hand, the Victorian area, which in 1901-2 was 307 acres, has diminished to only 248 acres in 1907-8. The cultivation of hops was much more extensive in Victoria twenty years ago than at present, the area devoted to this crop in 1883-4 being no less than 1758 acres. During the year 1907 the net importations of hops into the Commonwealth represented a weight of 1,007,318 lbs. and a value of £49,024. The total value of the net importations of hops into Australia during the past seven years amounted to £365,284, thus indicating the existence of a regular and extensive local demand.

6. **Millet.**—Millet appears in the statistical records of three of the Commonwealth States, viz., New South Wales, Victoria, and Queensland. The total area devoted thereto in 1907-8 was 3566 acres, by far the greater portion, viz., 3158 acres, being in New South Wales. The particulars here given relate to millet grown for grain and fibre. That grown for green forage is dealt with in the section relating thereto.

7. **Nurseries.**—In all the States somewhat extensive areas are devoted to nurseries for raising plants, trees, etc., but statistics concerning the area so occupied for flowers, fruit trees, etc., are not available, and so far as they relate to forestry are given elsewhere.

8. **Cotton.**—Cotton-growing on a small scale has been tried in Queensland, but so far without marked success. The area under cotton during the season 1905-6, viz., 171 acres, had fallen by 1906-7 to 138 acres, but during the season 1907-8 an increase in the area devoted to cotton took place, a total of 300 acres being attained. Hopes are entertained that with the invention of a mechanical device for the picking of the cotton the industry will become firmly established, since the soil and conditions appear eminently suitable for the growth of this crop. Small areas in the Northern Territory have also been planted with cotton, while the tropical portions of Western Australia have long been regarded as suitable for its cultivation.

9. **Coffee.**—Queensland is the only State of the Commonwealth in which coffee-growing has been at all extensively tried, and here the results have up to the present time been far from satisfactory. The total area devoted to this crop reached its highest point in the season 1901-2, when 547 acres were recorded. Since then the area continuously declined to 1906-7, when it was as low as 256 acres. During the season 1907-8 an improvement occurred and the total reached was 304 acres.

10. **Other Crops.**—Miscellaneous small crops are grown in the several States, amongst which may be mentioned pumpkins, melons, tomatoes, rhubarb, artichokes, arrowroot, chicory, and flowers.

§ 17. Fertilisers.

1. **General.**—In the early days of settlement and cultivation in the Commonwealth, scientific cultivation was in a much less developed state than it is to-day. The early farmers were neither under the necessity, nor were they as a rule aware of the need, of supplying the constituents to the soil demanded by each class of crop. The widely-divergent character of the soils in the Commonwealth, their degeneration by repeated cropping, the limitations of climatic conditions, the difficulties of following any desired order of rotation of crops, all rendered it necessary to give attention to artificial manuring. The introduction of the modern seed-drill, acting also as a fertiliser distributor, has greatly facilitated the use of artificial manures, and much land formerly regarded as useless for cultivation has now been made available. There is reason to believe that this feature will be even more strikingly characteristic of the future.

2. Fertilisers Acts.—In order to protect the interests of users of artificial manures an Act has been passed in each of the States, regulating the sale and preventing the adulteration of fertilisers. The following is a list of such Acts:—

| | |
|-----------------------|---|
| New South Wales ... | The Fertilisers Act of 1904. |
| Victoria ... | The Artificial Manures Acts of 1904 and 1905. |
| Queensland ... | The Fertilisers Act of 1905. |
| South Australia ... | The Fertilisers Act of 1900; amended 1903. |
| Western Australia ... | The Fertilisers and Feeding Stuffs Act of 1904; amended 1905. |
| Tasmania ... | The Manures Adulteration Acts of 1893 and 1898. |

As regards their main features these several Acts are practically identical. The words "fertiliser" and "manure," as used in these Acts, mean any substance containing nitrogen, phosphoric acid, or potash, manufactured, produced, or prepared in any manner for the purpose of fertilising the soil or supplying nutriment to plants, but do not include farm-yard or stable manure or similar articles in their natural or unmanufactured state. The Acts provide that every vendor of fertilisers shall, within a stated period, forward to the Secretary of Agriculture, or corresponding officer, samples of the fertilisers on sale by him, together with the distinctive name or brands by which they are known, and the price at which he intends to sell during the year. On every bag, package, or bundle of fertiliser sold, or exposed for sale, he must attach a printed label shewing thereon:—

- (i.) The number of net pounds of fertiliser in such bag or parcel;
- (ii.) The figure or trade mark attached to the fertiliser and intended to identify it;
- (iii.) The proportion per centum of nitrogen, phosphoric acid, and potash contained therein.

In addition to the above the vendor must furnish every purchaser with an invoice certificate, signed by himself or his agent, stating his full name and place of business and the quality of the fertiliser sold.

Any officer or analyst appointed under the Acts may enter any manufactory, warehouse, store, vessel, wharf, railway station, conveyance, or other place where fertiliser is manufactured, stored, exposed for sale, or in course of delivery or transit, and demand and take samples of such fertiliser. Every sample so taken must be divided by such officer into three parts, and each marked, sealed, and fastened by him in the presence of the person in charge, and disposed of as follows:—

- (i.) One part to be taken by person in charge.
- (ii.) One part to be used for analysis.
- (iii.) One part to be retained by the officer for future comparison.

Every buyer of fertiliser is entitled to submit a sample to the analyst appointed under the Act, and receive a certificate of its analysis. If the analysis prove it to be under what it is represented to be, the vendor must pay the cost of analysis.

3. Imports.—The local production of artificial manures falls short of the existing demand, and large quantities are consequently imported.

The importation of fertilisers has increased nearly 100 per cent. during the seven years of Federation. The chief items, both as regards quantity and value, are those relating to superphosphates, fertilisers apparently very suitable for the growing of cereals in Australian soils. The greater quantity of the manufactured superphosphates are obtained from the United Kingdom, whence came nearly 70 per cent. of the total imported during 1907. Belgium, Germany and the Netherlands also contribute, and of recent years Japan and the United States of America have also assisted in supplying the Australian demand. Guano is imported chiefly from Ocean Island, one of the South Sea group, and in lesser quantities from Malden Island and Surprise Island. Ocean Island is also the principal contributor of rock phosphates, next in order being Christmas

Island and the Straits Settlements. India has practically a monopoly of the bonedust trade with the Commonwealth; only a very small amount comes from the United Kingdom, Belgium, and Germany.

The increasing demand for artificial manures is shewn in the following table. The figures for 1907 are somewhat lower than for 1906 but are considerably in excess of those for any year previous thereto :—

IMPORTS OF FERTILISERS, 1901 to 1907.

| Fertiliser. | | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|---------------------|------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
| Bonedust ... | Cwt. | 94,680 | 94,387 | | | 64,241 | 80,625 | 93,798 |
| " ... | £ | 22,050 | 18,741 | | | 15,849 | 20,094 | 24,103 |
| Guano ... | Cwt. | 262,866 | 449,236 | 1,588,803 | 1,710,028 | 534,573 | 818,580 | 606,630 |
| " ... | £ | 35,151 | 64,801 | | | 68,088 | 103,953 | 75,130 |
| Superphosphates ... | Cwt. | 895,904 | 795,091 | 246,746 | 287,024 | 1,240,403 | 1,153,249 | 780,464 |
| Rock Superphos. ... | £ | | | | | 158,195 | 131,955 | 192,178 |
| Other " ... | Cwt. | | | | | 306,592 | 547,079 | 769,630 |

| " ... | | | | | | 10,126 | 24,659 | 52,975 |
| Total ... | Cwt. | 1,253,450 | 1,338,714 | 1,588,803 | 1,710,028 | 2,179,545 | 2,684,512 | 2,478,211 |
| | £ | 215,396 | 215,497 | 246,746 | 287,024 | 324,568 | 390,002 | 389,169 |

4. **Statistics of Use of Fertilisers.**—The only statistics available in connection with the use of manures in the Commonwealth are those of Victoria, South Australia, and Western Australia. Particulars concerning the first-mentioned State are given hereunder :—

FERTILISERS USED IN VICTORIA, 1901-2 to 1907-8.

| Season. | Total Area of Crops. | Farmers Using Manure. | Area Manured. | | Manure Used. | |
|------------|----------------------|-----------------------|---------------|-----------------------------------|------------------------------|-------------|
| | | | Aggregate. | Percentage to Total Area of Crop. | Natural (Stable-yard, etc.). | Artificial. |
| | | | | | | |
| 1901-2 ... | 2,965,681 | 11,439 | 556,777 | 18.77 | 153,611 | 23,535 |
| 1902-3 ... | 3,246,568 | 18,537 | 1,099,686 | 33.87 | 206,676 | 36,630 |
| 1903-4 ... | 3,389,069 | 19,921 | 1,205,443 | 35.57 | 207,817 | 41,639 |
| 1904-5 ... | 3,321,785 | 20,167 | 1,521,946 | 45.82 | 190,903 | 45,940 |
| 1905-6 ... | 3,219,962 | 21,586 | 1,791,537 | 55.64 | 210,507 | 54,674 |
| 1906-7 ... | 3,303,586 | 23,072 | 1,985,148 | 60.09 | 205,906 | 60,871 |
| 1907-8 ... | 3,232,523 | 23,733 | 2,018,079 | 62.43 | 232,394 | 62,337 |

The figures relating to the use of fertilisers in South Australia, as shewn in the table below, although not official, may be taken as being approximately correct :—

FERTILISERS USED IN SOUTH AUSTRALIA, 1901-2 to 1907-8.

| Season. | Total Area of Crops. | Area Manured. | | Manure Used. |
|------------|----------------------|---------------|-----------------------------------|--------------|
| | | Aggregate. | Percentage to Total Area of Crop. | |
| | | | | |
| 1901-2 ... | 2,236,552 | 845,000 | 37.78 | 37,500 |
| 1902-3 ... | 2,224,593 | 1,000,000 | 44.95 | 44,500 |
| 1903-4 ... | 2,256,824 | 1,170,000 | 51.84 | 52,000 |
| 1904-5 ... | 2,275,506 | 1,265,600 | 55.62 | 56,500 |
| 1905-6 ... | 2,255,569 | 1,321,600 | 58.59 | 59,000 |
| 1906-7 ... | 2,150,291 | 1,366,400 | 63.54 | 61,000 |
| 1907-8 ... | 2,265,017 | 1,456,000 | 64.28 | 65,000 |

Corresponding particulars relative to Western Australia for the past four seasons are given in the following table, and furnish interesting evidence of the rapid extension of the use of manures in that State:—

FERTILISERS USED IN WESTERN AUSTRALIA, 1904-5 to 1907-8.

| Season. | Total Area of Crops. | Area Manured. | | Manure Used. | |
|------------|----------------------|---------------|------------------------------------|------------------------------|-------------|
| | | Aggregate. | Percentage to Total Area of Crops. | Natural (Stable-yard, etc.). | Artificial. |
| | Acres. | Acres. | % | Loads. | Tons. |
| 1904-5 ... | 327,391 | 205,923 | 63.90 | 72,523 | 10,787 |
| 1905-6 ... | 364,704 | 257,469 | 70.60 | 83,033 | 12,676 |
| 1906-7 ... | 460,825 | 340,401 | 73.87 | 81,653 | 16,127 |
| 1907-8 ... | 494,987 | * | * | * | * |

* Not available.

A marked increase in the proportion of cropped land treated with manure is in evidence in all three of the States for which returns are available. Thus in Victoria the area of manured land represented in 1901-2 only 18½ per cent. of the area under crop, as against 62½ per cent. in 1907-8. Similarly in South Australia the percentage increased from 37½ per cent. in 1901-2 to 64½ per cent. in 1907-8, and in Western Australia from 64 per cent. in 1904-5 to 74 per cent. in 1906-7.

5. Local Production of Fertilisers.—Statistics relative to the local production of fertilisers are necessarily very incomplete, and detailed returns for fertiliser factories other than bone mills are not available. If, however, approximately complete returns of the quantities of fertilisers used in the various States could be given a comparison with the importations would give valuable information, but, as already mentioned, such particulars are only available for three of the States, and even then do not furnish the whole of the information necessary.

6. Benefits derived from the Use of Fertilisers.—There is little doubt that the increased and increasing use throughout the Commonwealth of fertilisers, natural and artificial, combined with the greater attention being devoted to fallowing and to the combination of sheep-farming with agriculture, is having the effect of improving the prospects of those dependent for a livelihood on the products of the soil. Reference has previously been made to the loss to the soil of phosphoric acid which the Commonwealth export of wheat and its milled products involves, and the necessity which thus arises for returning this ingredient in some form. Similarly, other staple products exported impose their respective tolls upon the soil of the Commonwealth, and the increased use of fertilisers furnishes evidence that producers are alive to the necessity for making good the deficiency so arising.

§ 18. Ensilage.

1. Value to Stockowners.—The use of ensilage as a substitute for green fodder during periods of drought or spells of dry weather, or for winter use, is less extensive in Australia than the circumstances would appear to warrant. There is, however, a growing disposition on the part of dairy farmers to make silos on their holdings, as they find that dairy cattle eat ensilage greedily, and that by its means the output of milk, both in regard to quantity and quality, may be kept up long after the supply of ordinary green food is exhausted. Sheepbreeders are also recognising the fact that during protracted periods of dry weather the silo enables them to keep their stock in good condition, and that lambing can take place satisfactorily. Ensilage thus obviates the expense of traveling or trucking sheep for hundreds of miles to get beyond the drought area, or the equally costly and even ruinous alternative of providing chaff for food at high prices and

costly freight. In the rearing of lambs for the London market, ensilage appears to be destined to play an important part, as the lambs thrive upon it much better than upon dry food. By the judicious economising of the surplus growth of green food with the use of the silo, farmers and squatters can carry more stock on their holdings than they otherwise would be justified in doing. Not only is the great waste of superabundant food thus avoided, but it becomes possible to change into a succulent and nutritious food much growth that in any other state would not be eaten by their stock. Thus such vegetation as marsh mallows, thistles, weeds of all sorts, and even the swamp reed, *Arundo phragmites*, which grows in great quantities in lagoons, billabongs, and swamps, are all eaten with avidity when offered to stock in the form of ensilage. The pit and stack silos are rapidly being superseded by those built of red gum and hardwood or concrete. This is found to a great extent to obviate the loss sustained by mould, at the same time reducing the risk of fire. These silos vary in capacity from forty to 130 tons. A portable silo made of iron which has been lately introduced, is made in sections of such size and weight as to admit of ready handling. These silos can be increased in diameter or height by the addition of further sections.

2. Government Assistance in the Production of Ensilage.—The Government of Victoria, recognising the fact that defective methods of making ensilage have often been adopted, leading to partial or total failure, is making special efforts to educate the farming community in this respect, so that mistakes may be avoided and the conditions essential for the production of good ensilage may be better appreciated. These conditions vary with the climate and with the locality. The Government is also undertaking the erection of silos on very liberal terms, repayment extending over three years. Experts supervise the erection of the silos and give practical lessons as to packing them, etc. With the exception of Victoria none of the other States have taken steps to assist the farmers financially, though some of them are making inquiries with the view of ultimately doing so where required.

3. Quantity Made.—Particulars concerning the number of silos and the quantity of ensilage made in the several States of the Commonwealth in the seasons 1901-2 to 1907-8 are furnished in the table given hereunder:—

COMMONWEALTH ENSILAGE-MAKING, 1901-2 to 1907-8.

| State. | 1901-2. | | 1902-3. | | 1903-4. | | 1904-5. | | 1905-6. | | 1906-7. | | 1907-8. | |

* No. of Holdings on which Ensilage was made.
 † Figures not available. Ensilage was made in small quantities in Tasmania, though no returns were published prior to 1907-8.
 ‡ Exclusive of Tasmania.

It will be noted that since the drought of 1902-3 greater attention has been paid to ensilage than heretofore, and though the quantity made in 1905-6 shews a falling-off this does not necessarily indicate that the quantity on hand was less, as owing to the favourable season pasturage was very abundant, and consequently the ensilage on hand was not availed of to as great an extent as would have been the case under less propitious circumstances. The two following years shew an upward tendency in the quantity produced.

§ 19. Agricultural Colleges and Experimental Farms.

1. **Introduction.**—It has been thought preferable to refer to what may be called the effort in the direction of agricultural education, in this section rather than under the heading of education.

The virgin soil of a new country rendered attention to scientific methods of farming less necessary in the earlier days of Australian colonisation than at the present time, and it may also be said that the knowledge of scientific farming was then but little developed. In many parts of Australia, moreover, the regular rotation of crops, of vast importance to all agricultural countries, would appear hardly possible owing to the peculiar climatic conditions. These conditions may, however, be utilised, or made less adverse by a more skilful tillage of the soil, and the restoring to it or adding to it such chemical constituents as may be necessary for particular crops. The fostering of industries, other than those pertaining merely to the production of cereals, is also becoming a matter of consequence, and considerable extensions of knowledge have been made in the past few years in respect to the co-ordination of other industries with agricultural industry. In most of the States agricultural colleges and experimental farms have been established with a view to promoting agriculture and of establishing improved and more scientific systems of stock-breeding and dairying. In these colleges and in some of the farms provision is made for the accommodation of pupils, to whom both practical and theoretical instruction is given by experts in various branches of agriculture. Analyses of soils and fertilisers are made, manures are tested, and elementary veterinary science, etc., is taught, while general experimental work is carried on with cereal and other crops, not merely for the purpose of showing that it is practicable to produce certain crops in a given place, but also to shew how it is possible to make farming pay best in that locality. Opportunities are afforded for practice in general agricultural work, and instruction is given in the conservation of fodder, in cheese and butter making, in the management, breeding, and preparation for the market of live stock, in the eradication of pests and weeds, and in the carpenters', blacksmiths' and other trades.

Travelling expert lecturers are sent to the various agricultural and dairying centres, and there is a wide distribution of periodical agricultural gazettes and bulletins on matters of importance at special seasons. Lectures are given on agricultural, pastoral, horticultural, and viticultural subjects, according as they have bearing on the industries of the district in which they are given, and practical demonstrations are frequently held with a view of obtaining the best results. Seeds of cereals, potatoes, and fodder plants are distributed throughout the several States for experimental purposes, on the understanding that result reports will be furnished to the department from which the seed was sent. The object of this is to ascertain the varieties of seed most suitably adapted to the soil in the different localities. Attention is also paid to the proper supervision of exports of produce in order to ensure their being placed on the home markets in the best possible condition. In some of the States agricultural instruction is given at technical schools, while experimental elementary agriculture—practically a form of nature study—is taught at many of the primary schools. Courses for the instruction of school-teachers during the holiday recesses have been established at some of the agricultural colleges.

(i.) *Particulars of Agricultural Colleges and Experimental Farms.* In the table given below particulars of agricultural colleges and experimental farms in the several States of the Commonwealth in 1907-8 are shewn. Tasmania is the only State in which such colleges and farms are not established :—

PARTICULARS OF AGRICULTURAL COLLEGES AND EXPERIMENTAL FARMS IN THE COMMONWEALTH, 1907-8.

* Figures for Western Australia are for 1906-7.

2. **New South Wales.**—In order to meet the demand for agricultural training, and for the purpose of conducting experiments in various branches of agriculture and of disseminating agricultural knowledge, an agricultural college and farm and twelve experimental farms have been established by the New South Wales Government. Theoretical instruction in agriculture, with practical illustrations, forms part of the curriculum of the Sydney Technical College. At the Hurlstone Continuation College there is a special course in both theoretical and practical agriculture for teachers. Instruction in "nature knowledge" is given in the State primary schools, many of which have their own experimental plots. As a means of further encouraging the study of agriculture the Department of Public Instruction has a travelling inspector in agriculture, whose duty it is to visit the country and metropolitan schools, giving lectures on the value, necessity, and advantages of agricultural knowledge, and giving practical demonstrations wherever practicable.

(i.) *The Hawkesbury Agricultural College*, situated near the town of Richmond, on the Hawkesbury River, about thirty-eight miles from Sydney, is under the control of the Agricultural Department and provides accommodation for about 250 students. Attached to the college is a farm of 3551 acres, of which 1038 acres were under crop in the season 1907-8.

(a) *The course of instruction* comprises the principles of agriculture; the breeding, rearing, feeding, and management of live stock; agricultural chemistry, botany, vegetable pathology, and entomology; veterinary science and practice; bacteriology; meteorology; agricultural mechanics; elements of surveying and farm book-keeping; all kinds of practical farm work, including the use of farm implements and machinery; dairying, carpentry, saddlery, blacksmithing, and elementary agricultural engineering; the management of poultry and bees and all branches of orchard and garden work. The course extends over two years, and is divided into four sessions. At the end of the course students may undergo examination for the purpose of obtaining the college diploma.

(b) *Experimental Work.* In addition to the education of the students extensive experimental operations are carried on at the farm for the general benefit of agriculturists. Large numbers of farmers visit the institution in quest of information. During the winter vacation arrangements are made for a winter school for farmers. This school has been in operation for three years. The course extends over one month.

(ii.) *Experimental Farms, Orchards, and Vineyards.* Experimental farms have been established at Wagga, Bathurst, Coolabah, Grafton, Glen Innes, Cowra, and Wollongbar. There are irrigation farms at Moree, Gera, and Yanco, and a dairy stud farm at Berry, while viticultural stations have been established at Howlong and Belmont. At the farms at Wagga, Bathurst, Wollongbar, and Berry, accommodation is provided for students. The educational work undertaken at the four farms where students are received is more practical than academic. Scientific lectures are given as far as possible, and the students, at the end of the full course, undergo an examination for the purpose of obtaining the farm certificate. The fees payable are not large, amounting, as a rule, to about £25 per annum for residential students. With regard to the farm operations, the objects of each farm are to demonstrate the most economic and effective systems of producing and harvesting crops; to carry out experiments to determine the suitability or otherwise of crops, not only for the district where the farm is situated but for other districts having similar climate and soils; and to carry out scientific agricultural experiments generally.

(iii.) *Particulars of Agricultural College and Experimental Farms.* The following table shows the number of students at the Hawkesbury College and at the four experimental farms at which students are received for each year from 1901 to 1907 inclusive:—

NEW SOUTH WALES.—NUMBER OF STUDENTS AT GOVERNMENT AGRICULTURAL COLLEGE AND EXPERIMENTAL FARMS, 1901 to 1907.

| Name. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-------------------------------|-------|-------|-------|-------|-------|-------|-------|
| Hawkesbury Agricultural Coll. | 102 | 116 | 120 | 153 | 144 | 201 | 230 |
| Wagga Farm | 7 | 18 | 29 | 40 | 41 | 40 | 63 |
| Bathurst Farm | 6 | 15 | 15 | 23 | 18 | 25 | 23 |
| Wollongbar Farm | ... | 2 | 3 | 11 | 14 | 9 | 18 |
| Berry Dairy Stud Farm | ... | 5 | 5 | 3 | 11 | 7 | 11 |
| Total | 115 | 156 | 172 | 230 | 228 | 282 | 345 |

It will be seen from this table that in the six years from 1901 there has been a substantial increase in the number of students, the total for 1907 being no less than 200 per cent. greater than that for 1901.

At the Wagga farm a specialty is made of growing seed wheats and fruits for drying, and of breeding dairy stock and swine. The Bathurst farm is devoted to the cross-breeding of sheep, fruit-growing, cereal culture, and general mixed farming. At Coolabah experiments in the dry districts have been carried on, while at Wollongbar experiments have been made on a large scale with grasses for the grazing of dairy cattle, and stags have been taken to assist the dairying industry in the surrounding districts.

The following table gives particulars of the Hawkesbury College and of the thirteen experimental farms for the year ended the 31st March, 1908:—

NEW SOUTH WALES.—PARTICULARS OF GOVERNMENT AGRICULTURAL COLLEGE AND EXPERIMENTAL FARMS AT THE 31st MARCH, 1908.

| Name of College or Farm. | Total Area of Farm. | Total Area under Crop. | Area under Cereals and Hay. | Area under Fruit Trees and Vines. | Area under all other Crops. | Number of Hands Employed | Value of Plant and Machinery. | Value of Produce for the Year. |
|--------------------------|---------------------|------------------------|-----------------------------|-----------------------------------|-----------------------------|--------------------------|-------------------------------|--------------------------------|
| | Acres. | Acres | Acres | Acres. | Acres. | No. | £ | £ |

| Yanco ^{2*} | ... | ... | ... | ... | ... | ... | ... | ... |

1. The total area of this farm is 15,000 acres, but 12,718 acres have been let for grazing purposes.
 2. Irrigation farm. 3. Dairy stud farm. 4. Viticultural station.
 * Particulars not available.

iv.) *Other Forms of Agricultural Instruction.* Agricultural education at the Technical College at Sydney includes the following studies:—The character and prospects of Australian agriculture; climate and rainfall; selection of land, clearing, fencing, building and draining; irrigation and water storage; the cultivation of crops; manures; live stock; dairying; sheep and wool; farm and dairy chemistry; the treatment of fungus and insect pests; fruit-growing and preserving; vine-growing and wine-making; pigs, poultry and bee-keeping; and horticulture and home-gardening. Elementary agriculture forms the first year's course, and advanced agriculture is dealt with during the second year. With the object of giving lectures and demonstrations on various subjects, the scientific and expert staff of the agricultural laboratories in Sydney as well as those attached to the college and farm staffs are from time to time placed at the disposal of the farming community, and are constantly in demand by agricultural societies, farmers' and settlers' associations, and other similar bodies. The publication of the *Agricultural Gazette* is a valuable means of imparting knowledge on agricultural matters. Seeds grown at the experimental farms are distributed from a central dépôt in Sydney for trial purposes among the farmers, and are also available to State school teachers for use in connection with the experimental plots, which are now attached to many of the primary schools throughout the State. The only condition in the granting of such samples is that the recipients shall in due course forward a report of their experiments to the Agricultural Department.

3. *Victoria.*—In 1884, the Agricultural Colleges Act, passed to make provision for the establishment of agricultural colleges and experimental farms in Victoria, provided for the permanent reservation from sale of 150,000 acres of Crown lands by way of endowment of agricultural colleges and experimental farms, which, together with other lands reserved as sites for such institutions prior to the passing of the Act, are vested in three trustees appointed by the Governor. Provision was made for the appointment of a Council of Agricultural Education, consisting of eleven members, five of whom are elected by the members of the Agricultural Societies of the State, five are nominated by the Governor, whilst the Secretary for Agriculture is also a member of the Council and its Treasurer. Two agricultural colleges and five experimental farms, orchards and vineyards have now been established in different parts of the State under this Act. There are two Agricultural High Schools under the control of the Education Department,

while elementary experimental agriculture is taught at many of the State primary schools. Instruction in agriculture is also given at the technical schools at Melbourne and Bairnsdale.

(i.) *Agricultural Colleges.* The two colleges are situated respectively (a) at Dookie, in the Goulburn Valley district, and (b) at Longerenong, in the Wimmera district.

(a) *The Dookie Agricultural College*, with its farm of 4846 acres, is situated in a rich agricultural country, eminently suited for farming, grazing, viticulture, and horticulture. The college buildings were erected during 1886, and since then numerous additions have been made, so that at the present time accommodation is provided for seventy students, and provision will shortly be made to accommodate thirty more. The farm is equipped with modern dairy and cowbyres, piggeries, poultry plant, cellars, etc., also large stables and stallion boxes, shearing shed, slaughterhouse, mechanics' and carpenters' shops, silos, barn, sheds, cattle and sheep yards, steam and oil engines, and numerous modern implements of agriculture. Half the students' time is devoted to practical work on the farm, and half to scientific, theoretical, and other work. On the farm the student is taught to manage live stock, handle implements and machinery, work the separator, drive engines, prune vines and trees, break-in horses, shoe horses, mend a break, and erect buildings. At the college instruction is given in determining the fertility of soils, the effects of manuring, the importance of drainage, the improvement of stock and crops, irrigation, and the treatment and eradication of diseases in plants and animals. Considerable attention is paid to experimental work in connection with cereals. The rearing of new varieties of wheat, suitable for the different parts of the State of Victoria, has special attention paid to it. Manurial tests are carried out each year and the results published for the benefit of the farmers. The stock comprise over fifty horses, as well as good herds and flocks of pedigreed cattle, sheep, pigs, and poultry. The annual charge made to residential students is £28 per head. The number of students during 1907-8 was seventy-six.

(b) *The Longerenong Agricultural College*, reopened in 1905, can accommodate forty students, and there were thirty-two on the rolls during last year. The farm contains an area of 2386 acres, and is particularly adapted for demonstrating what can be done in farming with irrigation, water being supplied by one of the channels of the Western Wimmera Irrigation Trust. Including fallow land, about 1000 acres are under cultivation each season; the orchard and vineyard cover an area of about thirty acres. In addition to a number of well-bred horses and cattle, there is a small flock of pedigree sheep. Lamb-raising is one of the principal industries. The course may be taken by either resident or non-resident students, the former doing both class and farm work, while the latter attend for class work only on alternate days. The syllabus of instruction includes the principles and practice of agriculture, agricultural chemistry, agricultural physics and mechanics, botany, entomology, geology, surveying, bookkeeping, mathematics, and English. The fees for resident students amount to £18 5s. per annum, and for non-resident students to £5 per annum.

(ii.) *Agricultural High Schools and Technical Colleges.* During the year 1907 the Education Department opened two agricultural high schools—one at Warnambool and the other at Sale—each having accommodation for about fifty pupils. Similar institutions are to be established in the near future at Wangaratta, Ballarat, and Shepparton, the sites having already been acquired, the direct aims being to give to boys such an education as will direct their attention specially towards the land as a means of gaining a livelihood; to promote agriculture as an occupation and a profession; to provide a central institution for the dissemination of agricultural information by evening lectures,

conferences, and literature; to superintend the Government experimental plots, to record and interpret their results; and to provide a summer school in agriculture for primary school teachers. The course of instruction comprises agricultural science, climatology, physics, chemistry, geography, drawing, English, mathematics, and farm practice. At the Working Men's College at Melbourne lectures are given on agricultural chemistry, wool-classing, poultry-breeding, etc., and at the School of Mines at Bairnsdale a complete course in theoretical and practical agriculture is given, extending over a period of two years. Agricultural courses are also held at the Ballarat School of Mines and at the Gordon College, Geelong.

(iii.) *Experimental Farms.* Experimental farms, orchards, and vineyards have been established at Rutherglen, Wyuna, Whitfield, Heytesbury, and Burnley, demonstrating different methods of cultivation, manuring, stock-breeding, the cultivation of economic plants, the improvement of varieties of cereals by selection and cross fertilisation, and the testing of fodder plants. Six demonstration orchards have been established to shew the effect of proper cultivation and pruning of fruit trees in various districts and the suitability of the trees for the district. At Burnley Horticultural Gardens students are trained in horticulture. Areas have been planted at Rutherglen and Wahgunyah with phyloxera-resistant vines for distribution to vignerons to enable them to reconstitute their vineyards.

(iv.) *Other Forms of Agricultural Instruction.* Since the establishment of butter factories throughout Victoria a travelling dairy formerly utilised has been discontinued. Demonstrations in cheese-making are, however, still given by an expert, while other experts also visit the factories and supply information and instruction. Practical lessons are also given by experts in fruit-preserving, drying, candying, also in flax manufacture, cider-making, poultry-dressing, and the preparation of poultry for export. In addition to these lectures a system of short course classes in agriculture has been established. These classes are held at various centres and lectures are given on the principles of agriculture, the care of farm stock, sheep-breeding and management, dairy-farming, agricultural engineering, and orchard and garden work. In many of the State schools of Victoria elementary agriculture is taught. In connection with these schools there are experimental plots varying in area from half an acre to rather less than a quarter of an acre. Experiments are conducted to shew the benefits of cultivation, drainage, and rotation of crops, to ascertain fodder and other crops suitable for the locality, and to test manures. In some of the schools milk-testing is taught, and the economic native woods, common weeds, and insects are dealt with.

(v.) *Particulars of Agricultural Colleges and Experimental Farms.* The table given hereunder furnishes particulars relating to the agricultural colleges of Dookie and Longerenong, and the experimental farms at Rutherglen, Whitfield, and Wyuna. As the total area of the plots at Burnley and Heytesbury is only thirty acres and twenty acres respectively, figures relative thereto have been omitted from this table:—

VICTORIA.—PARTICULARS OF GOVERNMENT AGRICULTURAL COLLEGES AND EXPERIMENTAL FARMS FOR THE YEAR 1907-8.

| Name of College or Farm. | Total Area of Farm. | Total Area under Crop. | Area under Cereals and Hay. | Area under Fruit Trees & Vines. | Area under all other Crops. | Number of Hands Employed. | Value of Plant and Machinery. | Value of Produce for the Year. |

| Dookie ... | 4,846 | 600 | 348 | 56 | 196 | 18 | 1,500 | 5,230 |
| Longerenong | 2,386 | 466 | 435 | 27 | 4 | 6 | 958 | 2,135 |
| Rutherglen | 913 | 181 | 92 | 21 | 68 | 22 | 950 | 1,125 |
| Whitfield ... | 113 | 33 | 18 | ... | 15 | 4 | 120 | 90 |
| Wyuna ... | 540 | 256 | 54 | 1 | 201 | 11 | 1,200 | 900 |

4. **Queensland.**—Organised experimental agriculture in Queensland dates from the establishment of the Department of Agriculture and Stock, but such work as has been done in connection with stock-breeding, other than that carried on by private individuals, has been of later birth, and has been confined to dairy stock and draught horses. Agriculture in Queensland in the early nineties was upon the well-defined lines of the other States, so that the knowledge to be gained as to what could be profitably adapted to Queensland, with its varied climate and rainfall, covered a wide field. Instructors were appointed conversant with the different lines of agriculture, of which grain cultivation, dairying, fruit-growing, tobacco cultivation, and tropical agriculture, such as sugar, rubber, and spices, are the most important. This has been followed by the establishment of an agricultural college, of farms in the temperate parts of the State, and of nurseries in the tropical parts. With wheaten grain a system of experiments has been carried out for some years with the distinctive object of evolving a type of wheat adapted for Queensland, and as far as possible resistant to the attacks of rust. In dairying, a commencement was made by despatching to the different farming centres properly equipped travelling dairies with the latest appliances. The export of Queensland dairy produce has arisen through this effort. No travelling dairies are, however, now employed. A fruit farm has been established, at which fruits suitable for or likely to adapt themselves to the Queensland climate and conditions have been experimented with during a series of years. To cope with the insect and fungus pests to which such fruits are peculiarly susceptible, careful inspection is made of fruits in the markets and for export, and every effort is put forth to prevent the introduction of fresh diseases and to exterminate those which are already within the State.

(i.) *Gatton Agricultural College.* In 1897 the Queensland Government established an agricultural college at Gatton, about fifty-eight miles west of Brisbane, with an associated farm of 1692 acres. Accommodation is provided for sixty residential students. Instruction is afforded in various branches of practical farming and theoretical agriculture, the practical feature being regarded as the more important. Elementary science and physics, dairying, gardening, elementary chemistry, veterinary science, horticulture, stock-breeding, elementary bacteriology, and agricultural chemistry are also taught. A dairy herd of the best known and favoured breeds has been established at the college, whence the young stock of pure breed have been distributed throughout the State. A course for the instruction of school teachers during the summer recess has been established at the college by the Education Department, and the knowledge thus acquired is imparted by the teachers, not only to the school children, but also to the farmers and dairymen. On the 31st December, 1907, there were fifty-four students on the books of the college.

(ii.) *Experimental Farms and Technical Colleges.*

(a) *Experimental Farms* are carried on by the Government at Westbrook (near Toowoomba), Gindie, Biggenden, Hermitage (near Warwick), Warren, and Roma. At the Hermitage farm arrangements were made during the year 1906, whereby instruction in general farm work is given to a number of boys who, from circumstances, are unable to receive the advantages of the college course, and this system has now been applied to the farm at Biggenden. The pupils are apprenticed for a term of three years and are instructed in experimental and acclimatisation work, stock-breeding, hybridising, orchard work, etc. These youths are paid nothing for the first twelve months, £12 for the second, and £24 for the third. A State nursery has been established at Kamerunda, near Cairns, and a sugar experimental station at Mackay, but the State tobacco farm at Texas was relinquished during 1906.

(b) *Technical Colleges.* At the technical colleges established in various parts of the State instruction is given in certain agricultural subjects. Thus, at Brisbane, Ipswich, and Maryborough, botany, milk and cream testing, fruit

preserving and pickling are considered, and at Brisbane wool-classing also. At Bundaberg, Gympie, Rockhampton, South Brisbane, and Toowoomba milk and cream testing is taught, whilst instruction is given in dairy-farming at Warwick.

(iii.) *Other Forms of Agricultural Instruction.* Free lectures are from time to time given at different centres by the Agricultural Department's technical instructors on all agricultural, horticultural, and pastoral subjects. A monthly *Agricultural Journal* is issued, in addition to pamphlets on special subjects. Seeds which are new to the country, and which have not been cultivated there before, are distributed free. In the primary schools instruction is given in nature study and in economic gardening, prizes being awarded both for practical and theoretical work.

(iv.) *Particulars of Agricultural College and Experimental Farms.* In the table given below particulars are given of the Gatton Agricultural College and the seven experimental farms. Figures relating to the technical colleges are not available:—

QUEENSLAND.—PARTICULARS OF GOVERNMENT AGRICULTURAL COLLEGE AND EXPERIMENTAL FARMS FOR THE YEAR 1907.

| Name of College or Farm. | Total Area of Farm. | Total Area under Crop. | Area under Cereals and Hay. | Area under Fruit Trees and Vines. | Area under all other Crops | Number of Hands Employ'd | Value of Plant and Machinery. | Value of Produce for the Year. |

* Recently established.

5. **South Australia.**—To this State belongs the honour of starting the first experimental farm in the Commonwealth. As far back as the year 1879 a resolution was passed by the local Parliament in favour of the establishment of a School of Agriculture, with an experimental farm, under the charge of a professor of agriculture. Active operations in this connection were commenced in 1882, when the first series of plots of wheat were sown at Roseworthy. Experimental work, chiefly directed towards improving the wheat yield, has been developed along three main lines, viz.: (a) The improvement of varieties of wheat, (b) the improvements of methods of cultivation, and (c) the use of manures. The Central Agricultural Bureau, established at Adelaide under the control of an Advisory Board, had on the 30th June, 1906, a membership of nearly 1900 persons distributed amongst 115 branches. It assists farmers by the dissemination of knowledge; by helping to introduce new economic plants; by improving the breed of stock; and it acts as a means of keeping the Agricultural Department in touch with the producers. The branches of the bureau hold meetings at regular intervals in their several districts, ideas and methods as regards practical subjects are interchanged, and discussions are held on matters of general interest to agriculturists. The Agricultural Department issues a monthly journal, and from time to time special bulletins and pamphlets regarding cultivation, manuring, diseases of stock, etc.

(i.) *The Roseworthy Agricultural College.* The Roseworthy College, situated seven miles from Gawler, and affording accommodation for fifty resident pupils—who must be at least sixteen years of age on admission—has two main objects, viz.: (a) To train young men for the practice of agriculture, horticulture, and viticulture, and (b) to conduct experiments with a view to the advancement of the rural industries in South Australia.

The attached plot is 1551 acres in extent. The course extends over a period of three years, the fees for residential students being £30 per annum. The curriculum includes both scientific and technical subjects, viz., chemistry, physics, anatomy, physiology, botany, and entomology; agriculture, viticulture, œnology, fruit culture, veterinary science, dairying, book-keeping, surveying, wool-classing, and general rural economy.

(ii.) *Experimental Farms.* During the year 1905-6 three experimental farms were handed over to the Agricultural Department, namely, the homestead block at Kybybolite of 1040 acres, 59 acres of reclaimed swamp at Murray Bridge, and 83 acres at Parafield. On these, experiments are carried on with regard to the growing of different varieties of wheat, oats, and barley, both for grain and for hay crops, and also with regard to the growing of root and fodder crops. Investigations cover the manuring of crops, different methods of cultivation, rotation of crops, irrigation, the hybridisation and selection of cereals, feeding of animals, fruit-growing, and wine-making.

(iii.) *Other Forms of Agricultural Instruction.* Lectures are given by the experts of the Agricultural Department under arrangement with the School of Mines at Adelaide and at country branches of that institution, while practical demonstrations are also given by the horticultural instructor. No instruction is given by travelling dairies, but the dairy instructor visits districts as arranged and gives instruction and advice on all matters pertaining to dairying. Lectures and practical demonstrations are given by experts all over the State, principally under the auspices of the Agricultural Bureau or local committees. Though no systematic scheme for agricultural teaching in the primary schools exists, numbers of individual teachers have taken up experimental elementary agriculture—practically a form of nature study—with satisfactory results. Seed of special varieties of wheat is from time to time distributed gratis to applicants; also seed of barley and oats, and of fodder plants of a special character, likely to suit prevailing conditions.

(iv.) *Particulars of Agricultural College and Experimental Farms.* The subjoined table gives details of the several farms in the State during 1907-8 :—

SOUTH AUSTRALIA.—PARTICULARS OF AGRICULTURAL COLLEGE AND EXPERIMENTAL FARMS FOR THE YEAR 1907-8.

| Name of College or Farm. | Total Area of Farm. | Total Area under Crop. | Area under Cereals and Hay. | Area under Fruit Trees and Vines. | Area under all other Crops. | No. of Hands Employ'd | Value of Plant and Machinery. | Value of Produce for the Year. |

6. *Western Australia.*—A considerable amount of developmental work has been done of late years towards the promulgation of agricultural knowledge on the three State farms at Chapman, Narrogin, and Hamel, and, more recently still, on the experimental farms at Brunswick and Nangeenan.

(i.) *The Chapman Farm* stands in the centre of a vast stretch of country lying twenty-five miles north of Geraldton and fifteen miles east of Northampton. Until five or six years ago the expanse of land referred to was almost exclusively devoted to grazing, and it was mainly to prove its capabilities, and thus promote settlement, that the farm was established. The whole of the available land has since been selected, and settlement has outrun the extent of the area in question. Collaterally the object of the farm has been extended; it has become the medium whereby practical instruction in farming is provided for intending settlers in quest of a training which will fit them for their work. The farm is well watered by the Chapman River and by wells served by windmills; it is securely fenced and subdivided. Stud stock are kept and bred, the young stock being sold annually. The stock consists of a stud of Suffolk Punch horses,

a herd of Dexter Kerries, a flock of pure-bred Shropshire ewes and rams, Angora goats, and various kinds of poultry.

(ii.) *The Narrogin Farm.* The initial object of this farm was to practically demonstrate the larger return consequent upon improved cultivation of the land; to raise stud-stock for the benefit of the farmers, to raise clean seeds for sowing their land, and to offer a field for training farmers' sons and others wishing to settle on the land. Students are admitted at an annual fee of £10; they are taught the practical farm work, such as handling live stock, and the use of various farm implements. Lectures are given at intervals by the scientific staff attached to the Agricultural Department. Experimental work is a merely subsidiary feature. The total area is 2826 acres. On the 30th June, 1907, there were forty-five students on the rolls.

(iii.) *The Hamel State Farm.* Hitherto only experimental work has been carried out on the Hamel State farm, consisting chiefly of testing new varieties of grasses and fodder plants, cereals, fruits and tubers. Students are not taken on at the farm, the work having been carried out chiefly by a gang of good conduct prisoners.

(iv.) *Other Forms of Agricultural Instruction.* The Government dairy expert is continually travelling and lecturing on dairying, and lectures are also given by the field-officer, the horticultural and viticultural experts, and others. Demonstrations are also given in the cultivation of vines and fruit trees, including budding, grafting, and pruning. A regular monthly journal and bulletins at frequent intervals on matters of importance are issued by the Agricultural Department. The distribution of seeds and plants is now practically confined to seeds of fodder plants. While there are no specific regulations, recipients are asked, with a view to collating information as to the most suitable varieties in different localities, to report results. Experimental plots are conducted at some of the State schools under the direction of the teachers. A special feature of the entomological work carried out by the Department of Agriculture is the collection, breeding and distribution of parasites on insect pests. This work has been carried out with excellent results, several pests which were formerly a great source of trouble and expense being now practically non-existent. Experimental farms have been established at Brunswick and Nangeenan.

(v.) *Particulars of State and Experimental Farms.* Particulars of the farms at Narrogin, Chapman, Hamel, Brunswick, and Nangeenan for the year 1906-7 are given hereunder:—

WESTERN AUSTRALIA.—PARTICULARS OF STATE AND EXPERIMENTAL FARMS FOR THE YEAR 1906-7.

| Name of Farm. | Total Area of Farm. | Total Area under Crop. | Area under Cereals and Hay. | Area under Fruit Trees and Vines. | Area under all other Crops. | Number of Hands Employed | Value of Plant and Machinery. | Value of Produce for Year. |

7. *Tasmania.*—In Tasmania there is a Council of Agriculture consisting of eleven members, whose duties are to collect and publish information of every kind calculated to prove beneficial to colonists engaged in agriculture, such as suitability of various districts for growth or production of animal and vegetable products, information respecting plants, methods of cultivation, of breeding and feeding animals, and how best to improve the same: to prevent as far as possible the introduction and spread of diseases and pests, and to publish bulletins, abstracts, and reports containing all such information as may be desirable. Other matters embrace the employment of experts in any branch

of agricultural science, distribution of plants and seeds for experiment, and the establishment of local boards of agriculture in different parts of the State. Lectures are given by the experts from time to time, and useful information and knowledge is diffused by means of the monthly gazette published by the Council, and also by means of special bulletins. There are no agricultural colleges nor experimental farms, and practically no agricultural teaching is given in the elementary schools.

§ 20. Government Loans to Farmers.

1. **Introduction.**—All the Australian States have established systems under which financial aid is rendered to agriculturists by the Government. The principle upon which such aid is founded was probably first practically applied in Germany, viz., in the year 1770, when the *Landschaften Bank* was created. The establishment of the *Crédit Foncier* somewhat later in France was a creation of a similar character. This latter institution was designed to enable house and land owners to raise money on mortgage at a low rate of interest, with facility for repayment by an annuity including redemption of the capital. It dates from 1852, but the mortgage bank known as the *Caisse Hypothécaire*, which, after a struggling existence, was finally liquidated in 1846, was based essentially on the same principle. Over the operations of the *Crédit Foncier*, created under governmental patronage and invested with such special privileges as to virtually constitute it a monopoly, the Government exercised a direct control, viz., by appointing its governor and its two deputy-governors. The *Crédit Foncier* was empowered to lend money only on a first mortgage, and to the amount of one-half of the estimated value of houses and farms, and one-third that of vineyards, woods, and other plantations and the commission charged could not exceed six-tenths per cent. The system developed and adopted in the Commonwealth, with the object of assisting farmers to make improvements or to develop or utilise the agricultural or pastoral resources of the land, is analogous. Particulars of advances made under the Closer Settlement and similar Acts are dealt with in the section on Closer Settlement. (See page 321.)

2. **Particulars of Transactions in each State, 1905 to 1908.**—The subjoined table gives particulars of transactions in each State in which advances to farmers are made, for the years 1905 to 1908, inclusive. Tasmanian figures are not available:—

STATE GOVERNMENT ADVANCES DEPARTMENTS.—PARTICULARS OF LOANS TO FARMERS, 1905 to 1908.¹

1. Compiled from figures furnished by the Government Savings Bank of Victoria. 2. Returns not available. 3. Balance after deduction of special principal payments in advances (see section 41, sub-section 7, of the Savings Banks Act, 1896). 4. Exclusive of New South Wales and Tasmania.

3. **New South Wales.**—(i.) *Initial Legislation.* New South Wales adopted the principle of advances to settlers on 4th April, 1899, when the Advances to Settlers Act received assent. The objects of this Act were to authorise the raising of a loan for making temporary advances to settlers; to provide for the making and repayment of such advances; and for purposes incidental to, or consequent on, those objects. In order to provide the funds necessary for the carrying out of this Act, the Colonial Treasurer was authorised to sell inscribed stock, secured upon the Consolidated Revenue, to an amount not exceeding £500,000, to be sold in amounts of £10 or some multiple of £10, and bearing interest at the rate of 3½ per cent. per annum, payable half-yearly. A board, consisting of not more than three members appointed by the Governor, called the Advances to Settlers Board, was appointed to deal with applications for loans and to decide whether they should be granted. The maximum amount that was authorised to be advanced to any one person was £200, and was to be repaid in full, together with interest at the rate of 4 per cent., within ten years of the making of the loan, but on no account was a loan to be granted except on the recommendation of the Board and when the security given was deemed satisfactory. An Amendment Act was passed in 1902, by which the advance limit of £200 was increased to £500, and the period within which repayments were to be made was extended to thirty-one years. In the latter part of the same year a further Amendment Act came into force. Under the provisions of this Act, the amount of inscribed stock was increased to £1,000,000, and the maximum amount of advance to any person was raised to £1500, interest on the latter being payable at the rate of not less than 4 per cent. per annum.

(ii.) *Legislation now in Force.* The above Acts were all repealed by the Government Savings Bank Act of 1906, which received assent on 21st December of that year. All property held by the Advances to Settlers Board was to be vested in three Commissioners appointed under this Act, who were styled "The Commissioners of the Government Savings Bank of New South Wales." An Advances Department of the Savings Bank was constituted, and debentures to the amount of £305,000 (that being the amount of stock issued under the Advances to Settlers Acts and held at the beginning of this Act) were issued, an equivalent amount of Government Stock transferred to the Savings Bank Department being, at the same time, cancelled. All moneys, securities, documents, property, etc., held by or on behalf of the Advances to Settlers Board were transferred to, and became vested in, the Commissioners, and were carried to the Advances Department of the Savings Bank.

(iii.) *Security on which, and Objects for which, Advances are made.* The Commissioners are authorised to issue debentures to the amount of £2,000,000, bearing interest at a rate not exceeding 4 per cent. per annum. They may lend moneys from the Advances Department (a) upon mortgage of an estate of inheritance in fee simple in any land in the State; (b) upon mortgage of conditional purchases with or without associated conditional leases, homestead grants or selections, settlement leases or purchases, or conditional purchase leases; and (c) on deposit at call or short notice in the Treasury on any bank of issue in the State, or on deposit in the Savings Bank Department. Loans may be made for any of the following purposes:—(a) To pay off existing encumbrances or to purchase the land; (b) to pay off money to the Crown in respect of the land; (c) to make improvements or to develop the agricultural or horticultural resources of the land; and (d) to build homes on the land.

(iv.) *Amount and Repayment of Loans.* No loan to any one person may amount to less than £50 or more than £2000, and applications for loans not exceeding £500 have priority over those of a larger amount. In no case does the amount of the advance exceed 80 per cent. of the Commissioners' valuation of the security. Advances may be made up to two-thirds of the value of the interest of the borrower in the land, buildings and improvements, except where the land is held as a conditional lease, homestead grant, settlement lease, homestead selection, settlement purchase, or conditional purchase as to which the first five years' certificate has not issued, in which cases the amount advanced may not exceed one-half of the holder's interest in the improvements. Loans are made

only in respect of first mortgages, and except in the case of loans on the security of freeholds or certificated conditional purchases, are repayable by equal half-yearly instalments within such period, not exceeding thirty-one years, as the Commissioners think fit. Loans granted on the security of freeholds and certificated conditional purchases are repayable either in the same manner as loans on other securities just mentioned, or at the expiration of a fixed term not exceeding five years, during which period interest only is payable.

(v.) *Advances on Purchases of Farms.* To facilitate close settlement on private estates suitable for the purpose, the Commissioners are authorised to make advances in order to assist persons in purchasing land. In the case of such advances the title to the land must be either freehold or a certificated conditional purchase, and the amount advanced may not exceed 80 per cent. of the Commissioners' valuation.

(vi.) *Particulars of Advances to Farmers, 1904 to 1907.* The following table shews particulars of the advances made up to the 30th June in each year from 1904 to 1907, inclusive:—

PARTICULARS OF GOVERNMENT ADVANCES IN NEW SOUTH WALES TO FARMERS, 1904 to 1907.

| Particulars. | 1904. | 1905 | 1906. | 1907.* |
|---|-----------|-----------|-----------|-----------|

| { of interest £ | 31,620 | 48,043 | 68,646 | † |

* Year ended 31st December, 1907. † Figures not available.

4. **Victoria.**—(i.) *Legislation.* The Advances Department of the Government Savings Bank of Victoria was established by the Savings Bank Act of 1896, amended in 1901 and again in 1903. The funds for the purpose of making advances are raised by the issue of mortgage bonds, the total amount of which is limited to £3,000,000.

(ii.) *Security on which Advances Granted.* In order to assist farmers, graziers, market gardeners, or other persons employed in agricultural, horticultural, viticultural, or pastoral pursuits, the Savings Bank Commissioners are empowered to make advances, either by instalments or otherwise, upon the security of any lands held by such person either (a) in fee simple, or (b) under a Crown lease in which the rent received is taken by the Crown in part payment of the lands demised. Security must be, in every case, a first mortgage. A loan may be either in cash or in mortgage bonds at par face value at the option of the Commissioners.

(iii.) *Amount of Advances.* The limits of the advances are £50 and £2000, as in New South Wales, applications for advances under £500 having also similar priority. In the case of land held in fee simple or under lease as specified in (b) above, the amount of the advance which may be made must not exceed two-thirds of the actual value of such land at the time of advance, which is reduced by the amount of all rent payable in respect of the land, previous to the issue of a Crown grant, for such. If the person appointed by the Commissioners as valuator of any land certify that the improvements effected thereon increase the productive power of the land and exceed £2 per acre, the Commissioners may make, notwithstanding anything contained above, an advance of fifteen shillings for every acre so improved.

(iv.) *Special Provision for Vineyards, Orchards, etc.* In the case of land which has acquired a special value by reason of being cultivated as vineyards, hop-grounds, orchards,

fruit-growing plantations, and other similar purposes, advances may be made on the following terms :—(a) The total amount which may be at any time advanced upon any such land may not be more than £100,000 in the whole. (b) The amount of two-thirds of the actual value referred to above may be increased by one-quarter of any special increase in value, but such increase is in no case to be considered as greater than £30 an acre. (c) No advance may be for a longer period than fifteen years.

(v.) *Purposes for which Advances Granted.* Advances are made for the following purposes only :—(a) To pay off existing liabilities; (b) to pay off money owing to the Crown in respect of the land; (c) to make improvements or to improve and develop the agricultural, horticultural, viticultural, or pastoral resources of the land.

(vi.) *Repayment of Advances.* The rate of interest charged on loans, originally fixed at 4½ per cent. per annum, may, by the Amendment Act of 1903, be altered by the Commissioners with the approval of the Governor-in-Council, up to but not beyond 5 per cent. per annum. All advances, together with interest, must be repaid by sixty-three half-yearly instalments, or such smaller number as may be agreed upon between the borrower and the Commissioners.

(vii.) *Particulars of Advances to Farmers, 1904 to 1908.* The following table gives particulars as to the loans raised and repaid by the Advances Department, the number and amount of applications received and granted, and the amounts advanced and repaid for each financial year from 1904-5 to 1907-8, inclusive :—

LOANS TO FARMERS.—TRANSACTIONS OF ADVANCES DEPARTMENT OF GOVERNMENT SAVINGS BANK, VICTORIA, DURING EACH FINANCIAL YEAR, 1904 to 1908.

| Particulars. | 1904-5. | 1905-6. | 1906-7. | 1907-8. | Total to the 30th June, 1908. |
|---------------------------|-----------|---------|---------|---------|-------------------------------|
| Loans raised ... | £ 200,000 | 100,000 | 100,000 | 100,000 | 2,283,600 |
| „ repaid ... | £ 30,325 | 79,675 | 104,675 | 79,500 | 673,750 |
| „ outstanding ... | £ ... | | | | |
| Applications received ... | No. 689 | 788 | 550 | 704 | 11,009 |
| „ „ Amount, £ | 323,352 | 319,650 | 217,572 | 344,703 | 5,235,890 |
| Applications granted ... | No. 370 | 371 | 295 | 390 | 5,852 |
| „ „ Amount, £ | 147,140 | 143,515 | 98,840 | 162,615 | *2,477,855 |
| Amounts advanced ... | £ 140,890 | 131,034 | 89,975 | 143,180 | 2,254,488 |
| „ repaid ... | £ 109,226 | 152,626 | 189,547 | 168,800 | 1,029,057 |
| „ outstanding ... | £ ... | | | | 1,202,785 |

* Of this amount £2,254,488 has been actually paid over to borrowers, a further sum of £12,770 being in course of settlement; the balance represents applications withdrawn or lapsed, or amounts offered but not accepted.

The number of loans at the 30th June, 1908, was 3030, and the average balance of each loan was £404 8s. 8d. The falling-off in the number of applications and amount of advances during the year 1906-7 was due, no doubt, partly to the fact that farmers had been favoured with good seasons during several years past, and partly also to the gradual fall in the rates charged for loans by other lenders. The number of repayments by farmers which became due during the year 1907-8 was 6763, representing amounts of £56,080 for interest and £27,765 for principal. These instalments have been well met, and on 30th June, 1908, there were only twenty farmers in arrear, the amount of principal in arrear amounting to £136, and of interest to £210.

(viii.) *Seed Advances Acts.* In 1896 and 1903, Acts were passed to enable seed and fodder to be advanced on certain terms to cultivators of land. These measures applied only to the season in which they were passed. Under the first-mentioned Act the Treasurer was authorised to pay out of the Consolidated Revenue a sum not exceeding £15,000, but no cultivator was to receive such quantity of seed as would sow more than 100 acres, and he had to give a preferable lien over the produce of all crop harvested within twelve months. By the Act of 1903, the amount authorised to be lent was

£100,000, in sums not exceeding value of £65 where granted on the security of a mortgage or license lien, or £40 where granted on the security of a preferable lien on crops. The borrower was required to give, as security, a mortgage over his farm or a license lien over the improvements thereon, and also, if required, a preferable lien on crops somewhat similar to that laid down in the previous Act. In 1904 an Act was passed to enable seed and manure to be advanced on certain terms to cultivators of land within the area controlled by the Carrum Irrigation and Water Supply Trust.

5. **Queensland.**—(i.) *Legislation.* The Queensland Government was authorised, under the Agricultural Bank Act of 1901, to establish a bank for the purpose of promoting the occupation, cultivation, and improvement of the agricultural lands of the State, and a body of three trustees was appointed to administer the Act. The Government was empowered to raise a sum not exceeding £250,000 by the issue of debentures, bearing interest at a rate of not more than 4 per cent. The original Act was amended in 1904 and again in 1905, the latter amendment specifying that no advance be made to any alien.

(ii.) *Security on which and Purposes for which Advances are made.* Advances may be made to owners of agricultural lands or to occupiers of Crown lands held either as agricultural farms or homesteads, grazing farms or homesteads, unconditional selections, or miners' homestead leases, and may be for any of the following purposes:—(a) The payment of existing liabilities; (b) agricultural, dairying, horticultural, or viticultural pursuits on the holding; (c) making improvements or adding to improvements already made; (d) the purchase of stock, machinery, or implements. Advances are only made on the security of first mortgages.

(iii.) *Amount and Repayment of Loans.* No advance may exceed ten shillings in the pound of the fair estimated value of the holding in the cases of (a) and (b) above, while in the other cases the limit of the amount of the advance is twelve shillings in the pound of such value, and the advance at any time must not exceed £800. Applications for amounts not larger than £200 have priority over those for a larger amount. During the first five years following the date of the loan the borrower must pay interest at the rate of 5 per cent. per annum. After the expiration of that period the loan, together with the interest, must be repaid by half-yearly instalments within twenty years, the amount of such half-yearly instalment being £4 0s. 3d. for each £100 advanced. In the case of advances for the purposes of paying off existing liabilities or of buying stock, machinery, or implements, the loan must be repaid by equal half-yearly instalments of the amount of £3 11s. for every £100 advanced within twenty-five years from the date of its granting.

(iv.) *Transactions of Agricultural Bank, 1904 to 1908.* The subjoined table shews particulars of the transactions of the Agricultural Bank for each year from 1904 to 1908, inclusive:—

* Information not available.

6. *South Australia.*—(i.) *Legislation.* Under the State Advances Act of 1895, amended in 1896 and 1901, a State Bank has been established in South Australia for the purpose of making advances (i.) to farmers and other producers, (ii.) in aid of industries on the security of lands held in fee simple or under Crown leases, and (iii.) to local authorities upon the security of their rates. The bank, managed by a board consisting of five trustees appointed by the Governor, has funds raised by the issue of mortgage bonds, carrying interest at a rate not exceeding 4 per cent., to an amount not greater than the total amount due to the bank for State advances, and in any case not greater than £3,000,000. Several Acts have, from time to time, been passed dealing with seed wheat advances. These were, in the main, similar to those enacted in Victoria, referred to in 4. (viii.) above.

(ii.) *Amount and Repayment of Loans.* No advance to farmers or to other producers, or in aid of any industry, may exceed three-fifths of the unimproved value of the fee simple of the land and permanent improvements thereon, and if the land has acquired a special additional value by reason of cultivation as a vineyard or orchard, *plus* one-third of such special additional value. If the advance be on the security of a Crown lease, the amount of the loan may not exceed one-half the selling value of the lease, including the interest of the holder in any improvements on the land. The amount lent to any one person at any time may not exceed £5000. Advances are repayable by half-yearly instalments, the rate of interest, up to the limit of 5 per cent. per annum, being a matter of arrangement between the bank and the borrower.

(iii.) *Transactions of the State Bank, 1904 to 1907.* The following table shews particulars of the transactions of the State Bank for each year from 1904 to 1907 inclusive:—

**SOUTH AUSTRALIA.—PARTICULARS OF TRANSACTIONS OF THE STATE BANK
FOR EACH YEAR ENDED 31ST MARCH, 1904 TO 1907.**

| Particulars. | 1904. | 1905. | 1906. | 1907. |

| Amounts advanced | £ 55,507 | 24,529 | 51,826 | 58,060 |
| „ repaid | £ 31,940 | 37,200 | 39,531 | 51,265 |
| „ outstanding | £ 349,532 | 336,861 | 349,156 | 355,951 |

7. *Western Australia.*—(i.) *Legislation.* By the Agricultural Bank Act of 1894 the Governor of Western Australia was empowered to establish a bank for the purpose of promoting the occupation, cultivation, and improvement of the agricultural lands of the State. This Act was amended from time to time until a consolidating Act was passed in the year 1906 repealing all previous enactments on the subject. Under this last Act the bank was placed under the control of three trustees, appointed by the Governor, in whom is vested the whole of the bank property. The necessary funds are provided for by the issue of mortgage bonds bearing interest at a rate not exceeding 4 per cent. per annum. The amount authorised to be raised was £1,000,000, but by an Amendment Act in 1907 this sum was increased to £1,500,000.

(ii.) *Purposes for which Advances may be made.* The bank is authorised to make advances for (a) ringbarking, clearing, fencing, draining, or water conservation; (b) for discharging any existing mortgage; or (c) for the purchase of stock for breeding purposes.

(iii.) *Amount of Loans.* Advances may be made to an amount not exceeding £300 up to the full value of the improvements proposed to be made. Further advances may be

made to an amount not exceeding £200 up to half the value of additional improvements proposed to be made. No advance, however, for the purpose of discharging existing mortgages may be made to an amount exceeding three-quarters of the value of improvements already made, and the total advances to any one person may not at any time exceed £500. Not more than £100 may be advanced to any person for the purpose of purchasing stock. Advances are made only on a first mortgage, but a second mortgage may be taken as collateral security.

(iv.) *Repayment of Loans.* During the five years following the date of the loan the borrower pays interest only, at the rate of 5 per cent. per annum. After the expiration of that period the amount advanced, with interest at 5 per cent., must be repaid within twenty-five years by equal half-yearly instalments. In the case of advances for the purpose of buying stock the bank fixes the time and manner of repayment.

(v.) *Particulars of Transactions of Agricultural Bank, 1904 to 1906.* Under the previous Acts, now repealed, loans up to three-fourths of the estimated value of proposed improvements were paid over by the bank in progress payments as the improvements were completed. The following table gives particulars of transactions under these Acts for each year from 1904 to 1906, inclusive. Particulars of transactions under the Act of 1906 are not yet available.

**PARTICULARS OF TRANSACTIONS UNDER THE AGRICULTURAL BANK ACTS,
WESTERN AUSTRALIA, 1894 to 1905, FOR EACH YEAR FROM 1904 to 1906,
INCLUSIVE.**

AMOUNTS ADVANCED FOR WHICH IMPROVEMENTS HAVE BEEN EFFECTED—

* Information not available.

8. *Tasmania.*—(i.) *Legislation.* Under the State Advances Act 1907, assented to 22nd November of that year, authority is given to make advances to persons holding land on credit purchase. Three persons called “the Trustees of the Agricultural Bank of Tasmania” have power to administer the provisions of the Act. Funds were raised by the issue of debentures or inscribed stock for a sum not exceeding £50,000, interest at 4 per cent. per annum being payable on same.

(ii.) *Purposes for which Advances may be made.* Loans may be granted for any of the following purposes:—(a) payment of liabilities already existing on the holding; (b) carrying on agricultural, dairying, grazing, or horticultural pursuits; (c) making or adding to improvements.

(iii.) *Amount of Loans.* The minimum amount of any loan must not be less than £25, and the maximum not greater than £500. No advance may exceed one-half of the amount actually paid to the Crown in respect of the land held by the borrower under purchase upon the credit system, plus one-half of the present value of any improvements upon such land.

(iv.) *Repayment of Loans.* Interest at the rate of 6 per cent. per annum is payable on all advances made. After five years the borrower must begin to pay off the principal in fifty half-yearly instalments, but the advance may, at the option of the borrower, be repaid at any time sooner than is provided, and in larger instalments.

Particulars of the operations of the Agricultural Bank are not yet available.

§ 21. Graphical Representation.

1. *Areas of Principal Crops.*—A graphical representation of the areas in the Commonwealth devoted to each of the leading crops from 1860 to the present time is furnished on page 445.

(i.) *Wheat.* In the case of wheat, the Commonwealth’s principal crop, the graph indicates that the forty-seven seasons under review divide themselves naturally into five distinct periods, three of moderate and fluctuating increases and two of extremely rapid increases. Thus, between the seasons 1860-1 and 1875-6, a moderate rate of increase was in evidence, the area increasing from 640,000 to 1,420,000 acres. During the five succeeding seasons a very rapid increase took place, the total in 1880-1 amounting to over 3,000,000 acres. For fifteen years thereafter the increase in area was not large, and in two seasons, viz., 1885-6 and 1890-1, marked decreases were experienced. The total increase for the fifteen years was about 700,000 acres, the total for 1895-6 being rather

more than 3,750,000 acres. The succeeding five years witnessed a rapid increase in area to a total of more than 5,600,000 acres, followed by a further period of marked fluctuations; this latter period, however, contained the season of maximum wheat-cropping, viz., 1904-5, when an area of 6,270,000 acres was so devoted.

(ii.) *Hay.* Hay-growing, which, next to the growing of wheat for grain, is the most important branch of agriculture in the Commonwealth, will be seen from the graph to have fluctuated very considerably from year to year during the period under review, these fluctuations being due in the main to seasonal variations and to variations in the relative prices of grain and hay crops. It will be seen that the features of the graphs are a moderate increase from 1860-1 to 1875-6, a fairly rapid increase from 1875-6 to 1882-3, moderate increase thence to 1896-7, succeeded by marked fluctuations from this point onwards with, on the whole, a moderate rate of increase. The maximum area under hay was reached in the season 1903-4, when a total of 1,850,000 acres was attained.

(iii.) *Oats.* The graph relating to oats exhibits extremely marked fluctuations from year to year in the area devoted to this crop, the general tendency, however, being towards increase. This feature was specially marked from 1892-3 to 1896-7, while the succeeding years were characterised by very extensive fluctuations. The maximum area under oats was reached in the season 1907-8, with a total of nearly 643,000 acres.

(iv.) *Maize.* The graph relating to maize indicates that the area devoted thereto in Australia, although somewhat fluctuating, increased with fair rapidity until the season 1896-7, since when it has varied above and below the point then reached, on the whole remaining practically stationary. The area for the season 1906-7 was, in fact, somewhat less than that for 1896-7. The maximum area under maize, viz., 372,000 acres, was attained in the season 1903-4.

(v.) *Sugar-Cane.* In the case of sugar-cane the graph shews a fairly rapid rate of increase to 1874-5, followed by a period of five years during which the area increased but slowly. From 1879-80, however, the sugar-cane area rose rapidly until in 1884-5 a total of more than 75,000 acres was reached. Then followed a period of diminished cultivation, and it was not until 1892-3 that so high a total was again attained. After this the area rose rapidly to 136,000 acres in 1898-9, but during the next five years a decline took place, the area for 1903-4 being 132,000 acres. A marked decline was in evidence in 1902-3, and a corresponding recovery in 1903-4. The season of maximum area, viz., 156,000 acres, was 1905-6.

(vi.) *Barley.* The Commonwealth barley crop, although not an extensive one, yet one which has exhibited from time to time very marked fluctuations in area. The graph representing this crop is consequently a very irregular line. The total has, on the whole, increased but slightly since 1880, rapid increases in certain years being succeeded by equally rapid decreases in subsequent years. The maximum area under barley, viz., 133,000 acres, was attained in the season 1894-5.

(vii.) *Vines.* The graph relating to area under vines, from 1872-3 onwards, indicates that there were two periods of very slow increase, one from 1872-3 to 1881-2, the other from 1893-4 onwards. Between these, viz., from 1881-2 to 1893-4, a moderate rate of increase of area was experienced, the total for the Commonwealth advancing during that time from 14,600 acres to 57,400 acres. The season of maximum area under vineyards was 1904-5, with a total of about 65,700 acres.

2. **Production.**—The diagram on page 446 furnishes a graphical representation of the aggregate yields from 1860-1 to 1906-7 of five of the principal crops of the Commonwealth.

(i.) *Wheat.* This graph brings out clearly the fact that while on the whole the production of wheat in the Commonwealth is increasing with fair rapidity, the fluctuations in the total quantity produced are more marked in recent than in earlier years. Thus

GRAPHS SHEWING THE AREA UNDER THE PRINCIPAL CROPS IN THE COMMONWEALTH FROM 1860-1 TO 1907-8.

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year, while the vertical height represents a number of acres, varying with the nature of the crop in accordance with the scale given in the upper left-hand corner of the diagram. The height of each graph above the base line denotes, for the crop to which it relates, the total area grown in the Commonwealth during the successive seasons.

GRAPHS SHEWING THE PRODUCTION OF THE PRINCIPAL CROPS IN THE COMMONWEALTH FROM 1860-1 TO 1907-8.

EXPLANATION OF GRAPHS.—In this diagram a separate base line is provided for each of the crops dealt with. In each instance the base of a small square represents an interval of one year, the vertical height of such square representing in the case of the wheat graph, 10,000,000 bushels; oats, 2,000,000 bushels; barley, 500,000 bushels; maize, 2,000,000 bushels; and hay, 500,000 tons. The height of each graph above its base line denotes the aggregate yield in the Commonwealth of that particular crop during the successive seasons.

since the year 1890 there have been three seasons of extremely low output, viz., in 1891-2, 1895-6, and 1902-3, with aggregate yields respectively of 25,700,000 bushels, 18,300,000 bushels, and 12,400,000 bushels. On the other hand there have been three seasons in which the total production was exceptionally high. These will be seen from the graph to have been the seasons 1893-4, 1900-1, and 1903-4, the total yields for which were 37,100,000 bushels, 48,400,000 bushels, and 74,100,000 bushels respectively. Each of these yields represented at the date of its attainment the maximum Australian wheat crop, the last-mentioned being the highest yet reached.

(ii.) *Oats.* From 1860-1 to 1880-1 the oats crop of the Commonwealth, although exhibiting from year to year fluctuations more or less marked, gave no indications of a tendency to increase with the advance in population. This is well shewn in the diagram, by the persistence with which the oats graph for this period adheres to the line denoting 4,000,000 bushels, the yield for 1880-1 being actually lower than that for 1860-1. From this latter season to 1894-5 the variation was on a somewhat higher level, and is shewn in the diagram to have been in the vicinity of the line representing 6,000,000 bushels. From this point onwards a tendency to more rapid increase in production is in evidence, obscured somewhat by extensive fluctuations corresponding to those referred to above in the case of wheat. Thus in 1895-6 and 1902-3 the total yields were only 4,400,000 and 7,300,000 bushels respectively, while in 1900-1 and 1903-4 aggregates respectively of 12,000,000 and 17,500,000 bushels were reached, this latter being the maximum oats crop of the Commonwealth.

(iii.) *Barley.* The Australian barley crop will from the graph be seen to have fluctuated very considerably throughout, these variations being due rather to fluctuations in the area sown than to adverse seasons. From 1879-80 to 1902-3 the curve rises above and falls below the line representing 1,500,000 bushels. For more recent years the graph bears evidence of an increasing, though still fluctuating, output. The maximum barley crop of the Commonwealth was that of 2,660,000 bushels in 1903-4.

(iv.) *Maize.* The maize graph indicates a rapid increase in output from 1860-1 to 1869-70, followed by a moderate increase from the latter season to 1886-7, and a further rapid increase to 1891-2. From the last-mentioned season onwards the production has fluctuated considerably, but little increase has, on the whole, been experienced, the total for 1891-2 being 9,300,000 bushels, as compared with 10,200,000 bushels for 1906-7, the maximum Australian maize crop. As in the case of all other crops, the maize yield for 1903-4 was much higher than those for the years immediately preceding and succeeding.

(v.) *Hay.* The graph relating to the Commonwealth output of hay indicates a fairly continuous increase in production from the season 1860-1, when the total stood at 340,000 tons, to that of 1887-8, when it reached 1,330,000 tons. In subsequent years marked fluctuations have been in evidence, but the tendency has, on the whole, been one of increase. The maximum hay crop of the Commonwealth was that of the season 1903-4, when the total production reached 2,900,000 tons. The yield for 1906-7, viz., 2,260,000 tons, was higher than for any season except 1903-4.

SECTION IX.

FARMYARD AND DAIRY PRODUCTION.

§ 1. Introductory.

1. **General.**—The live stock which accompanied Captain Phillip in 1788 included one bull, four cows, one calf, and seven pigs, these being established at Farm Cove when Port Jackson was settled. The greater part of the early shipments of cattle was slaughtered to relieve the necessity of early colonists in the famines which several times threatened the existence of the young community. The existing herds have sprung not only from the original stud, but have been steadily improved by the introduction of stud cattle and pigs, continually increasing attention being paid thereto, especially perhaps of late years. Stock-raising with regard to the special requirements of dairying, etc., has in fact been properly considered only in recent times. The technical advances made in the manufacture of butter, cheese, etc., in Europe, and the necessity of having regard thereto in connection with the export trade of Australia, demanded in Australian stock-raising a judicious crossing of strains with a view to increasing the essential contents in the milk for the production of butter or cheese; the eradication of grasses of little or no use, and the planting in lieu thereof of leguminosæ, grasses, and other plants, so as to amplify the nutrient qualities of the natural herbage, which, however, it may be said, is very often excellent. The importation of British and other cattle for breeding purposes is ordinarily under private enterprise. Government supervision has at times been found necessary in order to prevent the introduction of diseases and pests, with the result that there is but little disease among Australian herds. Recently some of the State Governments have made considerable importations for stud purposes. Permanent structures for the shelter of dairy herds, etc., as a rule are not required anywhere in the Commonwealth. State nurseries, however, supply to settlers, gratis, trees for making shelter belts, and these are found to be sufficient. Owing to the mildness of the Australian climate the heavy expenses for housing, stall-feeding, etc., are unnecessary. Where winter fodder must be grown it is given to the cattle in the fields, and consists mostly of lucerne, oats, maize, barley, and rye. Ensilage is highly recommended by dairy experts, and, when necessary, increasing use is made thereof. Continued expansion of the dairying industry, and particularly its extension into non-coastal districts, will involve a more general use of the silo.

Australian grasses are particularly suitable for dairy cattle, since they possess milk-producing, as well as fattening, properties. The area of land devoted to green food and permanent artificially-sown grasses is constantly increasing, its produce being, for the most part, devoted to the depasturing of dairy herds. The opinion, long held, that only heavily-grassed country with good rainfall was profitable for dairying has been controverted by experience, it being shown that more lightly clad regions yield good milk results.

2. **State Supervision of Industry.**—Each of the State Agricultural Departments exercises considerable supervision in regard to the industry. Dairy experts are employed to give instruction in approved methods of production, to examine animals, to inspect

the buildings used for milking and separating, and to examine the marketable produce. A high standard of dairy hygiene, cleanliness of *personnel* and *matériel*, and purity of the article and freedom from adulteration have also been insisted upon under State laws.

To meet complaints of the British consumer regarding tainted butter, and under the operation of the Federal Commerce Act, the Commonwealth Government issued the following standard for the classification of butter intended for export:—

Superfine pure creamery butter, containing not more than 14 per cent. of water, and classified at 95 to 100 points.

First grade pure creamery butter, classified at 90 to 94 points.

Second grade pure butter, classified at 83 to 89 points.

Third grade pure butter, classified at 75 to 82 points.

Pastry butter (branded as such), classified at less than 75 points.

In the first, second, and third grades not more than 16 per cent. of water is allowed.

The recent Butter Act of the British Legislature, designed to put a stop to adulteration, has brought about an increased demand for Australian butter in the United Kingdom.

In general, the method of State butter grading is as follows:—A percentage of the boxes of a consignment is selected and the brands and dates of churning registered. A sample of the full depth of the box is then taken out with the trier. The flavour, texture, colour, salting, finish, and condition of boxes are noted, and, in some States, the boxes are stamped according to grade. The margin in the number of points for flavour for superfine is from 45 to 50; for first grade, 40 to 44; for second grade, 33 to 39; and for third grade, 25 to 32. Under 25 the butter is condemned for table use.

3. **Mixed Farming.**—Dairying is not now, as formerly, wholly confined to farmers, since many graziers in a large way of business have lately given it their attention. In non-coastal regions it is generally carried on in conjunction with agriculture and sheep-raising, sufficient fodder being grown to carry the cattle through the winter months. Local wants are thus met, and in many places removed from the metropolis well-equipped factories have been established.

4. **Factory System.**—Cream separation and butter-making are often carried on together under the co-operative system. The creation of large central butter factories, supplied by numerous separating establishments or "creameries," has resulted in a considerable reduction in cost of manufacture, since improved appliances, such as refrigerators, may be profitably worked at the larger establishments. The product is also of a more uniform quality. The number of farmers who adhere to hand processes is steadily diminishing. Formerly the average quantity of milk used per pound of hand-made butter was about 3 gallons, but separator butter requires only about 2.6 gallons.

5. **Butter and Cheese Factories.**—The establishments in the Commonwealth where the manufacture of butter, butterine, margarine, and cheese was carried on, numbered 579 in 1907. These were distributed as regards the various States as follows:—New South Wales, 190; Victoria, 224; Queensland, 83; South Australia, 57; Western Australia, 2; Tasmania, 23.

§ 2. Milk, Butter, and Cheese.

1. **Dairy Herds.**—Since the drought year 1902, there has been in each State, almost without exception, a yearly increase in the number of dairy cows. In New South Wales, Victoria, South Australia proper, and Tasmania—as will be seen from the table of cattle and dairy cattle given below—the proportion of dairy cattle to all cattle is high. In Queensland, the Northern Territory of South Australia, and Western Australia, there is a greatly preponderating number of other cattle, dairying not having been established in the tropical regions of the Continent:—

CATTLE AND DAIRY CATTLE, AUSTRALIAN COMMONWEALTH, 1901 to 1907.

† Statistics not collected : figures supplied by interpolation.

‡ Statistics not collected : figures estimated.

* In New South Wales, up to 1902 the figures include only the cows actually in milk at the time the returns were taken. The figures for subsequent years are made up as follows :—

| Year. | Milch Cows. | Cows at Present Dry. | Heifers within 3 M'ths of Calving. | Total Dairy Cows. |
|-------|-------------|----------------------|------------------------------------|-------------------|
| 1903 | 362,429 | 117,679 | 43,330 | 523,438 |
| 1904 | 424,936 | 131,335 | 35,405 | 591,936 |
| 1905 | 442,950 | 154,635 | 46,559 | 644,164 |
| 1906 | 494,820 | 172,888 | 45,341 | 713,049 |
| 1907 | 505,395 | 206,828 | 43,693 | 755,916 |

2. **Milk.**—The annual quantity of milk produced per dairy cow varies greatly with locality and season, probably reaching as high as 500 gallons, but averaging for the whole of Australia, for all dairy cows and for all seasons, something under 250 gallons per annum. The best yields over a series of years appear to be in South Australia, New South Wales, Victoria, and Tasmania, while Western Australia is below Queensland. In the following table the average yield per cow for 1907 is taken from the number of dairy cows who were, during any part of the year, milking. The average given is considerably below that for cows which were yielding during the greater part of the year.

PRODUCTION OF MILK, 1907.

| Aver. yield per cow... gals. | 257 | 256 | 215 | *294 | 146 | ... | ... |

* Estimated. Exact yield not obtainable.

3. **Butter and Cheese.**—The butter output shews, in general, a tolerably steady increase since the drought year 1902, the most marked development being in Queensland. The production of butter and cheese reached their highest figures in 1906. In both these products a falling-off is shewn in some of the States in 1907, due to the dryness of the season. For the seven years from 1901 to 1907 the figures are :—

PRODUCTION OF BUTTER AND CHEESE, AUSTRALIAN COMMONWEALTH,

* Tasmanian statistics of the production of butter and cheese relate only to the quantities made in factories.

† The totals for the Commonwealth here given are exclusive of Tasmanian butter and cheese made elsewhere than in factories.

4. **Concentrated Milk.**—"Condensed" or "concentrated" milk denotes milk the bulk of which is reduced by evaporation, no sweetening agent being added. When a sweetening agent is added it is called "preserved" milk. Small quantities of such milk have been made, but the industry is at present by no means a large one. No condensed or concentrated milk is made in South Australia, Western Australia, or Tasmania. In New South Wales, Victoria, and Queensland the following quantities are returned for 1907:—

CONDENSED AND CONCENTRATED MILK MADE, 1907.

| Year. | New South Wales. | Victoria. | Queensland. |
|----------|------------------|-----------|-------------|
| | lbs. | gallons. | lbs. |
| 1907 ... | 1,526,471 | 390,388 | 2,323,472 |

5. **Overseas Trade in Milk, Butter, and Cheese.**—The tables following give the import, export, or net export or import of butter, cheese, and milk. In each of the seven years exports of butter exceeded imports; in only two did this occur with regard to cheese, and in none with regard to milk.

IMPORTS, EXPORTS, AND NET IMPORTS OF BUTTER, CHEESE, AND MILK,

| Western Australia ... | 1,338,682 | 25,997 | 11,460 | 246 | 1,327,222 | 25,751 |
| Tasmania ... | 242,859 | 4,988 | 6,650 | 128 | 236,209 | 4,860 |

1. — signifies net imports.

2. See definition on page 451.

The remarks relating to the positions of Victoria and Western Australia in the case of butter and cheese apply also to concentrated and preserved milk and cream. New South Wales is a large importer of preserved milk from other States of the Commonwealth. There was no interstate trade in fresh milk and cream in 1907.

7. **Local Consumption of Butter and Cheese.**—The total production of butter and cheese, with the net export or import subtracted or added, gives approximately the consumption in the Commonwealth. In the period considered, 1904 and 1907 were the only years in which the local supply of cheese was adequate:—

BUTTER AND CHEESE LOCALLY CONSUMED, 1901 to 1907.

| Product. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------------|------------|------------|------------|------------|------------|------------|------------|
| Butter ... Total | 68,406,007 | 76,812,181 | 70,004,681 | 75,491,119 | 85,013,391 | 84,137,949 | 90,324,660 |
| Per head | 18.0 | 19.9 | 17.9 | 19.1 | 21.2 | 20.6 | 21.7 |
| Cheese ... Total | 14,059,775 | 12,070,282 | 14,321,798 | 12,496,323 | 13,346,140 | 14,831,494 | 13,233,835 |
| Per head | 3.7 | 3.1 | 3.7 | 3.2 | 3.3 | 3.6 | 3.3 |

The consumption in 1907 was, therefore, equal to 21.7 lbs. of butter and 3.2 lbs. of cheese per head of mean population, an amount probably unsurpassed anywhere. The consumption of butter and cheese in the United Kingdom is given as 19 lbs. per head, and is therefore only equal to about four-fifths of that of the Commonwealth.

§ 3. Pigs, Bacon, etc.

1. **Pigs.**—The pigs in Australasia numbered 43 in 1792; 4017 in 1800; 8992 in 1810; 33,906 in 1821; 66,086 in 1842; and 121,035 in 1851. The figures for the States in subsequent census years, and in the last five years, were:—

NUMBER OF PIGS, AUSTRALIAN COMMONWEALTH, 1861 to 1907.

| State. | 1861. | 1871. | 1881. | 1891. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

* Statistics not collected. Figures supplied by interpolation.

The number of pigs was highest in 1904, when for the first time it was over a million; prior to 1899 it had never reached 900,000. That year, the two immediately following, and 1904 and 1905 mark the highest totals. An examination of the States' returns shews remarkable fluctuations. It will be noticed that in no State was the number as high in 1906 as in the preceding year, and in Tasmania alone was the figure for 1907 higher than that for 1906. In several States the falling off over the two years is very marked. In Tasmania it exceeded 35 per cent.; in New South Wales it was 30 per cent.; in Western Australia 28 per cent.; in South Australia and Victoria 22 per cent.; and in Queensland 19 per cent.; while for the Commonwealth the decrease was 25 per cent. The number of pigs per head of population, and the number per square mile, will be found in the tables of live stock, page 356.

2. **Bacon and Ham.**—With the exception of Tasmania, the production of bacon and ham increased in the years 1903 to 1906. In 1907, however, there was a general falling off.

PRODUCTION OF BACON AND HAM, AUSTRALIAN COMMONWEALTH, 1901 to 1907.

* Tasmanian statistics of the production of bacon and ham from 1901 to 1906 relate only to quantities made in factories.

† The totals for the Commonwealth here given are exclusive of Tasmanian bacon and ham made elsewhere than in factories, and also of all South Australian bacon and ham.

‡ Information not available.

3. Oversea Trade in Pig Products.—The oversea trade in pigs and pig products is shewn in the following tables:—

IMPORTS, EXPORTS, AND NET EXPORTS OF BACON AND HAM, FROZEN PORK,
PIGS, AND LARD, AUSTRALIAN COMMONWEALTH, 1901 to 1907.

1. — signifies net imports.

It will be seen that in the first three years shewn in the table there was a considerable net import of bacon and ham, while for the last three years, there was a large net export. The local production of frozen pork was each year more than sufficient for the local demand, excepting only in 1903. The production of lard was in excess of the local demand in each of the seven years, except 1902 and 1903.

4. Interstate Trade in Pig Products.—The interstate trade in pigs, bacon and hams, frozen pork, lard, etc., in 1907 was as follows:—

INTERSTATE TRADE IN PIG PRODUCTS, 1907.

1. — signifies net imports

5. **Local Consumption of Bacon and Ham.**—From 1904 to 1907 the production of bacon and ham was sufficient to meet the local demand, and there was a surplus for export, but in 1901, 1902, and 1903 this was otherwise, and considerable quantities were imported.

BACON AND HAM LOCALLY CONSUMED, 1901 to 1907.

| Per head ... | 10.1 | 8.9 | 7.2 | 9.2 | 10.7 | 11.0 | 9.8 |

1. This excludes South Australia from 1901 to 1906, for which no figures of production were available.

§ 4. Poultry Farming.

1. **Development of the Industry.**—Until recently, poultry farming as a well organised industry could scarcely be said to exist, although in metropolitan and suburban districts poultry has of course long been kept for the table and egg supplies. The aggregate output, though considerable, represented relatively little value beyond the cost of production, owing to imperfect management. Many farmers also, both wheat-growers and dairymen, have maintained a large poultry stock, erecting poultry yards constructed on modern principles, and feeding from the stubble fields and waste grain with a minimum expenditure in tending. This brought about a considerable addition to the net agricultural or dairying return. The poultry industry during recent years has assumed an independent position among rural industries, notwithstanding that large numbers of poultry runs on wheat and dairy farms are still maintained; poultry farming is also carried on in conjunction with pig farming. In special poultry farms, breeding on scientific principles and a proper arrangement of the runs is secured, and feeding and reproduction are technically attended to, and proper shelter is provided either by means of trees or sheds. Poultry experts are engaged by the State Governments to instruct in matters that will amplify the returns. Poultry for consumption are extensively reared, and the egg-producing qualities of the birds have also been greatly improved by careful breeding.

2. **Production of Poultry.**—Figures for the yield of poultry products are difficult to obtain. The following values are returned :—

ESTIMATED VALUE OF POULTRY AND EGGS, 1907.

| N.S.W. | Victoria.* | Queensland. | S. Australia. | W. Australia. | Tasmania. |
|----------------|----------------|-------------|---------------|---------------|-----------|
| £ 1,035,000 | £ 1,525,000 | £ † | £ 414,696 | £ † | £ † |

* For year 1907-8. † Not available.

3. **Oversea Trade in Poultry Products.**—The imports and exports of eggs shew a considerable balance on the side of imports, in each of the years 1901 to 1906. In 1907, however, the export considerably exceeded the import. The introduction of valuable poultry for breeding is evidenced by the fact that although the exports in 1903, 1904 and 1905 exceeded the imports in number, the imports were of greater value. The figures for frozen poultry shew that a considerable oversea trade is carried on:—

§ 5. Bee Farming.

1. **The Bee-farming Industry.**—Bee farming, like poultry farming, has ordinarily been an adjunct to agricultural or dairying industries, and can hardly yet be said to have been organised as a distinct industry. The returns collected shew that, while production varies greatly, there is on the whole a steady improvement, to which the large increase in the Western Australian product since 1902 has largely contributed. The annual average returns of honey from the hives range between 20 lbs. and 600 lbs. per hive.

2. **Honey and Beeswax.**—The particulars of honey production, available up to 1907 for only three States, are as given below :—

NUMBER OF HIVES AND PRODUCTION OF HONEY AND BEESWAX, 1901 to 1907.

| Particulars. | | | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

* Poultry and game.

§ 7. British Imports of Dairy Products.

1. **Butter.**—Australia stands third in the value of butter imported into the United Kingdom, but the import of other Australian dairy products is inconsiderable.

IMPORTS OF BUTTER INTO THE UNITED KINGDOM, 1907.

| Country from which Imported. | Quantity. | Value. | Country from which Imported. | Quantity. | Value. |
|------------------------------|-----------|------------|------------------------------|------------------|-------------------|
| | | | | | |
| Denmark | 1,818,811 | 10,192,587 | Argentine Republic | 51,122 | 273,433 |
| Russia | 657,649 | 3,086,821 | Canada | 94,753 | 175,537 |
| Australia | 598,986 | 3,008,225 | Norway | 23,465 | 122,535 |
| France | 281,306 | 1,651,137 | Belgium | 22,120 | 121,673 |
| New Zealand | 313,863 | 1,599,226 | Other Countries ... | 12,845 | 60,644 |
| Sweden | 226,740 | 1,269,820 | | | |
| Netherlands | 168,496 | 856,288 | Total | 4,210,156 | 22,417,926 |

2. **Cheese.**—The value of the British cheese import in 1907 was £6,900,000, of which nearly five million pounds worth was received from Canada. The import from Australia was practically *nil*.

3. **Bacon and Ham.**—Of a total import of bacon and ham valued in 1907 at £18,080,000, Great Britain received goods to the value of £8,430,000 from the United States; £5,390,000 from Denmark; and £4,000,000 from Canada. The British import from Australia was *nil*.

4. **Pork.**—The total value of British imports of fresh pork (including refrigerated and frozen) was £1,338,000 in 1907. Of this the value of Australian products was only £12,000, whilst from the Netherlands pork valued at £1,000,000 was imported.

5. **Other Products.**—There is practically no British import from Australia of honey, beeswax, poultry, game, lard, or eggs, but rabbits to the value of £558,000 were received from the Commonwealth in 1907.

§ 8. Graphical Representation.

Two graphs shewing respectively the increase in dairy production and in the exports of butter will be found on page 376.

SECTION X.

FORESTS, FORESTRY, AND FORESTAL PRODUCTS.

§ 1. The Forests of Australia.

1. **Extent of Forests.**—Although no definite survey of forest lands has been made on a uniform basis for the different States of Australia, the following table gives the results of careful estimates made for each State:—

FOREST RESERVES AND FOREST AREAS, STATES AND COMMONWEALTH, 1907.

| State. | Specially Reserved for Timber. | Total Forest Area. | Percentage of State Area. | | Percentage of Commonwealth Area. | |
|---------------------|--------------------------------|--------------------|---------------------------|---------------|----------------------------------|---------------|
| | | | Specially Reserved | Total Forest. | Specially Reserved | Total Forest. |
| | Acres. | Acres. | % | % | % | % |
| New South Wales | 7,155,900 | 20,000,000 | 3.60 | 10.07 | 0.37 | 1.05 |
| Victoria ... | 4,017,000 | 11,797,000 | 7.14 | 20.97 | 0.21 | 0.62 |
| Queensland ... | 3,672,600 | 40,000,000 | 0.85 | 9.32 | 0.19 | 2.10 |
| South Australia ... | 163,478 | 3,840,000 | 0.03 | 0.66 | 0.01 | 0.20 |
| Western Australia | 52,900 | 10,366,000 | 0.01 | 1.66 | 0.003 | 0.54 |
| Tasmania ... | 278,154 | 11,000,000 | 1.66 | 65.56 | 0.01 | 0.58 |
| Commonwealth | 15,340,032 | 97,003,000 | — | — | 0.81 | 5.10 |

The actual area of wooded land is probably in all cases much greater than shewn above. For example, that of Western Australia is estimated at 97,900,000 acres; Queensland has probably 143,000,000 acres; and Victoria has a considerable extent of "Mallee" country not included in the above estimate. The basis of estimation for each State in any case cannot be regarded as quite identical. Considerable areas not included as forest lands possess timber of local value.

The absolute and relative forest areas of Australia and other countries are shewn in the table on next page.

In each of the States areas have been set apart as State forests and "timber reserves," in some cases the reservation being made in perpetuity, in others for a definite period, in others again the reservation may be cancelled at any time. The characteristics of the forest areas of the different States are referred to seriatim.

RELATIVE AREAS OF FOREST LANDS, AUSTRALIA AND OTHER COUNTRIES, 1907.

| Hungary ... | 34,700 | 27.66 | | | |

2. **Characteristics of State Forest Areas.**—(i.) *New South Wales.* Great diversity exists in the more dense distribution of timber trees in the coastal region, between the range and the Pacific Ocean. The areas of natural forest, however, are found in nearly every part of the State except the wide plains of the Murrumbidgee, Lachlan, and Darling districts, the level surface of which is chiefly covered with salt bush, scrub, and indigenous grasses, while the tree-growth is, as a rule, confined to belts of red gum, box, sheoak, and myall along the courses of the rivers and their tributaries, and to groves of cypress pine at intervals. The tree-clad regions of the State may be divided into open, brush, and scrub forests. The first class has the widest distribution, being found in every geological formation, and including some of the finest timbers, such as many species of eucalyptus, angophora, and other genera of the natural order of myrtles. Among the hardwoods, red gum usually marks the courses of streams, while on the rough and stony mountain and hill ridges, with their sheltered gorges, are found several varieties of ironbark, blackbutt, tallowwood, spotted gum, grey box, red mahogany, forest red gum, Sydney blue gum, and turpentine. The brush or jungle forests occupy a considerable tract of country between the Dividing Range and the coast. In this region, interspersed occasionally with large Moreton Bay and other figs, fern trees, cabbage trees, and palms, grow some of the most beautiful timbers known for cabinet work and veneers, such as the red cedar, rosewood, silky oak, beech, red bean, beefwood, tulipwood, and coachwood. In addition to these, there are considerable supplies of the colonial or hoop pine, and the brown or barry pine. The scrub forests are represented by the red or black and white varieties of the cypress pine, and many species of acacia and eucalyptus. These are chiefly situated in the western portion of the State, and although the pines and some of the eucalypts are useful for local building and fencing, the bulk of the timber is of little commercial value.

(ii.) *Victoria.* The mountain ranges, principal of which are the Dividing Range and the Australian Alps, constitute the true forest regions of the country, the trees attaining considerable height and girth, and the brush or scrub growth great luxuriance. The lower elevations of the ranges, remote from settlement, are densely wooded to their summits, but the peaks above the winter snow-line are either bare or covered only with dwarfed vegetation. Dense and luxuriant forests characterise the Otway Ranges and Gippsland, south of the Main Divide. The tree-growth in the Grampians consists chiefly of stringy-bark, white gum, grey and yellow box, and white ironbark, with some red gum and wattle. In the Pyrenees there are more valuable hardwoods, chiefly blue gum and messmate, with stringy-bark, grey and yellow box, red and white ironbark on the lower levels. In Wombat Forest, extending along both sides of the Dividing Range from Creswick to Mount Macedon, the timber is almost wholly young messmate of good quality, with peppermint and swamp gum. Further eastward along the range messmate and stringy-bark prevail, with grey and yellow box and ironbark on the low country. In

Delatite, and in the lower ranges of the Australian Alps generally, the timber increases in height and girth, and includes blue gum, messmate, and peppermint of fine quality with ribbon gum, woollybutt, and silvertop on the higher levels, and grey and yellow box with stringy-bark along the lower slopes and valleys. The northern plains, extending westward from Wodonga to the Grampians, are thinly covered with open forests, the limits of the prevailing trees being defined in clearly-marked belts. Thus the main belt of red gum follows the course of the Murray and extends along the valleys of its tributaries, but is interspersed at intervals near the river with sand ridges bearing grey box and cypress pine. Southward of this belt, and between the streams, the prevailing trees are grey or yellow box, with red and white gum and stringy-bark on the low ridges. From Chiltern a line drawn westward through Rushworth, Heathcote, Bendigo, Dunolly, and St. Arnaud marks a long belt of ironbark, of both red and white varieties, interspersed with stringy-bark and grey or yellow box. In the north-west, between the Wimmera Plains and the Murray, the dwarf eucalypt known as the mallee scrub covers the plains, with belts of cypress pine at intervals, and red gum and box along the courses of streams and lakes. The south-west is poorly timbered, the prevailing tree being stringy-bark, with red gum along the streams and white gum, box, lightwood, and honeysuckle on the plains and undulating country. In the Otway district are valuable timber forests; over 280 square miles are covered with blue gum, spotted gum, messmate, and mountain ash or blackbutt of fine quality, with some stringy-bark and white gum, while the valleys between the ridges bear valuable timber of fine grain such as blackwood, beech, satin box, olive, sycamore, and pencil cedar. Eastward of Melbourne, on the watershed of the Yarra, there is another fine forest region, the trees consisting of spotted gum, mountain ash, messmate, and white gum, with blackwood, beech, sassafras, and silver wattle in the valleys. The ranges of Southern Gippsland bear blue gum, spotted gum, mountain ash, and yellow stringy-bark, while in the western and northern portions of the same district grow the mountain stringy-bark, spotted gum, blackbutt, and the Gippsland mountain ash or silvertop, with woollybutt and ribbon gum on the higher elevations of the Main Divide. In the eastern part of the district, stretching from the Lakes towards the Genoa River, are found the Bairnsdale grey box, the Gippsland mountain ash or silvertop, white and yellow stringy-bark, red ironbark, and bloodwood. The prevailing timber in this part of Gippsland is the white stringy-bark, which forms large forests from the foothills of the Divide to the sea-coast.

(iii.) *Queensland.* The extensive forests of Queensland yield a great variety of woods, esteemed for their strength, durability, or beauty. The principal merchantable timbers lie between the eastern seaboard and the Great Dividing Range, which runs roughly parallel to, and about 200 miles from the coast. At about the 21st parallel of south latitude, a spur runs westward nearly to the South Australian border, and bears on its crests and slopes much valuable timber. Forests are also found on the Denham, Johnstone, and Gilbert Ranges. The principal eucalypts are ironbark, grey, spotted, and red gum, blackbutt, and turpentine; Moreton Bay, brown, and Bunya Bunya pines represent the conifers; and red cedar, beech, tulipwood, rosewood, red bean, and black bean are among the brush timbers of fine grain. On the extensive plateaux west of the Divide there is but little timber; and towards the vast basin of the interior, the low ridges and banks of the short water-courses bear a growth of stunted eucalypts such as the gimlet gum, the desert sheoak, acacias, and mallee.

The chief supply of mill timber (eucalypts, Moreton Bay pine, etc.) is in the southern coastal region, from the New South Wales border as far north as Gladstone. In the regions between Rockhampton and Ingham the supply is not so plentiful; but northward of the latter town, the red cedar, kauri pine, and black bean are luxuriant. Large supplies of these valuable trees are found on the Barron Valley reserves, and in other localities between Ingham and Port Douglas. Inland from this zone of heavy forest is another, less densely timbered, bearing cypress and other pines, ironbarks and acacias. In the south-western regions of the State the cypress pine flourishes.

(iv.) *South Australia and Northern Territory.* The principal forest districts of South Australia proper are restricted largely to the hill ranges in the neighbourhood of

Adelaide and Spencer Gulf, and the trees have not the fulness and lofty growth of those of the eastern and south-western borders of Australia. Red gum is widely distributed, though never far from water; and there are belts of timber where, from the general appearance of the surrounding country, they would hardly be expected. The stringy bark has its habitat principally in the hills, and is but rarely seen on the plains; other useful hardwoods are the white and blue gum and peppermint. Blackwood (in demand for cabinet work) is common in the south-east and along the eastern border, but is rare near Adelaide. Wattle also is cultivated for its gum and bark. Sheoak appears in districts less thickly forest-clad, and ti-trees inhabit low, damp situations. The sandalwood tree grows luxuriantly in Yorke Peninsula. On the great plains of the interior there is little vegetation, patches of forest country being occasionally found, while here and there fertile spots of grass land, but generally not of large extent, are met with. Groups of stunted shrubs, and small ramified trees—sheoak, eucalyptus, and wattle—mostly of limited extent, rise from the plains like islands.

In Central and Northern Australia there is little forest, until the hills where the waters of the northern river system take their rise are encountered. On the plains to the north of the McDonnell Ranges there is a thin clothing of mulga scrub, with gum trees marking the water-courses. Occasionally patches of heavier gum forests are met with. Stirling Creek is lined with the bean tree. The mulga scrub thickens, and with stunted and mallee gums furnishes a uniform vegetation as far north as Powell's Creek. Here, with red gums still lining the water-courses and flooded gums on the flats, the vegetation becomes more varied. On the ranges pines, fig trees, and orange trees (*capparis*) occur. Heavy timber clothes the uplands about the Roper River, and the tableland which stretches across the territory at a distance from the coast of from 30 to 100 miles bears large paperbark trees, Leichhardt pines, and palms. On the higher steppes there is also abundance of bloodwood and other varieties of eucalyptus, besides other kinds of trees. Many prominent fibre plants are native to the territory.

(v.) *Western Australia.* The coastal timber belt runs along the western shore from the Murchison River to the Leeuwin, and along the southern shore from that point to beyond Albany, clothing with trees the Victoria, Herschel, Darling, and Stirling Ranges. Pre-eminent among the trees of this State for strength and durability are the jarrah and karri. A great belt of the former stretches eastward of the Darling Range to upwards of 100 miles in breadth, with a length of 350 miles. Between this region and the coast are two well-marked belts of tuart and red gum. In the extreme south-west of the State the main karri belt stretches from Augusta to Albany. Eastward of the jarrah belt a strip of white gum encloses a narrow belt of York gum, its southern extremity almost reaching the coast, while its northern limit extends even beyond that of the jarrah tract. Still further east the forest thins, a poorer growth of white gum giving place to brushes, scrub, and dwarf trees. Along the shores of the Great Australian Bight there are stunted eucalypts, with casuarinas and wattle. In the north-west, on the King Leopold and St. George's Ranges, there are forest areas, but from Dampier Land to below Shark Bay there is no coastal forest, and in many cases the stunted bush and scrub lands infringe on the sea-coast.

(vi.) *Tasmania.* The Tasmanian forest consists chiefly of eucalypts, widely distributed over the island; and of conifers, such as the Huon, the King William, and the celery-top pines, flourishing in the western and southern parts. The principal hardwoods of the eucalypt family are the blue gum, stringy bark, peppermint, and silvertop iron-bark, while among woods of fine grain are the blackwood, beech or myrtle, sassafras, native cherry, and sheoak. Black and silver wattles also inhabit various parts of Tasmania.

3. **Distribution of Timber in the Commonwealth Generally.**—The more conspicuous timber regions of Australia as a whole are the eastern and southern portions, including Tasmania, and, again, the south-western portion northwards and eastwards from Cape Leeuwin. In regard to distribution, on the eastern side of the continent the largest

timber is found on the crests and coastal slopes of the mountain ranges, but in the south-west, in addition to the vegetation between mountains and sea, a large area of forest stretches inland from the coastal ranges. The hills encircling Adelaide and Yorke and Eyre Peninsulas also bear good forest. The Kimberley district is timbered, and in the Northern Territory and round the shores of the Gulf of Carpentaria there are considerable forest areas. But the coastal regions of West and North-west Australia, except in the case of the districts named and the shores of the Great Australian Bight and Encounter Bay, are devoid alike of mountains and forests. The interior of the continent is thinly timbered, or almost destitute of vegetation, an occasional limited area of forest, generally in connection with mountain systems (though these themselves are scarce), acting as a relief in the landscape, which but for these presents to the eye all the features of a dreary and arid waste.

4. Distribution of Timber in New Zealand.—In the North Island the growth in the Hauraki Peninsula is of a mixed character, kauri being predominant, with red, white, and silver pine, beech, and tawa, extending from the Waikato River to the North Cape. Kauri gum, formed by the hardening of the exuded resin, is dug out of the ground in large quantities and exported chiefly to Europe and America, where it is largely used in the manufacture of varnishes, and also in cotton-spinning centres for glazing calico. Large numbers of men follow the calling of gum-digging, either regularly or intermittently. The great totara region extends from the central part of the west coast to the east and south-east coast, and from the Bay of Plenty southward to Cape Palliser. Among other trees in this region are rimu, white pine, beech, and tawa. The red pine district occupies a considerable tract of the south-western side of the island, and extends from the Makau River to Wellington, being interspersed with totara, tawa, and black and white pine. In the Middle Island the rimu or red pine and the several species of beech may be regarded as the typical forest trees. The former has a very wide range, following the coastal region from Cape Campbell, the extreme north-eastern point, to Cape Farewell on the north-west, and thence the whole of the western and southern coast-line to the Clutha River, while along the eastern coast it is found in well-defined belts near Dunedin, Waimate, and Banks Peninsula. The beech country forms a large, broad belt running through the island from north to south along the Dividing Range.

§ 2. Forestry.

1. Objects.—Economic forestry, aiming at the conservation of forestal wealth by safeguarding forests against inconsiderate destruction, and by the suitable re-forestation of denuded areas, is essential to the preservation of industries dependent upon an adequate supply of timber, and to the perpetuation of a necessary form of national wealth. Though in Australia large areas of virgin forests still remain, the inroads made by timber-getters, by agriculturists, and by pastoralists—who have destroyed large areas by “ringbarking”—are considerable; and it is not unlikely that climatological changes are caused thereby. For it would appear that variations in climate, and alternating periods of drought and flood, desiccation and erosion of soil, with loss or diminution of fertility, have resulted from forest denudation in countries bordering the Mediterranean. In many of the States of America diminished rainfall is said to have followed the destruction of large forest areas. On the other hand beneficial consequences appear also to have followed on the planting of trees on denuded lands, or along encroaching coasts, and it is obvious that a forest covering tends to beneficially regulate the effects of rainfall.

2. Forestry Departments.—Each State of the Commonwealth, excepting Tasmania, has organised a forestry department or branch of service specially charged with forestal matters. The following table gives a comparative indication of the attention paid to the subject, the figures being those for 1907:—

STATE FORESTRY DEPARTMENTS, 1907.

| Particulars. | N.S.W. | Victoria. | Q'sland. | Sth. Aust. | West. Aus. | Tas. |
|---|----------------------|------------------------|---------------------|------------------------|------------------------|------|
| Designation of officer in charge | Chief Forest Officer | Conservator of Forests | Director of Forests | Conservator of Forests | Insp.-Gen. of Forests. | * |
| Salaries of persons engaged in administration and control | 19,313 † | 1,501 | 300 † | 450 | 3,874 † | 240 |
| Salaries of technical experts, forest rangers, etc. ... | | 8,414 | 1,200 † | 790 | | |
| Incidental expenses ... | 231 | 4,891 | 722 | 145 | 1,500 | 104 |
| No. of persons forming office staff | 8 | 6 | 7 | 1 | 6 | 2 |
| No. of persons forming field staff | 61 | 56 | | 35 | 13 | * |

* Administered by Lands Department. † Including travelling allowances. ‡ Excluding travelling expenses.

The revenue and expenditure of the State Forestry Departments from 1901 to 1907 are given below:—

REVENUE OF STATE FORESTRY DEPARTMENTS, 1900-1 to 1907-8.

| State. | 1900-1. | 1901-2. | 1902-3. | 1903-4. | 1904-5. | 1905-6. | 1906-7. | 1907-8. |

* For calendar year ended previous 31st December.

3. **Sylviculture.**—The growing recognition of the necessity for systematic sylviculture has led to the creation in most of the States of a number of sylvicultural nurseries and plantations.

(i.) *New South Wales.* In this State a small forest nursery is maintained at Gosford, between Sydney and Newcastle, from which young trees are widely distributed throughout the State, the bulk being issued to municipal councils and farmers, and for

planting in parks, town reserves, hospital grounds, and cemeteries. Large sums have been disbursed by the State in improvement fellings and the thinning out of young timber, principally in the Bogan, Narrandera, and Murray River districts. Over a quarter of a million acres of pine forest and red gum have been so treated.

(ii.) *Victoria.* In Victoria there are four forest nurseries, the largest being situated at Macedon, the smaller at Creswick, Havelock, and Tintarra. At Macedon the arboretum contains many fine specimens of the conifers and deciduous trees of Europe, America, and Asia. While the bulk of the yields are retained for the State plantations, there are considerable distributions for public parks and recreation reserves, "Arbor-day" planting of streets and roads, municipal councils and water trusts, mechanics' institutes and libraries, cemeteries, State schools, and other institutions, and farmers and private persons, the applications of those in dry districts receiving first consideration.

Among the principal native hardwoods raised and distributed are blue gum, sugar gum, and tallowwood, with some jarrah for the plantations; among conifers, the Monterey, Corsican, Black Austrian, Canary Island, Maritime, and Aleppo pines, the blue pine of India, the American white and yellow pines, with several spruces; and among other exotics, peppers, Indian cedars, oaks, elms, planes, silver poplars, sycamores, and chestnuts.

The principal forest plantation is along the lower slopes of the You Yangs, near Geelong, where about 1000 acres have been enclosed and planted with eucalypts and conifers. Good results have attended the cultivation of the broad leaf and feather leaf wattles.

At another plantation, viz., at Sawpit Gully, among the foothills of the Dividing Range, near Creswick, conifers are chiefly grown. Minor plantations of blue gum and sugar gum are established at Havelock and Majorca, near Maryborough; and at Mount Macedon, the principal species of oak, elm, ash, plane, sycamore, pine, spruce, eucalypts, and willows are planted.

(iii.) *Queensland.* The questions of replanting and further reservation have lately been attracting attention, and the prominence given to them will probably greatly influence forest policy.

(iv.) *South Australia.* In this State there are several plantations, the most important being at Bundaleer and Wirrabara, situated some 150 and 190 miles respectively to the north of Adelaide in the direction of Spencer Gulf. Of the reserved area, about one-fifth only, it is said, ever bore timber of commercial value, the remainder being covered for the most part with stunted vegetation. Owing to the absence of high mountain ranges and the dryness of the climate, the forests are not dense. Special attention has been given in South Australia to silviculture, and great success has been achieved in clothing areas of treeless plain and hill slope with belts of young trees, such as blue, sugar and red gum, and white ironbark. In some parts the Tasmanian blue gum (*E. globulus*) flourishes; but great success has also been attained with the sugar gum (*E. corynocalyx*), a tree indigenous to the State itself. It is found chiefly in the Flinders Range, and used for railway sleepers, telegraph poles, coachbuilding, and in wharf and jetty construction. Two other eucalypts found in South Australia, the white ironbark (*E. leucocylon*), known locally as "blue gum," and the grey box (*E. hemiphloia*) furnish strong, tough, and durable timber, inlocked in grain and suitable for the same purposes as sugar gum. The common flooded variety of red gum, which has a fairly wide distribution, being found on clay flats and along streams and water-courses, has also been grown in the plantations, but not with the same success as sugar gum. Among conifers which have been grown with fair success are the Monterey, the Maritime, Aleppo, and Stone pines. The Monterey pine (*P. insignis*) outstrips all other trees in growth, and its timber, though softer than other first-class pines, has been utilised for deal tables, packing cases, picket fencing, shelving, and generally for purposes where common deal is useful. The Maritime, Aleppo, and Stone pines are naturally of slower growth. In Europe they furnish useful timber, but in these plantations have not yet reached the age suitable for utilisation. The upright poplar (*P. fastigiata*) growing

well over a large area, serves for packing cases, flooring boards, etc. The locally-grown American ash (*Fraxinus americana*) has been used in coachbuilding work, and compares well in quality with the imported American ash. The area suitable for its cultivation in South Australia is, however, very limited, as it requires favourable conditions of soil and climate.

During the last twenty-six years the Forest Department has issued very large numbers of young plants to the public free of charge, for wind breaks, avenues, and for the shelter of homesteads and buildings generally, nearly seven million trees having been so distributed. Formerly, bounties were paid under the Forest Act for the encouragement of private persons in planting timber trees.

(v.) *Western Australia.* A State silvicultural nursery is established at Drake's Brook, on the south-western railway, the site chosen being a ti-tree swamp, exotic trees of temperate climates being raised. The planting of the Monterey, Maritime, Aleppo, and Canary Island pines, the blue pine of the Himalayas (*P. excelsa*), the Indian cedar, Lawson's cypress, several kinds of poplar, the Virginian catalpa, white cedar, and American ash has been successful. A large number of pepper trees and sugar gums were raised, chiefly for shade purposes. The trees are sold or given away to settlers, being distributed chiefly in the goldfields region and other districts with little natural forest.

There are also three forest plantations—one for conifers at Bunbury, a second for Australian wattles at Spencer's Brook, and a third for the indigenous sandalwood at Meckering. The planted areas are flourishing, the trees making very healthy growth.

Particulars regarding nurseries and plantations in 1907 are given hereunder:—

NURSERIES AND PLANTATIONS, 1907.

| Particulars. | New South Wales. | Victoria. | Qu'ns-land. | South Australia. | Western Australia. | Tasmania. |
|--|------------------|-----------|-------------|------------------|--------------------|-----------|
| Expenditure on plantations and upkeep of silvicultural nurseries | £892 | £3948 | nil | £7542 | £250 | nil |
| No. of persons engaged in nurseries | 8 | 17 | nil | 13 | 5 | nil |
| No. of silvicultural nurseries ... | 1 | 4 | nil | 7 | 2 | nil |
| Area of silvicultural nurseries ... | 80 ac. | 30 ac. | nil | 7 ac. | 150 ac. | nil |
| No. of forest plantations ... | 2 | 13 | 1 | 100 | nil | nil |
| Area of forest plantations ... | 50 ac. | 9676 ac. | 500 ac. | 9505 ac. | nil | nil |
| Extent of public distribution of trees or number of trees issued ... | 54,850 | 45,000 | * | 275,122 | 45,000 | nil |

* There are no forest nurseries issuing trees in Queensland, but a small number of economic and ornamental trees are issued by the Department of Agriculture.

§ 3. Commercial Uses of Principal Australian Timbers.

The uses of the more important of Australian timbers are many and various; four varieties of ironbark, viz., white or grey (*E. paniculata*), narrow-leaved (*E. crebra*), broad-leaved (*E. siderophloia*), and red (*E. sideroxylon*) are largely used for public works, preference being given to the white and narrow-leaved varieties. These timbers are used extensively in the building of bridges and culverts, for railway sleepers and fencing posts, and for framing, naves, spokes, poles and shafts in carriage and waggon building. Ironbark beams are of great strength, hence it is largely employed for girders and joists of upper floors, especially in stores for heavy goods.¹ Another red ironbark (*E. leucoxylon*),

1. Ironbark girders do not burn rapidly and often stand a fire when iron girders yield through the effect of the heat.

heavy, dense, and strong, is greatly valued for bridge beams and piles. Tallowwood (*E. microcorys*) is strong, heavy, very durable, not easily split, and turns and planes well. It is used for bridge-decking, house-flooring (being peculiarly suitable for ballrooms), girders, piles, and fencing posts, and especially for paving blocks, giving even and regular wear under heavy traffic. Even better in this latter regard is blackbutt (*E. pilularis*), a fine hardwood for house and ship building, as well as street paving. Grey gum (*E. propinqua*), makes excellent railway sleepers, and is used for felloes and spokes in coach building. It makes very durable fencing posts, and is also sometimes split for shingles. Murray red gum (*E. rostrata*), the common river gum of all the eastern States, is one of the best hardwoods in contact with the ground, being largely used for poles, house foundations, wood paving, and railway sleepers. It is also extensively cut for mining shafts and public and municipal works. The forest variety of red gum (*E. tereticornis*) serves the same purposes as the river red gum. White mahogany (*E. acmenoides*) is used for posts, poles, girders, and similar classes of work, being an exceedingly durable timber. Red mahogany (*E. resinifera*) is largely employed for general building work, street paving, fencing, and weatherboards. It is very durable and hardens greatly with age. Grey box (*E. hemiphloia*) is very durable in contact with the ground, and is hence used for railway sleepers (lasting from thirty to thirty-five years in the track), telegraph poles, mine props, fence posts, piles, girders, and for heavy framing and naves, wheel cogs, shafts, dray poles, spokes, etc. Bairnsdale grey box (*E. bosistoana*) serves similar purposes. Brush box (*Tristania conferta*), another hard and durable wood, is used for tram rails, bullock yokes, tool handles, planes, etc. Sydney blue gum (*E. saligna*) is greatly valued by shipwrights and wheelwrights, and furnishes ships' planks, felloes of wheels, etc. It is also used for buildings, and makes very durable paving blocks. Woollybutt (*E. longifolia*) is used for house building, fencing, felloes, spokes, and wheelwrights' work generally. Being durable in contact with the ground, and resistant to heavy traffic, it is also used for street paving. Spotted gum (*E. maculata*) is one of the best hardwoods for bending, even when cold, and is therefore specially valuable in wheelwrights' and coachbuilders' work for poles, shafts, crosspieces, naves, and spokes; also for framing and house building, tram rails, ship planking, decking of bridges, and wood paving. Turpentine (*Syncarpia laurifolia*) is of great durability in the ground or under water, being used for piles or jetties, wharves, bridges, pillars and girders of buildings, wood paving, and hewn posts and rails. Yellow stringy-bark (*E. muelleriana*) is chiefly used for jetty and pier work, and for fencing posts. Blue gum (*E. globulus*) is a valuable timber with straight, symmetrical bole, used for upper timbers and decking in jetty and bridge work, bridge piles, shafts, felloes, spokes and frame work of vehicles, and in general building and construction. Spotted gum (*E. goniocalyx*) furnishes a hard, heavy, and durable timber, similar in appearance to blue gum, and serving the same purposes. Yellow box (*E. melliodora*) bears a large quantity of blossom, and hence is a favourite tree with beekeepers. Its timber is used for piles and posts, squared beams, and stringers for bridges. Messmate (*E. obliqua*) is largely sawn by mills for weatherboards, studs, rafters, joists, etc., and is also used for railway sleepers and fencing posts. Stringy-barks (*E. macrorrhyncha*, *E. capitellata*, *E. piperita*) are sawn by mills into ordinary building timber, and split by settlers into posts and rails and rough building material. Mountain ash (*E. amygdalina regnans*) is sawn into building material, and is also split into palings, shingles, rails, and mining laths. Silvertop (*E. sieberiana seu virgata*)—called also Gippsland mountain ash, green top, and white ironbark—is used for ordinary building purposes, and for fencing rails and rough construction. Sugar gum (*E. corymocalyx*) is held in high repute on account of its toughness and durability, and is chiefly used for railway sleepers, telegraph poles, coach building, and in wharf and jetty construction. White or manna gum (*E. viminalis*) is not a good weather timber, but is suitable for interior construction, such as house frames and floors.

The pre-eminent timber trees of the West are jarrah (*E. marginata*) and karri (*E. diversicolor*). Jarrah is in great request for piles in jetty and bridge construction, and for railway sleepers and street paving. It also furnishes a favourite material for boat-building, fencing, and rough furniture, and makes excellent

charcoal. Karri is heavy, dense, elastic, and tough, not so easily wrought as jarrah, and used for bridge-decking, flooring, planking, spokes, feloes, shafts, and street-paving. Tuart (*E. gomphocephala*) is exceedingly strong and tough, suitable for the framework of railway waggons, bridge supports, buffers, keelsons, shafts, wheelwrights' work, and generally for all purposes where great strength and hardness are necessary. The red gum (*E. calophylla*) is a fine shade tree, and is valued for the shelter it affords to cattle and sheep. Its timber, however, is not held in much esteem; but in short lengths it is employed for wheelwrights' work and agricultural implements. Its gum or kino has medicinal properties, and is used locally for tanning hides. Wandoo (*E. redunca*) is used for fencing, wheelwrights' work, and railway buffers and sleepers. The blackbutt (*E. patens*), York gum (*E. loxophleba*), and Yate (*E. cornuta*) of the West are largely used for fencing, building, and rough construction.

The Moreton Bay or hoop pine (*Araucaria cunninghami*) is used for interior work (flooring, ceiling, and lining boards) and for packing cases and butter boxes. Brown pine (*Podocarpus elata*) is also used for interior work, and for bridge, jetty, and pier piles. Cypress pine (*Callitris*), including red or black pine (*C. calcarata*); Murray pine (*C. verrucosa*), Port Macquarie pine (*C. macleayana*), and the Richmond River cypress pine (*C. columellaris*) are used for buildings liable to attacks of white ants, being strongly resistant to these pests. Cypress pine is also suitable for bridge decking and makes fine fuel. Red cedar (*Cedrela australis*) furnishes timber of great beauty; it is easily worked and very durable, and is used for furniture and cabinet-making, doors, panelling, and interior fittings generally. Rosewood (*Dysoxylon fraserianum*) is easily wrought, and is used for furniture, turnery, carving, cabinet work, mouldings, planes, window joints, house-fittings, and wine casks. Red bean (*Dysoxylon muelleri*) has a finely-figured grain and is an excellent furniture wood. White beech (*Glehnina leichhardtii*) is durable and easily worked, and is in great request for decks of vessels, furniture, picture frames, carving, flooring, house-fittings, vats, casks, and general coopers' work. Silky oak (*Grevillea robusta* and *Orites excelsa*) are also in request for coopers' work, and make handsome furniture and wainscoting. The silky oak has also been used for butter kegs, buckets, churns, etc., and makes good butter boxes for the local markets. Black bean (*Castanospermum australe*), or Moreton Bay chestnut, is used for furniture, cabinet-making, and gun stocks. Tulip-wood (*Harpullia pendula*) is highly esteemed for cabinet-work, being used for door panels, dadoes, and billiard tables. Coachwood (*Ceratopetalum apetalum*) is suitable for boat-building, cabinet work, and coach-building. Kauri pine (*Agathis palmerstoni*) gives a light, strong, and durable timber, and is used for general building and construction, wainscoting, furniture and joinery, railway carriages, and ship-decking. Blackwood (*Acacia melanoxylon*) is very strong and durable, diminishing, however, greatly in weight in seasoning, though shrinking very little in volume. Figured blackwood is a beautiful timber; it is used for furniture, such as billiard tables, chairs, secretares, casings of pianofortes and organs, and general cabinet work; dadoes, panelling of railway carriages, boat-building, picture frames, wheel naves, gun stocks, walking sticks, and a great variety of useful and ornamental purposes; it is also split into staves for wine and tallow casks. Evergreen beech (*Fagus cunninghami*) yields also a handsome timber, used for furniture, sashes and doors, light joinery, wood-carving, picture frames, and cog-wheels. Huon pine furnishes a fine, strong, and light timber; it is almost indestructible in water, and hence is largely used for boat planking; its beautiful grain brings it into request for furniture, panelling, and wainscoting. The King William variety is very tough, being used for racing sculls; it is also a favourite timber in joiners' work. Celery-top pine is strong and heavy, suitable for furniture, flooring, house frames, coopers' work, and masts. Other Australian brush timbers of minor importance are sassafras (*Atherosperma moschatum*), used for saddle-trees and boot lasts; and satin box, sycamore, olive, and pencil-wood, giving woods of beautiful grain for parquetry, veneers, carving, and picture frames. The sandalwood of Western Australia (*Santalum cygnorum*) is a very valuable forest product, its export having covered half-a-century.

§ 4. Forestal Industries and Production.

1. **Timber.**—The returns for quantity and value of timber cut and sawn, as given by the States Forestry Departments, are at present very incomplete. Owing to this fact the figures are, in some cases, necessarily merely estimates. It is proposed by the Commonwealth Bureau of Statistics to secure, if possible, more accurate information in future concerning this important industry.

QUANTITY OF LOCAL TIMBER SAWN OR HEWN IN EACH STATE OF THE COMMONWEALTH DURING THE YEARS 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------|-------------|-------------|-------------|-------------|-------------|-------------|--------------|
| | Sup. feet. | Sup. feet. | Sup. feet. | Sup. feet. | Sup. feet. | Sup. feet. | Sup. feet. |
| New South Wales | 96,907,000 | 90,308,834 | 100,408,000 | 117,029,000 | 112,580,000 | 119,337,000 | 360,000,000* |
| Victoria | 46,495,885 | 40,494,660 | 38,841,322 | 49,250,000 | 47,635,358 | 51,103,000 | 75,900,000 |
| Queensland | 140,443,099 | 72,478,951 | 69,506,800 | 71,293,811 | 73,930,279 | 82,801,846 | 91,752,000 |
| South Australia ... | 22,877 | 197,088 | 130,565 | 94,396 | 155,662 | 130,763 | 143,009 |
| Western Australia ... | 122,413,865 | 124,005,005 | 126,729,833 | 143,594,953 | 137,250,340 | 136,294,697 | 110,395,000 |
| Tasmania | 45,848,526 | 24,531,922 | 35,196,700 | 34,760,628 | 40,273,429 | 39,498,697 | 85,228,000 |
| Commonwealth | 452,131,252 | 352,016,460 | 370,815,220 | 416,022,788 | 411,825,068 | 429,166,003 | 673,418,000 |

* As returned.

The only States for which an annual return is furnished for the value of locally sawn or hewn timber are South Australia and Tasmania. The values for South Australia for the years 1901 to 1907 are respectively, £23; £154; £413; £400; £340; £230; and £815. For Tasmania the values for the years 1901 to 1906 are respectively, £117,734; £62,573; £89,227; £92,102; £75,817; £110,689; the estimate for Western Australia for the same years is £5,268,235; for New South Wales 1901 to 1906, £4,050,000; and for 1907, £1,440,000; for Victoria, for 1907, £256,590.

2. **Forest Produce.**—Estimates have been made of the total value of forest production, but these must be regarded as mere approximations. Many of the items are very difficult, and some impossible, to obtain. Large returns are credited to firewood, but these have been omitted altogether, since estimates are subject to a wide range of uncertainty.

The Forestry Department of New South Wales estimates that the production in the seven years, 1901-7, averaged at least £685,000 per annum. For Victoria the Government Statist gives the following figures:—1904, £230,567; 1905, £206,725; 1906, £217,569; 1907, £244,170. This is exclusive of hewn timber, which in 1907 was valued at £75,000. No figures on a similar basis are available for Queensland. The estimates for South Australia for 1901 to 1907 are £187; £354; £590; £665; £610; £440 and £1086. Western Australia averages for the seven years, 1901-7, £984,264. Tasmania supplies the following estimates for the years 1901 to 1906, viz., £152,102, £83,943, £114,227, £119,477, £94,987, £126,514.

§ 5. Oversea Trade.

1. Imports.—The quantities of timber imports for 1901 and 1902 are not available. In 1901 the value of imports of dressed timber was £441,665; undressed timber, £717,548. For 1902 the respective values were £395,842 and £704,751. The countries of origin are shewn in the previous issue of the Year Book. For the years 1903 to 1907 the quantities and values were as follow:—

IMPORTS OF DRESSED TIMBER, 1903 to 1907.

2. Exports.—The quantity and value of undressed (sawn) timber exported from 1903 to 1907 is given below, the countries of destination being also shewn. The quantities for 1901 and 1902 are not available, and the values only are given. Countries to which the produce was exported cannot, however, be stated for these years:—

VALUE OF EXPORTS OF UNDRESSED TIMBER (SAWN), 1901 and 1902.

1901, £631,257; 1902, £544,830.

EXPORTS OF UNDRESSED TIMBER (SAWN), 1903 to 1907.

In the years 1905 and 1904 the largest quantities of undressed timber were exported. The year 1907 shows a considerable decrease from previous years, both in quantity and value, the decrease in the latter, as compared with 1906, being more than 22 per cent.

**QUANTITIES OF TIMBER IMPORTED INTO, AND EXPORTED FROM, THE
COMMONWEALTH, 1903 to 1907.**

SECTION XI.

FISHERIES AND PISCICULTURE.

§ 1. Commercial Fisheries.

1. **Early Fishing Excursions of Malays.**—Economic fisheries in Australia date back to a period long before the exploration of the northern and north-western shores of the continent by Tasman and Dampier. The Malays of Macassar, in their proas, made fishing excursions amongst the reefs and shoals skirting the coast, collecting and curing trepang and bêche-de-mer, a practice continued up to the present time. They arrive ordinarily at the beginning of the north-west monsoon, and return to Macassar after a few weeks, as the south-east monsoon sets in. Besides the bêche-de-mer, the Malays barter rice, tobacco, and gaudy handkerchiefs for tortoise-shell, pearl shell, and seed pearls, collected by the aborigines.

2. **Fish Stocks.**—Australasia, extending from 10° to 45° south latitude, produces an abundant and varied fish fauna, embracing both tropical and temperate characters, including destructive, as well as edible species, and on its shores both crustaceans and amphibians. In the rivers and lakes indigenous varieties thrive side by side with imported ones, introduced and acclimatised for industrial and sporting purposes by Governments and angling societies. Exploitation of aquarian products—for some classes of fish for the whole year, for others during the breeding season only, or until a certain size is attained—is, where necessary, expressly forbidden; areas are closed against net-fishing, and a minimum size of mesh for nets is sometimes fixed. Even where the State has not interfered, the sea-fishers in some districts have made regulations for the purpose of controlling the market supply, and these they rigorously observe.

3. **Economic Fisheries.**—Australia's food fishes, though abundant, have not led to the development of an industry of national importance, though fresh and salt water fisheries pay handsomely in other countries, and could no doubt do so in Australia. It has been authoritatively stated that "The collection and distribution of the knowledge of the world's work in fish-culture would make an acre of water more valuable than an acre of land, and the toilers of the sea could reap manifold their present harvest." This would involve also better arrangements for the distribution of fish than exist at present.

4. **Lake and River Fishing.**—Lake and river fishing take even lower industrial rank than marine fishing, though local catches furnish on the aggregate a not inconsiderable amount of food supply.

5. **Distribution of Supplies.**—The economic arrangements as to distribution impose at present serious difficulties on the development of fishing generally, since there is a wide divergence between the price paid by the consumer and the return received by the producer.

6. **Oyster Fisheries.**—Natural oyster beds, whose ample product is of excellent quality, exist in the shallow waters of inlets and estuaries of several parts of the Australian foreshore. By husbanding the natural crop, and by judicious transplanting, the

oyster output has been very materially augmented. The areas are leased by the Government to private persons, lengths of foreshore being taken up and profitably exploited.

7. **Pearl-shelling.**—Pearl-shelling is carried on in the tropical districts of Queensland, South Australia (Northern Territory), and Western Australia. The pearl oyster inhabits the northern and western coasts from Cape York to Shark Bay, a length of shore of over 2000 miles. Along the north coast the pearls taken are small, and their aggregate value inconsiderable; but the shells are marketed in considerable quantities, the industry giving directly and indirectly employment to a large number of people, mostly Japanese, Chinese, and Malays. The Shark Bay pearling industry, however, is carried on for both gems and shells. The fishing is now generally conducted with the aid of diving apparatus, in water varying from four to twenty fathoms in depth. The inshore banks and shallower waters have been almost entirely worked out, and the deeper waters, from three to twenty miles off shore, are now being worked.

In tropical Queensland pearl-shell diving is actively pursued, and is by far the most important of the fishing industries, Torres Straits being the centre of production. With it the pursuit of *bêche-de-mer* is carried on, and tortoise-shell is obtained on the coasts. The industry is supervised by the Marine Department, which administers the Fisheries Acts. A statutory limit is fixed for the minimum size of shell that may be gathered. Experiments have been made in cultivating the pearl oyster on suitable banks. A small variety has been discovered at Stradbroke Island, in Moreton Bay, but the commercial value of the produce is small.

The discovery of mother-of-pearl shell in Port Darwin Harbour in 1884 caused a rush of pearling boats from Torres Straits. But the muddiness of the water, rendered almost opaque by the heavy tides, prevented the divers from satisfactorily working the area and led to an abandonment of the industry within three years from its birth. Prospecting in new patches has since being carried on and the industry has been revived. In addition to pearl and trepang fishing, dry-salted fish is also exported from the Territory.

In Western Australia the centres of the industry are Broome, Cossack, Onslow, and Shark Bay. There are two distinct species of mother-of-pearl shell exported. The principal trade is done in the large shells (*Meleagrina margaritifera*), limited in distribution to tropical waters and extending in habitat from Exmouth Gulf northwards. It is laid under contribution for the larger manufactured articles, such as dessert and fish knife and fork handles, large buttons, and inlaid work. The largest and finest pearls are obtained from it. The second species is that known commercially as the Shark Bay variety (*Meleagrina imbricata*). It is of smaller size and used chiefly for the manufacture of small buttons. The pearls found are of varying value. The Shark Bay pearl-shell is collected by dredging in the deeper waters and gathered by hand from off the shallow banks at low tide.

The system of licensing boats and men engaged in the pearling industry restricts, in the States where it is in force, indiscriminate exploiting of the areas, and returns a small revenue.

§ 2. Fisheries Statistics.

1. **Departmental Estimates.**—Statistics of the fishing industry have not hitherto been systematically collected. The returns given below have been furnished by the States departments, and estimates, where they have been made, are official. The data do not lend themselves to presentation on a uniform scheme, and are therefore given for the individual States.

2. **New South Wales.**—Much of the information must be regarded as approximate only. An estimate of the number of men employed during the years 1901 to 1906 gives an annual average of 1730, with 849 boats in use; the average annual quantity of fish marketed per year was 5,790,400 lbs., value £193,013. In 1907, the estimated number

of men employed was 1935, and of boats, 1025, and the take of fish was 124,078 baskets, estimated to contain an average weight of 75 lbs. each.

| 1902 ... | 202 | 6½ | 382,069 | 16,157 | 24,235 |
| 1903 ... | 121 | 6½ | 391,942 | 13,593 | 20,389 |
| 1904 ... | 219 | ... | 435,550 | 12,613 | 19,000 |
| 1905 ... | 123 | 27 | 404,064 | 13,858 | 20,787 |
| 1906 ... | 155 | 64 | 467,592 | 15,006 | 22,509 |
| 1907 ... | 303 | 65 | 553,975 | 14,406 | 25,210 |

Considerable proportions of the foreshores and shallow areas of the river estuaries are excellent natural oyster-beds, and with constant attention to them the annual yield of oysters could no doubt be materially increased. As the table shews, it was less in the years 1903 to 1907 than it had been in the two preceding years.

3. **Victoria.**—In 1908 a Fisheries Committee investigated the conditions of the fishing industry in Victoria. The scope of the inquiry covered questions as to the permanent and temporary closing of areas against fishing; the length and number of nets to be used by any one party; poaching; the destruction of cormorants; and the

handling, freight, and marketing of fish. As a result of this inquiry legislation is proposed that is expected to result in the industry being considerably developed in the near future.

GENERAL FISHERIES (EXCLUDING EDIBLE OYSTERS), VICTORIA, 1901 to 1907.

| Year. | No. of Boats Engaged. | Value of Boats and Equipment. | No. of Men Employed. | Total Take of | | Value of Take. | |
|-------|-----------------------|-------------------------------|----------------------|---------------|-----------|----------------|-----------|
| | | | | Fish. | Lobsters. | Fish. | Lobsters. |
| | No. | £ | No. | cwt. | doz. | £ | £ |
| 1901 | 622 | 28,094 | 982 | 72,517 | 19,003 | 45,017 | 6,269 |
| 1902 | 668 | 32,780 | 1,038 | 111,579 | 19,359 | 68,194 | 6,381 |
| 1903 | 651 | 33,163 | 1,084 | 116,750 | 18,823 | 70,252 | 6,258 |
| 1904 | 654 | 34,610 | 1,089 | 113,650 | 20,560 | 67,009 | 8,014 |
| 1905 | 660 | 34,600 | 1,039 | 96,000 | 19,662 | 58,230 | 7,496 |
| 1906 | 693 | 33,789 | 1,120 | 91,700 | 20,517 | 55,640 | 8,720 |
| 1907 | 726 | 38,666 | 1,153 | 99,707 | 24,889 | 60,442 | 6,179 |

Licenses to net in certain waters are issued without fee. These are not annual, but are supplemented every year by new issues. It is proposed to make the registration annual, and impose a fee.

FISHERMEN'S AND FISHING BOAT LICENSES, VICTORIA, 1901 to 1907.

| Licenses. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------------|-------|-------|-------|-------|-------|-------|-------|
| Fishermen's licenses to net | 46 | 38 | 175 | 185 | 67 | 39 | 176 |
| Fishing boat | 19 | 22 | 42 | 40 | 36 | 38 | 80 |

The increase in 1907 was caused through a court case calling attention to the fact that the necessary licenses had in many cases not been taken out.

Annual leases have been granted to oyster fisheries, but the return is insignificant.

EDIBLE OYSTER FISHERIES, VICTORIA, 1901 to 1907.

| Year | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------------------|--------|--------|-------|-------|-------|-------|-------|
| Number of leases granted | 5 | 5 | 4 | 4 | 2 | Nil | Nil |
| Length of foreshore in leases ft. | 86,610 | 39,480 | 7,800 | 7,200 | 3,000 | ... | ... |

No separate revenue is credited to fisheries. the small amount derived by way of fines being credited to general revenue.

4. **Queensland.**—Prior to 1907 no account was kept of the value of boats and equipment, but an approximation believed to be very close was furnished. An estimate was made of the total take of fish, giving 1450 tons as the annual average for the years 1901 to 1906, corresponding to an average annual value of £20,300. In 1907 the take was 1625 tons, of an estimated value of £24,437. There are no lobster fisheries. The amount put up in the fish-preserving establishments is not great, but the demand for fish locally tinned is growing. The quantities and values of oysters from 1901 to 1904 given are those exported. In 1905 and 1906 the information was not recorded, and no records were kept of those placed on the local market. The figures for 1907 give total production. The length of foreshore under lease cannot be accurately given. The deep water in Moreton Bay and Sandy Strait is leased as dredge sections, which extend across the channels to the islands, and contain from 100 to 1000 acres each. Within these sections the majority of the oyster banks (ground containing up to 30 acres lying within two feet below low-water mark) are situated on the foreshores of the islands, and on the mud and sand flats.

GENERAL FISHERIES (EXCLUDING EDIBLE OYSTERS, PEARLSHELL AND BÉCHE-DE-MER), QUEENSLAND, 1901 to 1907.

Prior to 1907 no record was taken of the value of pearls obtained, and it is impossible to estimate it. The value in 1907 was approximately £30,000.

5. **South Australia and Northern Territory.**—Prior to 1906 there are no records of the number and value of boats, number of men employed, and take and value of fish. In the year named 558 men and 479 boats were engaged, the value of boats and equipment being £15,377. In 1907, 633 persons and 512 boats were engaged, and the value of boats, equipment, etc., was £21,570. In 1906 the take of fish was 14,569 cwt., valued at £16,770, and 2229 cwt. of lobsters, valued at £1578; in 1907, 20,734 cwt. of fish were taken, and 230 cwt. of lobsters, the values being £25,121 and £369 respectively. The Act imposing licenses was passed in 1904. In 1905, 600 fishermen's licenses were issued, 686 in 1906, and 840 in 1907. The revenue from general fisheries was £552 in 1905, made up of £551 from licenses and £1 fine; £330 in 1906, £267 being from licenses and £63 fines and forfeitures; and £286 in 1907, all from licenses. There are two fish-preserving establishments in the Northern Territory.

From oyster fisheries the revenue in the years 1901, 1902, 1903, and 1904 was only £6 altogether, derived from leases. In 1905 it was £19, all from licenses; in 1906 £17, and in 1907 £21, from the same source. Revenue amounting to £34 was also collected from licenses for Northern Territory in 1907. The figures for edible oyster fisheries, as completely as they can be furnished, are:—

EDIBLE OYSTER FISHERIES, SOUTH AUSTRALIA, 1901 to 1907.

| Year. | Number of Boats Engaged. | Value of Boats and Equipment. | Number of Men Employed. | Number of Leases Granted. | Length of Foreshore leased. |
|-------------|--------------------------|-------------------------------|-------------------------|---------------------------|-----------------------------|
| 1901 | ... | £ ... | ... | 1 | 100 feet |
| 1902 | ... | ... | ... | 1 | 100 " |
| 1903 | ... | ... | ... | 1 | 100 " |
| 1904 | 5 | 550 | 6 | 1 | 100 " |
| 1905 | 7 | 720 | 8 | 1 | 100 " |
| 1906 | 6 | 620 | 8 | 1 | 100 " |
| 1907 | 4 | 730 | 6 | 2 | 15 miles |

The oysters taken in 1907 were 416 bags, valued at £728.

FISHING INDUSTRY, NORTHERN TERRITORY, 1901 to 1907.

| Year. | No. of Pearling Boats Engaged. | Value of Pearls Taken. | Pearl-shell. | | Tortoise-shell. | | Dried Fish. | | Bêche-de-mer. | |
|-------|--------------------------------|------------------------|--------------|----------|-----------------|--------|-------------|--------|---------------|---------|
| | | | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| 1901 | 51 | £ 2,000 | Tons. 141 | £ 17,168 | lbs. 80 | £ 50 | lbs. 28,336 | £ 342 | Tons. 64 | £ 2,628 |

| 1903 | 56 | 1,183 | 126 | 28,391 | ... | ... | 40,096 | 581 | 105 | 3,870 |
| 1904 | 56 | 1,000 | 133 | 18,526 | ... | ... | 29,680 | 428 | 44 | 1,865 |
| 1905 | 52 | ... | 115 | 14,352 | 130 | 50 | 56,672 | 1,046 | 62 | 2,929 |
| 1906 | 24 | 175 | 57 | 7,835 | ... | ... | 43,232 | 858 | 94 | 6,056 |
| 1907 | 31 | 200 | 64 | 8,805 | 342 | 115 | 38,976 | 822 | 20 | 898 |

Not more than half the fleet of boats were engaged in pearling operations during the year owing to the low price of shell, to shelling grounds being limited, and to scarcity of suitable labour. Some new grounds were discovered during the latter end of 1907, which will increase the number of boats engaged, and augment the output. The whole of the trepang industry is in the hands of Europeans. The closing of the coast against the Macassar proas must necessarily cause a shrinkage, but it is expected that in the course of a year or two, this will prove a great boon to local boats, inasmuch as it will give the fishing grounds time to recoup.

6. **Western Australia.**—In Western Australia the fishing industry has attained considerable importance, as will be seen from the tabular statements below:—

GENERAL FISHERIES (EXCLUDING EDIBLE OYSTERS AND PEARL-SHELL)
WESTERN AUSTRALIA, 1901 to 1907.

| Year. | Number of Boats Engaged. | Value of Boats and Equipment. | Number of Men Employed. | Total Take of | | Value of Take. | |

* Incomplete.

7. **Tasmania.**—There are no licenses charged against fishermen or fishing vessels, and consequently no records are kept regarding their numbers or value of equipment. The estimated number of boats engaged in the industry is eighty-one, average crew two men, average value per boat £70. The license revenue is almost entirely obtained for rights to angle for salmon and trout with rod and line. Oyster fisheries are not worked except in a most primitive way. The estimate of fish marketed at Hobart in 1907 was £8853.

§ 3. Oversea Trade.

That the development of the fishing industry in Australia leaves much to be desired is evident from the fact that the import of preserved fish into the Commonwealth is large, the export inconsiderable. The figures for the trade are as follows:—

IMPORTS OF FISH, COMMONWEALTH, 1901 to 1907.

| Classification. | 1901. ¹ | 1902. ¹ | 1903. | 1904. | 1905. | 1906. | 1907. |

1. Quantities for 1901 and 1902 are not available.

A considerable development has taken place lately in the fish preserving industry. Two factories were opened in the Northern Territory of South Australia in 1907, and a large output resulted from the operations of those previously established. There is, however, an excess of imports over exports amounting to more than £350,000.

§ 4. Development of the Industry.

1. **Transport and Marketing.**—The large importations of fish into the Commonwealth indicate the scope for the development of the local fishing industry. Where quick transport by rail or steamer is not provided, the catch of fish in tropical or subtropical waters can only be locally consumed, since speedy marketing is essential. Adequate refrigerating apparatus on railway waggons and coasting steamers, and quick transport to centres of population might, however, alter the economic condition in a satisfactory direction. At the present time the natural wealth of Australia in fish is exploited only to a very slight extent.

2. **Experiment and Culture.**—(i.) *The Existing Fisheries.* In many respects the fishing industry is capable of modification and development. A good deal has been effected by the State Governments in the way of experiment and culture, but much yet remains to be done before the industry is at all commensurate with the industrial development and consuming capacities of the Commonwealth. The existing fishing is inshore, the supplies being obtained from the vicinity of river estuaries and lakes. Deep-sea fishing, as established and carried on in older countries, is, so far, practically non-existent in Australia.

(ii.) *New South Wales.* In New South Wales, trawling experiments have shewn that considerable areas along the coast are suitable, but practical work on commercial lines is yet undeveloped. The stocking of rivers and lakes was begun by private enterprise, since which Government aid has been granted, and eminent success has been attained, among other fish, with the Californian rainbow trout. Young fry are distributed annually from the trout hatchery at Prospect, and the natural reproduction of the fish in the streams that issue from the mountain ranges is regarded as a valuable asset. In 1902 attempts were successfully made to transport European fishes alive to Australia. A marine hatchery and biological station has been completed at Gunnamatta Bay, Port Hacking, by means of which it is proposed to gradually acclimatise suitable fishes. The natural oyster beds are also being extended.

(iii.) *Victoria.* In Victoria very little has been done in the way of hatcheries and culture, and that little has been mainly the work of private individuals and angling clubs. The Government has, however, incurred the expenditure of a sum of money on hatcheries with good results. Fry and yearlings are distributed, and one consignment of the latter was despatched from the Geelong hatchery and liberated without loss at Mundaring, Western Australia. Trawling experiments were conducted some years ago, but the results were inconclusive.

(iv.) *Queensland.* In Queensland artificial hatching was undertaken by the Acclimatisation Society of Southern Queensland. Here, also, the American rainbow trout has succeeded, fry being distributed from the hatchery at Spring Creek, Killarney. The lung-fish, formerly known only in two streams, has been successfully transplanted

to several other streams. Oyster beds are also being developed in several parts, and improved methods of culture have largely increased the output. The trawling experiments of 1901 and 1902 point to the improbability of a great trawling industry being established. The trawling area off Queensland would be a mere strip, because of the presence of the coral region immediately to the north and the fact that the sea deepens very rapidly to the east.

(v.) *South Australia.* In South Australia the indiscriminate exploitation of the Port Lincoln and adjacent oyster beds led to the necessity for their being closed from time to time to prevent the district from being altogether worked out. The future outlook has in this way been improved as regards oyster culture. The South Australian fishing grounds have been stated to be most desirable areas, only wanting men and boats to ensure a large take. Trawling by private individuals has led to satisfactory results.

(vi.) *Western Australia.* In Western Australia the coastal waters have been examined to ascertain whether suitable trawling grounds exist. The Acclimatisation Committee has successfully hatched and liberated trout, the Mundaring weir being stocked with the Loch Leven variety. Perch were stocked in the lakes near Wanneroo Caves.

(vii.) *Tasmania.* Considerable distributions of ova and fry are annually made from the River Plenty in Tasmania. Besides the supplies to Tasmanian waters, the northern States are also recipients of ova.

(viii.) *Commonwealth Investigations.* The Federal Council had power to legislate with regard to fisheries in Australasian waters beyond territorial limits. In the second session (opened 16th January, 1888), an Act was passed to regulate pearl-shell and bêche-de-mer fisheries in Australasian waters adjacent to Queensland, and in the third session, opened shortly afterwards, the Act was made applicable to Western Australia. It was not till the present year, however, that the Federal Government commenced operations in regard to fisheries. A fisheries investigation vessel has been built and launched at Sydney. Its general object is to find out what fish occur around Australian coasts, and how to catch them. Trawling, whereby the fish are disturbed by a large bag-shaped net which is drawn along the sea-bottom, and caught and retained in a trap arrangement at the tail-end of the net, will form one of the branches of experiment. Work will be carried on in all known and recognised methods of capture, including long-line and drift-net fishing, etc.; and survey will be carried out, so as to get information as to the nature of the bottom. The New Zealand Government is experimenting with a view to the introduction of Northern Hemisphere fish into the waters surrounding the shores of the Dominion.

(ix.) *Inquiries by Scottish Fishermen.* In the latter half of 1908 a delegation of Scottish fishermen visited Australia to make inquiries regarding the possibility of the remunerative working of the Australian fisheries. They appeared to be impressed with the excellence of the fishing grounds, and will probably report favourably on the proposal to settle colonies of fishermen, with their wives and families, on the coast, and establish industries for fish catching, smoking, curing, etc., and for manufacturing fertilisers, fish oils, and fish cakes.

§ 5. Fish Preserving.

Bounties have been provided by the Federal Government for fish preserving. These, together with the increased yield that may be expected as a result from the fisheries investigations now being conducted, will probably lead to a considerable output and consumption of locally preserved fish. The abundance of fish in Australian waters offers excellent opportunities for the institution of preserving establishments, particularly in those coastal districts which enjoy a temperate climate. Up to the

present but little development has taken place. The establishments for fish preserving at the present time are very few:—

SECTION XII.

MINES AND MINING.

§ 1. Introduction.

1. **Place of Mining in Australian Development.**—Although Australia is pre-eminently a pastoral and agricultural country, the value of the production from its flocks and herds and from its farming industry far exceeding the return from mining, yet its mines and its mining developments are of great and increasing importance. It may also be said that it was the discovery of its immense stores of mineral wealth that first attracted population to Australia, and thus laid the foundations of its nationhood. Though coal was the first discovered mineral of recent times, it was the discovery of gold, overshadowing in popular estimation the former, which brought about a large influx of population and the formation of various settlements.

That Australia was a gold-producing country was known probably 400 years ago. From the Dauphin chart (1530-1536) preserved in the British Museum, it appears that the north-west coast was called by the Portuguese and Spaniards *Costa d'Ouro*, gold-coast. But the knowledge of Australia as a gold-producing territory was not revived until as late as 1823, when James McBrien, making a survey of the Fish River, between Rydal and Bathurst, in New South Wales, wrote in his field notes—"At this place I found numerous particles of gold in the sand."

Reference to subsequent discoveries will be reserved till later.

2. **Extent of Mineral Wealth.**—The large production of gold, silver, copper, and tin, the extent of the coal deposits, the presence of large quantities of iron ore, and the great variety of minerals found in appreciable quantities, suggest that the future history of mining will, in all probability, be more remarkable even than that of the past. For the extent of the total mineral wealth of Australia cannot yet be regarded as well-ascertained, since the mineral exploration of the country is, after all, still in its infancy. The presence of considerable deposits of valuable metals has long been known. Thus, silver was discovered by Count Strzelecki as early as 1839, and was worked as early as 1864; copper mining dates back to 1844; lead to about 1848, and iron to about 1850. Cobalt, nickel, manganese, chromium, tungsten, molybdenum, mercury, antimony, bismuth, zinc, etc., have all been found, some in fairly large quantities.

Among the more valuable non-metalliferous substances may be mentioned coke, kerosene shale, graphite, alunite, asbestos, diatomaceous earth, clays, ochres, etc.; in building stones, sandstones, syenites, granites, basalts, augite-andesite, porphyries, serpentines, slates, limestones, and marbles; in precious stones, diamonds, emeralds, rubies, sapphires, amethysts, precious opal, turquoise, topazes, garnets, chrysolites, cairngorm, agates, etc. In general it may be said that the variety of Australian mineral wealth is very great.

It will be convenient in the succeeding pages to treat first of all gold and the various metals, then to deal with non-metallic minerals and precious stones, and finally to furnish some account of the total mineral wealth of Australia, and of the extent of employment in mining generally.

METALS (A).

§ 2. Gold.

1. **Discovery of Gold in Various States.**—The discovery of gold in payable quantities was an epoch-making event in Australian history, for as one writer aptly phrases it, this event “precipitated Australia into nationhood.” A reference to the population figures prior and subsequent to the year 1851 amply demonstrates this fact. Thus on 31st December, 1841, the population of the Commonwealth was only 220,968¹; at the end of 1851 it was still under half a million, viz., 437,665¹, while by the end of 1861 the total had reached 1,168,149¹ persons, that is, the population had quintupled itself in twenty years. A short account of the chief discoveries in each State and in New Zealand is appended:—

(i.) *New South Wales.* The first authentic discovery of the precious metal in this State was made by “Assistant-Surveyor” James McBrien, on the 16th February, 1823. Mr. McBrien reported that he had “found numerous particles of gold amongst the sand in the hills convenient to the Fish River,” the locality to which he alludes in his field-book being not far from the scene of Hargraves’ memorable discovery twenty-eight years later. The famous Polish explorer, Count Strzelecki, reported the existence of gold, in the form of auriferous pyrites, in the Vale of Clwydd, near Lithgow, in 1839, but Governor Gipps, to whom he had imparted his discovery, requested him to keep the matter secret, being fearful of the effect that such news might have on the discipline of the infant settlement. The Rev. W. B. Clarke, who, in 1841, discovered gold on the Cox River, and on the Wollondilly in 1842, expressed the belief that a large portion of the newly occupied country would prove auriferous. This opinion was shared by several eminent authorities in England, including Sir Roderick Murchison, and the validity of it was in the first instance amply demonstrated by Hargraves’ world-renowned discovery in 1851. Hargraves, who had gained his experience on the goldfields of California, found payable deposits of alluvial gold at Lewis Ponds and Summer Hill Creek, and on the Macquarie River. The news of these discoveries, amplified and distorted by all sorts of rumours, soon caused an enormous influx of people into Australia. The dates of other important finds were as follows:—Rich alluvial leads at Forbes in 1862, Rocky River, near Uralla, 1856, in beach sands at northern rivers, 1870, Gulgong 1871, Mount Drysdale 1892, Wyalong 1893.

(ii.) *Victoria.* The discovery of gold in the mother colony was quickly followed by discoveries on a larger and more important scale in the neighbouring colony of Victoria. According to the report of the Select Committee of the Legislative Council appointed to inquire into the claims of candidates for the rewards offered, the discoveries took place in the following sequence. The Hon. W. Campbell discovered the precious metal in March, 1850, at Clunes, but concealed the fact temporarily through fear lest the announcement should prove injurious to the squatter on whose run the discovery was made, and the gold-discovery committee was not notified until the 8th July, 1851. On the 5th July, 1851, notification was made of the discovery of gold in the Yarra Ranges by Mr. L. J. Nichel. Mr. James Esmond discovered gold in quartz at the Pyrenees Mountains, the notification being made on the 5th July, and soon after the numerous fields near Mount Alexander were opened up. The chief centres of the gold-mining industry at the present time are in the Bendigo, Ballarat, Beechworth, Castlemaine, Maryborough, Gippsland, Ararat, and Stawell districts. In November, 1906, a remarkable discovery of gold was made near Tarnagulla, where a miner who had prospected the district for years obtained seven ounces of gold from a shaft nineteen feet deep, and some fairly large nuggets being found soon after, the so-called Poseidon rush set in. Several of the nuggets were unearthed within a few inches of the surface. The largest weighed 953 ounces and two

1. Figures for these years were given in “A Statistical Account of Australia and New Zealand for 1903-4” as 206,095; 403,889; 1,153,973 respectively, but those refer presumably to the enumerations in the earlier part of the years mentioned.

others weighed 703 and 675 ounces respectively. The shallow ground was soon worked out, but operations have given satisfactory results in the deeper alluvial.

(iii.) *Queensland.* The news of the discoveries in the southern divisions of the continent fired the minds of the few remaining settlers in Queensland, which at this time was still a portion of New South Wales, with the hope that an El Dorado would be discovered in the north. It was not, however, until the year 1858 that payable gold was struck at Canoona by a party under the leadership of Mr. W. C. Capel. Almost immediately a rush set in from all parts of Australia and also from New Zealand—a rush that was attended with disastrous consequences to many that participated in it, for the alluvial deposits were soon worked out, and many of those who reached the diggings suffered great privations through lack of the ordinary necessities of life. In 1863 gold was found at Canal Creek and Gladstone; Crocodile Creek field was discovered in 1865, Ridglands in 1867, followed shortly afterwards by Rosewood and Gympie; Townsville was opened up in the following year, and the Gilbert River fields in 1869. Charters Towers dates from 1872, the Palmer goldfield from 1873, the Hodgkinson from 1875, while the celebrated Mount Morgan was first worked in 1882. Croydon in 1886, Coen in 1900, and Alice River in 1904.

(iv.) *South Australia.* In South Australia, what is believed to have been the first authentic discovery of gold in the Commonwealth from which actual mining operations resulted was made in January, 1846, at a spot about 10 miles east from the City of Adelaide. Although finds were subsequently made at various places, over large areas, the gold-mining industry has never made very great progress in the State, and South Australia contributes the smallest share of the total gold production of the Commonwealth. Included amongst districts where gold has been found are the southern portion of the main range through Echunga, Talunga, Barossa, and Uooloo to Wonna, about 140 miles north from the city; thence north-east, Mount Grainger, Waukarina, Manna-hill, Wadnaminga, and Olary districts. A good find of alluvial gold was made in 1886 at Teetulpa, about 200 miles north-east by north from Adelaide, and £300,000 worth of the precious metal was obtained from an area of about a square mile. The ground was, however, soon worked out, but there is an immense area of similar country in the surrounding district which has not been systematically prospected. A fair amount of gold has been won from reefs at Tarcoola, 300 miles north-west from Port Augusta, while discoveries have been reported from the Peake and Denison Ranges and Yudnamuntuna, in the northern portion of the Main Range. Arltunga, in the MacDonnell Range, within the boundaries of the Northern Territory, was the scene of a reported rich find in 1902, but the yield has since been small. Up to the 31st December, 1907, the ore treated at the Government battery yielded £42,000 worth of gold. There are numerous deposits of the precious metal at various other localities in the Northern Territory, the chief yield in 1907 being 1045 oz. obtained at the Driffield. A large number of Chinese are engaged in mining in the Territory. In 1907, out of a total of 1166 miners employed, the Chinese numbered 958.

(v.) *Western Australia.* The discovery of gold in Western Australia took place at a much later date than in the eastern States; nevertheless the present production far exceeds in value that of any other portion of the continent. It appears that the precious metal was first detected in 1848, in specimens sent for assay to Adelaide from the Murchison copper and lead deposits. In 1852-53 rich specimens of gold-bearing stone were found by shepherds and others in the eastern districts, but they were unable afterwards to locate the places where the stone was discovered. The late Hon. A. C. Gregory found traces of gold in quartz at the Bowes River in 1854. In 1861 Mr. Panton found gold near Northam, while shortly afterwards a shepherd brought in rich specimens of auriferous quartz which he had found to the eastward of Northam, but he failed to locate the spot again. Various small finds were made up to 1882, when Mr. A. McRae, riding from Cossack to Roeburne, picked up a nugget weighing fourteen ounces. In 1885 Messrs. Hall, Slattery, and others found gold on the Elvire, Margaret, and Ord Rivers. The Kimberley goldfield was opened in May, 1886. Next year the precious metal was

discovered at Yilgarn, and the field was proclaimed in 1888, in which year rich finds were also made at Mallina and Pilbara Creek, the Pilbara field being proclaimed in October. The Ashburton field was proclaimed in 1890, and the Murchison in 1891. From the cap of a reef on the Yalgoo field, proclaimed in 1890, gold to the value of £15,000 was obtained in a very short time by the simple process known as "dollying." In 1892 Bayley and Ford discovered the Coolgardie field, obtaining over 500 ozs. of gold in one afternoon by the aid of a tomahawk. Alluvial was discovered by Frost and party at Goongarrie (the Ninety-mile) in May, 1893. Kalgoorlie (Hannan's) was discovered in June of the same year by Messrs. Flannigan and Hannan, Bardoc in August by Messrs. Cashman and Lee, Siberia by Frost and Bonner in October. There were numerous rich discoveries in 1894, such as at "Mount Jackson," "the Pinnacles," "Billy Billy," and at the celebrated Kanowna diggings. Rich finds were also made at Bulong, Londonderry, and the Wealth of Nations, Mr. J. G. Dunn, the discoverer of the latter, obtaining £20,000 of gold in a few days. The "Norseman" was discovered in July by Mr. L. Sinclair, as also the "Lady Shenton" at Menzies. The "Niagara" was discovered in January, 1895, also the rich field known as the "Hands Across the Sea," at Kunanalling. "Blackboy Hill" field was proclaimed in 1897, "Donnybrook" in 1898, while there were further rich finds in 1899.

(vi.) *Tasmania*. The first discovery of the precious metal in the island State is reported to have been made by a Mr. Riva, of Launceston, who is stated to have traced gold in slate rocks in the vicinity of Nine Mile Springs in 1849. A valuable discovery was made in 1852 at the Nook, near Fingal, and further small finds were reported during the same year from Tower Hill Creek and the vicinity of Nine Mile Springs (Lefroy). During 1859 the first quartz mine started operations at Fingal. In the same year James Smith found gold at the River Forth, and Mr. Peter Leete at the Calder, a tributary of the Inglis. Reef gold was discovered in 1869 at Nine Mile Springs (Lefroy) by Mr. S. Richards. The first recorded returns from the Mangana goldfields date from 1870; Waterhouse, 1871; Hellyer, Denison, and Brandy Creek, 1872; Lisle, 1878; Gladstone and Cam, 1881; Minnow and River Forth, 1882; Branxholme and Mount Victoria, 1883; and Mount Lyell, 1886.

(vii.) *New Zealand*. Gold was discovered in New Zealand by Mr. C. Ring, of Coromandel, who obtained a small quantity in the creek which now bears his name. Further discoveries were, however, prevented by the hostility of the natives, and it was not until 1862 that the district was proclaimed a goldfield. A small find was made in the Middle Island during 1853 at a place called "The Fortifications," now known as the West Taieri goldfield. The first payable field was at Collingwood, in the Nelson district, opened in 1857, in which year the production was about 10,500 ozs. A find of the precious metal was reported from the Lindis River in 1861, but the yield from the locality was small. In June of the same year a rich discovery was made by a former Victorian digger named Gabriel, at the place named Gabriel's Gully, although in 1858 Mr. Edward Peters had found payable quantities on the Tokamaro River, at the locality afterwards known as the Woolshed diggings. Early in 1862 further auriferous deposits were found at Waipori and the Woolshed, while in August of that year Messrs. Hartley and Reilly arrived at Dunedin with over 1000 ozs. of gold obtained from beach sands on the Clutha River, and this discovery was succeeded by other alluvial finds on the tributaries of that stream. The Teviot, Benger, and Upper Manuherikia fields were opened up in March, 1863. In May a rich find was made at Hogburn, leading to further discoveries at Hill's Creek, Dunstan's Creek, Kyeburn, Hyde, Hamilton's, Macrae's, and Mount Buister. At the last-mentioned place, which is 4000 feet above the level of the sea, the deposits can be worked during only about half the year. The next discoveries were made at Cambrian's, Tinker's, Matakanaui, Round Hill, Orepuki, and in recent times at Mount Criffel. Rich finds were made at the end of 1863 at Wakamarina, in the Marlborough district. In 1864 deposits were found in the bed of the Greenstone River by Maoris, and at the present time the mining population in the locality is over 80,000. The rush to the West Coast was soon followed by discoveries of auriferous deposits at Waimeri, Kanieri, Blue Spur, and Ross, and these in turn were

followed by finds at Grey Valley, No Town, Red Jack's, Nobles, Orwell Creek, Antonio's, Maori Gully, Lyell, Charleston, Brighton, and Kumara. In the North Island, the out-crop at the Waihi in the Hauraki district was first noted in 1878.

2. **Production of Gold at Various Periods.**—In the table hereunder will be found the value of the gold raised each year in the several States and New Zealand from the dates when payable discoveries were first reported. Owing to defective information in the earlier years the figures fall considerably short of the actual totals, for during the first stages of mining development large quantities of gold were taken out of Australia by successful diggers, who preferred to keep the amount of their wealth secret. For South Australia the records in the earlier years are somewhat irregular, and the remark applies to some extent also to the returns for Western Australia and Tasmania.

VALUE OF GOLD RAISED IN AUSTRALIA AND NEW ZEALAND, 1851 to 1907.

3. **Changes in Relative Positions of States as Gold Producers.**—A glance at the figures in the preceding table will sufficiently explain the enormous increase in the population of Victoria during the period 1851 to 1861, when an average of over 40,000 persons reached that State each year. Victoria maintained its position as the chief gold-producer for a period of forty-seven years, or up to 1898, when its production was first outstripped by that of Western Australia, the latter State from this year onward contributing practically half the entire yield of the Commonwealth. New South Wales occupied the second place on the list until 1876, when Queensland returns exceeded those of the parent State, a condition of things that has been maintained ever since. Up to the year 1884 Tasmania and South Australia in turn occupied the position of lowest contributor to the total gold yield of the Commonwealth, but from 1894 onwards the returns from the former State have been in excess of those of the latter. Taking the average of the last seven years the relative positions of each State and of New Zealand in regard to the gold production of Australia were, as follows:—

RELATIVE POSITIONS OF STATES AS GOLD PRODUCERS, 1901 to 1907.

| State. | Annual Average of Gold Production, 1901 to 1907. | Percentage on Commonwealth. | State. | Annual Average of Gold Production, 1901 to 1907. | Percentage on Commonwealth. |
|-------------------|--|-----------------------------|-----------------|--|-----------------------------|
| Commonwealth ... | £ | 100.00 | New Zealand ... | 2,017,554 | 11.89* |
| Western Australia | 7,981,059 | 53.02 | New South Wales | 991,840 | 6.63 |
| Victoria ... | 3,155,021 | 21.09 | Tasmania ... | 282,302 | 1.89 |
| Queensland ... | 2,518,101 | 16.84 | South Australia | 79,886 | 0.53 |

* Percentage on production of Australasia.

4. **Methods of Gold Mining adopted in Each State.**—The circumstances of gold mining in the various States are not quite identical, for which reason reference is made to that of each State.

(i.) *New South Wales.* In New South Wales the earlier "rushes" were to surface alluvial or shallow-sinking grounds. Many of these were apparently soon worked out, but there is reason to believe that in some instances payable results would be obtained by treating the rejected wash-dirt on more scientific principles. With the exhaustion of the surface deposits discoveries were made by sinking to what are called deep alluvial leads, representing the beds of old drainage channels in Pliocene times. The first of these deep alluvial leads was discovered at Forbes, in New South Wales, in 1862. The Tertiary deep leads at Gulgong were discovered in 1871. Cretaceous leads occur at Tibooburra, and detrital gold has been found in Permo-carboniferous conglomerates at Tallawang. The method of dredging is at present being extensively used for winning gold from the beds of running streams, and also in loose river flats and other wet ground where sinking would be impracticable. The system was introduced from New Zealand, where it was originally applied with great success on the Clutha River, and there are now dredges working on practically all the auriferous rivers of New South Wales. Hydraulic sluicing is also employed in several places, the necessary machinery being fitted to a pontoon for convenience in moving from place to place. The quantity of alluvial gold obtained, other than by dredging, amounted to 16,540 ozs. in 1907, the chief yields being—Braidwood, 1442 ozs.; Adelong, 1247 ozs.; Batlow, 1027 ozs.; Stuart Town, 978 ozs.; Wattle Flat, 900 ozs. The quantity obtained by dredging was 39,946 ozs., the largest returns being obtained at Adelong, with 11,786 ozs.; Araluen, 11,523 ozs.; Stuart Town, 7198 ozs.; Wellington, 3212 ozs.; and Sofala, 2331 ozs. At the present time the Cobar district is the chief centre of the production from quartz, the yields from the Canbelego and Cobar fields included therein being respectively 31,464 ozs. and 26,935 ozs. Next comes the Wyalong field, with 20,347 ozs.; Wellington, with 12,260 ozs.; Hillgrove, with 11,777 ozs.; and Murrumburrah, 9879 ozs.

The table below shews the yield from alluvial and quartz working in each of the principal districts during 1907 :—

GOLD WON IN NEW SOUTH WALES, ALLUVIAL AND QUARTZ, 1907.

| District. | Alluvial. | | Quartz. | Total |
|-----------------------------|-------------------------------|-----------------|---------|--------|
| | Other than by Dredging. | By Dredging. | | |

| Peel and Uralla | 1,782 | 1,348 | 12,950 | 16,080 |
| Southern | 2,324 | 12,803 | 9,556 | 24,683 |
| Tambaroora and Turon | 1,505 | 9,529 | 790 | 11,824 |
| Tumut and Adelong | 4,317 | 13,053 | 1,469 | 18,839 |
| Other districts | 834 | 1 | 3,005 | 3,840 |

(ii.) *Victoria.* Quartz-reefing predominates in Victoria, although a considerable amount of gold is obtained from alluvial workings, both surface and deep leads. The deepest mines in Australia are found in the Bendigo district, where two shafts were at the 31st December, 1907, 4318 and 4300 feet deep respectively. Altogether there were at the close of 1907 no less than thirty-one shafts in this district which had reached a depth of over 3000 feet, while the bottom of the winze at the Victoria Reef Quartz was 4363 feet from the surface. A considerable amount of attention is given to dredging and hydraulic sluicing, particularly in the Beechworth, Castlemaine, and Ballarat districts, the number of plants in operation at the end of 1907 being 133. The yields from alluvial and quartz in the chief mining districts of the State during last year were as follows :—

GOLD WON IN VICTORIA, ALLUVIAL AND QUARTZ, 1907.

| District. | Alluvial. | Quartz. | Total. |
|---------------------------|-----------|---------|---------|
| | ozs. | ozs. | ozs. |
| Ararat and Stawell | 9,093 | 12,178 | 21,271 |
| Ballarat | 41,286 | 106,782 | 148,068 |
| Beechworth | 104,007 | 25,255 | 129,262 |
| Bendigo | 18,696 | 177,768 | 196,464 |
| Castlemaine | 38,446 | 63,944 | 102,390 |
| Gippsland | 8,467 | 66,715 | 75,182 |
| Maryborough | 47,835 | 33,366 | 81,201 |

(iii.) *Queensland.* Operations in Queensland are at present chiefly confined to quartz reefing, the yield from alluvial in 1907 being only about 9000 ozs. out of a total production of 465,900 ozs. The celebrated Mount Morgan mine occupies the position of being at the same time the most productive gold mine and the most productive copper mine in the State. The yields from the principal fields are given below :—

GOLD WON IN QUEENSLAND, ALLUVIAL AND QUARTZ, 1907.

| District. | Alluvial. | Quartz. | Total. |
|------------------------------|-----------|---------|---------|
| | ozs. | ozs. | ozs. |
| Charters Towers | 846 | 174,706 | 175,552 |
| Gympie | 466 | 63,761 | 64,227 |
| Mount Morgan | 354 | 145,420 | 145,774 |
| Ravenswood | 364 | 34,466 | 34,830 |
| Croydon | ... | 13,411 | 13,411 |
| Clermont | 4,364 | 421 | 4,785 |
| Etheridge and Woolgar | 812 | 7,290 | 8,102 |
| Other districts | 2,127 | 17,074 | 19,201 |

(iv.) *South Australia.* In South Australia alluvial gold has been worked for many years in the gullies round Adelaide, while a fair amount of gold has been obtained by this method at Teetulpa, in the northern areas. There are some valuable reefing fields in the Echunga district, at Mt. Grainger, Barossa, Wadnaminga, Mannahill, etc., but they have not been developed to the extent they deserve. Good stone was discovered a few years ago at Tarcoola, but the present returns are comparatively small. The rich finds at Arltunga in the centre of the continent, within the boundaries of the Northern Territory, have not yielded up to expectations, but the field has not been systematically prospected. It is stated that the gold occurs chiefly in vughs, crevices, and cellular quartz, the latter being at times exceedingly rich. The solid stone is low grade and is not worked. Operations are confined to the vein matter, which is passed through screens, and the larger lumps hand picked, the fines and all that contains vughs or cellular quartz being saved for treatment and the balance discarded. The official returns shew that there were forty gold-dredging leases in existence last year. South Australia is not divided into mining districts as is the case in the other States.

(v.) *Western Australia.* In Western Australia the operations are confined principally to quartz reefing, the returns from ordinary alluvial and hydraulic sluicing being comparatively small. The total production of gold from all sources during last year was 1,697,554 ounces, of which only 0.6 per cent. was alluvial. The production from the more important mines was as follows:—

GOLD WON IN WESTERN AUSTRALIA, ALLUVIAL AND QUARTZ, 1907.

| District. | Alluvial. | Dollied and Specimens. | Crushed. | Total. |
|------------------------------|-----------|------------------------|----------|---------|
| | ozs. | ozs. | ozs. | ozs. |
| Peak Hill | 119 | 80 | 7,912 | 8,111 |
| East Murchison | 259 | 89 | 118,860 | 119,208 |
| Murchison | 1,021 | 530 | 167,846 | 169,397 |
| Mount Margaret | 231 | 341 | 168,894 | 169,466 |
| North Coolgardie | 103 | 278 | 86,410 | 86,791 |
| North-east Coolgardie | 1,432 | 799 | 32,900 | 35,131 |
| East Coolgardie | 3,658 | 1,836 | 931,744 | 937,238 |
| Coolgardie | 220 | 925 | 59,665 | 60,810 |
| Yilgarn | ... | 28 | 19,264 | 19,292 |
| Dundas | 73 | 80 | 23,449 | 23,602 |
| Broad Arrow | 660 | 171 | 21,077 | 21,908 |
| Other districts | 1,863 | 117 | 19,059 | 21,039 |

(vi.) *Tasmania.* The yield from Tasmania is also chiefly obtained from quartz reefing, although there is a little alluvial mining carried on in the Lyell district. The yields from the chief centres in 1907 are shewn hereunder:—

GOLD WON IN TASMANIA, ALLUVIAL AND QUARTZ, 1907.

| | Northern & Southern. | North-eastern. | Eastern. | Western. | Total. |
|-----------------|----------------------|----------------|----------|----------|--------|
| | ozs. | ozs. | ozs. | ozs. | ozs. |
| Quartz | 34,674 | 325 | 4,986 | 24,574 | 64,559 |
| Alluvial | 475 | 242 | 33 | 45 | 795 |

The total production equalled 65,354 fine ounces, valued at £277,607.

(vii.) *New Zealand.* The yield of gold in New Zealand during 1907 was £2,027,490, of which quartz mining was responsible for £1,544,572, dredging £419,634, and alluvial £63,284. Of the total yield from quartz the Northern district returned £1,375,035, the West Coast £160,533, and the Southern £9004. The principal quartz mines are situated in the Ohinemuri and Thames counties. On the Waihi and Karangahake the veins give every indication of permanency. The Waihi is the most productive gold mine

in Australasia, and during 1907, from a total of 356,974 tons of quartz, gave a yield valued at £826,010. The company paid in dividends during 1907 the sum of £396,726. In the Thames district the Waiotahi produced 11,562 tons of ore during the year, averaging £12 19s. 2d. per ton, and declared a dividend of £117,000. The Progress mines were the chief producers in the South Island during 1907, their output of bullion being £87,805. New Zealand may be considered as the pioneer of dredge-mining in Australia, although the supply from this source is annually falling off owing to the depletion of suitable areas. In the West Coast and Southern districts 128 dredges were at work in 1907, producing, as previously stated, £419,634 worth of gold. The production from alluvial was £63,284, the greater portion being obtained in the Otago and Southland districts. Hydraulic sluicing, or sluicing and elevating, are the methods employed in working the deposits, but the long-continued dry weather in 1907 caused a great falling off in production as compared with the previous year.

5. Remarkable Masses of Gold.—The first "nugget" found in Australia was obtained at Hargraves, in New South Wales, on the 13th May, 1851, and weighed a little over 1 lb. In the same year the Burrandong nugget, found near Orange, weighed 2217 ozs. 16 dwts., and the "Brennan" was sold in Sydney for £1156. During the period 1880-82 nuggets weighing from 59 ozs. to 1393 ozs. were found at Temora. The "Jubilee," which weighed 347 ozs., was found in 1887.

In Victoria a nugget found at Canadian Gully in 1853 weighed 1620 ozs.; the "Welcome," found at Ballarat in 1858, weighed 2217 ozs.; and the "Welcome Stranger," unearthed in 1869 at Mount Moliagul, near Dunolly, weighed 2315 ozs., of which 2284 ozs. were fine gold and 31 ozs. silver, and was valued at £9534.

In addition to these alluvial nuggets large masses of gold have been found *in situ* in reefs. A mass known as "Kerr's Hundredweight," discovered in 1851 at Hargraves, in New South Wales, yielded 106 lbs. of gold. Probably the largest mass of gold ever found was obtained in Beyers and Holtermann's claim at Hill End in 1872. The total weight of the specimen, including the small amount of quartz in which it was encased, was 630 lbs. Its dimensions were 4 ft. 9 in. high, 2 ft. 2 in. wide, and about four inches thick. The value was not definitely known, but an offer of £13,000 was refused.

6. Modes of Occurrence of Gold in Australia.—(i.) *New South Wales.* The principal gold deposits worked with profit in New South Wales are classified by the Government Geologist of that State as follows:—1. Alluvial or detrital gold. 2. Auriferous reefs or lodes. 3. Impregnations in stratified deposits, such as slate, quartzite, and volcanic tuff. 4. Impregnations in igneous rocks, such as granite, serpentine, felsite, etc. 5. Irregular deposits, such as bunches of auriferous ironstone. The detrital gold is found chiefly in Recent and Pleistocene alluvials, in beach sands along the coast, in Tertiary alluvial leads, in Cretaceous alluvial leads, and in Permo-carboniferous conglomerates. In the beach sands the gold is found in association with platinum and tin. In reefs the gangue is principally composed of quartz; calcide is often present, and barytes and fluor-spar are also met with. At Hill End gold was found associated with muscovite. In the oxidised portions of auriferous reefs, limonite, malachite, azurite, and cuprite are found, while below the water-line the veins are impregnated with iron pyrites, galena, copper pyrites, zinc blende, pyrrhotine, and stibnite. The auriferous quartz veins fall into three categories—fissure veins, bedded veins, and contact veins. Large masses of gold have occasionally been found in lodes, such as "Kerr's Hundredweight," alluded to in a preceding paragraph. The so-called saddle reefs in the Hargraves district are identical with those worked so profitably and at such great depths round Bendigo, in Victoria. Altogether gold has been found in association with over forty minerals in New South Wales, one of the most peculiar products being known as "mustard" gold, resultant on the decomposition of tellurides. The substance has the appearance of dull yellow clay; but it readily burnishes when pressed with a knife blade. Native gold has never been found in an absolutely pure state in New South Wales, being always alloyed with silver and also traces of other metals.

(ii.) *Victoria.* In Victoria the occurrence of gold is noted under two main headings—1. Matrix gold. 2. Redistributed gold. The so-called matrix gold occurs in quartz reefs of various kinds, in Ordovician, Silurian, and Lower Devonian sedimentary, metamorphic, and granitoid and porphyritic rocks; in reefs, veins, and lenticular deposits in dykes of granitoid, porphyritic, dioritic, and felspathic rocks, or between dykes and walls of intruded rocks; or in fracture planes or joints in granitoid rocks. Under the above conditions the gold is either free or in combination with iron, arsenic and iron, copper and iron, zinc, lead, antimony, silver, etc.

The redistributed gold is found in sands and gravels of existing streams, in deep leads, in littoral gravels and sands, and in cleavage and joint planes of rocks underlying the deep leads.

(iii.) *Queensland.* The most remarkable mode of occurrence in Queensland is that at the Mount Morgan mine, which presents so many novel features as to demand special reference. At this mine the siliceous material forming the ore body was found enclosed in igneous rock, which continued to the surface, except for a funnel-shaped mass of sandy beds and secondary ore outcropping near the summit of the mount. In a crevice of these sandy beds was deposited a plug of desert sandstone nearly 100 feet deep at its thickest part, with a surface area of three-fifths of an acre, quite distinct from and unconformable to, the beds of loose sand which underlay and surrounded it, and more ferruginous towards the outside than in the centre of its area. A ferruginous belt extended outside the plug, attaining a depth of 150 feet from the surface. It was hard and extremely rich in gold, which was disseminated through the stone in microscopic particles. Beneath the ironstone there was a band of loose sand or soft bed, in some places many feet in thickness, also extremely rich in gold. Underlying and almost surrounding the secondary ores, a great mass of siliceous and kaolin ore was found, denuded of its gold, which is supposed to have been leached out and conveyed in solution and again deposited in the enriched zone. The impoverishment prevails between the depths of 180 and 300 feet, the friable silica being cellular from the removal of the pyrites. The evidences of the oxidation and leaching action are greater towards the centre than along the walls of the mass. Below the skeleton ore an unaltered zone of copper sulphide ore was found, in which gold was irregularly distributed, the copper increasing with the depth. Outside both sulphide and skeleton ore are walls of crystalline igneous rocks. Dykes, later than the massive igneous rocks but older than the enriched zone, traverse the siliceous sulphides in various directions. The theory advanced by Dr. Jack that the formations at Mount Morgan were due to geyser action at one time found wide acceptance, but later investigations tend to discredit it. So far, however, no completely satisfactory explanation has been put forward.

(iv.) *Western Australia.* The Government Geologist of Western Australia classifies the conditions under which gold is found in that State as follows:—(a) Native metal. (b) Compounds with tellurium and other elements. (c) Associated with other minerals.

Native gold occurs in several different forms, to which popular names descriptive of their appearance have been given, such as crystalline, dendritic, rough, flake, mustard, and sponge gold. Tellurides of gold abound at Kalgoorlie and Mulgabbie. Calaverite is the most frequently occurring mineral, but petzite, goldschmidtite, and the minerals termed kalgoorite and coolgardite are also found. Of the metallic minerals, iron in the form of iron pyrites and oxides is widely distributed. Galena comes next, whilst amongst other minerals found in association with the precious metal may be mentioned zinc blende, arsenopyrite, vanadinite, bismuth, pyrrhotite, chalcocopyrite, bourmonite, copper, scheelite. Quartz is of course the commonest of the earthy secondary minerals, but calcite, chalcedony, gypsum, actinolite, chlorite, and others are also found in association with gold. Some of the native gold is found to be remarkably pure, specimens of sponge gold from lodes at Boulder, Kalgoorlie, and East Coolgardie being found to contain 99.91 per cent. of the precious metal with but 0.09 per cent. of silver.

7. **Place of Commonwealth in the World's Gold Production.**—In the table given below will be found the estimated value of the world's gold production, and the share of the Commonwealth therein during the ten years 1897 to 1906. The figures given in the table have been compiled from returns obtained direct by the Commonwealth Bureau of Census and Statistics from the gold-producing countries of the world.

WORLD'S GOLD PRODUCTION, 1897 to 1906.

| Year. | World's Production of Gold. | Gold produced in Commonwealth. | Percentage of C'wealth on Total. |
|-------------|-----------------------------|--------------------------------|----------------------------------|
| | £ | £ | % |
| 1897 | 48,196,000 | 9,890,000 | 20.52 |
| 1898 | 58,136,000 | 11,679,000 | 20.09 |
| 1899 | 63,015,000 | 14,533,000 | 23.06 |
| 1900 | 51,515,000 | 13,578,000 | 26.36 |
| 1901 | 53,544,000 | 14,006,000 | 26.16 |
| 1902 | 60,869,000 | 14,812,000 | 24.33 |
| 1903 | 66,650,000 | 16,295,000 | 24.45 |
| 1904 | 70,688,000 | 15,897,000 | 22.49 |
| 1905 | 76,675,000 | 15,551,000 | 20.28 |
| 1906 | 82,569,000 | 14,632,000 | 17.72 |

The latest published estimates place the world's gold yield at about 82½ millions sterling in 1907, towards which the Commonwealth contributed 13½ millions, or about 16½ per cent. While the production of gold in the Commonwealth rose by about 48 per cent. in the decennium 1897-1906, the world's total increased by over 71 per cent. in the same period. The following table, which has been compiled from official returns forwarded to this Bureau, will be found interesting as shewing the various foreign countries where the chief increases have taken place during the interval in question:—

INCREASE IN GOLD YIELD, VARIOUS COUNTRIES, 1897 to 1906.

| Country. | 1897. | 1900 | 1903 | 1906. |
|----------------------|------------|------------|------------|------------|
| | £ | £ | £ | £ |
| United States | 11,787,000 | 16,269,000 | 15,122,000 | 19,392,000 |
| Canada | 1,240,000 | 5,742,000 | 3,877,000 | 2,365,000 |
| Mexico | 2,045,000 | 1,122,000 | 2,197,000 | 3,424,000 |
| Transvaal | 11,654,000 | 1,481,000 | 12,628,000 | 24,606,000 |
| Rhodesia | 800 | 308,000 | 828,000 | 1,985,000 |
| Gold Coast | 85,000 | 38,000 | 255,000 | 322,000 |
| Madagascar | 8,500 | 142,000 | 232,000 | 268,000 |
| India | 1,571,000 | 1,893,000 | 2,303,000 | 2,230,000 |
| Korea | 208,000 | 371,000 | 557,000 | 476,000 |
| Japan | 142,000 | 290,000 | 428,000 | 926,000 |
| Java | 24,000 | 100,000 | 280,000 | 371,000 |
| Costa Rica | 2,000 | 14,000 | 7,000 | 28,000 |

The largest increase was recorded in the Transvaal, where the production practically doubled itself in the four years 1903 to 1906.

The number of persons engaged in gold mining in each State and New Zealand during the last six years is shewn in the following table. The figures for South Australia include 227 Chinese working on the fields in the Northern Territory.

PERSONS EMPLOYED IN GOLD MINING, 1901 to 1907.

| State. | Persons Employed in Gold Mining. | | | | | | |
|-----------------------|----------------------------------|--------|--------|--------|--------|--------|--------|

| New Zealand ... | 12,732 | 11,398 | 10,210 | 10,898 | 9,362 | 9,039 | 9,138 |

§ 3. Platinum and the Platinoid Metals.

1. **Platinum.**—The existence of platinum was first noted in New South Wales in 1851 by Mr. S. Stutchbury, who found a small quantity near Orange. Since the year 1878 small quantities of the metal have been obtained from beach sands in the northern coastal district. Platiniferous ore was noted in 1889 at Broken Hill. The chief deposits at present worked in the State are situated at Fifield, near Parkes, but the entire production last year was small, amounting to only 276 ozs., valued at £1014.

In Victoria the metal has been found in association with copper at the Walhalla Copper Mine in Gippsland, but the mine is not at present being worked. The metal has also been found in small quantities in black sand beaches in the Otago district of New Zealand, and is present in the alluvial wash at Takaka, Nelson. Up to the present, however, the production has been trifling.

2. **Osmium, Iridium, etc.**—Small quantities of osmium, iridium, and rhodium are also found in various localities. As far back as 1860, the Rev. W. B. Clarke states that he found native iridium. Platinum, associated with iridium and osmium, has been found in the washings from the Aberfoil River, about 15 miles from Oban, on the beach sands of the northern coast; in the gem sand at Bingara, Mudgee, Bathurst, and other places. In some cases, as for example in the beach sands of Ballina, the osmiridium and other platinoid metals amount to as much as 40 per cent. of the platinum, or about 28 per cent. of the whole metallic content.

In Victoria, iridosmine has been found near Foster, and at Waratah Range, South Gippsland.

§ 4. Silver.

1. **Discovery in Each State.**—The famous Polish explorer, Count Strzelecki, was the first to note the occurrence of silver in New South Wales. In a letter addressed to Captain King, R.N., bearing date 26th October, 1839, he speaks of a "specimen of native silver in hornblende rock." In his work, "The Southern Goldfields," published in 1860, the Rev. W. B. Clarke also mentions a discovery of the metal. Since that date silver has been found in a large number of localities throughout the entire State. The Broken Hill field, the chief lode on which was discovered in 1882 by Mr. Charles Rasp, constitutes one of the richest and most productive mining centres in the world. Further reference to the production from the Broken Hill district will be made on a subsequent

page. Amongst other important finds in New South Wales may be mentioned Boorook, near Tenterfield, discovered in 1878; Sunny Corner, originally worked for gold in 1875; Emmaville, 1884; Rivertree, on the Clarence River, 1887; Borah Creek, near Inverell, 1870; Rockvale, 1895.

Mining for silver is not carried on to any extent in Victoria, the production recorded in the mining returns being chiefly obtained in the process of refining gold, and the same applies in the case of the production from Western Australia. In Queensland most of the important gold mines yield also supplies of silver, but the credit of establishing the silver mining industry *per se* belongs to the Ravenswood field, where in 1879 the recovery of a parcel of 40 tons of galena assaying 130 ozs. of silver to the ton, marked the opening of the industry. At Chillagoe in 1884 there were thirty-two silver lead shows being worked, while during the decade 1885-1895 over 1½ million ozs. were raised at the Mount Albion mine. The Lady Jane and Girofla mines in the Mungana group at present are producing large supplies of silver lead ore of high grade. The Silver Spur mine at Texas produced £11,500 worth of silver lead in 1894, and the ore deposits in the vicinity are reckoned to be the richest in Southern Queensland. In South Australia, silver lead is found in the main range, south of Adelaide. The Wheal Gawler mine, near Glen Osmond, opened in 1841, was probably the first mine worked in the Commonwealth. Silver lead deposits have also been noted north-east from Farina and west from Beltana. The production of both silver and lead in 1907 was only about £700. A small amount of silver lead is also obtained in the Northern Territory, the production in 1907 being valued at £4164. Tasmania is the only other State in the Commonwealth which produces any considerable quantity of silver. The famous Zeehan mine, on the west coast, was discovered in 1885, and the deposits at Heazlewood River in 1887. Both districts are still opening up rich deposits of ore. In New Zealand, and particularly in the North Island, the gold generally contains a large proportion of silver, but the rich deposits of argenteriferous ores at Puhupuhi, Collingwood, Mount Rangitoto, and other places have not yet been systematically exploited.

2. **Development of Silver Mining.**—In illustration of the great development of silver mining in Australia the following table has been compiled, shewing the production of silver, silver lead and ore, and lead from each State during the years 1881, 1891, and 1901 to 1907:—

PRODUCTION OF SILVER AND LEAD, AUSTRALASIA, 1881 to 1907.

| State. | Silver, Silver Lead Ore, Lead, etc., produced during | | | | | | | | |
|---------------------|--|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
| | 1881. | 1891. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
| | £ | £ | £ | £ | £ | £ | £ | £ | £ |
| N. S. W. ... | ... | 3,621,614 | 1,954,964 | 1,487,837 | 1,539,969 | 2,131,504 | 2,496,709 | 2,564,057 | 4,290,128 |

The figures quoted for New South Wales in the above table represent the *net* value of the product (excluding zinc) of the silver-lead mines of the State, and clearly show the great progress made by this branch of the mining industry during the last quinquennium. In explanation of the values thus given, it must be noted that the metallic contents of the larger portion of the output from the silver-lead mines in the State is extracted outside New South Wales, and it is considered, therefore, that the State should not take full credit for the finished product. Hence the *net* value referred to above refers to that of the ore, concentrates, and bullion, as declared by the several companies

to the Customs Department at date of export. The real importance of the State as a producer of silver, lead, and zinc is thus to some extent lost sight of. The next table, however, which indicates the quantity and value of these metals locally produced, and the quantity and value of concentrates exported during the last five years, will shew the estimated total value of the yield:—

**VALUE OF PRODUCTION FROM SILVER-LEAD MINES OF NEW SOUTH WALES,
1903 TO 1907.**

| Year. | Value of Silver, Lead, and Spelter produced within the C'wealth. | Value of Concentrates Exported | Total. |
|-------------|--|-----------------------------------|-----------|
| | £ | £ | £ |
| 1908 | 1,790,929 | 308,714 | 2,099,643 |
| 1904 | 2,088,784 | 642,125 | 2,730,909 |
| 1905 | 2,131,317 | 1,181,720 | 3,313,037 |
| 1906 | 2,112,977 | 1,876,834 | 3,989,811 |
| 1907 | 2,228,420 | 3,574,775 | 5,803,195 |

3. Chief Centres of Silver Production.—Broken Hill, in New South Wales, and Zeehan, in Tasmania, are the great centres of silver production in Australasia. The production in Queensland has, however, considerably expanded during the last few years.

(i.) *Broken Hill.* The bulk of the production is, of course, from New South Wales, being contributed mainly by the mines in the celebrated Broken Hill district.

At Broken Hill a considerable quantity of high-grade ore has been found at or near the surface, while shafts and drives have been put in along the lode to intersect ore bodies at greater depths. The deepest shaft on the field is on Block 10, where a depth of 1490 ft. has been reached, while shafts at the Proprietary and Junction North have been put down to a depth of 1300 and 1200 ft. respectively. Broken Hill itself consists of a low range about two miles in length, composed of crystalline gneisses passing into banded quartzites, micaceous and hornblendic schists, and garnetiferous sandstones. The rocks are bent into an anticlinal fold, the axis being coincident with the crown of the range, and the strata dipping away on each side almost parallel to the surface of the slope. The lode occupies the saddle-shaped cavity formed by the contortion of the strata, and its outcrop is coincident with the highest part of the range for about a mile and a half in length. Practically the whole of this outcrop has been removed in an open cut varying in width from 20 to 100 ft. The outcrop was composed of massive manganeseiferous limonite associated with siliceous and aluminous material, and containing numerous vughs bearing cerussite, chloride, iodide, and bromide of silver and stalactites of psilomelane. The iron ore contained from 2 to 30 ozs. of silver to the ton and from 10 to 25 per cent. of lead, and was extremely useful in fluxing the siliceous ores beneath it. Underneath the ironstone were found (1) deposits of carbonate of lead and a gangue composed of siliceous and aluminous material containing manganeseiferous iron oxide; (2) other high-grade ores containing kaolin, garnets, quartz with native silver, and also chlorides, chloro-bromides, and iodides, and yielding 4 to 300 ozs. of silver to the ton and a small quantity of lead; (3) a dry low-grade ore yielding from 5 to 40 ozs. to the ton. Below these so-called oxidised ores the lode consisted of rich sulphides containing galena, zinc blende, quartz, garnet, rhodonite, feldspar, iron and copper pyrites, and small quantities of mispickel, wulfenite, and fluorspar. The sulphide ore contains from 6 to 36 ozs. of silver and 2 to 3 dwts. of gold to the ton, from 5 to 50 per cent. of lead, and 14 to 30 per cent. of zinc.

Although the returns are not complete in all cases, the following table relating to the mines at Broken Hill will give some idea of the richness of the field:—

RETURNS OF BROKEN HILL SILVER MINES, 1907.

| Mine. | Authorised Capital. | Value of Output to end of 1907. | Dividends and Bonuses Paid to end of 1907. |
|--|---------------------|---------------------------------|--|
| | £ | £ | £ |
| Broken Hill Proprietary Co. Ltd. ... | 384,000 | 30,966,293 | 11,424,000 |
| Broken Hill Proprietary Block 14 Co. ... | 155,000 | 3,104,253 | 430,827 |
| British Broken Hill Proprietary Co. ... | 264,000 | 1,993,616 | 337,500 |
| Broken Hill Proprietary Block 10 Co. ... | 1,000,000 | 3,242,781 | 1,155,000 |
| Sulphide Corporation Ltd. (Central Mine) ... | 1,100,000 | 7,727,887* | 501,875* |
| Broken Hill South Silver Mining Co. ... | 200,000 | 2,767,650 | 575,000 |
| North Broken Hill Mining Co. ... | 140,000 | 625,893* | 172,440 |
| Broken Hill Junction Mining Co. ... | 100,000 | 797,673* | 85,000 |
| Broken Hill Junction North Silver Mining Co. ... | 180,000 | 336,219* | 25,793 |
| Broken Hill South Blocks Ltd. ... | 200,000 | 197,806 | ... |
| Broken Hill South Extended Ltd. ... | 337,500 | 150,344 | 50,000 |
| Totals ... | 4,060,500 | 51,910,415* | 14,757,435 |

* Incomplete.

(ii.) *Yerranderie and Conrad Stannite.* The mines on the Yerranderie field in the Southern Mining District produced 479,000 ozs. of silver in 1907, besides small quantities of gold and lead. The total production was valued at £80,000, as compared with £9000 in 1900. During 1907 the Conrad Stannite Mines Ltd., at Howell, in the Tingha Division, raised 38,800 tons of ore, valued at £81,097.

(iii.) *West Coast of Tasmania.* The silver-lead mines on the west coast are now well established. Amongst the most important are the Mt. Zeehan, Zeehan-Montana, Zeehan-Western, Florence, Oonah, Silver Queen Extended, and South Comstock. The total production of silver-lead ore in 1907 was 89,762 tons, valued at £572,560.

(iv.) In Queensland the two great Mungana mines, the Lady Jane and Girofla, produced in 1907, £34,027 worth of copper, £22,307 worth of silver, and £30,978 worth of lead. The Silver Spur mine at Texas produced £25,749 worth of metals, chiefly silver and lead. It is believed that silver lead will also prove an important factor in the development of the Etheridge goldfield.

The effect of the improved treatment of refractory ores is seen particularly in the returns for the Broken Hill district of New South Wales, where the export of zinc spelter and concentrates has increased from 97 tons valued at £988 in 1889, to 237,219 tons valued at £536,620 in 1907. In addition to the numerous plants for dealing with refractory ores on the fields itself, the Broken Hill Company possesses extensive smelting works at Port Pirie in South Australia. At Dapto and Cockle Creek in New South Wales there are also smelting establishments capable of dealing with considerable bodies of ore of various classes. The Tasmanian silver and lead ores are principally dealt with by the Tasmanian Smelting Company's works at Zeehan.

4. *World's Production of Silver.*—The world's production of silver during the last six years is estimated to have been as follows:—

WORLD'S PRODUCTION OF SILVER, 1901 to 1907.

| Year ... | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|---|---------|---------|---------|---------|---------|---------|---------|
| World's production* in 1000 fine ozs. ... | 174,851 | 163,937 | 173,222 | 176,840 | 181,338 | 185,035 | 193,542 |

* Add 000 to figures for fine ounces.

The Commonwealth's share in the world's silver production averages about 13 per cent.

5. **Prices of Silver.**—As the production of silver is dependent to a very large extent on the price realised, a statement of the average price per standard ounce paid by the London Mint at various periods and during the last six years is given below.

PRICES OF SILVER, 1871 to 1907.

| Year | 1871. | 1881. | 1891. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|------------------------|-------------------|------------------|-------------------|------------------|-------------------|------------------|------------------|-------------------|-------------------|-------------------|
| Pence per standard oz. | 60 $\frac{7}{16}$ | 51 $\frac{1}{8}$ | 45 $\frac{5}{16}$ | 27 $\frac{1}{8}$ | 24 $\frac{5}{16}$ | 23 $\frac{1}{8}$ | 26 $\frac{1}{2}$ | 27 $\frac{7}{16}$ | 31 $\frac{1}{16}$ | 30 $\frac{9}{16}$ |

During the month of November, 1906, owing to the small sales in New York, and also to the fact that the Indian, American, and Mexican Governments were all buying silver, the price rose to 33 $\frac{1}{2}$ d., the highest realised since 1893, when the average stood at 36 $\frac{1}{16}$ d.

6. **Employment in Silver Mining.**—The number of persons employed in silver mining during each year of the period 1901 to 1907 is given below :—

PERSONS EMPLOYED IN SILVER MINING, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------|-------|-------|-------|-------|-------|--------|--------|
| N.S.W. ... | 6,298 | 5,382 | 6,035 | 7,071 | 7,887 | 9,414 | 10,021 |
| Victoria ... | ... | ... | ... | ... | ... | 13 | 10 |
| Queensland ... | 40 | 100 | 458 | 45 | 293 | 282 | 785 |
| South Australia | 150 | 150 | 150 | 50 | 50 | 50 | 86 |
| West. Australia | ... | ... | ... | ... | ... | ... | 8 |
| Tasmania ... | 2,414 | 2,893 | 1,681 | 1,101 | 1,512 | 1,745 | 1,908 |
| Commonwealth | 8,902 | 8,525 | 8,324 | 8,267 | 9,742 | 11,504 | 12,818 |

As the table shews, the bulk of the employment was in New South Wales and Tasmania, the quantity of silver raised in the other States, excepting Queensland, being unimportant.

§ 5. Copper.

1. **History.**—(i.) *New South Wales.* It is believed that copper was the first metal mined for in New South Wales, the earliest attempts at working taking place about the year 1844. The deposits at Copper Hill, near Molong, were worked in 1845, as well as those in the neighbourhood of Canowindra. In 1847 mining for copper was commenced at the Summerhill Estate, near Rockley. The Rev. W. B. Clarke reported the discovery of copper ores near Marulan in 1851, and at Quidong, in the Snowy River district, in 1852. The principal seat of the copper-mining industry at the present date is in the Cobar district, the value of the deposits there being first recognised in 1869. The Mount Hope field was opened in 1878, Nymagee 1880, and Lake George in 1882.

At present, in addition to the yield from Cobar, good returns are being obtained at Mount Hope, at Cadia near Orange, at the Lloyd mine, Burruga, and at Cangai in the Grafton district.

(ii.) *Victoria.* In Victoria copper has been found at Bethanga, Sandy Creek, near Bogong, Walhalla on the Thomson River, and on the Snowy River and at Mount Tara near Buchan, but there are no mines at present being worked for their copper contents.

(iii.) *Queensland.* The first important discovery of copper in Queensland was made in the year 1862, when a rich lode was found near Clermont, on the Peak Downs. A

further discovery was made during the same year at Mount Perry. Copper, tin, silver, and gold were found on the Herberton, Walsh, and Tinaroo mineral fields in 1879. The famous Mount Morgan, discovered in 1882, also produces a considerable amount of copper, the production therefrom in 1907 exceeding that from any other district. The production in 1907 from the more important districts was as follows:—Mount Morgan, £386,000; Herberton, £314,000; Mount Perry, £170,000; Cloncurry, £55,000; Gladstone, £42,000.

(iv.) *South Australia.* Taking the entire period over which production extended, the yield of copper in South Australia easily outstrips that of any other State in the Commonwealth. In recent years, however, Tasmania, Queensland, and New South Wales have come to the front as copper producers, as the table on the next page will shew. Deposits of copper ore are found over a large portion of South Australia. The Kapunda mine, discovered in 1842 by Messrs. Dutton and Bagot, is situated fifty miles north of Adelaide, and is the oldest copper mine in the State. Up to the end of 1879 the production amounted to 70,000 tons, the metal possessing such a high standard of purity that it always obtained the highest prices in the world's markets. During the nine years 1870 to 1878 the production was valued at £157,000. The Burra Burra mine, located in 1845 by a shepherd named Pickett, is situated about 100 miles north of Adelaide. The original capital invested in this mine was £12,320 in £5 shares, on which no call was ever made, while dividends to the amount of £800,000 were paid. For many years this mine produced from 10,000 to 13,000 tons of ore, averaging 22 to 23 per cent. of copper. During the 29½ years in which the mine was worked the production was valued at £4,749,000. In 1859 as many as 1170 persons were employed on it. The mine has lain practically idle for many years, but recently there have been attempts at re-working.

Yorke's Peninsula, between Spencer's Gulf and St. Vincent's Gulf, contains a large area of copper-bearing country. The principal mines at Wallaroo and Moonta are situated a few miles from Port Wallaroo, and date back to 1860. For about thirty years the Moonta mines were worked independently, selling their ores to the Wallaroo company. During its separate existence the Wallaroo field produced about £2,600,000 worth of copper, while Moonta yielded £5,396,000, and was the first Australian mining field to produce £1,000,000 in dividends. The amalgamation took place in 1889, and since that year the united properties have produced about £4,281,000 worth of copper. The entire yield from the date of first working is estimated at about £12,500,000. On the 30th. June, 1907, the number of employees was stated as 3107. The mines just enumerated represent a very small proportion only of those opened on the copper bearing areas of the State. The latest returns shew that at Mutooroo near the New South Wales border, 100 men are employed in mining for copper, while work is proceeding at Yudnamutana, the Daly mine, and some of the old mines to the south of Adelaide.

Copper is also obtained in the Northern Territory, the production being chiefly from the mines of the Northern Territories Mining and Smelting Co. Ltd. at Yam Creek.

(v.) *Western Australia.* The inception of active mining operations in Western Australia dates from the year 1842, when lead and copper mines were discovered in the Northampton district, but working was carried on in a most perfunctory manner in the early days, sinking being discontinued as soon as the lodes shewed signs of contraction. Rich ores of copper have been located at Whim Creek, in the Pilbara district, about fifty miles eastward of Roeburne, the copper ore being removed by quarrying. Promising lodes have also been struck at the Irwin mines, between Arrino Springs and the Irwin River. The Kimberley district is intersected in places by copper and lead deposits in association with gold, and a rich lode has been located at Mount Barren, about 120 miles to the eastward of Albany, while various quartz reefs in the Wongan Hills contain copper in association with gold and iron. The West Pilbara field, from which there was no production in 1906, yielded £63,000 worth of copper ore in 1907. From the mines at Eulaminna in the Mount Morgans district, the yield was £59,000 and the Phillips River fields shewed a total output of £57,000.

(vi.) *Tasmania.* For a long time Tasmania was the largest producer of copper in the Commonwealth, but during the last two years Queensland has occupied the premier position. The cupriferous area in the island State stretches from Mount Lyell, Mount Tyndall, Mount Read, and Mount Murchison, in the western district, to some distance north of the Pieman River. Copper mining has also been started on the North-west Coast, notably in the Stowport and Blythe River districts, and some attention has been given to the deposits at Rocky Cape and Boat Harbour. In 1907 the output of the Mount Lyell Mining and Railway Co. Ltd. was 8247 tons of blister copper, which contained copper valued at £745,253, silver £87,438, and gold £81,876.

(vii.) *New Zealand.* Copper ore has been found and worked in different localities in New Zealand, but in a desultory fashion only, the export in 1907 being 56 tons, valued at £595.

2. **Production of Copper.**—The production of copper during the years 1901 to 1907 in the various States of the Commonwealth has been influenced considerably by the ruling prices, which have fluctuated in an extraordinary way. The value of the production in earlier years and for 1901 to 1907 is shewn in the following tables :—

VALUE OF PRODUCTION OF COPPER, AUSTRALASIA, 1881 to 1907.

| State. | 1881. | 1891. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|--------------|---------|---------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
| | £ | £ | £ | £ | £ | £ | £ | £ | £ |
| N.S.W. ... | 267,884 | 119,195 | 412,292 | 307,806 | 462,640 | 406,001 | 527,403 | 789,527 | 727,774 |
| Victoria | 8,186 | 216 | ... | ... | 500 | ... | ... | ... | 2,356 |
| Q'land ... | 19,637 | 865 | 194,227 | 189,200 | 285,122 | 257,896 | 503,547 | 916,546 | 1,028,179 |
| S. Aust. ... | 418,296 | 239,436 | 500,077 | 432,525 | 472,033 | 438,960 | 483,431 | 743,671 | 705,031 |
| W. Aust. ... | ... | 4,463 | 75,246 | 8,090 | 56,541 | 25,180 | 16,266 | 50,337 | 180,387 |
| Tasmania | ... | ... | 1,026,748 | 710,146 | 511,801 | 569,053 | 563,275 | 844,663 | 869,665 |
| C'wealth | 714,003 | 364,175 | 2,208,590 | 1,647,767 | 1,788,697 | 1,697,090 | 2,093,922 | 3,344,744 | 3,513,393 |
| N.Z. ... | 36 | 4 | 105 | ... | 123 | ... | 17 | ... | 595 |

3. **Price of Copper.**—The great variation in price that the metal has undergone is shewn in the following table of prices realised for standard and best selected copper since 1897 :—

FLUCTUATION IN THE VALUE OF COPPER, 1897 to 1908.

| Year. | Average Price of Copper per Ton. | | | | | | Year. | Average Price of Copper per Ton. | | | | | |
|----------|----------------------------------|----|----|----------------|----|----|-------------------|----------------------------------|----|----|----------------|----|----|
| | Standard. | | | Best Selected. | | | | Standard. | | | Best Selected. | | |
| | £ | s. | d. | £ | s. | d. | | £ | s. | d. | £ | s. | d. |
| 1897 ... | 49 | 2 | 6 | 52 | 5 | 6 | 1905—Jan. to June | 67 | 2 | 1 | 71 | 3 | 9 |
| 1898 ... | 51 | 16 | 7 | 55 | 8 | 3 | July to Dec. | 72 | 1 | 11 | 77 | 7 | 11 |
| 1899 ... | 73 | 13 | 9 | 78 | 2 | 3 | 1906—Jan. to June | 82 | 2 | 8 | 86 | 18 | 11 |
| 1900 ... | 73 | 2 | 5 | 78 | 9 | 1 | July to Dec. | 92 | 15 | 1 | 97 | 11 | 1 |
| 1901 ... | 66 | 19 | 1 | 73 | 8 | 2 | 1907—Jan. to June | 103 | 4 | 4 | 111 | 8 | 4 |
| 1902 ... | 52 | 8 | 3 | 56 | 12 | 7 | July to Dec. | 70 | 18 | 10 | 76 | 0 | 6 |
| 1903 ... | 58 | 3 | 2 | 62 | 13 | 8 | 1908—Jan. to June | 59 | 0 | 9 | 62 | 5 | 10 |
| 1904 ... | 59 | 0 | 7 | 62 | 13 | 0 | | | | | | | |

There is no doubt that the steady rise in the price of copper from the year 1902 onwards caused a large amount of overtrading with consequent unhealthy inflation of values, while the sudden drop in 1907 was directly due to the financial panic in America. It is believed, however, that the increasing demand for the metal in electrical and other industries will, under ordinary circumstances, tend to establish prices on a sounder basis, and at higher rates than those quoted for the last six months in the table above.

4. **Relationship to World's Production.**—The world's production of copper during the last seven years is estimated to have been as follows:—

WORLD'S PRODUCTION OF COPPER, 1901 to 1907.

| Year | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|---------------------------------|---------|---------|---------|---------|---------|---------|---------|
| World's production (short tons) | 586,712 | 597,805 | 664,644 | 731,342 | 771,239 | 788,890 | 798,023 |

Of the total production last year the share of the Commonwealth amounted to about 6 per cent.

5. **Employment in Copper Mining.**—The number of persons employed in copper mining during the last six years was as follows:—

PERSONS ENGAGED IN COPPER MINING, 1901 to 1907.

| State. | Persons Engaged in Copper Mining. | | | | | | |
|-----------------|-----------------------------------|-------|-------|-------|--------|--------|--------|
| | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
| N.S.W. | 2,964 | 1,699 | 1,816 | 1,850 | 2,171 | 3,047 | 3,764 |
| Victoria | 4 | ... | ... | ... | ... | 3 | 10 |
| Queensland | 814 | 666 | 1,418 | 1,094 | 1,435 | 2,598 | 3,941 |
| South Australia | 4,000 | 4,000 | 4,000 | 4,000 | 4,500 | 5,000 | 5,254 |
| West. Australia | 321 | 113 | 193 | 169 | 125 | 296 | 611 |
| Tasmania | * | * | * | 925 | 2,269 | 2,391 | 2,614 |

* Included with silver miners.

There were 112 persons engaged in mining for copper during 1907 in New Zealand.

§ 6. Tin.

1. **History.**—(i.) *New South Wales.* The probable occurrence of tin in New South Wales was first referred to by the Rev. W. B. Clarke as early as 1849, while the same author notes having obtained a specimen in the Kosciusko district in 1851 and in the New England district in 1853. He also reported the discovery of stanniferous deposits at different localities in the Darling Downs, Queensland. In 1872 the Messrs. Fearby discovered tinstone near Inverell, and the present Elsmore mine was opened near the spot. The news of the discovery of tin in the New England district attracted a mild rush, and in March, 1872, valuable deposits of stream tin were found at Vegetable Creek. It is interesting to note that native tin, which is extremely rare, was discovered at Oban, in this district. At Cope's Creek stanniferous gravels occur in the channel of the stream and in the slopes adjacent to it. Post-tertiary deposits of tin-bearing ore have been found at Emmaville, where mining was commenced soon after the opening of the district. In the southern portion of the State deposits have been discovered at Dora Dora, near Albury, and Pulletpop, near Wagga, in the central-western district at Burra Burra, near Parkes, and in the far west at Poolamacca and Euriowie. The bulk of the yield, however, still comes from the Tingha-Inverell district, the production last year being £194,000 out of a total for the whole State of £293,000. Of the total production in 1907 £176,212, or 60 per cent., represents the value obtained by dredging.

(ii.) *Victoria.* In Victoria lode tin has been discovered at Mt. Wills, Beechworth, Eldorado, Chiltern, Stanley, and other places in the north-eastern district; and stream tin has been found in a large number of places, including those just mentioned in the north-eastern district. The bulk of the production last year was obtained by dredging and hydraulic sluicing, the chief yields being 36 tons of ore, valued at £3721, raised by the Cock's Pioneer Dredging Company at Beechworth, and 27 tons, valued at £2903, raised by the Franklin River Hydraulic Sluicing Company at Toora.

(iii.) *Queensland.* The first notable discovery of the metal in Queensland occurred in 1872, when rich deposits of stream tin were found in the country to the south of Warwick and on the borders of New South Wales. This district proved to be surprisingly rich, the value of the metal raised there during the five years subsequent to its discovery being £715,000. The alluvial deposits, however, soon became exhausted, so far as the ordinary miner is concerned, but some degree of success has attended dredging operations in the district. In 1879 important discoveries were made in the Herbert River district, and the rich Herberton, Walsh, and Tinaroo mineral fields were opened up, further discoveries being shortly after reported on the Russell, Mulgrave, Jordan, and Johnstone. At the Annan River tinfield, near Cooktown, alluvial mining has been carried on continuously since 1886. The production in 1907 amounted to 5140 tons, valued at £496,766, more than three-fourths of which were produced by the Herberton mineral field.

(iv.) *Northern Territory.* Valuable lodes of tin are found in the Northern Territory at West Arm and Bynoe Harbour, and at Horseshoe Creek, south of Pine Creek, but the deposits have not yet been exploited to the extent they deserve.

The metal has also been discovered near Earea Dam in the province proper.

(v.) *Western Australia.* Tin was first discovered in Western Australia in the year 1888, and since that date has been found in several widely distant localities in the State—at the head of the Bow and Lennard Rivers, in the Kimberley district; on the Thomas River, Gascoyne goldfield; at Brockman's Soak and the Western Shaw, in the Pilbara district; and at Greenbushes, in the south-western portion of the State. The production of tin for the State during 1907 amounted to 1624 tons, valued at £158,648, to which the Greenbushes field contributed 770 tons, valued at £73,045, and Pilbara 854 tons, valued at £85,603. Lode tin has been discovered at Wodgina, in the Pilbara field, and the deposits are being developed.

(vi.) *Tasmania.* Tin mining in Tasmania dates from the year 1871, when the celebrated Mount Bischoff mine was discovered by Mr. James Smith. This mine, which is probably the richest in existence, is worked as an open quarry, and a large proportion of the original hill has been removed in the course of developmental operations. Soon after rich deposits were located in the north-east district by Mr. G. B. Bell, while deposits of stream tin were discovered near St. Helens by Messrs. Wintle and Hunt. Further finds were reported from Flinders and Cape Barren Islands, and in 1875 the metal was discovered at Mount Heemskirk. The total production of Tasmania in 1907 was 4343 tons of ore, valued at £501,681, the largest producer being the Briseis Tin Mines Limited, in the North-East Division, with a return of 1017 tons. This company distributed during the year £112,500 in dividends. The Mount Bischoff mine paid dividends amounting to £36,000, making a total to the end of 1907 of £2,124,000. Good returns are being obtained at the North-East Dundas and at Mount Heemskirk, and a fair amount of alluvial is furnished by the Eastern mining division.

(vii.) *New Zealand.* In New Zealand tin ore has been found widely distributed among the gravel drifts in the neighbourhood of the Remarkables, in Stewart Island, but the deposits have up to the present not proved sufficiently rich to pay for working.

2. Value of Tin Produced.—The development of tin mining is, of course, largely dependent on the price realised for the metal, and, as in the case of copper, the production

has been subjected to somewhat violent fluctuations. The table below shews the production in each of the Commonwealth States during the years 1881, 1891, and 1901 to 1907. There is no record of production in New Zealand:—

TIN PRODUCED IN AUSTRALIA, 1881 to 1907.

| State. | Value of Tin Produced in | | | | | | | | |
|---------------------|--------------------------|---------|---------|---------|---------|---------|-----------|-----------|-----------|
| | 1881. | 1891. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
| | £ | £ | £ | £ | £ | £ | £ | £ | £ |
| New South Wales ... | 568,795 | 133,963 | 76,544 | 59,593 | 150,208 | 188,377 | 226,110 | 255,744 | 293,305 |

| South Australia ... | ... | 1,938 | 5,586 | 6,078 | 10,773 | 24,179 | 23,768 | 36,907 | 41,365 |
| West Australia ... | ... | 10,200 | 40,000 | 39,783 | 55,890 | 58,817 | 86,840 | 157,644 | 158,648 |
| Tasmania ... | 375,775 | 293,170 | 212,542 | 237,846 | 308,594 | 257,256 | 368,796 | 537,266 | 501,681 |
| Commonwealth ... | 1,145,603 | 560,750 | 432,576 | 459,971 | 770,779 | 804,095 | 1,014,127 | 1,509,488 | 1,502,296 |

3. **World's Production of Tin.**—According to "The Mineral Industry" the world's supplies of tin during each of the last five years were obtained as follows:—

THE WORLD'S TIN SUPPLIES, 1903 to 1907.

| Origin. | 1903. | 1904. | 1905. | 1906. | 1907. |
|--|--------|--------|--------|---------|--------|
| | Tons. | Tons. | Tons. | Tons. | Tons. |
| English production ... | 4,282 | 4,132 | 4,468 | 4,522 | 4,700 |
| Chinese exports ... | ... | ... | 4,482 | 4,052 | 4,000 |
| Straits to Europe and America ... | 52,212 | 57,419 | 56,840 | 57,143 | 52,520 |
| Straits to India and China ... | 3,123 | 3,261 | 1,484 | 1,292 | 3,140 |

| Billiton sales in Java and Holland ... | 3,650 | 3,215 | 2,715 | 1,968 | 2,229 |
| Bolivian arrivals on Continent ... | 9,630 | 12,978 | 14,245 | 16,394 | 15,500 |
| Bolivian arrivals in England ... | | | | | |
| Total (long tons) ... | 92,901 | 97,214 | 99,222 | 101,139 | 99,965 |

The main users of tin are the manufacturers of tin-plates, while it is also required in conjunction with other metals to produce bronze, brass, Britannia metal, pewter, printers' type, and solder. It is stated that the rising tendency of prices during recent years is due to the fact that production has not been commensurate with the demands for consumption, and also in some measure to the fact that for industrial purposes the metal can be replaced by others to a limited extent only.

4. **Prices of Tin.**—The average price of the metal in the London market for the year 1897 and from 1901 to 1907, was as follows:—

PRICE PER TON OF TIN, 1897 to 1907.

| Year. | Price per Ton. | Year. | Price per Ton. |
|----------|----------------|----------|----------------|
| | £ s. d. | | £ s. d. |
| 1897 ... | 61 8 0 | 1904 ... | 126 14 8 |
| 1901 ... | 118 12 8 | 1905 ... | 143 1 8 |
| 1902 ... | 120 14 5 | 1906 ... | 180 12 11 |
| 1903 ... | 127 6 5 | 1907 ... | 172 12 9 |

According to "The Mineral Industry" the maximum price obtained for tin during the period 1897-1907 was reached in December, 1906, when the metal was quoted at £195 19s. 9d. per ton.

5. **Employment in Tin Mining.**—The number of persons employed in tin mining during each of the years 1901 to 1907 is shewn below:—

PERSONS ENGAGED IN TIN MINING, 1901 to 1907.

| State. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-----------------------|-------|-------|-------|-------|-------|-------|-------|
| New South Wales ... | 1,428 | 1,288 | 2,502 | 2,745 | 2,884 | 3,795 | 3,173 |
| Victoria ... | ... | ... | ... | 50 | 50 | 95 | 87 |
| Queensland ... | 1,148 | 1,467 | 1,598 | 2,237 | 2,936 | 2,872 | 2,582 |
| South Australia ... | ... | ... | ... | ... | ... | ... | 554 |
| Western Australia ... | 413 | 249 | 294 | 284 | 479 | 890 | 1,003 |
| Tasmania ... | 1,065 | 1,260 | 1,331 | 1,304 | 1,351 | 1,659 | 1,828 |
| Commonwealth ... | 4,054 | 4,264 | 5,725 | 6,620 | 7,700 | 9,311 | 9,227 |

§ 7. Zinc.

1. **Production of Zinc.**—The production of spelter is practically confined to the Broken Hill district of New South Wales, where zincblende forms one of the chief constituents in the enormous deposits of sulphide ores.

Improvements in means of extraction have led to a largely increased production in recent years as the following table shews:—

| Year. | Quantity of Zinc (Spelter and Concentrates) Produced. | Value. | Year. | Quantity of Zinc (Spelter and Concentrates) Produced. | Value. |
|-------|---|--------|-------|---|---------|
| | Tons. | £ | | Tons. | £ |
| 1889 | 97 | 988 | 1906 | 103,666 | 292,806 |
| 1891 | 219 | 2,622 | 1907 | 237,219 | 536,620 |
| 1899 | 49,879 | 49,207 | | | |

The average price of spelter per ton in the London market during the last three years was £25 8s. 8d. in 1905, £27 0s. 5d. in 1906, and £23 15s. 5d. in 1907.

§ 8. Iron.

1. **History.**—(i.) *New South Wales.* The existence of large deposits of iron ore in New South Wales has been known since the early years of the history of the State, but until quite recently little was accomplished in the way of utilising these deposits so as to produce any extensive supply of marketable metal. According to a report furnished by the Government Geologist in 1905, the total quantity of ore available for exploitation is 53,000,000 tons, the deposits at Cadia, near Orange, being computed to contain no less than 39,000,000 tons, of which a large proportion consists of ores capable of yielding a high-grade metal. The aluminous ores at Wingello are estimated to contain 3,000,000 tons, the titaniferous magnetic ores on the Williams and Karuah Rivers nearly 2,000,000 tons, the hematite and brown ores at Carcoar, 3,000,000 tons; while several other districts are capable of supplying over 1,000,000 tons. There are extensive supplies of

coal and limestone within reasonable distance of some of the more extensive deposits. The increasing demand for iron and steel manufactures and the enhanced price of the metal, will probably enable the State in the near future to take its place amongst the iron-producing countries of the world. Ironworks were established at Fitzroy, near Mittagong, as far back as 1852, and at Eskbank, near Lithgow, in 1875, but the production of pig iron and manufactures was in neither case considerable. In May, 1907, however, works on a much larger scale were opened at Lithgow, and their success for some time seemed practically assured, since the Government contracted with them for a supply of rails and other ironwork for a period of seven years. The ironstone used in this establishment was obtained at Carcoar, where the deposit is calculated to yield 2000 tons of ore for a period of twenty-five years. Coke was obtained in large quantities from the South Coast district, but it was proposed to obtain the main supply from the Oakey Park Coal Company, while the limestone was furnished by the Portland Cement Company. During 1907 the ore raised amounted to 34,731 tons. The following materials were also received at the blast furnace:—Limestone, 13,433 tons; coke, 20,873 tons; and slag, 2831 tons. The output was 18,631 tons of pig iron, valued at £60,550. In addition 11,271 tons of iron and steel, bars, castings, etc., valued at £118,082, were made from scrap, and 5700 tons of steel ingots, valued at £28,075, were made from pig iron and steel scrap. The mine and works employed 871 hands, and the wages paid amounted to £79,944. At date of writing this article operations were suspended.

(ii.) *Victoria.* Iron ore has been located at various places in Victoria, particularly at Nowa Nowa, in the Gippsland district, and at Dookie. In his report for 1905 the Secretary for Mines states that without special assistance to the industry there does not seem to be any prospect of the deposits being cheaply worked.

(iii.) *Queensland.* Queensland possesses some extensive deposits of iron ore, which is mined chiefly for fluxing purposes in connection with the reduction of gold and copper ores.

(iv.) *South Australia.* In South Australia iron ore is raised for fluxing purposes only, although the State possesses some rich deposits capable of being mined for an indefinite period. The best known deposit is the Iron Knob, a veritable hill of iron of high percentage, situated about forty miles W.S.W. from Port Augusta. This property has been leased by the Broken Hill Proprietary Company, the ore being transported to the smelting works at Port Pirie. Extensive beds of limonite with a little hematite are found at Cutana, near Mingary, and it was from this district that the Broken Hill Company at one time obtained ore for fluxing purposes. At Mount Jagged, where a small quantity of pig iron was made about thirty-five years ago, there are large deposits of hematite. Ore beds of varying extent have been located at Peralilla, near Port Victor, at Oodla Wirra, at Donnelly's, near Quorn, and several other localities.

The estimated quantity of iron ore in sight at the Iron Knob and Iron Monarch has been set down at 21,000,000 tons.

(v.) *Western Australia.* This State has some very rich deposits of iron ore, but owing to their geographical position the most extensive fields at the present time are practically unexploited, the production in the State being confined chiefly to that needed for fluxing purposes. The Murchison field possesses some extensive deposits of high-grade ore.

(vi.) *Tasmania.* The existence of large quantities of iron ore in Tasmania was noted as far back as 1822, when Surveyor-General Evans alluded to the "surprising abundance of iron within a few miles of Launceston." A company known as the Tasmanian Charcoal Iron Company was formed to work these deposits, and commenced operations in June, 1876. Unfortunately, however, the presence of chromium rendered the pig-iron so hard and brittle that the works had to be abandoned. Extensive deposits of specular iron ore are also found in the neighbourhood of the Blythe and Gawler Rivers.

(vii.) *New Zealand.* The deposits of iron ore in the Auckland, Otago, and Nelson districts have up to the present been little utilised, but it is proposed to float a company to exploit the rich hematite deposit at Parapara.

§ 9. Other Metals.

1. **Aluminium.**—In the form of bauxite or hydrous sesquioxide, aluminium is found in New South Wales at Emmaville, Inverell, and Wingello, its existence being first recognised in 1889. The metal, however, has not been manufactured locally.

2. **Antimony.**—This metal is widely distributed in New South Wales, and has been found native at Lucknow, near Orange. Dyscrasite, a silver antimonide, has been found in masses up to one ton in weight in the Broken Hill lodes. It has also been found at various places in Victoria, chiefly in association with gold. In 1906 the export of antimony metal and ore from New South Wales amounted to £52,645, and in 1907 to £46,278. The chief production in 1907 was from the Hillgrove district, and amounted to £22,372. The production of antimony ore in Victoria during 1907 amounted to 4500 tons, valued at £13,290. The ore was raised by two syndicates operating at Costerfield. In New Zealand the metal has been found associated with gold and silver in quartz lodes at Puhipuhi, Thames, and Te Aroha, in the Auckland district, and at Rēefton, Langdons, and the west coast of Middle Island, as well as at several localities in the Otago district. An extensive lode was at one time worked at Endeavour Inlet, and a good sulphide lode at Collingwood. Extensive deposits were discovered at Neerdie, in the Wide Bay district of Queensland, during 1872, also at Wolfram Camp on the Hodgkisson field, on the Palmer River, and in the Ravenswood district. In 1907 the yield from the Hodgkisson mines was valued at £6356, while ore to the value of £550 was raised at Ravenswood. In Western Australia good lodes of stibnite, carrying gold, have been found in the Roeburne district.

3. **Arsenic.**—In the form of arsenopyrite, arsenic is of wide distribution in Victoria, but the deposits are worked to a limited extent only. At Ballarat a small quantity of the oxide is obtained from the flues of roasting furnaces.

4. **Barium.**—A valuable lode of barium sulphate has been discovered near Dalwin, on the North Lyell railway, in Tasmania, and the necessary plant is in course of erection to develop the deposit. It is stated that the lode is from 2½ to 7 feet wide over a length of over 40 chains.

5. **Bismuth.**—This metal has been found in New South Wales, near Glen Innes, and also in the vicinity of Pambula, its discovery dating from 1877. About seventeen tons of metal and ore were exported during 1907. In Queensland the metal is found in the Hodgkisson and Herberton districts, at Ukalunda in the Ravenswood district, and at Biggenden, in the Burnett district. The production in 1907 was valued at £1806. In South Australia deposits are found at Balhannah, at Mount MacDonald, and at Winninnie, on the shores of Spencer's Gulf. Small quantities are also produced in Tasmania.

6. **Chromium.**—In New South Wales chromium is found at Bowling Alley Point, on the Peel River, and also near Coolac, but the quantity raised at present is insignificant. The metal is also found in the Nelson district in New Zealand.

7. **Carnotite.**—A discovery of carnotite ore was made twenty miles from the Olary railway station in South Australia, and steps are being taken to test its value commercially.

8. **Cobalt.**—This metal was found at Carcoar in New South Wales in 1888, and subsequently at Bungonia, Port Macquarie, and various other places. Deposits have been noted in South Australia near Bimbourie, and South Blinman, in Western Australia at Norseman and Kanowna, and at various places in Victoria.

9. **Lead.**—This metal was first noted in New South Wales in 1849, when small specimens of native metal were found by the Rev. W. B. Clarke. At present lead mining *per se* is not practised to any extent in the Commonwealth, the supply of the metal being

chiefly obtained in conjunction with silver. In Victoria oxides, sulphides, and carbonates of lead are found in the reefs of most of the goldfields. The deposits are not, however, of sufficient extent to repay the cost of working. In Queensland the deposits are worked chiefly for the silver contents of the ore. Galena is found in several districts in New Zealand, but is not worked to any extent.

10. **Mercury.**—In New South Wales mercury was first recorded by the Rev. W. B. Clarke in 1843. Cinnabar has been found in lodes and impregnations at various places, such as Bingara, Clarence River, etc. Up to the present the production of quicksilver has been small, the total being only a little over 1000 lbs. Lodes of cinnabar have been found in Queensland at Kilkivan, and at Black Snake, in the Wide Bay district, about four tons were produced between 1874 and 1891. Small quantities have been found near Willunga in South Australia. In New Zealand cinnabar has been located at Waipori, Waitahuna, Puhipuhi, Te Aroha, and Ohaeawai. Cinnabar in the form of grains is of frequent occurrence in the alluvial deposits of the Middle Island.

11. **Manganese.**—Ores of this metal occur in considerable quantity in widely separated districts in New South Wales, but the low price of the metal precludes mining to any great extent, and the production to date has been trifling. In Queensland there are extensive deposits at Gladstone, the product being utilised chiefly by the Mount Morgan mine. The production from the Mount Miller mine amounted in 1907 to 1116 tons of ore, valued at £4464. Extensive deposits of the ore were mined at Boolcunda in South Australia some years ago, but latterly the production has ceased. Deposits have also been noted at Kangaroo Island, Quorn, Tumby, and various other parts of the State. In Western Australia ores of the metal are found widely scattered, the black oxide being especially plentiful in the Kimberley district. In New Zealand deposits are found in various localities, but little has been done in the way of exploration.

12. **Molybdenum.**—In New South Wales molybdenite is obtained at Kingsgate near Glen Innes, the export in 1907 being 22 tons, valued at £3564. The production in Queensland for the same year was valued at £3442, the bulk of which was contributed by the Hodgkinson field.

13. **Tungsten.**—Wolfram and scheelite, the principal ores of tungsten, are both mined to a small extent in New South Wales. During 1907 the export of wolfram was 207 tons, valued at £26,235, and of scheelite 196 tons, valued at £23,781. Wolfram was mined chiefly at Torrington, Emmaville, and Wagga, and scheelite at Hillgrove. In Queensland wolfram and molybdenum are both obtained on the Hodgkinson, Etheridge, and Herberton fields, and at Kangaroo Hills and Star River. The production in 1907 was over £90,000, chiefly contributed to by the mines on the Hodgkinson and Herberton fields. The Northern Territory of South Australia exported ore to the value of £7000 in 1906 and £11,450 in 1907. Wolfram is mined in Tasmania at Ben Lomond and in the Middlesex district, the quantity exported in 1907 being 41 tons, valued at £4411. A rich lode of scheelite has been discovered on King Island in Bass Strait. Rich deposits of scheelite have been found in New Zealand, where it is mined principally at Macrae's Flat, Otago, and Top Valley, Marlborough. The export from the scheelite mines of Otago reached £15,486 in 1907.

14. **Tantalum.**—Tantalite in small quantities has been found in the Greenbushes tinfield for some time past, but recently a lode of fairly extensive proportions was located at the Wodgina tinfield. Up to the end of 1905 the production of this mineral amounted to 73 tons, valued at about £10,000, but early in 1906 it was found that the supply exceeded the demand and production was temporarily stopped. Small quantities of the mineral are also produced in the Northern Territory.

In addition to the metals enumerated above there is a large number of others occurring in greater or less degree, while fresh discoveries are being constantly reported.

NON-METALLIC MINERALS (B).

§ 10. Coal.

1. **Historical.**—Coal was discovered at a very early period in the history of Australia, the first mention of it dating from August, 1797, when its existence was noted in New South Wales by some survivors from the wreck of a vessel, who had walked from the southern portion of Australia up the coast to Sydney. The discovery was shortly afterwards confirmed by Surgeon Bass, who found coal in the cliffs southward of Point Solander, but the locality was at the time looked upon as so inaccessible that no attempt was made to utilise the deposits. During 1907, however, the South Coast district, in which the site of these discoveries occurs, produced over 1,835,000 tons of coal. In 1797 coal was also discovered at the mouth of the Hunter (or Coal) River by Lieutenant Shortland, and in this case, the deposits being more easily worked, it was not long before they were utilised, and a township sprang up which is now the port of one of the greatest coalfields in the world. The production for the northern district, of which Newcastle is the port, amounted in 1907 to 6,059,000 tons, valued at £2,232,000.

The discovery of coal in *Victoria* dates from the year 1825, when the mineral is reported to have been found at Cape Patterson. There is no record of production in the earlier years, but it is stated that the first Victorian coal placed on the Melbourne market came from Kileunda, in the vicinity of the original discovery. Up to 1889, with the exception of a little work by the companies at Moe and Narracan, the industry languished, the total production to the beginning of the year named being only about 25,000 tons. Early in 1889 the Government determined to come to the assistance of the industry, and the Coal Creek Company at Korumburra was registered, followed during next year by the Jumbunna Company, and the Outtrim, Howitt, and British Consolidated in 1894. The unfortunate strike of 1903 completely disorganised coal mining in *Victoria*, and the industry still suffers from its disastrous effects. In 1908 a seam of good black coal 9 ft. 3 in. thick was reached by boring in the basin of the Powlett River. Other payable seams outcrop about five miles away, near Cape Patterson, and it is believed that the coal-bearing area extends over twelve to fifteen square miles. The Government of *Victoria* proposes to retain a considerable area in this district with a view to establish a State coal mine.

The existence of coal in *Queensland* was known soon after the establishment of the first settlement at Moreton Bay, mines near Ipswich, on the banks of the Bremer Creek and Brisbane River, having been worked almost continuously since that date. Seams in the Wide Bay district have been operated on since 1870, while good coal was mined at Clermont shortly after the establishment of the copper mines in that locality. A seam of good coal has also been discovered at Mount Mulligan, 32 miles from Dimbulah Station, on the Chillagoe railway. The industry is at present in a very satisfactory position in the northern State, and owing to the wide area over which the deposits stretch practically no limit can be set to its possibilities of extension.

In *South Australia* brown coal of fair quality was found in 1889 at Kuntha Hill, 110 miles north of Hergott, and at Lee Creek, on the Great Northern railway line. The discovery of coal in *Western Australia* dates from 1846, when the mineral was found on the Murray River. Since that year coal has been met with in other localities, but production at the present time is confined to the deposits at the Collie River. In *Tasmania* coal was discovered between the Don and Mersey Rivers in 1850. The value of the deposits at Fingal was first proved in 1863, two tons of this coal producing nearly 14,000 feet of gas. The first official record of production in *New Zealand* dates from the year 1878, when about 160,000 tons were raised.

2. **Production of Coal.**—The production of coal in each State and New Zealand at various periods since 1881, and the *value* of such production are shewn in the following table:—

PRODUCTION OF COAL, AUSTRALIA, 1881 to 1907.

| State. | 1881. | 1891. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |

* Estimated.

As the table shews, the great bulk of the production is confined to New South Wales, although New Zealand has been steadily increasing its output during the last few years.

3. **Distribution and Quality of Coal in each State.**—(i) *New South Wales.* Estimates have from time to time been made as to the total quantity of coal available for working in the deposits in New South Wales, and while these naturally differ to some extent, they agree in placing the amount at well over a thousand million tons, without taking into consideration the deposits existing below a depth of 4000 feet. According to Mr. E. F. Pittman, the coal-bearing rocks of New South Wales may be classified as follows:—

COAL-BEARING ROCKS OF NEW SOUTH WALES.

| Geological Age. | Maximum Thickness of Coal-bearing Strata. | Locality. | Character of Coal. |
|------------------------------------|---|---|--|
| I. Tertiary—Eocene to Pliocene ... | Approx. 100 ft. | Kiandra, Gulgong, and Chouta Bay | Brown coal or lignite. |
| II. Mesozoic—Triassic ... | 2,500 .. | Clarence and Richmond Rivers | Coal suitable for local use only. |
| III. Palæozoic—Permo-Carboniferous | 13,000 .. | Northern, Southern and Western Coalfields | Good coal, suitable for gas, household and steaming. |
| IV. Palæozoic—Carboniferous ... | 10,000 .. | Stroud | Very inferior. |

No serious attempt has been made to use the deposits of brown coal or lignite as a source of fuel. The Triassic deposits in the Clarence and Richmond districts contain

numerous seams, but the coal is largely intersected by bands, while its large percentage of ash renders it unfit for use as fuel for industrial purposes. Probably these beds extend under the great western plains, but the presence of artesian water precludes the possibility of their being worked. It is in the Permo-Carboniferous division that the great productive coal seams of the State are found, the area which they cover being estimated at about 25,000 square miles. The coal from the various districts embraced in this division differs considerably in quality—that from the Newcastle district being especially suitable for gas-making and household purposes, while the product of the Southern (Illawarra) and Western (Lithgow) is an excellent steaming coal. The Permo-Carboniferous measures have in various places been disturbed by intrusions of volcanic rocks, which in some instances have completely cindered the seams in close proximity to the intrusive masses, while in other instances the coal has been turned into a natural coke, some of which has realised good prices as fuel.

The quantity and value of the coal raised in each district during the years 1887, 1901, and 1907 will be seen in the following table :—

COAL RAISED IN NEW SOUTH WALES, 1887 to 1907.

| District. | 1887. | | 1901. | | 1907. | |
|--------------|--------------------|----------------|--------------------|----------------|--------------------|----------------|
| | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| Northern ... | Tons. 2,243,792 | £ 1,096,720 | Tons. 3,999,252 | £ 1,669,519 | Tons. 6,058,580 | £ 2,231,901 |
| Southern ... | 376,568 | 170,684 | 1,544,454 | 407,196 | 1,835,425 | 515,786 |
| Western ... | 302,137 | 79,036 | 424,720 | 102,214 | 763,919 | 174,732 |
| Total ... | 2,922,497 | 1,346,440 | 5,968,426 | 2,178,929 | 8,657,924 | 2,922,419 |

So far back as 1847 the Rev. W. B. Clarke expressed the belief that workable coal would be found in the strata below Sydney, a belief that was also held by subsequent geologists, who based their contentions on stratigraphical and palæontological evidence. The later geologists urged that the Illawarra coal measures of the South Coast district were identical with the Newcastle measures of the Northern district, although it was agreed that the deposits in the neighbourhood of Sydney would probably be found at a considerable depth. Borings were made in several localities close to Sydney, and in 1891 a drill put down at Cremorne Point in Sydney Harbour passed through a seam of coal seven feet four inches thick and at a depth of 2801 feet. Unfortunately the site of the bore happened to be in the vicinity of a volcanic dyke, which had cindered the coal near the locality of its intrusion. A second bore was commenced in July, 1892, and in November, 1893, a seam of excellent coal, ten feet three inches thick, was reached at 2917 feet. The results attained led to the formation of a company which acquired land at Balmain, and expended a considerable sum of money in the purchase of plant suitable for working coal at such a great depth. Sinking operations were commenced in June, 1897, and coal was struck at a depth of 2880 feet on the 21st November, 1901. Up to the present developmental work has not sufficiently advanced to permit of any considerable production.

(ii.) *Victoria.* The deposits of black coal in Victoria occur in the Jurassic system, the workable seams, of a thickness ranging from two feet three inches to six feet, being all in the Southern Gippsland district. The coal is of excellent quality for steaming and household purposes. The full exploitation of the Victorian coal deposits has, however, been rather severely hindered by various obstacles. In the Report of the Royal Commission on the Coal Industry, 1906, these have been summarised as follows:—(1) Labour troubles. (2) Difficulties of working arising from faults, displacements, and thin seams. (3) Increased cost of production as the workings extend. (4) The low price ruling for coal.

Deposits of brown coal and lignite of immense extent occur in gravels, sands, and clays of the Cainozoic period throughout Gippsland, Mornington Peninsula, Werribee Plains, Gellibrand, and Barwon and Moorabool basins. In the Latrobe Valley the beds reach a thickness of over 800 feet. When dried, the material makes good fuel, but owing to its excessive combustibility and friability requires to be consumed in specially constructed grates. Attempts have been made to manufacture briquettes from the brown coal, but so far without any great measure of success.

The output of coal from the chief Victorian collieries during the last six years was as follows:—

PRODUCTION OF COAL IN VICTORIA, 1902 to 1907.

| Year. | Outtrim Howitt Company. | Jumbunna Coal Company. | Coal Creek Proprietary. | Silkstone Co-operative Company. | Other Companies. | Total Production. | Value. |
|-------|-------------------------------|------------------------------|----------------------------|---------------------------------------|---------------------|----------------------|---------|
| | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. | £ |
| 1902 | 114,686 | 67,876 | 39,257 | 2,257 | 1,088 | 225,164 | 155,850 |
| 1903 | 20,602 | 18,517 | 20,727 | 4,354 | 5,661 | 69,861 | 43,645 |
| 1904 | 57,828 | 39,364 | 22,547 | 2,014 | 489 | 121,742 | 70,208 |
| 1905 | 71,989 | 49,009 | 27,710 | 1,624 | 4,804 | 155,136 | 79,060 |
| 1906 | 74,812 | 64,222 | 13,214 | 3,977 | 4,406 | 160,631 | 80,283 |
| 1907 | 64,033 | 61,755 | 3,762 | 7,565 | 1,470 | 138,635 | 79,706 |

The figures for 1903 include 5661 tons of brown coal.

The coal from Leigh's Creek in South Australia is subject to similar disabilities as the Victorian brown coal, and until some means are devised of overcoming these, production will necessarily languish.

(iii.) *Queensland.* In Queensland the coal-bearing strata are of vast extent and wide distribution, being noted under the greater portion of the South-eastern districts, within 200 miles of the sea, as far north as Cooktown, and under portions of the far western interior. The Ipswich beds are estimated to occupy about 12,000 square miles of country, while the Burrum fields occupy a considerably larger area. At Callide, fifty miles west of Gladstone, a seam of coal free from bands has been struck in a shaft only sixty feet deep, and borings have proved the deposit to be of considerable magnitude. Extensive beds occur in the basin of the Fitzroy River, in the Broadsound district, and at the Bowen River. Amongst other places where the mineral is found may be enumerated Clermont, the Palmer River, Tambo, Winton, Mount Mulligan, and the Flinders River. A bituminous coal is yielded by the Ipswich seams, those of the Darling Downs yield a cannel, while anthracite of good quality is furnished by the Dawson River beds.

The quantity and value of coal raised in Queensland at various periods since 1861 were as shewn below:—

PRODUCTION OF COAL IN QUEENSLAND, 1861 to 1907.

| Year | ... | ... | 1861 | 1871. | 1881. | 1891. | 1901. | 1906 | 1907. |
|----------|------|-----|--------|--------|--------|---------|---------|---------|---------|
| Quantity | Tons | | 14,212 | 17,000 | 65,612 | 271,603 | 539,472 | 606,772 | 683,272 |
| Value | ... | £ | 9,922 | 9,407 | 29,033 | 128,198 | 189,877 | 173,282 | 222,135 |

At present coal mining in Queensland is in a very satisfactory position, the increasing volume of the trade being chiefly due to the action of the Government in granting concessions to vessels coaling at local ports.

The distribution of production during the last two years was as follows:—

QUEENSLAND COLLIERIES, 1906 and 1907.

| Collieries. | 1906. | | 1907. | |
|---|--------------|-------------------------------|--------------|-------------------------------|
| | Tons Raised. | Average Value at Pit's Mouth. | Tons Raised. | Average Value at Pit's Mouth. |
| Ipswich and Darling Downs | 509,989 | s. d. 5 2½ | 591,174 | s. d. 6 1½ |
| Wide Bay and Maryborough | 86,634 | 8 0½ | 77,921 | 8 4 |
| Rockhampton and Central District | 10,079 | 11 2½ | 14,077 | 11 6½ |
| Other (Nundah) | 70 | ... | 100 | ... |
| Total | 606,772 | 5 8½ | 683,272 | 6 6 |

A considerable proportion of the produce of the Ipswich district is supplied to vessels for bunker coal, the total in 1907 being 334,000 tons, as against 272,000 tons in 1906. Queensland coal despatched abroad amounted to 3019 tons, 3000 tons of which were shipped in one cargo to Valparaiso.

(iv.) *Western Australia.* The coal seams in Western Australia belong to the Carboniferous, Mesozoic, and Post-tertiary ages. Most of the coal contains a large proportion of moisture, and belongs partly to the hydrous bituminous and partly to the lignite class. The only coalfield at present worked is at Collie, in the Mesozoic beds of the south-west. The coal produced is bright and clean, but very fragile when free from moisture. The production from this field during the last seven years was as follows:—

PRODUCTION OF COAL IN WESTERN AUSTRALIA, 1901 to 1907.

| Year | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-------------------|---------|---------|---------|---------|---------|---------|---------|
| Quantity ... Tons | 117,836 | 140,884 | 133,427 | 138,550 | 127,364 | 149,755 | 142,373 |
| Value ... £ | 68,561 | 86,188 | 69,128 | 67,174 | 55,312 | 57,998 | 55,158 |

(v.) *Tasmania.* In Tasmania coal occurs in the Carboniferous and Mesozoic systems, the product of the former class being, however, far inferior to that of the latter. Carboniferous seams occur at the Don, Tarleton, Latrobe, Port Cygnet, Tippagory Range, St. Mary's, and Adventure Bay, the seam at Port Cygnet having a thickness of two feet and being of fair quality. The Mesozoic coal measures are well developed in the Fingal basin, the Cornwall coal from this locality being excellent for household purposes. The chief production of recent years has been furnished by the Mt. Nicholas and Cornwall mines, but it is hoped that ere long the production from the Sandfly mine will assume considerable proportions. The quantity of coal raised during the last seven years in the various districts was as follows:—

PRODUCTION OF COAL IN TASMANIA, 1901 to 1907.

| District. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|-------------------------------|--------|--------|--------|--------|--------|--------|---------|
| | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. |
| North-western | 2,952 | 1,683 | 1,735 | 2,282 | 1,261 | 1,878 | 1,045 |
| North-eastern (Fingal) | 37,239 | 41,735 | 43,157 | 54,567 | 46,708 | 46,803 | 53,214 |
| Midland | 1,536 | 725 | 1,047 | 940 | 200 | 393 | 624 |
| South-eastern | ... | 60 | 30 | 200 | 200 | 1,483 | } 4,008 |
| South-western | 3,711 | 4,660 | 3,100 | 3,120 | 3,624 | 2,339 | |
| Total | 45,438 | 48,863 | 49,069 | 61,109 | 51,993 | 52,896 | 58,891 |

(vi.) *New Zealand.* New Zealand possesses coal measures of vast extent and great wealth, but as yet in a comparatively undeveloped state through lack of efficient shipping facilities on the coasts adjacent to the site of the chief deposits. The greater portion of the coal produced is of the bituminous or semi-bituminous character, but considerable quantities of brown coal and lignite are mined, and there is a small production of pitch coal. Bituminous coals are most largely mined on the west coast of the Middle Island, while the Southern district yields the chief production of brown coal, lignite, and pitch coal. Competent judges have pronounced the bituminous coals of the West Coast to be equal, if not superior, to the best description from any part of the world. Large quantities of Westport coal are supplied to the warships on the Australian Naval Station. The output of coal from the chief districts during each of the last seven years was as follows:—

PRODUCTION OF COAL IN NEW ZEALAND, 1901 to 1907.

| District | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
| | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. | Tons. |
| Northn. | 175,084 | 192,045 | 209,795 | 242,517 | 259,876 | 301,186 | 316,977 |
| W.Coast | 669,535 | 753,816 | 781,032 | 836,950 | 856,227 | 962,915 | 1,052,022 |
| Southn. | 395,067 | 419,179 | 429,402 | 458,371 | 469,653 | 465,435 | 462,010 |
| Total... | 1,239,686 | 1,365,040 | 1,420,229 | 1,537,838 | 1,585,756 | 1,729,536 | 1,831,009 |

Two collieries in New Zealand, situated at Seddonville and Port Elizabeth, are owned by the State, and depôts for the sale and distribution of State coal have been established at Wellington, Christchurch, Wanganui, and Dunedin. For the year ended 31st March, 1908, the profits of the mines amounted to £8440. A briquette factory has been established in connection with the Seddonville State Colliery, and is manufacturing a product of first-rate quality, largely used on the Government railways.

4. **Production of Coal in Various Countries.**—The total known coal production of the world in 1906 amounted to about 905 million tons, towards which the Commonwealth and New Zealand contributed 10 million tons, or about 1 per cent. The following table shews the production of the British Empire and the chief foreign countries in units of 1000 tons during each year of the period 1901 to 1906:—

BRITISH EMPIRE.

| Year. | United Kingdom. | British India. | Canada. | Australian C'wealth. | New Zealand. | South Africa. |
|----------|-----------------|----------------|------------|----------------------|--------------|---------------|
| | 1000 tons. | 1000 tons. | 1000 tons. | 1000 tons. | 1000 tons. | 1000 tons. |

| 1901 | 16,215 | 268 | 106,795 | 21,856 | 31,126 | 2,600 | 12,895 | 8,885 | 261,875 |
| 1902 | 16,156 | 300 | 105,747 | 23,493 | 28,693 | 2,679 | 12,012 | 9,589 | 269,277 |
| 1903 | 17,532 | 315 | 114,763 | 23,415 | 33,668 | 2,654 | 12,526 | 9,979 | 319,068 |
| 1904 | 19,042 | 316 | 118,874 | 22,395 | 32,964 | 2,974 | 12,613 | 10,602 | 314,122 |
| 1905 | 18,389 | 317 | 119,350 | 21,506 | 34,652 | 3,152 | 13,454 | 11,593 | 350,821 |
| 1906 | 21,302 | 292 | 134,914 | 23,232 | 33,762 | 3,157 | 14,437 | 12,791 | 369,672 |

Including New Zealand the production from Australasia takes first place amongst the possessions of the British Empire.

5. **Export of Coal.**—(i.) *New South Wales.* The exports of coal from Australasia are practically confined to New South Wales and New Zealand, the quantity sent away from the latter being comparatively small. In the following table will be found the quantity and value of the exports at decennial intervals since 1881 and during the last five years, the figures for New South Wales being given on the authority of the Mines Department of that State:—

EXPORTS OF AUSTRALIAN COAL, 1881 to 1907.

| Year. | Exports from New South Wales. | | Exports from New Zealand. | |
|----------|-------------------------------|-----------|---------------------------|---------|
| | Quantity. | Value. | Quantity. | Value. |
| | Tons. | £ | Tons. | £ |
| 1881 ... | 1,029,844 | 417,530 | 6,621 | 5,610 |
| 1891 ... | 2,514,368 | 1,306,630 | 91,664 | 91,173 |
| 1901 ... | 3,470,985 | 1,681,824 | 159,643 | 142,176 |
| 1902 ... | 3,261,459 | 1,625,380 | 188,677 | 154,747 |
| 1903 ... | 3,716,194 | 1,704,993 | 152,332 | 128,927 |
| 1904 ... | 3,172,867 | 1,380,839 | 165,220 | 139,898 |
| 1905 ... | 3,718,053 | 1,483,978 | 122,817 | 107,062 |
| 1906 ... | 4,961,540 | 2,080,600 | 141,641 | 122,614 |
| 1907 ... | 5,743,507 | 2,662,218 | 128,950 | 114,737 |

The principal countries to which coal was exported from New South Wales during the year 1907 were as shown hereunder:—

DESTINATION OF NEW SOUTH WALES COAL, 1907.

| Country. | Quantity. | Value. | Country. | Quantity. | Value. |
|-----------------------|-----------|---------|-------------------|-----------|---------|
| | Tons. | £ | | Tons. | £ |
| Victoria ... | 882,365 | 488,925 | New Zealand ... | 221,094 | 103,704 |
| South Australia ... | 599,226 | 342,549 | Peru ... | 101,131 | 48,681 |
| Chile ... | 878,062 | 446,095 | Hawaii... .. | 98,530 | 46,628 |
| Philippine Islands... | 314,235 | 155,430 | United States ... | 539,876 | 265,990 |
| Straits Settlements | 142,795 | 66,940 | China | 41,058 | 18,474 |

The quantity of bunker coal taken by oversea vessels was about 1,080,000 tons, valued at £531,000.

The distribution of the total output from New South Wales collieries during the last five years was as follows:—

DISTRIBUTION OF TOTAL OUTPUT OF NEW SOUTH WALES COAL.

| Year. | Exports to Australasian Ports. | Exports to other Ports. | Local Consumption. | Total. |
|-------------|--------------------------------|-------------------------|--------------------|-----------|
| | Tons. | Tons. | Tons. | Tons. |
| 1903 | 2,031,473 | 1,684,721 | 2,638,652 | 6,354,846 |
| 1904 | 1,880,545 | 1,292,322 | 2,846,942 | 6,019,809 |
| 1905 | 2,066,576 | 1,651,477 | 2,914,085 | 6,632,138 |
| 1906 | 2,260,090 | 2,701,450 | 2,664,822 | 7,626,362 |
| 1907 | 2,379,024 | 3,364,483 | 2,914,417 | 8,657,924 |

(ii.) *Queensland.* In 1907 Queensland's oversea export of coal consisted of 3019 tons, valued at £1511. of which 3000 tons, valued at £1500. were sent to Chile. In

view of the local resources, the comparatively large imports of coal and coke into the northern State are rather surprising.

(iii.) *New Zealand.* New Zealand's export consisted principally of bunker coal used on vessels trading to the United Kingdom, the amount so credited in the export returns being 76,373 tons, valued at £77,104. In addition there was an export of 22,000 tons, valued at £16,000, sent to New South Wales, the bulk of this being coal for use in British warships on the Australian station. Of the remainder the South Sea Islands took 7000 tons, valued at £4880, and Fiji 4000 tons, valued at £2700.

6. **Price of Coal.**—(i.) *New South Wales.* The price of coal in New South Wales has been subject to considerable fluctuation since the date of first production. Up to the end of 1857 the average value of the total output was 11s. 10d. per ton. Next year the value had risen to nearly 15s., declining thereafter until in 1871 the price realised was 7s. From 1872 to 1879 there was a rise in value to 12s. Between 1882 and 1891 the price ranged between 8s. and 10s. From 1891 onwards there was a steady decline until 1898, when the average was 5s. 4d. Henceforward prices rose again until 1902, when 7s. 5d. was the average. A further decline then set in until 1905, when the price stood at a little over six shillings followed by a rise of one penny in 1906. In 1907 the average was 6s. 9d. per ton. The price of New South Wales coal depends on the district from which it is obtained, the northern (Newcastle) coal always realising a much higher rate than the southern or western product. The average rate in each district during the last six years was as follows:—

PRICE OF COAL IN NEW SOUTH WALES (PER TON), 1901 to 1907.

| Year. | Northern District. | | Southern District. | | Western District. | |
|-------|--------------------|------|--------------------|------|-------------------|-------|
| | s. | d. | s. | d. | s. | d. |
| 1901 | 8 | 4.19 | 5 | 3.28 | 4 | 9.76 |
| 1902 | 8 | 4.49 | 5 | 9.33 | 5 | 0.73 |
| 1903 | 8 | 1.04 | 5 | 8.12 | 5 | 0.14 |
| 1904 | 7 | 2.10 | 5 | 7.25 | 5 | 1.91 |
| 1905 | 6 | 4.15 | 5 | 5.03 | 5 | 0.15 |
| 1906 | 6 | 5.28 | 5 | 6.60 | 4 | 10.81 |
| 1907 | 7 | 4.41 | 5 | 7.44 | 4 | 6.90 |

(ii.) *Victoria.* In Victoria the average price of coal up to the 31st December, 1890, was nineteen shillings and threepence per ton. In 1895 the price was still as high as twelve shillings and twopence, but in the following five years there was a serious decline, the value in 1900 being quoted at nine shillings and sevenpence per ton. In 1901, however, there was an astonishing rise, the figure being as high as fourteen shillings and sevenpence. Since that year, however, the price again declined, the average for 1905 being ten shillings and twopence, for 1906 ten shillings, and for 1907 eleven shillings and sixpence.

(iii.) *Queensland.* The average price of coal at the pit's mouth in Queensland during the period 1900 to 1907 ranged from five shillings and eightpence halfpenny in 1906 to seven shillings in 1901. Prices in the principal coal-producing districts during the last three years were as follows:—

PRICES OF COAL, QUEENSLAND, 1905 to 1907.

| District. | Value at Pit's Mouth. | | | | | |
|---------------------------|-----------------------|----------|----------|----------|----------|----------|
| | 1905. | | 1906. | | 1907. | |
| | Per ton. | Per ton. | Per ton. | Per ton. | Per ton. | Per ton. |
| Ipswich and Darling Downs | s. d. | s. d. | s. d. | s. d. | s. d. | s. d. |
| Wide Bay and Maryborough | 5 4 | 5 2½ | 8 0¾ | 6 1½ | 8 4 | 11 6½ |
| Rockhampton and Central | 7 8½ | 12 0 | 11 2½ | 11 6½ | 11 6½ | 11 6½ |

(iv.) *Western Australia.* The average price of the Collie (Western Australia) coal up to the end of 1901 was nine shillings and fourpence per ton, the price in 1901 being eleven shillings and sevenpence. In 1902 the average stood at twelve shillings and threepence, but since that time there has been a steady fall, the lowest point being reached in 1906, when the price was 7s. 7½d. per ton. In 1907 the average was 7s. 8½d.

(v.) *Tasmania.* The average price per ton of coal at the pit's mouth in Tasmania was eight shillings in 1901. In 1902 it was eight shillings and sevenpence, in 1903 eight shillings and ninepence, in 1904 nine shillings and eightpence, in 1905 nine shillings and eightpence, in 1906 nine shillings and ninepence, and in 1907 eight shillings per ton.

7. **Price of Coal in other Countries.**—According to a report published by the Board of Trade the average value of coal at the pit's mouth in the five principal coal-producing countries of the world, for the three years ended 1906, was as follows:—

PRICES OF FOREIGN COAL.

| Year. | United Kingdom. | Germany. | France. | Belgium. | United States. |
|----------|-------------------|-------------------|-------------------|-------------------|-------------------|
| | Per ton. s. d. | Per ton. s. d. | Per ton. s. d. | Per ton. s. d. | Per ton. s. d. |
| 1904 ... | 7 2½ | 8 6½ | 10 10½ | 10 8 | 5 10¾ |
| 1905 ... | 6 11½ | 8 7½ | 10 6¾ | 10 2½ | 5 8 |
| 1906 ... | 7 3½ | 8 11½ | ... | ... | 5 9½ |

The price of coal at the pit's mouth in the principal British possessions is averaged by the same authority as follows:—

PRICE OF COAL, BRITISH POSSESSIONS.

| Year. | British India. | C'wealth of Australia. | New Zealand. | Canada. | Transvaal. | Cape of Good Hope. | Natal. |
|-------|-------------------|------------------------|-------------------|-------------------|-------------------|--------------------|-------------------|
| | Per ton. s. d. | Per ton. s. d. | Per ton. s. d. | Per ton. s. d. | Per ton. s. d. | Per ton. s. d. | Per ton. s. d. |
| 1904 | 3 5 | 6 10 | 10 9 | 9 3 | 8 3 | 20 0 | 10 8 |
| 1905 | 3 4 | 6 2 | 10 7 | 9 4 | 7 3 | 18 8 | 8 3 |
| 1906 | 3 11 | 6 3 | 10 0 | 9 4 | 6 5 | 18 5 | 8 6 |

A consideration of the above and preceding figures will shew that throughout the world the price of coal has, generally speaking, undergone a considerable decline during the last few years, although the latest returns shew an upward tendency.

8. **Employment in Coal Mining.**—The number of persons employed in coal mining in each of the States and New Zealand during the year 1907 is shewn below. The table also shews the number of persons killed and injured, with the proportion per 1000 employed, while further columns are added shewing the quantity of coal raised for each person killed and injured, this being a factor which must be reckoned with in any consideration of the degree of risk attending mining operations.

Returns published by the Board of Trade, England, give the total known number of persons engaged in mining and quarrying throughout the world as about 5½ millions, more than one-half of whom were employed in coal mining, the number in Great Britain being 867,000; the United States, 641,000; Germany, 569,000; France, 178,000; Belgium, 139,000; Austria, 121,000; and India, 99,000.

The latest returns shew the death rate in the United Kingdom as 1.29, and for the British Empire 1.34 per 1000 persons employed in coal mines. For France the rate is given as 7.17, for Germany 1.88, and the United States 3.21. For foreign countries generally the rate is stated at 2.99 per 1000. The high rate in France was due to an unusual casualty list in 1906, the rate for the preceding year being 1.04.

EMPLOYMENT AND ACCIDENTS IN COAL MINING, 1907.

| State. | Persons Employed in Coal Mining. | No. of Persons. | | Proportion per 1000 Employed. | | Tons of Coal Raised for Each Person. | |
|-----------------------|----------------------------------|-----------------|----------|-------------------------------|----------|--------------------------------------|----------|
| | | Killed. | Injured. | Killed. | Injured. | Killed. | Injured. |
| New South Wales ... | 17,080 | 17 | 99 | 1.0 | 8.9 | 509,290 | 56,588 |
| Victoria ... | 599 | 1 | 3 | ... | 5.0 | 138,585 | 46,195 |
| Queensland ... | 1,505 | ... | 24 | ... | 15.9 | ... | 28,470 |
| South Australia ... | ... | ... | ... | ... | ... | ... | ... |
| Western Australia ... | 253 | 1 | 13 | 3.9 | 51.3 | 142,373 | 10,944 |
| Tasmania ... | 198 | ... | 4 | ... | 20.0 | ... | 14,723 |
| Commonwealth ... | 19,635 | 19 | 143 | 1.0 | 7.28 | 509,529 | 49,142 |
| New Zealand ... | 3,910 | 12 | 33 | 3.1 | 8.4 | 152,584 | 55,485 |

THE AVERAGE FOR THE LAST SIX YEARS AVAILABLE IS GIVEN BELOW:—

| | | | | | | | |
|---------------------|--------|------|-------|-----|------|-----------|--------|
| New South Wales ... | 14,500 | 32.0 | 94.7 | 2.2 | 6.5 | 215,000 | 73,000 |
| Victoria ... | 700 | 1.2 | 9.2 | 1.7 | 13.1 | 120,000 | 16,000 |
| Queensland ... | 1,400 | 0.5 | 18.3 | 0.4 | 13.1 | 1,113,000 | 30,000 |
| South Australia ... | ... | ... | ... | ... | ... | ... | ... |
| Western Australia* | 340 | 0.3 | 11.2 | 0.9 | 33.0 | 462,000 | 12,000 |
| Tasmania ... | 200 | ... | 1.5 | ... | ... | ... | 36,000 |
| Commonwealth ... | 17,140 | 34.0 | 134.9 | 2.0 | 7.9 | 228,000 | 57,000 |
| New Zealand ... | 3,300 | 5.7 | 19.7 | 1.7 | 6.0 | 277,000 | 80,000 |

* Two killed; one in 1903, one in 1907.

§ 11. Coke.

1. **Production of Coke.**—Notwithstanding the large deposits of excellent coal in Australia there is at the present time a fairly considerable amount of coke imported from abroad, the oversea import during the year ended 1907 amounting to 9800 tons, valued at £13,250, the bulk of which came from the United Kingdom and Germany, and was taken chiefly by South Australia and Western Australia. Various reasons were at one time adduced to account for the rejection of the local article, such as excessive friability in transport, lack of strength to sustain the weight of large ore bodies in reduction works, excessive amount of ash, etc. These disabilities have, however, largely been overcome, so that succeeding years should see continued expansion in local production. Extensive shipments of coke were obtained from Germany in 1908 for the Wallaroo and Moonta smelters, and for the Broken Hill Proprietary's works at Port Pirie. In explanation of this, it has been stated that while supplies in Australia were not sufficient to meet demands and ensure continuity in supply, there has been considerable over-production at German coke works. In New South Wales the industry is making rapid progress, as the figures hereunder will shew:—

COKE MADE IN NEW SOUTH WALES.

| Year. | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. |
|---------------|---------|---------|---------|---------|---------|---------|---------|
| Quantity Tons | 128,882 | 126,872 | 160,592 | 171,006 | 162,961 | 186,060 | 254,609 |
| Value ... £ | 105,665 | 89,605 | 108,764 | 110,692 | 100,306 | 110,607 | 159,316 |

A small quantity of coke is made in Queensland, but the bulk of that used in ore reduction is imported, mainly from New South Wales. The coke manufactured locally amounted in 1905 to 8650, in 1906 to 8672, and in 1907 to 8280 tons, while the imports for the same years came to 9823, 22,661, and 34,013 tons respectively.

New Zealand formerly produced a fair amount of coke, the records for 1892 shewing an export of local produce amounting to over 4000 tons, valued at £5700. The production has, however, dwindled away, and from 1900 to 1907 there was a continuous rise in imports, ranging from 963 tons, valued at £2451, to 4391 tons, valued at £8854.

It must be clearly understood that the coke referred to above is the production of coke-making establishments only, and does not include the inferior article produced at gasworks.

§ 12. Oil Shale and Mineral Oils.

1. **Production of Shale.**—(i.) *New South Wales.* As pointed out by Mr. E. F. Pittman, the name kerosene shale has been rather inaptly applied to a variety of torbanite, cannel, or boghead mineral found at various geological horizons in New South Wales. The mineral does not, as a rule, split in parallel layers, the fracture being rather of a conchoidal type. Pure samples have been found to contain over 89 per cent. of volatile hydro-carbons and over 5 per cent. of fixed carbons. The discovery of the mineral in New South Wales dates probably from 1827, although the first authentic mention by a scientific observer dates from 1845, when its occurrence in the Hartley Vale district was noted by Count Strzelecki. The mineral has been found at several places in the Upper Coal Measures, and in at least two in the Lower Carboniferous. Production on anything like a large scale commenced in 1868, when about 17,000 tons, valued at £48,000, were raised. The production in 1907 amounted to 47,000 tons, valued at £32,055, the whole of it being raised in the mines controlled by the Commonwealth Oil Corporation Limited at Hartley Vale, New Hartley, and Wolgan. Up to the end of 1907 the entire production for the State amounted to 1,327,000 tons, valued at £2,167,500.

(ii.) *Victoria.* Up to the present no extensive deposit of oil shale has been located in Victoria.

(iii.) *Queensland.* Deposits of oil shale are known to exist at various localities in Queensland, and what is believed to be a payable oil bearing area has been located by a bore near Roma. At the time of compilation of this article, however, developmental work had not sufficiently progressed to enable a definite statement to be made.

(iv.) *South Australia.* In this State large areas of bituminous shale, of which the boundaries are only approximately known, occur at Leigh's Creek and Lake Phillipson. Allusion to the mineral known as Coorongite is made in Section 13.

(v.) *Western Australia.* A deposit of carbonaceous shale of considerable thickness is known to exist at Coolgardie, but the mineral has not yet been raised in any quantity.

(vi.) *Tasmania.* The deposits of oil shale (Tasmanite) in the Mersey district are not at present being worked, but operations are in progress with a view to testing their value. Kerosene shale of fine quality is found in the country between the Jessie and Flowerdale Rivers, but the extent of the beds has not been proved.

(vii.) *New Zealand.* Mineral oil has been known to exist for some years in New Zealand in the locality of New Plymouth, and also near Gisborne and the East Cape, while small quantities are at times noticeable on hot pools in the volcanic district. Up to the end of 1907 no developments of commercial value had resulted from oil-boring operations in Taranaki and at Kotuku, near Lake Brunner.

2. **Export of Shale.**—In 1907, New South Wales exported 5686 tons of shale valued at £13,546, of which 5080 tons, valued at £11,957, were sent to the Netherlands.

§ 13. Other Non-Metallic Minerals.

1. **Alunite.**—Probably the most remarkable deposit of alunite in the world occurs at Bulladelah, in the county of Gloucester, New South Wales, a large proportion of a low range of mountains in the district being composed of this mineral. The deposits are worked by quarrying, and up to the end of 1907 about 29,000 tons had been raised, valued at £87,700, the production for the year 1907 being 2087 tons, valued at £5115.

2. **Asbestos.**—This substance has been found in various parts of Australia, but up to the present has not been produced in sufficient quantity to warrant special notice. In Western Australia what may prove to be a valuable deposit of the fibrous chrysotile variety has been located at Tambourah, on the West Pilbara goldfield. In 1899 Tasmania raised 200 tons, valued at £363, but there has been no production during the last seven years.

3. **Clays.**—Valuable deposits of clays of various sorts are found throughout the Commonwealth. There is a considerable local production of earthenware, bricks, and tiles, but the finer clays have not as yet been extensively used. On Kangaroo Island, South Australia, where, it is stated, the first pottery mill in the Commonwealth was erected, there are vast deposits of felspar, china stone, silica, and firebrick clay.

4. **Coorongite.**—This peculiar indiarubber-like material was first noted many years ago near Salt Creek and in the vicinity of Coorong Inlet, in South Australia. It was thought that the substance owed its origin to subterranean oil-bearing strata, but so far the search for petroleum has not been attended with success.

5. **Graphite.**—Graphite is found in New South Wales near Undercliff Station, in the county of Buller, but the deposit is not sufficiently pure to prove remunerative. In Victoria the mineral occurs in Ordovician slates in several of the goldfields, but is not worked. In Queensland the mineral is raised by the Graphite Plumbago Company at Mt. Bopple, near Netherby, on the Maryborough-Gympie line. The quantity produced in 1907 was sixty-five tons, valued at £200. There is an extensive deposit of the mineral at Mt. Bopple, but the quality is rather inferior.

6. **Gypsum.**—This mineral is found at various places in the Commonwealth. In South Australia deposits are being worked at Lake Fowler and near Marion Bay, Yorke Peninsula. At Boort, in Victoria, 1036 tons, valued at £259, were raised in 1907.

7. **Tripolite, or Diatomaceous Earth.**—Although tripolite has been found at Barraba, Cooma, Wyrallah, and in the Warrumbungle Mountains in New South Wales, the deposits have not yet been worked commercially. In Victoria there is a remarkably pure deposit at Lillieur, near Talbot, while beds of the mineral are also met with at Clunes and Portland. From the deposit at Talbot, 155 tons valued at £930 were obtained in 1907.

8. **Salt.**—Salt is obtained from salt lakes in the western and north-western districts of Victoria, and from salterns in the neighbourhood of Geelong. In Western Australia supplies are obtained from dried-up shallow lakes and consumed locally or exported. The chief centres of production are Rottnest Island, near Fremantle, and Middle Island, near Esperance, the product from the former being a remarkably pure chloride. Large quantities are also obtained from the shallow salt lakes of South Australia, chiefly on Yorke Peninsula. Lake Hart, about sixty square miles in area, situated about 120 miles N.W. from Port Augusta, contains immense supplies of salt of good quality which at present, however, owing to distance from market possess no economic value. The salt is simply scraped from the beds of the lakes in summer time and carted to the refinery. It is stated that care must be taken not to leave too thin a crust of salt over the under-

lying mud, as the resultant "crop" after the winter rains will in that case be smaller than usual. The production of crude salt in South Australia during 1906 was 55,000 tons, valued at £27,500.

9. **Natural Manures.**—In Victoria large quantities of "copi," an impure hydrous sulphate of lime, are obtained in the North-western district. South Australia possesses deposits of rock phosphate near Port Clinton and Ardrossan on Yorke Peninsula, at Belvedere near Kapunda, and at Kooringa. The production in 1907 was 8000 tons. Although it can hardly be considered a mineral product, mention may be made here of the large accumulations of guano on the Arolhos Islands, off the coast of Western Australia, in the neighbourhood of Geraldton. The deposits vary in thickness from four to twenty-seven inches. During the years 1876-80 over 36,000 tons were raised, no figures being available shewing the production of recent years.

In New Zealand, fairly extensive deposits of phosphates have been located at Clarendon in the Otago district, but the production has not up to the present reached any magnitude.

§ 14. Gems and Gemstones.

1. **Diamonds.**—Diamonds were first noted in New South Wales by E. J. Hargraves in 1851, and in October of the same year by Geological Surveyor Stutchbury. The Cudgong field was discovered in 1867, and shortly afterwards the Bingara diamantiferous deposits were located. None of the diamonds so far discovered have proved of any considerable size, the largest weighing about $6\frac{1}{2}$ carats. Stones of small size are also found at Cope's Creek and other places in the Inverell district. The chief production in 1907 was from Copeton in the Tingha Division. It is difficult to obtain accurate returns in connection with the production of precious stones, but the yield of diamonds in 1907 was estimated at 2539 carats, valued at £2056, while the total production to the end of 1907 is given as 159,675 carats, valued at £106,145. Small quantities of diamonds are found in Victoria in the gravels of streams running through granite country in the Beechworth district; at Kongbool in the Western District; and near Benalla. The stones are generally small, and the production up to date has been trifling. A few small diamonds have been found in the Pilbara district in Western Australia. In South Australia diamonds have been found on the Echunga goldfield, the most notable gem being Glover's diamond, which was sold for £70.

2. **Sapphires.**—These gems were discovered in New South Wales in 1851, near Burrandong. The gems have also been found in small quantities near Inverell, and at a few other localities in the State. There is no record of production. Specimens of sapphire have been found in Victoria, but the stones of commercial size are generally of little value owing to flaws.

In Queensland sapphires are found in the gravel of creek beds, between Withersfield and Anakie on the Rockhampton-Winton railway line. The gems show excellent fire and lustre, but the colour is darker blue than the Oriental sapphire. Hyacinths are occasionally found in association with the gems. The production of all gems in Queensland last year was valued at £40,500, and up to the end of 1907 the total was £103,000.

3. **Precious Opal.**—This stone was first discovered in New South Wales at Rocky Bridge Creek on the Abercrombie River, in the year 1877, and later a most important discovery was made at White Cliffs in the Wilcannia district, which is now the centre of production. The total value of opal raised last year was estimated at £79,000, of which £66,000 worth was raised in the White Cliffs district, and the balance at the Wallangulla field in the Walgett division. Beautiful specimens of "black" opal, realising over £40 an ounce, have been obtained at the last-mentioned field. Since the year 1890 the total value of opal won is estimated at £1,068,000.

Small quantities of precious opal are also found in the Beechworth district in Victoria. In Queensland, the first recorded discovery of the gem dates from about 1875.

The opaliferous district stretches over a considerable area of the western interior of the State, from Kynuna and Opalton as far down as Cunnamulla. The yield in 1907 was estimated at £3000, and up to the end of that year at £159,000. These figures are, however, merely approximations, as large quantities of opal are disposed of privately to buyers on the fields, no record of which is obtained.

4. **Other Gems.**—Emeralds were found in New South Wales in the year 1890, near the township of Emmaville, the largest specimen found in the district weighing twenty-three carats in the rough. Altogether 2225 carats were sent to London during that year, some of the gems bringing £4 a carat, but the production has since dwindled, there being no record of any yield in 1906. Amongst other gems found in New South Wales at various times may be mentioned *turquoises*, discovered in 1894, near Bodalla, *topazes*, fine specimens of which have been obtained in the New England district, and *zircons* and *garnets*. Turquoises are also found in thin veins in Victoria, but the deposit is not rich enough to pay for expenses of working. Fine *agates* are found in many places in Victoria, but have not been made use of to any extent. Garnets are found in Western Australia, and beautiful specimens of *crocidolite* have been obtained at Yarra Creek in the Murchison district. *Rubies* have been found at various places in New South Wales and Queensland, and in the Westland district of Middle Island, New Zealand. In South Australia *tourmaline* has been found on Kangaroo Island and *beryls* near Williamstown.

§ 15. The Mineral Wealth of Australasia.

1. **Total Production.**—(i.) *Australia.* The value of the production from all minerals raised in Australia during 1907 is given in the following table:—

MINERAL PRODUCTION IN 1907.

| Minerals. | N.S.W. | Victoria. | Q'land. | S.A. | W.A. | Tas. | Cwth. |
|---------------------|-------------------|------------------|------------------|----------------|------------------|------------------|-------------------|
| | £ | £ | £ | £ | £ | £ | £ |
| Alunite | 5,115 | ... | ... | ... | ... | ... | 5,115 |
| Antimony | 46,278 | 13,290 | 7,863 | ... | 630 | ... | 68,061 |
| Bismuth | 5,268 | ... | 1,806 | ... | ... | 27 | 7,101 |
| Chrome | 105 | ... | ... | ... | ... | ... | 105 |
| Coal | 2,922,419 | 79,706 | 222,135 | ... | 55,158 | 23,556 | 3,392,974 |
| Coke | 159,316 | ... | ... | ... | ... | ... | 159,316 |
| Copper | 727,774 | 2,356 | 1,028,179 | 705,031 | 180,387 | 869,666 | 3,513,393 |
| Diamonds | 2,056 | ... | ... | ... | ... | ... | 2,056 |
| Diatomaceous earth | 50 | 930 | ... | ... | ... | ... | 980 |
| Gems (unspecified) | ... | ... | 40,500 | ... | ... | ... | 40,500 |
| Gold | 1,050,730 | 2,954,617 | 1,978,938 | 42,468 | 7,210,749 | 277,607 | 13,515,109 |
| Graphite | ... | ... | 200 | ... | ... | ... | 200 |
| Gypsum | ... | 259 | ... | ... | ... | ... | 259 |
| Iron | 60,550 | ... | ... | ... | ... | ... | 60,550 |
| Iron oxide | 1,961 | ... | ... | ... | ... | 1,150 | 3,111 |
| Ironstone flux ... | 7,707 | ... | 24,327 | 38,100 | 438 | ... | 70,572 |
| Kaolin | 740 | 772 | ... | ... | ... | ... | 1,512 |
| Lead | 374,182 | ... | 75,330 | ... | 1,292 | ... | 460,804 |
| Limestone flux ... | 16,162 | ... | 35,808 | 5,800 | 1,382 | ... | 59,152 |
| Manganese | ... | ... | 4,464 | ... | ... | ... | 4,464 |
| Molybdenite | 3,564 | ... | 8,442 | ... | ... | ... | 12,006 |
| Opal | 79,000 | ... | 3,000 | ... | ... | ... | 82,000 |
| Platinum | 1,014 | ... | ... | ... | ... | ... | 1,014 |
| Salt | ... | 19,996 | ... | 37,500 | ... | ... | 57,496 |
| Scheelite | 23,781 | ... | 320 | ... | ... | ... | 24,101 |
| Shale | 32,055 | ... | ... | ... | ... | ... | 32,055 |
| Silver | 257,314 | 4,355 | 112,540 | 780 | 25,382 | ... | 400,371 |
| Silver-lead bullion | 3,658,632 | ... | ... | ... | ... | 572,560 | 4,244,285 |
| Silver-lead ore ... | ... | 10,531 | 496,766 | 13,093 | 158,648 | 501,631 | 1,502,296 |
| Tin | 293,305 | ... | 496,766 | 41,365 | ... | 4,411 | 133,082 |
| Wolfram | 26,235 | ... | 90,985 | 11,451 | ... | ... | 536,620 |
| Zinc | 536,620 | ... | ... | 10,500 | ... | ... | 10,668 |
| Uncenumerated ... | 186 | ... | ... | ... | ... | ... | ... |
| Total | 10,292,119 | 3,086,812 | 4,131,603 | 906,088 | 7,634,066 | 2,250,658 | 28,301,346 |

In the next table will be found the estimated value of the total mineral production in each State up to the end of 1907. The figures do not in all cases coincide with those published by the Mines Departments, as they are exclusive of certain items such as building stones, clay, cement, and lime, which appear in some of the mining returns. The New South Wales Mining report gives the production of building stone up to the end of 1907 as £17,801 (this figure, however, representing exports alone), while the production in Victoria during the period 1866-1906 is given in the Victorian Mines Report as £3,413,937. For comparative purposes the figures are therefore valueless, the utility of export figures for such a commodity as building stone being more or less dubious.

COMMONWEALTH MINERAL PRODUCTION TO END OF 1907.

| Minerals. | N.S.W. | Vic. | Q'land. | S. Aust. | W. Aust. | Tas. | C'wealth. |
|------------------|--------------------|--------------------|-------------------|-------------------|-------------------|-------------------|--------------------|
| | £ | £ | £ | £ | £ | £ | £ |
| Gold ... | 55,364,882 | 279,471,596 | 66,313,841 | 2,749,609 | 78,004,408 | 6,523,821 | 488,428,157 |
| Silver and lead | 47,526,887 | 212,139 | 1,540,186 | 401,777 | 572,470 | 4,827,825 | 55,081,285 |
| Copper... | 9,200,403 | 125,810 | 5,430,182 | 26,280,877 | 658,516 | 7,623,227 | 49,319,015 |
| Tin ... | 8,037,814 | 452,061 | 6,607,965 | 179,267 | 755,821 | 9,676,861 | 25,709,789 |
| Coal ... | 53,279,161 | 1,556,981 | 3,876,503 | ... | 542,066 | 422,681 | 59,677,392 |
| Other ... | 7,669,625 | 292,432 | 1,091,543 | 1,040,001 | 56,310 | 126,402 | 10,276,313 |
| Total ... | 181,078,772 | 282,111,019 | 84,860,220 | 30,651,531 | 80,589,591 | 29,200,818 | 688,491,951 |

The "other" minerals in New South Wales include antimony, £299,557; bismuth, £119,882; chrome, £101,108; diamonds, £106,145; opal, £1,068,099; oil shale, £2,167,500; and zinc, £1,426,894. In the Victorian returns antimony ore was responsible for £194,101, and salt £54,206. Included in "other" in the Queensland production were opal, £158,695; gems, other, £102,277; bismuth, £79,695; wolfram, £447,523; antimony ore, £50,412; and manganese, £48,632. The chief item in South Australian "other" minerals was salt, £644,500. In the Tasmanian returns limestone flux was responsible for nearly £100,000.

(ii.) *New Zealand.* The production of minerals in New Zealand during 1907 and up to the end of that year is given below:—

MINERAL PRODUCTION OF NEW ZEALAND, 1907, and Total to 1907.

| Minerals. | During 1907. | To end of 1907. | Minerals. | During 1907. | To end of 1907. |
|---------------|--------------|-----------------|------------------|------------------|--------------------|
| | £ | £ | | £ | £ |
| Gold ... | 2,027,490 | 71,528,978 | Coal ... | 965,766 | 13,492,470 |
| Silver ... | 169,484 | 1,090,751 | Kauri Gum ... | 579,888 | 14,022,905 |
| Copper ... | 595 | 18,823 | Other ... | 30,468 | 214,584 |
| Chrome ... | ... | 38,002 | | | |
| Antimony ... | 2,118 | 54,716 | | | |
| Manganese ... | 26 | 61,857 | Total ... | 3,775,835 | 100,523,086 |

The so-called kauri gum—which is really a resin—has contributed about 14 per cent. of the total mineral production of New Zealand. The substance is the solidified turpentine of the kauri pine, and is used as the base of the best oil varnishes. It is obtained chiefly in the Auckland provincial district of the North Island, being found alike in the driest fern banks and the deepest swamps. A certain amount is also got from the forks of standing trees.

2. *Total Employment in Mining.*—The number of persons engaged in the mining industry in each State and New Zealand is an index of the significance of the mineral wealth. During the year 1907 this was as follows:—

EMPLOYMENT IN MINING, 1907.

| State. | Number of Persons Engaged in Mining for | | | | | | Total. |
|-----------------------|---|-------------------------------|---------|-------|-----------------------|--------|---------|
| | Gold. | Silver, Lead, and Zinc. | Copper. | Tin. | Coal and Shale. | Other. | |
| New South Wales ... | 7,468 | 10,021 | 3,764 | 3,173 | 17,356 | 1,976 | 43,758 |
| Victoria ... | 23,291 | 10 | 10 | 87 | 599 | 128 | 24,125 |
| Queensland ... | 8,883 | 785 | 3,941 | 2,582 | 1,573 | 1,434 | 19,198 |
| South Australia ... | 914 | 86 | 5,254 | 554 | ... | 1,033 | 7,841 |
| Western Australia ... | 17,237 | 8 | 611 | 1,003 | 253 | 1 | 19,113 |
| Tasmania ... | 953 | 1,908 | 2,614 | 1,828 | 198 | 15 | 7,516 |
| Commonwealth ... | 58,746 | 12,818 | 16,194 | 9,227 | 19,979 | 4,587 | 121,551 |
| New Zealand ... | 9,138 | ... | 112 | 2 | 3,692 | 137 | 13,081 |
