## KEY POINTS

### THE ALL GROUPS CPI

- rose 0.5% this quarter, compared with a rise of 0.5% in the December quarter 2016.
- rose 2.1% over the twelve months to the March quarter 2017, compared with a rise of 1.5% over the twelve months to the December quarter 2016.

### OVERVIEW OF CPI MOVEMENTS

- The most significant price rises this quarter are automotive fuel (+5.7%), new dwelling purchase by owner-occupiers (+1.0%), medical and hospital services (+1.6%) and electricity (+2.5%).
- The most significant offsetting price falls this quarter are international holiday travel and accommodation (-3.8%), fruit (-6.7%) and furniture (-3.5%).

CHANGES IN THIS ISSUE

Implementation of the changes outlined in the December quarter 2016 feature article *Measuring Price Change of Attached Dwellings in the CPI* are included in this publication. These changes see the inclusion of dwellings such as apartments and townhouses in the measurement of price change for the new dwelling purchase by owner-occupiers expenditure class. These changes do not result in any changes to the published series in this publication.

### MAIN CONTRIBUTORS TO CHANGE

CPI GROUPS

The discussion of the CPI groups below is ordered in terms of their absolute significance to the change in All groups index points for the quarter (see Tables 6 and 7). Unless otherwise stated, the analysis is in original terms.

WEIGHTED AVERAGE OF EIGHT CAPITAL CITIES, Percentage change from previous quarter

HOUSING GROUP (+0.8%)

The main contributors to the rise in the housing group this quarter are new dwelling purchase by owner-occupiers (+1.0%), electricity (+2.5%) and gas and other household fuels (+3.8%). The rise in new dwelling purchase by owner-occupiers is driven by rises in input costs. The rise in electricity and gas and other household fuels is driven by increases in wholesale costs.

Over the last twelve months, the housing group rose 2.5%. The main contributors to the rise are new dwelling purchase by owner-occupiers (+2.8%) and electricity (+7.5%).

In seasonally adjusted terms, the housing group rose 0.8% this quarter. The main contributor to the rise is new dwelling purchase by owner-occupiers (+1.0%).

TRANSPORT GROUP (+1.5%)

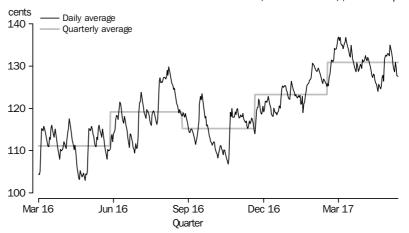

The main contributor to the rise in the transport group this quarter is automotive fuel (+5.7%). Automotive fuel rose in January (+4.6%) and fell in February (-2.4%) and March (-1.4%). All fuel types recorded rises this quarter. The rise is partially offset by falls in urban transport fares (-0.8%) and motor vehicles (-0.3%).

The following graph shows the pattern of the average daily prices for unleaded petrol for the eight capital cities over the last fifteen months.

TRANSPORT GROUP

(+1.5%) continued

AVERAGE PRICE OF UNLEADED PETROL (91 OCTANE), cents per litre

Over the last twelve months, the transport group rose 3.8%. The main contributor to the rise is automotive fuel (+16.2%).

In seasonally adjusted terms, the transport group rose 1.3% this quarter. The main contributor to the rise is automotive fuel (+5.7%).

HEALTH GROUP (+2.0%)

The main contributors to the rise in the health group this quarter are medical and hospital services (+1.6%) and pharmaceutical products (+4.9%). These rises are a result of the cyclical reduction in the proportion of patients who qualify for subsidies under the Medicare Benefits Scheme (MBS) and Pharmaceutical Benefits Scheme (PBS), as well as the co-payment indexation for PBS. The safety net threshold amount for both the MBS and PBS are reset on 1 January each year, and the co-payment indexation for PBS is scheduled on the same date.

Over the last twelve months, the health group rose 3.8%. The main contributor to the rise is medical and hospital services (+5.4%).

In seasonally adjusted terms, the health group rose 0.7% this quarter. The main contributor to the rise is medical and hospital services (+1.2%).

EDUCATION GROUP (+3.1%)

The main contributors to the rise in the education group this quarter are secondary education (+4.1%) and tertiary education (+2.4%) following the commencement of the new school year.

Over the last twelve months, the education group rose 3.3%. The main contributor to the rise is secondary education (+4.1%).

In seasonally adjusted terms, the education group fell 0.5% this quarter. The main contributor to the fall is tertiary education (-1.0%).

ALCOHOL AND TOBACCO  ${\tt GROUP} \ (+1.1\%)$ 

The main contributor to the rise in the alcohol and tobacco group this quarter is tobacco (+1.0%). The rise in tobacco is due to the federal excise tax increase effective from 1 March 2017 based on the Average Weekly Ordinary Time Earnings (AWOTE).

Over the last twelve months, the alcohol and tobacco group rose 6.1%. The main contributor to the rise is tobacco (+13.3%).

### MAIN CONTRIBUTORS TO CHANGE continued

ALCOHOL AND TOBACCO GROUP (+1.1%) continued

In seasonally adjusted terms, the alcohol and tobacco group rose 1.9% this quarter. The main contributor to the rise is tobacco (+3.0%).

FURNISHINGS,
HOUSEHOLD EQUIPMENT
AND SERVICES GROUP
(-1.0%)

The main contributor to the fall in the furnishings, household equipment and services group this quarter is furniture (-3.5%) due to post Christmas specials.

Over the last twelve months, the furnishings, household equipment and services group fell 0.1%. The main contributor to the fall is household textiles (-5.5%).

In seasonally adjusted terms, the furnishings, household equipment and services group recorded no movement.

RECREATION AND CULTURE GROUP (-0.7%)

The main contributor to the fall in the recreation and culture group this quarter is international holiday travel and accommodation (-3.8%) due to the winter off-peak seasons in Europe and America.

Over the last twelve months, the recreation and culture group fell 0.2%. The main contributors to the fall are international holiday travel and accommodation (-4.2%) and audio, visual and computing equipment (-7.2%).

In the CPI, airfares are collected in advance (at the time of payment), but are only used in the CPI in the quarter in which the trip is undertaken. International airfares are collected two months in advance (January for travel in March) and domestic airfares are collected one month in advance (February for travel in March).

In seasonally adjusted terms, the recreation and culture group rose 0.2% this quarter. The main contributor to the rise is domestic holiday travel and accommodation (+0.8%).

CLOTHING AND FOOTWEAR GROUP (-1.4%) The main contributors to the fall in the clothing and footwear group this quarter are garments for men (-3.9%), garments for infants and children (-3.8%) and garments for women (-1.7%) due to post Christmas specials.

Over the last twelve months, the clothing and footwear group rose 0.3%. The main contributor to the rise is accessories (+4.4%).

In seasonally adjusted terms, the clothing and footwear group rose 0.1% this quarter. The main contributor to the rise is accessories (+2.8%).

INSURANCE AND
FINANCIAL SERVICES
GROUP (+0.6%)

The main contributor to the rise in the insurance and financial services group this quarter is insurance (+0.8%).

Over the last twelve months, the insurance and financial services group rose 2.7%. The main contributor to the rise is insurance (+6.8%).

In seasonally adjusted terms, the insurance and financial services group rose 0.7% this quarter. The main contributor to the rise is insurance (+0.9%).

### MAIN CONTRIBUTORS TO CHANGE continued

FOOD AND
NON-ALCOHOLIC
BEVERAGES GROUP
(-0.2%)

The main contributors to the fall in the food and non-alcoholic beverages group this quarter are fruit (-6.7%), which saw increased supply of summer fruits, and other food products n.e.c. (-4.3%).

Over the last twelve months, the food and non-alcoholic beverages group rose 1.8%. The main contributors to the rise are vegetables (+13.1%) and fruit (+12.2%). Adverse weather conditions in major growing areas over previous periods continue to impact supply for particular vegetables and fruits.

In seasonally adjusted terms, the food and non-alcoholic beverages group rose 0.1% this quarter. The main contributor to the rise is fruit (+1.7%).

COMMUNICATION GROUP (-0.3%)

The main contributor to the fall in the communication group this quarter is telecommunication equipment and services (-0.5%).

Over the last twelve months, the communication group fell 4.8%. The main contributor to the fall is telecommunication equipment and services (-5.2%).

The communication group is not seasonally adjusted.

INTERNATIONAL TRADE EXPOSURE - TRADABLES AND NON-TRADABLES The tradables component (see Table 8) of the All groups CPI fell 0.2% this quarter. Price changes for the goods and services in this component are largely determined on the world market. The tradables component represents approximately 35% of the weight of the CPI. The tradable goods component recorded no movement this quarter. The most significant negative contributor is fruit (-6.7%), while the most significant positive contributor is automotive fuel (+5.7%). The fall in the tradable services component of 3.6% is driven by international holiday travel and accommodation (-3.8%).

The non-tradables component of the All groups CPI rose 0.9% this quarter. Price changes for the goods and services in this component are largely determined by domestic price pressures. The non-tradables component represents approximately 65% of the weight of the CPI. The most significant contributors to the 1.1% rise in the non-tradable goods component are new dwelling purchase by owner-occupiers (+1.0%) and electricity (+2.5%). The rise in the non-tradable services component of 0.6% is driven by medical and hospital services (+1.6%), secondary education (+4.1%) and tertiary education (+2.4%).

Over the last twelve months, the tradables component rose 1.3%, while the non-tradables component rose 2.6%. This compares to a rise of 0.1% and 2.1% respectively over the twelve months to the December quarter 2016.

In seasonally adjusted terms, the tradables component of the All groups CPI rose 0.5% this quarter, while the non-tradables component rose 0.7%.

A detailed description of which expenditure classes are classified as tradable and non-tradable in the 16th series is shown in the Appendix of the December quarter 2016 issue of Consumer Price Index, Australia (cat. no 6401.0).

SEASONALLY ADJUSTED ANALYTICAL SERIES The All groups CPI seasonally adjusted rose 0.5% this quarter, compared to the original All groups CPI which also recorded a rise of 0.5%.

SEASONALLY ADJUSTED
ANALYTICAL SERIES
continued

The trimmed mean rose 0.5% this quarter, compared to a revised rise of 0.5% in the December quarter 2016. Over the last twelve months, the trimmed mean rose 1.9%, compared to a rise of 1.6% over the twelve months to the December quarter 2016.

The weighted median rose 0.4% this quarter, compared to a rise of 0.4% in the December quarter 2016. Over the last twelve months, the weighted median rose 1.7%, compared to a revised rise of 1.4% over the twelve months to the December quarter 2016.

(a) not seasonally adjusted

A detailed explanation of the seasonal adjustment of the All Groups CPI and calculation of the trimmed mean and weighted median measures is available in *Information Paper: Seasonal Adjustment of Consumer Price Indexes, 2011* (cat. no. 6401.0.55.003) available on the ABS website. Revisions to the seasonally adjusted estimates can be the result of the application of concurrent seasonal adjustment, described in paragraph 15 of the Explanatory Notes.

#### CAPITAL CITIES COMPARISON

ALL GROUPS CPI

ALL GROUPS CPI, Percentage change from previous quarter

At the All groups level, the CPI rose in all capital cities except Darwin this quarter, while Perth recorded no movement.

The housing group (+0.8%) is the most significant positive contributor to the All groups quarterly movement, with rises in six out of the eight capital cities. This is driven by a rise in new dwelling purchase by owner-occupiers (+1.0%), due to increases in input costs, particularly steel and metal products. Electricity (+2.5%) is also contributing to the rise this quarter, driven by increases in wholesale prices.

The transport group (+1.5%) is the second most significant positive contributor to the All groups quarterly movement, with rises across all eight capital cities. This is driven by a rise in automotive fuel (+5.7%), due to an increase in world oil prices.

The health group (+2.0%) is the third most significant positive contributor to the All groups quarterly movement, with rises in all eight capital cities. The rise is driven by medical and hospital services (+1.6%) and pharmaceutical products (+4.9%) and is due to the resetting of the Medicare Benefits Scheme (MBS) and Pharmaceutical Benefits Scheme (PBS) safety net thresholds on 1 January, which increases the out-of-pocket expenses for patients.

The education group (+3.1%) is the fourth most significant positive contributor to the All groups quarterly movement, with rises in all eight capital cities. All forms of education are contributing to the rise, however the rise this year is weaker than past years due to low wages growth resulting in smaller fee increases.

The most significant offsetting negative contributors to the All groups quarterly movement are the furnishings, household equipment and services group (-1.0%), with falls in seven out of the eight capital cities, and the recreation and culture group (-0.7%), which saw falls in six out of the eight capital cities.

Over the last twelve months to March quarter 2017, the All groups CPI has risen across all eight capital cities, with Melbourne (+2.5%) and Sydney (+2.4%) recording the largest positive movements.

#### ALL GROUPS CPI continued

### ALL GROUPS CPI, All groups index numbers and percentage changes

	INDEX		
	NUMBER(a)	PERCENTAGE CHA	ANGE
	Mar Qtr	Dec Qtr 2016 to	Mar Qtr 2016 to
	2017	Mar Qtr 2017	Mar Qtr 2017
Sydney	111.3	0.4	2.4
Melbourne	110.9	0.9	2.5
Brisbane	110.5	0.3	1.8
Adelaide	109.1	0.4	2.0
Perth	109.0	0.0	1.0
Hobart	108.9	0.8	2.3
Darwin	108.5	-0.1	0.5
Canberra	108.6	0.6	2.3
Weighted average of eight capital cities	110.5	0.5	2.1

(a) Index reference period: 2011-12 = 100.0.

SYDNEY (+0.4%)

The main contributors to the rise in Sydney this quarter are automotive fuel (+4.7%), new dwelling purchase by owner-occupiers (+1.3%) and medical and hospital services (+1.8%). Preschool and primary education (+1.3%) also contributed to the rise, however the increase is weaker than usual due to the NSW Government's introduction of the Start Strong funding model for community preschools. The rise is partially offset by falls in fruit (-6.9%), international holiday travel and accommodation (-3.6%) and furniture (-5.2%).

MELBOURNE (+0.9%)

The main contributors to the rise in Melbourne this quarter are automotive fuel (+6.0%), electricity (+7.7%) and gas and other household fuels (+7.8%). Melbourne's utility prices rose due to increases in wholesale costs in electricity and gas being passed on to consumers. The rise is partially offset by falls in fruit (-8.7%) and international holiday travel and accommodation (-3.0%).

BRISBANE (+0.3%)

The main contributors to the rise in Brisbane this quarter are new dwelling purchase by owner-occupiers (+1.9%), automotive fuel (+3.8%) and medical and hospital services (+2.1%). The rise is partially offset by falls in international holiday travel and accommodation (-6.1%), urban transport fares (-11.5%) and domestic holiday travel and accommodation (-3.5%). The fall in urban transport fares is due to a reduction in public transport fares throughout South-East Queensland as a result of the Fairer Fares package being launched by the Queensland government in late December 2016.

ADELAIDE (+0.4%)

The main contributors to the rise in Adelaide this quarter are electricity (+5.9%), automotive fuel (+5.9%) and pharmaceutical products (+5.0%). The rise in electricity is due to the switch to peak pricing for the summer months. The rise is partially offset by falls in international holiday travel and accommodation (-5.0%) and fruit (-8.3%).

PERTH (0.0%)

Perth recorded no movement this quarter. Rises in automotive fuel (+7.7%), medical and hospital services (+1.3%) and pharmaceutical products (+4.2%) are offset by falls in rents (-2.4%), furniture (-5.8%), international holiday travel and accommodation (-3.1%) and new dwelling purchase by owner-occupiers (-0.8%). The fall in rents is due to a continuation of excess housing stock leading to high vacancy rates.

## CAPITAL CITIES COMPARISON continued

HOBART (+0.8%)

The main contributors to the rise in Hobart this quarter are automotive fuel (+13.2%), domestic holiday travel and accommodation (+5.9%) and rents (+1.4%). Hobart recorded the strongest rise for automotive fuel of any capital city this quarter. The rise in domestic holiday travel and accommodation is due to Tasmania's increasing popularity as a holiday destination for both international and domestic travellers. The rise is partially offset by falls in fruit (-11.4%) and international holiday travel and accommodation (-3.7%).

DARWIN (-0.1%)

Darwin is the only capital city to record a fall this quarter at the All groups level. The main contributors to the fall in Darwin this quarter are domestic holiday travel and accommodation (-7.8%), international holiday travel and accommodation (-6.2%), rents (-1.4%) and fruit (-10.2%). The fall in domestic holiday travel and accommodation is due to lower airfare prices as the wet season impacts tourist numbers in Darwin. The fall is partially offset by a rise in automotive fuel (+10.2%).

CANBERRA (+0.6%)

The main contributors to the rise in Canberra this quarter are automotive fuel (+8.5%), medical and hospital services (+2.9%) and child care (+2.6%). The rise is partially offset by falls in international holiday travel and accommodation (-3.8%), furniture (-4.2%) and fruit (-5.6%).

<sup>(</sup>c) Index numbers are available in the time series spreadsheet Table 8. CPI: Analytical Series, Weighted Average of Eight Capital Cities'.

#### **EXPLANATORY NOTES**

BRIEF DESCRIPTION OF THE

- **1** The Consumer Price Index (CPI) measures quarterly changes in the price of a 'basket' of goods and services which account for a high proportion of expenditure by the CPI population group (i.e. metropolitan households). This 'basket' covers a wide range of goods and services, arranged in the following eleven groups:
  - Food and non-alcoholic beverages
  - Alcohol and tobacco
  - Clothing and footwear
  - Housing
  - Furnishings, household equipment and services
  - Health
  - Transport
  - Communication
  - Recreation and culture
  - Education
  - Insurance and financial services.
- **2** Capital city indexes used by the CPI are based on the 2006 Australian Standard Geographical Classification (ASGC) statistical divisions. The capital city indexes measure price movements over time in each city individually. They do not measure differences in retail price levels between cities.
- **3** Further information about the CPI is contained in *Consumer Price Index: Concepts, Sources and Methods, 2016* (cat. no. 6461.0).
- 4 The frequency of price collection by item varies as necessary to obtain reliable price measures. Prices of some items are volatile (i.e. their prices may vary many times each quarter) and for these items frequent price observations are necessary to obtain a reliable measure of the average price for the quarter. Each month prices are collected at regular intervals for goods such as milk, bread, fresh meat and seafood, fresh fruit and vegetables, alcohol, tobacco, women's outerwear, project homes, motor vehicles, petrol and holiday travel and accommodation. For most other items, price volatility is not a problem and prices are collected once a quarter. There are a few items where prices are changed at infrequent intervals, for example education fees where prices are set once a year. In these cases, the frequency of price collection is modified accordingly.
- **5** In order to facilitate a more even spread of field collection workload, the number of items for which prices are collected quarterly is distributed roughly equally across each month of each quarter. In all cases, however, individual items are priced in the same month of each quarter. For example, items for which prices are collected in the first month of the September quarter, July, are also priced in the first month of subsequent quarters, namely October, January and April.
- **6** There are 87 expenditure classes (that is, groupings of like items) in the 16th series CPI and each expenditure class has its own weight, or measure of relative importance. In calculating the index, price changes for the various expenditure classes are combined using these weights.
- 7 Changes in the weighting pattern have been made at approximately six yearly intervals to take account of changes in household spending patterns. The CPI now comprises sixteen series of price indexes which have been linked to form a continuous series. The current and historical weighting patterns for the CPI for the weighted average of the eight capital cities are published in *Consumer Price Index: Historical Weighting Patterns (1948 to 2011)* (cat. no. 6431.0). The 16th series weighting pattern for the weighted average of eight capital cities and for each of the eight capital cities, as well as each city's percentage contribution to the weighted average, are also published in the *Consumer Price Index: 16th Series Weighting Pattern* (cat. no. 6471.0). Both publications are available on the ABS website <a href="http://www.abs.gov.au">http://www.abs.gov.au</a>.

PRICES

WEIGHTING PATTERN

ANALYSIS OF CPI CHANGES

**8** Movements in indexes from one period to another can be expressed either as changes in index points or as percentage changes. The following example illustrates the method of calculating changes in index points and percentage changes between any two periods:

All groups CPI: Weighted average of eight capital cities. Index numbers:

June Quarter 2012 100.4 (see Table 1) less June Quarter 2011 99.2 (see Table 1) Change in index points 1.2

Percentage change  $1.2/99.2 \times 100 = 1.2\%$  (see Table 2)

- **9** Percentage changes are calculated to illustrate three different kinds of movements in index numbers:
  - movements between consecutive financial years (where the index numbers for financial years are simple averages of the quarterly index numbers)
  - movements between corresponding quarters of consecutive years
  - movements between consecutive quarters.
- 10 Table 7 provides a detailed analysis, for the weighted average of eight capital cities, of movements in the CPI since the previous quarter, including information on movements for groups, sub–groups and expenditure classes. It also shows the contribution which each makes to the total CPI. For instance, the dairy and related products sub–group contributed 1.13 index points to the total All groups index number of 100.4 for the June Quarter 2012. The final column shows contributions to the change in All Groups index points by each group, sub–group and expenditure class.
- **11** Various series are presented in Table 8 in this publication to assist users analyse the CPI. Some of the analytical series are compiled by taking subsets of the CPI basket, and most are self explanatory, such as 'All groups CPI excluding Food and non-alcoholic beverages'. (A complete list of CPI groups, sub-groups and expenditure classes is contained in Tables 6 and 7). Other series and their composition are described below:
  - All groups CPI, seasonally adjusted: Comprises all components included in the All groups CPI, seasonally adjusted where seasonality has been identified at the weighted average of eight capital cities level. Seasonal adjustment factors are calculated using the history of price changes up to the current quarter CPI and are revised each quarter.
    - Where CPI expenditure classes are identified as having a seasonal pattern, quarterly price changes are estimated on a seasonally adjusted basis. At the introduction of the 16th series, 62 out of the 87 expenditure classes were classified as seasonal. A description of which series are currently seasonally adjusted is published in the Appendix of every September quarter issue of Consumer Price Index, Australia (cat. no. 6401.0), following the annual seasonal reanalysis.
  - Underlying trend series, 'Trimmed mean' and 'Weighted median': These are two analytical measures of trend inflation calculated from the June quarter 2002 using standard ABS seasonal adjustment techniques. For more information see the Information Paper: Seasonal Adjustment of Consumer Price Indexes, 2011 (cat. no. 6401.0.55.003). The Trimmed mean and Weighted median are calculated using the distribution of expenditure classes each quarter derived as follows:
    - The CPI expenditure classes are ranked from lowest to highest according to the seasonally adjusted percentage change from the previous quarter.
    - The seasonally adjusted relative weight of each expenditure class is calculated based on its previous quarter contribution to the All groups CPI.
    - The 'Trimmed mean' is calculated by using a weighted average of percentage change from the previous quarter (seasonally adjusted) from the middle 70 percent of the distribution.

ANALYTICAL SERIES

ANALYTICAL SERIES continued

- The 'Weighted median' is calculated using the percentage change from the previous quarter (seasonally adjusted) expenditure class at the 50th percentile of the distribution.
- International trade exposure series, Tradables component: Comprises all items whose prices are largely determined on the world market. For more information, see paragraph 12 below.
- *International trade exposure series, Non-tradables component:* Comprises all items not included in the Tradables component.
- All groups CPI, goods component: Comprises the Food and non-alcoholic beverages group (except Restaurant meals); Alcohol and tobacco group; Clothing and footwear group (except Cleaning, repair and hire of clothing and footwear); Furnishings, household equipment and services group (except Domestic and household services sub-group); Utilities, Audio, visual and computing equipment and services, and Newspapers, books and stationery sub-groups; and New dwelling purchase by owner-occupiers, Pharmaceutical products, Motor vehicles, Automotive fuel, Spare parts and accessories for motor vehicles, Equipment for sports, camping and open-air recreation, Games, toys and hobbies and Pets and related products expenditure classes.
- All groups CPI, services component: Comprises all items not included in the 'All groups CPI, goods component'. A description of which series are goods or services is published in the Appendix of the December quarter 2016 issue of Consumer Price Index, Australia (cat. no 6401.0).
- All groups CPI including Deposit and loan facilities (indirect charges): One of the outcomes of the 16th series CPI Review was to remove the indirectly measured component of the Deposit and loan facilities index from the headline CPI but to include it in a new analytical series. This index includes the 16th series All groups CPI plus the indirectly measured component of the Deposit and loan facilities index.
- Market goods and services excluding 'volatile items': in addition to the items excluded from the series 'All groups CPI excluding 'volatile items', also excludes: Utilities, Property rates and charges, Child care, Health, Other services in respect of motor vehicles, Urban transport fares, Postal services, and Education.
- All groups CPI excluding Insurance and financial services: Reflecting the changing composition of the CPI, from the September quarter 1989 to the June quarter 1998, comprises the All groups CPI excluding house insurance, house contents insurance, vehicle insurance and mortgage interest charges and consumer credit charges; from the September quarter 1998 to the June quarter 2000 comprises the All groups CPI excluding house insurance, house contents insurance and vehicle insurance; from the September quarter 2000 to the June quarter 2005 comprises the All groups CPI excluding insurance services; from the September quarter 2005 to the June quarter 2011 comprises the All groups CPI excluding Financial and insurance services; from the September quarter 2011 comprises the All groups CPI excluding Insurance and financial services.
- \*\* All groups CPI excluding Housing and Insurance and financial services: Reflecting the changing composition of the CPI, from the September quarter 1989 to the June quarter 1998, comprises the All groups CPI excluding Housing, house contents insurance, vehicle insurance and consumer credit charges; from the September quarter 1998 to the June quarter 2000 comprises the All groups CPI excluding Housing, house insurance, house contents insurance and vehicle insurance; from the September quarter 2000 to the June quarter 2005 comprises the All groups CPI excluding Housing and insurance services; from the September quarter 2005 to the June quarter 2011 comprises the All groups CPI excluding Housing and Financial and insurance services; from the September quarter 2011 comprises the All groups CPI excluding Housing and Insurance and financial services.

ANALYTICAL SERIES continued

- All groups CPI excluding food and energy: Comprises the All groups CPI excluding the Food and non-alcoholic beverages group (except Restaurant meals); Electricity, Gas and other household fuels; and Automotive fuel.
- All groups CPI excluding 'volatile items': Comprises the All groups CPI excluding Fruit and vegetables and Automotive fuel.
- 12 The International trade exposure series was reviewed and updated for the December quarter 2016. There were eight changes of classification outlined in the September quarter 2016 feature article 'Review of the Consumer Price Index International Trade Exposure Series' (cat. no. 6401.0): Breakfast cereals; Waters, soft drinks and juices; Gas and other household fuels; Therapeutic appliances and equipment; and Newspaper, magazines and stationery were reclassified from non-tradables to tradables: and Spirits; Tobacco; and Pharmaceutical products were reclassified from tradables to non-tradables. These changes are included from the December quarter 2016. The historical tradables and non-tradables series will not be revised. A description of which expenditure classes are tradables or non-tradables is published in the Appendix of the December quarter 2016 issue of Consumer Price Index, Australia (cat. no 6401.0).
- 13 Published index numbers, except for the underlying trend series, are rounded to one decimal place. Percentage change movements are calculated from the index numbers and then rounded to one decimal place. Rounding errors can occur, causing discrepancies (e.g. when calculating percentage changes of aggregates and their components). Underlying trend series, 'Trimmed mean' and 'Weighted median' index numbers are published to four decimal places. Percentage change movements are calculated from the published index numbers and rounded to one decimal place.
- **14** Seasonally adjusted estimates are derived by estimating and removing systematic calendar related effects from the original series. In most economic data these calendar related effects are a combination of the classical seasonal influences (e.g. the effect of the weather, social traditions or administrative practices such as government charges increasing on 1 July each year) plus other kinds of calendar related variations, such as Easter or the proximity of significant days in the year (e.g. Christmas). In the seasonal adjustment process, both seasonal and other calendar related factors evolve over time to reflect changes in activity patterns. The seasonally adjusted estimates reflect the sampling and non–sampling errors to which the original estimates are subject.
- adjustment factors. This method uses the original time series available at each reference period to estimate seasonal factors for the current and previous quarters. Concurrent seasonal adjustment is technically superior to the more traditional method of reanalysing seasonal patterns once each year because it uses all available data to fine tune the estimates of the seasonal component each quarter. With concurrent analysis, the seasonally adjusted series are subject to revision each quarter as the estimates of the seasonal factors are improved. In most instances, the only significant revisions will be to the combined adjustment factors for the previous quarter and for the same quarter in the preceding year as the reference quarter (i.e. if the latest quarter is September quarter 2011 then the most significant revisions will be to June quarter 2011 and September quarter 2010). The seasonal patterns are also reanalysed on an annual basis or when there are known changes to regular events. This can lead to additional revisions.
- **16** Autoregressive integrated moving average (ARIMA) modelling can improve the revision properties of the seasonally adjusted and trend estimates. ARIMA modelling relies on the characteristics of the series being analysed to project future period data. The projected values are temporary, intermediate values, that are only used internally to improve the estimation of the seasonal factors. The projected data do not affect the

ROUNDING

SEASONALLY ADJUSTED INDEXES

SEASONALLY ADJUSTED INDEXES continued

original estimates and are discarded at the end of the seasonal adjustment process. From the December quarter 2012, the Consumer Price Index uses ARIMA modelling where appropriate for individual time series. The ARIMA model is assessed as part of the annual reanalysis. For more information on ARIMA modelling see Feature article: Use of ARIMA modelling to reduce revisions in the October 2004 issue of *Australian Economic Indicators* (cat. no. 1350.0).

17 The ABS applies seasonal adjustment to the expenditure class components of the CPI which are found to be seasonal, and then aggregates the seasonally adjusted and non–seasonally adjusted components to calculate the All groups CPI, seasonally adjusted, Trimmed mean and Weighted median estimates. The seasonally adjusted expenditure class components are available in Table 13 – CPI expenditure classes and selected analytical series, seasonally adjusted index numbers, weighted average of eight capital cities. The seasonal factors used to derive these seasonally adjusted indexes are available in Table 14 – CPI expenditure class, combined seasonal adjustment factors, weighted average of eight capital cities. For more information about seasonal adjustment of the CPI please refer to *Information Paper: Seasonal Adjustment of Consumer Price Indexes*, 2011 (cat. no. 6401.0.55.003).

INTERNATIONAL COMPARISONS

18 In analysing price movements in Australia, an important consideration is Australia's performance relative to other countries. However, a simple comparison of All groups (or headline) CPIs is often inappropriate because of the different measurement approaches used by countries for certain products, particularly housing and financial and insurance services. To provide a better basis for international comparisons, the 17th International Conference of Labour Statisticians adopted a resolution which called for countries to 'if possible, compile and provide for dissemination to the international community an index that excludes housing and financial services' in addition to the all-items index.

REVISIONS

**19** CPI original indexes are revised only in exceptional circumstances, such as to correct a significant error. As is the case with all price indexes, the index reference period (i.e. the period in which the index is set equal to 100.0) will be changed periodically. The index number levels for all periods will be changed by this process and it may also result in differences, due to rounding, between the percentage changes published on the old base and those on the new base. Seasonally adjusted indexes (including the Trimmed mean and Weighted median) for some quarters will be revised as extra quarters are included in the series analysed for seasonal influences (see paragraphs 14 to 17).
