NOTES

ABOUT THIS PUBLICATION

This publication contains final estimates for the main commodities collected in the 2008–09 Agricultural Survey. Included are statistics on land use, industry activity, crop and horticultural area and production, and livestock numbers. Data will be available for a range of sub–state geographic levels, including Natural Resource Management (NRM) region and Statistical Division (SD). The data are based on a response rate of 88% from a sample of approximately 38 thousand agricultural businesses selected for the 2008–09 Agricultural Survey.

More detailed agricultural commodity and livestock data will be attached as data cubes to this publication at a later time.

Structural tables containing data pertaining to agricultural business activity by Estimated Value of Agricultural Operations (EVAO) and area are also attached as data cubes to this publication.

Additional state/territory and national data for wheat grain storage and use and grain storage capacity are available for download with this publication.

The estimates in this publication are based on the Australian and New Zealand Standard Industrial Classification (ANZSIC) 2006 edition, which was adopted for the first time in 2005–06.

Further data from the 2008–09 Agricultural Survey collection will be released in *Water Use on Australian Farms* (cat. no. 4618.0).

CHANGES IN THIS ISSUE

The 2008–09 Agricultural Survey collected a greater range of agricultural commodities and livestock breakdowns than was collected in the 2007–08 Agricultural Resource Management Survey (ARMS). For further details refer to the Explanatory Notes.

SUMMARY OF FINDINGS INDUSTRY STRUCTURE

BUSINESSES WITH AGRICULTURAL ACTIVITY

Table 2 of this publication categorises businesses with agricultural activity into the industry that represents the business' main activity, using the Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006 edition.

The 2008–09 Agricultural Survey revealed that the number of businesses undertaking agricultural activity had fallen to a total of 136 thousand businesses. This represents a 3% decrease compared to 2007–08.

The beef cattle farming industry remained the largest sector in 2008–09, comprising nearly a third of businesses classified to the agriculture industry. The mixed farming sector (grain–sheep/grain–beef cattle) represented the next largest sector, accounting for 11% of businesses in the agriculture industry.

Other notable movements in 2008–09 were the decrease in the number of businesses in the dairy cattle farming industry (down 12%) and the doubling of the number of businesses in the rice growing industry since 2007–08.

The number of non–agricultural businesses which undertook agricultural activity during 2008–09 remained steady at an estimated 15 thousand businesses.

SUMMARY OF FINDINGS CROPS

OVERVIEW	Production increased for many broadacre crops in 2008–09, in particular wheat, barley and canola, as a result of improved seasonal conditions in some areas.
CROPS FOR GRAIN	The area sown to wheat for grain in 2008–09 increased by 8% to 13.5 million hectares while production recovered from the lows of recent years, rising by 58% to 21.4 million tonnes from 2007–08. Production increased in all the major growing states, except Victoria (down 12%) where production was affected by dry seasonal conditions. Production in New South Wales was more than double that of the previous drought-affected year, up to 7.0 million tonnes.
<i>Wheat</i>	
<i>Barley</i>	There was a 2% increase in the area sown to barley for grain, up to 5.0 million hectares in 2008–09. Production of 8.0 million tonnes was 12% higher than 2007–08. With improved seasonal conditions, most regions had increased production from 2007–08, with New South Wales recording the largest increase (up 78%), while production in Victoria decreased by 18%.
<i>Oats</i>	The area sown to oats fell 30% in 2008–09, down to the lowest level since 2002. As a result, production decreased by 23% to 1.2 million tonnes. All states recorded decreased production, except New South Wales which increased by 35% to 261 thousand tonnes.
<i>Grain Sorghum</i>	There was a 19% decrease in the area sown to sorghum for grain in 2008–09, with 767 thousand hectares sown. Production decreased by 29% to 2.7 million tonnes, with most states/territories recording falls from the previous year.
<i>Lupins</i>	In 2008–09, the area sown to lupins continued a decade of decline, down to 577 thousand hectares. However, production rose by 7% from 2007–08, totalling 708 thousand tonnes as a result of increases in Western Australia, which was the main producing state with 600 thousand tonnes.
<i>Rice</i>	In 2008–09 the area sown to rice more than trebled to 7 thousand hectares compared with the previous year due to increased availability of water for irrigation. Production similarly increased to 61 thousand tonnes. However, these figures are still markedly below the levels recorded ten years ago.
OTHER CROPS	The area of canola planted in 2008–09 increased by 33% to 1.7 million hectares.
<i>Canola</i>	Increased plantings were recorded in three of the four main growing states, with only New South Wales showing a small decrease, down to 300 thousand hectares. However, increased production in all the main producing states, including a 56% increase in Western Australia, saw overall production up by 52% to 1.8 million tonnes in 2008–09.
<i>Cotton</i>	In 2008–09 the total area sown to cotton more than doubled to 159 thousand hectares following increased availability of water for irrigation. Production of cotton lint increased from the low levels of recent years to 309 thousand tonnes.

SUMMARY OF FINDINGS CROPS *continued*

Sugar cane

While the area sown to sugar cane in 2008–09 increased by 3% to 391 thousand hectares, production fell by 4% to 31.5 million tonnes due to falls in New South Wales and ceasing of production in Western Australia. Queensland, the main growing state, increased plantings by 6% to 376 thousand hectares.

SUMMARY OF FINDINGS HORTICULTURE

FRUIT	
<i>Citrus</i>	<p>Although the number of orange trees increased in 2008–09 by 12% to 6.8 million trees, production fell by 15% to 348 thousand tonnes.</p> <p>Both mandarin production and the number of mandarin trees were down 4% in 2008–09. Production in Queensland, the main producing state, was down by 20%.</p>
<i>Pome</i>	<p>In 2008–09, apple producers reported a decrease of almost one million trees (12%), but production rose by 11% to 295 thousand tonnes. Pear growers reported falls, both in the number of trees (down by 5% to 1.6 million trees) and in production which dropped by 8% to 120 thousand tonnes.</p>
<i>Other fruit and nuts</i>	<p>In 2008–09, the area planted to bananas increased by 22% to 12 thousand hectares. Banana production rose by 31% to 270 thousand tonnes, driven by increased production in Queensland (Australia's main producing state) where production was up by 32% from 2007–08. These increases bring production levels back in line with pre-2006 levels.</p> <p>Further decreases from 2006–07 in mango production were recorded in 2008–09, down by 17% to 41 thousand tonnes from 2007–08. This reduced production was driven by poor conditions in Queensland (down 23%). Queensland accounted for 67% of national mango production.</p> <p>Although the number of macadamia trees increased by 13% to 3.9 million in 2008–09, reduced production due to unfavourable conditions in the major producing states of New South Wales (down by 12%) and Queensland (down by 5%) pushed national production down by 10% to 30 thousand tonnes.</p>
VEGETABLES	
<i>Carrots</i>	<p>The area for carrots sown in 2008–09 increased by 5% to 5 thousand hectares, but there was a slight decrease in production (down 3%) to 264 thousand tonnes. Production decreased in Victoria, South Australia and Tasmania, but increased in the other states.</p>
<i>Mushrooms</i>	<p>Production of mushrooms declined by 8% to 43 thousand tonnes, driven by decreases in Queensland (down 31% and continuing declines of recent years in that state), and New South Wales (down from a peak in the previous year). The area sown to mushrooms also dropped, down by 11% to 159 hectares.</p>
<i>Onions</i>	<p>In 2008–09 increases were reported in both area of onions (up 9% to 5 thousand hectares) and production of onions (up 12% to 284 thousand tonnes). All producing states recorded increased production, except for Western Australia which was down 20% from 2007–08. Tasmanian production continued the increases of recent years and overtook South Australia as the main producing state.</p>
<i>Potatoes</i>	<p>In 2008–09, there were declines for potatoes in both area sown and production. A total area of 33 thousand hectares (down 15%), resulted in a 16% downturn in production to 1.2 million tonnes. This continued a pattern of reduced production reported over the past decade.</p>

Tomatoes

The area of tomatoes sown remained steady at 7 thousand hectares in 2008–09 but there was a 15% increase in production to 440 thousand tonnes. This national increase in production was driven by the major producing state, Victoria, recording a 40% increase from 2007–08 when production was affected by poor seasonal factors.

SUMMARY OF FINDINGS LIVESTOCK

LIVESTOCK

Milk cattle

The number of milk cattle increased in 2008–09 by 3% to 2.6 million head, with the number of cows in milk and dry increasing by 2% to 1.7 million head.

Tasmania had the largest percentage increase of all states in dairy cattle, up by 14% to 226 thousand head. Victoria remained the major dairy state, with herd numbers up 2% to 1.6 million head.

Meat Cattle

In 2008–09, meat cattle totalled 25.3 million head, representing an increase of 2% from 2007–08. Notable movements in meat cattle numbers were Western Australia with a 10% increase and in the Northern Territory recording an 18% decrease.

Sheep

Sheep numbers decreased by 5% to 72.7 million in 2008–09, the lowest level since 1905. The largest decreases were reported in Western Australia (down by 1.9 million head) and Victoria (down by 1.7 million head).

Pigs

Pig numbers continued to decline in 2008–09, dropping to the lowest herd size since 1979 at 2.3 million head. This downward trend in pig numbers was driven by the main producing states of New South Wales (down 16%) and Queensland (down 2%).

Chickens

The number of chickens for egg production fell in 2008–09 by 15% to 12.6 million, while meat chicken numbers increased by 12% to 82.8 million. All three major meat chicken producing states reported increased numbers, with Queensland (up 37%) reporting the largest rise. New South Wales continued to be the main producing state with 38% of the national total.

— nil or rounded to zero (including null cells)

(a) Excludes crops harvested for hay and seed, and pastures and grasses.

(b) Total area of agricultural businesses with an EVAO of \$5,000 or more.

(c) Non-agricultural land is the difference between agricultural land as reported in the Agricultural Survey or ARMS and total land area of the state/territory. It comprises conserved land, forestry, urban and unused land such as vacant Crown land, commercially unused land on Aboriginal and other Crown reserves and waste land, ephemeral lakes and mangrove swamps, as well as establishments not included in the scope of the Agricultural Survey.

(d) Total area of Australia includes Jervis Bay.

(a) Excluding house cows.

(b) As at 30 June.

(c) Includes heifers 1 to 2 years, heifers over 2 years, and other dairy cattle (calves, bulls and bull calves).

(d) Includes bulls, steers, bullocks, calves etc.

(e) Includes dairy and meat cattle for all purposes.

(f) Includes maiden ewes intended for breeding.

(g) Includes lambs under one year (marked lambs only), rams, wethers, hoggets and non-breeding ewes.

(h) Includes boars, suckers, weaners, growers and finishers and gilts intended for breeding.

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains estimates for commodities collected in the 2008–09 Agricultural Survey. It contains detailed statistics on land use, broadacre crops, horticulture, livestock numbers and industry characteristics of agricultural businesses.

GENERAL

2 In 2007–08, an Agricultural Resource Management Survey (ARMS) was run with a reduced set of commodities compared to the Agricultural Survey/Census of previous years. The ARMS was a combination of a reduced Agricultural Survey and a benchmark survey of land management practices undertaken by agricultural businesses as well as a survey of management responses to adverse seasonal conditions experienced by affected agricultural businesses. In 2008–09, the Australian Bureau of Statistics (ABS) returned to the Agricultural Survey which collected a greater range of agricultural commodities and livestock breakdowns than the 2007–08 ARMS.

3 Expanded horticulture and livestock commodities information can be found in the data cubes attached to this publication (cat. no. 7121.0). Estimates for sub–state geographies, specifically Statistical Division (SD) and Natural Resource Management (NRM) regions, will also be released in data cubes attached to this publication. Additional data on wheat storage and use, as well as grain storage capacity are also available for downloading.

4 Agricultural water use data collected as part of the 2008–09 Agricultural Survey will be released in *Water Use on Australian Farms* (cat. no. 4618.0). Sub–state water data, for SD, NRM and Murray–Darling Basin (MDB), will be included as data cubes.

5 Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

CROPS, PASTURES AND HORTICULTURE

6 Statistics on area and production of crops relate, in the main, to crops sown during the year ended 30 June. Statistics of perennial crops relate to the position at 30 June and the production during the year ended on that date, or fruit set by that date.

LIVESTOCK SLAUGHTERING AND LIVESTOCK PRODUCTS

7 Livestock slaughtering and livestock products, including milk and wool data, and poultry slaughtering are no longer included in this publication. Further information can be found in the publication *Livestock Products, Australia* (cat. no. 7215.0).

INDUSTRY CLASSIFICATION

8 The industry classification used in this publication is the 2006 version of the Australian and New Zealand Standard Industrial Classification (ANZSIC). Prior to the 2005–06 issue of this publication, estimates were based on the ANZSIC 1993 edition. ANZSIC 2006 was developed to provide a more contemporary industrial classification system taking into account issues such as changes in the structure and composition of the economy, changing user demands and compatibility with major international classification standards. For more information, please refer to *Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006* (cat. no. 1292.0).

STATISTICAL UNITS USED

9 Since 2005–06, the ABS has used an economic statistics units model on the ABS' Business Register (ABSBR) to describe the characteristics of businesses and the structural relationships between related businesses. The units model is used within large and diverse business groups to define reporting units that can provide data to the ABS at a suitable level.

10 Respondents to the 2008–09 Agricultural Survey were drawn from the ABS Business Register.

SCOPE AND COVERAGE

11 The scope of the 2008–09 Agricultural Survey included all agricultural businesses recorded on the ABS Business Register (ABSBR) above a minimum size cut–off. The ABSBR is based on the Australian Business Register (ABR) which is administered and maintained by the Australian Taxation Office (ATO).

EXPLANATORY NOTES *continued*

SCOPE AND COVERAGE

continued

12 A minimum size cut-off of \$5,000 was applied to determine whether a business was in-scope for the 2008–09 Agricultural Survey. The measure of size was based on the ABS' Estimated Value of Agricultural Operations (EVAO) or a derived value based on Business Activity Statement (BAS) turnover.

13 While the ABSBR does not include all agricultural businesses in Australia, it provides improved coverage from the former ABS maintained Agricultural Survey frame, as most businesses and organisations in Australia need to obtain an Australian Business Number (ABN) from the ATO for their business operations. The ABR based register is also more up-to-date as it excludes agricultural businesses with cancelled ABNs and incorporates regularly updated information on agricultural businesses from the ATO.

14 For the 2008–09 Agricultural Survey, a response rate of 88% was achieved from a sample of approximately 38,000 agricultural businesses selected from an in-scope population of approximately 171,000 agricultural businesses.

RELIABILITY OF ESTIMATES

(SAMPLE ERROR)

15 The estimates in this publication are based on information obtained from a sample drawn from the total agricultural business population in scope of the collection, and are subject to sampling variability; that is, they may differ from the figures that would have been produced if all businesses had been included in the survey. One measure of the likely difference is given by the standard error (SE) which indicates the extent to which an estimate might vary by chance because only a sample was taken. There are about two chances in three that a 'sample' estimate will differ by less than one SE from the figure that would have been obtained if all businesses had responded, and about nineteen chances in twenty that the difference will be less than two SEs.

16 In this publication, 'sampling' variability of the estimates is measured by the relative standard error (RSE) which is obtained by expressing the SE as a percentage of the estimate to which it refers.

17 Most published national estimates have RSEs less than 5%. For some states with limited production of certain commodities, RSEs are greater than 10%. Estimates that have an estimated RSE between 10% and 25% are annotated with the symbol '^'. These estimates should be used with caution as they are subject to sampling variability too high for some purposes. Estimates with an RSE between 25% and 50% are annotated with the symbol '*', indicating that the estimate should be used with caution as it is subject to sampling variability too high for most practical purposes. Estimates with an RSE greater than 50% are annotated with the symbol '**' indicating that the sampling variability causes the estimates to be considered too unreliable for general use. Separate indication of the RSEs of all estimates is available on request.

18 A table with RSEs for selected commodities follows:

ABS DATA AVAILABLE ON REQUEST

19 As well as the statistics included in this and related publications, the ABS may have other relevant data available on request. Enquiries should be made to the National Information and Referral Service on 1300 135 070.

GENERAL ACKNOWLEDGMENT

20 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated: without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.

RELATED PUBLICATIONS

21 A range of agricultural publications is produced by the ABS, including:

- *Agricultural Commodities: Small Area Data, Australia* (cat. no. 7125.0)
- *Livestock and Meat, Australia* (cat. no. 7218.0.55.001)
- *Livestock Products, Australia* (cat. no. 7215.0)
- *Principal Agricultural Commodities, Australia, Preliminary* (cat. no. 7111.0)
- *Value of Principal Agricultural Commodities Produced, Australia, Preliminary* (cat. no. 7501.0)
- *Value of Agricultural Commodities Produced, Australia* (cat. no. 7503.0)
- *Water Use on Australian Farms* (cat. no. 4618.0)

22 For comparisons of the agriculture industry with other industries, users are referred to:

- *Australian National Accounts: National Income, Expenditure and Product* (cat. no. 5206.0)
- *Australian National Accounts: State Accounts* (cat. no. 5220.0)

23 Current publications and other products released by the ABS are listed under the *Statistics* and *Themes* pages on the ABS website <<http://www.abs.gov.au>>. The ABS also issues a daily Release Advice on the website which details products to be released in the week ahead.
