CHAPTER XXIV.

POPULATION.

§ 1. Enumerations and Estimates.

The nature of the early "musters" of the population and the subsequent Census enumerations which have been conducted in Australia were reviewed in Official Year Book, Number 15, pp. 1083-5. This review was accompanied by a tabular statement showing the dates on which the various enumerations were made, and the numbers counted on such occasions.

§ 2. Census of 4th April, 1921.

1. Numbers Enumerated.—The Census for the whole of Australia was taken as for the night between the 3rd and the 4th of April, 1921, and was the second Census under the provisions of the Commonwealth Census and Statistics Act 1905-20, which provides for the enumeration being dealt with from one centre, instead of each State being responsible for its own count as on previous occasions. The numbers recorded in the several States and Territories were as follows:—

POPULATION,—4th APRIL, 1921.

(EXCLUSIVE OF FULL-BLOOD ABORIGINALS.)

States and Territories.	Males.	Females.	Persons.
States—			
New South Wales	1,071,501	1,028,870	2,100,371
Victoria	754,724	776,556	1,531,280
Queensland	398,969	357,003	755,972
South Australia	248,267	246,893	495,160
Western Australia	177,278	155,454	332,732
Tasmania	107,743	106,037	213,780
Territories—			
Northern	2,821	1,046	3,867
Federal Capital	1,567	1,005	2,572
 Australia	 2,762,870	 2,672,864	 5,435,734

2. Increase since Census of 1881.—(i) *Australia*.—The increase of population between the Census of 3rd April, 1911, and that of 4th April, 1921, was 980,729, of which 449,835 were males and 530,894 were females, as compared with an increase of 681,204, comprising 335,107 males and 346,097 females, for the preceding ten years. The population of each sex enumerated at the Censuses of 3rd April, 1881, 5th April, 1891, 31st March, 1901, 3rd April, 1911, and 4th April, 1921, was as follows:—

POPULATION.—AUSTRALIA, LAST FIVE CENSUSES.
(EXCLUSIVE OF FULL-BLOOD ABORIGINALS.)

Date of Census.	Males.	Females.	Persons.	(a) Masculinity.
3rd April, 1881	1,214,913	1,035,281	2,250,194	7.98
5th April, 1891	1,704,039	1,470,353	3,174,392	7.36
31st March, 1901	1,977,928	1,795,873	3,773,801	4.83
3rd April, 1911	2,313,035	2,141,970	4,455,005	3.84
4th April, 1921	2,762,870	2,672,864	5,435,734	1.66

(a) Excess of males over females per 100 persons.

(ii) *States and Territories.* The increases in the population of the several States and Territories during the past four intercensal periods have been as follow :—

POPULATION.—STATES, ETC., INTERCENSAL INCREASES.

State or Territory.	1881-1891.		1891-1901.		1901-1911.		1911-1921.

Australia	924,198	41.07	599,409	13.88	681,204	18.05	980,729	22.01

(a) Including Federal Capital Territory.

(b) Decrease.

For Australia as a whole, the increase during the period 1911-1921 was greater by 299,525 than that for the period 1901-1911, the rate of increase being 22.01 per cent. for 1911-1921, as against 18.05 for 1901-1911. The former corresponds to an increase of 1.67 per cent. per annum, the latter to an increase of 2.01 per cent. per annum.

As regards the separate States, both the numerical and relative increases in the case of New South Wales, Victoria, Queensland, South Australia, and Tasmania were greater for 1911-1921 than for 1901-1911. On the other hand, Western Australia experienced a smaller increase during the decade 1911-1921 than in either of the two immediately preceding decades. The Northern Territory showed during the period 1911-1921 its first increase in population since the decade 1881-1891.

§ 3. Distribution and Fluctuation of Population.

1. **Present Number.**—The population of Australia on the 31st December, 1926, was estimated at 6,110,514 persons, of whom 3,122,531, or 51.10 per cent., were males and 2,987,933, or 48.90 per cent., were females. The increase during the year 1926 was 118,430, equal to 1.98 per cent., males having increased by 62,266, or 2.03 per cent., and females by 56,164, or 1.92 per cent. Of the increase referred to, 76,210, or 64.35 per cent., was due to the excess of births over deaths, and 42,220, or 35.65 per cent., was due to the excess of immigration over emigration.

2. **Growth and Distribution.**—The following tables show the population of the States at decennial intervals from their foundation to the year 1910, and for each of the

last five years. In issues of the Year Book up to No. 15, the male and female populations of Australia as a whole were given at quinquennial periods from 1788, but it is considered that the abridged table presented herewith will suffice for general purposes.

POPULATION.—1788 TO 1926.

(a) Details as to sex not available for earlier decennial dates. (b) Previously included with New South Wales. (c) Previously included with South Australia.

So far as the numbers can be ascertained, the nucleus of the population of Australia consisted of 1,024 persons, including the military, who landed in Sydney Cove on the 26th January, 1788. For many years the number increased very slowly, and in 1825, when Tasmania (then known as Van Diemen's Land) was separated from New South Wales and constituted a separate colony, *i.e.*, 37 years after the first settlement, the total population was only 52,505 persons, of whom 38,313 were in New South Wales, and 14,192 were in Tasmania. The total for Australia attained its first million in 1858, 70 years after settlement. At this time the population was distributed among the States, or Colonies as they were then, as follows:—New South Wales, 31.97 per cent.; Victoria, 47.22 per cent.; Western Australia, 1.38 per cent.; South Australia, 11.29 per cent.; and Tasmania, 8.14 per cent. The second million was reached in 1877, after a lapse of nineteen years, by an average rate of increase of 3.53 per cent. per annum. The third million was reached twelve years later, in 1889, by an annual rate of increase of 3.48 per cent.; the fourth million sixteen years later, in 1905, at the rate of increase of 1.74 per cent. per annum; the fifth million thirteen years later in 1918, by an annual average rate of 1.79 per cent.; and the sixth million eight years later in 1926 by an annual average rate of 2.31 per cent.

The growth of the population of Australia and of each State thereof, is illustrated by the graph accompanying this chapter.

3. Mean Population.—The following table shows the mean population for each State and Territory for the five years 1922 to 1926.

MEAN POPULATION, EXCLUSIVE OF FULL-BLOOD ABORIGINALS.

(a) Excess of males over females in each 100 persons. (b) Number of persons per square mile.
NOTE.—The minus sign (—) indicates excess of females over males in each 100 persons.

6. Urban and Rural Distribution.—The following table shows the number of persons and the percentage on the total population recorded at the Census of the 4th April, 1921, as resident in urban and rural areas respectively. The metropolitan divisions include the capital city and the adjoining urban areas; the urban provincial districts cover those cities and towns which are not adjacent to the metropolitan areas, and which are incorporated for local government purposes; those persons classed as migratory were mostly on board ships in Australian ports :—

URBAN AND RURAL POPULATION.—AUSTRALIA, CENSUS, 4th APRIL, 1921.

For Australia as a whole 62.10 per cent. of the population is urban, this percentage being exceeded by New South Wales, 67.80 per cent., and Victoria 62.29 per cent. Tasmania, with 50.52 per cent., has the smallest percentage of urban population in all the States.

During the ten years between the Censuses of 1911 and of 1921 the population of the metropolitan areas in the aggregate increased in proportion to the total population of Australia from 38.03 per cent. in 1911 to 43.01 per cent. in 1921. This movement was common to all the States, though in varying degree. The relative accretion to the metropolitan total was greatest in Western Australia, where it increased from 37.85 per cent. to 46.55 per cent. of the population of the State, and was least in New South Wales, where it increased from 38.23 per cent. to 42.80 per cent. The abnormal increase in the proportion of the metropolitan population to the total population of Western Australia is not due entirely to the actual increase to the population of Perth and suburbs, but is caused in some measure by the departure from the State of many persons who had been engaged in connexion with the mining industry in extra-metropolitan districts.

In Victoria and in South Australia more than half the population lives within the metropolitan areas. At the Census of 1921, 50.05 per cent. of the population of Victoria, and 51.57 per cent. of the population of South Australia, were resident in their respective capitals. Of the total population of Australia, 43.01 per cent. was in the metropolitan areas, the proportion of the total males being 40.35 per cent., and of the females 45.77 per cent. The post-censal estimates, which are given in the following table, show a higher proportion in each of the capitals than was shown by the Census.

7. Metropolitan Population—Australia and Other Countries.—The abnormal concentration of population in the capitals of the States of Australia, as compared with other countries, may be readily seen from the following table. It may be mentioned, however, that, in most of the European countries, the capital is not always the most populous of many big cities, whereas, in Australia, the capital is invariably the most populous city, and in some States is the only town of important magnitude.

Ipswich	20,526		

§ 4. Elements of Increase.

1. Natural Increase.—(i) *General.* The two factors which contribute to the growth of a population are the “natural increase” by excess of births over deaths, and the “net immigration,” *i.e.*, the excess of arrivals over departures. While the relative potency of these factors depends upon a variety of causes, it may be said that, in general, in the case of a new country “net immigration” provides an important part of the increase of population, while in an old country “natural increase,” modified more or less by “net emigration,” or excess of departures over arrivals, is the principal element of increase. A graph showing the natural increase to the population of each State and of Australia, from year to year since 1861, accompanies this chapter.

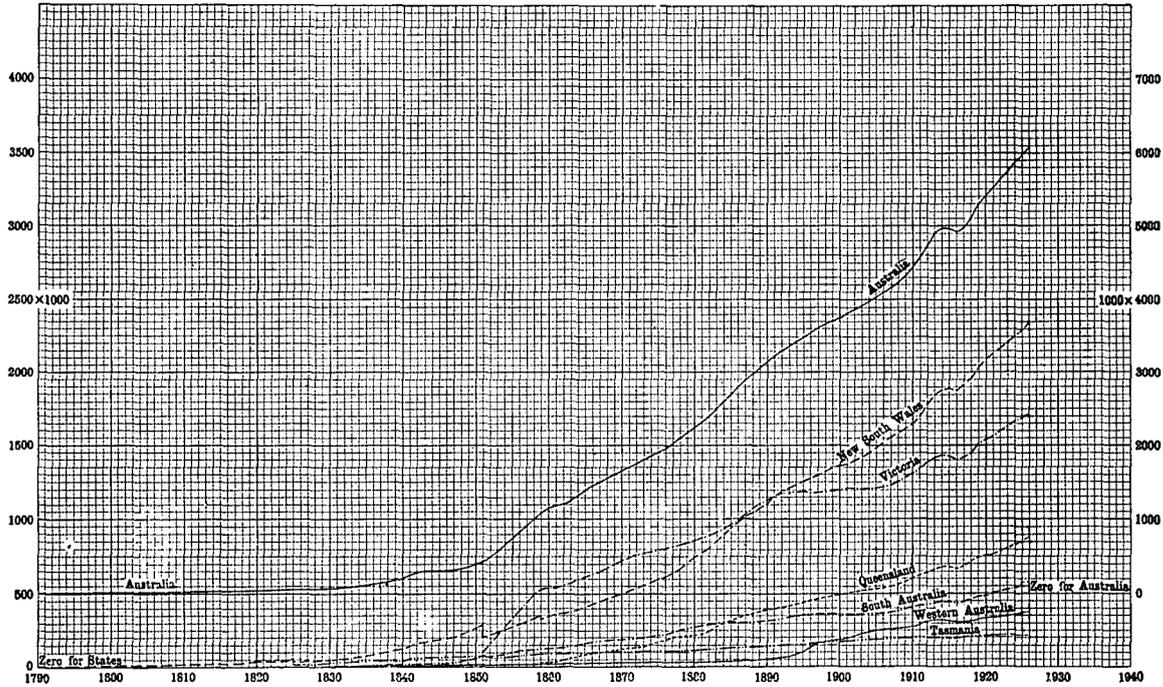

POPULATION.—NATURAL INCREASE (a), 1861 TO 1926.

Period.	States.						Territories.		Australia.

1861 to 1926	1,445,787	1,034,376	491,290	384,594	155,775	174,550	-487	456	3,736,341

(a) Excess of births over deaths. (b) Including Federal Capital Territory prior to 1911.
(c) Including Northern Territory prior to 1901. (d) Included in South Australia prior to 1901.
(e) Part of New South Wales prior to 1911.

NOTE.—Minus sign (-) denotes excess of deaths over births.

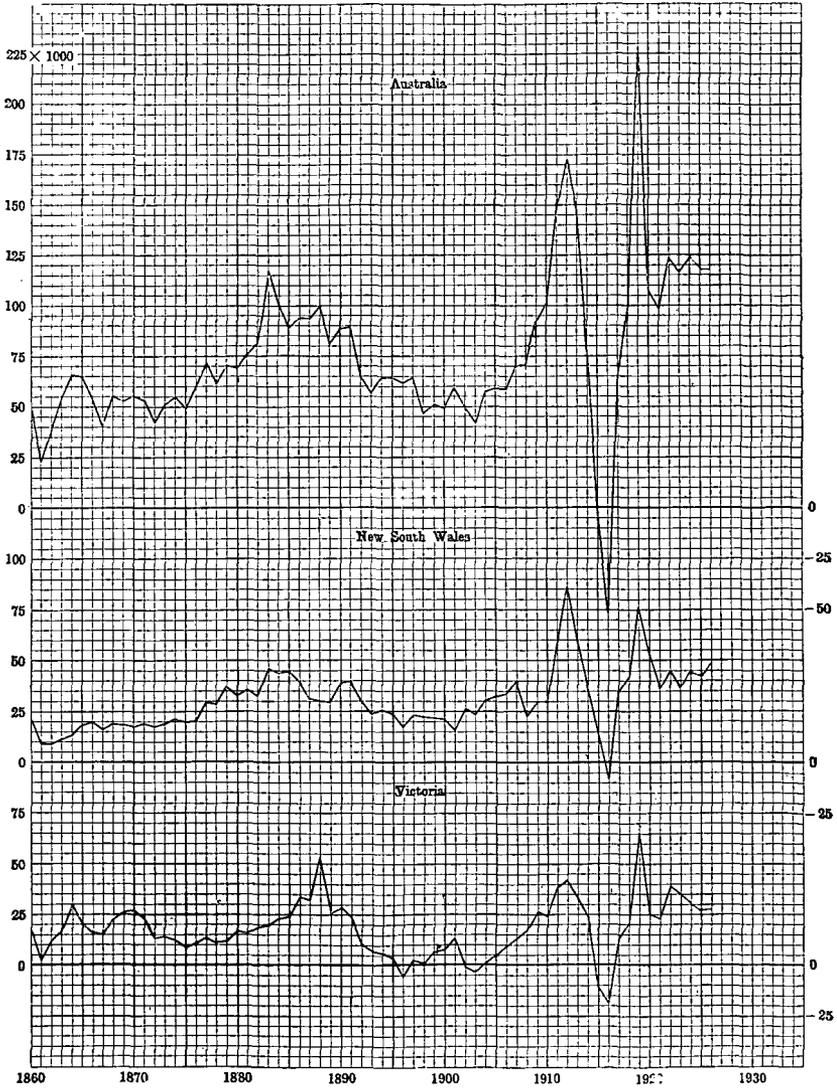

TOTAL POPULATION, 1788 TO 1926.

EXPLANATION.—The base of each small square represents one year's interval for the States and Australia, and the vertical height for the States 50,000 persons, and for Australia 100,000 persons.

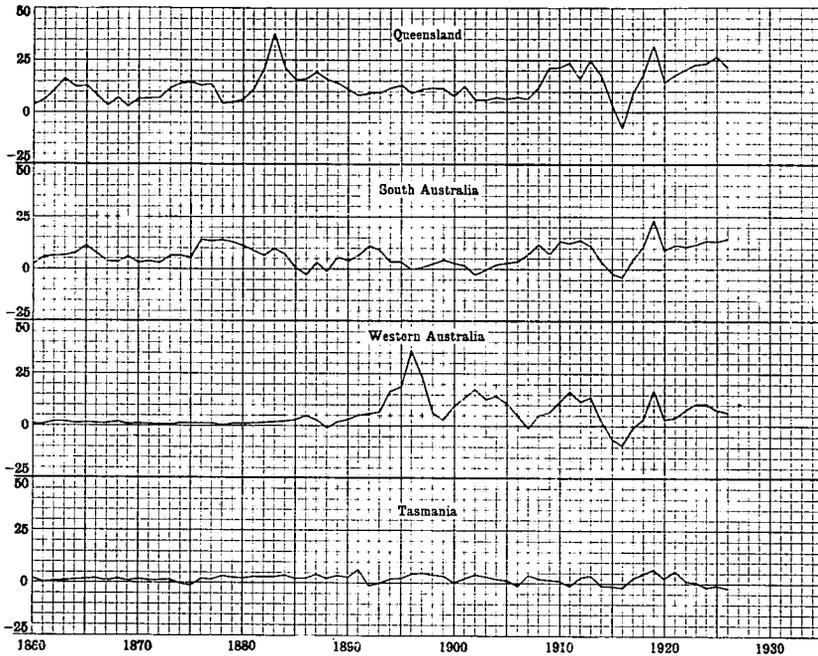

Where the population falls suddenly, the fall denotes the creation of a new colony, *e.g.*, New South Wales in 1825 lost the whole population of Tasmania.

TOTAL INCREASE OF POPULATION—AUSTRALIA, AND NEW SOUTH WALES AND VICTORIA, 1860 TO 1926.

(For explanation see next page.)

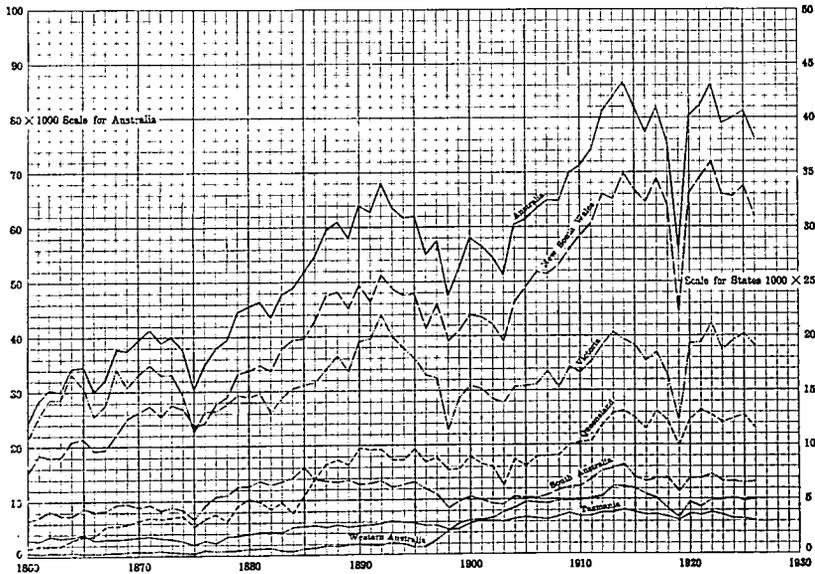

TOTAL INCREASE OF POPULATION.—QUEENSLAND, SOUTH AUSTRALIA, WESTERN AUSTRALIA, AND TASMANIA, 1860 TO 1926.

EXPLANATION.—The base of each small square represents an interval of a year for both States and Australia; the vertical height represents 5,000 persons. In the first graph (on page 862) three zero lines are taken (i) for Australia, (ii) for New South Wales, and (iii) for Victoria. In the second graph four zero lines are taken (i) for Queensland, (ii) for South Australia, (iii) for Western Australia, and (iv) for Tasmania.

DECREASES IN population are shown by carrying the curve in such cases below the zero line, the distance below the zero line indicating the extent of the decrease.

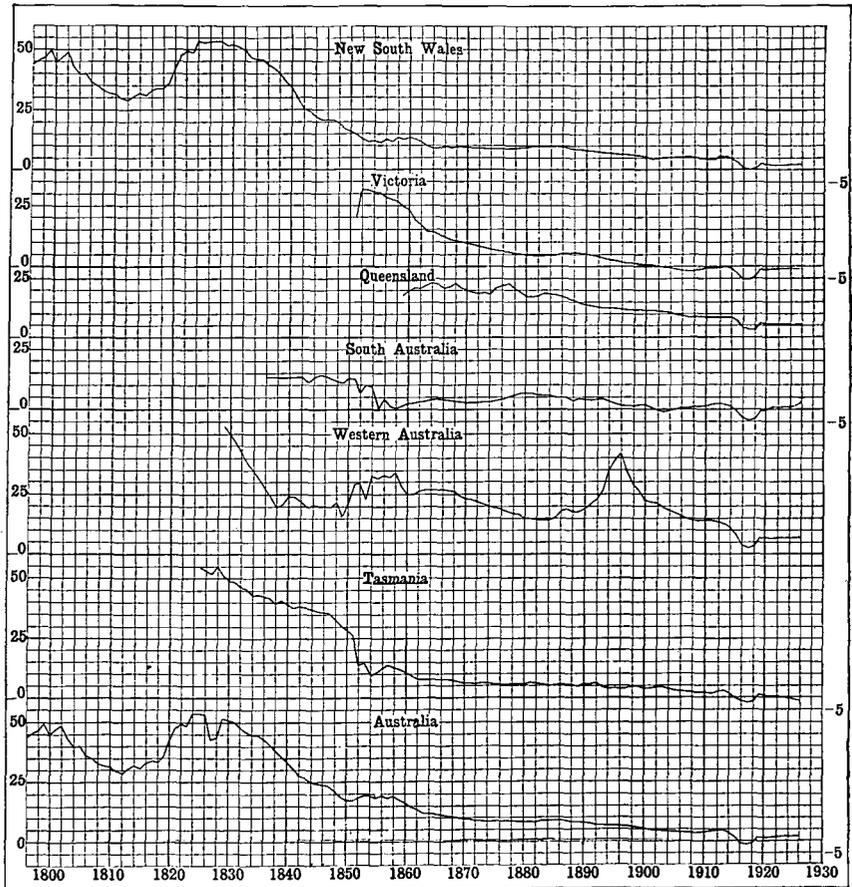

NATURAL INCREASE OF POPULATION 1860 TO 1926.

EXPLANATION.—The base of each small square represents one year for both States and Australia, and the vertical height 1,000 persons for the States and 2,000 persons for Australia.

The distances upward from the zero line, marked 0 for both Australia and States, denote the excess of births over deaths. The scale on the left relates to Australia, and that on the right to the States.

MASCULINITY OF POPULATION—1796 TO 1926.

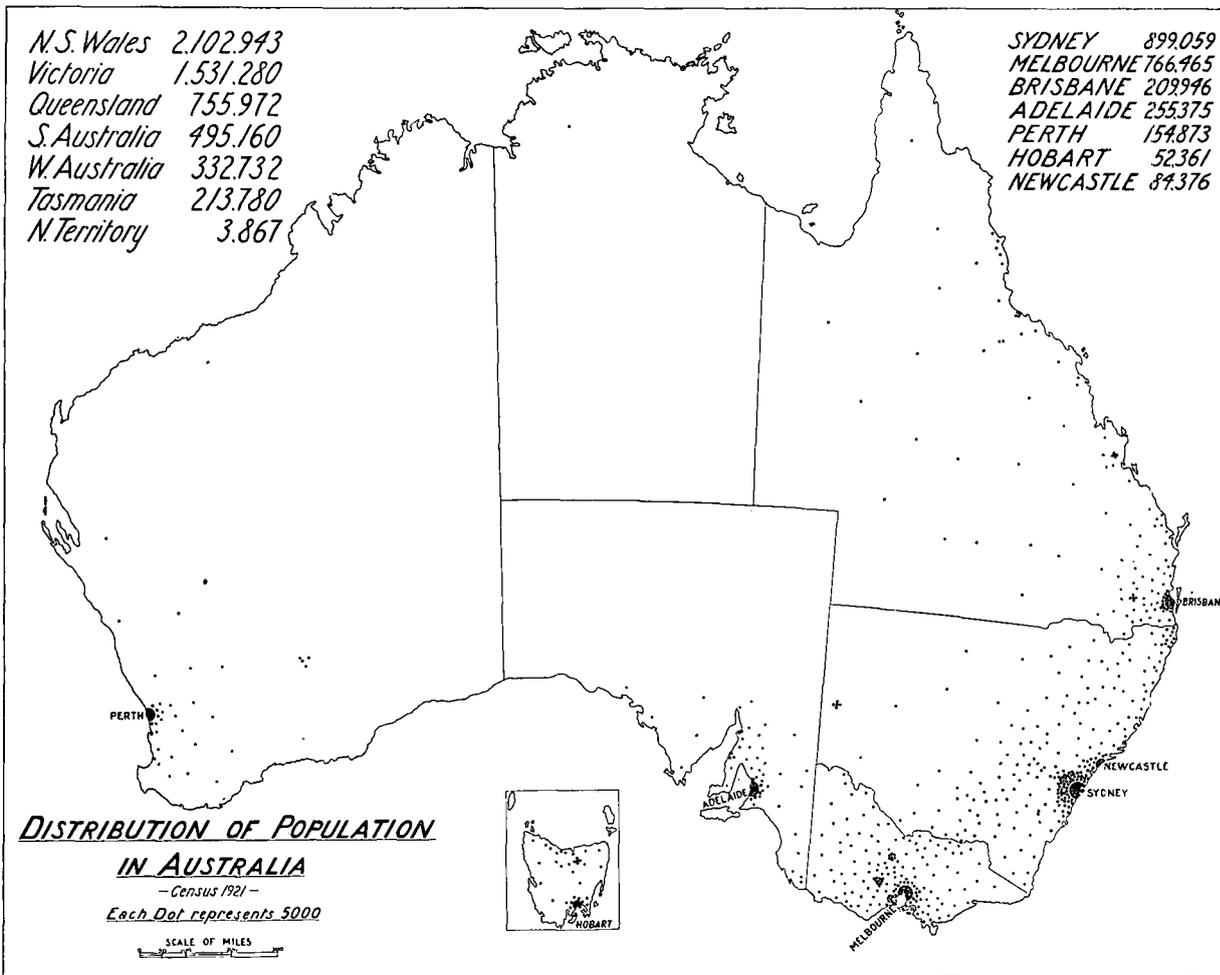

EXPLANATIONS.—The base of each small square represents an interval of two years, and the vertical height an excess of five males per 100 of the population. The basic lines (shown thickened) for Australia and all the States are at zero, equivalent to a numerical equality of the sexes.

It will be noticed that in the case of Australia in the years 1916, 1917, and 1918, Victoria in the years 1903 to 1926, South Australia in the years 1902 to 1904 and 1915 to 1920, and Tasmania for the years 1915 to 1918, and 1924 to 1926 the curves are below the zero line, thus showing an excess of females over males.

N.S. Wales 2,102,943
Victoria 1,531,280
Queensland 755,972
S. Australia 495,160
W. Australia 332,732
Tasmania 213,780
N. Territory 3,867

SYDNEY 899,059
MELBOURNE 766,465
BRISBANE 209,946
ADELAIDE 255,375
PERTH 154,873
HOBART 52,361
NEWCASTLE 84,376

In the natural increase, females have exceeded the males during the period under review. This is due to the higher death rate among males, the effect of which is augmented by the larger number of males subject to the greater risk of death. Although males predominate in both births and deaths, they exceed the females to a greater degree in the deaths than in the births.

(ii) *Comparison with other Countries.*—Notwithstanding its comparatively low birth-rate, Australia has a high rate of natural increase, owing to the fact that its death-rate is very low. The following table gives a comparison between the average rates per annum of natural increase for some of the principal countries of the world for which such information is available, and those for the several States of Australia and the Dominion of New Zealand :—

NATURAL INCREASE PER ANNUM PER 1,000 OF MEAN POPULATION.

(VARIOUS COUNTRIES.)

Country.	Natural Increase per 1,000.	Country.	Natural Increase per 1,000.
Australasia (1922-26)—		Europe— <i>continued.</i>

Graphs of natural increase for each of the States, as well as for Australia, accompany this chapter.

2. Net Immigration.*—The other factor of increase in the population, viz., the excess of arrivals over departures, known as "net immigration" is, from its nature, much more subject to variations than is the factor of "natural increase." These variations are due to numerous causes, some of which are referred to later in this chapter, in dealing with the influences which affect the growth of population.

* The subject of immigration is dealt with at some length later in this chapter.

(a) Including Northern Territory up to 1900. (b) Included in South Australia up to 1900.

(c) Part of New South Wales prior to 1911.

NOTE.—Minus sign (—) indicates the excess of departures over arrivals.

From 1861 to 1926 the increment to the population arising from the excess of births over deaths amounted to 3,736,341, or 75.25 per cent. of the total increase, while the increase from net immigration amounted to 1,228,588 or 24.75 per cent. During the 26 years of the present century the total increase to the population was made up of 1,882,576 or 80.27 per cent. by natural increase, and 462,599 or 19.73 per cent. by net immigration. The greatest increase to the population by net immigration which has occurred in any one decade was during the ten years 1881 to 1890. This period, however, concluded in world wide speculation, which, in Australia, took the form of speculation in land values, and the effect of the financial collapse which followed this boom is shown by the

small increment by migration from 1891 to 1910. For many of the years during this last-mentioned period there was an actual loss to Australian population by net migration. In 1907 the stream of migration again turned in favour of Australia, and during the five years 1909-1913 the net immigration represented 281,193. The war interrupted the flow, but in 1926 the net immigration represented 42,220 persons.

3. **Total Increase.**—The total increase of the population is obtained by the combination of the natural increase with the net immigration.

The following table gives the total increase in each decade from 1861 to 1920 and for the six years 1921 to 1926:—

POPULATION.—TOTAL INCREASE, 1861 TO 1926.

(a) Including Northern Territory up to 1900. (b) Included in South Australia up to 1900.

(c) Part of New South Wales prior to 1911.

NOTE.—Minus sign (-) denotes decrease.

For Australia as a whole the greatest numerical increase during any decennial period occurred in the decade 1911 to 1920. The increase during this decade amounted to 986,214, or 22.29 per cent. The greatest proportional increase, on the other hand, occurred during the decade 1881-1890 when it amounted to 919,824, which, on the smaller population of that time represented an increase of 41.22 per cent. for the decade. Of this increase of 919,824, 537,083 or 58.38 per cent. was from the excess of births over deaths, whereas during the decade 1911-1920, of the total increase of 986,214 the natural increase produced 778,643 or 78.96 per cent. A graph showing the increase in the population of each State and of Australia from year to year since 1860 accompanies this chapter.

As regards the individual States the maximum increases in any decennium are as follows:—New South Wales, 449,512, in 1911-20; Victoria, 275,123, in 1881-90; Queensland, 181,076, in 1881-90; South Australia, 91,847, in 1871-80; Western Australia, 131,465, in 1891-1900; Tasmania, 29,997, in 1881-1890.

4. Rates of Increase.—(i) *For various Countries.* The table hereunder gives approximate rates of increase in population for Australia, and its component States, and for other countries:—

NOTE.—The minus sign (—) denotes decrease.

(ii) *Variations in the Rates.*—The fluctuations in the rates of increase in the population of Australia are, for the greater part, due to variations in the volume of immigration. The more important of these periodic variations, so far as they affected the population of Australia as a whole, have been referred to in the preceding sub-sections dealing with net immigration. The large increase in the population of Western Australia during the quinquennium 1892-6 marks the opening up of the gold mines of that State.

§ 5. Seasonal Variations of Population.

1. *Variations in Natural Increase.*—The following table shows the natural increase to the population, during each quarter of the year, based on the experience of the ten years 1917-1926. For Australia as a whole, the rate of natural increase was greatest in the quarter ended 31st March, and least in the quarter ending 30th June, the difference between the rates of increase for these two periods being equal to 23 persons for every 100,000 of the population. In New South Wales, Victoria, South Australia and Western Australia the March quarter was the most favourable, in Queensland the June quarter, and in Tasmania the September quarter. The natural increase was lowest in New South Wales, Victoria and Tasmania in the June quarter, in Queensland and Western Australia in the December quarter, and in South Australia in the September quarter. The differences between the least favourable and the most favourable quarters ranged from 24 per 100,000 of the population in Victoria to 37 per 100,000 in Queensland.

During recent years there have been two unusual occurrences which have considerably disturbed the normal contributions of the several quarters. The first of these was the payment of the Maternity Allowance which commenced on the 10th October, 1912, with the result that births were registered in the December quarter of that year, which otherwise would not have been registered until the March quarter of the following year. As the results given in earlier issues in this connexion are the averages for decennial periods, this factor is present in the results given for the December quarter up to and including the decade 1912-21, but, with the increasing population it became less important from year to year. Although this factor did not seriously disturb the order of increase in the various quarters, it very materially reduced the margins between the highest and the lowest quarters.

The other disturbance referred to was the influenza epidemic of 1919. The total number of deaths during 1919, for which influenza was stated to be the primary cause, was 11,989, which were distributed over the four quarters of the year as follows:—March quarter, 926; June quarter, 5,958; September quarter, 4,658; December quarter, 447. Prior to this epidemic, the September quarter had been consistently the highest, and the June quarter had been, almost invariably, next in order during each decade from 1901-10 to 1909-18, while the March quarter had been almost consistently the lowest. The same consistency, however, did not prevail throughout the individual years. The deaths from influenza in the June and September quarters, and the comparative freedom of the March quarter from such deaths, have given the March quarter precedence in the four successive decennial periods in which the year 1919 is included. During the same periods, the September quarter has been consistently second, and the December quarter has most frequently been the lowest.

The precedence—with regard to its contribution to the natural increase in population—which was so consistently held by the September quarter prior to the influenza epidemic of 1919, was due entirely to its higher birth rate. With the exception of the year 1915, the September quarter was distinguished by a greater number of births than any other quarter in each of the 21 years 1906-26, and with the exception of 1915 and 1919, it

showed the greatest birth rate per 1,000 persons. On the other hand, with the exceptions of the years 1915, 1919 and 1926, the September quarter showed the highest death rate per 1,000. The high death rate in conjunction with the high birth rate is due in some measure to the increased risk, from the greater number of births, of infantile deaths and deaths due to childbirth.

NOTE.—The minus sign (—) indicates an excess of deaths over births, and ‰ denotes “ per thousand.”

2. **Variations in Net Immigration.**—In the following table the figures relating to the separate States and Territories include interstate migrants, but so far as these persons are concerned, the arrivals into any State are departures from some other State, so that they do not affect the figures shown for Australia as a whole, which, therefore, represent the oversea arrivals and departures. For each of the decades from 1901–1910 to 1904–1913 inclusive, the December quarter showed the greatest rate of increase from migration, with the other quarters consistently in order directly reverse to their position in the calendar. The despatch of troops from Australia during November and December, 1914, and the effects of the war on the oversea passenger traffic, altered the position so that in the decade 1905–14, and each decade since, the September quarter has been the highest, with the March quarter second. On the average, however, of the six years 1921–26 which were not affected by the movements of the troops, the December quarter again has first place. The precedence of the December quarter during the last six years was due both to the small number of departures (22.83 per cent.) and to the large number of arrivals (28.64 per cent.) during that quarter. The normal quota for each quarter would of course be 25 per cent. in both cases. Notwithstanding that the interstate movement is very much greater than the oversea migration, the results shown in the following table are to some extent vitiated in their application to the particular States, by the inclusion of the war period. For instance, the small increases shown for New South Wales and for Victoria in the June quarter, and for South Australia in the March and June quarters are largely due to large embarkations of troops during those periods of the years 1917 and 1918. Although it is usual for Queensland to show a loss of population during the December quarter, owing to the return of sugar workers and tourists to the southern States, the loss for the decade 1917–26 is aggravated by the despatch of troops. Western Australia shows an increase of population by migration, for each quarter September having the greatest increase and December the lowest. The gain to Tasmania in the December quarter represents the influx of tourists from the mainland, whereas the departure of tourists and of other persons during the remainder of the year represents an average net annual loss of 1,521 persons.

NOTE.—The minus sign (-) denotes excess of departures over arrivals, and % denotes "per thousand" of population.

§ 6. Influences affecting Increase and Distribution.

1. **Mineral Discoveries.**—The discovery of gold in Australia in 1851 was undoubtedly one of the most influential factors in bringing about a rapid settlement of the country. Its effect may be gauged by comparing the increase during the ten years preceding with that during the ten years succeeding the discovery. From 31st December, 1840 to 31st December, 1850, the increase was only 214,948 (from 190,408 to 405,356). During the succeeding decennium there was an increase of 740,229, the population advancing to 1,145,585 on 31st December, 1860. In 1861, owing to the opening up of the New Zealand goldfields, a rush of population from Australia set in, the result being that the net increase per annum to the population of Australia, which in 1855 amounted to 98,343, and even in 1860 was as much as 48,280, fell in 1861 to 22,564. In fact, during the year 1861 the departures from Australia exceeded the arrivals by 6,283, the gain of 22,564 being due to the births exceeding the deaths by 28,847.

In 1886 and subsequent years the gold discoveries of Western Australia led to such extensive migration to that State that its population, which on 31st December, 1885, amounted to only 35,959, increased during the next twenty years by 595 per cent., or by 10.18 per cent. per annum, to 250,138 in 1905. In this case, however, the additions to the population of the western State were largely drawn from the eastern States, so that the actual gain of population to Australia was relatively small.

2. **Pastoral Development.**—Very early in the colonization of Australia it was recognized that large areas were well adapted for pastoral pursuits, and pastoral developments led to the spread of population in various directions. As the numbers engaged in connexion therewith, compared with the value of the interests involved, are relatively small, and as pastoral occupancy tends to segregation rather than aggregation of population, the growth of the pastoral industry is not noticeably reflected in the population statistics.

3. **Agricultural Expansion.**—At the present time the area under crop in Australia is over 16½ million acres. Although substantial in itself, this area, viewed in relation to the total area of Australia, is relatively small, and represents only 0.88 per cent. of the total area. Per head of population the area under crop, however, is 2.8 acres, a fairly large area when allowance is made for the recency of Australian settlement. About 78 per cent. of the area under crop in 1925-26 was devoted to the production of wheat and hay, both of which, for profitable production in Australia, require a considerable area in the one holding. Consequently, the agricultural districts are for the most part sparsely populated, though in a less marked degree than the pastoral areas.

4. **Progress of Manufacturing Industries.**—One direct effect of the development of manufacturing industries is the concentration of population in places offering the greatest facilities for the production of particular commodities. In Australia, where manufacturing industries are as yet in their infancy, the tendency throughout has been to concentrate the manufacturing establishments in each metropolis. This has accentuated the growth of the capital cities to an extent which, when compared with that of the rest of the country, appears somewhat abnormal.

5. **Influences of Droughts.**—Droughts, which at times so seriously affect the agricultural and pastoral industries of Australia, have a marked influence on the distribution of population. Districts, which in favourable seasons are fairly populous, become more or less depopulated in times of drought. This movement, however, ordinarily affects only the internal distribution of the population, and not the total, but severe drought may even make its influence felt in the statistics of the total population. Thus, in the case of the drought of 1902–3, the departures from Australia exceeded the arrivals for the two years 1903 and 1904 by 12,859. It may be noted also, that for the former of these years, the natural increase of population by excess of births over deaths was abnormally low, being only 51,150, as compared with 54,698 in the preceding, and 60,541 in the succeeding year. As the solution of the problem of dealing with droughts is advanced, their influence will be less marked.

6. **Assisted Immigration.**—Assisted immigration has been a factor of some importance in the increase of population. The number of persons brought to Australia by this means has varied considerably in different periods, according to the activities of Governments in this direction. The table given in sub-section 5 of § 10 hereinafter shows that 995,559 persons have been brought to Australia in connexion with schemes for assisting immigration.

7. **Other Influences.**—(i) *Commercial Crises.* The effect on population of a commercial crisis, such as that which occurred in the early nineties of last century, is clearly indicated by comparing the migration statistics of Australia for the five years 1887 to 1891 with those for the five years 1892 to 1896. During the earlier periods the arrivals exceeded the departures by 146,872, whereas in the later period the excess of arrivals was only 2,064.

(ii) *War.* The war in South Africa left its impress on the population statistics of Australia, the departures during 1899 and 1900 exceeding the arrivals by 10,546. The effect of the recent European war is, of course, much more marked.

§ 7. Density.

1. **General.**—From certain aspects population may be less significant in respect of its absolute amount than in its relation to the area of the country. Australia, with an area of 2,974,581 square miles, and a population on 31st December, 1926, of 6,170,514 including aborigines, has a density of only 2.07 persons to the square mile, and is, therefore, the most sparsely populated of the civilized countries of the world. For the other continents the densities are approximately as follows:—Europe, 128; Asia, 65; Africa, 11; North and Central America, 18; and South America 10. The population of Australia has thus about 22 per cent. of the density of South America; about 20 per cent. of that of Africa; about 12 per cent. of that of North and Central America; about 3 per cent. of that of Asia; and about $1\frac{1}{2}$ per cent. of that of Europe.

A map showing the density of population throughout Australia as at the Census of 1921 accompanies this chapter.

Particulars concerning the number and density of the population of the various countries of the world for the latest dates for which such information is available are given in the following table. These figures have in the main been taken from the 1927 issue of the "Statesman's Year Book," and in some instances, more particularly in the cases of Asia and Africa, must be considered as rough approximations only, complete data not being obtainable.

(a) Number of persons per square mile.

(b) Including 60,000 aboriginals.

2. *Position of the British Empire.*—The approximate relationship of the British Empire to the world as a whole in regard to its area and population is given hereunder :—

BRITISH EMPIRE IN RELATION TO THE WORLD.

Particulars.	The World.	British Empire.
Area in square miles (exclusive of Polar Circles) ..	51,683,000	13,366,000
Population ..	1,904,000,000	454,000,000
Population per square mile ..	36.8	34.0

§ 8. General Characteristics.

1. **Sex Distribution.**—(i) *General.* The distribution of the sexes in the populations of young countries shows marked contrasts to that of older countries. In young countries there will be, invariably, a greater number of males than females, whereas in countries which have been long settled the females predominate. In the older countries the populations have grown almost entirely by the excess of births over deaths, which tends towards equality in the numbers of the sexes. The table on page 879, however, shows that in many instances, this natural tendency has been deflected to an excess of females. This has been due possibly to the following causes—(a) preponderance of males amongst emigrants; (b) greater propensity of males to travel; (c) employment of males away from the home country in the army, navy, and mercantile marine; (d) effects of war. In a young country, on the other hand, the increase in the population is largely brought about by immigration, in which males preponderate. The pioneering conditions of a young country, naturally, are less attractive to females than to males, and in the case of Australia, the disabilities inseparable from the early stages of settlement were aggravated by the great distance from the mother country.

Information regarding the sexes of the first settlers in Australia is not available, but on the 31st December, 1796—nearly nine years later—there was an excess of 44 males in every 100 of a total population of 4,100.

The subsequent development of the natural industries of the country attracted male rather than female immigrants, and notwithstanding the equalizing tendency of the expanding factor of natural increase, and the heavy loss of males through the war, the population of Australia, on the 31st December, 1926, contained an excess of 2.20 males in every 100 persons.

The relation between the degree of development of a country and the masculinity of its population is exemplified by the conditions in the various Australian States. The table on page 857 shows that the greatest masculinity is associated with the smallest density of population, *i.e.*, the masculinity is greatest in the less developed States. For instance, in Queensland, which embraces over 22 per cent. of the area of Australia, but which holds only 14 per cent. of the total population (1.32 persons per sq. mile) the masculinity is 5.57, and in Western Australia, where the density of population is less (0.39 persons per sq. mile), the masculinity is greater (7.31). On the other hand, in Victoria, where the density is greatest (19.48 persons per sq. mile), there is an excess of females of 0.41 per 100 persons. In fact, if either Victoria or Tasmania be excluded, the masculinity indexes for all the other States will fall in reverse sequence to the indexes to density.

The position in South Australia is somewhat unusual, inasmuch as the people of that State are concentrated within a relatively small area, while a large portion of the area carries no population, and the masculinity, therefore, is governed by the density of the populated area.

(ii) *Masculinity.* On pages 163 to 165 in the second issue of this publication a table was included showing the masculinity of the population of each of the States for each year from 1796 to 1907. In the fifth issue, on page 123, the figures in this table for the years 1901 to 1907 were modified in accordance with the results of the Census of 3rd April, 1911.

The figures given in those tables showed the number of males to each 100 females, but it is considered that a more satisfactory index is obtained by computing the ratio of the excess of males over females to the total population. This ratio, expressed as a percentage, has been adopted as the "masculinity" of the population, and the ratios so computed are given hereunder for intervals of ten years from 1800 to 1910 and for the five years 1922 to 1926 :—

POPULATION.—MASCULINITY, 1800 TO 1926.

(a) Including Federal Capital Territory prior to 1911. (b) Including Northern Territory prior to 1900. (c) Included with South Australia prior to 1900. (d) Part of New South Wales prior to 1911.

NOTE.—The minus sign (—) denotes excess of females over males per 100 of persons.

The table shows the progress towards equalization of the sexes as the country developed, and conditions suitable to family life became more general.

The war naturally had a great affect on the masculinity of the population. In 1913 there was in Australia as a whole an excess of 4.41 males in every 100 persons, but by 1918 the excess was on the side of females to the extent of 0.96 per 100 persons. This excess of females was experienced in Victoria, South Australia, and Tasmania, but, largely by the return of the military forces, the excess of males was restored in all States except Victoria; subsequent changes, however, brought about an excess of females over males in Tasmania.

Graphs showing the masculinity of the population of each State and of Australia accompany this chapter.

The difference between young and old countries in the masculinity of their populations is clearly illustrated by the comparisons furnished in the following table, which are based on the latest statistics available. It is interesting to note that of the countries named, Chile is the only non-European country with an excess of females :—

POPULATION OF VARIOUS COUNTRIES.—MASCULINITY.

NOTE.—The minus sign (—) denotes excess of females over males in each 100 of population.

(a) White population only.

2. Age Distribution.—(i) *Australia*. The causes which brought about the excess of males also made the age constitution of the population of Australia essentially different from that of older countries. The high birth rate of the earlier years, coupled with the low average age of immigrants, produced a population in which young and middle-aged persons were above, and the persons of advanced ages were below, the normal proportions. With time, however, these differences have been modified, so that they are no longer important.

The following table shows the proportions in three main groups of ages, of the population of Australia over a period of 60 years in decennial periods from 1861, and of England and Wales for 1861, 1911 and 1921. The percentages are in all cases based on Census results. The Australian figures for 1861 include the results of the Western Australian Census of 1859, and those for 1871 include the results of the Western Australian and Tasmanian Censuses of 1870.

Throughout the period covered by the table, the age distribution of the Australian population has varied considerably in consequence of the fluctuations of the birth-rate and of net migration.

There is a steady approach to similarity in the age composition of males to that of females in harmony with the equalization of the numbers of each sex, and an increasing similarity in the composition of the Australian population to that of England and Wales.

(ii) *States and Territories.* The disparity in sex distribution in the States is accompanied by a corresponding inequality in age distribution. For convenient comparison in respect to ages, the several populations may each be divided into groups, indicative of dependence on the one hand, and ability to support on the other. The usual division for this purpose is into an initial group of "under 15" classed as "dependent age," a second group of "15 and under 65" classed as "supporting age," and a final group of "65 and upwards" classed "old age." From certain points of view the division might be into two classes, the "supporting" and the "dependent," as the majority of those aged "65 and upwards" strictly belong to the dependent class. The number and proportion of persons in each State and Territory at the Census of 4th April, 1921, in each of the three groups mentioned, were as follows:—

POPULATION.—DEPENDENT, SUPPORTING, AND OLD AGE GROUPS,
4th APRIL, 1921.

State or Territory.	Number of Persons of—				Proportion of Population of—		
	Dependent age (under 15).	Supporting age (15 and under 65).	Old age (65 and upwards).	All ages.	Dependent (under 15).	Supporting age (15 and under 65).	Old age (65 and upwards).
States—					%	%	%
New South Wales	677,770	1,332,214	90,387	2,100,371	32.26	63.42	4.32
Victoria ..	455,640	1,002,050	73,590	1,531,280	29.76	65.43	4.81
Queensland ..	251,445	474,160	30,367	755,972	33.27	62.71	4.02
South Australia	156,560	313,318	25,282	495,160	31.63	63.26	5.11
Western Australia	107,390	214,508	10,834	332,732	32.27	64.47	3.26
Tasmania ..	73,420	130,279	10,081	213,780	34.34	60.95	4.71
Territories—							
Northern ..	806	2,859	202	3,867	20.84	73.94	5.22
Federal Capital	847	1,648	77	2,572	32.93	64.07	3.00
Australia ..	1,723,878	3,471,036	240,820	5,435,734	31.71	63.86	4.43

Victoria has the highest proportion of the population in the "supporting" age-group, while Tasmania has the lowest proportion. This high proportion in Victoria is largely due to the relatively low birth-rate in that State during the years which produced the lives under 15 years at the Census of 1921. The relatively small proportion of the population in the age group 15-65 in Tasmania is due to the fact that many Tasmanian natives, in their early adult years, seek the wider opportunities available on the mainland.

3. Race and Nationality.—(i) *General.* With regard to its racial characteristics, the population of Australia may be divided into two main groups, one comprising the aboriginal natives, and the other consisting of the various immigrant races which have made the country their home. [It will of course be understood that full-blood aboriginals are not counted in the population.] The term "immigrant races" naturally covers not only those residents of Australia who were born in other countries, but includes their descendants who were born in Australia.

(ii) *Aboriginals.* (a) *Early Estimates of Numbers.* The number of aboriginals in Australia at the advent of the white race has been estimated by various observers at somewhere in the vicinity of 150,000, but this figure must be regarded as a very rough approximation only.

(b) *Various Estimates from 1826 to 1921.* In 1826 the native black population in the settled districts of New South Wales numbered 3,019, this figure, however, offering little indication of the total for the whole State.

In Victoria an enumeration of the aboriginals in the settled districts in 1861 gave a total of 2,384, while at the Census of 1871, 1,330 were enumerated. In New South Wales 983 were counted in 1871 who were more or less in contact with white settlers, and it was estimated that 12,000 others were living in a wild and wandering condition.

At the Census of 1881 the aboriginals recorded in Victoria had dwindled to 780. In New South Wales the number enumerated was 1,643, while the unenumerated were estimated at 10,000. In South Australia (exclusive of the Northern Territory) the number counted and estimated was 6,346. In Queensland officers of the Police Department supplied an estimate of 20,585.

At the Census of 1891 the number in Victoria had decreased to 317. In New South Wales, where the first complete enumeration of the blacks was made, the number was returned as 5,097. In Western Australia 5,670 were enumerated, this figure, however, excluding natives not in contact with white settlers.

At the Census of 1911, 19,939 aboriginals were recorded for the whole of Australia, the figure again being exclusive of natives in unsettled areas.

At the Census of 1921 special efforts were made to obtain a reliable indication of the number of aboriginals living in the various States, including wild and wandering natives, as well as those in contact with the whites. Great difficulty was experienced in gaining anything like a reliable estimate in regard to the numbers of those in a wild state in Western Australia, the Northern Territory, and Queensland. The estimates gave a total of 60,300, distributed as follows:—New South Wales, 1,597; Victoria, 144; Queensland, 14,014; South Australia, 1,609; Western Australia, 25,587; Northern Territory, 17,349. (It may be mentioned here that the last representative of the Tasmanian aboriginals died in 1876.)

(c) *Census of Aboriginals in 1926.* A census of the aboriginal population taken in 1926 gave the following results:—

CENSUS OF ABORIGINALS, 1926.

State.	Full Bloods.					Half Castes.				
	Adults.		Children.		Total.	Adults.		Children.		Total.
	M.	F.	M.	F.		M.	F.	M.	F.

Total 1924 ..	23,234	18,444	5,787	4,950	62,415	4,032	3,280	2,526	2,464	12,302

(a) Including 10,000 estimated as living outside the influence of Europeans.

(b) The figures for Queensland and South Australia are those for 1924.

NOTE.—In the case of aboriginals, all those twelve years of age and over are counted as adults, and the balance as children.

DISTRIBUTION OF ABORIGINALS, 1926.

State or Territory.	Full Blood and Half Castes.					
	Nomadic.	In Regular Employment.	In Supervised Camps.	Not Stated.	Total.	
New South Wales	2,382	4,684	7,066	
Victoria	293	221	514	
Queensland	4,384	3,844	7,320	17,651	
South Australia	2,460	830	693	3,983	
Western Australia	16,485	5,069	3,088	24,642	
Northern Territory	20,542	20,542	
Total	23,329	9,743	13,776	27,550	74,398

NOTE.—Under "In Regular Employment" those regularly employed in Supervised Camps are not included.

The figures for 1926 show a small increase over the total for 1921, but this increase is more apparent than real, and is due to underestimation in 1921 of the numbers of the wild and unapproachable natives. In South Australia, for example, tribes previously

unknown have been found living west of Oodnadatta, near the boundary of Western Australia. Except in a few places where the blacks are under missionary influence, the numbers generally tend to decline, and the figures for New South Wales and Victoria, which are probably the most reliable, certainly evidence a rapid decline since the foundation of white settlement.

(d) *Decline in Numbers since 1891.* As evidence of the decline alluded to in the previous sub-section, a table is appended showing the numbers in the States of New South Wales and Victoria from 1891 onwards:—

NEW SOUTH WALES AND VICTORIA.—FULL-BLOOD ABORIGINALS, 1891 TO 1926.

State.	1891.	1901.	1911.	1921.	1925.	1926.
New South Wales ..	5,097	3,778	2,012	1,597	1,081	1,031
Victoria	317	250	196	144	66	55

The figures refer to full-blood aboriginals actually enumerated at the dates mentioned.

(iii) *Immigrant Races.* The immigrant races consist mainly of natives of the British Isles and their descendants. Of the total population (5,435,734) enumerated at the Census of 1921, 5,387,143, or over 99 per cent., were of European race. Of the remainder, 30,975 were full-blood, and 17,616 were half-caste non-Europeans.

The Census figures included all persons on board ships which were in Australian waters on the night of the Census, and 4,576 persons of full-blood and 49 half-castes of non-European race were thus enumerated. Amongst the 4,576 full-bloods were 1,018 Chinese, 1,330 Japanese, 942 Hindus, and 623 Malays.

The following table shows the number of full-blood and half-caste persons of non-European race—according to continental divisions—who were included in the Census of 1921. Of the 28,087 full-blood Asiatics, 17,157 were Chinese, 2,881 Hindus, 2,892 Syrians, 2,740 Japanese, and 1,087 Malays. The number of full-blood non-Europeans enumerated at the Census of 1921 was less than in 1911 by 6,814, or 18.03 per cent., whereas the half-caste non-Europeans had increased by 3,062, or 21.03 per cent. During the intercensal period the number of full-blood Chinese declined by 5,596, Japanese by 749, and Hindus by 418. The non-European element is relatively strongest in those parts of Australia where there are béche-de-mer and pearl fisheries. More detailed information relating to the non-European races in the Australian population may be found in the Census Bulletins and Parts:—

(iv) *Biological and Sociological Significance.* The population of Australia is fundamentally British in race and nationality, and furnishes an example of the transplanting of a race into conditions greatly different from those in which it had been developed. The biological and sociological significance of this will ultimately appear in the physical and moral constitution produced by the complete change of climatic and social environment. The new conditions are likely to modify considerably the physical characteristics and the social instincts of the constituents of the population. At present, the characteristics of the Australian population, whether physical, mental, moral, or social, are only in the making, and probably a distinct Australian type will not appear until three or four generations more have passed. Even then, it is probable that, with the great extent of territory and differing conditions there will be a number of types varying with locality. At present the Australian is little more than a transplanted Briton, with the essential characteristics of his British forbears, with perhaps some accentuation of the desire for freedom from restraint. The greater opportunity for an open-air life, and the absence of the restricting conventions of older countries, may be mainly responsible for this development.

(v) *Nationality.* Prior to the Census of 1921 no attempt had been made to ascertain the allegiance of the people, except in so far as a person was or was not a British subject. At the last Census all persons were asked to state their nationality, and the results which are given in the following table, show that of a total population of 5,435,734, as many as 5,387,205, or over 99 per cent., were definitely stated to be British subjects. Of the foreign element, the Chinese were the most numerous, representing 30 per cent. of the foreign people and 2.56 in every 1,000 of the total population:—

Japanese ..	2,489	150	2,639				

(vi) *Birthplaces.* The proportion of native-born in the Australian population has increased rapidly in recent years. At the Census of 1921 the Australian-born numbered 4,581,663 persons, or 84.51 per cent. of a total population of 5,421,242 persons whose birthplaces were specified. Of the remainder, 676,387, or 12.48 per cent., were natives of the British Isles, and 38,611, or 0.71 per cent., were natives of New Zealand, so that 97.70 of the total population at that time had been born either in Australasia or in the British Isles. Excluding these, the following countries are the most important recorded as the birthplaces of persons in Australia at the Census of 1921:—

Germany, 22,396 (0.41 per cent.); China, 15,224 (0.28 per cent.); Scandinavia (comprising Sweden, Norway, and Denmark), 14,341 (0.26 per cent.); Italy, 8,135 (0.15 per cent.); British India, 6,918 (0.13 per cent.); United States of America, 6,604 (0.12 per cent.); Union of South Africa, 5,408 (0.10 per cent.); Canada, 3,550 (0.07 per cent.)

The Australian-born element is lowest in Western Australia and Queensland, where the density of population is also least, but where the masculinity is greatest. On the other hand, in Tasmania, where the density is high and the masculinity is low, the proportion of Australian-born is highest. These related facts indicate that conditions throughout these territorially larger but less developed States hitherto have been, on the whole, less attractive to women and less conducive to the rearing of families than the conditions existing in the more settled States.

Information in greater detail respecting birthplaces will be found in Bulletins and other matter published in connexion with the Census of 1921.

(a) Includes Norfolk Island, Papua, and the Territory of New Guinea.

(vii) *Length of Residence of Immigrants.* At the Census of 1921 the population of Australia included 839,579 persons who were classed as immigrants, and the following table shows the number of years during which these people had resided in Australia. The number of persons whose length of residence is shown as less than one year is necessarily large, as it includes many persons, such as the crews of oversea ships, travellers, and others, who did not intend to remain in the country. The variations in the numbers with different periods of residence show the fluctuations in the volume of immigration. Thus the figures for length of residence groups 5-9 years and 10-14 years include those persons who arrived in Australia during the years 1911-1913 when immigration was large, those for the groups 30-44 years represent the arrivals during the boom period of the eighties of last century, while those for the groups 65-74 represent the survivors of the gold rush of the fifties.

Further details are available from the Bulletins and Parts published in connexion with the Census of 1921.

4. *Education.*—(i) *General.* The information concerning educational attainments which can be satisfactorily collected at a Census is necessarily meagre. In Australia the particulars ascertained have never amounted to more than a statement as to whether or not a person could read and write. The results, therefore, merely divide the population into three main groups, viz. :—(a) Those who cannot read; (b) those who can read but cannot write; and (c) those able to read and write. Of the 5,435,734 persons who

comprised the population of Australia on the 4th April, 1921, there were 805,798 who were definitely shown to be unable to read, and there were 86,641 persons whose ability in this direction was not stated. Thus, approximately 15 per cent. of the population were unable to read. Of the 805,798 persons returned as unable to read, 600,206, or 74.5 per cent., were under five years of age, and many of the remaining 25.5 per cent. were also children. Allowing for those persons whose ability to read and write was unspecified, it may be said that over 95 per cent. of the population over five years of age can read and write, and of those over ten years of age more than 98 per cent. can read and write. The number of persons returned at the Census of 1921 as able to read but unable to write was 14,493, of whom 943 could read a foreign language only. With the exception of New Zealand, there is probably no country in the world so strikingly unilingual as Australia.

(ii) *Place of Education.* At the Census of 1921 the place of instruction was given for 1,023,462 persons, and of these 74.93 per cent. were attending State schools, 18.93 per cent. were at private schools, 2.43 per cent. at technical schools, 3 per cent. were receiving instruction at home, and 7 per thousand were attending universities. Of the males receiving instruction, 75.85 per cent. were at State schools, and 17.04 per cent. were at private schools; of the females 73.96 per cent. were at State schools and 20.90 per cent. at private schools.

5. *Religions.*—At the Census of the 4th April, 1921, of a total population of 5,435,734, the number who objected to state their religion was 46,268; a further number of 45,990 failed to specify their religion in any degree; 20,544 stated that they had no religion:

and 19,896 classed themselves in indefinite groups, such as "Freethinker," "Agnostic," "No Denomination," etc. Of those remaining (5,303,046), 5,267,641, or 99.33 per cent., were definitely stated to be Christians, and 35,405 were stated to be Non-Christians. The number who were definitely stated to be Christians represented nearly 97 per cent. of the total population. Of the total Christians, 2,372,995, or 45.04 per cent., belonged to the Church of England; 1,134,002, or 21.53 per cent., to the Roman Catholic Church; 636,974, or 12.09 per cent., to the Presbyterian Church; and 632,629, or 12.01 per cent., were Methodists. Thus, the four denominations named embraced over 90 per cent. of the declared Christians. It is possible that the number given above for Roman Catholics may be somewhat understated, as some of those shown in the table as "Catholics undefined" were doubtless Roman Catholics.

6. Conjugal Condition.—The number of persons whose conjugal condition was definitely stated at the Census of 4th April, 1921, was 5,421,191, of whom 2,753,740 were males and 2,667,451 were females. Of the 5,421,191 persons referred to, 1,998,662, or 36.86 per cent., were married, as compared with 33 per cent. in 1911; 237,821, or 4.39 per cent., were widowed; 8,528, or 0.15 per cent., were divorced; and 3,176,180, or 58.60 per cent., had never married. Of those who had never married, 1,725,004, or 54.31 per cent., were under 15 years of age. The proportion of married persons per cent. to the total population of the several States varied in the following order:—South Australia, 38.14; New South Wales, 37.40; Western Australia, 36.85; Victoria, 36.63; Tasmania, 35.88; Queensland, 35.32. On the basis of the adult population, the percentage of married persons in Australia was about 63.36, and in each State was approximately as follows:—Tasmania, 65.66; South Australia, 65.31; New South Wales, 64.78; Western Australia, 64.16; Queensland, 62.65; Victoria, 60.99.

7. *Occupations.*—(i) *General.* The following table shows, for each State and Territory and for Australia as a whole, the population grouped according to the various classes of occupations. The bulletins which have been published in connexion with the Census of 1921 give, in greater detail than is possible here, the occupations of the people of each State and Australia, and also give comparisons of the results of the Censuses of 1911 and 1921.

(ii) *Breadwinners.* After distributing the number of persons whose occupations were not specified there were at the Census of 1921, 2,322,471 breadwinners, representing 42.7 per cent. of the total population. At the Census of 1911, the breadwinners represented 45 per cent. of the population. Of the total male population, 67.25 per cent. were breadwinners in 1921, as compared with 69.4 per cent. in 1911. Of the female population the percentage of breadwinners was 17.4 in 1921, and 18.6 in 1911. The proportion of females to the total of breadwinners was almost identical at both periods, being about 20 per cent.

(iii) *Industrial.* The decade 1911–1921 marks an interesting phase in the industrial development of Australia, inasmuch as, during that period, the persons engaged in manufacturing and other construction work became more numerous than those engaged in primary production. In 1911, the Industrial Class already had first place in New South Wales, Victoria and South Australia, but in the other States the predominance of the Primary Class was such that, for Australia as a whole, the Primary Class was the greater. In 1921, the preponderance of the Industrial Class in New South Wales, Victoria, and South Australia had increased to such an extent, and at the same time the excess in favour of the primary industries, though still existent in Queensland, Western Australia, and Tasmania, had so diminished, that the number of persons engaged in industrial occupations throughout Australia exceeded those in the primary industries by 126,066, or by nearly 21 per cent. In 1911 the primary industries employed 39,711 persons, or 7.0 per cent., more than were employed in the industrial group. Of the total of 2,322,471 breadwinners in 1921, 725,816, or 31.2 per cent., belonged to the Industrial Class, as compared with 569,132, or 28.4 per cent., of all breadwinners in 1911. The principal group within the Industrial Class is composed of the manufacturing industries. During the intercensal period, the number of persons engaged in manufacturing industries increased from 367,939, or 18.4 per cent., of all breadwinners in 1911, to 442,598, or 19 per cent., of breadwinners in 1921, an increase of 74,659, or 20.3 per cent.

(iv) *Primary Producers.* As mentioned in the preceding paragraph, the primary producers have ceased to be the most numerous of the occupational classes. In 1911 the primary producers numbered 608,843, or 30.4 per cent., of all breadwinners, while the number decreased to 599,750, representing only 25.8 per cent. of the breadwinners in 1921. The number of persons engaged in Agriculture increased by 14.3

per cent. from 295,710 to 338,088. This increase in numbers however represents a relative decline of about two per thousand of all breadwinners. The number engaged in the Pastoral Industries declined from 157,967 to 142,349, or by nearly 10 per cent. The number engaged in Mining was less in 1921 by 42,866, or 39 per cent., having fallen to 66,882 from 109,748, in 1911. Those engaged in Forestry and in connexion with Water Supply, though still relatively few, increased substantially—the former by 20 per cent., and the latter by 48 per cent.

(v) *Commercial.* The number of persons recorded as engaged in commercial pursuits in Australia as a whole increased by 22.1 per cent. during the intercensal decade, the increases in the various States ranging from about 15½ per cent. in Victoria to 29 per cent. in New South Wales. This class represented 15.3 per cent. of all breadwinners in Australia in 1921, as against 14.5 per cent. in 1911. The similar proportions in the various States in 1921 were:—New South Wales, 15.7 per cent.; Victoria, 16.1 per cent.; Queensland, 13.3 per cent.; South Australia, 16 per cent.; Western Australia, 14.9 per cent.; and Tasmania, 12.2 per cent.

(vi) *Domestic.* Notwithstanding an increase in the number in the Domestic Class from 202,925 in 1911 to 210,362 in 1921, the class relatively to the total breadwinners declined from 10.1 per cent. in 1911 to 9.1 per cent. in 1921. For Australia as a whole the number in the Domestic Class increased by 7,437, of whom 6,203 were females. The number in this class was actually less in 1921 in Victoria by 7 per cent., and in Tasmania by 8.8 per cent. than in 1911, while in the other States the increases varied from 3.0 per cent. in Western Australia to 11.2 per cent. in New South Wales.

(vii) *Transport and Communication.* The number of persons employed in connexion with transport and communication increased from 158,854, or 8 per cent., of all breadwinners in 1911, to 208,222, or 9 per cent. in 1921.

(viii) *Professional.* The Professional Class embraces all persons, not otherwise classed, who are mainly engaged in government and defence, and in ministering to the moral, intellectual, and social wants of the community. The number of persons in this class increased from 146,603 in 1911 to 201,887 in 1921, or by 37.7 per cent. The Professional Class represented 8.7 per cent. of all breadwinners in 1921, as compared with 7.3 per cent. in 1911.

(ix) *Changes in Occupation, 1871 to 1921.* The following table shows the changes which have taken place in the occupations of the people in the 50 years from 1871 to 1921, and illustrates the relative decline in the number of breadwinners engaged in the primary industries and the corresponding expansion of the other industrial groups. The arrest of progress from the financial crisis of the nineties is also brought into striking relief. From the Census of 1871 the proportion engaged in the primary group fell, and that in the industrial group rose until at the Census of 1891 the two groups were

practically equal. The Census of 1901, i.e., after the financial collapse, showed a reversion to the primary from the secondary industries. A feature of the movement of that time was the transfer of workers from the industries of the eastern States to the gold-fields of Western Australia. The same cause was no doubt responsible for the increased proportion represented in 1901 by the domestic class, which, with this exception, has declined since 1881. The curve of the development of the industrial group during the twenty years 1901-1921 is somewhat similar to that during the period 1871 to 1891, but, whereas in 1891 the proportions represented by the industrial and primary groups were equal, in 1921 the industrial group represented 31.2 per cent. of all breadwinners, and the primary group 25.8 per cent. only.

Increased proportions in the professional, commercial, and transport classes evidence the higher standard of life and the increasing complexity of the social structure.

Total Breadwinners ..	100.0	100.0	100.0	100.0	100.0	100.0

8. Grade of Employment—(i) *General*. The term "grade of employment" indicates the capacity in which persons are employed in the various branches of industry. The grades recorded are five in number, viz. :—(a) Employer, (b) Working on own account, (c) Assisting but not receiving wages or salary, (d) Receiving wages or salary, (e) Unemployed. In addition to these categories provision is made for (f) Grade not applicable—which consists mainly of dependents and persons of independent means not engaged in gainful occupations, and (g) Grade not stated.

(ii) *Employers and Workers on Own Account*. For all States the figures show a decline in the number of employers, and an increase in the number of those working on their own account. For Australia as a whole the number of employers fell from

222,866 in 1911 to 141,570 in 1921, or by 36.5 per cent., while the number working on their own account increased by 87.5 per cent. from 185,161 in 1911, to 347,250 in 1921. From these results it would appear that many of the small employers of 1911 had dispensed with paid assistance in 1921. It is probable, also, that the establishment of returned soldiers in small businesses and other ventures increased the number of workers on their own account.

(iii) *Assisting, but not Receiving Wages.* The number of those assisting, but not receiving wages or salary—mainly sons, daughters, or other relatives of the principal—fell by 55.4 per cent., from 78,427 in 1911 to 34,983 in 1921.

(iv) *Wage Earners.* In considering the proportion of the wage and salary-earning division of the community, account must be taken of the persons returned as unemployed at the date of the Census, since, ordinarily, these persons are wage or salary earners. Combining the two grades, therefore, it appears that of the total population of Australia on the 4th April, 1921, the wage and salary earners represented 31 per cent. Excluding those persons to whom grade of employment is not applicable, about 74 per cent. of male breadwinners and 86 per cent. of the female breadwinners were wage or salary earners.

(v) *Unemployed.* The number returned as unemployed in 1921 was nearly three times as great as in 1911, this result being confirmed by figures collected in connexion with the Labour and Industrial Branch of the Bureau of Census and Statistics.

9. *Unemployment.*—(i) *Causes.* At the Census of the 4th April, 1921, there were in Australia 1,679,992 wage or salary earners, of whom 160,956 were unemployed. The following table shows that approximately 50 per cent. of the unemployment was due to scarcity of work, 29 per cent. to illness or accident, 3 per cent. to industrial disputes, 1.5 per cent. to old age, and 17 per cent. to other causes.

Persons ..	79,338	41,818	5,094	4,818	2,276	27,612	160,956

(ii) *Duration.* At the Census of 1921 persons who were unemployed on Saturday, 2nd April, 1921, were asked to state the number of working days during which they had been out of work. The results of the enquiry show that approximately 46 per cent. were unemployed under five weeks, 17.2 per cent. from five to ten weeks, 10.6 per cent. from ten to fifteen weeks, and 26.2 per cent. above fifteen weeks :—

(iii) *Unemployment in States.* Particulars regarding unemployment in the separate States at the time of the Census may be found in Part XVII. (Occupations) of the tables relating to the Census of 1921.

§ 9. Dwellings.

[NOTE.—Information concerning dwellings will be found in detail in Census Parts Nos. XVIII.—XXV.]

1. *General.*—The following table represents a summary of the information relating to dwellings which was obtained at the Census of 1921. Including those in course of construction there were in Australia on the 4th April, 1921, 1,210,786 dwellings—including hotels, boarding-houses, hospitals, gaols and any structure for the purpose of shelter as a dwelling, but excluding wagons used as camps, and dwellings occupied solely by full-blood aboriginals. The number of dwellings per square mile varies from 1 to every 433 square miles in the Northern Territory to 1.87 (approximately one dwelling to every half a square mile) in Tasmania, the average throughout Australia being 0.41. Of the total dwellings referred to above, 51,163 were stated to be unoccupied. This description does not, however, mean all dwellings so returned were “to let” but, merely, that they had no inmates on the night of the census. The average number of rooms per occupied dwelling ranged from 5.33 in Victoria to 4.59 in Western Australia, the average for Australia being 4.96 as compared with 5.18 in 1911. The number of persons per occupied dwelling varied from 4.85 in New South Wales to 4.52 in Western Australia, the average for Australia being 4.71, as compared with 4.82 in 1911. For Australia as a whole, there were 0.95 persons per room in 1921, as against 0.93 persons in 1911.

2. *Occupied Private Dwellings.*—A better index to the housing conditions of the people is obtained by excluding all other than occupied *private* dwellings. The following table shows that of the 1,153,285 occupied dwellings in Australia, 1,107,010 were private dwellings. These contained an average of 4.94 rooms in 1921, as compared with 4.93 in

1911, and had an average of 4.40 inmates, as against 4.53 in 1911. The number of inmates per room in occupied private dwellings in Australia declined from 0.92 in 1911 to 0.89 in 1921.

3. *Private Dwellings occupied by Tenants.*—For Australia as a whole the proportion of private dwellings which were occupied by tenants dropped from 47.78 per cent. in 1911 to 43.68 in 1921. The falling off was due mainly to the increase in the number of dwellings occupied by rent purchasers resultant on the policies of the State Governments of advancing money for the building of homes, and on the activities of the War Service Homes Commissioners.

DWELLINGS.—AUSTRALIA, CENSUS, 4th APRIL, 1921.

(a) Excluding Wagons and Camps. (b) Average weekly rental value of private dwellings occupied by tenants.

4. *Private Dwellings in Urban and Rural Divisions.*—(i) *General.* The following table, which relates to *occupied private dwellings* in the Urban and Rural Divisions of Australia, shows that, while the average number of rooms and the average number of inmates per occupied private dwelling are greater in the Metropolitan Area than in the Urban Provincial or Rural Districts, the average number of inmates per room is least in the Metropolitan Districts.

(ii) *Tenants.* The proportion of occupied private dwellings occupied by tenants is greatest in the Metropolitan Areas, where it represents 53.17 per cent. of all dwellings for which the mode of occupancy was stated, as against 46.05 per cent. in the Urban Provincial Districts, and 31.02 per cent. in the Rural Districts. In urban districts, however, the dwelling is as a rule valued as a purely residential entity, whereas in rural districts the productive property of the land—to which the dwelling is an appurtenance—is most often the incentive to ownership.

(iii) *Rental Value.* Considerable divergence was shown between the Metropolitan and other divisions of the country in the weekly rental value of private dwellings, which vary from an average of 9s. 11d. in the Rural Districts to 20s. 8d. in the Metropolitan Areas.

**OCCUPIED PRIVATE DWELLINGS.—URBAN AND RURAL, AUSTRALIA,
CENSUS, 4th APRIL, 1921.**

Particulars.	Urban.		Rural.	Total.
	Metropolitan.	Provincial.		
Occupied Private Dwellings	467,913	207,807	431,290	1,107,010
Rooms per Dwelling	5.15	5.07	4.66	4.94
Inmates per Dwelling	4.42	4.40	4.39	4.40
Inmates per Room	0.86	0.87	0.95	0.89

Weekly Rental Value(a)	20s. 8d.	14s. 0d.	9s. 11d.	16s. 6d.

(a) Average weekly rental value of private dwellings occupied by tenants.

5. *Private Dwellings in Metropolitan Areas.*—(i) *General.* The number of rooms per dwelling in these areas varied from a minimum of 4.67 in Perth to a maximum of 5.47 in Brisbane—a difference of 17 per cent., but the number of inmates per dwelling varied from 4.31 in Adelaide to 4.52 in Sydney—a difference of 5 per cent. only. The average number of inmates per room was highest in Perth, with 95 persons to every 100 rooms, and lowest in Brisbane, where there were 81 persons to every 100 rooms.

(ii) *Tenants.* The proportion of private dwellings in Metropolitan Areas occupied by tenants ranged from 39.18 per cent. in Brisbane to 59.22 per cent. in Sydney, the average for the six capitals being 53.17 per cent., as against 63.48 per cent. in 1911. As already mentioned, the decline during the decade 1911–1921 in the proportion of tenants was due largely to the action of the State Government and of the War Service Homes Commissioners in facilitating the acquisition of houses under the system of purchase by instalment.

(iii) *Rental Value.* The weekly rent of private dwellings ranged from 17s. 1d. per week in Hobart to 23s. per week in Sydney.

§ 10. Immigration.

(A) The Encouragement of Immigration into Australia.

1. **General.**—Various measures have from time to time been adopted by the Commonwealth and State Governments, as well as by private societies and individuals, to promote the immigration of suitable settlers into Australia. The activities of the Commonwealth Government (which is vested with constitutional powers in regard to immigration under section 51, xxvii., of the Constitution Act 1900) with respect to the encouragement of immigration, were formerly confined to advertising the resources and attractions of Australia by means of exhibitions, and in handbooks, in newspapers, and periodicals. During the war, immigration operations were almost entirely suspended.

2. **Joint Commonwealth and States' Immigration Scheme.**—In 1920 an arrangement was arrived at between the Commonwealth and State Governments under which the Commonwealth is responsible for the recruiting of immigrants abroad and for their transport to Australia, whilst the State Governments advise the Commonwealth as to the numbers and classes of immigrants which they are prepared to receive. Briefly stated, the Commonwealth selects the immigrant according to the requirements of the State concerned and brings him to Australia, and on his arrival the State Government assumes the responsibility for placing him in employment or upon the land. Incidentally, the Commonwealth undertakes all publicity and propaganda in connexion with the encouragement of immigration.

3. **Assisted Passages.**—During the period 1st May, 1925, to 31st March, 1928, the British and Commonwealth Governments will jointly donate the following contributions towards the passages of approved settlers for Australia from the United Kingdom :—Children under 12 years, £16 10s. (representing the whole of the half fare); juveniles 12 and under 17 years, £27 10s.; juveniles 17 years and under 19 years, £22; married couples, including widowers or widows, and wives nominated by husbands, with at least, one child under 19 years, £22 per parent (children at rate according to age); domestic servants, £33; others including children 19 years of age and over, £16 10s. Allowing for this financial assistance, children under 12 years will be carried free; juveniles 12 years of age and under 17 years, who are ordinarily charged for by the shipping companies as adult passengers, will merely require to pay £5 10s. each; juveniles 17 years and under 19 years, £11 each; married couples, including widowers or widows, and wives nominated by husbands, with at least one child under 19 years, £11 per parent (children at rate according to age); domestic servants free; others, including children 19 years and over, £16 10s. each. Persons who have previously resided in the Commonwealth are not eligible for assistance. In addition to these contributions, loans of the balance of the passage money are in special cases granted by the Governments concerned. Persons entitled to assisted passages are divided into two classes—"Selected" and "Nominated." "Selected" immigrants are those such as farm workers and domestics who are originally recruited abroad by the Commonwealth Government. "Nominated" immigrants are those nominated by persons resident in Australia, and the nominators, who must submit their applications through the officers in charge of the State Immigration Offices in the various capital cities, are held responsible for their nominees upon arrival, so that they shall not become a burden upon the State.

Intending settlers or immigrants may, on application, obtain full information from the Director of Migration and Settlement, Australia House, Strand, London, W.C.2.; or from the Secretary, Development and Migration Commission, "Kurrajong House" 175-177 Collins-street, Melbourne.

4. **Migration Agreement between British and Commonwealth Governments.**—On the 8th April, 1925, the British and Commonwealth Governments entered into an agreement under which it is proposed to furnish to the Governments of the various States, loan moneys at a very low rate of interest, to enable suitable areas of land to be made available for settlement, or to enable such public works to be carried out as will

tend to develop and expand settlement areas or will enable areas already settled to carry a greater population. The maximum amount of loan moneys provided for in the agreement is £34,000,000. It is provided that for every principal sum of £75 issued to a State Government under the agreement, one assisted migrant shall sail direct from the United Kingdom and be received into and satisfactorily settled in the State concerned. If full advantage is taken of the offer of loan moneys contained in the agreement, 450,000 new settlers will be absorbed during a period of ten years.

5. **Results of Assisted Immigration.**—In the earlier days of settlement in Australia, State-assisted immigration played an important part. Such assistance ceased for the time being in Victoria in 1873, in South Australia in 1886, and in Tasmania in 1891. In New South Wales, general State-aided immigration was discontinued in the year 1887, but those who arrived under that system and were still residing in New South Wales, might, under special regulations, send for their wives and families. A certain amount of passage money, graduated according to the age of the immigrant, had to be paid in each case. Under the provisions of these regulations, immigrants to the number of 1,994 received State assistance during the years 1888 to 1899 inclusive. From 1900 to 1905 no assistance of any kind was given, but from 1906 onwards assistance has again been granted. In Queensland and Western Australia, such assistance, although varying considerably in volume from year to year, has been accorded for many years past. Assistance to immigrants, which in the case of Victoria had practically ceased in 1873, has recently been again afforded. In South Australia the principle of State assistance was again introduced in 1911, and in Tasmania in 1912.

The number of assisted immigrants for the years 1914 to 1926 and the total from the earliest years up to the end of 1926 are given in the following table:—

ASSISTED IMMIGRATION.—1914 TO 1926, AND UP TO THE END OF 1926.

(B) The Regulation of Immigration into Australia.

1. **Pre-Federal Restrictions.**—(i) *Alien Races.* For many years prior to federation the States had imposed certain restrictions upon the admission of persons desirous of becoming permanent residents. The influx of Chinese, for example, was limited by stringent statutes, and later, general Acts were passed in some of the States which restricted the immigration of other—principally Asiatic—races.

(ii) *Undesirable Immigrants.* Further restrictions were placed upon the admission of persons who were undesirable as inhabitants, either for medical or moral reasons, or who were likely to become an economic burden upon the community.

2. **Powers and Legislation of the Commonwealth.**—(i) *Constitutional.* Under Part V., Sec. 51, xxvii. and xxviii. of the Commonwealth Constitution Act the Parliament of the Commonwealth is empowered to make laws with respect to immigration and emigration and the influx of criminals. (See page 24 hereinbefore.)

(ii) *Legislation.* The powers above specified have been exercised by the Commonwealth Government, and the laws passed in pursuance thereof supersede the previously existing State laws. The present Commonwealth Acts dealing with Immigration are the Immigration Act 1901–1925 and the Contract Immigrants Act 1905. A summary of the provisions of these Acts (excepting the provisions of the Amending Immigration Acts of 1920, 1924 and 1925, which are given below), containing particulars regarding the admission of immigrants, prohibited immigrants, the liabilities of shipmasters and others, and kindred matters will be found in preceding Year Books (see Year Book, No. 12, pp. 1166 to 1168).

3. **Amending Immigration Act 1920.**—The principal provisions of this Act, which came into operation as from the 2nd December, 1920, are those prohibiting the entry of (a) any person who advocates the overthrow by force or violence of the established Government of the Commonwealth or of any State or of any other civilized country, or of all forms of law, etc.; (b) for a period of five years, and thereafter until the Governor-General by proclamation otherwise determines, any person of German, Austro-German, Bulgarian, or Hungarian parentage and nationality, or Turk of Ottoman race; (c) any person over 16 years of age who, on demand by an officer, fails to prove that he is the holder of a valid passport; (d) any person who has been deported under any Act.

Section 9 of the War Precautions Act Repeal Act also provides for prohibiting the entry of any British subject who upon being required to make and subscribe an oath or affirmation of loyalty fails to do so.

4. **Amending Immigration Act 1924.**—The provisions of this Act were mainly intended to improve the machinery of the existing law. Section 3, paragraph (f), of the principal Act was amended to include amongst the classes of prohibited immigrants any persons who in the opinion of an officer were considered likely to become a charge upon the public through having insufficient means of support or from any other cause. It is now required that every alien immigrant must be in possession of at least £40 landing money, unless his maintenance has been guaranteed by some one residing in Australia.

5. **Amending Immigration Act 1925.**—This measure contains several important amendments, the principal of which are those providing power—(i) To prohibit the entry of any person declared by the Minister to be in his opinion, from information received from the Government of the United Kingdom or of any other part of the British Dominions or from any foreign Government, through official or diplomatic channels, undesirable as an inhabitant of, or visitor to, the Commonwealth. (ii) To prohibit by proclamation, either wholly or in excess of specified numerical limits, and either permanently or for a specified period, the immigration into the Commonwealth, or the landing at any specified port or place in the Commonwealth, of aliens of any specified nationality, race, class or occupation, in any case where it is deemed desirable so to do—(a) on account of the economic, industrial, or other conditions existing in the Commonwealth; (b) because the persons specified in the proclamation are deemed to be unsuitable for admission into the Commonwealth; or (c) because they are deemed unlikely to become readily assimilated or to assume the duties and responsibilities of Australian citizenship within a reasonable time after their entry. (iii) To deport persons, other than those born in Australia, who have been concerned in Australia in acts directed towards hindering or obstructing, to the prejudice of the public, the transport or the conveyance of passengers, or the provision of necessary services, and whose presence in Australia is considered likely to be injurious to the peace, order, and good government of the Commonwealth. Before action can be taken under the latter provision to deport any person from the Commonwealth, he must be required to appear before a specially appointed Board, to afford him an opportunity to show cause why he should not be deported. The Board will consist of three members nominated by the Minister, and the Chairman must be a person who holds or has held the office of Judge, or of Police, Stipendiary, or Special Magistrate.

6. **Compilation of Statistics.**—The statistics relative to immigration, which are presented in this Chapter, have been compiled by the Department of Home and Territories in accordance with the provisions of the Immigration Act 1901-25. The number of persons admitted without test includes Australian citizens who have been abroad, and other persons landing in Australia irrespective of the length of time which they propose to stay. Certain persons who are permitted to land (under security for their subsequent departure) pending transhipment to another country are not included. The majority of the persons of Asiatic or other non-European nationality shown in the table are former residents of Australia who have returned from visits abroad, or are persons who have been admitted temporarily under exemption certificates, for business, educational, or other purposes. The Immigration Act 1901-25 does not require any statistical record of the departures from Australia.

It may be mentioned, however, in this connexion, that the Bureau of Census and Statistics, for the purpose of estimating the population of Australia, compiles—from data collected by the Department of Trade and Customs—statistics of both arrivals into and departures from Australia. For this compilation, all persons leaving an oversea ship, and all persons joining an oversea ship, in any Australian port, are counted. Consequently the number of arrivals as recorded respectively under the Immigration Act and by this Bureau are not in complete agreement. During the last five years the number of persons who desired but were not permitted to land was 18 in 1922; 49 in 1923; 50 in 1924; 35 in 1925; and 58 in 1926.

7. **Persons Admitted Without Dictation Test.**—The following table shows the number and nationality of persons admitted during the years 1922 to 1926 without passing the dictation test:—

(a) Not previously recorded.

(C) Passports.

Provision is made in the Immigration Act 1920 for the production of passports by all persons over 16 years of age who desire to enter Australia. Similarly, the Passports Act 1920 provides that no person over the age of 16 years shall leave Australia unless—

- (a) he is the holder of a passport or other document authorizing his departure ; and
- (b) his passport has been viséed or indorsed in the prescribed manner for that journey, and the visé or indorsement has not been cancelled.

Among the exceptions to this requirement are natural-born British subjects leaving for New Zealand, Papua, or Norfolk Island; members of the crew of any vessel who sign on in Australia for an oversea voyage and who satisfy an authorized officer that they are by occupation seafaring men; aboriginal natives of Asia, or of any island in the East Indies, or in the Indian or Pacific Oceans. The charge for a Commonwealth passport is 10s., and for a visé 2s.

With regard to (b), the Commonwealth Government has agreed to the inclusion of Australia in reciprocal arrangements for the abolition of visé requirements made by the British Government with the respective Governments of the following countries, viz. :— France, Switzerland, Liechtenstein, Italy, Belgium, Denmark, Sweden, and Norway.

§ 11. Naturalization.

1. **Commonwealth Legislation.**—A brief summary of the Commonwealth legislation regarding naturalization is given in Year Book No. 15 (p. 1090).

The "Nationality Act 1920" was amended by the "Nationality Act 1922," which extends the operation of the principal Act to the Territories of Papua and Norfolk Island, and to any other territories under the authority of the Commonwealth to which the Governor-General by proclamation declares it to extend. A further amendment made by the Nationality Act 1925, the object of which was to bring the Nationality Act into line with the British law and to meet the wishes of British communities in foreign countries, restores the privilege of British nationality to children of the second generation, and also under certain conditions to children of later generations. A penal clause was also inserted dealing with trafficking in naturalization certificates.

The grant of a certificate of naturalization entitles the recipient to all the rights and privileges, and renders him subject to all the obligations of a natural-born British subject, with the exception that where, by any Commonwealth or State Constitution or Act, a distinction is made between natural-born British subjects and naturalized persons, such distinction shall hold good in the case of all persons naturalized under the Commonwealth Act.

The "Nationality Act 1920" provides that applications for certificates of naturalization must be made to the Governor-General, the qualifications required in an applicant being :—(i) Residence in Australia or a Territory continuously for not less than one year immediately preceding his application for naturalization, and previous residence, either in Australia or in some other part of His Majesty's dominions, for a period of four years within the last eight years before the application; (ii) Good character and an adequate knowledge of the English language; (iii) Intention to settle in the British Empire.

The applicant is required to furnish the following particulars in support of his application :—His own statutory declaration stating—(a) Name; (b) Age; (c) Birth-place; (d) Occupation; (e) Residence; (f) Length of residence in the British Empire; (g) Intention to settle in the British Empire; (h) Such other particulars as are prescribed. He must also furnish—(a) Newspapers containing copies of an advertisement, as prescribed, of his intention to seek naturalization; (b) Certificates of character from three natural-born British subjects, two of whom must be householders, and the third a Justice of the Peace, Postmaster, State School Teacher, or Police Officer; (c) Satisfactory evidence that he has an adequate knowledge of the English language.

The Governor-General in Council may, in his absolute discretion, and with or without assigning any reason, grant or withhold a certificate of naturalization as he thinks most conducive to the public good; but the issue of a certificate of naturalization will not be effected until the applicant furnishes a certificate signed by a Justice of the High Court of Australia, a State Judge, or a Magistrate, certifying that he has renounced allegiance to the country of which he was a subject at the time of his application for naturalization, and that he has taken an oath or affirmation of allegiance to the Crown in accordance with the Constitution. The grant of a certificate is made free of charge.

In addition to naturalization by grant of certificate, the act makes provision for—
(a) Naturalization by marriage; (b) Naturalization by inclusion in certificate granted to parent.

The former relates to the case of a woman who is not herself a British subject, but is married to a British subject; the latter to that of a person who is not a natural-born British subject, but who being under 21 years of age has, at the request of the parent, been included in the certificate granted to him by the Commonwealth. In each instance the person concerned is deemed to be naturalized under the Commonwealth Act.

The Governor-General may revoke a certificate of naturalization on any one of a number of grounds set out in Section 12 of the Nationality Act 1920-22, and the grantee thereupon ceases to be a British subject and is regarded as a subject of the State to which he belonged at the date of issue of the certificate of naturalization.

Where a wife and any minor children have acquired British nationality under the certificate issued to the husband and father, and such certificate is subsequently revoked, the wife and children remain British subjects unless the Governor-General otherwise declares, or unless they themselves elect to make a declaration of alienage.

In accordance with the Act, a list of persons naturalized, with their addresses, is published in the *Commonwealth Gazette* from time to time.

The administration of the Act is carried out by the Home and Territories Department and the Governor-General is authorized to make such regulations as are necessary or convenient for giving effect to the Act.

2. **Certificates Granted.**—(i) *Australia.* Particulars regarding the previous nationalities of the recipients of certificates of naturalization issued under the Act during each of the five years 1922 to 1926, and the countries from which such recipients had come, are given in the following table:—

**NATURALIZATION.—COMMONWEALTH CERTIFICATES GRANTED,

1926 ..	385	172	258	67	224	14	3	1,123

3. *Census Particulars.*—On the Personal Card used at the Census of 4th April, 1921, an inquiry as to naturalization was made, all persons who were British subjects by naturalization being required to indicate the fact by inserting the letter N in the place provided for the purpose on the card. In addition, in checking the cards in the Census Bureau, instructions were given that cases of women naturalized by marriage to British subjects, and of children naturalized by residence with parents who have become British subjects, should be duly taken into account by the insertion of the letter N if originally omitted. The results of the tabulation will be found in the following table :—

NATURALIZATION.—NATURALIZED BRITISH SUBJECTS, CENSUS OF 4th APRIL, 1921.

Particulars.	States.						Territories.		Australia.
	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	North-ern.	Fed. Cap.

Persons ..	12,549	8,791	15,418	4,509	3,607	791	63	17	45,745

§ 12. Population of Territories.

At the Census of the 4th April, 1921, special arrangements were made to obtain complete and uniform information concerning each of the five Territories of the Commonwealth, viz. :—(1) Northern Territory; (2) Federal Capital Territory; (3) Norfolk Island; (4) Papua; (5) Territory of New Guinea.

The work of Census enumeration in each Territory was carried out under the direction of the Commonwealth Supervisor of Census, the local organization in each Territory being under the control of a Deputy Supervisor of Census stationed in each Territory. On the conclusion of the collection the whole of the material was forwarded to the Census Office, Melbourne, for tabulation in conjunction with the data for Australia. A summary of the population and number of dwellings in each Territory is shown in the following table :—

POPULATION AND DWELLINGS.—TERRITORIES, 4th APRIL, 1921.

(EXCLUSIVE OF FULL-BLOOD ABORIGINALS IN THE NORTHERN AND FEDERAL CAPITAL TERRITORIES AND OF THE INDIGENOUS POPULATION OF PAPUA AND NEW GUINEA).

Territory.	Population.			Dwellings.			Total.
	Males.	Females.	Persons.	Occu- pied.	Unoccu- pied.	Being Built.	
Northern Territory ..	2,821	1,046	3,867	1,074	138	1	1,213

Territory of New Guinea ..	2,562	671	3,173	1,056	18	..	1,074

§ 13. The Aboriginal Population.

In Official Year Book No. 17, pp. 951 to 961, a brief account was given of the Australian aboriginal population, its origin, its numbers as estimated from time to time, and the steps taken for its protection. Pages 881 to 883 of this issue contain a statement showing the numbers of full-blood and half-caste aboriginals in each of the States and Territories of Australia at successive periods.

§ 14. The Chinese in Australia.

In Official Year Book No. 18, pp. 951 to 956, a brief historical sketch was given regarding "The Chinese in Australia," but limitations of space preclude its repetition in the present volume.

§ 15. The Pacific Islanders in Australia.

In Official Year Book No. 19, pp. 902-3, a brief account was given of the introduction of Kanakas into Australia.
