EXPLANATORY NOTES

INTRODUCTION

This publication is produced as a reference document for use in conjunction with census tables in which geographic areas are identified by code numbers rather than by name. These geographic areas are formed by aggregating Collection Districts (CD's) which are the smallest areas used in the collection and dissemination of census data and usually containing between 200 and 300 dwellings in urban areas but fewer in rural areas.

GEOGRAPHIC DEFINITIONS

The geographic levels contained in this code list are described below.

Local Government Area (LGA)

This is the basic unit used in the presentation of census data. The areas listed are those which existed at 30 June 1980 for all States with the exception of N.S.W. where the areas are those which existed as at 1 January 1981. LGA's correspond in all but a few instances to legal Local Government Authority areas, e.g. City, Municipality, Shire, District Council. The exceptions are:

- (a) areas affected by minor boundary changes, details of which were received too late for implementation;
- (b) the City of Brisbane, which covers a large area; the Australian Capital Territory which contains no Local Government Authority areas; and the Northern Territory which contains only two Local Government Authority areas. These are divided into areas which are treated as LGA's for census purposes and are known as census LGA's.

Urban Centres

At each Census of Population and Housing a boundary is defined for each population cluster of 1,000 or more people and for known holiday resorts of less population if they contain 250 or more dwellings of which at least 100 are occupied. These clusters are known as Urban Centres and the population and dwellings enumerated in them are classified as urban for statistical purposes. The rules used to determine Urban Centres and define their boundaries are complex and are not reproduced here but they can be made available on request.

Section of State

This identifies aggregations of CD's on a basis which ignores legal boundaries.

Five codes describing Section of State are used:

- Code 0 Major Urban—Urban Centres with a population of 100,000 and over;
- Code 1 Other Urban—Urban Centres with a population of 1,000 to 99,999;

Code 2 Bounded Rural Locality—population clusters of 200 to 999 persons;

Code 3 Rural Balance—the remainder of the State;

Code 4 Migratory—persons enumerated on board vessels in and between Australian ports or on board long-distance trains, buses or aircraft are classified as Migratory. Such persons are not included in the population of a specific LGA but are shown as a balancing item for the total population of the State or Territory. Because the Australian Capital Territory is a small inland area it has no Migratory population.

LGA Section

These are parts of LGA's identifying each Urban Centre or Bounded Rural Locality included either wholly or partly within the LGA and the remaining rural part of the LGA. LGA Sections are numbered consecutively in alphabetical order within the LGA with the completely rural section of the LGA taking the last number allocated.

Locality Code

A Locality Code is assigned to each Urban Centre and Bounded Rural Locality. The codes are assigned in alphabetical order within each State or Territory. Migratory is assigned Locality Code 99999.

Statistical Division

Statistical Divisions are designed to be relatively homogeneous regions characterised by identifiable social and economic links between the inhabitants and between the economic units within the region, under the unifying influence of one or more major towns or cities. Capital City Statistical Divisions are predominantly urban in character and the boundaries are delineated to contain the anticipated urban development of the capital cities (and associated Urban Centres) for a period of at least twenty years.

Statistical Subdivision

A Statistical Subdivision is defined in most States on the same basis as a Statistical Division but as a portion of the latter. In some cases, subdivision boundaries cross Local Government Areas.

Statistical District

Generally, a Statistical District is a Statistical Subdivision that meets additional criteria. Most Statistical Districts contain an Urban Centre with a population of 25,000 or more and, like a Capital City Statistical Division, the boundaries are delineated to contain the anticipated urban development of the centre for a period of at least twenty years. These fixed boundaries delimit areas which for general statistical purposes are free from the problems imposed by the moving boundaries of the majority of Urban Centres.

In selected cases, especially in Queensland, Statistical District boundaries were delineated around Urban Centres with a population of fewer than 25,000 where there was a demand for intercensal population estimates for the area and where existing LGA boundaries were obviously inadequate for this purpose.

There are three cases where Statistical Districts are not equivalent to Statistical Subdivisions. They are the Statistical Districts of Gold Coast and Albury-Wodonga which cross State boundaries and each of which consist of two Statistical Subdivisions, and the Canberra Statistical District which consists of the Canberra Statistical Division and the LGA of Queanbeyan in New South Wales.

DESCRIPTION OF TABLES

Table 1: Local Government Areas in census LGA Code Order. This table contains census LGA's in alphabetical order, numbered consecutively within each State or Territory.

In this table, the City of Brisbane has been divided into 172 statistical areas and these areas appear as a separate alphabetical listing within the content of Table 1, Queensland, between Bowen (S) and Broadsound (S).

The combination of codes shown in Table 1 (Statistical Division, Statistical Subdivision, LGA code) provides a cross reference to Table 2, Local Government Areas in Statistical Division order.

For instance, by knowing the name of an LGA, Table 1 is used to access the Statistical Division/Subdivision/LGA code. This combination of codes is then used to locate the LGA in Table 2. From Table 2 further information can be obtained, i.e. the LGA Section code(s) and Section of State code(s) applicable to each LGA.

NOTE: State Capital City Undefined and State Undefined. These two descriptors and the codes allocated to them have been included in Table 1 for each State for the benefit of users who need to interpret tabulations on persons by LGA of usual residence.

Responses to the census questions on usual residence which were too imprecise to code to a specific LGA were assigned either State Capital City Undefined or State Undefined codes. These codes and descriptors have not been entered in Tables 2 and 3.

Table 2: Local Government Areas in Statistical Division, Subdivision and District Code Order. This table shows the LGA's and their component LGA Section(s), within each Statistical Division and Subdivision or District. A Section of State code is also allocated to each LGA.

Table 3: Urban Centres and Bounded Rural Localities in Code Order. This is an alphabetical listing of Urban Centres and Localities within each State or Territory. An Urban Centre or Locality will be listed more than once whenever it is composed of more than one LGA Section. A Section of State code also appears for each Urban Centre or Locality. The combination of codes shown in this table also provides a cross reference to Tables 1 and 2.
