EXPLANATORY NOTES

Introduction

The base year of constant price estimates of gross domestic product and its components contained in this issue has been changed to 1984-85. (For the last 6 years or so, constant price estimates have been published on a 1979-80 base.) Estimates at average 1984-85 prices are presented for all major aggregates from September quarter 1974 to March quarter 1988. Apart from the exceptions noted in paragraphs 8 and 9 below, current price estimates contained in this issue are consistent with those published in the regular March quarter 1988 issue of this publication which was released on 1 June 1988.

Why rebasing is necessary

2. Periodic rebasing of constant price estimates is necessary to take account of changed price relativities and structural relationships in the economy. The choice of base year influences the movements in the constant price series, and the usefulness of such series is diminished if the relative price weights of the base year differ significantly from the price relationships in other periods included in the series. The more remote a base year is from the current period, the less likely that its relative prices will reflect the current situation. A more detailed discussion of the need for rebasing constant price estimates, and factors affecting the choice of base year, is contained in the information paper *Change in Base Year of Constant Price Estimates from 1979-80 to 1984-85* (5227.0), released on 6 June 1988.

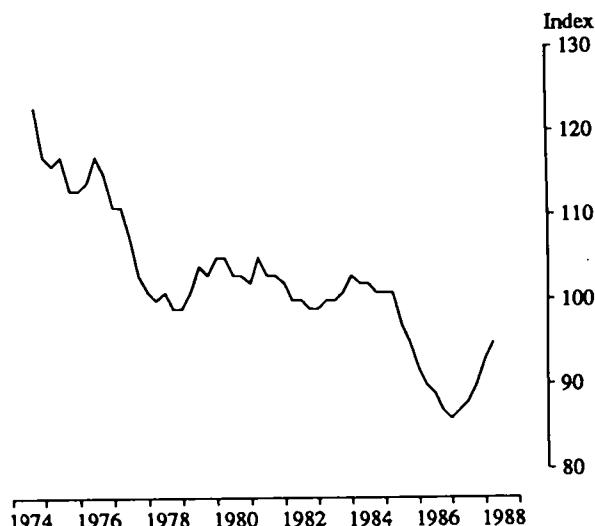

The effects of rebasing constant price estimates

3. In rebasing the estimates from average 1979-80 prices to average 1984-85 prices the opportunity was taken to review the methodology previously used and to draw upon additional data which have become available since the last rebase. The differences between the growth rates exhibited by the estimates at average 1979-80 prices and at average 1984-85 prices reflect the impact of new methodologies as well as differences in the price relativities between the two base years.

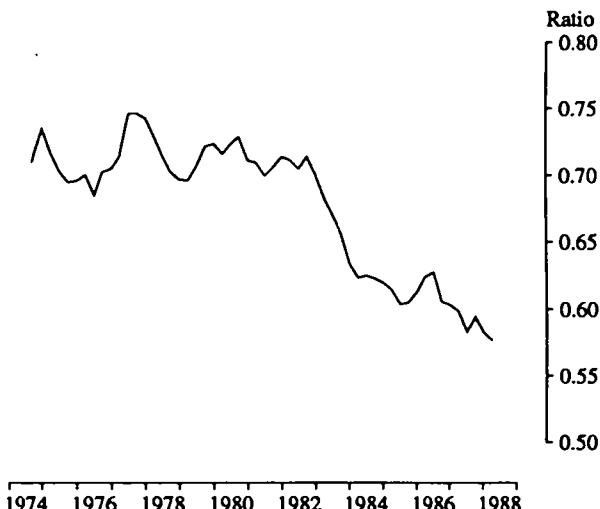

4. While the effects of the rebase have been quite small at the level of total gross domestic product at constant prices, some components have changed significantly. A major factor is the introduction of an improved price index in the estimation of constant price expenditure on computer equipment. The series most affected by this change are imports, private gross fixed capital expenditure on equipment, and the terms of trade. The information paper (5227.0), referred to in paragraph 2, contains details of the effects of the new computer equipment price index on these and other series affected. Because expenditure on imports at constant prices is a component of the stocks to sales ratio and the imports to sales ratio, these series are also affected by the change in the method of estimating constant price expenditure on computer equipment.

5. Graphs of the terms of trade, the stocks to sales ratio, and the imports to sales ratio are shown below.

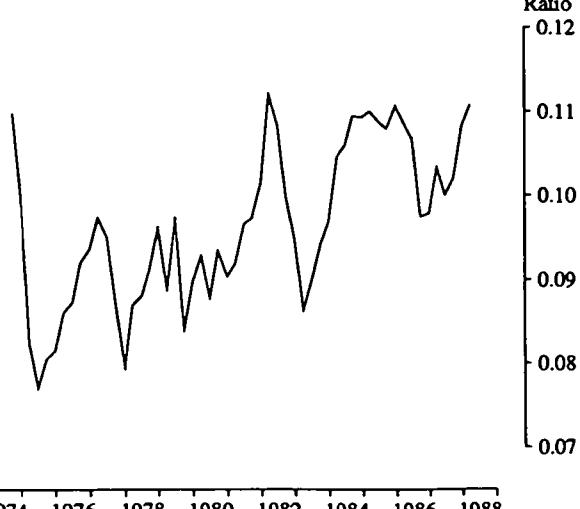

**TERMS OF TRADE
(1984-85 = 100)
SEASONALLY ADJUSTED**

**RATIO OF PRIVATE NON-FARM STOCKS TO SALES
AT AVERAGE 1984-85 PRICES
SEASONALLY ADJUSTED**

**RATIO OF IMPORTS TO SALES
AT AVERAGE 1984-85 PRICES
SEASONALLY ADJUSTED**

Exports and imports of goods and services

6. Detailed estimates of exports and imports at current and average 1979-80 prices have been published for some time in the quarterly publication *Balance of Payments, Australia* (5302.0). Commencing with the June quarter 1988 issue of that publication these estimates will be presented at average 1984-85 prices. For the information of users, detailed estimates at current and average 1984-85 prices are also contained in Tables 47 to 59 of this special issue.

7. In the regular March quarter issues of 5206.0 and 5302.0 it was noted that difficulties in the constant price estimation of exports and imports of goods for March quarter 1988 had arisen as a result of the introduction of the Harmonised Commodity Classification System. These same difficulties have been encountered in deriving estimates at average 1984-85 prices. Consequently, users are again warned that the constant price estimates for the latest quarter are not as firmly based as usual. The estimation difficulties have been most severe for imports of merchandise and, as a result, constant price estimates of imports by commodity group are not published for the latest quarter.

Rewvisions to current price estimates

8. The national accounts concept of production does not include any holding gains associated with the effects of inflation on the value of stocks held. Consequently, a stock valuation adjustment (SVA) is calculated as a measure of these effects. Estimates of gross operating surplus and increase in stocks recorded in the national accounts are after deduction of the SVA. The SVA is influenced by movements in the price indexes used to estimate increases in stocks at constant prices. Similarly, estimates of consumption of fixed capital (COFC) are influenced by the movements of the price indexes relating to the components of gross fixed capital expenditure. The rebase to average 1984-85 prices affected the movements in these price indexes, resulting in changes to the SVA and COFC.

9. The COFC for general government equates to the gross operating surplus of general government because net operating surplus for this sector is assumed to be zero. Thus, current price estimates of gross operating surplus of general government are affected by the changes in the COFC estimates caused by the rebase to average 1984-85 prices. The general government COFC is also an element of government final consumption expenditure, so the current price estimates of this series have changed as well. Changes to the COFC for general government and the SVA have a direct effect on total gross operating surplus and hence gross domestic product. Similarly, current price estimates of gross national expenditure and gross non-farm product are affected by these changes. In addition, sectoral estimates of net operating surplus and saving, together with their associated series contained in this issue, differ from those published in the March quarter 1988 issue released on 1 June 1988.

Other data available

10. Estimates of the major components of private final consumption expenditure at average 1984-85 prices are included in this issue for only the most recent years. Estimates for earlier years, from September quarter 1974, are available upon request.

Data on floppy disk

11. Commencing with this issue of 5206.0, data will be available on floppy disk. All series in the normal issue will be included, generally running from September quarter 1959 for current price estimates and from September quarter 1974 for constant price estimates. The cost is \$50 per quarter for most customers and order forms for the service (*Australian National Accounts : Quarterly Data on Floppy Disk* (5228.0)) can be obtained by telephoning Terry Turner on (062) 52 6684 or by writing to:

User Contact Officer
Publishing and Electronic Dissemination Section
PO Box 10
BELCONNEN ACT 2616

Rounding of figures

12. Although percentage changes are given to one decimal place in this publication, this does not imply that they can be regarded as accurate to the last digit shown. The figures after the decimal point are given to avoid distortions which may occur in rounding off the figures to the nearest half or whole number.

13. The procedures used in preparing this publication may occasionally result in rounding differences between figures in this publication and corresponding figures in other publications. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

Occasional Papers

14. Occasional Papers produced by officers within the national accounts area of the ABS report on various aspects of research being undertaken. They are not used for the release of official statistics and do not necessarily reflect the views of the ABS. The following Occasional Papers are available at all ABS offices:

Studies in National Accounting : Current Cost Depreciation and Net Capital Stock — Cherylee Bailey (1981/1)

The Accuracy and Reliability of the Quarterly Australian National Accounts — A. G. Johnson (1982/2)

State Accounts, Australia : Issues and Experimental Estimates — S. Burrell, J. Daniel, A. Johnson and R. Walters (1984/4)

The Effects of Rebasing the Constant Price Estimates of the Australian National Accounts — R. Dippelsman (1985/1)

Estimates of Depreciation and Capital Stock, Australia — R. Walters and R. Dippelsman (1985/3)

Related publications

15. In addition to those mentioned above other ABS publications which may be of interest include:

Historical Series of Estimates of National Income and Expenditure, Australia (5207.0) — issued for December quarter only.

Australian National Accounts, Gross Product by Industry, 1985-86 (5211.0)

Budget Related Paper No. 2, National Income and Expenditure, 1986-87 (5213.0)

Australian National Accounts, State Accounts, 1986-87 (5220.0)

Australian National Accounts, Estimates of Capital Stock, 1986-87 (5221.0)

Australian National Accounts, Quarterly Data on Floppy Disk (5228.0).

16. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia (1101.0)*. The ABS also issues, on Tuesdays and Fridays, a *Publications Advice (1105.0)* which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

Electronic services

VIATEL. Key *656# for selected current economic, social and demographic statistics.

AUSSTATS. Thousands of up-to-date time series are available on this ABS on-line service through CSIRONET.

For further information phone the AUSSTATS Help Desk on (062) 52 6017.

TELESTATS. This service provides foreign trade statistics tailored to users' requirements.

Further information is available on (062) 52 5404.

Floppy disk service

Selected ABS statistics are available on floppy disk. Further information is available on (062) 52 6684.
