CENSUS OF THE COMMONWEALTH OF AUSTRALIA.

4th April, 1921.

CENSUS BULLETIN No. 25.

Summary for the Commonwealth of Australia

RELATING TO

DWELLINGS.

(Subject to Revision.)

Prepared under instructions from the Minister
of State for Home and Territories

BY

CHAS. H. WICKENS, F.I.A., F.S.S., HON. M.S.S. (PARIS),
COMMONWEALTH STATISTICIAN.

By Authority:

ALBERT J. MULLETT, GOVERNMENT PRINTER. MELBOURNE.

CENSUS OF THE COMMONWEALTH OF AUSTRALIA, 4th APRIL, 1921:

AUSTRALIA.

DWELLINGS.

SECTION 1.—INTRODUCTION.

1. General.—This bulletin presents in tabular form the summarized results relating to Dwellings for the Commonwealth of Australia, and for the Metropolitan, Urban Provincial, and Rural Divisions thereof. The subjects referred to in the tables are dealt with in the following order:—(1) Summary of Population and Dwellings; (2) Nature of Occupied Dwellings (Private Houses, etc.); (3) Materials of which Outer Walls are composed; (4) Material of which Roof is composed; (5) Private Dwellings classified according to the Number of Rooms; (6) Mode of Occupancy (Owner, Tenant, etc.); (7) Weekly Rental Value of Private Dwellings Occupied by Tenants; (8) Private Houses, Tenements, and Flats classified according to the Number of Inmates. Bulletins containing similar information for each of the States have already been published.

2. Metropolitan Area.—Throughout the following observations comparisons will be made between results from the Census of 1911, and from the Census of 1921, relating to the "Metropolitan Areas," and in this connexion it must be pointed out that the area included under the designation, "Metropolitan Area," is not exactly identical in both instances. The number of dwellings affected, however, is relatively so small that the comparisons quoted may be accepted as valid.

3. Private Dwellings.—All tables after Table 2 refer to occupied *private* dwellings only.

SECTION 2.—POPULATION AND DWELLINGS (Table 1).

1. General Summary.—From the summary of results given in Table 1, it may be ascertained that, during the interval between the Census of 1911 and that of 1921, the population of Australia increased by 22.01 per cent., and the total occupied dwellings, including hotels, boarding-houses, gaols, hospitals, and any structure used for the purpose of shelter as a dwelling, but excluding wagons and camps, increased by 24.89 per cent., so that the number of persons per occupied dwelling was less in 1921 than in 1911. The average number of persons per occupied dwelling at the Census of 1921 was 4.71, as compared with the average of 4.82 in 1911. For social and economic purposes a better result is obtained by excluding boarding-houses, hotels, gaols, hospitals, and similar establishments, which, though necessarily treated as dwellings, do not represent the condition of the normal social unit, which is the family. In the following more detailed observations relative to housing accommodation, consideration will be restricted to private dwellings.

2. Unoccupied Dwellings.—The number of unoccupied dwellings in Australia on the 4th April, 1921, was 51,166, or 4.25 per cent. of all existing dwellings. On a similar basis, the proportion of unoccupied dwellings in the Metropolitan Areas was 2.79 per cent., in the Urban Provincial Areas 4.48 per cent., and in the Rural Areas 5.70 per cent. Of the 51,166 unoccupied dwellings, 14,109, or 27.57 per cent., were in the Metropolitan Areas; 10,189, or 19.91 per cent., were in the Urban Provincial Centres; and 26,868 or 52.52 per cent., were in the Rural Areas. Dwellings which were temporarily unoccupied on the night of the Census are included in the foregoing figures, though they were not necessarily "to let."

3. Dwellings being Built.—The number of dwellings returned as in course of construction represented an addition of 5.26 to every 1,000 dwellings in existence in Australia on the 4th April, 1921. The similar increments in the various divisions of the country were:—Metropolitan, 8.24; Urban Provincial, 4.10; and Rural, 2.64.

4. Tenements and Flats.—It might be well to mention here that any room, or suite of rooms, occupied as a tenement or flat has been considered as a distinct dwelling in conformity with the *Census and Statistics Act 1905-20*, which provides that—"Where a building is let, sublet, or held in different apartments and occupied by different persons or families, each part so let or sublet, or held and used for the purpose of human habitation shall be deemed a dwelling." (Section 10, sub-section 2.)

SECTION 3.—NATURE OF OCCUPIED DWELLINGS (Table 2).

1. Private Houses, Tenements and Flats, Boarding-houses, etc.—Of the structures recorded as dwellings at the Census of the 4th April, 1921, private houses numbered 1,068,607, and tenements or flats numbered 38,403; taken together these represent 95.99 per cent. of all occupied dwellings. The most striking disclosure from the analysis of dwellings, according to their nature, is the extension of the use of the tenement or flat, and of the boarding-house, lodging-house, or coffee palace as a place of residence. The figures not only confirm what has been a subject of general observation for some time past, but they provide authentic data by which the extent of the movement can be measured. Thus, during the ten years between the Censuses of 1911 and 1921, the number of private houses increased by 20.33 per cent.—from 888,045 to 1,068,607, while the tenements and flats increased by 505 per cent.—from 6,344 to 38,403, and the number of boarding-houses, etc., increased by 95 per cent.—from 14,187 to 27,665. Of the 38,403 tenements and flats in Australia at the 1921 Census, 27,819, or 72.44 per cent., were in the Metropolitan Areas; 5,544, or 14.44 per cent., were in the Urban Provincial Areas; and 5,040, or 13.12 per cent., were in the Rural Districts; and of the 27,665 boarding-houses, 18,354, or 66.34 per cent., were in the Metropolitan Areas; 4,837, or 17.48 per cent., were in the Urban Provincial Areas; and 4,474, or 16.18 per cent., were in the Rural Districts.

The extended use of the tenement and of the boarding-house was general throughout the States, though it was not equally pronounced in all. The percentage increases in the number of tenements and flats in the various States were, in the order of their magnitude—Tasmania, 993 per cent.; New South Wales, 675 per cent.; Victoria, 538 per cent.; South Australia, 252 per cent.; Queensland, 251 per cent.; and Western Australia, 235 per cent. In the various Metropolitan centres the similar rates of increase were:—Hobart, 959 per cent.; Sydney, 611 per cent.; Melbourne, 541 per cent.; Adelaide, 289 per cent.; Brisbane, 156 per cent.; Perth, 83 per cent. The increase for the six Capitals together was 475 per cent.

The increases to the number of boarding-houses, etc., in each State were:—South Australia, 111 per cent.; New South Wales, 113 per cent.; Queensland, 93 per cent.; Victoria, 80 per cent.; Western Australia, 76 per cent.; and Tasmania, 64 per cent. In the Metropolitan centres the number of boarding-houses, etc., increased as follows:—Perth, 151 per cent.; Sydney, 144 per cent.; Adelaide, 143 per cent.; Melbourne, 97 per cent.; Brisbane, 93 per cent.; and Hobart, 59 per cent. The increase for the six Capitals together was 123 per cent.

2. Hotels.—The number of hotels in Australia declined during the intercensal period by 1,140, or 12.52 per cent.—from 9,106 in 1911 to 7,966 in 1921. In the State of Victoria the number of hotels decreased by 714, or 24.35 per cent.

SECTION 4.—MATERIAL OF OUTER WALLS (Table 3).

1. Wood.—When all the occupied private dwellings in Australia are classified according to the material of their outer walls, the most numerous are those with walls of wood. This is true of all the States except South Australia, where stone dwellings predominate. In the Northern Territory iron walls are the most numerous. At the Census of 1921 the private dwellings with wooden walls in Australia numbered 614,775, or 55.79 per cent. of all private dwellings for which particulars regarding walls were specified, as against 489,966, or 55.07 per cent. of the total in 1911—having increased in the interval by 25.47 per cent. The materials of which houses are built differ considerably between the States, and also between the Metropolitan and extra-Metropolitan Divisions of the same State. The percentage proportions which dwellings with walls of wood bore to all private dwellings in the States and Territories in 1921 were:—New South Wales, 49.18 per cent.; Victoria, 66.50 per cent.; Queensland, 85.52 per cent.; South Australia, 7.90 per cent.; Western Australia, 41.35 per cent.; Tasmania, 73.82 per cent.; Northern Territory, 28.80 per cent.; Federal Capital Territory, 57.05 per cent. In the Metropolitan Areas the similar percentages for wooden dwellings were:—Sydney, 20.00 per cent.; Melbourne, 51.16 per cent.; Brisbane, 96.02 per cent.; Adelaide, 4.72 per cent.; Perth, 33.56 per cent.; Hobart, 45.17 per cent.; the average for the six Capitals being 37.22 per cent. In the extra-Metropolitan Areas the average percentage of wooden dwellings in 1921 was 69.38 per cent. Of the 614,775 wooden private dwellings in Australia in 1921, there were 28.21 per cent. in the Metropolitan Areas; 23.37 in Urban Provincial Areas; and 48.42 per cent. in Rural Areas. It may be noticed that this distribution is in striking contrast to that of brick dwellings, and that the disposition of stone dwellings differs from both the wood and the brick.

2. Brick.—In 1921 the number of private dwellings with brick walls numbered 304,653, or 27.65 per cent., as against 221,478, or 24.89 per cent., of all private dwellings in 1911. The proportions of brick dwellings to the total in the several States in 1921 were:—New South Wales, 40.40 per cent.; Victoria, 26.76 per cent.; Queensland, 1.35 per cent.; South Australia, 21.52 per cent.; Western Australia, 29.36 per cent.; and Tasmania, 18.18 per cent. In the various Metropolitan Areas the proportion of brick dwellings were:—Sydney, 75.62 per cent.; Melbourne, 45.57 per cent.; Brisbane, 2.69 per cent.; Adelaide, 39.26 per cent.; Perth, 54.70 per cent.; Hobart, 44.07 per cent.; the average for the six Capitals being 52.63 per cent. Of the 304,653 brick dwellings in Australia in 1921, there were in the Metropolitan Areas 80.50 per cent.; in the Urban Provincial Areas 12.67 per cent.; and in the Rural Areas 6.83 per cent.

3. Stone.—Although the number of private dwellings in Australia with walls of stone increased by 11.20 per cent.—from 71,925 in 1911 to 79,983 in 1921, it fell relatively from 8.08 per cent. to 7.26 per cent. In South Australia dwellings of stone represented 55.82 per cent. of all private dwellings, whereas in the other States their numbers were relatively small, ranging from 5.76 in Western Australia to 0.21 per cent. in Queensland.

4. Other Materials.—The materials already referred to—wood, brick, and stone—composed 90.70 per cent of all private dwellings. Of the remainder, 43,790, or 3.97 per cent. of the total dwellings, had walls of iron, and 28,850, or 2.62 per cent., had textile walls. Of the dwellings with iron walls 69.15 per cent., and of those with textile walls 93.16 per cent., were in the Rural Areas, and represent the primitive, and in many cases, temporary dwellings of pioneer farmers, of miners, and of persons engaged in construction works, such as roads, railways, water conservation, etc.

SECTION 5.—MATERIAL OF ROOF (Table 4).

1. General.—The results given in Table 4 show that of all private dwellings in Australia for which particulars were given regarding the material of which the roof was composed, 865,832, or 78.64 per cent., were roofed with iron; 103,035, or 9.36 per cent., were covered with slate; 75,377, or 6.85 per cent., with tiles; 24,826, or 2.25 per cent., with textile materials; and 20,005, or 1.82 per cent., with wood. Outside New South Wales and Victoria, where they are mostly confined to the Metropolitan Areas, slate and tile roofs are few, whereas of the wooden roofs nearly 50 per cent. are in Tasmania.

SECTION 6.—OCCUPIED PRIVATE HOUSES, TENEMENTS, AND FLATS, ACCORDING TO NUMBER OF ROOMS (Table 5).

1. General.—The most striking feature of Table 5 is the decline in the numbers of small dwellings, consisting of 1 or 2 rooms, and also in the number of the larger dwellings. For Australia as a whole the average number of rooms per private dwelling has increased very slightly—from 4.93 in 1911 to 4.94 in 1921, though the results for the different States are not all in harmony. In New South Wales and Victoria the average number of rooms per private dwelling is less than in 1911, but in all the other States it is greater. Victoria showed the greatest decrease—from 5.26 rooms per dwelling in 1911 to 5.11 in 1921; and Western Australia showed the greatest increase—from 3.67 in 1911 to 4.22 in 1921. This increase in the average number of rooms per dwelling in Western Australia was due to the marked contraction in the number of small dwellings on the mining fields. In the Metropolitan Areas the results show a smaller average number of rooms per dwelling in all cases, the average for the aggregate of the six Capitals having fallen from 5.34 rooms per dwelling in 1911 to 5.15 in 1921. The following table shows for Australia, and for the aggregate of the six Capitals, the changes which have taken place in the composition of private dwellings according to the number of rooms:—

NUMBER OF ROOMS.	AUSTRALIA.				METROPOLITAN AREAS.			
	1911.		1921.		1911.		1921.	
	Per cent. on Total.	Average Rooms.	Per cent. on Total.	Average Rooms.	Per cent. on Total.	Average Rooms.	Per cent. on Total.	Average Rooms.
1-2	12.58	1.41	7.93	1.47	2.95	1.62	3.17	1.60
3-7	77.62	4.93	85.31	4.93	86.23	4.96	89.73	4.96
8 and over	9.80	9.43	6.76	9.19	10.82	9.38	7.10	9.14
	100.00	4.93	100.00	4.94	100.00	5.34	100.00	5.15

From the above results it may be seen that in the main group of dwellings containing from 3 to 7 rooms, the average number of rooms per dwelling was the same at both Censuses for Australia (4.93 rooms per dwelling), and, similarly, for the Metropolitan Areas the average (4.96) was unchanged. For Australia as a whole the conflicting effects on the general average of the reduction in the number of small dwellings, and in the larger ones, were almost equal, so that the general average was altered very slightly—from 4.93 to 4.94 rooms per dwelling. In the Metropolitan Areas the net effect of the changes was to reduce the average number of rooms per dwelling—from 5.34 in 1911 to 5.15 in 1921. This was almost wholly due to the conversion of many of the larger private houses into flats and tenements—so increasing the number of dwellings without increasing the number of rooms—and by the conversion of other similar houses into boarding-houses, and so eliminating them from the category of private houses. (See Table 2.) The average number of rooms per occupied private dwelling in each State in 1921 was:—Victoria, 5.11; New South Wales, 4.97; Queensland, 4.94; South Australia, 4.90; Tasmania, 4.80; Western Australia, 4.22. In the Metropolitan Areas the similar averages were:—Brisbane, 5.47; Melbourne, 5.19; Sydney, 5.14; Hobart, 5.10; Adelaide, 5.06; Perth, 4.67. Table 5 shows that for Australia the decline in the number of large dwellings began with those of 8 rooms. This was the experience in all the States except Queensland and South Australia, where the reduction began with the 9-roomed dwelling. The corresponding decline in the Metropolitan Areas began in Perth with the 8-roomed dwelling, in Adelaide with the 10-roomed dwelling, and in all the other Capitals it started with dwellings of 9 rooms.

2. Australia.—It was shown in the previous section that the private dwellings occupied by tenants represented, in 1921, 43.68 per cent., and in 1911, 47.78 per cent. of all occupied private dwellings in Australia for which the mode of occupancy was stated. The average weekly rental of the rented dwellings was 16s. 7d. in 1921, as compared with about 10s. 9d. in 1911. From Table 7 it may be seen that, as compared with 1911, there were in 1921 fewer dwellings at each weekly rental value rising by increments of 1s. to the value of 11s. and under 12s., whereas from that point onward the numbers at each rental value had increased. *Weekly Rental under 12s.*—The results given in the above table show that in 1911 more than half the number of rented dwellings (52.44) were occupied at a rental of less than 10s. per week, but by the 4th April, 1921, the proportion of dwellings bearing similar rentals had fallen to 22.32 per cent. of the total. The proportion bearing a weekly rental of 10s. and under 12s. fell from 16.89 per cent. in 1921 to 13.28 per cent. Taken together, the number of dwellings with a weekly rental of less than 12s. per week represented only 35.60 per cent. of the total in 1921, as compared with 69.33 per cent. in 1911. *Weekly Rental 12s. and over.*—The number of rented private dwellings bearing a rental of 12s. but less than 20s. represented 34.70 per cent. of the total in 1921, as against 22.06 per cent. in 1911; and those with a rental of £1 and upwards per week represented 29.70 per cent. in 1921, as against 8.61 in 1911.

3. Metropolitan Areas.—Of the 454,351 occupied private houses, tenements, and flats in the Metropolitan Areas for which the mode of occupancy was stated at the Census of 1921, 241,567, or 53.17 per cent., were occupied by tenants, and of these the weekly rent was given for 225,572, or 93.37 per cent. On this basis the average weekly rent has risen from about 13s. 3d. in 1911 to 20s. 8d. in 1921—an increase of 56 per cent. The index-numbers for the years 1911 and 1921, which were derived from the quarterly returns collected by the Labour and Industrial Branch of the Bureau of Census and Statistics, show an increase in the average rents of 40 per cent., which, assuming a common starting point of 13s. 3d. a week in 1911, would give a weekly rental in 1921 of 18s. 7d., as against the 20s. 8d. ascertained from the Census data. Table 7 shows that for Australia as a whole the number of dwellings at each rental value up to 11s. but less than 12s. was less in 1921 than in 1911. In the Metropolitan Areas this decline in numbers was extended to embrace rentals of 13s. but less than 14s. In 1911 nearly 68 per cent. of the private dwellings in the Metropolitan Areas bore a rental of less than 14s., whereas in 1921 similar rentals represented 26 per cent. only.

SECTION 9.—INMATES—PRIVATE HOUSES, TENEMENTS, AND FLATS, CLASSIFIED ACCORDING TO THE NUMBER OF INMATES AT THE TIME OF THE CENSUS (Table 8).

1. General.—The results given in Table 8 show that for Australia as a whole the average number of inmates per occupied private dwelling fell from 4.53 in 1911 to 4.40 in 1921. In the Metropolitan Areas the decline was more marked, the average having fallen from 4.70 in 1911 to 4.42 in 1921. In the extra-Metropolitan Area the change in the average number of inmates per dwelling was much less—being 4.39 in 1921, against 4.44 in 1911. On the basis of rooms, too, the number of inmates was slightly less than formerly. In 1921 the number of inmates per room in occupied private dwellings throughout Australia was 0.89, as compared with 0.92 in 1911. In the Metropolitan Areas the number of inmates per room declined from 0.88 in 1911 to 0.86 in 1921. If the total population be taken in relation to all rooms, whether in private or other dwellings, the number of persons per room in 1921 was 0.91, against 0.93 in 1911, throughout Australia. In the Metropolitan Areas the numbers were practically identical in both years at about 0.89 persons per room.

2. Australia.—The following table gives for Australia abridged results relating to the number of dwellings classified according to the number of inmates as ascertained at the Censuses of 1911 and 1921. The results show that the average number of inmates per private dwelling throughout Australia has fallen from 4.53 in 1911 to 4.40 in 1921. The average number of inmates per room in private dwellings decreased from 0.92 to 0.89.

An interesting feature of the table below is the decline in the proportion of dwellings with only one inmate, from 11.26 per cent. in 1911 to 8.82 per cent. in 1921. The greater part of this change was due to the decrease in the number of primitive dwellings on the mining fields of Western Australia. In 1911 there were in Western Australia 16,133 single-inmate dwellings, whereas in 1911 there were only 10,210. In Victoria, on the other hand, these establishments increased from 22,578 in 1911 to 25,779 in 1921. This increase in Victoria occurred mainly in the Metropolitan Area by the increased use of tenements and flats.

Inmates of Private Dwellings in Australia.

INMATES PER DWELLING.	CENSUS OF 1921.					CENSUS OF 1911.				
	Dwellings.		Inmates.			Dwellings.		Inmates.		
	Number.	Per cent. on Total.	Number.	Per cent. on Total.	Average per Dwelling.	Number.	Per cent. on Total.	Number.	Per cent. on Total.	Average per Dwelling.
1	97,620	8.82	97,620	2.00	1.00	100,669	11.26	100,669	2.48	1.00
2-4	529,744	47.85	1,626,814	33.37	3.07	385,625	43.12	1,180,835	29.11	3.06
5-7	365,843	33.05	2,112,916	43.34	5.78	294,018	32.87	1,711,195	42.20	5.82
8 and over ..	113,803	10.28	1,038,078	21.29	9.12	114,077	12.75	1,063,227	26.21	9.32
	1,107,010	100.00	4,875,428	100.00	4.40	894,389	100.00	4,055,926	100.00	4.53

3. Metropolitan Areas.—The next table shows for the Metropolitan Areas of the six States, taken together, results similar to those already given for the whole of Australia. These results show that the average number of inmates per dwelling has declined from 4.70 in 1911 to 4.42 in 1921. It may be seen, too, that contrary to the experience of Australia as a whole, the number of dwellings with one inmate has increased in proportion to the whole from 4.03 per cent. in 1911 to 4.33 per cent. in 1921. The proportion of dwellings with from 2 to 4 inmates has increased from 47.97 per cent. to 52.74 per cent.

Inmates of Private Dwellings in Metropolitan Areas.

INMATES PER DWELLING.	CENSUS OF 1921.					CENSUS OF 1911.				
	Dwellings.		Inmates.			Dwellings.		Inmates.		
	Number.	Per cent. on Total.	Number.	Per cent. on Total.	Average per Dwelling.	Number.	Per cent. on Total.	Number.	Per cent. on Total.	Average per Dwelling.
1	20,255	4.33	20,255	0.97	1.00	13,162	4.03	13,162	0.86	1.00
2-4	246,765	52.74	764,875	36.99	3.10	156,708	47.97	487,622	31.77	3.11
5-7	160,978	34.40	923,344	44.66	5.74	119,012	36.43	689,287	44.91	5.79
8 and over ..	39,915	8.53	359,487	17.38	9.01	37,820	11.57	344,763	22.46	9.12
	467,913	100.00	2,067,961	100.00	4.42	326,702	100.00	1,534,834	100.00	4.70

4. Different Divisions of the Country.—In Table 8 results from the Census of 1921 are shown for Urban Provincial Districts and for Rural Districts, but as the extra-Metropolitan Areas were not similarly divided in 1911 comparisons with the past cannot be made for these divisions separately. The following table, however, presents a comparison between the proportion which the principal groups bear to the total of all private dwellings in the three divisions, and for the whole country as on the 4th April, 1921 :—

INMATES PER DWELLING.	URBAN.		Rural.	The Whole of Australia.
	Metropolitan.	Provincial.		
	%	%	%	%
1	4.33	7.73	14.22	8.82
2-4	52.74	48.77	42.12	47.85
5-7	34.40	33.93	31.14	33.05
8 and over ..	8.53	9.57	12.52	10.28
	100.00	100.00	100.00	100.00

The most striking feature of this comparison is the large proportion in the Rural Division of single-inmate dwellings, and of dwellings with 8 or more inmates. Of every 100 inmates of private dwellings in the Metropolitan Areas at the Census of 1921, less than 1 was the sole occupant of the dwelling, whereas in the Rural Areas the solitary occupants represented over 3 in every 100.

CENSUS RESULTS.

Note.—The figures contained herein are subject to revision on completion of the detailed tabulation.

1. Commonwealth of Australia, 4th April, 1921.—Summary of Results relating to POPULATION and DWELLINGS.

(Exclusive of full-blood Aboriginals and of Dwellings occupied solely by them.)
