MAIN FEATURES

Estimates of average weekly earnings for November 1987 and the respective changes are shown below:

Full-time adult average weekly ordinary time earnings

	(\$)	Change (%)	
		Aug. 1987 to Nov. 1987	Nov. 1986 to Nov. 1987
Males	478.00	+1.6	+5.7
Females	392.00	+0.8	+5.2
Persons	450.50	+1.3	+5.4

Full-time adult average weekly total earnings

	(\$)	Change (%)	
		Aug. 1987 to Nov. 1987	Nov. 1986 to Nov. 1987
Males	517.50	+2.3	+5.9
Females	401.90	+0.9	+5.2
Persons	480.50	+2.0	+5.6

All employees average weekly total earnings

	(\$)	Change (%)	
		Aug. 1987 to Nov. 1987	Nov. 1986 to Nov. 1987
Males	471.10	+2.8	+5.5
Females	306.60	+1.4	+6.6
Persons	402.50	+2.4	+5.8

Notes on the estimates

The movements for most categories of employee earnings between August 1987 and November 1987 are statistically significant in most States.

For the three months to November 1987, average weekly ordinary time earnings for full-time adult males increased by 1.6 per cent to \$478.00 and by 0.8 per cent to \$392.00 for full-time adult females.

Average weekly earnings for November 1987 were influenced by the payment of the March 1987 National Wage Case second tier increase. (The March 1987 \$10 per week first tier increase had been paid to all relevant employees by the August 1987 reference period.) Information ob-

tained from the survey suggests that by the November 1987 reference date about 20 per cent of full-time adults had received the second tier increase (about 25 per cent of employees in the private sector but only about 10 per cent of public sector employees). More male than female employees had received the second tier increase, and more employees in New South Wales, Victoria and South Australia had received this increase than in the other States.

Industries for which a substantial proportion of employees had received second tier increases were:

- Manufacturing
 - Chemical, petroleum and coal products
 - Transport equipment
 - Paper, paper products, printing and publishing
 - Basic metal products
- Construction

The industries for which only a small proportion of employees had received second tier increases were:

- Manufacturing
 - Textiles; clothing and footwear
- Communication
- Retail trade
- Public administration and defence
- Community services

In the three month period to November 1987, overtime earnings for full-time adults grew at a faster rate than ordinary time earnings, due mainly to the increase in overtime earnings for males. Both the level of overtime earnings, and the increase in overtime earnings since August 1987, were higher for employees in manufacturing industries compared to non-manufacturing industries. These findings are consistent with the record high (since 1983) estimates of overtime hours worked per employee which were obtained from the survey of Job Vacancies and Overtime (published in Overtime, Australia, November 1987 (6330.0)).

There are many factors which may give rise to increases in average weekly earnings (see paragraph 17 of the Explanatory Notes), although the major influences are

increases to award rates of pay as a result of National Wage Case decisions. In the two years to November 1987, the National Wage Case decisions were:

- 3.8 per cent increase, effective November 1985
- 2.3 per cent increase, effective July 1986
- \$10 per week (first tier), effective March 1987
- second tier increase, up to 4 per cent, subject to terms specified in the National Wage Case, March 1987.

In this two year period average weekly ordinary time earnings for full-time adults increased by 13.5 per cent.

Ordinary time earnings for full-time adults increased at a faster rate in Victoria (14.6 per cent) and Western Australia (14.8 per cent) than the national average (of 13.5 per cent), and ordinary time earnings for males increased at a slightly faster rate (13.9 per cent) than for females (13.5 per cent).

Ordinary time earnings for employees in the private sector increased at a faster rate (15.4 per cent) than for employees in the public sector (11.1 per cent) over the two year period.

Industries for which average weekly total earnings increased at a faster rate than the national average were:

- **Manufacturing**
 - Textiles; clothing and footwear
 - Paper, paper products, printing and publishing
 - Chemical, petroleum and coal products
 - Basic metal products
- **Construction**
- **Finance, property and business services**
- **Recreation, personal and other services**

Results for the February 1988 survey are expected to reflect further March 1987 second tier wage increases and some effects of the \$6 National Wage Case increase awarded in February 1988.

Average weekly earnings may be affected significantly in some periods by changes in the composition of the employed labour force (see paragraph 13 of the Explanatory Notes).

EXPLANATORY NOTES

Introduction

This publication contains estimates of average weekly earnings for November 1987 based on information obtained from a sample survey of employers.

2. Background information about the average weekly earnings series is provided in *Information Paper: New Statistical Series: Employment, Average Weekly Earnings, Job Vacancies and Overtime* (6256.0) published on 21 June 1984, copies of which are available on request.

3. Preliminary estimates of average weekly earnings, Australia for November 1987 were published on 3 March 1988 in *Average Weekly Earnings, Australia, November 1987, Preliminary* (6301.0).

Scope of the survey

4. All wage and salary earners who received pay for the reference period are represented in the survey, except:

- members of the Australian permanent defence forces;
- employees of enterprises primarily engaged in agriculture, forestry, fishing and hunting;
- employees in private households employing staff;
- employees of overseas embassies, consulates, etc.;
- employees based outside Australia; and
- employees on workers' compensation who are not paid through the payroll.

5. Also excluded are the following persons who are not regarded as employees for the purposes of this survey:

- directors who are not paid a salary;
- proprietors/partners of unincorporated businesses; and
- self-employed persons such as subcontractors, owner/drivers, consultants and persons paid solely by commission without a retainer.

Survey design

6. A sample of approximately 4,000 employers is selected from the ABS register of businesses to ensure adequate State and industry representation. The sample is updated each quarter to take account of new businesses, those which have ceased operation and structural changes such as takeovers and mergers. The statistical unit for the survey comprises all activities of an enterprise in a particular State or Territory. Each statistical unit is classified to an industry which reflects the predominant activity of the enterprise in the State or Territory. In a small number of cases where an enterprise has significant employment in more than one industry, a separate statistical unit is created for each industry. The statistical units are stratified by State, public/private, industry and size of employment and a simple random sample is selected from each stratum.

Definitions

7. *Reference period* for the survey refers to the last pay period ending on or before the third Friday of the middle month of the quarter. The reference date for the current survey is 20 November 1987.

8. *Employees* refers to all wage and salary earners (as defined in paragraph 4) who received pay for any part of the reference period.

9. *Full-time employees* are permanent, temporary and casual employees who normally work the agreed or award hours for a full-time employee in their occupation and received pay for any part of the reference period; if agreed or award hours do not apply, employees are regarded as full-time if they ordinarily work 35 hours or more per week.

10. *Adult employees* are those employees 21 years of age or over and those employees who, although under 21 years of age, are paid at the full adult rate for their occupation.

11. *Weekly ordinary time earnings* refers to one week's earnings of employees for the reference period attributable to award, standard or agreed hours of work. It is calculated before taxation and any other deductions (e.g. superannuation, board and lodging) have been made. Included in ordinary time earnings are award payments, overaward payments, penalty payments, shift and other allowances; commissions and retainers; bonuses and similar payments related to the reference period; payments under incentive or piecework; payments under profit-sharing schemes normally paid each pay period; payments for leave taken during the reference period; all workers' compensation payments made through the payroll; and salary payments made to directors. Excluded are overtime payments, retrospective pay, pay in advance, leave loadings, severance, termination and redundancy payments and other payments not related to the reference period.

12. *Weekly total earnings* of employees is equal to weekly ordinary time earnings plus weekly overtime earnings.

13. *Average weekly earnings* statistics represent average gross (before tax) earnings of employees and do not relate to average award rates nor to the earnings of the 'average person'. Estimates of average weekly earnings are derived by dividing estimates of weekly total earnings by estimates of employment. Changes in the averages may be affected not only by changes in the level of earnings of employees but also by changes in the overall composition of the labour force. There are several aspects which can contribute to compositional changes such as variations in the proportions of part-time, casual and junior employees, variations in the occupational distribution within and across industries and variations in the distribution of employment between industries.

14. *Sector*. Public sector includes local government authorities and all government departments, agencies and authorities created by, or reporting to the Commonwealth and State Parliaments. All remaining employees are classified as private sector.

Industry classification

15. Since 1981 additional data items have been collected in the survey each November, with the resulting average weekly earnings estimates published in *Average Earnings and Hours of Employees, Australia* (6304.0). The November issue of *Average Weekly Earnings, States and Australia* (6302.0), includes estimates of average weekly earnings for full-time adult employees classified by industry (see Table 4). These estimates should be considered to be preliminary and may be subject to minor revisions in *Average Earnings and Hours of Employees, Australia* (6304.0), which will be published later this year.

16. Industry is classified according to the *Australian Standard Industrial Classification (ASIC) 1983 Edition, Volume 1 — The Classification* (1201.0). The table in the Appendix shows the ASIC subdivisions used in the survey.

Comparability of results

17. When comparisons are made between period to period movements in average weekly ordinary time earnings (AWOTE) for full-time adults and movements in the Award Rates of Pay Indexes (ARPI) it is important to recognise the different coverage, scope, definitions and

methodology used in the construction of each series. In particular, the AWOTE series includes a number of payments additional to award rates of pay used in compiling ARPI. Allowances covered under awards which are not industry or occupation wide in their application such as site, travelling, height and dirt allowances are excluded from ARPI but included in AWOTE. The AWOTE series also includes other payments, such as shift penalty payments and overaward pay. A significant number of employees are not covered by awards but are included in AWOTE. The AWOTE series is affected by compositional change in the labour force. However ARPI is not, because it is a fixed-weight index constructed from a representative 'basket' of occupations selected from the May 1976 Survey of Employee Earnings and Hours and subject to reselection and rebasing at infrequent intervals. Other factors affecting comparisons of the two series include seasonal influences on earnings and differences between the two series in the treatment of retrospective pay increases. A detailed description of the methodology, scope and definitions used in ARPI is published in *Award Rates of Pay Indexes, Australia* (6312.0).

18. It is also important to recognise that whilst average employee earnings can be derived from the Survey of Employment and Earnings (SEE) published in *Employed Wage and Salary Earners, Australia* (6248.0), these average earnings will not be comparable with those produced from the Survey of Average Weekly Earnings (AWE). In the AWE survey, information is obtained relating to a specified pay period, the last pay period ending on or before the third Friday of the middle month of the calendar quarter. The SEE collects the sum of employee earnings paid in *all* pay periods ending in a calendar quarter including payments to employees which are excluded from the scope of the AWE survey such as retrospective pay, pay in advance, leave loadings and severance, termination and redundancy payments. Whilst the quarterly earnings produced by SEE are affected by the varying number of pay periods from quarter to quarter the AWE results are unaffected because of the selection of a specified pay period in the middle of a quarter. The SEE earnings data are also more subject to seasonal variations, particularly in the December and March quarters, due to the incidence of holidays taken in January being paid in advance and the earnings being reported in December quarter figures.

Historical series

19. The series was introduced in August 1981 when it replaced the average weekly earnings series based principally on information from payroll tax returns. Revised estimates of average weekly earnings for the period August 1981 to November 1983 were included in *Average Weekly Earnings, States and Australia, March Quarter 1984* (6302.0) published on 12 July 1984. Users who need a measure of the movement in earnings for a period which spans both the payroll tax based and employer survey series should refer to Table 3 in that publication which presents both series linked to a common index base (August 1981 = 100).

Reliability of estimates

20. As the estimates in this publication are based on information relating to a sample of employers rather than a full enumeration, they are subject to sampling variability. That is, they may differ from the figures that would have

been produced if the information had been obtained from all employers. This difference, called *sampling error*, should not be confused with inaccuracy that may occur because of imperfections in reporting by respondents or in processing by the ABS. Such inaccuracy is referred to as *non-sampling error* and may occur in any enumeration whether it be a full count or sample. Efforts have been made to reduce non-sampling error by careful design of questionnaires, detailed checking of returns and quality control of processing.

21. The sampling error associated with any estimate can be estimated from the sample results. One measure of sampling error is given by the *standard error* which indicates the degree to which an estimate may vary from the value that would have been obtained from a full enumeration (the 'true' figure). There are about two chances in three that a sample estimate differs from the true value by less than one standard error, and about nineteen chances in twenty that the difference will be less than two standard errors.

22. An example of the use of a standard error is as follows. If the estimated average earnings was \$380.00 with a standard error of \$2.00, then there would be about two chances in three that a full enumeration would have given an estimate in the range \$378.00 to \$382.00 and about nineteen chances in twenty that it would be in the range \$376.00 to \$384.00.

23. An example of the use of a standard error for a quarterly change estimate is as follows. If the estimated standard error for a quarterly change estimate of average weekly earnings was \$1.00 and the quarterly change estimate between two quarters was \$1.50, then there would be about two chances in three that a full enumeration would have given a quarterly change estimate in the range +\$0.50 to +\$2.50 and about nineteen chances in twenty that it would be in the range -\$0.50 to +3.50.

25. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

Unpublished statistics

26. In some cases, the ABS can also make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, computer printout or clerically extracted tabulation. Generally, a charge is made for providing unpublished information. Inquiries should be made to Information Services in the nearest ABS office.

APPENDIX. INDUSTRY CLASSIFICATION

Australian Standard Industrial Classification (ASIC)

Division	Sub-division	Title
B		Mining
C		Manufacturing
	21	Food, beverages and tobacco
	23,24	Textiles; clothing and footwear
	26	Paper, paper products, printing and publishing
	27	Chemical, petroleum and coal products
	29	Basic metal products
	31,33	Fabricated metal products; other machinery and equipment
	32	Transport equipment
	25,28,34	Other manufacturing(a)
D		Electricity, gas and water
E		Construction
F	47	Wholesale trade
	48	Retail trade
G		Transport and storage
H		Communication
I		Finance, property and business services
J		Public administration and defence(b)
K		Community services
L		Recreation, personal and other services(c)

(a) Includes wood, wood products and furniture (subdivision 25); glass, clay and other non-metallic mineral products (subdivision 28); leather, rubber and plastic products and manufacturing not elsewhere classified (subdivision 34). (b) Excludes permanent defence forces. (c) Excludes private households employing staff (subdivision 94).

NOTE: Division A (Agriculture, Forestry, Fishing and Hunting) is excluded from the survey.
