## Labour Force Experience, February 1995

### Introduction

A survey of labour force experience was conducted among persons aged 15 to 69 years in February 1995 as a supplement to the monthly Labour Force Survey. Labour force experience can be described in terms of labour force activities undertaken by persons in a 12 month period, namely *working* and *looking for work*.

The survey measured the number of whole weeks persons were engaged in these labour force activities during the year, the number of employers or businesses persons had during the year, the number of spells of looking for work during the year and the main activity of persons when not in the labour force.

### Overview

In February 1995, Australia's civilian population included 12,444,900 persons aged 15 to 69 years. Of these persons, during the 12 months ending February 1995 —

- 8,923,100 (81 per cent of males and 63 per cent of females) worked at some time during the year;
- 1,968,400 (18 per cent of males and 14 per cent of females) looked for work at some time during the year; and
- 5,553,300 (32 per cent of males and 57 per cent of females) were not in the labour force at some time during the year.

The proportion of the population aged 15 to 69 years who worked at some time during the year was 72 per cent. This result was the highest recorded since March 1991.

It is possible for a person to be in one or more of the above categories over the course of a 12 month period. Specifically, there were 6,107,500 (49%) persons who spent the whole year engaged in just one labour force activity and 2,803,800 (23%) persons who spent no time in the labour force. A further 3,533,600 (28%) persons either spent time in more than one labour force activity during the year or only part of the year in the labour force (Diagram 2, Table 2).

### Participation in the labour force

An estimated 9,641,100 persons aged 15 to 69 years were in the labour force, that is, either worked or looked for work at some time during the 12 months ending February 1995 (Diagram 2, Table 2).

The participation rate of males was 86 per cent in the year to February 1995, the highest rate recorded since March 1991. While the participation rate for females remained steady at 67 per cent from March 1990 through to March 1993, the rate increased to 69 per cent for the year to February 1995 (Table 1).

Source: Table 2

## Labour force experience

An estimated 6,891,600 persons were in the labour force for the whole year. Of this group, 5,812,000 persons worked 52 weeks; 784,100 persons spent time in both labour force activities; and 295,500 persons looked for work for the whole 12 months.

There were 2,749,500 persons who were in the labour force for only part of the year, that is, they spent less than 52 weeks in the labour force. Of these people, 1,860,700 worked for part of the year but did not look for work at other times; 466,300 worked for part of the year and also spent some of the balance looking for work; and 422,400 persons looked for work but did not work at all during the year.

The proportion of males spending the whole year in the labour force has fallen from 70 per cent in March 1992 to 68 per cent in February 1995. A further 18 per cent of males spent less than 52 weeks in the labour force during the year (Table 1).

For females, 38 per cent of those with children under 15 spent the whole year in the labour force and a further 32 per cent spent between one and 51 weeks in the labour force. In comparison, those females without children under 15 had a greater tendency to spend either all or no time in the labour force with 45 per cent in the labour force for 52 weeks and a further 23 per cent spending between one and 51 weeks in the labour force (Table 2).

## Persons who worked at some time during the year

An estimated 8,923,100 persons worked at some time during the year, comprising 5,011,900 males and 3,911,200 females.

Of the 5,011,900 males who worked at some time during the year, 82 per cent worked all weeks full time, 10 per cent worked all weeks part time and 8 per cent worked a combination of full time and part time.

Of the 1,297,900 females with children under 15 who worked at some time during the year, 36 per cent worked all weeks full time, 53 per cent worked all weeks part time and 11 per cent worked a combination of full time and part time. By comparison, of the 2,613,300 females without children under 15 who worked at some time during the year, 56 per cent worked all weeks full time, 33 per cent worked all weeks part time and 11 per cent worked a combination of full time and part time (Table 2).

DIAGRAM 3. PERSONS WHO WORKED AT SOME TIME DURING THE YEAR, 1990 TO 1995

Source: Table 1

**Persons who looked for work at some time during the year**

During the year ending February 1995, 1,968,400 persons looked for work at some time comprising 1,105,000 males and 863,400 females.

While the proportion of males who looked for work at some time during the year steadily increased from 13 per cent in March 1990 to 20 per cent in March 1993, it has fallen over the last 2 years to 18 per cent in February 1995. The proportion of females who looked for work at some time during the year has increased from 12 per cent in March 1990 to 14 per cent in February 1995 (Table 1, Diagram 4).

Of the 1,968,400 persons who looked for work at some time during the year -

- 17 per cent of males and 13 per cent of females looked for the whole 52 weeks; and
- the majority of males (73%) and females (75%) had one spell looking for work (Table 2).

**DIAGRAM 4. PERSONS WHO LOOKED FOR WORK AT SOME TIME DURING THE YEAR, 1990 TO 1995**

Source: Table 1

**Persons who were not in the labour force at some time during the year**

The number of persons not in the labour force at some time during the year ending February 1995 was 5,553,300 persons. Of these people, 2,803,800 (51%) were not in the labour force at any time during the year.

For males, the most commonly reported main activity while not in the labour force was "Attended an educational institution" (27%), followed by "Retired or voluntarily inactive" (26%).

For females the most commonly reported main activity while not in the labour force was "Home duties/childcare" (59%), followed by "Attended an educational institution" (15%) (Table 4).

## EXPLANATORY NOTES

**Introduction**

The monthly population survey (which is described in *The Labour Force, Australia* (6203.0)) comprises the monthly Labour Force Survey and supplementary topics. These tables contain some results of a supplementary survey of Labour Force Experience run in association with the February 1995 Labour Force Survey conducted throughout Australia.

2. Those respondents to the Labour Force Survey who fell within the scope of the supplementary survey were asked additional questions. Persons aged 15 to 69 years were asked the length of time they worked or looked for work, the number of spells during which they looked for work and other aspects of labour force experience for the 52 weeks up to the end of the week before the interview.

**Scope**

3. The scope of this supplementary survey was the same as that used for the Labour Force Survey (described in full in *The Labour Force, Australia* (6203.0)) except that it was restricted to persons aged 15 to 69 years. Visitors to private dwellings, students who were boarding at school, some patients in hospitals and sanatoriums and inmates of reformatories, gaols, etc. have also been excluded.

4. In the tables, 'All Persons' refers to all persons within the scope of the survey.

**Coverage**

5. In the population survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. See *The Labour Force, Australia* (6203.0) for more details.

**Definitions**

6. Definitions of labour force and demographic classifications appearing in these tables are given in *The Labour Force, Australia* (6203.0).

7. Labour force experience characteristics relate to the 52 weeks up to the end of the week before the interview. Unless otherwise stated, all other characteristics referenced in these tables relate to the week before the interview.

**Results of the survey**

8. The estimates relate to persons covered by the survey in February 1995. Because of emigration, deaths, etc., not all persons with labour force experience during the period were covered. Labour force experience may relate to experience outside Australia.

9. Due to differences in the method of estimation used in this supplementary survey and that used in the Labour Force Survey, there are some small variations between estimates in these tables and those in the corresponding issue of *The Labour Force, Australia* (6203.0).

10. The estimates in these tables refer to information collected in the survey month and, due to seasonal factors, may not be representative of other months of the year.

11. Results of similar surveys, conducted in February 1969, 1973, 1975, 1976, 1977, annually from February 1979 to February 1989, and annually from March 1990 to March 1994, have been given in previous issues of the discontinued publication *Labour Force Experience, Australia* (6206.0).

12. Statistical tables formerly published in these bulletins are now available as a Standard Data Service, available on subscription or on request. Inquiries should be made to the contact named in the Inquiries box on the Contents page.

13. A brief analysis of statistics from this survey and a set of summary tables were published in the June 1995 issue of *The Labour Force, Australia* (6203.0).

14. This survey is scheduled to be conducted next in February 1997, and at two yearly intervals thereafter.

- Unpublished statistics**
15. As well as the statistics included in these tables, the ABS may have other relevant unpublished data available. Inquiries should be made to the contact named in the Inquiries box on the Contents page.
- Comparability of series**
16. It is impracticable to obtain information relating to a whole year which is strictly comparable with that obtained in the monthly Labour Force Survey for which the reference period is one week. The definitions used in determining the labour force status of persons in the monthly survey depend on a detailed set of questions asked about a person's labour force activity during the reference week. For the survey of labour force experience, a person is assigned to a labour force category on the basis of a more limited set of questions. It is for this reason that the terms *worked* and *looked for work* are used in this survey rather than the precisely defined terms *employed* and *unemployed* used in the monthly Labour Force Survey.
- Discontinuities in the series**
17. Results in these tables are from the latest survey conducted in the month of February 1995. Prior survey results also included in these tables are for those surveys conducted in March 1990 to March 1994. Therefore, the estimates for the surveys conducted in the month of March are not strictly comparable with those conducted in the month of February.
- Survey sample redesign**
18. In previous years this supplementary survey has been conducted on either 50 per cent, 75 per cent, or the full sample of the dwellings selected in the Labour Force Survey. Since July 1994, the sample size for all supplementary surveys has been reduced to seven-eighths of the full Labour Force Survey sample. As a result the standard errors for this survey differ from those applicable to previous surveys.
- Changes in industry classifications**
19. From August 1994, industry data are classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC), a detailed description of which appears in *ANZSIC 1993* (1291.0). Like the previous Australian Standard Industrial Classification (ASIC), ANZSIC classifies businesses according to their economic activities, in a structure consisting of four levels (Division, Sub-division, Group and Class).
- For further details refer to *The Labour Force, Australia* (6203.0).
- Changes in educational attainment classification**
20. From May 1993, the educational attainment data item in this survey has been classified according to the Australian Bureau of Statistics Classification of Qualifications (ABSCQ). The major difference between data collected according to the ABSCQ and the previous classification used is that the level of attainment and field of study in the ABSCQ are two distinct elements. For a more detailed explanation of the ABSCQ, see *Information Paper, Australian Bureau of Statistics Classification of Qualifications — ABSCQ* (1263.0).
- Estimation procedure**
21. The estimates are derived from the population survey by use of a ratio estimation procedure, which ensures that the estimates conform to an independently estimated distribution of the population for each capital city and remainder of State by age, sex and labour force status, rather than to the corresponding distribution within the sample itself.
- Reliability of the estimates**
22. Estimates in these tables are subject to sampling and non-sampling errors. For more information refer to the Technical Notes section.

**Related surveys**

23. Other supplements to the monthly Labour Force Survey which may be of interest include:

*Labour Mobility, Australia* (6209.0) — conducted two-yearly

*Career Experience* (6254.0) — conducted three-yearly

*Persons Not in the Labour Force, Australia* (6220.0.40.001)  
— conducted annually

*Job Search Experience of Unemployed Persons, Australia*, (6222.0.40.001)  
— conducted annually

*Successful and Unsuccessful Job Search Experience, Australia*, (6245.0.40.001)  
— conducted two-yearly

*Persons who have Left the Labour Force, Australia*, (6267.0.40.001)  
— conducted irregularly

*Persons who had Re-entered the Labour Force, Australia*, (6264.0)  
— conducted irregularly

24. Current publications and Standard Data Services produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications and Standard Data Services to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

**Symbols and other usages**

\* subject to sampling variability too high for most practical uses. See the Technical Notes section.

.. not applicable

25. Because estimates have been rounded, discrepancies may occur between sums of the component items and totals.

## TECHNICAL NOTES

### Introduction

Since the estimates in these tables are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability, that is, they may differ from those that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the *standard error*, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the number that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of the likely difference is the *relative standard error*, which is obtained by expressing the standard error as a percentage of the estimate.

2. Space does not allow for the separate indication of the standard errors of all estimates in these tables. A table of standard errors for general application is given on page 25. Since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics these numbers will not give a precise measure of the standard error of a particular estimate but they will provide an indication of its magnitude.

### Calculation of standard error

3. An example of the calculation and the use of standard errors in relation to estimates of persons is as follows. Table 5 shows the estimated number of females who were in the labour force at some time during the year ending February 1995 was 4,284,900. Since this estimate is between 2,000,000 and 5,000,000, the table shows the standard error for Australia will be between 16,300 and 22,500 and can be approximated by interpolation as 21,000 (rounded to the nearest 100). Therefore, there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall in the range 4,263,900 to 4,305,900 and about nineteen chances in twenty that the value will fall within the range 4,242,900 and 4,326,900. This example is illustrated in the diagram below.

4. As can be seen from the standard error table, *the smaller the estimate the higher is the relative standard error*. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In these tables, only estimates with relative standard errors less than 25 per cent are considered sufficiently reliable for most purposes. However, estimates with larger relative standard errors have been included and are preceded by an asterisk (e.g. \*3.4) to indicate they are subject to high standard errors and should be used with caution.

## Averages and medians

5. The relative standard errors of estimates of *average duration of time spent looking for work* and *median duration of time spent looking for work* are obtained by first finding the relative standard error of the estimate of the total number of persons contributing to the average or median and then multiplying the number so obtained by the following relevant factors:

Average duration of time spent looking for work:	1.3
Median duration of time spent looking for work:	2.0

6. An example of the calculation of standard errors by the use of those factors is as follows. Table 8 shows that the estimated median duration of time spent looking for work for all males was 19 weeks and the number of males who had looked for work at some time during the year ending February 1995 was estimated as 1,105,000. From the table on the following page it can be calculated that this estimate (1,105,000) has a standard error of about 13,000 and therefore a relative standard error of about 1.2 per cent. The *relative standard error* of the estimate of median duration of time spent looking for work is calculated by multiplying this number (1.2) by the appropriate factor shown in the previous paragraph (in this case 2.0):  $1.2 \times 2.0 = 2.4$  per cent. The *standard error* of this estimate of median duration of time spent looking for work is therefore 2.4 per cent of 19, i.e. about 0.5. Therefore there are about two chances in three that the median duration of time spent looking for work for males who looked for work at some time during the year ending February 1995 that would have been obtained if all dwellings had been included in the survey would have been within the range 18.5 to 19.5 weeks and about nineteen chances in twenty that it would have been within the range 18 to 20 weeks.

## Proportions and percentages

7. Proportions and percentages formed from the ratio of two estimates are also subject to sampling errors. The size of the error depends on the accuracy of both the numerator and the denominator. A formula to approximate the relative standard error (RSE) of a proportion is given below:

$$\text{RSE } (x/y) = \sqrt{[\text{RSE } (x)]^2 - [\text{RSE } (y)]^2}$$

8. Considering the example from paragraph 3 above, these females as a proportion of all females (6,220,400) is 68.9 per cent. The standard error for 6,220,400 is approximately 23,900 so the relative standard error is 0.4 per cent. The relative standard error for 4,284,900 is 0.5 per cent. Applying the above formula, the relative standard error of the proportion is  $\sqrt{(0.5)^2 - (0.4)^2}$  or 0.3 per cent, giving a standard error for the proportion (68.9 per cent) of 0.2 percentage points. Therefore, there are about two chances in three that the proportion of females who were in the labour force at some time during the year ending February 1995 is between 68.7 per cent and 69.1 per cent and nineteen chances in twenty that the proportion is within the range 68.5 per cent to 69.3 per cent.

## Sampling error

9. Published estimates may also be used to calculate the difference between two survey estimates (of numbers or percentages). Such an estimate is subject to sampling error. The sampling error of the difference between two estimates depends on their standard errors and the relationship (correlation) between them. An approximate standard error (SE) of the difference between two estimates (x-y) may be calculated by the following formula:

$$\text{SE } (x-y) = \sqrt{[\text{SE } (x)]^2 + [\text{SE } (y)]^2}$$

While this formula will only be exact for differences between separate and uncorrelated characteristics or subpopulations it is expected to provide a good approximation for all differences likely to be of interest in these tables.

## Non-sampling error

10. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents and errors made in coding and processing data. Inaccuracies of this kind are referred to as the *non-sampling error*, and they may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

## STANDARD ERRORS OF ESTIMATES

Size of estimate	NSW	Vic.	Qld	SA	WA	Tas.	NT	ACT	Australia

## GLOSSARY

<b>All persons</b>	Civilian population aged 15-69 years. See paragraph 3 of the Explanatory Notes section for details of exclusions.
<b>Average duration of time spent looking for work</b>	Obtained by dividing the aggregate number of weeks a group has been looking for work by the number of persons in that group.
<b>Educational attainment</b>	All occurrences of educational attainment in these tables are defined by the <i>Australian Bureau of Statistics Classification of Qualifications</i> (ABSCQ). See also paragraph 20 of the Explanatory Notes.
<b>Family</b>	Two or more related persons ( <i>relationship</i> includes relationships by blood, marriage or adoption) usually resident in the same household at the time of the survey. A family comprises a married couple or a family head as defined, together with any persons having any of the following relationships to them: <ul style="list-style-type: none"> <li>(a) sons or daughters of any age, if not married and with no children of their own present;</li> <li>(b) other relatives if not accompanied by a spouse, sons or daughters, or parents of their own; or</li> <li>(c) any children under 15 years of age who do not have a parent present.</li> </ul>
<b>Full-time status of weeks worked during the year</b>	During any week of the reference period, if a person perceived that they worked full time they were classified as working full time in that week.
<b>In the labour force at some time during the year</b>	Persons who were reported as having either worked or looked for work for one week or more during the reference period.
<b>In the labour force at some time during the year (per cent)</b>	For a particular group, persons in the labour force at some time during the reference period as a percentage of all persons in that group.
<b>Industry</b>	All occurrences of industry in these tables refer to Industry Division as defined by the <i>Australian and New Zealand Standard Industrial Classification</i> (ANZSIC). See paragraph 19 of the Explanatory Notes section for further detail.
<b>Looked for work at some time during the year</b>	Persons who were reported as being out of work and looking for work for one week or more during the reference period.
<b>Looked for work at some time during the year (per cent)</b>	For a particular group, persons who looked for work at some time during the reference period as a percentage of all persons in that group.
<b>Main English speaking countries</b>	Comprises the United Kingdom, Ireland, Canada, South Africa, the U.S.A and New Zealand.
<b>Median duration of time spent looking for work</b>	The duration which divides persons who looked for work into two equal groups, one comprising persons whose time spent looking for work during the year is above the median, and the other, persons whose time spent looking for work is below it. This can be useful as a measure of central tendency or value, where the arithmetic mean is unrepresentative due to extreme high or low values.
<b>Multiple jobholders</b>	All persons who had more than one job in the week before the interview. Persons who had more than one job solely by reason of changing jobs were not counted as multiple jobholders.
<b>Not in the labour force at any time during the year</b>	Persons who were reported as having neither worked nor looked for work at any time during the reference period.
<b>Not in the labour force at any time during the year (per cent)</b>	For a particular group, persons not in the labour force at any time during the reference period as a percentage of all persons in that group.
<b>Not in the labour force at some time during the year</b>	Persons who were reported as having neither worked nor looked for work for one week or more during the reference period.
<b>Not in the labour force at some time during the year (per cent)</b>	For a particular group, persons not in the labour force at some time during the year as a percentage of all persons in that group.

<b>Number of employers/businesses during the year</b>	The number of employers/businesses a person has worked for during the reference period, excluding second jobs of multiple jobholders.
<b>Number of spells of looking for work during the year</b>	The number of different periods, including the current period, during which persons were reported as having been out of work and looking for a job.
<b>Occupation</b>	All occurrences of occupation in these tables refer to Major Group as defined by the <i>Australian Standard Classification of Occupations</i> (ASCO).
<b>Part-time status of weeks worked during the year</b>	During any week of the reference period, if a person perceived that they worked part time they were classified as working part time in that week.
<b>Reference period</b>	The 52 weeks up to the end of the week prior to interview. See also paragraph 7 of the Explanatory Notes section.
<b>Time in the labour force during the year</b>	The total number of weeks persons were reported as having either worked or looked for work.
<b>Time not in the labour force during the year</b>	The total number of weeks persons were reported as having neither worked nor looked for work.
<b>Time spent looking for work during the year</b>	The total number of weeks persons were reported as being out of work and looking for a job.
<b>Time worked during the year</b>	The total number of weeks persons were reported as having either worked or been on paid leave. Periods of one week or more on strike or time off without pay are not classified as time worked.
<b>Worked at some time during the year</b>	Persons who were reported as having worked and/or been on paid leave for one week or more during the reference period.
<b>Worked at some time during the year (per cent)</b>	For a particular group, persons who worked at some time during the reference period as a percentage of all persons in that group.
<b>Worked for part of year</b>	Persons who indicated they worked and/or were on paid leave for less than 52 weeks during the reference period. Periods of leave without pay are not classified as time worked.
<b>Worked for whole year</b>	Persons who indicated they worked and/or were on paid leave for 52 weeks during the reference period.

## SPECIAL DATA SERVICES

### DATA ITEMS AND HOW TO ORDER SPECIAL TABLES FROM THIS SURVEY

The ABS offers a range of unpublished data from this survey upon request. When ordering special tables from this survey, please ensure you identify the **population(s)** and the **data item(s)** which you require.

This section specifies the data items, categories and populations which relate to the survey and includes an order form for special tables. More detailed breakdowns of some data items are available on request.

The population(s) for a particular data item refers to the persons in the survey to whom the data item relates.

Refer to the glossaries in these tables and in *The Labour Force, Australia* (6203.0) for definitions of data items.

### POPULATIONS

POPULATION 1: All persons aged 15 to 69 years (excluding institutionalised persons and boarding school pupils)

POPULATION 2: Persons in the labour force at some time during the year ending February 1995

POPULATION 3: Persons who worked at some time during the year ending February 1995

POPULATION 4: Persons who looked for work at some time during the year ending February 1995

POPULATION 5: Persons not in the labour force at some time during the year ending February 1995

POPULATION 6: Persons who were working at February 1995

DATA ITEM	POPULATIONS	DATA ITEM	POPULATIONS

## SPECIAL DATA REQUESTS

### LABOUR FORCE EXPERIENCE, FEBRUARY 1995

Please specify your special data request(s) on a photocopy of the order form provided on the following page.

The following points should be noted when requesting special tables:

1. Table requests will be available on computer printout, floppy disk or microfiche.
2. The current cost of special tables is as follows —

No. of variables (excluding populations)	Cost per table (\$)
2	120
3	150
4	225
5	330
6 or more	negotiable

*NOTE:* Prices quoted are subject to revisions.

3. Return the completed **SPECIAL DATA REQUEST ORDER FORM** to —

Assistant Director  
Labour Force Supplementary Surveys  
Australian Bureau of Statistics  
PO Box 10  
Belconnen ACT 2616

*or*

Facsimile No. (06) 252 7784

4. The invoiced cost is payable in full within 28 days of receipt of data.
5. Any inquiries about this order should be directed to Jon Havelock (06) 252 6661.

## SUPPLEMENTARY AND SPECIAL SURVEYS

The supplementary and special surveys collect data on particular aspects of the labour force. The following is a historical list of supplementary and special labour force surveys. Statistical tables published in these bulletins are available as a Publication or a Standard Data Service, available by subscription or on request. Inquiries should be made to the contact in the Phone Inquiries box on the Contents page. It may be possible to order Unit Record Tapes on the following supplementary and special surveys by contacting the ABS (see below for contact numbers).
