### CHANGES IN THIS ISSUE

This publication introduces, in Table 5 (original) and Table 6 (seasonally adjusted) a breakdown of endogenous imports into consumption goods, capital goods and other goods. For further details, see paragraphs 10 and 11 of the Explanatory Notes.

### MAIN FEATURES

#### March quarter 1986 -

The merchandise trade deficit fell \$731 million to \$427 million in the March quarter 1986. A 2 per cent rise in exports was augmented by a 6 per cent fall in imports. The deficit on current account, at \$3,056 million, was down \$728 million on the December quarter deficit mainly as a result of the fall in the merchandise trade deficit.

In seasonally adjusted terms exports rose 5 per cent and imports fell 3 per cent, resulting in a merchandise trade deficit which was \$619 million lower than for the previous quarter. The seasonally adjusted current account deficit fell \$498 million to \$3,322 million.

The net inflow on capital account was \$2,880 million, comprising an inflow of \$1,203 million on account of official sector transactions and an inflow of \$1,677 million attributable to non-official sector transactions.

The trade weighted index of the value of the Australian dollar (base May 1970 = 100) stood at 61.1, up 0.7 per cent on the end of December 1985 but down 11.7 per cent on the end of March 1985. Through the March quarter 1986 the dollar rose against the \$US (4.6 per cent) and the £UK (1.9 per cent) and fell against the West German Mark (0.8 per cent) and the Japanese Yen (6.2 per cent).

#### Nine months ended March 1986 -

The merchandise trade deficit at \$2,405 million was double the deficit recorded for the nine months ended March 1985, with imports rising by 25 per cent and exports by 20 per cent.

Increases of \$362 million (13 per cent) in the net services deficit and \$1,151 million (26 per cent) in the net income deficit were partly offset by a \$409 million rise in the net unrequited transfers surplus.

The current account deficit was \$10,596 million, up \$2,312 million or 28 per cent on the deficit for the corresponding period of the previous financial year. The balance on capital account was a net inflow of \$7,710 million, down \$269 million on the net inflow for the corresponding period of 1984-85.

The very large positive balancing item (net errors and omissions) of \$2,887 million was much higher than the \$304 million recorded in the same period of the previous financial year, although it should be noted that there was a large negative balancing item in the June quarter 1985. The increase in net errors and omissions may reflect timing, coverage and valuation problems arising from the rapid movement in the exchange rate and the impact of the earlier deregulation of the financial market. This suggests that extra care needs to be exercised in interpreting the more recent quarterly estimates. It is suspected that the bulk of the increase in net errors and omissions arises in the recording of capital account transactions.

#### ANALYSIS OF SELECTED MAJOR AGGREGATES

March quarter 1986 compared with the December quarter 1985 -

##### Current account

. Exports f.o.b. were \$8,190 million, up \$197 million or 2 per cent on the previous quarter.

. Seasonally adjusted exports f.o.b. rose 5 per cent. Rural and non-rural exports rose 10 per cent and 2 per cent respectively. The only commodity groups to record falls were wool (down 3 per cent), coal (down 3 per cent) and mineral fuels other than coal (down 19 per cent). The most significant rises were in cereals (up 13 per cent), sugar (up 68 per cent) and metal ores and minerals (up 12 per cent).

. Imports f.o.b. fell \$534 million or 6 per cent to \$8,617 million.

. Seasonally adjusted imports f.o.b. fell 3 per cent. All broad commodity groups fell except food, beverages and tobacco, which rose 3 per cent, and chemicals, which rose 4 per cent.

. The 7 per cent fall in seasonally adjusted exogenous imports was largely due to an 11 per cent fall in imports of fuels. Seasonally adjusted endogenous imports fell 2 per cent, with the consumption and capital goods categories contributing roughly equally to the fall and other goods displaying no change.

. The net services deficit of \$946 million was down \$55 million or 5 per cent. The seasonally adjusted net services deficit was also down 5 per cent.

. The net transfers deficit of \$1,683 million was up \$58 million or 4 per cent.

. An increase of \$238 million in the seasonally adjusted net income deficit was partly offset by a \$67 million rise in the seasonally adjusted net unrequited transfers surplus, resulting in a \$171 million or 11 per cent rise in the seasonally adjusted net transfers deficit.

##### Capital account

. The net capital transactions of the official sector yielded an inflow of \$1,203 million, down \$390 million on the December quarter 1985. While the net transactions of the Reserve Bank turned around \$1,595 million to an outflow of \$499 million, mainly on account of transactions in official reserve assets, the net transactions of general government recorded an inflow of \$1,702 million or \$1,205 million higher than that for the previous quarter. Mainly responsible for the sharply increased inflow was general government borrowing which took account of the proceeds of foreign currency drawings of Deutsche Mark 750 million (\$A231 million), \$US500 million (\$A709 million), £UK 57 million (\$A113 million) and Netherlands Guilder 400 million (\$A219 million).

. Interim estimates of foreign investment in the non-official sector (excluding Australian currency borrowing

by trading banks) indicated a net inflow of \$2,785 million, down \$727 million on the net inflow for the same category of transactions in the December quarter 1985. Direct investment transactions which turned around \$898 million (from a net inflow to a net outflow) were mainly responsible for the fall.

. Interim estimates of Australian investment abroad by the **non-official sector** (excluding Australian currency lending by trading banks) indicated a net outflow of \$1,108 million, down \$1,723 million on the outflow for the same category in the preceding quarter. The major part of the fall was accounted for by direct investment transactions which resulted in a net inflow of \$42 million after a net outflow of \$1,180 million in the December quarter 1985.

**Nine months ended March 1986 compared with nine months ended March 1985 -**

#### **Current account**

. **Exports f.o.b.**, at \$24,660 million were \$4,140 million or 20 per cent up on the nine months ended March 1985. Rural and non-rural exports rose 22 per cent and 19 per cent respectively, with all broad commodity groups contributing to the rises except sugar and machinery and transport equipment which both fell by less than 5 per cent. The largest increases were in wool and sheepskins, up 44 per cent, and coal, coke and briquettes, up 21 per cent.

. **Imports f.o.b.** rose \$5,348 million or 25 per cent to reach \$27,065 million. All groups contributed to the rise except fuels which was down 6 per cent. Machinery and transport equipment, up 35 per cent, was responsible for 60 per cent of the overall increase.

. **Exogenous imports f.o.b.** were up 22 per cent on the corresponding period of the previous financial year despite the fall in fuel imports. Exogenous imports apart from fuels rose by \$767 million or 57 per cent, with aircraft imports by Qantas and the delivery of two Aussat satellites accounting for \$475 million of this rise. **Endogenous imports** rose 25 per cent, with consumption, capital and

other goods components increasing by 21 per cent, 32 per cent and 24 per cent respectively.

. **Net services** were in deficit by \$3,210 million, \$362 million or 13 per cent higher than for the 9 months ended March 1985. A 17 per cent (\$624 million) rise in services credits was more than offset by a 15 per cent (\$986 million) rise in services debits.

. **Net transfers** were in deficit by \$4,981 million, an 18 per cent rise on the deficit for the same period of the previous financial year. An increase of \$1,151 million in the net income deficit, largely reflecting higher interest payable abroad, was partly offset by a \$409 million rise in the net unrequited transfers surplus.

#### **Capital account**

. The net capital inflow of the **official sector** was \$4,084 million, up \$1,501 million on that recorded for the nine months ended March 1985.

. Foreign investment in the **non-official sector** (excluding Australian currency borrowing by trading banks in the March quarter) yielded a net inflow of \$8,430 million which was \$1,026 million lower than that recorded for the same category of transactions for July to March 1984-85.

. The net outflow on account of Australian investment abroad by the **non-official sector** (excluding Australian currency lending by trading banks in the March quarter) rose \$397 million to \$5,004 million.

#### **Levels of reserves**

At 31 March 1986, Australia's holdings of **official reserve assets** valued at market rates of exchange and with gold holdings at market value stood at \$12,811 million.

#### **REVISIONS**

Some revisions are made in this issue to estimates included in previous balance of payments publications.

Merchandise exports have been revised, mainly through a downward revision to exports of barley (included in cereal and cereal preparations) to remove some double counting caused by erroneous reporting of data on customs entries. This revision affects all periods from December quarter 1983 onward, although it is partially offset in the December quarter 1985 and March quarter 1986 by a smaller upward revision to metals and metal manufactures.

An upward revision to travel debits in the June quarter 1985 results from actual migration data for that period differing

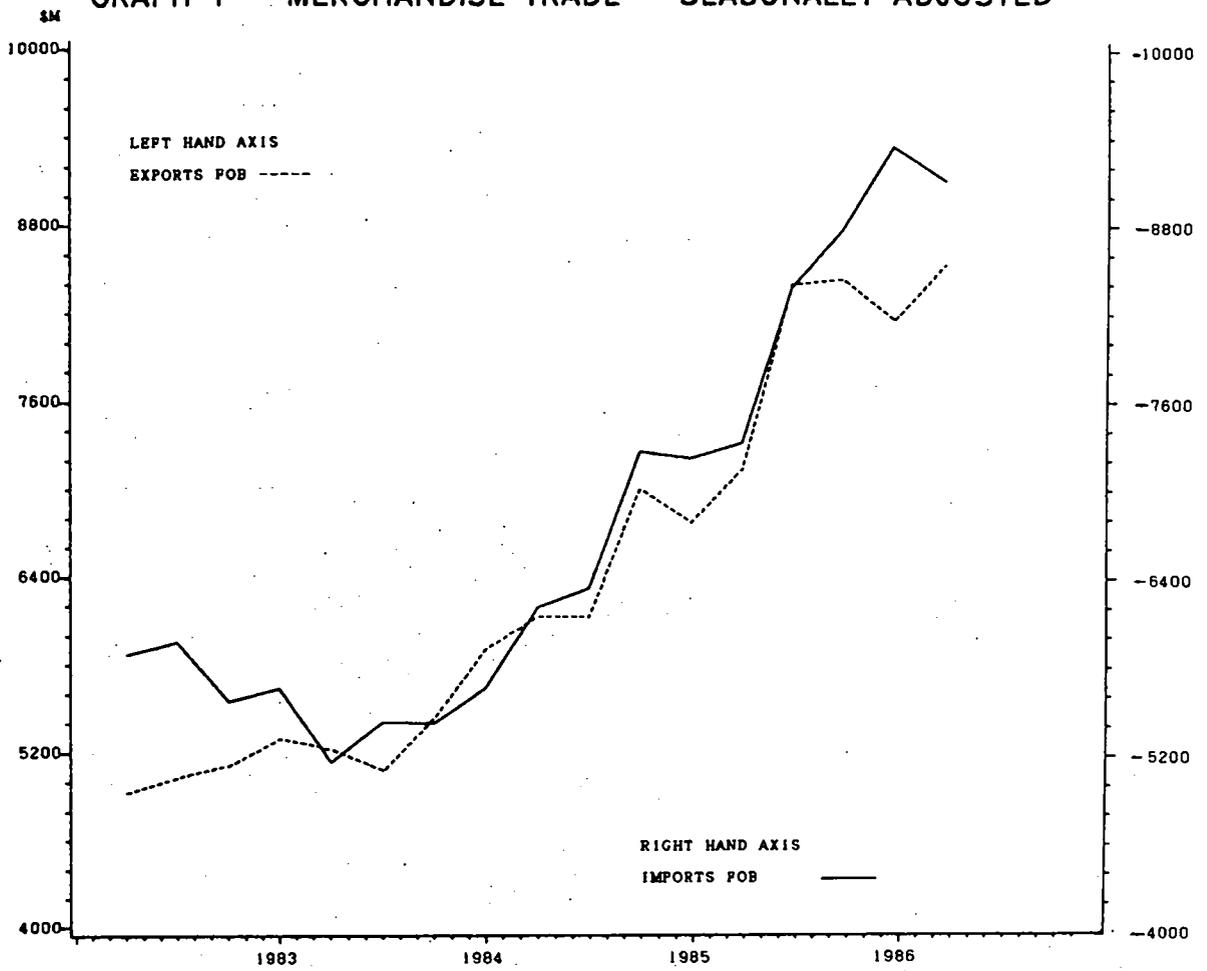

markedly from the preliminary indications previously used. Consequently, estimates of travel debits in the following quarters have also been revised.

Net capital transactions of the non-official sector for the December quarter 1985 have been revised as a result of the replacement of interim estimates from the Surveys of Foreign Investment with more up-to-date estimates.

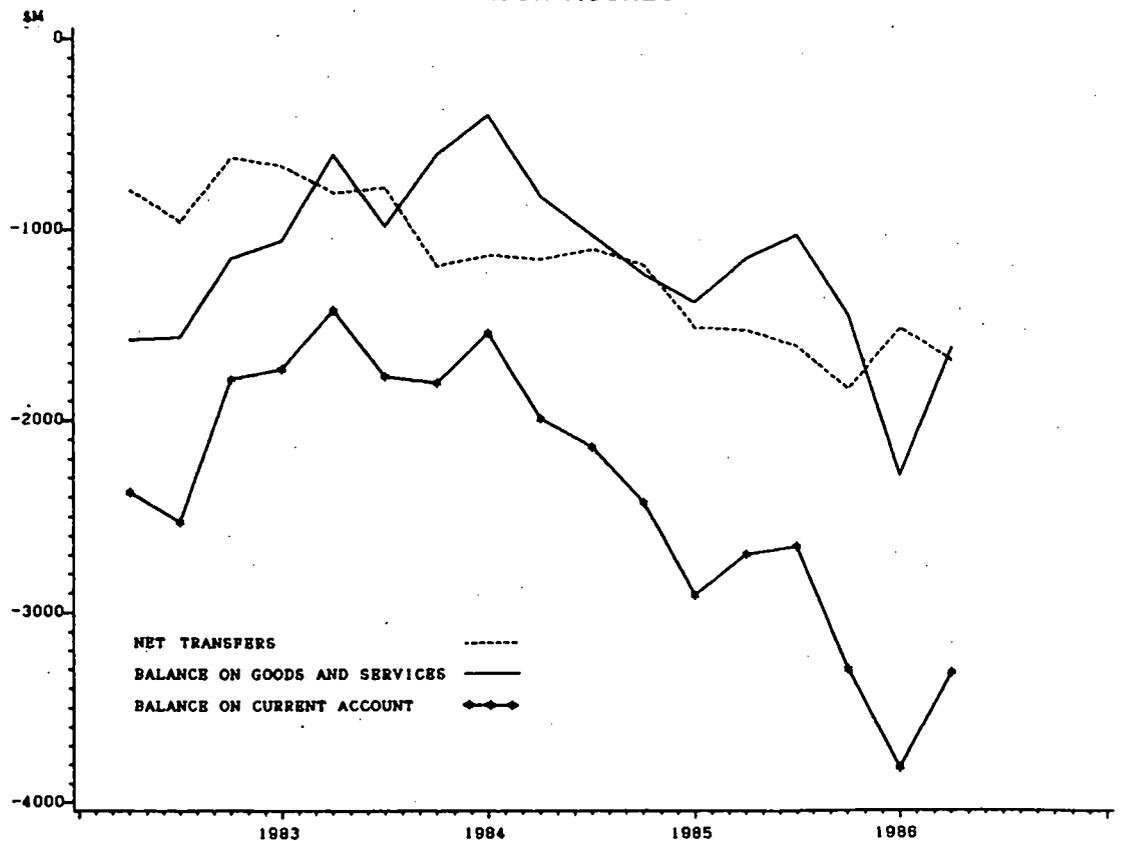

Other less significant revisions also occur in a number of series from the incorporation of the latest results of other surveys and data sources.

## EXPLANATORY NOTES

## INTRODUCTION

This publication contains preliminary estimates of Australia's balance of payments for March quarter 1986, together with revised estimates for previous quarters and financial years. Longer term estimates, from September quarter 1959, consistent with those shown in this issue, will shortly be available in the publication **Balance of Payments, Australia - Historical Series on Microfiche** (5337.0) March quarter 1986.

2. Descriptions of the concepts, data sources and methods used in compiling the estimates are to be found in **Balance of Payments, Australia - Concepts, Sources and Methods** (5331.0) released in March 1981. Changes to concepts, sources and methods since that publication are described in the 1983-84 annual balance of payments publication (5303.0), the September 1985 quarterly publication (5302.0), the Information Paper **Changes in the Presentation of Australian Balance of Payments Statistics** (5340.0) issued on 23 December 1985 and Appendix A to the December 1985 quarterly publication (5302.0).

3. This publication contains four main tables and 12 supplementary tables. The main tables (Tables 1 to 4) provide summary statistics; they show the main aggregates and the more important components of the aggregates. The supplementary tables (Tables 5 to 16) provide additional breakdowns, related series (e.g. exchange rates and the trade-weighted index) and reconciliations of selected balance of payments series with other series (i.e. with foreign trade statistics and levels of official reserve assets).

## SCOPE OF THE BALANCE OF PAYMENTS

4. The Australian balance of payments is

a statistical statement designed to provide a systematic record of Australia's economic transactions with the rest of the world. The statement is divided into a current account and a capital account. Table 1 presents summary statistics covering both accounts.

## RECORDING OF TRANSACTIONS

5. Transactions are recorded in the balance of payments as either **debits** or **credits**. The following transactions are regarded as debits and identified by a minus sign: the acquisition of goods and services from non-residents, income payable to non-residents, unrequited transfers provided to non-residents, increases in foreign financial assets and decreases in foreign liabilities. Credits have no arithmetic sign and consist of these transactions: the provision of goods and services to non-residents, income receivable from non-residents, unrequited transfers received from non-residents, decreases in foreign financial assets and increases in foreign liabilities. These sign conventions apply in all tables except Tables 7 and 16. In Table 7, imports are shown with no sign. In Table 16, decreases in Australia's official reserve assets are shown with a minus sign and increases in these assets are shown with no arithmetic sign.

## CURRENT ACCOUNT

6. The **current account** records transactions between Australian residents and non-residents in merchandise, other goods and services, income and unrequited transfers. Table 2 summarises the estimates of current account transactions, while Table 3 provides corresponding seasonally adjusted estimates.

**MERCHANDISE (BALANCE OF PAYMENTS BASIS)**

7. **Merchandise** covers movable goods (with a few exceptions) which change ownership from residents to non-residents (exports) and from non-residents to residents (imports). The series are derived from foreign trade statistics which are adjusted for coverage, timing and (imports only) valuation to put them on a balance of payments basis. Table 7 provides details of the adjustments.

**COMMODITY BREAKDOWNS OF MERCHANDISE**

8. Commodity breakdowns of merchandise exports and imports are provided in Table 5 and on a seasonally adjusted basis in Table 6. The groupings shown consist of the following Australian Export Commodity Classification (AECC) and Australian Import Commodity Classification (AICC) divisions and/or sections:

Exports	Section or Division of AECC
Rural -	
Meat and meat preparations	01
Cereal grains and cereal preparations	04
Sugar, sugar preparations and honey	06
Wool and sheepskins	Parts of 21, 26 and 65
Other rural	00, 02, 03, 05, 07 to 09, 21 (part), 22 to 25, 26(part), 29, 4
Non-rural -	
Metal ores and minerals	27,28
Mineral fuels -	
Coal, coke and briquettes	32
Other	33, 34
Metals and metal manufactures	67 to 69
Machinery and transport equipment	7
Other non-rural	1, 5, 61 to 64,65 (part), 66, 8, 9

Imports	Section or Division of AICC
Food, beverages and tobacco	0, 1
Fuels	3
Basic materials	2,4
Chemicals (incl plastics)	5
Textiles, fabrics, etc	65
Metals and metal manufactures	67 to 69
Machinery and transport equipment	7
Other imports	61 to 64, 66, 8, 9

**EXOGENOUS AND ENDOGENOUS IMPORTS**

9. **Exogenous imports** comprise a group of imported goods which it has been found useful to identify separately in economic analysis because the transactions in these goods are lumpy, subject to government arrangements or significantly affected by factors other than the general level of economic activity in Australia. Exogenous imports include fuels, certain large items of equipment imported by both the public and private sectors, and certain other government goods. **Endogenous imports** comprise imports of all goods other than those regarded as exogenous.

10. Endogenous imports in Table 5 (original) and Table 6 (seasonally adjusted) are classified into three classes - **consumption goods, capital goods** and **other goods** - according to the United Nations' classification by broad economic categories (BEC). **Other goods** covers the BEC class **intermediate goods** and the residual BEC category **goods not elsewhere specified**. The classes consist of the following BEC categories (excluding goods defined as exogenous):

**Consumption goods**

- Food and beverages, primary, mainly for household consumption (112)
- Food and beverages, processed, mainly for household consumption (122)
- Passenger motor vehicles (51)
- Transport equipment, non-industrial (522)

Consumer goods, not elsewhere specified  
(6)

#### Capital goods

Capital goods (except transport equipment)  
(41)

Transport equipment, industrial (521)

#### Other goods

Food and beverages, primary, mainly for  
industry (111)

Food and beverages, processed, mainly for  
industry (121)

Industrial supplies not elsewhere  
specified (2)

Parts and accessories of capital goods  
(except transport equipment) (42)

Parts and accessories of transport  
equipment (53)

Goods not elsewhere specified (7)

11. The BEC attempts to classify merchandise trade statistics for purposes of general economic analysis according to the main end-use of the commodities traded. It does not achieve complete alignment with the particular end-use to which articles are put in specific circumstances; for example some passenger motor cars, which are conventionally classified as consumption goods, and some parts and accessories of capital goods, which are conventionally classified as other goods, are in fact acquired as capital equipment.

#### SERVICES

12. Services covers services rendered by Australian residents to non-residents (credits) and by non-residents to residents (debits), together with transactions in a few types of goods (eg goods purchased by travellers). Detailed estimates are shown in Table 8.

#### INCOME AND UNREQUITED TRANSFERS

13. Income covers income earned by Australian residents from non-residents (credits) or by non-residents from residents (debits). It includes investment income (eg dividends and

interest), other property income (eg royalties) and labour income (eg wages and salaries). Tables 9 and 10 give detailed estimates.

14. Unrequited transfers covers the offsetting entries required by the double-entry system of accounting when resources (goods, services and financial assets) are provided, without something of economic value being received in return, by non-residents to Australian residents (offsetting credits required) and by residents to non-residents (offsetting debits required). It includes foreign aid, migrants' transfers, gifts, donations, pensions and taxes. Detailed estimates are provided in Table 11.

#### CAPITAL ACCOUNT

15. The capital account records transactions in Australia's foreign financial assets and liabilities, including the creation and extinction of claims on or by the rest of the world and a few specified other changes. Summary estimates for the capital account appear in Table 4.

#### RESIDENT INSTITUTIONAL SECTORS

16. Capital transactions, and some current transactions, are grouped into two broad institutional sectors called official and non-official, with the former split into general government and Reserve Bank of Australia. The general government sector comprises the transactions of the Commonwealth, the States, local government authorities and statutory bodies, but it excludes the transactions of public business enterprises. Details of general government and Reserve Bank capital transactions are given in Tables 12 and 13 respectively. The non-official sector covers transactions of all other resident entities including private and government owned banks, private and public business enterprises, and households. Estimates of the capital transactions of the non-official sector are detailed in Tables 14 and 15.

## FOREIGN INVESTMENT IN AUSTRALIA AND AUSTRALIAN INVESTMENT ABROAD

17. Broadly, foreign investment in Australia covers transactions which increase or decrease the liabilities of residents to non-residents and Australian investment abroad covers transactions which increase or decrease Australia's foreign financial assets.

### BALANCES

18. This publication presents a number of balances, eg balance on goods and services, balance on capital account. A balance is derived as the net sum of the credit and debit entries selected for inclusion.

### SEASONAL ADJUSTMENT

19. Most of the current account series in this publication are affected to some extent by seasonal influences and it is useful to recognise and take account of this element of variation. Therefore seasonally adjusted estimates are presented in Tables 3 and 6.

20. Seasonal adjustment may be carried out by various methods and the results may vary slightly according to the procedure adopted. Accordingly, seasonally adjusted statistics should not be regarded as in any way definitive. In interpreting particular seasonally adjusted statistics it is important, therefore, to bear in mind the methods by which they have been derived and the limitations to which the methods used are subject. Details of the seasonal adjustment methods used are available on request.

21. For those items showing substantial irregular movement, particular care should be taken in interpreting quarter-to-quarter movements in the adjusted figures, as the short term movements cannot be assumed to indicate changes in trend.

22. In order to maintain an accounting identity, the seasonally adjusted balances (balance on merchandise trade, balance on goods and services and balance on current account) are derived by differencing independently adjusted series.

### OFFICIAL RESERVE ASSETS, EXCHANGE RATES AND THE TRADE WEIGHTED INDEX

23. Table 16 shows changes in official reserve assets dissected into those which are included in the balance of payments (ie those resulting from transactions and a few specified other changes), and those which are due to the effects of revaluations.

24. Table 16 also shows the exchange rates of the Australian dollar with four major currencies and a trade-weighted index of the value of the Australian dollar.

25. The exchange rates shown are provided by the Reserve Bank of Australia and relate to the last trading day of the quarter. Prior to 12 December 1983, the rate for the US dollar was the mid-point of the rates at which the Reserve Bank was prepared to deal with Australian trading banks. From that date, the rate is a representative mid-point determined by the Reserve Bank on the basis of market quotations at 4pm Eastern Australian time. Rates for the other currencies are calculated by crossing the rate for the US dollar with the mid-points of closing buying and selling rates in New York (prior to 31 October 1983) or largely in Asian markets (from 31 October 1983). The rates shown are indications of market value only and could differ from those quoted by Australian banks.

26. The trade-weighted index is also provided by the Reserve Bank and is an index of the average value of the Australian dollar vis-a-vis currencies of Australia's trading partners. Prior to 12 December 1983, the index was as published each morning by the Reserve Bank; from that date, the index is as calculated at 4pm on the basis of the

representative rate for the US dollar and rates for other currencies, mainly from Asian markets.

#### ACCURACY AND RELIABILITY OF ESTIMATES

27. Because the transactions recorded in the balance of payments are of many different kinds, compilation of balance of payments estimates entails the use of a very wide range of statistical data of varying degrees of accuracy and timeliness. One feature that is common to all components of the estimates, whatever the source of the basic data, is the element of judgement that has to be applied in compiling them.

28. Therefore care should be exercised in the use and interpretation of estimates in this publication. The latest estimates are **preliminary and subject to revision** as more accurate data come to hand. Also, the more detailed estimates may be less accurate in relative terms than broader items and aggregates of which they form components.

#### SERIES AVAILABLE ON REQUEST

29. Detailed quarterly statistics relating to transportation can be obtained from Mr Dudley Scoullar on Canberra (062) 52 6057.

(a) Balance of payments basis

(b) From September quarter 1985, the entries are not strictly comparable with entries for previous periods because of the change in the definition of direct investment. See Appendix B to the December quarter 1985 issue of this publication.

(c) Up to and including June quarter 1985, this income is recorded after deducting withholding tax on both interest and dividends. From September quarter 1985 withholding tax is not deducted.

(d) From September quarter 1985, includes withholding tax.

(a) From September quarter 1985, the entries are not strictly comparable with entries for previous periods because of the change in the definition of direct investment. See Appendix B to the December quarter 1985 issue of this publication.

(b) Direct investment borrowing by trading banks is included in portfolio and other investment.

(c) Includes direct investment borrowing - see footnote (b).

(d) Up to and including June quarter 1985, covers foreign currency borrowing for on-lending only. From September quarter 1985, covers all foreign currency borrowing. See Appendix B to the December quarter 1985 issue of this publication.

(e) Excludes Australian currency borrowing by trading banks.
