SUMMARY OF FINDINGS

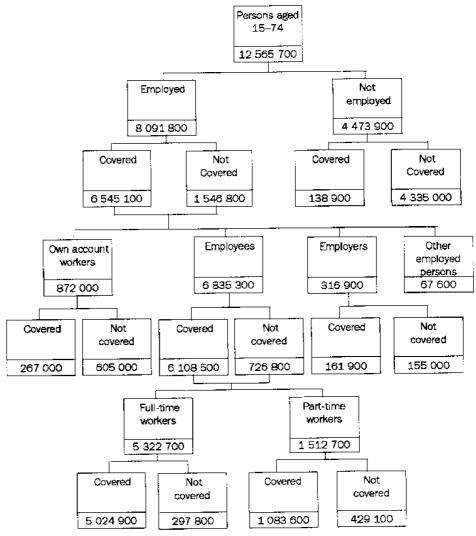

OVERVIEW

In November 1995, there were 12,565,700 persons aged 15-74 in Australia. Some 8,091,800 (64%) of these persons were employed, of whom 6,545,100 (81%) were covered by superannuation - that is, they were personally contributing to a superannuation scheme and/or their employer or business was contributing to a superannuation scheme on their behalf.

This represents a similar level of superannuation coverage amongst employed persons to November 1993 (80% covered) and is significantly higher than in November 1991 (71% covered) (table 1).

SUPERANNUATION COVERAGE

1 PERSONS AGED 15-74: SUPERANNUATION COVERAGE

Source: Tables 1, 8 and 11.

Employed persons

In November 1991, 79% of full-time workers were covered by a superannuation scheme. This increased to 86% in November 1993 and increased again to 87% in November 1995. Similarly, the proportion of part-time workers who were covered increased from 44% in November 1991, to 61% in November 1993, and then to 62% in November 1995.

For the purposes of this survey, part-time workers excludes those persons who were full-time school students.

Over the period November 1991 to November 1995, the gap narrowed between the proportion of males and the proportion of females covered by superannuation. In November 1991, 75% of employed males and 66% of employed females were covered by a superannuation scheme, compared to 82% of employed males and 79% of employed females in November 1995 (table 1).

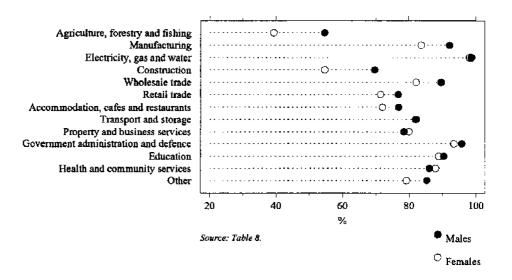

Superannuation coverage was not consistent across age groups. Some 68% of employed persons aged 15–19 were covered by superannuation. Coverage was higher for employed persons aged 20–54 (83%) and those aged 55–64 (74%). However, only 26% of employed persons aged 65–74 were covered.

Although coverage for employed husbands or wives with dependants was approximately equal to that for employed husbands or wives without dependants (82% compared with 80%, respectively), employed lone parents with dependants were less likely to be covered by superannuation than employed lone parents without dependants (78% compared with 84%).

Some 81% of employed persons born in Australia and 82% of employed persons born overseas in a main English speaking country were covered by superannuation compared with 78% of those who were born overseas in other countries.

The Electricity, gas and water supply industry recorded the highest level of superannuation coverage with 99% of all persons employed in this industry covered. Lowest coverage was recorded in the Agriculture, forestry and fishing industry where 50% of workers were covered.

2 EMPLOYED PERSONS AGED 15-74: PROPORTION COVERED BY SUPERANNUATION AND INDUSTRY

Persons employed as Para-professionals had the highest level of coverage of all the occupation groups (92%), followed by Professionals and Clerks (both 87%). The occupation groups with the lowest level of coverage were Managers and administrators (72%), Labourers and related workers (76%) and Salespersons and personal service workers (76%).

Of the various categories of employed persons, employees had the highest level of superannuation coverage with 89% covered (91% of males and 87% of females). In comparison, the level of coverage amongst employers was 51% (56% of males and 41% of females), whilst for own account workers, only 31% (36% of males and 19% of females) were covered by superannuation (table 8).

The level of coverage for employers and own account workers has fallen since the last survey. In November 1993, 55% of employers and 36% of own account workers were covered.

Employees

Some 95% of public sector employees and 88% of private sector employees were covered by superannuation in November 1995.

The rate of coverage was higher amongst permanent employees (97%) than casual employees (65%). Some 98% of permanent full-time employees were covered by superannuation compared with 94% of permanent part-time employees. For casual part-time employees, the superannuation coverage was 59% (table 11).

A greater proportion of employees who were members of a trade union were covered by superannuation than employees who were not members of a trade union (97% compared with 85%).

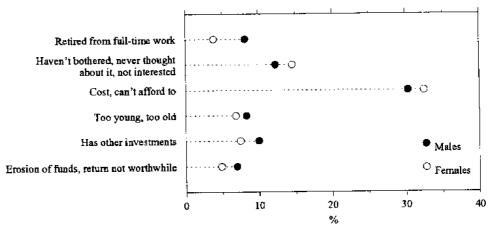

Employees aged 45–74 with higher incomes were more likely to be covered by superannuation than those with lower incomes. Some 56% of those earning under \$200 a week were covered, compared with 88% of those earning at least \$200 but less than \$400 a week, 96% of those earning at least \$400 but less than \$600 a week, and 98% of those earning \$600 and over a week (table 11).

PERSONS NOT COVERED BY A SUPERANNUATION SCHEME

In November 1995, there were 3,072,800 persons aged 45–74 not covered by superannuation. Of these, 70% (2,160,300) had ceased full-time work, 18% (555,900) had not ceased full-time work and 12% (356,500) had never worked full time or had not decided (or it could not be determined) whether they would work full time in the future (table 5).

Some 531,100 employed persons aged 45–74 were not covered by a superannuation scheme. Of these, 31% said that they were not making personal contributions because the cost was too high or they could not afford to. A further 13% stated that they had not bothered, had never thought about or were not interested in making personal contributions (table 10).

3 EMPLOYED PERSONS AGED 45-74 NOT COVERED BY A SUPERANNUATION SCHEME: SELECTED REASONS NOT CONTRIBUTING PERSONALLY

Source: Table 10.

TYPE OF SUPERANNUATION COVERAGE

In November 1995, there were 6,108,500 employees aged 15–74 who were covered by superannuation. Some 43% of these persons had both employer and personal contributions (compared with 47% in November 1993) and the employer paid all contributions for a further 54% (compared with 50% in November 1993).

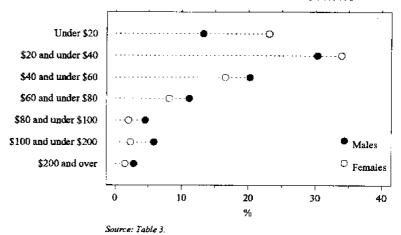

Compared with female employees, a higher proportion of male employees in every industry and occupation group had both employer and personal contributions. The employer paid all contributions for a larger proportion of females than males in every occupation group and in every industry except the Agriculture, forestry and fishing industry (table 12).

Some 69% of persons aged 45–74 covered by superannuation had funds in only one account. This included persons who had one account (only) to which both personal and employer/business contributions were being made. A further 22% had funds in two accounts, 6% had funds in three or more accounts, and for the remaining 3%, the number of accounts was not known or could not be determined. (table 2).

CONTRIBUTIONS

Some 795,500 males and 416,900 females aged 45–74 were making personal contributions to a superannuation scheme. On average, males personally contributed more than females (\$55 a week compared with \$40 a week). Personal contributions were compulsory for 34% of this group. Some 23% of those for whom contributions were compulsory contributed more than the required amount (table 3).

PERSONS AGED 45-74 MAKING PERSONAL CONTRIBUTIONS TO A SUPERANNUATION SCHEME: OWN WEEKLY CONTRIBUTIONS

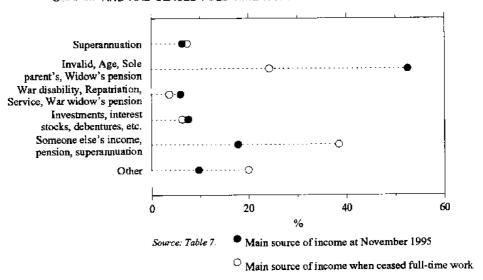

Of the 969,100 employees aged 45-74 making personal contributions to a superannuation scheme, 20% were contributing under 4% of their earnings, 32% were contributing at least 4% but less than 6% of their earnings, 23% were contributing at least 6% but less than 10% of their earnings, and 14% were contributing 10% or more of their earnings to a superannuation scheme (or schemes) (table 13).

MAIN SOURCE OF INCOME

Overall, there were 2,160,300 persons aged 45–74 who had ceased full-time work and were not covered by superannuation in November 1995. More than half (53%) of these persons reported that their main source of income in November 1995 was some form of government pension (Invalid, Age, Sole parent's or Widow's pension). Other common main sources of income were: Someone else's income (18%); Investments, interest, stocks, debentures, etc. (8%); and Superannuation (6%). Of those reporting that their main source of income in November 1995 was Someone else's income, 68% had ceased full-time work 10 or more years ago.

Of the persons aged 45–74 who had ceased full-time work and were not covered by superannuation, some 41% had changed their main source of income since they ceased full-time work. Of the persons whose main source of income when they ceased full-time work was superannuation, 27% had changed their main source of income since they ceased full-time work. Only 3% of those whose main source of income when they ceased full-time work was some form of government pension had changed their main income source (table 7).

5 PERSONS AGED 45-74 WHO WERE NOT COVERED BY A SUPERANNUATION SCHEME AND HAD CEASED FULL-TIME WORK

Some 1,619,700 persons aged 45–74 were covered by superannuation and had not ceased full-time work. Amongst this group, the most commonly reported expected main sources of income after ceasing full-time work were Superannuation (36%), Invalid, Age, Sole parent's, Widow's pension (21%), and Investments, interest, stocks, debentures, etc. (10%). A further 14% did not know what their main source of income would be after ceasing full-time work (table 4).

PAYMENTS FROM SUPERANNUATION SCHEMES

Of the 1,953,900 persons aged 45–74 with superannuation coverage, 68% expected to receive a lump sum payment from their superannuation scheme(s), 11% did not expect to receive a lump sum payment, and 21% did not know whether they would receive a lump sum payment.

Of the 1,323,100 expecting to receive a lump sum payment, 22% intended to invest the money elsewhere, 20% intended to roll it over (or invest it in an approved deposit fund, deferred annuity or other superannuation scheme), and 38% did not know what they would do with the money.

The longer a person had been a member of a superannuation scheme the more likely they were to intend to roll over the lump sum. Some 9% of persons who had been in a superannuation scheme for less than 5 years intended to roll over their lump sum compared with 25% of those who had been in a scheme for 20 years or more (table 4).

Some 87% of persons aged 45–74 with superannuation coverage were employees. Of these, 55% expected to receive only a lump sum on retirement, 13% expected to receive a lump sum and a pension, 8% expected to receive a pension only, and 24% did not know what type of payment they would receive (table 14).

EXPLANATORY NOTES

INTRODUCTION

SCOPE

COVERAGE

DEFINITIONS

- 1 The monthly population survey comprises the monthly Labour Force Survey and supplementary topics. This publication contains some results of a supplementary survey run in association with the November 1995 Labour Force Survey conducted throughout Australia. For further information regarding the monthly population survey (including scope and coverage) and for details of labour force definitions and demographic classifications, appearing in this publication refer to Labour Force, Australia (6203.0).
- 2 Of the respondents to the Labour Force Survey, those who fell within the scope of the supplementary survey were asked additional questions about their superannuation coverage (or lack thereof).
- 3 The scope of this supplementary survey was the same as that used for the Labour Force Survey except that it was restricted to persons aged 15–74 excluding some patients in hospitals, and sanatoriums and inmates of reformatories, gaols, etc. and persons aged 15–20 still at school.
- 4 In the population survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection.
- 5 Unless otherwise stated, all characteristics referenced in this publication relate to the week before the interview (i.e. the reference week).
- **6** Due to differences in the method of estimation used in this supplementary survey and that used in the Labour Force Survey, there are some small variations between estimates in this publication and those in the corresponding issue of *Labour Force*, *Australia* (6203.0).
- 7 The estimates in this publication refer to information collected in the survey month and, due to seasonal factors, may not be representative of other months of the year.
- **8** Results of similar surveys on superannuation have been published in *Superannuation*, *Australia*, February 1974, September to November 1982, November 1988, November 1991 and November 1993 (6319.0).
- **9** This survey is scheduled to be conducted next in November 1998.

UNPUBLISHED STATISTICS

RESULTS OF THE SURVEY

10 As well as the statistics included in this publication and related data services, the ABS may have other relevant unpublished data available. Inquiries should be made to the contact named in the Inquiries box on the Contents page.

DISCONTINUITIES IN THE SERIES

- 11 Due to considerable changes in scope, collection methodology and content, care should be taken in any comparisons with surveys prior to November 1988. The main changes are outlined below.
- 12 The scope of the 1974 survey included all persons aged 15 and over. In 1982, persons aged 15–20 still at school were excluded from the survey. In November 1988, November 1991 and November 1993 persons aged 75 and over were excluded from the survey.
- 13 Superannuation coverage in the 1974 survey was determined by respondents' membership of superannuation-type schemes (including provident and pension schemes). In the 1982 survey, superannuation coverage was expanded to include life assurance (for those with no other form of superannuation). From the 1988 survey, superannuation coverage has been determined by whether respondents (or their employers) currently contribute to a superannuation scheme.

CHANGES IN FAMILIES CLASSIFICATIONS

- 14 In November 1995, more detail on superannuation was collected from persons aged 45–74 than from those aged 15–44. Persons aged 15–44 were only asked superannuation questions relating to whether they were covered and the number of superannuation accounts they held. In prior surveys, more detail was collected from persons aged 15–44.
- 15 The Relationship in Household classification has been introduced to align with recently established ABS standards. Most categories in the new classification remain comparable with categories in the previous classification, Family Status. The cases in which there are breaks in comparability are discussed in the following paragraphs.
- 16 Lone parents (previously referred to as Sole parents) now includes parents with non-dependent children (provided those children are without a spouse or children of their own).
- 17 Dependent students (previously Full-time students aged 15–24) now comprise sons or daughters (of a couple or a lone parent) aged 15–19 attending school or aged 15–24 attending a tertiary educational institution full time. Other related full-time students, who were also previously classified as Full-time students aged 15–24 are now included in Other family persons.
- 18 Other family persons now comprises the previous groups:
- Other family head (excluding those now counted as Lone parents);
- Other related full-time students (previously classified as Full-time students aged 15-24); and
- Other relative of married couple or family head.

For further details refer to Labour Force, Australia (6203.0).

CHANGES IN INDUSTRY CLASSIFICATION

19 From August 1994, industry data have been classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC), a detailed description of which appears in ANZSIC 1993 (1292.0). Like the previous Australian Standard Industrial Classification (ASIC), ANZSIC classifies businesses according to their economic activities, in a structure consisting of four levels (Division, Subdivision, Group and Class).

SURVEY SAMPLE REDESIGN

20 In November 1988, this supplementary survey was conducted on 50% of the dwellings selected in the labour force survey. For the November 1991 and November 1993 surveys this was expanded to 75% of the labour force survey sample. From November 1995 this has been expanded to seven-eighths of the full sample size. As a result, the standard errors for this survey differ from those applicable to surveys previous to November 1995.

BENCHMARK REVISION

- 21 From February 1994, the monthly Labour Force Survey and its supplementary surveys are based on population estimates from the 1991 Census of Population and Housing. While historical monthly labour force estimates were revised back to January 1989, results of supplementary surveys conducted before February 1994 were not revised and are based on population estimates from the 1986 Census of Population and Housing.
- 22 The change to population estimates based on the 1991 Census of Population and Housing resulted in a downward revision to the size of the in-scope civilian population aged 15 and over (the January 1994 estimate of this population was revised from 13,960,400 to 13,860,400, a downward revision of 100,000 or approximately 1%).

23 This change in the base population estimates should be considered when comparing the results of supplementary surveys conducted before February 1994 with results of those conducted after February 1994.

ESTIMATION PROCEDURE

25

24 The estimates are derived from the population survey by use of a ratio estimation procedure, which ensures that the estimates conform to an independently estimated distribution of the population for each capital city and remainder of State by age, sex and labour force status rather than to the corresponding distribution within the sample itself.

Estimates in this publication are subject to sampling and non-sampling

RELIABILITY OF THE ESTIMATES

errors. For more information refer to the Technical Notes section.

RELATED SURVEYS

26 Related surveys which may be of interest include:

Labour Force, Australia (6203.0) — issued monthly

Employment Benefits, Australia (6334.0.40.001) — issued biennially

TECHNICAL NOTES

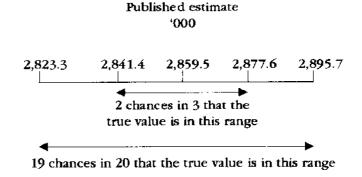

INTRODUCTION

Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability; that is, they may differ from those that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the number that would have been obtained if all dwellings had been included, and about 19 chances in 20 that the difference will be less than two standard errors. Another measure of the likely difference is the relative standard error, which is obtained by expressing the standard error as a percentage of the estimate.

Space does not allow for the separate indication of the standard errors of all estimates in this publication. A table of standard errors applicable to persons estimates is given in table B on page 30. Since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics these numbers will not give a precise measure of the standard error of a particular estimate but they will provide an indication of its magnitude.

CALCULATION OF STANDARD ERROR

An example of the calculation and the use of standard errors in relation to estimates of persons is as follows. Table 1 shows that the estimated number of females aged 15–74 in Australia who were covered by a superannuation scheme to be 2,859,500. Since this estimate is between 2,000,000 and 5,000,000, table B shows that the standard error for Australia will be between 16,300 and 22,500 and can be approximated by interpolation as 18,100 (rounded to the nearest 100). Therefore, there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall in the range 2,841,400 to 2,877,600 and about 19 chances in 20 that the value will fall within the range 2,823,300 to 2,895,700. This example is illustrated in the following diagram.

As can be seen from the standard error table, the smaller the estimate the higher is the relative standard error. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In this publication, only estimates with relative standard errors of 25% or less and percentages based on such estimates are considered sufficiently reliable for most purposes. However, estimates with larger relative standard errors have been included and are preceded by an asterisk (e.g. *3.4) to indicate they are subject to high standard errors and should be used with caution.

CALCULATION OF STANDARD ERROR FOR NON-PERSON **ESTIMATES**

The relative standard errors of estimates of average usual gross weekly pay in (all) job(s) and average own weekly contributions are obtained by first finding the relative standard error of the estimate of the total number of persons contributing to the average and then multiplying the number so obtained by the relevant factor from table A on page 29.

An example of the calculation of standard errors by the use of those factors is as follows. Table 3 shows the estimated average own weekly contributions for persons aged 55-74 is \$50 and the number of persons aged 55-74 contributing to the average is estimated at 274,000. This estimate excludes persons whose contributions were paid by their employer and those who did not know their own contributions. From table B on page 30 it can be calculated that this estimate (274,000) has a standard error of about 7,500 and therefore a relative standard error of about 2.7%. The relative standard error of the estimate of average own weekly contributions is calculated by multiplying this number (2.7) by the appropriate factor shown in table A (in this case 1.4): $2.7 \times 1.4 = 3.8\%$. The standard error of this estimate of average own weekly contributions is therefore 3.8% of \$50, i.e. about \$2. Therefore there are about two chances in three that the average own weekly contributions of persons aged 55-74 that would have been obtained if all dwellings had been included in the survey would have been within the range \$48 to \$52 and about 19 chances in 20 that it would have been within the range \$46 to \$54.

PROPORTIONS AND **PERCENTAGES**

Proportions and percentages formed from the ratio of two estimates are also subject to sampling errors. The size of the error depends on the accuracy of both the numerator and the denominator. A formula to approximate the relative standard error (RSE) of a proportion is:

RSE
$$(x/y) = \sqrt{[RSE (x)]^2 - [RSE (y)]^2}$$

Considering the example from the paragraph Calculation of Standard Error, the 2,859,500 females who were covered by a superannuation scheme, represented 45.5% of the 6,288,600 females aged 15-74 in November 1995. The standard error of 6,288,600 is approximately 24,000 so the relative standard error is 0.4%. The relative standard error for 2,859,500 is 0.6%. Applying the above formula the relative standard error of the proportion is $\sqrt{(0.6)^2 - (0.4)^2}$ or 0.4%, giving a standard error for the proportion (45.5%) of 0.2 percentage points. Therefore, there are about two chances in three that the proportion of females who were covered by a superannuation scheme was between 45.3% and 45.7% and 19 chances in 20 that the proportion is within the range 45.1% to 45.9%.

SAMPLING ERROR

Published estimates may also be used to calculate the difference between two survey estimates (of numbers or percentages). Such an estimate is subject to sampling error. The sampling error of the difference between two estimates depends on their standard errors and the relationship (correlation) between them. An approximate standard error (SE) of the difference between two estimates (x-y) may be calculated by the following

SE
$$(x/y) = \sqrt{[SE(x)]^2 - [SE(y)]^2}$$

While this formula will only be exact for differences between separate and uncorrelated characteristics or sub populations, it is expected to provide a good approximation for all differences likely to be of interest in this publication.

NON-SAMPLING ERROR

The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents and errors made in coding and processing data. Inaccuracies of this kind are referred to as the non-sampling error, and they may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

FACTORS FOR CALCULATING THE RELATIVE STANDARD ERRORS OF NON-PERSON

Laboration Comp.	Factor
verage own weekly contributions	
Sex	
Females, Persons	1.4
Maies	1. 3

GLOSSARY

ADF

Approved deposit fund.

Average own weekly contributions

The amount obtained by dividing the aggregate weekly contributions of a group by the number of people in the group who make contributions.

Average usual gross weekly pay in (all) job(s)

The amount obtained by dividing the aggregate gross weekly pay in (all) job(s) of a group by the number of individuals in that group.

Casual employees

Employees who were entitled to neither annual leave nor sick leave.

Covered by a superannuation scheme

Persons who, at the time of the survey, belonged to a superannuation scheme towards which contributions were being made either personally or by their employer/business. For people contributing to more than one superannuation scheme, details were collected about the scheme to which they contributed the most money.

Current job

The job in which a person worked in the survey reference week (i.e. the week before the interview). Where a person worked in more than one job during this period, the current job was considered to be the job in which the most hours were usually worked.

Employees

Employed persons, who had worked:

- for an employer for wages or salary; or
- in their own business, either with or without employees, if that business was a limited liability company.

Full-time workers

Employed persons who usually work 35 hours or more a week (in all jobs) and others who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.

Had ceased full-time work People who had worked full time in the past, who were not working full time at the time of the survey, and did not intend to look for or take up full-time work at any time in the future.

Had not ceased full-time work People who were either working full time at the time of the survey or who intended to look for or take up full-time work in the future.

Industry

All occurrences of industry in this publication refer to Industry Division as defined by the Australian and New Zealand Standard Industrial Classification (ANZSIC) 1993. However, unpublished industry data is available at the Group (3-digit) level.

Intended disbursement of lump sum payment The intended use to which the majority of the lump sum payment will be out.

Lump sum payment

A benefit payable in cash as a single sum to a member of a scheme on ceasing employment or membership of the scheme. This does not include any annual leave payments, sick leave or other payments due to termination of employment.

Main English speaking countries

Comprises United Kingdom, Ireland, Canada, South Africa, United States of America and New Zealand.

Main superannuation

scheme

Of the schemes which are currently being contributed to, the main superannuation scheme is the one which has been contributed to for the longest time (in years). If a person has been personally contributing to a current scheme for the same length of time as their employer/business has been contributing, and if those schemes are not provided by the same type of provider, then the main superannuation scheme cannot be determined.

Member of a trade union

Member of a trade union in connection with current job.

Number of superannuation accounts

The number of superannuation schemes to which contributions are being made plus the number of schemes which, although not being contributed to, have funds left in them. If a person makes personal contributions to the same scheme that their employer/business contributes to, then the scheme is counted only once when calculating the number of accounts.

Occupation

All occurences of occupation in this publication refer to Major Group as defined by the Australian Standard Classification of Occupations (ASCO) 1986. However unpublished occupation data is available at the Unit Group (4-digit) level.

Part-time workers

Employed person who usually work less than 35 hours a week and who did so during the reference week.

Pension from a superannuation scheme Regular and continuous benefits from a superannuation scheme which are made either to the member or, if the member is deceased, to a dependant of the member.

Permanent employees

Employees who were entitled to annual leave or sick leave.

Preserved benefits

Benefits of a superannuation scheme which are retained in that scheme until some time in the future, even though the scheme is no longer being contributed to.

Previously covered

Where a person, or their current or previous employer/business, previously made contributions to a superannuation scheme, but that scheme is not being contributed to currently.

Sector

Is used to classify a respondent's employer as a public or private enterprise. Public sector includes local government authorities, government departments, agencies and authorities created by, or reporting to, the Commonwealth and State parliaments. In November 1995 there were 47,900 employees aged 15 - 74 for whom sector could not be determined. These persons were included in the private sector for the purpose of these tables.

Superannuation scheme

Any fund, association or organisation set up for the purpose of providing financial cover for members when they retire from work. Overseas superannuation funds are excluded.

Time in previous superannuation scheme

The number of years that contributions were made to superannuation scheme(s) that are no longer being contributed to.

Time personally contributing to superannuation scheme

The number of years that a person has been contributing to the superannuation scheme to which they currently contribute the most money.

Time employer/business contributing to superannuation scheme

The number of years that a person's current employer/business has been currently contributing to a superannuation scheme on their behalf.

Usual gross weekly pay in (all) job(s) The amount of usual total weekly pay (i.e. before taxation and other deductions have been made).

DATA ITEMS AVAILABLE FROM THIS SURVEY

The ABS offers a range of unpublished data from this survey upon request.

This section specifies the data items, categories and populations which relate to the survey. More detailed breakdowns of some data items are available on request.

The population(s) for a particular data item refers to the persons in the survey to whom the data item relates.

Refer to the glossary in this publication and in Labour Force, Australia (6203.0) for definitions of data items.

POPULATIONS

- POPULATION 1: Persons aged 15-74.
- POPULATION 2: Persons aged 45-74.
- POPULATION 3: Persons aged 45-74 covered by a superannuation scheme.
- POPULATION 4: Persons aged 45-74 not covered by a superannuation scheme.
- POPULATION 5: Employed persons aged 15-74.
- POPULATION 6: Employed persons aged 45-74.
- POPULATION 7: Employed persons aged 45-74 covered by a superannuation scheme.
- POPULATION 8: Employed persons aged 45-74 not covered by a superannuation scheme.
- POPULATION 9: Employees aged 15-74 (excluding persons who worked for payment in kind).
- POPULATION 10: Employees aged 45-74 covered by a superannuation scheme (excluding persons who worked for payment in kind).

HOW TO ORDER SPECIAL TABLES FROM THIS SURVEY

WHAT INFORMATION IS AVAILABLE?

See the list of data items and survey populations on pages 33-42. Data items from this list may be cross-classified to produce tables to your specifications.

COST

The cost of special data tables is available on request, but will depend on the number of data items, and their degree of detail.

METHOD OF PAYMENT

Payment can be made by credit card or on receiving our invoice (the invoiced cost is payable in full within 28 days of supply).

AVAILABLE ON PAPER OR FLOPPY DISK

Special data tables can be made available as printed tables or on floppy disk in a variety of formats to suit specific software packages.

FOR MORE INFORMATION

Contact Alastair Banks Ph: (06) 252 7204 Fax: (06) 252 7784

or write to:

Assistant Director Labour Force Supplementary Surveys Australian Bureau of Statistics PO Box 10 **BELCONNEN ACT 2616**

SUPPLEMENTARY AND SPECIAL SURVEYS

The supplementary and special surveys collect data on particular aspects of the labour force. The following is a historical list of supplementary and special labour force surveys. Statistical tables are available as a Publication or a Standard Data Service, available by subscription or on request. Inquiries should be made to the contact in the Phone Inquiries box on the Contents page. It may be possible to order Unit Record Tapes on the following supplementary and special surveys by contacting the ABS (see below for contact numbers).
