EXPLANATORY NOTES

Introduction

1. This publication contains monthly details of the number of new dwelling units reported by approving authorities as having commenced in each local government area.

Scope and Coverage

2. The statistics were compiled from monthly reports, provided by local and other government authorities, of commencements of new houses and other new residential buildings for which:

(a) building permits were issued by local government authorities in areas subject to building control by those authorities; or

(b) contracts were let, or day labour work was authorised, by Commonwealth, State, semi-government and local government authorities.

Major residential building commencements in areas not subject to the normal administrative approval processes (e.g., buildings on remote mine sites) are included also.

3. The number of dwelling units created by alterations and additions to existing buildings, and through the construction of new non-residential buildings (i.e., buildings other than dwellings) is not included.

Definitions

4. A *dwelling unit* is defined as a self-contained suite of rooms, including cooking and bathing facilities and intended for long-term residential use. Units (whether self-contained or not) within buildings offering institutional care (such as hospitals) or temporary accommodation (such as motels, hostels and holiday apartments), are not defined as dwelling units.

5. A *residential building* is defined as a building predominantly consisting of one or more dwelling units. Dwellings can be either houses or other residential buildings as follows:

(a) A *house* is defined as a detached building predominantly used for long-term residential purposes and consisting of only one dwelling unit. Thus, detached 'granny flats' and detached dwelling units (such as caretakers' residences) associated with non-residential buildings, are defined as houses for the purpose of these statistics.

(b) An *other residential building* is defined as a building which is predominantly used for long-term residential purposes and which contains (or has attached to it) more than one dwelling unit (e.g., townhouses, duplexes and apartment buildings).

6. **Commencements:** For the purposes of this statistical series, a residential building is regarded as being commenced on the date when:

(a) the building work is first inspected by a local government, or other government authority building inspector or surveyor, whether the work is passed or not (in general, the first inspection is undertaken at the foundations or footings stage of construction); or

(b) the building work is determined as commenced by a building inspector or surveyor.

7. **Ownership:** The ownership of a building is classified as either public sector or private sector, according to the sector of the intended owner of the completed building, as evident at the time of approval. Residential buildings being constructed by private sector builders under government housing authority schemes, whereby the authority has contracted, or intends to contract, to purchase the buildings on or before completion, are classified as public sector.

Comparability of Statistics

8. Because of the difference in data sources, collection methodologies, and timing of notification of commencements, care should be exercised in comparing quarterly data derived from monthly dwelling unit commencements statistics with the quarterly dwelling unit commencements statistics from the Building Activity Survey, published in *Building Activity, Tasmania* (8752.6).

Australian Standard Geographical Classification

9. Statistics in this publication are presented using the Australian Standard Geographical Classification (ASGC) which has been prepared by the ABS for use in its collection, compilation and publication of statistics. For additional information about ASGC users are referred to the manual *Australian Standard Geographical Classification* (1216.0), Edition 4.
