## INQUIRIES

- *for further information about statistics in this publication and the availability of related unpublished statistics, contact Cynthia Kim on Canberra (06) 252 6114.*

# INTRODUCTION

Australian Economic Indicators presents a statistical summary of the Australian economy, and includes comprehensive tables and charts, as well as commentaries, occasional articles and technical notes. International comparisons of selected economic indicators are also provided. Australian Economic Indicators has been developed primarily as a reference document, providing a broad basis for economic analysis and research.

## The Statistics

The statistics are generally presented as time series for the last nine years of annual data, and for the last nine quarters or 15 months of data. To assist analysis most tables include percentage movements, as well as levels, of series.

For users requiring longer time series, a special issue of *Australian Economic Indicators* is produced at the beginning of each year. It contains, for most series, a greater span of annual, quarterly and monthly data. To accommodate these changes, each special issue has a graphical summary and no commentaries. Special issues were released for January 1992, January/February 1993, February 1994, February 1995, February 1996 and February 1997.

The tables contain mainly ABS data, although data from other sources are included. For ABS sourced data, the publication name and catalogue number are included in the footnotes of the tables. If the data are from other sources, the source organisation's name is included in the footnotes.

The statistics shown are the latest available as at 16 April 1997.

### **Retail Business Survey Investigation into Small Business Turnover Estimates**

The retail survey project has recently commenced an examination of the retail trade series to determine the feasibility of producing separate estimates for both the large and small retailer sectors.

The analysis aims to examine the robustness, reliability and usefulness of such estimates in terms of adding value to the analysis of monthly retail trade turnover estimates.

It is expected that this work will take a few months to complete as it is detailed and will look at amongst other things, definitions of both small and large retailers.

Provided the analysis reaches some conclusive results, the ABS will look to release information showing a range of turnover estimates dissected by small and large retailers. For more information, or if you wish to register interest in the outcome of this study, please contact Howard Williams on (06) 252 5631.

# MONTHLY REVIEW

The analysis in the Monthly Review refers to trend estimates unless otherwise specified.

---

## Overview

---

- The gradual slow down in **consumption expenditure** over most of 1996 appears to have finished. Retail turnover has shown accelerating rises since October 1996. New motor vehicle registrations have also been rising since September 1996.
- Statistics on **building approvals** indicate that while residential building approvals have shown steady rises in the four months to February 1997, the value of non-residential approvals has been falling at an accelerating rate in this period.
- **Employment** growth has been slowing since July 1996. The bulk of the rise in total employment since early 1996 has been in part-time employment. There has been almost no movement in the unemployment rate since August 1996, and the participation rate has been fairly steady since early 1996.
- In February 1997, the various producer price indexes (PPIs) continued to show little indication of **price pressure**.
- The March quarter 1997 **ABS Business Expectation Survey** indicates that businesses expect the outlook for activity in the medium term to be positive.

---

## Expenditure and Production

---

### Expenditure

The latest monthly statistics on consumption expenditure suggest that the gradual slow down in consumption expenditure over most of 1996 has bottomed out. **Retail turnover** rose 0.6 per cent in February 1997, and the rate of rise has been accelerating since October 1996.

Five of the seven retailing industry groups showed generally accelerating rises in their turnover in February 1997. Of the two industry groups which recorded falls in their turnover in February 1997, the **recreational good retailing group** recorded its first fall since July 1996, while the **clothing and soft good retailing group** has been falling continuously since October 1996.

The number of new passenger vehicle registrations has been rising since September 1996. This series rose 1.6 per cent in February 1997, and the rate of rise has been fairly steady since November 1996. The number of new registrations for **other vehicles** has been rising slowly since November 1996, and a 0.4 per cent rise was recorded in February 1997.

### Production

Statistics for manufacturing production indicate that the **production of motor vehicles** has shown similar movements to the registrations of new motor vehicles. The production of **cars and station wagons** has been rising since September 1996, whilst the production of **vehicles for the transport of goods and materials** has been rising since November 1996.

The latest building approvals statistics indicate that both the **value** and the **number of residential building approvals** have shown fairly steady monthly percentage rises in the four months to February 1997. In contrast, the **value of non-residential building approvals** has been falling at an accelerating rate during this period. Although the number of **private sector houses** approved continued to rise in February 1997, the rate of rise has been decelerating since November 1996. In contrast, the number of **other residential units** approved continued to show strong rises, and has been rising at almost 4.0 per cent per month in the four months to February 1997.

The recovery in the residential building sector saw a rise in the **production of clay bricks** since early 1996. However, the rise has been fairly slow and appears to be flattening since November 1996. The production of **ready mixed concrete** and **portland cement** has also slowed since November 1996.

Actual expenditure on **mineral exploration** resumed strong rises in 1996, following fairly static expenditure in 1995. In the December quarter 1996, mineral exploration expenditure rose 4.0 per cent. Results from the survey indicate that, in original terms, the strong rises in expenditure are expected to continue in the first half of 1997.

Actual expenditure on **petroleum exploration**, in original terms, rose 22.5 per cent in the December quarter 1996, and has been rising at an accelerating rate since the March quarter 1996. Results from the survey indicate that in original terms, the rises in expenditure are expected to continue in the first half of 1997.

With respect to livestock production, **red meat production** rose for the sixth consecutive month in February 1997, while **chicken meat production** recorded its fourth consecutive marginal fall. **Wool receipts by brokers and dealers** showed a marginal rise in February 1997, and the rate of rise has been decelerating since November 1996.

## Labour Force and Demography

### □ Labour Force

**Total employment** showed only a marginal rise in March 1997, and the rate of rise has been slowing since July 1996. The bulk of the rise in total employment in the past 12 months can be attributed to rises in **part-time employment**. **Full-time employment** has shown small falls each month since October 1996.

**Total unemployment** rose 0.4 per cent in March 1997, and has been rising generally since June 1995. The acceleration in the rate of rise in this series since December 1996 largely reflected an accelerating rise in **male full-time unemployment** since December 1996. **Female unemployment** has been rising continuously since July 1995, but the rate of rise has been decelerating in the four months to March 1997.

The **unemployment rate** has remained almost steady at 8.7 per cent since August 1996. The **male unemployment rate** has remained fairly steady in 1996 through to March 1997, and the **female unemployment rate** has remained unchanged since July 1996.

The **labour force participation rate** has remained at around 63.6 per cent since February 1996. While the **male participation rate** has been generally falling since late 1995, the **female participation rate** has been generally rising since May 1996. In March 1997, male and female participation rates stood at 73.3 and 54.0 per cent respectively.

Results from the ABS Job Vacancies and Overtime survey indicate that the number of job vacancies in February 1997 rose 1.9 per cent from November 1996, and was the highest in over two years. The number of **private sector vacancies** in February 1997 rose 1.1 per cent from November 1996, and the rate of rise has been decelerating since May 1996. In contrast, the number of **public sector vacancies** showed a strong 6.7 per cent rise in February 1997, following strong falls in May and August 1996 and a slight fall in November 1996.

In February 1997, the **average weekly overtime hours per employee** rose 0.8 per cent from November 1996. However, this series has been falling generally since August 1994. With the expansion of enterprise bargaining, which often sees overtime absorbed into general working hours, this series may

have become less reliable as an indicator of labour market pressure.

In the twelve months to 30 September 1996, the **estimated resident population of Australia** rose 1.3 per cent in original terms. This rise largely reflected a 38 per cent rise in **net overseas migration**, whilst the other component, **natural increases**, fell 5 per cent in the twelve months period. The graph below shows that natural increases has been slowly trending downwards since the beginning of the 1990s. It also shows that because natural increases is a relatively stable series, movements in total population are often strongly affected by movements in net overseas migration, even though net overseas migration is usually the smaller component.

INCREASE IN ESTIMATED RESIDENT POPULATION  
Year ended 30 September

## International

### □ Trade in Goods and Services

The **balance on goods and services** at current prices recorded the twelfth consecutive surplus in February 1997, the longest run of continuous monthly surpluses since May 1992.

**Imports of goods and services** rose 1 per cent in February 1997. **Imports of goods** rose 1 per cent,

MERCHANDISE IMPORTS  
Trend

continuing the rise since August 1996. The graph shows that all three categories of the imports of goods have been rising for some months and continued to rise in February 1997. **Imports of services** rose slightly in February, continuing the gradual rises since August 1996.

**Exports of goods and services** rose 2 per cent in February 1997, continuing the rise since September 1996. **Exports of goods** rose 2 per cent in February 1997. The graph below shows that both **rural** and **non-rural exports** have been rising since September 1996. **Exports of services** rose 2 per cent in February 1997 for the third consecutive month, and continuing the rises since August 1996.

## Prices

The commentary below on prices refers to original estimates unless otherwise specified.

### Producer Price Indexes

The two **manufacturing industry price indexes** have been showing generally opposite movements since mid-1996. The **price index of materials used in manufacturing industries** has been mostly in decline in 1996. The index fell 0.5 per cent in February 1997, following a 1.3 per cent rise in January 1997. In contrast, the **price index of articles produced by manufacturing industry** has shown small consecutive monthly rises since June 1996, and the index rose 0.2 per cent in February 1997.

Both of the **building materials price indexes** have remained fairly flat in 1996 and into 1997. The upturn in private sector house building since mid-1996 has not yet triggered a steady increase in the **prices of materials used in house building**. The price index continued to show little movement in February 1997. The **price index of materials used in other building** rose 0.4 per cent in February 1997, following a 0.2 per cent rise in the previous month.

The strength of the Australian dollar against other major trading currencies in 1996 was a major reason for the falls shown in both **foreign trade price indexes** in 1996. However, the value of the Australian dollar fell against the US dollar in the first two months in 1997, and both indexes rose. The **import price index** rose 0.5 per cent in February 1997, following a 0.7 per cent rise in the previous month, largely reflecting movements in the Australian dollar. The **export price index** rose 1.4 per cent in February 1997, following a 1.0 per cent rise in the previous month. Apart from price rises due to exchange rate changes, higher prices for wool, aluminium, and zinc were major contributors to the rise in the export price index in February 1997.

## Financial Markets

### Money Supply

Reserve Bank figures showed that the growth in **money supply** continued to decelerate in February 1997. The growth in **M3** and **broad money** have been decelerating continuously since October and September 1996 respectively, whilst the growth in **credit provided to the private sector by financial intermediaries** has been decelerating since late 1995.

### Secured Housing Finance

The rise in the **number of secured housing financing commitments** has been decelerating since August 1996, with fairly small percentage rises in the five months to February 1997. The small rise in February 1997 continued to be driven by rises in the number of commitments for the **construction of dwellings** and for the **purchase of new dwellings**. The **number of commitments for the purchase of established dwellings** showed the fourth consecutive small fall in February 1997. The number of **loans refinanced** has remained at around the same level in the three months to February 1997.

The rise since mid-1996 in the number of housing finance commitments for construction, and purchase of new dwellings suggests a recovery in the residential building sector. However, the rate of rise is decelerating. A similar deceleration is also seen in the number of building approvals in the private sector for houses.

### Personal Finance

**Personal finance commitments** rose 2.5 per cent in February 1997, the sixth consecutive monthly rise. The rise comprised a 4.6 per cent rise in **revolving credit** and a 1.2 per cent rise in **fixed loans**. Commitments under fixed loan facilities have been rising since September 1996. Monthly commitments under revolving credit facilities have risen steadily since March 1996.

Commercial Finance

**Commercial finance commitments** rose 3.5 per cent in February 1997, the fifth consecutive rise. The overall rise comprised a 4.9 per cent increase in **fixed loans** and a 2.0 per cent rise in **revolving credit**.

---

**Forward looking Indicators**

---

The March quarter 1997 **ABS Business Expectation Survey** indicates that businesses expect the outlook for activity in the medium term to be positive.

There is little indication of inflationary pressure emerging, with businesses expecting only moderate rises in **selling prices** and **total operating expenses** over the next year (up 0.9 and 1.8 per cent respectively). Large businesses (defined as those with 100 or more employees, and 600 or more employees for those in the manufacturing industry) are more optimistic than small and medium businesses with regard to **sales, profits, employment, and export**. On an industry basis, **manufacturing** and **wholesale** expect the strongest profit growth over the next year (up 17.2 and 17.4 per cent respectively), while **retail** expects the largest increase in capital expenditure (up 7.2 per cent).

(a) : National disposable income is equal to wages, salaries and supplements plus net operating surplus plus indirect taxes less subsidies less net income paid to overseas less unrequited transfers to overseas. It is equal to total outlays which comprises final consumption expenditure plus saving. (a) : Trend data used instead of seasonally adjusted. (b) : Sales is defined as gross non-farm product plus imports of goods and services less changes in private non-farm stocks. (c) : Corporate gross operating surplus includes private corporate trading enterprises plus financial enterprises less imputed bank service charge. GNPfc = Gross non-farm product at factor cost. (d) : Interest paid component contains original data. (e) : By convention, zero productivity growth is assumed for industries in the non-market sector (mainly government and some service industries). Therefore, a better indicator of productivity change is provided by the series showing market sector constant price gross product per hour worked. 1991-92	10,600	8,230	18,809	-374	18,533	21,687	2,997
1992-93	15,853	4,672	20,186	-1,787	18,570	26,322	-5,342

(a) : The net financing requirements encompass governments' net borrowing, their call on cash reserves and the net change in other financial assets and liabilities. The financing requirements of public financial enterprises are excluded. The concept of *net public sector borrowing requirements* (net PSBR) used in Commonwealth Budget papers is the same as the ABS concept of net financing requirement. (b) : Total net financing requirements can vary from the sum components due to differences in the timing of the recording of payments and receipts, and unresolved errors and omissions in inter-sector transactions. (c) : The sum of the financing transactions components exceeds the net financing requirements as it includes net advances and increases in provisions. Source: *Government Financial Statistics, Australia* (5512.0) and *Public Finance Section ABS*.

(a) : Quarterly seasonally adjusted estimates are from *Balance of Payments, Australia* (5302.0) — issued quarterly. The quarterly estimates for goods and services are not necessarily consistent with the corresponding monthly seasonally adjusted estimates, obtained from *International Trade in Goods and Services, Australia* (5301.0) — issued monthly. The differences are to (1) data revisions to the original monthly data not feeding into the quarterly original series, and hence the quarterly seasonally adjusted series, until the next quarterly release of *Balance of Payments, Australia* (5302.0); and (2) differences arising from the seasonal adjustment process, which are explained in *Seasonal Adjustment of Australia's Monthly Balance of Payments Statistics* (5359.0). Source: *Balance of Payments, Australia* (5302.0).

(a) : There is a series break between 1985-86 and 1986-87, resulting from a change in survey methodology for engineering construction, introduced from the September quarter 1986. The most significant was the introduction of public sector units into the survey. Source: Manufacturing and Construction Section, ABS.

(a) : Original data provided. (b) : The weights used are based on the average share of Australia's imports from the US, Japan, UK and West Germany from 1984-85 to 1987-88. The four countries are the source for about 60 per cent of Australia's imports. Observations are quarterly averages. A rise (fall) implies a deterioration (improvement) in Australian costs and prices relative to our four major trading partners after adjusting for exchange rate changes. (c) : The relative domestic price of non-traded goods compared with imported goods. The relative domestic price index can be used to indicate possible resource flows between the domestic traded and non-traded goods sectors in a small economy that engages in international trade. A decrease in the price of non-traded goods relative to imported goods in the domestic economy — that is, a fall in the relative domestic price — encourages a flow of resources into the traded goods sector, thereby encouraging additional exports and import replacement. (d) : The adjusted CPI index is the ratio of the Australian consumer price index to the weighted geometric average of the exchange rate adjusted consumer price indexes of Australia's four major trading partners. (e) : The adjusted GDP deflator index is the ratio of the GDP deflator for Australia to the weighted geometric average of the exchange rate adjusted GDP deflators of Australia's four major trading partners. (f) : The adjusted unit labour cost index is the ratio of unit labour costs in the non-farm sector of the Australian economy to the weighted geometric average of the exchange rate adjusted unit labour cost indexes estimated for the business sectors of Australia's four major trading partners. Source: Australian National Accounts: National Income, Expenditure and Product (5206.0), Australian Bureau of Agricultural and Resource Economics (ABARE) and Department of Treasury.

(a) : See Appendixes A and B, *Consumer Price Index* (6401.0), September Quarter 1994. (b) : This series covers approximately 84 per cent of the total CPI basket. (c) : Comprises the All Groups CPI excluding: Fresh fruit and vegetables, Mortgage interest charges, Automotive fuel and Consumer credit charges. The resulting series covers approximately 85 per cent of the total CPI basket. (d) : Comprises the All Groups CPI excluding: items in (c), Government-owned dwelling rents, Fuel and light, Local Government rates and charges, Postal and telephone services, Motoring charges, Urban transport fares, Health services, Pharmaceuticals and Education and child care. The resulting series covers approximately 69 per cent of the total CPI basket. (e) : Comprises the All Groups CPI excluding: items in (c) and (d) (except Motoring charges), Meat and seafoods, Clothing, Tobacco and alcohol and Holiday travel and accommodation. The resulting series covers approximately 51 per cent of the total CPI basket. Source: *Consumer Price Index* (6401.0).

(a) : Total population increase is equal to the change in population. Prior to 1992 this is not equal to natural increase (live births less deaths) plus net immigration because of the distribution of the intercensal discrepancy. There is now an intercensal discrepancy for 1986-91. (b) : Includes Cocos (Keeling) Islands, Christmas Island and Jervis Bay Territory from September quarter 1993. Source: Australian Demographic Statistics (3101.0).

(a) : Excludes Commonwealth and State Government and interbank deposits but includes deposits of the private non-bank sector with the Reserve Bank. (b) : Currency plus bank deposits (including certificates of deposit with trading banks) of the private non-bank sector. (c) : Borrowings (other than from banks and related corporations) by permanent building societies, credit co-operatives, finance companies, authorised money market dealers, pastoral finance companies, money market corporations, general financiers and cash management trusts; less borrowings by authorised money market dealers from those non-bank intermediaries. Breaks occur from time to time due to changes in the number of reporting corporations. (d) : M3 plus borrowings from private sector by non-bank financial intermediaries less the latter's holdings of currency and bank deposits. (e) : Holdings of notes and coin by the private sector, plus deposits of banks with the Reserve Bank and Reserve Bank liabilities to the private non-bank sector. (f) : Loans and advances of those financial intermediaries whose deposit liabilities are included in broad money. (g) : Bills outstanding under acceptance and endorsement commitments by banks. (h) : Credit is equal to bank bills outstanding plus loans and advances by financial intermediaries whose liabilities are included in broad money. Source: Reserve Bank of Australia Bulletin (RBA).

(a) Extreme care should be exercised in using the seasonally adjusted and trend series for turnover of retail establishments for the Northern Territory. The highly erratic nature of these data makes reliable estimation of the seasonal pattern and of the trend very difficult. Source: *Retail Trade, Australia* (8501.0).

## TABLES

10.1	Real gross domestic product volume index . . . . .	104
10.2	Balance on current account : percentage of seasonally adjusted GDP . . . . .	105
10.3	Balance on merchandise trade . . . . .	106
10.4	Private consumption expenditure volume index . . . . .	106
10.5	Private fixed capital investment volume index . . . . .	107
10.6	Industrial production volume index . . . . .	108
10.7	Consumer price index (all items) . . . . .	109
10.8	Producer prices index . . . . .	110
10.9	Wages index . . . . .	111
10.10	Employment index . . . . .	111
10.11	Unemployment rates . . . . .	112
10.12	M1 plus quasi-money index . . . . .	113
10.13	Consumer price index (excluding shelter) . . . . .	114

## NOTES

1. The statistics for Germany in these tables refer Germany after unification.

2. **Consumer price index.** Due to the many differences in the structure of the housing sector in different countries and in the way that housing is treated in their CPIs, a simple comparison of All items (or headline) CPIs is often inappropriate. To provide a better basis for international comparisons, the Fourteenth International Conference of Labour Statisticians adopted a resolution which called for countries to "provide for dissemination at the international level of an index which excludes shelter, in addition to the all-items index."

Table 10.13 presents indexes for selected countries on a basis consistent with the above resolution and comparable to the Australian series *All groups excluding housing*. The series in this table are presented on a reference base consistent with that used for publication of the Australian CPI (ie 1989-90 = 100.0) and as such are not directly comparable with those for All items published in Table 10.7 (presented on a reference base of 1990 = 100.0).

# GENERAL INFORMATION

## Structure of *Australian Economic Indicators* and Cross Referencing

*Australian Economic Indicators* takes a market or activity approach to the presentation of statistics. The relationship between this structure and the four consolidated accounts that comprise the National Accounts is shown in Table A below. Table B following provides a cross-reference guide to industry and sector statistics.

**Table A - Cross Reference to National Accounts Aggregates**

<i>I DOMESTIC PRODUCTION ACCOUNT</i>			
	<i>Chapter</i>		<i>Chapter</i>
Wages, Salaries and Supplements	1,7	Consumption	1,3
Gross Operating Surplus	1,7	Investment	1,3
Net Indirect Taxes	1	Increase in Stocks	1,3,4
		Exports less Imports	1,3
<hr/>		<hr/>	
Gross Domestic Product (income based)	1	Gross Domestic Product (expenditure based)	1
<hr/>			
<i>II NATIONAL INCOME AND OUTLAY ACCOUNT</i>			
	<i>Chapter</i>		<i>Chapter</i>
Consumption	1,3	Wages, etc.	1,7
Saving	1,7	Net Operating Surplus	1,7
		Net income/transfers from Overseas	1,2,7
		Net Indirect Taxes	1
<hr/>		<hr/>	
Disposal of Income	1,7	National Disposable Income	1,7
<hr/>			
<i>III NATIONAL CAPITAL ACCOUNT</i>			
	<i>Chapter</i>		<i>Chapter</i>
Investment	1,3	Depreciation	1,7
Increase in Stocks	1,3,4	Saving	1,7
Net Lending to Overseas	2		
<hr/>		<hr/>	
Gross Accumulation	1	Finance of Gross Accumulation	1
<hr/>			

**Table B - Cross Reference to Industry and Sector Statistics**

<i>Chapter</i>	<i>National Accounts</i>	<i>International Accounts</i>	<i>Consumption and Investment</i>	<i>Production</i>	<i>Prices</i>	<i>Labour Force and Demography</i>	<i>Incomes and Labour Costs</i>	<i>Financial Markets</i>
<i>Sector, Industry</i>	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
<b>Table number</b>								
<b>Sector</b>								
Trading enterprises <sup>(a)</sup>	4,5	2,11	2,3,5,6	1-12	7-12	6	2,5	4,6
Financial enterprises	3,4		5					1-7
Households <sup>(a)</sup>	4-6	2,11	1-4,7		1,2,7	1-10	1-5	2,3
General Government	2,4-7	7	8,9		2-4			
Overseas	2,5	1-12			5,6	9,10		6
<b>Industry</b>								
Agriculture, forestry, fishing and hunting	1,3	2,3	4	1,2	5,6,9	6	1	
Mining	3	3	5-7	4,5	6	6,8		
Manufacturing	3	3,4	5-7	1-3	8,11,12	6-8		
Electricity, gas and water	3		1	2		6		
Construction	3		5	6-11	7-9	6,8		2,3
Wholesale and retail trade	3		1-4,6	1,2	1,2,6			
Transport and storage	3	3,4	1		1	6,8		
Communication	3		1			6,8		
Finance, property and business services	3		1,5,7			6		
Public administration and defence	3		8,9			6		
Community services	3		8,9			6		
Recreation, personal and other services	3		1,8,9	12	1	6		
Ownership of dwellings	3		1,4		1,2,7			2,3

Note: Chapter 10, International Comparisons is not included in this table as most data in this chapter are at a national level, not sector or industry.  
(a): In the National Accounts chapter, the trading enterprises sector includes only corporate trading enterprises, and the households sector also includes unincorporated enterprises.

## Explanatory Notes

Explanatory notes in the form found in other ABS publications are not included in *Australian Economic Indicators*. Readers are directed to the explanatory notes contained in related ABS publications.

Other useful sources of detailed information are the 'Concepts, Sources and Methods' and classification publications. These are released irregularly, each relating to a specific publication, collection or standard classification. Some of the publications most relevant to *Australian Economic Indicators* are:

*Australian and New Zealand Standard Industrial Classification (ANZSIC) (1292.0)*  
*Classification Manual for Government Financial Statistics, Australia (5514.0)*  
*Australian National Accounts: Concepts, Sources and Methods (5216.0)*  
*Balance of Payments, Australia: Concepts, Sources and Methods (5331.0)*  
*A Guide to Labour Statistics (6102.0)*  
*The Australian Consumer Price Index: Concepts, Sources and Methods (6461.0)*

## Related Publications

A list of related publications is included in each chapter under the table of contents. These include publications which are the source of the data in the tables and other related publications.

## Seasonally Adjusted and Trend Estimates

Series in this publication include original, seasonally adjusted and trend series. Special care should always be taken in interpreting data for the most recent months and quarters. Some of the original and all of the seasonally adjusted and trend series are subject to revision.

It is not uncommon for movements in original time series data and those provided from seasonally adjusted and trend series to differ significantly. Movements in a time series of original data may reflect several factors, including:

- longer-term changes in the item being measured (ie trend movements);
- short term irregular changes;
- regular seasonal influences;
- normal 'trading', 'working' or 'pay' day patterns; and
- systematic holiday effects.

Seasonal adjustment and trend estimates help the user to identify the effect of these influences on the time series. Seasonal adjustment removes the effect of the last three listed influences from the data, leaving only the trend and short term irregular movements. Trend estimates are then obtained by removing the effects of the short term irregularities, which in many series can be a major contributor to movements in the original data. By comparing the historical trend series with the seasonally adjusted series, the user can identify the short term irregularities which have influenced the original series.

The general methods used in the ABS for making seasonal adjustments are described in *Seasonally Adjusted Indicators, Australia 1983 (1308.0)*. The method used to estimate trends is described in the Information Paper *A Guide to Smoothing Time Series - Estimates of Trend (1316.0)*.

Trend estimates produced by the ABS are based on Henderson Moving Averages, and are therefore subject to revision especially for the latest few months or quarters. Sometimes the data may be so erratic that reliable trend estimates cannot be provided for the latest months. In these cases, the last few observations are not published.

## Constant Price Estimates

Constant price statistics in this publication, refer to estimates in 1989-90 dollar terms, and measure values expressed at the average prices prevailing that year. Period-to-period movements in constant price estimates provide what are often called 'changes in real terms'.

## Implicit Price Deflators

An implicit price deflator (IPD) is a price index obtained by dividing the current price value of a statistical aggregate by its constant price value and as such has the form of a current weighted price index. The change in the IPD between any two periods represents the effects of actual price changes and the effects of relative changes in the underlying quantity weights, or physical composition of the aggregate from which the deflator is formed.

## Symbols and Other Usages

The following *symbols*, where shown in columns of figures or elsewhere in tables, mean:

- na data not available: due to either some series starting later than others, no seasonally adjusted data for some series, or data not published for other reasons. Note that where a time series is not available the symbol na is used followed by empty cells.
- nya data not yet available: used in tables from multiple sources where some series' end-dates are shorter than that of the table itself.
- .. not applicable.
- 0, 0.0 nil or rounded to zero.
- nec not elsewhere classified.

Columns in bold in the tables indicate a total. Columns usually sum from the left, with the total appearing on the right. Some tables include sub-total columns and columns which need to be subtracted to obtain the total. Where this is not clear a footnote explains the relationship between the columns.

Columns in italics indicate that seasonally adjusted or trend estimates are not available for that column, and original data are provided instead.

Yearly periods shown as, e.g. 1988-89, refer to the fiscal year ended 30 June 1989.

Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Percentage changes may not be exactly comparable to tabulated source series due to rounding of the source series, the percentage change series or both.

## Metric Prefixes

- Deca (da) = ten  
Hecto (h) = hundred  
Kilo (k) = thousand  
Mega (M) = million  
Giga (G) = thousand million  
Tera (T) = million million
