

**LIVESTOCK PRODUCTS, AUSTRALIA
JANUARY 1996**

MAIN FEATURES

Livestock Slaughterings

The trend estimate for cattle slaughterings rose 1.3 per cent in January 1996, but since the last trough in October 1995 has risen 2.2 per cent. The trend estimate for calves rose 0.9 per cent in January 1996. Since the last trough in April 1995 it has risen 4.0 per cent.

**CATTLE SLAUGHTERINGS
AUSTRALIA
Trend Series**

Sheep slaughterings continues to decline, falling 1.7 per cent in January 1996 to be 32 per cent below the last peak in September 1994. However the trend estimate for lamb slaughterings rose for the sixth consecutive month and is now 7.6 per cent higher than the last trough in July 1995.

**SHEEP AND LAMB SLAUGHTERINGS
AUSTRALIA
Trend Series**

Pig slaughterings also rose marginally in January 1996, but is 6.3 per cent below the last peak in November 1994.

Red Meat

Although the trend estimate for total red meat production rose marginally for the second successive month, it is 1.5 per cent below the last peak in June 1995. Beef production rose marginally in January 1996, but it is 1.5 per cent lower than the last peak in June 1995. Mutton continues to fall and is now 26.0 per cent below the last peak in August 1994. While the trend estimate for lamb fell marginally for the first time in seven months, it is 13.0 per cent above the last trough in June 1995. Pigmeat also fell marginally from December 1995 and has fallen 7.3 per cent since the last peak in May 1995.

Chicken Meat

The trend estimate for chicken meat production fell marginally for the third consecutive month and is now 0.7 per cent below the last peak in October 1995.

Whole Milk Intake

Whole milk intake by factories fell for the third consecutive month, falling by 0.4 per cent in January 1996. However the trend estimate is 7.9 per cent above the last trough in March 1995.

Wool Receipts by Brokers and Dealers

The trend estimate for wool receipts by brokers and dealers rose 3.7 per cent in January 1996. Since the last trough in August 1995 it has risen 10.8 per cent, but this estimate is 1.8 per cent below the last peak in February 1995.

Live Exports

The number of live sheep exported in December rose by 35.6 per cent to 528,300. The unit value (\$38.21) rose 20.3 per cent and the gross value (\$20.2 million) rose 63.2 per cent.

Live cattle exports rose 10.5 per cent in December 1996. The unit value (\$576.71) rose 1.1 per cent, while gross value (\$26.0 million) rose 11.7 per cent.

INQUIRIES

(a) Excludes offal. (b) Factors can be applied to beef, veal, mutton and lamb bone-out figures to derive bone-in carcass weight which, when added to bone-in figures, shows total exports in carcass weight. The factor for beef and veal is 1.5 and for mutton and lamb is 2.0 (Source: Australian Meat and Livestock Corporation). (c) Includes buffalo meat. (d) Cured carcass weight of smoked or cooked bacon and ham. Includes stated net weight of packs of canned bacon and ham. (e) Canned weight. Excludes canned bacon and ham.

**RELIABILITY OF JANUARY TREND ESTIMATES
FOR PRODUCTION OF RED MEAT**

Readers should exercise care in the interpretation of trend data as the last six observations, in particular, are likely to be revised with either revisions to the underlying data or the addition of data for the month of February.

The table below shows, for red meat production for the six months ended January:

- trend estimates as published;
- trend estimates assuming an increase in seasonally adjusted data for February of 3% on the January figure;
- trend estimates assuming a decrease in seasonally adjusted data for February of 3% on the January figure.

The percentage change of 3% was chosen because the average absolute monthly percentage change in the seasonally adjusted data since the inception of the series has been 3.20%

(a) Chicken meat is shown in dressed weight of whole birds, pieces and giblets. (b) Excludes Tasmania, the Northern Territory and the Australian Capital Territory.

(c) Trend estimates for the most recent months are subject to revision when data for subsequent months become available.

Note: Some slaughtering and meat production statistics for 'Ducks and Drakes' and 'Other Fowls and Turkeys' are available by contacting the ABS on Canberra 252 5337 or by writing to PO Box 10, Belconnen ACT 2616 (Attention: Agriculture Section).

RELIABILITY OF JANUARY TREND ESTIMATES FOR CHICKEN MEAT

Readers should exercise care in the interpretation of trend data as the last six observations, in particular, are likely to be revised with either revisions to the underlying data or the addition of data for the month of February.

The table below shows, for chicken meat production for the six months ended January:

- trend estimates as published;
- trend estimates assuming an increase in seasonally adjusted data for February of 4% on the January figure;
- trend estimates assuming a decrease in seasonally adjusted data for February of 4% on the January figure.

The percentage change of 4% was chosen because the average absolute monthly percentage change in the seasonally adjusted data since the inception of the series has been 4.16%

(a) Includes white, flavoured, high and low fat milk, uht milk.

**RELIABILITY OF DECEMBER TREND ESTIMATES
FOR WHOLE MILK INTAKE BY FACTORIES**

Readers should exercise care in the interpretation of trend data as the last six observations, in particular, are likely to be revised with either revisions to the underlying data or the addition of data for the month of January.

The table below shows, for whole milk intake by factories for the six months ended December:

- trend estimates as published;
- trend estimates assuming an increase in seasonally adjusted data for January of 2% on the December figure;
- trend estimates assuming a decrease in seasonally adjusted data for January of 2% on the December figure.

The percentage change of 2% was chosen because the average absolute monthly percentage change in the seasonally adjusted data since the inception of the series has been 1.98%

(a) Trend estimates for the most recent months are subject to revision when data for the subsequent months become available.

**RELIABILITY OF JANUARY TREND ESTIMATES
FOR WOOL RECEIVALS**

Readers should exercise care in the interpretation of trend data as the last six observations, in particular, are likely to be revised with either revisions to the underlying data or the addition of data for the month of February.

The table below shows, for wool receivals for the six months ended January:

- trend estimates as published;
- trend estimates assuming an increase in seasonally adjusted data for February of 9% on the January figure;
- trend estimates assuming a decrease in seasonally adjusted data for February of 9% on the January figure.

The percentage change of 9% was chosen because the average absolute monthly percentage change in the seasonally adjusted data since the inception of the series has been 9.30%

	<i>Trend as published</i>	<i>Trend change with seasonally adjusted February estimate</i>

EXPLANATORY NOTES

Introduction

This publication contains information (preliminary where indicated) on livestock slaughterings, meat production, stocks of frozen meat, exports of live sheep and live cattle, exports of fresh, frozen and processed meat, and whole milk intake by factories, market milk sales by factories and receivals of taxable wool by wool brokers and dealers.

Livestock slaughterings and meat production

2. The statistics on slaughterings and meat production are based on a monthly collection from abattoirs and other major slaughtering establishments and include estimates of animals slaughtered on farms and by country butchers and other small slaughtering establishments.

3. Care should be taken when using this information as the figures only relate to slaughterings for human consumption and do not include animals condemned or those killed for boiling down. Since July 1994 the definition of livestock categories between States has been standardised.

4. Poultry slaughterings statistics have been compiled from returns supplied by commercial poultry slaughtering establishments. Producers in the Northern Territory and the Australian Capital Territory and the many very small producers are excluded from the collection; however, the statistics represent a high level of coverage.

Live sheep and cattle exports

5. These tables contain statistics of the number of live sheep and cattle exported, the gross weight, gross value and unit value. Sheep or cattle exported for breeding are excluded.

Milk

6. Tables 9 and 10 contain statistics collected by the Australian Dairy Corporation (ADC) on whole milk intake and market milk sales by factories.

Wool receivals

7. The statistics in Table 11 show the amount of taxable wool received by brokers and dealers from wool producers. It excludes wool received by brokers on which tax has already been paid by other dealers (private buyers) or brokers.

8. The information shown is on the basis of the State in which wool has actually been received and does not necessarily reflect the production of wool in that State.

Seasonal adjustment

9. Details of seasonally adjusted figures for livestock slaughterings, red meat, milk and wool are shown in Tables 1, 2, 9 and 11 respectively. Information on the methods used in seasonally adjusting these series is available on request.

Trend Estimates and Sensitivity Analysis

10. A trend estimate is obtained by reducing the irregular component from the seasonally adjusted series. In this publication trend estimates are

generally derived by applying a 13 term Henderson moving average to the seasonally adjusted series. The 13 term Henderson, (like all Henderson averages) is symmetric, but as the end of a time series is approached, asymmetric forms of the average are applied. While the asymmetric weights enable the trend to be calculated for the latest month, it does result in revisions to the last six estimates as additional observations become available.

11. Sensitivity analysis indicates the potential magnitude and direction of revisions created to the last six estimates. It aims to show how a specified movement in the seasonally adjusted data in the next period will affect the trend path of the time series. By showing how sensitive the trend estimates are to the addition of new data, the analysis provides information which can be used in the assessment of the trend's stability. For further information, see *A Guide to Interpreting Time Series - Monitoring "Trends", an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on (06) 252 6345.

13. Current publications produced by the ABS are listed in the Catalogue of Publications and Products, Australia (1101.0). The ABS also issues, on Tuesdays and Fridays, a Publication Advice (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

Next release date

14. The expected release date for the February 1996 issue of this publication is 3 April 1996. The date can be confirmed a few days prior to release by telephoning (06) 252 5226.

Symbols and other usages

p preliminary
 .. not applicable
 — nil or rounded to zero

15. The figures shown in this publication have been revised where necessary and as a consequence may not agree with similar data shown in previous publications.

16. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

17. Unless indicated otherwise, Australian totals include data for all States and both Territories.

W. McLennan
 Australian Statistician
