## SUMMARY OF FINDINGS VALUE OF WORK DONE

---

### AVERAGE 1989-90 PRICES, SEASONALLY ADJUSTED ESTIMATES

#### MOVEMENT ESTIMATES

Changes in the seasonally adjusted value of engineering construction work done, at average 1989-90 prices, in the September quarter 1996, compared with the previous quarter and a year previously, are summarised below.

---

	Change Jun qtr 96 to Sep qtr 95 to Sep qtr 96	Change Sep qtr 96
<b>Engineering construction work done</b>		%
By private sector		
For private sector	3.6	28.3
For public sector	-6.6	7.2
Total by private sector	0.2	20.8
By public sector	13.0	2.0
<i>Total for public sector (a)</i>	6.5	3.4
<b>Total engineering construction</b>	5.4	11.8

---

(a) Includes work done by the private sector for the public sector  
and work done by the public sector

The total value of engineering construction work done rose by 5.4% in the September quarter 1996, following an increase of 2.1% in the June quarter and a 2.9% decrease in the March quarter 1996. Engineering construction work done in the September quarter 1996 was 11.8% higher than for the September quarter 1995. The increase in the September quarter 1996 was principally due to increased activity by the public sector, which rose by 13.0% to \$1,508.7m. The value of work done by the private sector rose by a modest 0.2%.

#### LEVEL ESTIMATES

## **SUMMARY OF FINDINGS VALUE OF WORK COMMENCED**

\*\*\*\*\*

### **CURRENT PRICES, ORIGINAL ESTIMATES**

In current prices, the total value of engineering construction work commenced during the September quarter 1996 was \$4382.1m, an increase of 33.6% over the June quarter 1996 estimate but 9.6% below the value of commencements in the September quarter 1995. The value of work commenced for the private sector increased by 36.9% to \$1,389.9m in the September quarter 1996. This was 19.6% above the value of work commenced during the September quarter 1995. The value of work commenced for the public sector during the September quarter 1996, was \$2,992.2m, an increase of 32.2% over the June quarter 1996 estimate but 18.8% below the value of work commenced during the September quarter 1995.

## EXPLANATORY NOTES

---

### INTRODUCTION

- 1 This publication contains estimates of engineering construction activity in Australia by both public and private sector organisations. The estimates were compiled from the Engineering Construction Survey (ECS).
- 2 These estimates together with results from the ABS Building Activity Surveys provide a complete quarterly picture of building and construction activity in Australia.

### SCOPE AND COVERAGE OF THE SURVEY

- 3 The ECS aims to measure the value of all engineering construction work undertaken in Australia. For the ECS all enterprises recorded on the ABS central register of businesses and classified to the construction industry and all other units known to be undertaking engineering construction work (from trade journals, newspapers, etc.), are included in the survey framework.
- 4 The cost of land and the value of building construction is excluded from the surveys scope. Where projects include elements of both building and engineering construction, for example, electricity generation, heavy industrial plant, every effort is taken to exclude the building component from these statistics.
- 5 Repair and maintenance activity is excluded from the survey (see definitions) as are the value of any transfers of existing assets, the value of installed machinery and equipment not integral to the structure and the expenses for relocation of utility services.
- 6 A contract for the installation of machinery and equipment which is an integral part of a construction project is included in the statistics even though, in some cases, the activity in installing such machinery and equipment is classified to the manufacturing industry in the Australian and New Zealand Standard Industrial Classification, 1993 (1292.0).

### SAMPLE REVISION

- 7 For the September quarter survey each year, some changes are made to the sample of businesses. While the impact of the sample revision on total estimates is insignificant, the impact at individual category level may be significant.

### TYPE OF CONSTRUCTION

- 8 In this collection each project is classified to a category of construction without regard to end use. For example, a project involving coal handling equipment at an electricity generating plant is included under Heavy industry Oil, gas, coal and other minerals and not under Electricity generation, transmission and distribution. Where a project involves more than one category of construction the project is included under the category which accounts for the major part of the contract in terms of value.
- 9 Type of construction is divided into a number of categories as defined below:
  - *Roads, highways and subdivisions*. Includes parking areas; cycle paths; airport runways; pedestrian and vehicle overpasses; traffic lights; roundabouts; associated road drainage works; street and highway lighting; road resurfacing, kerbing and guttering, road tunnels.
  - *Bridges*. Includes those for the support of roads, railways, causeways and elevated highways.
  - *Railways*. Includes tracklaying; overhead power lines and signals; platforms; tramways; tunnels for underground railways; fuel hoppers.

## EXPLANATORY NOTES *continued*

---

- *Harbours*. Includes boat and yacht basins; breakwaters; retaining walls; docks and piers; terminals; wharves; dredging works; marinas.
- *Water storage and supply*. Includes dams; weirs; reservoirs; embankments for water diversion; water pipelines; mains and treatment plants; flood prevention and erosion; aqueducts; water conduits; systems conveying water to residences, commercial and industrial establishments.
- *Sewerage and drainage*. Includes sanitary and storm sewers; sewage treatment plants; stormwater drains; drainage systems.
- *Electricity generation, transmission and distribution*. Includes power stations; substations; hydroelectric generating plants; associated work i.e. towers, chimneys; transmission and distribution lines.
- *Pipelines*. Includes oil and gas pipelines; urban supply mains for gas; pipelines for refined petroleum products, chemicals, foodstuffs, etc.
- *Recreation*. Includes golf courses; playing fields; racecourses; stadiums; swimming pools; landscaping; park construction.
- *Telecommunications*. Includes radio, television, microwave and radar transmission towers; telephone and telegraph lines and underground cables; coaxial cables.
- *Heavy industry*
  - *Oil, gas, coal and other minerals*. Includes construction of production, storage and distribution facilities; refineries; pumping stations; construction of mines;
  - *Other heavy industry*. Includes construction of chemical plants; blast furnaces; steel mills; other industrial processing plants; ovens.

### DEFINITIONS

#### 10 Definitions used are as follows:

- *Ownership*. Projects are classified as private sector or public sector according to the expected ownership of the project at the time of completion.
- *Sector*. The public sector includes Commonwealth Departments and Authorities, State Departments and Authorities, Local Government Authorities, Water, Sewerage and Electricity Authorities and Semi-government Authorities e.g. public hospitals. This publication contains separate estimates for:
  - ♦ Commonwealth Government;
  - ♦ State and Territory Government; and
  - ♦ Local Government.All remaining organisations are classified as private sector.
- *Commenced*. A project is regarded as having commenced when the site work begins. However, some public sector authorities are unable to report on this basis. In such cases, the authorities report the value of their annual works budget as a commencement in the September quarter each year.
- *Value of work yet to be done*. The value of outstanding work for the project at the end of the period. Rise and fall and other cost variations can lead to increases or decreases in the value of work yet to be done.
- *Value of work done*. For the private sector this consists of the value of work done on prime contracts, plus speculative contracts, plus work done on own account. For the public sector it is defined as work done by the organisations own workforce.

## EXPLANATORY NOTES *continued*

---

### RELIABILITY OF THE ESTIMATES

**1.1** Since the figures for private sector and public sector organisations are derived from information obtained from a sample of organisations they are subject to sampling error; that is, they may differ from the figures that would have been obtained if information for all organisations for the relevant period had been included in the survey. A measure of the likely difference is given by the relative standard error of each estimate. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all units had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Relative standard errors of the estimates are shown in tables 14, 15 and 16.

**1.2** An example of the use of standard errors is as follows. If the total value of work done during the quarter is \$2,500m and the associated standard error is 0.5% then there are about two chances in three that the value which would have been derived if there had been a complete collection would have been within the range \$2,488m to \$2,513m and about nineteen chances in twenty that the value would have been within the range \$2,475m to \$2,525m.

**1.3** The imprecision due to sampling variability, which is measured by the relative standard error, should not be confused with inaccuracies that may occur because of inadequacies in the source of information, imperfections in reporting by respondents, and errors made in the coding and processing of data. Inaccuracies of this kind are referred to as non-sampling error, and may occur in any enumeration whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by the careful design of questionnaires, efforts to obtain responses for all selected organisations, and efficient operating procedures. Every effort is made to reduce the non-sampling error to a minimum by the careful design of questionnaires, efforts to obtain responses for all selected organisations, and efficient operating procedures.

**1.4** Caution is advised in respect of the value of work commenced (and consequently, the value of work yet to be done) reported by the public sector. It is known that data reported for value of work commenced are a combination of the following: annual works budget estimates which are reported as commencements in the September quarter (and in some cases may subsequently be undertaken by the private sector); genuine commencements as defined in paragraph 10, and reported quarterly; commencements being reported as equal to the value of work done for the quarter; commencements of major stages in the case of long-term projects.

### SEASONAL ADJUSTMENT

**1.5** Seasonally adjusted statistics for engineering construction activity are shown in tables 2 and 4. In the seasonally adjusted series, account has been taken of normal seasonal factors and the effect of movement in the date of Easter which may, in successive years, affect figures for different quarters. As happens with all seasonally adjusted series, the seasonal factors are reviewed annually to take account of each additional year's data. The results of the latest review were included in the September quarter 1995 issue. Information regarding the methods used in seasonally adjusting the series, is available on request.

## EXPLANATORY NOTES *continued*

.....

**16** Since seasonally adjusted statistics reflect both irregular and trend movements, an upward or downward movement in a seasonally adjusted series does not necessarily indicate a change of trend. Particular care should therefore be taken in interpreting individual quarter to quarter movements.

### ESTIMATES AT CONSTANT PRICES

**17** Estimates of the value of work done at average 198990 prices are presented in original and seasonally adjusted terms for Australia in table2.

**18** Constant price estimates measure changes in value after the direct effects of price changes have been eliminated. The deflators used to revalue the current price estimates in this publication are derived from the same price data underlying the deflators compiled for the dwellings and non-dwelling construction components of the national accounts aggregate *Gross fixed capital expenditure*.

**19** Estimates at constant prices are subject to a number of approximations and assumptions. Further information on the nature and concepts of constant price estimates is contained in Chapter 4 of Australian National Accounts : Concepts, Sources and Methods (5216.0).

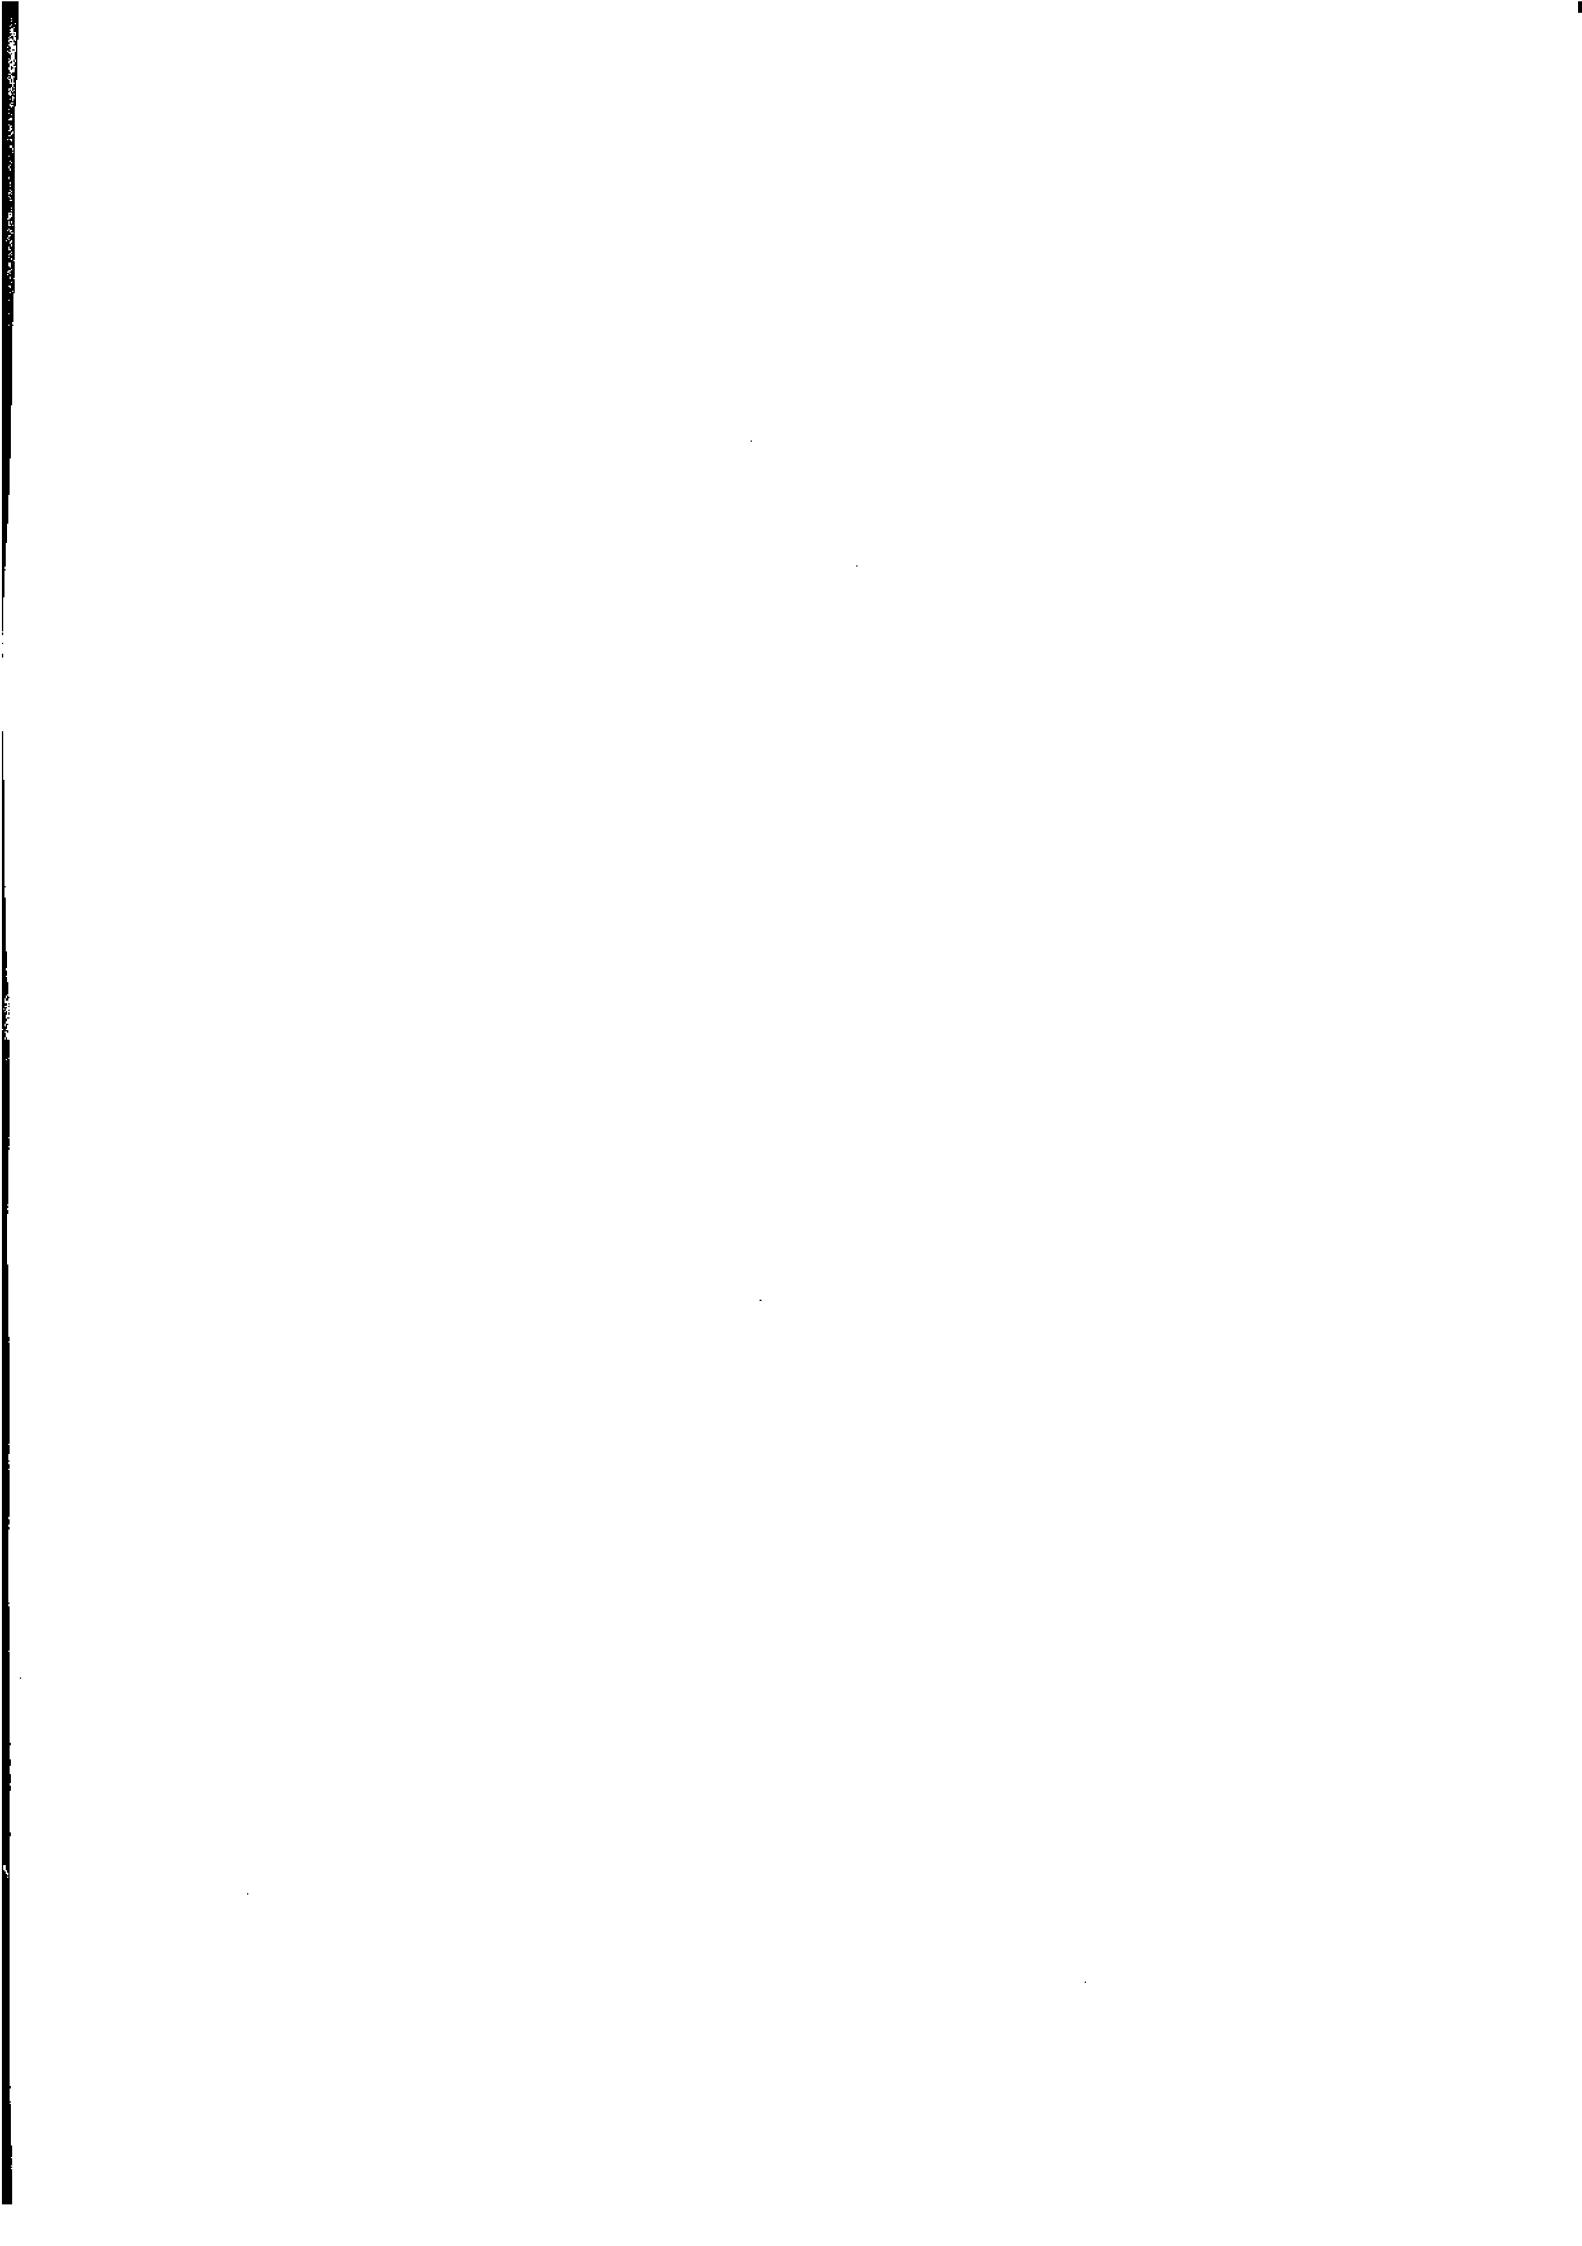

### RELATED PUBLICATIONS

**20** Users may also wish to refer to the following building and construction publications and special products which are available on request

- *Building Approvals, Australia* (8731.0) issued monthly
- *Building Activity, Australia: Dwelling Unit Commencements, Preliminary* (8750.0) issued quarterly
- *Building Activity, Australia* (8752.0) issued quarterly

**21** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

.....

## **For more information . . .**

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the ABS Catalogue of Publications and Products available from all ABS Offices.

### **ABS Products and Services**

Many standard products are available from ABS bookshops located in each State and Territory. In addition to these products, information tailored to the needs of clients can be obtained on a wide range of media by contacting your nearest ABS Office. The ABS also provides a Subscription Service for standard products and some tailored information services.

#### **National Dial-a-Statistic Line**

**0055 86 400**

*Steadycorn P/L; premium rate 25c/20 secs.*

This number gives 24-hour access, 365 days a year, for a range of important economic statistics including the CPI.

#### **Internet**

<http://www.abs.gov.au>

A wide range of ABS information is available via the Internet, with basic statistics available for each State, Territory and Australia. We also have Key National Indicators, ABS product release details and other information of general interest.
