#### **Record Structure**

<i>Field 1</i>	State/Territory (S/T) Code
<i>Field 2</i>	SLA Maincode 2001
<i>Field 3</i>	SLA Name 2001
<i>Field 4</i>	SLA Maincode 2006
<i>Field 5</i>	SLA Name 2006
<i>Field 6</i>	*Area Change (given in hectares to two decimal places)
<i>Field 7</i>	*Percentage Area (percentage given to three decimal places)

\* The 'Area Change' field provides the area of the 2006 SLA either as one total figure if there has been no change to the SLA (in which case the 'Percentage Area' field will be 100%) or over several lines representing the parts that make up the 2006 SLA where there has been a change. Therefore if a 2001 SLA is split into two 2006 SLAs, there will be two records for the 2001 SLA; the 'Area Change' field giving the area of each of the 2006 SLAs, and the 'Percentage Area' field providing a percentage of the 2001 SLA that has gone into each of the 2006 SLAs.

If a 2006 SLA is created from two whole 2001 SLAs, there will be a record for each 2001 SLA. The Percentage Area will be 100%, as the 2001 SLAs have been absorbed into the 2006 SLA, and the Area Change will be the area of each 2001 SLA.
