## **PREFACE .....**

The Australian Standard Geographical Classification (ASGC) is used by the Australian Bureau of Statistics (ABS) for the collection and dissemination of geographically classified statistics. It is an essential reference for understanding and interpreting the geographical context of statistics published by the ABS. The ABS also encourages the use of the ASGC by other organisations to improve the comparability and usefulness of statistics generally.

The ASGC provides seven hierarchies of geographical areas. Each structure is designed to suit different statistical purposes. This edition has four current structures: the Main and the Statistical Region structures covering the whole of Australia; the Local Government Area and the Statistical District structures which cover only part of Australia. The three remaining structures, which are not current, are the Urban Centre and Locality, the Section of State and the Remoteness structures which were last defined in the ASGC Edition 2001. They will next be defined in 2006 as part of the census edition.

Any inquiries regarding the Classification, or suggestions for its improvement, can be made by contacting the Assistant Director, Area Classification, on telephone (02) 62525888, facsimile (02) 62528666, email <[geography@abs.gov.au](mailto:geography@abs.gov.au)> or by writing to PO Box 10, Belconnen, ACT 2616.

Dennis Trewin

## **ABOUT THIS PUBLICATION** .....

### **PURPOSE OF THE ASGC**

The main purpose of the ASGC is for collecting and disseminating geographically classified statistics. These are statistics with a 'where' dimension.

The ASGC provides a common framework of statistical geography and thereby enables the production of statistics which are comparable and can be spatially integrated.

In practice, statistical units such as households and businesses are first classified or assigned to a geographical area in one of the seven ASGC structures. Data collected from these statistical units are then compiled into ASGC defined geographic aggregations which, subject to confidentiality restrictions, are then available for publication.

The purposes of this publication are to outline the ASGC structures, describe the codes and names of geographical areas used and depict the statistical relationship between different types of geography used in the classification.

**CLASSIFICATION  
STRUCTURES**

The seven interrelated classification structures of the ASGC are:

- Main Structure
- Local Government Area Structure
- Statistical District Structure
- Statistical Region Structure
- Urban Centre/Locality Structure
- Section of State Structure
- Remoteness Structure.

Each of these structures serves a specific purpose and is individually discussed in Chapters 2–8.

In Census of Population and Housing years (e.g. 1996, 2001), all structures of the ASGC are defined. In intercensal years, only the first four structures are defined.

The Main Structure, the Statistical Region Structure, the Section of State Structure, and the Remoteness Structure cover the whole of Australia without gaps or overlaps. The other structures cover only part of Australia. The structures are hierarchical, with different structures having different numbers of levels (see table 1). Each hierarchical level is made up of one type of geographical spatial unit. The spatial units at each higher level are aggregations of the spatial units at the previous lower level.

**SPATIAL UNITS**

The various geographical areas, or spatial units, which build the different classification structures are as follows:

- Census Collection District (CD)
- Statistical Local Area (SLA)
- Statistical Subdivision (SSD)
- Statistical Division (SD)
- State and Territory (S/T)
- Statistical District (S Dist.)
- Local Government Area (LGA)
- Statistical Region Sector (SRS)
- Statistical Region (SR)
- Major Statistical Region (MSR)
- Urban Centre/Locality (UC/L)
- Section(s) of State (SOS)
- Remoteness Area (RA).

During Population Census years, the smallest spatial unit is the CD. It is the basic building block of the classification structures. Between censuses, the smallest spatial unit is the SLA. Thus for those years when a census is held, all the above spatial units are defined. In intercensal years, all units except CDs, UC/Ls, SOS and RAs are defined.

These spatial units are individually explained in Chapters 2–8.

**SUMMARY TABLES**

The various ASGC structures and their component spatial units are shown in the following table:

**SUMMARY OF ASGC STRUCTURES**

ASGC Structure	Hierarchical Levels	Component Spatial Units	Covers whole of Australia?
Local Government Area	4	CD,SLA,LGA,S/T	No
Statistical District	4	CD,SLA,SSD,S Dist	No
Main	5	CD,SLA,SSD,SD,S/T(a)	Yes
Statistical Region	6	CD,SLA,SRS,SR,MSR,S/T	Yes
Section of State	3	CD,SOS,S/T	Yes
Remoteness	3	CD,RA,S/T	Yes
Urban Centre/Locality	2	CD,UC/L	No

(a) Only that part of the S/T which comes under the responsibility of an incorporated Local Government Council. (See Chapter 3 p. 19)

The number of spatial units in the various ASGC structures current at 1 July 2004 are shown below:

**SUMMARY OF ASGC SPATIAL UNITS AS AT 1 JULY 2004**

Spatial Unit	NSW	Vic.	Qld.	SA	WA	Tas.	NT	ACT	OT	Aust.
S/T	1	1	1	1	1	1	1	1	1	9
SD	13	12	12	8	10	5	3	2	1	66
SSD	50	46	31	21	29	9	12	8	1	207
SLA	198	206	481	125	156	44	93	107	3	1 413
LGA	165	79	158	68	142	29	37	0	0	678
S Dist.(a)	11	7	10	0	4	2	0	1	0	35
MSR	2	2	2	2	2	1	1	1	1	14
SR	22	14	11	6	7	1	1	1	1	64
SRS	25	14	29	6	7	3	2	1	1	88

(a) Counted in predominant state or territory.

## ASGC STRUCTURAL CHART

The diagram below depicts the various ASGC structures and shows how they interrelate.

## PRINCIPLES OF THE ASGC

The ASGC is constructed on the principle that it must fulfil user needs for spatial statistics while also conforming to general classification principles.

*Classification principles*

The ASGC is constructed on the basic classification principles that members within one class are of the same type, classes are uniquely defined so as to be mutually exclusive and, in total, the members in each class cover the entire class.

As a result, the geographical units of each hierarchical level in each classification structure of the ASGC are:

- of the same type, delimited by well-defined criteria
- clearly demarcated by precise boundaries
- uniquely identified by codes and names
- mutually exclusive
- in aggregate cover the whole area to which that hierarchy applies.

*User needs*

The ASGC is designed to meet user needs for social, demographic and economic statistics. The smallest units of the ASGC i.e. CDs at census times and SLAs at intercensal times, have been designed such that they are:

- convenient and efficient for data collection
- useful and relatable for data dissemination
- flexible for aggregation to larger units
- useful building blocks for user-defined regions.

Thus, CDs are designed for efficient data collection at census times. Each CD covers an area which allows census data to be collected in an efficient and cost effective manner. SLAs are defined on the administrative areas of local governments. Local governments are both a useful source of data and a relatable dissemination unit for users.

CDs aggregate to SLAs which in turn aggregate to other larger areas of the ASGC. Each of these geographical areas serves a specific purpose and meets user needs. Many organisations employ the CDs and the SLAs as the building blocks to construct their own geography for statistical purposes.

**DEFINITION OF AUSTRALIA**

For ASGC purposes, the ABS uses the definition of Australia as set out in section 17(a) of the *Acts Interpretation Act 1901* which currently defines Australia or the Commonwealth as meaning:

‘...the Commonwealth of Australia and, when used in a geographical sense, includes the Territory of Christmas Island and the Territory of Cocos (Keeling) Islands, but does not include any other external Territory.’

Following the incorporation of the Territories of Christmas Island and Cocos (Keeling) Islands into geographic Australia (by the *Territories Law Reform Act*, No. 104, 1992, which amended the *Acts Interpretation Act 1901*), these two territories were included in the ASGC from 1 July 1993. Other external territories (such as Norfolk Island) remain excluded. In addition, the treatment of Jervis Bay Territory in the ASGC changed from 1 July 1993.

Jervis Bay Territory was previously included with the Australian Capital Territory for statistical purposes because of its administrative association with the Australian Capital Territory and because its relatively small size prevented it from meeting confidentiality requirements for statistical output. Following the granting of self-government to the Australian Capital Territory in May 1989, the situation was reviewed and from the 1 July 1993 Edition of the ASGC, Jervis Bay Territory, along with the Territory of Christmas Island and the Territory of Cocos (Keeling) Islands, formed part of a new category, Other Territories, at the state/territory level. Although included as part of the ASGC, all three of these territories are currently regarded as out-of-scope for ABS censuses and surveys except for the Census of Population and Housing, population estimates, and Cause of Death.

## CHAPTER 2 MAIN STRUCTURE .....

### CONTENTS

	<i>page</i>
Purpose .....	7
The Structure .....	7
The Spatial Units .....	7

**PURPOSE**

The Main Structure of the ASGC is used to collect and disseminate a broad range of ABS social, demographic and economic statistics. Although the Main Structure is the most widely used and has broad application, the other structures are equally important to their own purposes. Maps depicting the Main Structure boundaries are provided in Chapter 14.

**THE STRUCTURE**

The Main Structure has five hierarchical levels at Population Census times, comprising in ascending order: CDs—SLAs—SSDs—SDs—S/Ts. In non-census years, CDs are undefined and the Main Structure thus has only four levels of hierarchy.

In this structure, CDs aggregate to form SLAs, SLAs aggregate to form SSDs and this aggregation principle continues up the remaining hierarchical levels. At each hierarchical level, the component spatial units (e.g. SLAs) collectively cover all of Australia (as defined in Chapter 1, p. 5) without gaps or overlaps.

**Tables**

Detailed tables of the Main Structure are shown in Chapter 13 — The Classification Structures.

For example:

- Main Structure — Broad

(showing three hierarchical levels: S/T—SD—SSD)

S/T	SD	SSD	NAME
4			SOUTH AUSTRALIA
<b>05</b>			<b>Adelaide</b>
	05		Northern Adelaide
	10		Western Adelaide

- Main Structure — Detailed

(showing four hierarchical levels: S/T—SD—SSD—SLA)

S/T	SD	SSD	SLA	NAME
4				SOUTH AUSTRALIA
<b>05</b>				<b>Adelaide</b>
	05			Northern Adelaide
	2030			Gawler (T)
	5681			Playford (C) - East Central
	10			Western Adelaide
	1061			Charles Sturt (C) - Coastal
	1064			Charles Sturt (C) - Inner East

**THE SPATIAL UNITS****Census Collection District  
(CD)**

CDs are designed for use in census years for the collection and dissemination of Population Census data. In non-census years, CDs are undefined. In aggregate, CDs cover the whole of Australia (as defined in Chapter 1, p. 5) without gaps or overlaps.

*Census Collection District  
(CD) continued*

The CD is the smallest spatial unit in the ASGC. CDs aggregate to form the larger spatial units of SLAs in the Main, Statistical Region, Statistical District and LGA Structures, SOS in the SOS Structure, Urban Centres and Localities in the UC/L Structure and Remoteness Areas in the Remoteness Structure. Aggregation of SLAs in turn forms the remaining spatial units in the ASGC. Therefore, in census years, the CD is the common denominator which integrates all classification structures in the ASGC (see ASGC Structural Chart, Chapter 1, p. 4).

The traditional concept of a CD is that it defines an area that one census collector can cover, delivering and collecting census forms, in about a ten-day period. However, in the interests of comparability between censuses, this criterion is no longer strictly observed. In the 2001 edition, many urban CDs were of a size such that census collectors may have been allocated more than one CD. In urban areas CDs average about 220 dwellings. In rural areas the number of dwellings per CD reduces as population densities decrease. By design, CD boundaries do not cross SLA (and thus LGA) boundaries. Therefore, an aggregation of CDs covers the administrative area of a local government.

For the 2001 Census, 37,209 CDs were defined throughout Australia.

*Delimitation of CDs*

For the 2001 Census, the following criteria were used for delimiting CDs:

- CDs should be consistent with the requirements of a collector's workload and be a useful spatial unit providing the building blocks capable of aggregation into broader level ASGC spatial units.
- The area and population delimited by a CD boundary must not be so great that one collector cannot deliver and collect census forms within about ten days.
- The chosen CD boundaries should, if possible, be readily identifiable on the ground, be defined in terms of permanent features, follow the centre of a road or river if these features are used and should delimit CDs which conform to existing and proposed land uses. The use of major roads as CD boundaries in rural areas should be avoided where possible, i.e. to minimise splitting of identifiable rural localities.
- CDs should conform where possible to existing/gazetted suburb boundaries. CDs must not cross SLA boundaries and, as a consequence, any other ASGC spatial unit boundary.
- CDs should not be designed in such a way as to make them confidential for publication of data. Accordingly, a CD should contain, where possible, at least 100 persons at the next census. For dissemination purposes, Indigenous Community CDs will have a limit of 80 persons.
- CDs in aggregate must cover the whole of Australia (as defined in Chapter 1, p. 5) without gaps or overlaps.

*Special purpose CDs*

Special purpose CDs are created so that special enumeration procedures can be applied. They include:

- Indigenous Community CDs
- Defence Establishments CDs
- Mining or Construction towns or camps CDs
- Major Waterways CDs.

A number of these special purpose CDs have no actual boundary. They are represented as points instead of areas on maps.

*Special purpose CDs  
continued*

Indigenous Community CDs are defined where there is a significant Indigenous population.

Defence Establishments CDs are defined where there is a clear boundary and special enumeration procedures are required.

Mining or Construction CDs are defined when the town or camp is expected to exist for at least two censuses.

Major Waterways CDs consist of water only and contain no population. They are mostly found in urban areas where an LGA boundary extends from the shore to include part of a body of water.

Nil CDs are created for areas where it is not expected that persons or dwellings will be enumerated. This may be an expanse of National Park which, if included in an adjoining populated area would provide a distorted view of population density for that area.

*Off-shore, shipping and  
migratory CDs*

Off-shore, shipping and migratory CDs are not spatial units in the usual sense — they have no defined boundaries. They are designed to facilitate the recording of people on census night who are off-shore on oil rigs, drilling platforms and other structures; on board vessels in and between Australian ports; or are in transit on board long distance trains, buses and aircraft.

Off-shore, shipping and migratory CDs are not defined for the Australian Capital Territory and the Other Territories. For the 2001 Census, Australian residents temporarily in Antarctica, Heard or Macquarie Islands, were included in the off-shore, shipping and migratory CDs of Tasmania.

*CD codes*

CDs are identified by unique six-digit codes within each S/T.

Example:

1160501 is CD 160501 of New South Wales

5051901 is CD 051901 of Western Australia

*Statistical Local Area  
(SLA)*

The SLA is a general purpose spatial unit. It is the base spatial unit used to collect and disseminate statistics other than those collected from the Population Censuses. In non-census years, the SLA is the smallest unit defined in the ASGC. In census years, an SLA consists of one or more whole CDs. In aggregate, SLAs cover the whole of Australia (as defined in Chapter 1, p. 5) without gaps or overlaps.

SLAs aggregate directly to form the larger spatial units of SSDs in the Main Structure, SRSSs in the SR Structure and LGAs in the LGA Structure (see ASGC Structural Chart, Chapter 1, p. 4). SSDs in turn aggregate to form the larger spatial units of S Dists in the S Dist. Therefore, the SLA is the common denominator which integrates the four classification structures in use in both census and non-census years.

In this edition of the ASGC, there are 1,413 SLAs in Australia including one SLA for each of the three Territories of Jervis Bay, Christmas Island and Cocos (Keeling) Islands.

SLAs are listed in the table — Local Government Areas and Statistical Local Areas — Alphabetic — in Chapter 13.

*Delimitation of SLAs*

SLAs are based on the boundaries of incorporated bodies of local government where these exist. These bodies are the Local Government Councils and the geographical areas which they administer are known as Local Government Areas (LGAs).

An LGA is an SLA if it fits entirely within an SSD and is broadly similar in size, economic significance and user needs for statistics to other LGAs in Australia.

For example, the SLA Albury (C) corresponds to the whole LGA of City of Albury in New South Wales. In this edition of the ASGC, 505 of the total 1,413 SLAs, approximately 36%, equate with a whole LGA while approximately 74% of LGAs equate with one SLA.

An LGA will be composed of two or more SLAs when the above conditions are not met. This can occur if an LGA is divided by the boundary of one or more SSDs or where the LGA is substantially different in size, economic significance and user needs for statistics to other LGAs. The LGA is then split into two or more SLAs which generally correspond to one or more suburbs (as occurs in the predominantly urban LGA of the City of Brisbane) or other areas of interest.

For example, the LGA of Shire of Calliope in Queensland is split into two SLAs Calliope (S) - Pt A and Calliope (S) - Pt B because it is split by an SSD boundary, and, the LGA of the City of Brisbane is split into 158 SLAs generally based on suburbs.

There are large parts of Australia which are not administered by incorporated local government bodies. For those areas an SLA is an unincorporated area. Unincorporated SLAs are defined for unincorporated on-shore area(s) and/or off-shore island(s) in an SSD or are defined for that part of an unincorporated area which is considered of sufficient economic significance as to warrant the formation of a separate SLA.

For example, Unincorp. Pirie is an unincorporated SLA in the Pirie SSD in South Australia and Unincorp. Islands is an unincorporated SLA in North West SSD in Queensland. Similarly the SLAs of Petermann and Tanami in Central NT SSD in the Northern Territory are unincorporated areas.

Other large parts of Australia which are unincorporated include the unincorporated part of the Northern Territory. For the SSD Daly the entire area is covered by one unincorporated SLA. In other SSDs (e.g. East Arnhem), the unincorporated area is split into several SLAs to distinguish an economically significant town (e.g. Nhulunbuy), island (e.g. Groote Eylandt) or administrative region. The Australian Capital Territory is entirely an unincorporated area where each SLA is either a suburb, a locality or the non-urban area of an SSD.

Off-Shore Areas & Migratory SLAs, formed for census purposes for all S/Ts except the Australian Capital Territory and Other Territories to encompass off-shore, shipping and migratory CDs (off-shore, shipping and migratory CDs are explained in Chapter 2, p. 9)

*SLA name*

The naming conventions for SLAs are as follows:

- An SLA which is a whole LGA adopts the name of the LGA including its LGA status as a suffix. Thus, Northam (S) and Northam (T) in Western Australia are separate SLAs. The various LGA types currently in use by states and the Northern Territory are specified in Chapter 3, p. 19.

*SLA name continued*

- An SLA which is part of an LGA may adopt a hyphenated name the first part of which is the name of the LGA.

For example, the LGA of Stirling (C) in Western Australia is split into three SLAs:

Stirling (C) - Central  
Stirling (C) - Coastal  
Stirling (C) - South-Eastern

- If the name includes - Pt A, - Pt B, or - Pt C, this indicates the SLAs were formed by splitting an LGA between two or more SSDs and - Pt A usually denotes the more urban part of the split LGA.

For example, the LGA of the Municipality of Latrobe in Tasmania is split into two SLAs:

Latrobe (M) - Pt A  
Latrobe (M) - Pt B

- An SLA which is part of an LGA may adopt a locality or suburb name.

For example, the LGA of the City of Brisbane in Queensland is split into 158 SLAs, including:

Acacia Ridge  
Albion  
Yeronga  
Zillmere

- The name of an SLA which covers an unincorporated area does not contain LGA type. In New South Wales, Queensland and South Australia the SLA name may include Unincorp.

For example, the SLAs West Arnhem (in Northern Territory) Bruce (in Australian Capital Territory) and Unincorp. Far West (in New South Wales).

- A small number of SLA names are duplicated across S/Ts and one SLA name is duplicated within an S/T. These names become unique when used in conjunction with SLA codes.

Example:

City (Queensland and Australian Capital Territory)  
City - Inner (Queensland and Northern Territory)  
City - Remainder (Queensland and Northern Territory)  
Kingston (Queensland and Australian Capital Territory)  
Oxley (Queensland and Australian Capital Territory)  
Red Hill (Queensland and Australian Capital Territory)  
West End (Townsville (C) and Brisbane (C))

**SLA code**

The coding conventions for SLAs are as follows:

- SLAs are identified by four-digit codes. These codes are unique only within an S/T.
- For unique Australia-wide identification the four-digit SLA code must be preceded by the unique one-digit S/T code.

Example:

Barraba (A) 0400 (in New South Wales) (S/T code 1)  
Barcaldine (S) 0400 (in Queensland) (S/T code 3)

- The fourth (last) digit of the SLA code indicates the following:
  - 0 means the SLA is a whole LGA.

Example:

Ashburton (S) 0250 (in Western Australia)  
■ 1–8 means the SLA is part of an LGA.

Example:

Sorell (M) - Pt A 4811 (in Tasmania)  
Sorell (M) - Pt B 4812 (in Tasmania)  
■ 9 means the SLA is either an unincorporated area, an Off-Shore Areas & Migratory SLA or an undefined category (see Chapter 3, p. 18; Chapter 2, p. 10 or Chapter 9, p. 41, respectively).

Example:

Bruce 0729 (in Australian Capital Territory)

Off-Shore Areas & Migratory 9779

- Within each S/T, SLA codes are in the range of 0001–9990; codes ending with 99 and those within the range of 9991–9999 have been reserved for special purposes (see Chapter 9, pp. 41–43).
- In the Main Structure, SLA codes are arranged in ascending numerical order within an SSD. Gaps have been provided between the codes for future expansion or change.

**Statistical Subdivision (SSD)**

The SSD is a general purpose spatial unit of intermediate size between the SLA (smaller) and the SD (larger) in the Main Structure.

- SSDs consist of one or more SLAs. In aggregate, they cover Australia (as defined in Chapter 1, p. 5) without gaps or overlaps. The larger spatial units of SDs and S Dists can be formed by aggregation of SSDs (see ASGC Structural Chart, Chapter 1, p. 4). SSDs do not cross S/T boundaries except in the case of the Other Territories SSD, which comprises the three Territories of Jervis Bay, Christmas Island and Cocos (Keeling) Islands.

In this edition of the ASGC, there are 207 SSDs in Australia.

**Delimitation of SSDs**

The delimitation criteria for SSDs are as follows:

- SSDs are defined as socially and economically homogeneous regions characterised by identifiable links between the inhabitants. Moreover, in the non-urban areas (i.e. outside the capital cities or areas with population clusters of 25,000 or more people), an SSD is characterised by identifiable links between the economic units within the region, under the unifying influence of one or more major towns or cities.

*Delimitation of SSDs  
continued*

- Where possible, SSD boundaries embrace contiguous whole LGAs. However, in some cases e.g. where S Dists or capital city SDs have been defined, an SSD boundary may split the LGA into parts with each part of the LGA forming part of the relevant SSD. For example, the SSDs of Gold Coast City Part A and Gold Coast City Part B dissect the LGA of the City of Gold Coast in Queensland.
- One or more SSDs must be defined for an S Dist. that falls within an S/T.

For example, the Ballarat City SSD in Victoria covers the same area as the Ballarat S Dist.

- One or more SSDs must be defined for each part of an S Dist. which straddles an S/T boundary.

For example, the Albury SSD in New South Wales plus the Wodonga SSD in Victoria together cover the same area as the Albury-Wodonga S Dist. which lies partly in New South Wales and partly in Victoria.

- Where an SD contains an S Dist. (or part of an S Dist.), one or more SSDs must be defined for the S Dist. and at least one SSD for the remainder of the SD which falls outside the S Dist. even though the SSD(s) so defined may not have a predominant town or cluster of towns with a unifying socioeconomic influence over the region.

For example, in New South Wales, the SSD of Hunter SD Bal is defined as the part of the Hunter SD which is outside the Newcastle S Dist. (and Newcastle SSD).

- One Off-Shore Areas & Migratory SSD is defined for each S/T except the Australian Capital Territory and Other Territories.

*SSD code*

The coding conventions for SSDs are as follows:

- SSDs are identified by unique two-digit codes within SDs. Unique Australia-wide identification of SSDs is obtained by use of a five-digit code comprising S/T code (digit 1), SD code (digits 2–3) and SSD code (digits 4–5).

For example, Albury 15505 (in New South Wales) and Wodonga 24505 (in Victoria).

- SSD code 88 has been reserved for special purposes (see Chapter 9, p. 43).
- In the Main Structure, SSD codes are arranged in ascending numerical order within an SD. Gaps have been provided between the codes for future expansion or change.

*Statistical Division (SD)*

The SD is a general purpose spatial unit and is the largest and most stable spatial unit within each S/T in the Main Structure.

SDs consist of one or more SSDs. In aggregate, they cover Australia (as defined in Chapter 1, p. 5) without gaps or overlaps. SDs aggregate to form S/Ts (see ASGC Structural Chart, Chapter 1, p. 4).

In this edition of the ASGC, there are 66 SDs in Australia including one SD for the three Territories of Jervis Bay, Christmas Island and Cocos (Keeling) Islands.

*Delimitation of SDs*

The current basis for delimiting SDs was determined by the 31st and 33rd Conferences of Statisticians of Australia in 1969 and 1973. The delimitation criteria are as follows:

- SDs should ideally be delimited on the basis of socioeconomic criteria and should, where possible, embrace contiguous whole local government areas.
- SD boundaries so delimited should be changed only at infrequent intervals, for example, at periods of 15–20 years.

*Delimitation of SDs  
continued*

- SD boundaries should be determined in time for use in the next Population Census if practicable.
- A Capital City SD (currently one in each capital city) should be defined, after consultation with planners, to contain the anticipated development of the city for a period of at least 20 years. This fixed SD boundary — as distinct from the moving urban centre boundary — delimits an area which is stable for general statistical purposes. It represents the city in a wider sense. This delimitation procedure cannot be applied to the separate urban centres within a Capital City SD.
- SDs outside a capital city should be defined as a relatively homogeneous region characterised by identifiable social and economic links between the inhabitants and between the economic units within the region, under the unifying influence of one or more major towns or cities.

More specifically, the SDs within the individual S/T have been delimited as follows:

- In New South Wales, SDs correspond to proclaimed Government Regions with the exception that North Coast Region consists of the SDs of Richmond-Tweed and Mid-North Coast. These Regions were delimited to maximize the degree of socioeconomic interactions within each Region. Information on transport patterns, telephone traffic between major cities and towns, retail shopping, fresh goods marketing, provincial newspaper circulation areas and coverage of principal radio stations were all used in delimiting these boundaries.
- In Victoria, the SDs prior to 1995 generally corresponded to State Planning Regions adopted by the Victorian Government in October 1981. However, following the restructuring of local government in that State during 1994 and 1995, the SDs were redefined to accord with the general considerations and criteria outlined above.
- In Queensland, formal State Planning Regions have been abolished. SDs are used on an informal basis for State Government planning purposes where relevant. SD delimitation follows the general criteria outlined above.
- In South Australia, State Planning Regions, as proposed by the Committee on Uniform Regional Boundaries for Government Departments (CURB), were adopted by the South Australia Government in 1976. CURB Regions were based on such factors as: population density and distribution, socioeconomic characteristics, political boundaries, government service areas, newspaper circulation, retail trading patterns, etc. Prior to 1998, South Australian SDs did not always correspond to CURB Regions but they always aggregated to these Regions. However, following the restructuring of local government in South Australia in 1996 and 1997, the SDs were redefined to accord with the general considerations and criteria outlined above.
- In Western Australia, State Planning Regions, as proposed by the State Statistical Coordination Committee, were adopted by the Western Australia Government in January 1976. SDs in Western Australia correspond to these Regions. The Perth Metropolitan Region is delimited to be consistent with the overall concepts and planning of Perth and to take into account LGA and CD boundaries. Rural Regions on the other hand are delimited based on the socioeconomic interest of the community; the character of natural resource; the distribution of population and industries; town size; road and railway systems; and production and marketing practices.

*Delimitation of SDs  
continued*

- In Tasmania, SD delimitation follows the general considerations and criteria outlined above. They are considered satisfactory for the purpose of State Government planning.
- In the Northern Territory, SDs are based on Territory Government Administrative Regions, and are consistent with the general considerations and criteria for their delimitation described above.
- In the Australian Capital Territory, SD delimitation follows the general considerations and criteria outlined above.
- In the Other Territories, the SD has been delimited to represent the aggregated area of the Territories of Jervis Bay, Christmas Island and Cocos (Keeling) Islands.

*SD name*

SD names tend to indicate their generalised region (e.g. Far North in Queensland). SD names are unique only within an S/T as a small number of SD names are replicated between the states (see example below). SD names become unique when used in conjunction with their SD codes or referenced to their respective state code. One Off-Shore Areas & Migratory SD is defined for each S/T except the Australian Capital Territory and the Other Territories.

Example:

Central West (in New South Wales and Queensland)  
 Northern (in New South Wales, Queensland, South Australia and Tasmania)  
 South West (in Queensland and Western Australia)  
 South Eastern (in New South Wales and Western Australia)

*SD code*

The coding conventions for SDs are as follows:

- SDs are identified by unique two-digit codes within an S/T. Unique Australia-wide identification of SDs requires a three-digit code comprising S/T code (digit 1) and SD code (digits 2–3).

Example:

Adelaide 405  
 Kimberley 545

- The SD code 85 is reserved for Off-Shore Areas & Migratory SDs and the SD code 88 has been reserved for special purposes (see Chapter 9, p. 42).
- In the Main Structure, SD codes are arranged in ascending numerical order within an S/T. Gaps have been provided between the codes for future expansion or change.

*State and Territory (S/T)*

The S/T is the largest spatial unit in the Main Structure and in the ASGC.

Six states and five territories are recognised in the ASGC: New South Wales, Victoria, Queensland, South Australia, Western Australia, Tasmania, Northern Territory, Australian Capital Territory, Jervis Bay Territory and the external Territories of Christmas Island and Cocos (Keeling) Islands.

These spatial units are political entities with fixed boundaries. Except for the last three mentioned territories, the total area of each S/T, including their off-shore islands, is used for statistical purposes as a separate spatial unit in the ASGC. Jervis Bay Territory, and the Territories of Christmas Island and Cocos (Keeling) Islands are included as one spatial unit at the S/T level under the category of Other Territories.

*State and Territory (S/T)  
continued*

S/Ts consist of one or more SDs. In aggregate, they cover Australia (as defined in Chapter 1, p. 5) without gaps or overlaps.

S/Ts are identified by unique one-digit codes within Australia as follows:

Code	S/T
1	New South Wales
2	Victoria
3	Queensland
4	South Australia
5	Western Australia
6	Tasmania
7	Northern Territory
8	Australian Capital Territory
9	Other Territories

This coding order has been widely used in the ABS and other organizations as a standard for many years. The order was reviewed when Western Australia displaced South Australia as the fourth most populous state. Citing the Commonwealth Table of Precedence, which adopted a revised listing such that any textual material having protocol significance should list Western Australia before South Australia, some users requested the code for Western Australia be changed to four and South Australia to five. For the ASGC however, the above order was maintained to ensure historical continuity, to reduce potential errors in data handling and interpreting, and to avoid costs associated with changing existing systems.

**CHAPTER 3****LOCAL GOVERNMENT AREA STRUCTURE .....****CONTENTS**

	<i>page</i>
Purpose .....	18
The Structure .....	18
The Spatial Units .....	19

**PURPOSE**

The LGA Structure shows the relationship between LGAs and SLAs. This relationship can be one LGA to one SLA or one LGA to many SLAs.

The LGA Structure is separate from the Main Structure because:

- Unlike spatial units in the Main Structure, LGAs do not cover the whole of Australia
- Unlike SLAs which aggregate to form SSDs and SDs, some LGAs do not wholly fit within an SSD and an SD (e.g. Gold Coast City in Queensland).

**THE STRUCTURE***Incorporated areas only*

The LGA Structure covers only incorporated areas of Australia. Incorporated areas are legally designated parts of states and territories over which incorporated local governing bodies have responsibility. The major areas of Australia not administered by incorporated bodies are the northern parts of South Australia, most of the Northern Territory and all of the Australian Capital Territory and the Other Territories.

In Population Census years the LGA Structure has four levels of hierarchy, in ascending order these are: CDs—SLAs—LGAs—S/Ts (Incorporated Areas). In non-census years CDs are not defined and consequently the LGA Structure has only three levels: SLAs—LGAs—S/Ts (Incorporated Areas). The spatial units in each level relate to each other in a straightforward manner: LGAs comprise one or more whole SLAs and SLAs comprise one or more whole CDs.

*Processing LGAs for the ASGC*

LGAs are proclaimed by state and territory government authorities and changes are gazetted throughout the year. The ABS has broadened the categories of legislation used to define local government areas for statistical purposes, to include the Indigenous Council areas in the states and Northern Territory.

LGAs are used as the base on which SLAs are defined. Because this definition process takes time, LGAs gazetted during the year leading up to an ASGC edition cannot always be included in that edition. For instance, complex LGA changes which result in complicated redesign of SLAs, or changes gazetted too close to the effective date of 1 July of an ASGC edition, may have to be included in a later edition.

*Table*

The current LGA Structure, down to SLA level, is shown in Chapter 13, The Classification Structures.

For example:

- Local Government Areas and Statistical Local Areas — Alphabetic

S/T	LGA Name	LGA	SLA Name	SD	SSD	SLA
1	Albury (C)	10050	Albury (C)	155	15505	155050050
1	Armidale Dumaresq (A)	10110				
1			Armidale Dumaresq (A) - City	130	13015	130150111
1			Armidale Dumaresq (A) Bal	130	13015	130150112

Note that there is no SD or SSD code for the LGA because LGAs are not part of the Main Structure. This table also shows SLAs which cover unincorporated areas and are therefore not part of the LGA Structure.

*Table continued*

For example:

S/T	LGA Name	LGA	SLA Name	SD	SSD	SLA
1			Unincorp. Far West	160	16010	160108809

**THE SPATIAL UNITS***Census Collection District  
(CD)*

See Chapter 2, pp. 7–8.

*Statistical Local Area  
(SLA)*

See Chapter 2, pp. 9–12.

*Local Government Area  
(LGA)*

An LGA included in the ASGC LGA Structure is a spatial unit which represents the whole geographical area of responsibility of an incorporated Local Government Council, an Aboriginal or Island Council in Queensland, or a CGC in the Northern Territory.

An LGA consists of one or more SLAs. LGAs aggregate directly to form the incorporated areas of S/Ts (see ASGC Structural Chart, Chapter 1, p. 4). In this edition of the ASGC, there are 678 LGAs defined.

*Delimitation of LGAs*

The creation and delimitation of LGAs is the responsibility of the state and territory Governments. The number of LGAs, their names and their boundaries vary over time.

Local government bodies perform a wide range of functions in the areas they administer. These functions are defined in legislation such as:

- The Local Government Acts in each state and the Northern Territory
- The Indigenous Council Acts in each state and the Northern Territory
- Specific Acts and regulations establishing Local Government Areas in Queensland, *City of Brisbane Act 1924*, and the Commonwealth Aluminium Corporation Pty Limited Agreement (Weipa Town Area) Regulation 1994.

*LGA status*

In all states and the Northern Territory each incorporated area has an official status. In this ASGC edition, the various LGA status types currently in use are:

- New South Wales: Cities (C) and Areas (A)
- Victoria: Cities (C), Rural Cities (RC), Boroughs (B) and Shires (S)
- Queensland: Cities (C), Shires (S), Towns (T), Aboriginal Councils (AC) and Island Councils (IC)
- South Australia: Cities (C), Rural Cities (RC), Municipalities/Municipal Councils (M), District Councils (DC) and Regional Councils (RegC)
- Western Australia: Cities (C), Towns (T) and Shires (S)
- Tasmania: Cities (C) and Municipalities (M)
- Northern Territory: Cities (C), Towns (T), Community Government Councils (CGC) and Shires (S).

*LGA name*

In the LGA Structure LGA names are contracted. A suffix also indicates the LGA status.

*LGA name continued*

## Example:

City of Albury	Albury (C)
District Council of Copper Coast	Copper Coast (DC)

LGA names are not unique across states and territories (e.g. Campbelltown (C) is duplicated between New South Wales and South Australia). An LGA name will become unique when used in conjunction with a state code, or its LGA code.

*LGA code*

LGAs are identified by four-digit codes as follows:

- Codes are unique only within an S/T. For unique Australia-wide LGA code identification, the four-digit code must be preceded by the S/T code. All LGA codes end with the digit 0.
- Where an LGA corresponds to an SLA, the LGA code and the SLA code are identical.
- Where an LGA consists of more than one SLA, generally the first three digits of the LGA code and the SLA code are identical.

For example, the LGA Latrobe (M) has two SLAs.

The exceptions to this rule are explained in special case LGA codes below.

*Special case LGA codes*

When an LGA consists of many component SLAs, it becomes impossible to maintain a three-digit link between the LGA code and the SLA codes. This occurs for the LGAs of: Queensland — Brisbane (C), Gold Coast (C), Logan (C), Pine Rivers (S), Redland (S), Caboolture (S), Maroochy (S), Ipswich (C), Cairns (C), Thuringowa (C) and Townsville (C); and for the Northern Territory — Darwin (C) and Palmerston (T).

For example, the LGA of Brisbane (C) in Queensland is split into 158 SLAs, including:

Acacia Ridge 1001  
Yeronga 1648  
Zillmere 1653

*State/Territory (S/T)*

See Chapter 2, pp. 15–16.

## CHAPTER 4 STATISTICAL DISTRICT STRUCTURE .....

### CONTENTS

	<i>page</i>
Purpose .....	22
The Structure .....	22
The Spatial Units .....	22

**PURPOSE**

The S Dist. Structure maintains a list of selected, significant, predominantly urban areas in Australia which are not located within a Capital City SD (see Chapter 2, p. 14). S Dists enable comparable statistics to be produced about these selected urban areas. In the main, the structure is used to report intercensal population estimates.

S Dists are maintained as a separate structure from the Main Structure because:

- the total area of S Dists does not cover the whole of Australia
- some S Dists straddle S/T boundaries (e.g. the Gold Coast-Tweed S Dist. lies partly in Queensland and partly in New South Wales).

**THE STRUCTURE**

The S Dist. Structure has four levels of hierarchy in census years, comprising in ascending order: CDs–SLAs–SSDs–S Dists. In non-census years, with CDs undefined, it has only three levels of hierarchy (see ASGC Structural Chart, Chapter 1, p. 4).

In this structure, CDs, SLAs and SSDs are confined to those which fall within S Dists. The spatial units relate to each other through aggregation or disaggregation. For example, CDs aggregate to SLAs while SLAs are disaggregates of SSDs. The spatial units within each level of the S Dist. Structure do not collectively cover the whole of Australia.

*Table*

The current S Dist. Structure, down to SLA level, is shown in the following table in Chapter 13 of this manual:

*S Dist. Structure*

(showing three hierarchical levels: S Dist.–SSD–SLA)

<i>SDIST</i>	<i>SSD</i>	<i>SLA</i>	<i>NAME</i>
1003			NEWCASTLE (NSW)
<b>11005</b>			<b>Newcastle</b>
	1720		Cessnock (C)
	4650		Lake Macquarie (C)
	5050		Maitland (C)
	5901		Newcastle (C) - Inner
	5902		Newcastle (C) - Remainder
	6400		Port Stephens (A)

**THE SPATIAL UNITS**

See Chapter 2, pp. 7–9.

*Census Collection District  
(CD)**Statistical Local Area  
(SLA)*

See Chapter 2, pp. 9–12.

*Statistical Subdivision  
(SSD)*

See Chapter 2, pp. 12–13.

*Statistical District  
(S Dist.)*

S Dists are predominantly urban areas, the boundaries of which are designed to contain the anticipated urban spread of the area for at least 20 years. They are generally defined as containing an urban centre population of 25,000 or more.

*Statistical District  
(S Dist.) continued*

S Dists consist of one or more SSDs. S Dists do not aggregate to any higher level spatial units (see ASGC Structural Chart, Chapter 1, p. 4).

There are 35 S Dists in this edition of the ASGC. Three of these straddle two states: Albury-Wodonga (New South Wales/Victoria), Gold Coast-Tweed (Queensland/New South Wales) and Canberra-Queanbeyan (Australian Capital Territory/New South Wales).

*Delimitation of S Dists*

The criteria for delimiting S Dists are as follows:

- S Dists consist of one or more urban centres (outside Capital City SDs) in close proximity with a population of 25,000 or more
- S Dist. boundaries are defined in anticipation of urban development of at least 20 years
- S Dists consist of one or more SSDs
- S Dists may cut across LGA boundaries
- S Dists may cut across S/T boundaries
- an S Dist. may be delimited for an urban centre with less than 25,000 population, where the ABS can determine a demand for intercensal population estimates for the area and the existing LGA/SIA boundaries are inadequate for this purpose.

*S Dist. name*

S Dist. names include a suffix which identifies the state(s)/territory in which the S Dist. is located.

Example:

Newcastle (NSW)  
Albury-Wodonga (NSW/VIC)

*S Dist. code*

S Dists are identified by four-digit codes which are unique within Australia. The first two digits indicate the S/T(s) in which the S Dist. is located. For the three S Dists which cover two states, the first digit is the code of the predominant state and the second digit is the code of the other state. For the other S Dists which fall entirely within one S/T, the first digit is the S/T code and the second digit is 0. The last two digits are allocated in ascending numerical order. Gaps are left between codes for future expansion.

Example:

Newcastle (New South Wales) 1003  
Albury-Wodonga (New South Wales/Victoria) 1218  
Gold Coast-Tweed (Queensland/New South Wales) 3139  
Canberra-Queanbeyan (Australian Capital Territory/New South Wales) 8196

## CHAPTER 5 STATISTICAL REGION STRUCTURE .....

### CONTENTS

	<i>page</i>
Purpose .....	25
The Structure .....	25
The Spatial Units .....	26

**PURPOSE**

The SR Structure has been in use since 1986 for the production of standard statistical outputs from Population Censuses and labour force surveys. Labour Force Surveys use 77 dissemination regions for the publication of labour force data. For further information on the current regions see *Information Paper: Labour Force Survey Sample Design, November 2002* (cat. no. 6269.0).

SRs are maintained as a separate structure from the Main Structure because of the complex manner in which they relate to SSDs and SDs. For example, SRs can be whole SSDs, aggregates of SSDs, or part of an SSD. Similarly they can be whole SDs, aggregates of SDs or part of an SD. SRs can also be as large as a state or territory. SRs are aggregates of SLAs.

**THE STRUCTURE**

The SR Structure has six levels of hierarchy in census years, comprising in ascending hierarchical order: CDs—SLAs—SRSs—SRs—MSRs—S/Ts. In non-census years, with CDs undefined, it has only five levels of hierarchy (see ASGC Structural Chart, Chapter 1, p. 4).

The spatial units in adjoining levels relate to each other by aggregation and disaggregation. For example, SRSs aggregate to SRs while SRs are disaggregates of MSRs. The spatial units within each level of the SR Structure cover the whole of Australia (as defined in Chapter 1, p. 5) without gaps or overlaps.

*Table*

Detailed tables of the SR Structure are shown in Chapter 13 — The Classification Structures.

For example:

- Statistical Region Structure — Broad

(showing three hierarchical levels: S/T—MSR—SR)

S/T	MSR	SR	Name
1			NEW SOUTH WALES
	<b>1</b>	<b>Sydney</b>	
	04		Inner Sydney
	08		Eastern Suburbs
	12		St George-Sutherland
	16		Canterbury-Bankstown

For example:

- Statistical Region Structure — Detailed

(showing five hierarchical levels: S/T—MSR—SR—SRS—SLA)

S/T	MSR	SR	SRS	SLA	Name
1					NEW SOUTH WALES
	<b>1</b>				<b>Sydney</b>
		04			Inner Sydney
			1		Inner Sydney
				1100	Botany Bay (C)
				4800	Leichhardt (A)

**THE SPATIAL UNITS**

See Chapter 2, pp. 7–9.

*Census Collection District  
(CD)*

*Statistical Local Area  
(SLA)*

See Chapter 2, pp. 9–12.

*Statistical Region Sector  
(SRS)*

SRSs consist of one or more adjoining SLAs and in all but three cases equate to one or more adjoining SSDs.

Example:

SRS SSD

Mornington

Peninsula Frankston City

Mornington

Peninsula Shire

The three exceptions are:

- nine of the 17 SRSs in the Brisbane MSR are smaller than an SSD
- South and East Moreton Balance SRS in Queensland is smaller than an SSD. It equates with the SLA of Beaudesert (S) - Pt B
- North and West Moreton SRS in Queensland equates with two SSDs minus the SLA of Beaudesert (S) - Pt B.

Although SRSs are subdivisions of SRs, most SRSs equate with SRs. Exceptions to this generalised rule include the SRSs in the Hunter, Illawarra, Mackay-Fitzroy-Central West, Northern-North West, South and East Moreton, Darling Downs-South West, Tasmania and Northern Territory SRs and the SRSs in the Brisbane MSR. SRSs are used primarily for disseminating selected labour force statistics. SRSs have also been used to present a range of regional statistics not incorporated in the Main Structure.

<i>Statistical Region Sector (SRS) continued</i>	Example: SR SRS Brisbane City Inner Ring City Core Northern Inner Eastern Inner Southern Inner Western Inner Brisbane City Outer Ring Northern Outer Eastern Outer Southern Outer Western Outer
--	---

There are 88 SRSs in this edition of the ASGC.

*SRS code* SRSs are identified by five-digit codes. Each code consists of S/T code (digit 1), MSR code (digit 2), SR code (digits 3–4) and SRS code (digit 5).

Example:

Mornington Peninsula (21281)

Only digits 1, 3–4 and 5 are required for unique identification within Australia.

*Statistical Region (SR)* SRs consist of one or more SSDs in all but three cases. The three exceptions are:

- Brisbane City Inner Ring SR and the Brisbane City Outer Ring SR are smaller than an SSD. Collectively they form the Brisbane City SSD
- South and East Moreton SR comprises one SSD plus the SLA of Beaudesert (S) - Pt B
- North and West Moreton SR equates with two SSDs minus the SLA of Beaudesert (S) - Pt B.

In the capital cities of the five larger states of New South Wales, Victoria, Queensland, South Australia and Western Australia, SRs are smaller than SDs and aggregate to form the respective capital city SDs. Outside of the capital cities in these S/Ts, SRs consist of one or more adjoining SDs.

In Tasmania, Northern Territory, Australian Capital Territory and Other Territories, SRs are the entire S/Ts.

There are 64 SRs in this edition of the ASGC.

*SR code* SRs are identified by four-digit codes as follows:

Each code consists of S/T code (digit 1), MSR code (digit 2) and SR code (digits 3–4).

Example:

South and Eastern Moreton 3964  
Gosford-Wyong 1156

The SR code 98 has been reserved for special purposes (see Chapter 9, p. 43).

<i>Major Statistical Region (MSR)</i>	Each of the five larger states of New South Wales, Victoria, Queensland, South Australia and Western Australia consists of two MSRs. One MSR equates with the capital city SD and the other with the balance of the state. The other S/Ts have one MSR each with each MSR covering the entire area of the S/T.
	There are 14 MSRs in this edition of the ASGC.
<i>MSR code</i>	MSRs are identified by two-digit codes for unique identification within Australia. Each code consists of an S/T code (digit 1) and an MSR code (digit 2). MSR code 1 represents the capital city MSR in the larger states while code 9 denotes the Balance of State MSR.
	Example: MSR Sydney 11 Balance of New South Wales 19
<i>Delimitation of MSR, SR, SRS</i>	One of the main uses of these spatial units is to report statistics from the Labour Force Surveys. These units were established following analyses of data from Censuses of Population and Housing, consultation with users of labour force data, consideration of minimum regional population levels required to yield reliable estimates, and the need for consistency with other statistical collections.  Population considerations dictate that Tasmania, Northern Territory, Australian Capital Territory and Other Territories cannot be dissected into two MSRs (as in the other states) as their populations are too small.  The minimum population size of a region for which labour force statistics are published depends on a number of factors. The prime determinant is the reliability of data based on the population size of the region and the sampling fraction of the S/T. Unlike state and MSR level data, estimates at lower geographic levels are not constrained to conform to independently estimated population totals. Estimates for regions are also based on considerably smaller samples. For these reasons, regional estimates may be subject to high relative standard errors. Other factors that may be considered are how well the region fits with the classification structure of the S/T, how homogenous the labour force is in the region, and the uses to which the data may be put.
<i>State/Territory (S/T)</i>	See Chapter 2, pp. 15–16.

**CHAPTER 6****URBAN CENTRE — LOCALITY STRUCTURE .....****CONTENTS**

	<i>page</i>
Purpose .....	30
The Structure .....	30
The Spatial Units .....	31

**PURPOSE**

The UC/L Structure groups CDs together to form defined areas according to population size criteria. The resulting areas are known as Urban Centres or Localities. Population counts (place of enumeration) from the latest Census of Population and Housing are used to define the UC/L Structure which means this classification structure is only current at the time of the Census. Both the Urban Centre and the Locality spatial units are made up of one or more contiguous CDs. As the UC/L Structure relates to CDs within defined areas only, the structure, in aggregate, does not cover all of Australia.

The UC/L Structure is used for the production of standard ABS statistical outputs from Population Censuses such as *Selected Social and Housing Characteristics for Urban Centres and Localities* (cat. nos 2016.0–7), *CADATA 2001* (cat. nos 2019.0.30.001–2019.8.30.001).

The UC/L Structure is separate from the Main Structure because:

- the boundaries do not generally coincide with SLAs and the higher level spatial units in the Main Structure
- its total area covers only part of Australia.

**THE STRUCTURE**

The UC/L Structure is defined at Population Census times only. It comprises in ascending hierarchical order: CDs–Urban Centres/Localities.

CDs within this structure are confined to those within defined Urban Centre and Locality boundaries. As a consequence, Urban Centres and Localities aggregate to cover only part of a state or territory and thus the structure covers part of Australia only.

Urban Centres may be bisected by an S/T boundary. Where this occurs each portion of the urban centre is separately identified and is included in the Urban Centre/Locality Structure for the relevant S/T. For example, the urban centre of Albury-Wodonga is partly in New South Wales and partly in Victoria. One part is shown under New South Wales and the other under Victoria.

*Table*

Urban Centres and Localities are delimited by the use of actual population counts after each Census is conducted. The Urban Centres and Localities determined following the 2001 Census are listed in the publication *Statistical Geography: Volume 3 — Australian Standard Geographical Classification (ASGC) Urban Centres/Localities, 2001* (cat. no. 2909.0).

Example:

S/T	UC/L	NAME
<b>1</b>		<b>NEW SOUTH WALES</b>
	00200	Aberdeen
	00400	Adaminaby (L)

In this table, Urban Centre and Locality names are listed alphabetically and UC/L codes are arranged in ascending numerical order within each S/T. The suffix (L) is shown after Locality names to distinguish Localities from Urban Centres.

**THE SPATIAL UNITS**

See Chapter 2, pp. 7–9.

*Census Collection District  
(CD)**Urban Centre/Locality  
(UC/L)*

In broad terms, an Urban Centre is a population cluster of 1,000 or more people while a Locality is a population cluster of between 200 and 999 people. For statistical purposes, people living in Urban Centres are classified as urban while those in Localities are classified as rural.

Each Urban Centre/Locality has a clearly defined boundary and comprises one or more whole CDs. Urban Centres/Localities are redefined at each Population Census.

*Delimitation of Urban  
Centres and Localities*

The delimitation criteria for UC/Ls are based on those developed in 1965 by Dr GJR Linge from the Australian National University. The criteria that are currently in force have been adopted and subsequently amended by the Conferences of Statisticians of Australia in 1965 and 1969 and the Review of ABS Statistical Geography in 1988.

*Delimitation of Urban  
Centres with 20,000 or  
more people*

The criteria are as follows:

- Each Urban Centre with a population of 20,000 or more is to consist of a cluster of contiguous urban CDs and other urban areas. CDs classified as urban include the following:
  - All contiguous CDs which have a population density of 200 or more persons per square kilometre shall be classified as urban. Consequently State, SD, LGA and other administrative boundaries shall be disregarded in determining whether a CD should be included within the Urban Centre.
  - A CD consisting mainly of land used for factories, airports, small sports areas, cemeteries, hostels, institutions, prisons, military camps or certain research stations shall be classified as urban if contiguous with CDs which are themselves urban.
  - A CD consisting mainly of land used for large sporting areas, large parks, explosives handling and munitions areas, or holding yards associated with meatworks and abattoirs shall be classified as urban only if it is bordered on three sides by CDs which are themselves classified as urban.
  - Any area which is completely surrounded by CDs which are urban must itself be classified as urban.
  - Where an Urban Centre of 20,000 or more population is separated from another urban area by a gap in urban development of less than three kilometres (by the shortest railway or road distance), the gap shall be bridged by classifying a connecting CD as urban, and therefore treating the urban areas as one. If the gap is three or more kilometres (and whether or not it is comprised mainly of reserved land or a natural barrier) the urban areas shall remain separate.
  - Any area included in an Urban Centre in 1971 or thereafter under the provisions of these criteria shall continue to be so included, unless the population of the Urban Centre falls below 20,000, in which case these criteria will cease to apply.
  - If a CD was incorrectly included (for whatever reason) in a Linge area at a previous census, then it should be excluded at the next census unless it now meets the criteria.

*Delimitation of Urban Centres with 20,000 or more people continued*

- Large peripheral CDs in growth areas may be fragmented; and insofar as the availability of visible boundary features allows, the fragments so created shall be as near square-shaped as possible, contain at least 100 persons at the next census and be of such a size that they will contain a collector's workload when fully developed. For the purpose of delimiting Urban Centres such fragments shall be regarded as CDs.

*Delimitation of Urban Centres with 1,000 to 19,999 people*

Each Urban Centre with a population between 1,000 and 19,999 is to be delimited as follows:

- The Urban Centre shall be delimited subjectively by the inspection of aerial photographs, by field inspection and/or by consideration of any other information that is available.
- All contiguous urban growth is to be included (even if this would not necessarily occur if the density criterion were applied), together with any close but non-contiguous development which could be clearly regarded as part of the Urban Centre. However, for Urban Centres which contain a population approaching 20,000 the objective criteria applied for Urban Centres with 20,000 people should also be considered.

*Delimitation of Localities*

Localities are to be delimited as follows:

- All population clusters of less than 1,000 population and whose population is expected to reach 200 by the next census are to be examined for boundary delineation.
- The following criteria must be satisfied before a boundary is drawn around a Locality. It must:
  - contain a non-farm population of at least 200 people but not more than 999 by the next census
  - have a minimum of 40 occupied non-farm dwellings with a discernible urban street pattern
  - have a discernible nucleus of population.
- If there is some doubt that a Locality will reach the minimum population of 200 people then a boundary should still be drawn around the Locality.
- Where, in the case of defence camps, construction camps, etc. it is anticipated that the cluster will not exist at two consecutive censuses, these camps should not be bounded.
- The Localities shall be delimited subjectively, by the use of the latest available aerial photographs, by field inspection and/or by consideration of any other information that is available.

*Subjective guidelines*

Guidelines for the drawing of subjectively determined UC/L boundaries are as follows:

- Wide rather than narrow boundaries are to be used to ensure inclusion of all urban or built-up areas. Some rural area can be included in an Urban Centre, if necessary, to ensure that the boundary encompasses all the urban area. However, this guideline should be interpreted in the light of the ones that follow.

*Subjective guidelines  
continued*

- Continuity of urban development is a major consideration. Boundaries are not to be thrown very wide just to include some small non-contiguous area of urban development. (The Linge criterion of three kilometres may be of assistance in this respect in larger Urban Centres of say greater than 10,000–15,000 population).
- Where the subjective boundaries decided upon are contained within a municipal boundary and the remaining area or population is small, the municipal boundary is to be used.
- For previously bounded cities, towns or localities the boundaries are not to be changed lightly. Comparability is to be maintained with the past unless there are significant exclusions (either due to faulty boundaries at the previous census or subsequent development).
- When considering urban land usage, recognition should be given to approved plans.
- Topographic boundaries must be used wherever possible when they are consistent with the above guidelines.

*UC/L name and code*

When Urban Centres cross S/T boundaries, the separate portions of the Urban Centre are uniquely identified and reported in their relevant S/T.

UC/Ls are identified by a five-digit code which is only unique within each State/Territory. Use of UC/L codes in conjunction with S/T codes is necessary before these codes become unique across Australia.

Example:

S/T	UC/L	NAME
<b>1</b>		<b>NEW SOUTH WALES</b>
	00800	Albury-Wodonga (Albury part)
<b>2</b>		<b>VICTORIA</b>
	00400	Albury-Wodonga (Wodonga part)

The codes 00000 and 99999 are reserved as Rural Balance and Off-Shore and Migratory codes, respectively, for the S/Ts NSW, Vic., Qld, SA, WA, Tas. and NT.

The code 99999 is not applicable for the ACT or the OT as off-shore, shipping & migratory CDs are not defined for those Territories. See Chapter 2, p. 9.

*State/Territory (S/T)*

See Chapter 2, pp. 15–16.

## CHAPTER 7 SECTION OF STATE STRUCTURE .....

### CONTENTS

	<i>page</i>
Purpose .....	35
The Structure .....	35
The Spatial Units .....	35

**PURPOSE**

The SOS Structure uses population counts from the latest Census of Population and Housing to class CDs as urban or rural. Unlike the UC/L Structure (Chapter 6), the SOS Structure includes all CDs and therefore, in aggregate, the SOS Structure covers all of Australia (as defined in Chapter 1). For the 2001 edition, three of the five different SOS were divided into sub categories based on population size.

The SOS Structure is used for the production of standard statistical outputs from Population Censuses such as *Selected Social and Housing Characteristics for Urban Centres and Localities* (cat. nos 2016.0–7) and *CDATA2001* (cat. nos 2019.0.30.001–2019.8.30.001). It is also used to classify data collected from the labour force surveys.

The SOS Structure is maintained as a separate structure in the ASGC because SOS spatial units do not align with spatial units from any of the other structures.

**THE STRUCTURE**

The SOS Structure is defined only in census years. It contains three hierarchical levels, comprising in ascending order: CDs–SOS–S/Ts.

In this structure, CDs aggregate to SOS and SOS aggregate to S/Ts without gaps or overlaps. Consequently, the structure covers all of Australia.

*Table*

The Sections of State determined following the 2001 Census are listed in the publication Statistical Geography: Volume 1, *Australian Standard Geographical Classification (ASGC), 2001* (cat. no. 1216.0). This list provides:

- Section of State Structure: States/Territories, Sections of State (showing only the top two levels of the hierarchy: S/T–SOS)

Example:

S/T    SOS

S/T	SOS	Name
<b>1</b>	<b>New South Wales</b>	
0	Major Urban	
1	Other Urban	
2	Bounded Locality	
3	Rural Balance	
4	Migratory	

**THE SPATIAL UNITS**

See Chapter 2, pp. 7–9.

*Census Collection District  
(CD)**Sections of State (SOS)*

Within a state or territory, each SOS represents an aggregation of non-contiguous geographical areas of a particular urban/rural type. The categories are:

- Major Urban: this category provides for a further three categories of urban areas (Urban Centres from the UC/L Structure) based upon population ranges of 1,000,000 or more, 250,000 to 999,999, and 100,000 to 249,999

*Sections of State (SOS)  
continued*

- Other Urban: this category provides for a further five categories of urban areas (Urban Centres from the UC/L Structure) based upon population ranges of 50,000 to 99,999, 20,000 to 49,999, 10,000 to 19,999, 5,000 to 9,999, and 1,000 to 4,999
- Bounded Locality: this category provides for a further two categories of rural areas (Localities from the UC/L Structure) with a population of 500 to 999 and 200 to 499
- Rural Balance: the remainder of the S/T
- Migratory: areas composed of off-shore, shipping and migratory CDs (see Chapter 2, p. 9).

*SOS code*

SOS are identified by unique two-digit codes within each S/T. For unique Australia-wide identification, each two-digit SOS code has to be used in conjunction with the S/T code.

*State/Territory (S/T)*

See Chapter 2, pp. 15–16.

**CHAPTER 8****REMOTENESS STRUCTURE .....****CONTENTS**

	<i>page</i>
Purpose .....	38
The Structure .....	38
The Spatial Units .....	38

**PURPOSE**

The final structure listed in the ASGC is the Remoteness Structure (see ASGC Structural Chart, Chapter 1, p. 4). The first edition of the ASGC to include a structure describing Australia in terms of a measurement of Remoteness was ASGC Edition 2001. The Remoteness Structure includes all CDs and therefore, in aggregate, it covers the whole of Australia (as defined in Chapter 1, p. 5). The purpose of the structure is to classify CDs which share common characteristics of remoteness into broad geographical regions called Remoteness Areas (RAs).

There are six RAs in this structure.

The Remoteness Structure is used for the production of standard ABS statistical outputs from Population Censuses and some ABS surveys.

The Remoteness Structure is maintained as a separate structure in the ASGC because the spatial units (RAs) do not align with those from any of the other structures.

**THE STRUCTURE**

The Remoteness Structure is defined only in census years, commencing with the census year 2001. It contains three hierarchical levels, comprising in ascending order: CDs–RAs–S/Ts.

In this structure, CDs aggregate to RAs and RAs aggregate to S/Ts without gaps or overlaps. Consequently the structure covers all of Australia.

*Table*

The Remoteness Structure determined for the 2001 Census is listed in the publication *Statistical Geography: Volume 1 Australian Standard Geographical Classification (ASGC), 2001* (cat. no. 1216.0). The listing provides:

- Remoteness Structure: States/Territories, Remoteness Areas (showing only the top two levels of the hierarchy: S/T–RA)

Example:

S/T	RA	Name
<b>1</b>	<b>New South Wales</b>	
0	Major Cities of Australia	
1	Inner Regional Australia	
2	Outer Regional Australia	
3	Remote Australia	
4	Very Remote Australia	
5	Migratory	

**THE SPATIAL UNITS**

See Chapter 2, pp. 7–9.

*Census Collection District  
(CD)**Remoteness Area (RA)*

Within a S/T, each RA represents an aggregation of non-contiguous geographical areas which share common characteristics of remoteness. While statistical data classed to this structure may be available by S/T, characteristics of remoteness are determined in the context of Australia as a whole. Therefore, not all RAs are represented in each S/T. The categories are:

*Remoteness Area (RA)*  
*continued*

- Major Cities of Australia: CDs with an average Accessibility/Remoteness Index of Australia (ARIA) index value of 0 to 0.2
- Inner Regional Australia: CDs with an average ARIA index value greater than 0.2 and less than or equal to 2.4
- Outer Regional Australia: CDs with an average ARIA index value greater than 2.4 and less than or equal to 5.92
- Remote Australia: CDs with an average ARIA index value greater than 5.92 and less than or equal to 10.53
- Very Remote Australia: CDs with an average ARIA index value greater than 10.53
- Migratory: composed of off-shore, shipping and migratory CDs (see Chapter 2, p. 9).

*Delimitation of  
Remoteness Areas*

The delimitation criteria for RAs are based on the Accessibility/Remoteness Index of Australia (ARIA) developed by the Commonwealth Department of Health and Aged Care (DHAC) and the National Key Centre For Social Applications of GIS (GISCA). ARIA measures the remoteness of a point based on the physical road distance to the nearest Urban Centre (ASGC 1996) in each of five size classes. For more information on how ARIA is defined see the *Information Papers ABS Views on Remoteness, 2001* (cat. no. 1244.0) and *Outcomes of ABS Views on Remoteness Consultation, Australia* (cat. no. 1244.00.001). Also refer to *Census Geography Paper* (cat. no. 03/01), ASGC *Remoteness Classification: Purpose and Use*, available from the ABS web site.

*RA code*

RAs are identified by unique one-digit codes within each state/territory. For unique Australia-wide identification, each RA must be used in conjunction with the S/T code.

*State/Territory (S/T)*

See Chapter 2, pp. 15–16.

## CHAPTER 9                    **SPECIAL PURPOSE ASGC CODES** .....

### **CONTENTS**

	<i>page</i>
Purpose .....	41
Main Structure .....	41
Statistical Region Structure .....	43

<b>PURPOSE</b>	To allow data to be coded when only incomplete locational information is available, a series of special purpose codes has been created for each hierarchical level within the ASGC's Main Structure and for SRs within the SR Structure. These codes are used when people provide limited address details or have no fixed place of abode.
	Special purpose codes enable data to be coded to the broadest hierarchical level reported. For example, a reported address may be sufficiently detailed to allow it to be coded to a Capital City SD within a S/T, even though it cannot be coded to an SSD within that Capital City SD.
	Coding data to a higher level unit in a hierarchical classification without also coding it to the lower levels would cause the data value for the higher unit to no longer equal the sum of data values for the lower units. Special purpose (i.e. dummy area) codes have therefore been created for each hierarchical level in the Main Structure and for SRs within the SR Structure, to which geographically undefined data can be classified.
<b>MAIN STRUCTURE</b>	In the Main Structure special purpose codes relate to, in ascending hierarchical order: SLAs, SSDs, SDs and S/Ts.
<i>Special purpose SLA codes</i>	Four-digit SLA codes ending with 99 are reserved for coding undefined area data to SLA level. The first two digits of undefined SLA codes are normally in the range 00–89.
	Example: 0199 Greater Hobart Undefined 1399 Lyell Undefined
	Information required to be coded at SLA level but only able to be coded at SSD level, is coded to the undefined SLA within the defined SSD.
	Example: SD      SSD      SLA 20                  Mersey-Lyell 15                  Lyell 1399               Lyell Undefined
	Information required to be coded at SLA level but only able to be coded at SD level, is coded to the undefined SLA of the undefined SSD (see Chapter 9, p. 43) within the defined SD.
	Example: SD      SSD      SLA 05                  Sydney 88                  Sydney Undefined 0099               Sydney Undefined

*Special purpose SLA codes continued*

A number of SLA codes within the range 0099–9999 are reserved for specific applications.

- Code 0099 is reserved for the undefined SLA in each capital city SD.

Example:

S/T	SD	SSD	SLA
1	05	88	0099 Sydney Undefined

- Code 9899 is reserved for the undefined SLA within an undefined SD, within a defined S/T. For example, when information is required to be coded at SLA level but is only able to be coded at the S/T level, it is coded to SLA 9899.

Example:

S/T	SD	SSD	SLA
1	88	88	9899 New South Wales Undefined
8	88	88	9899 Australian Capital Territory Undefined

- Code 9099 is reserved for the undefined SLA within an undefined SD, within an undefined S/T (see next page). For example, when information is required to be coded at SLA level but is only able to be coded at the Australia level, it is coded to SLA 9099. This code is used to code Population Census data when usual residence information is not stated.

Example:

S/T	SD	SSD	SLA
0	88	88	9099 S/T Undefined, Not Stated for census purposes

- Code 9199 is used in ‘usual residence’ and similarly worded coding where the information is not applicable (e.g. children who had not been born five years ago).

Example:

S/T	SD	SSD	SLA
1	88	88	9199 New South Wales, Not Applicable

- Code 9299 is used in usual residence and similarly worded coding when the information relates to overseas.

Example:

S/T	SD	SSD	SLA
3	88	88	9299 Queensland, Overseas

- Code 9399 is used as a dummy LGA to enable S/T totals to be produced for some LGA output from the Censuses of Population and Housing. In such circumstances, code 9399 equates to the aggregated unincorporated SLAs in each S/T.

Example:

S/T	LGA
7	9399 Northern Territory, Aggregation of unincorporated SLAs

- Code 9499 is used for persons with no fixed place of abode, including children in care, persons in prison etc.

<i>Special purpose SLA codes continued</i>	Example: S/T SD SSD SLA 4 88 88 9499 South Australia, No fixed abode
<i>Special purpose SD and SSD codes</i>	The two-digit code 88 is reserved for coding undefined area information to SSD and SD levels. A dummy SD, with an SD code of 88, exists for every S/T in the Main Structure, except Other Territories. Similarly there is a dummy SSD for every SD, except for Other Territories.
	Example: S/T SD SSD 1 New South Wales 88 New South Wales Undefined 05 Sydney 88 Sydney Undefined
<i>Special purpose S/T code</i>	Information is coded to S/T Undefined when address details specify Australia only (i.e. without S/T details). The S/T code for S/T Undefined is 0. This code is also used to code Population Census data when usual residence is not stated.
	Example: S/T SD SSD SLA 0 88 88 9099 S/T Undefined or for Population Census purposes — Not stated
<b>STATISTICAL REGION STRUCTURE</b>	In the SR Structure, special purpose codes relate to SLAs, SRs and S/Ts.
<i>Special purpose SLA codes</i>	See Chapter 9, pp. 42–43.
<i>Special purpose SR codes</i>	In New South Wales, Victoria, Queensland, South Australia and Western Australia, the two-digit code 98 is reserved for coding undefined area data to the SR level.
	Example: S/T SR SLA 5 98 9899 Western Australia Undefined
	In the remaining S/Ts (Tasmania, Northern Territory, Australian Capital Territory, Other Territories) there is only one SR, so undefined SR level information is coded to an undefined SLA within each S/T's one defined SR (code 04).
	Example: S/T SR SLA 8 04 9899 Australian Capital Territory Undefined
<i>Special purpose S/T code</i>	See Special purpose S/T code above.

# CHAPTER **10**

## USE OF THE ASGC IN PUBLICATION OF ABS STATISTICS .....

### CONTENTS

	<i>page</i>
Guidelines .....	45

**GUIDELINES**

The ASGC was created to allow spatially comparable statistics to be collected and published by the ABS. However, this objective can only be achieved if the ASGC is consistently applied across all statistical work. The following publishing guidelines are therefore used in the ABS:

- Where possible, each table relates to one particular ASGC structure only. This structure is identified in the table heading or a table footnote.
- Where possible, the ASGC structure is represented in full. Omissions of one or more hierarchical levels in one structure are however, permissible. For example, the entire CD level or entire SSD level of the Main Structure may be omitted. All omissions are noted and explained in the publication.
- Partial omissions from an ASGC structure may also be necessary because of confidentiality considerations. When ASGC spatial units have to be combined, the combinations are confined to spatial units which are:
  - within one ASGC structure
  - at the same hierarchical level
  - within one spatial unit at the next hierarchical level.

For example, in the Main Structure, two or more SLAs are combined within an SSD or, two or more SSDs within an SD.

- In certain circumstances it is permissible in one table, to publish statistics which relate to more than one ASGC structure, for example, if statistics are required on LGAs and SDs. Extreme care is required, however, to ensure the statistics being cross-classified cover the same total area. For example, in some states and the Northern Territory, LGAs cover only part of the S/T, while SDs cover the entire S/T. A cross-classification of LGAs within SDs would therefore not be feasible if S/T totals were required. In this case, use of the Main Structure or the SR Structure would be more appropriate.
- ASGC spatial unit names are shown in table stubs or column headings. These should conform with those in the ASGC or authorised ASGC subsets.
- Each file, document or publication containing statistics classified according to the ASGC specifies the applicable ASGC edition. This is necessary to ensure users can compare like areas across different collections.
- Care should be taken in publishing ASGC spatial unit codes. In publications containing combined national, S/T data, ASGC spatial unit codes are quoted in conjunction with spatial unit names or prefixed by S/T codes to allow unique identification throughout Australia.

# CHAPTER **11** MAINTENANCE OF THE ASGC .....

## CONTENTS

	<i>page</i>
Introduction .....	47
Spatial Unit and Code Changes .....	47

**INTRODUCTION**

The first edition of the ASGC had an effective date of 5 July 1984 and adopted the geographical areas already in use in the ABS for some time prior to that date. In 1988, the ASGC underwent a review and most of the findings were incorporated into the 1991 edition of the ASGC. A further review of the ASGC commenced in early 1996 and was completed in 1997. This review did not result in any changes to the ASGC spatial units or their delimitation criteria. However a decision was made to review the existing capital city SDs, and S Dists, to ensure they will meet statistical requirements for at least the next twenty years. Sections of State were also reviewed to determine additional classes for the Urban Centres. The outcomes of these reviews were implemented in the ASGC 2001 Edition.

Prior to 1993, the ASGC was updated on an as-needed basis which generally resulted in updates occurring once or twice a year. Since 1994, the ASGC has been updated annually (with the exception of 1997, in which no update occurred) with an effective date of 1 July. The nine editions of the ASGC manual between 1984 and 1990 were known as Edition 1 to Edition 9. By contrast, the five editions between 1991 and 1995 were known as Edition 2.1 to Edition 2.5. From 1996, the ASGC edition is known by the year it becomes effective, e.g. the 2004 Edition.

Earlier editions of the ASGC manual were kept up-to-date by the issue of replacement pages. Editions 1 to 9 formed one series of editions. Similarly, Edition 2.1 was the base edition for the second series of ASGC manuals, which included Editions 2.1 to 2.5. The 1996 and 2001 Editions were published as part of three-volume sets of Statistical Geography publications relating to those census years. The 1998, 1999, 2000, 2002 and 2003 Editions were each published as a single volume, as is this 2004 Edition.

**SPATIAL UNIT AND CODE CHANGES**

Essentially, the ASGC is updated in response to two types of changes:

- Externally controlled spatial unit changes. These changes relate to administrative or political areas which have been adopted as spatial units in the ASGC. The ABS has no control over changes to these types of spatial units. The most usual changes of this type are changes to LGAs made by state and territory governments. These changes can range from LGA boundary variations to the creation or amalgamation of whole LGAs and usually require consequential changes to related ASGC spatial units such as SLAs.
- All other changes. These cover changes to ABS-defined spatial units, such as SLAs created within LGAs or changes to SSD boundaries, or changes to the principles and criteria which govern the delimitation of these spatial units. On occasion, changes of this type are triggered by changes to administrative or political areas described above. More usually, changes of this type result from ad hoc or systematic reviews.

Changes in spatial units are often, though not always, accompanied by changes to the spatial unit codes. Therefore it is important when referencing spatial units in publications or tabulations, to quote the ASGC edition as well as the names and codes of these units. The main causes of spatial unit code changes between ASGC editions are:

- changes to spatial unit areas, especially where changes are significant
- spatial unit name changes, especially in the case of LGAs and SLAs
- consequential changes i.e. where one change forces another
- general code structure revisions.

*Coordination of ASGC  
maintenance*

Maintenance of the ASGC and ASGC-related material and products is shared by the ABS central and state offices. It is coordinated by Geography Section which also has responsibility for the ASGC manual and the National Localities Index (Chapter 12), as well as providing assistance to users.

## CHAPTER **12** ASGC-RELATED MATERIAL AND PRODUCTS .....

### CONTENTS

	<i>page</i>
Introduction .....	50
ASGC-Related Products and Services .....	50

**INTRODUCTION**

The ASGC manual is essentially a reference document. Consequently, additional and more specialised ASGC-related material and products are needed to assist application of the ASGC to statistical work. Many of these materials and products are available for sale to ABS clients, as well as for use by ABS personnel. The following is a listing of some of the more important types of related material and products.

**ASGC-RELATED  
PRODUCTS AND SERVICES***National Localities Index  
(NLI)*

The *National Localities Index, Australia* (cat. no. 1252.0.55.001) is a coding tool designed to assist users assign the ASGC Main Structure codes to street address information. Once coded to the ASGC Main Structure direct comparisons to other ABS statistical information may be made. The NLI is updated regularly and maintained in accordance with each edition of the ASGC.

The NLI consists of two parts — a Localities Index and a Streets Sub-Index. The Localities Index contains a list of all Localities in Australia. In broad terms, a Locality is a place where people live or work — or say they live or work. Localities are assigned their full ASGC Main Structure code (i.e. S/T, SD, SSD and SLA codes). The majority of Localities lie wholly within one SLA but where they are split between two or more SLAs, street information is recorded in the Streets Sub-Index.

The NLI index files are available as ASCII, comma delimited text files with fixed field lengths, suitable for downloading into personal and mainframe computers. These can be downloaded from the ABS web site free of charge.

*Maps and digital  
boundaries*

Maps depicting past years ASGC boundaries are included in the various editions of this publication from 1996 onwards. Maps depicting the 1981 and 1986 Census Editions were included in the respective Census Publications. Maps of the ASGC Edition 2004 Main Structure are included in this publication. Digital boundaries for 1981 (pre ASGC), 1986 and from 1991 onwards are also available in MapInfo interchange format (.MID .MIF) on several CDROM products.

*Labels and Codes*

Listings of ASGC labels and codes are available for all structures and all editions of the *Australian Standard Geographical Classification* (cat. no. 1216.0.15.001). These are available electronically as ASCII comma delimited text files and can be downloaded from the ABS web site free of charge.

*Conversion listings and  
concordances*

The ABS has developed a large number of concordances between editions of the ASGC and between the various structures. These are available electronically as ASCII comma delimited text files.

Examples of the Concordances available include:

- 2003 SLAs to 2003 LGAs
- 2001 CDs to 2003 SLAs
- 2002 SLAs to 2003 SLAs
- 2001 SLAs to 2001 RAs
- 2001 CDs to 2001 SLAs
- 1996 SLAs to 2001 SLAs
- Postal Area to ASGC Edition 2001.

## APPENDIX 2

## CHANGES TO GEOGRAPHICAL AREAS 2001–2004

### INTRODUCTION

This Appendix contains details of all changes to Statistical Divisions, Statistical Subdivisions, Statistical Local Areas and Statistical Districts between ASGC Editions 2001 and 2004. Significant changes between ASGC Editions 2003 and 2004 are also listed in Appendix 3.

## NEW SOUTH WALES

## STATISTICAL DIVISION

<i>Name</i>	<i>Code</i>	<i>Nature of Change</i>	<i>Date of change to ASGC</i>
Mid-North Coast	25	Reduced by the transfer of part of Copmanhurst (A) to Richmond-Tweed	01-07-03
Murray	55	Reduced by the transfer of part of Wentworth (A) to Vic. SD Mallee	01-07-03
Murrumbidgee	50	Enlarged to include part of Yarrowlumla (A) - Pt B from South Eastern	01-07-04
Richmond-Tweed	20	Enlarged to include part of Copmanhurst (A) from Mid-North Coast	01-07-03
South Eastern	45	Reduced by the transfer of part of Yarrowlumla (A) - Pt B to Murrumbidgee	01-07-04

## STATISTICAL SUBDIVISION

<i>Name</i>	<i>Code</i>	<i>Nature of Change</i>	<i>Date of change to ASGC</i>
Bathurst-Orange	4005	Enlarged to include part of Evans (A) - Pt B from Central Tablelands (excl. Bathurst-Orange)	01-07-02
Central Murrumbidgee (excl. Wagga Wagga)	5010	Enlarged to include part of Yarrowlumla (A) - Pt B from Southern Tablelands (excl. Queanbeyan)	01-07-04
Central Tablelands (excl. Bathurst-Orange)	4010	Reduced by the transfer of part of Evans (A) - Pt B to Bathurst-Orange	01-07-02
Clarence (excl. Coffs Harbour)	2505	Reduced by the transfer of part of Copmanhurst (A) to Richmond-Tweed SD Bal	01-07-03
Murray-Darling	5520	Reduced by the transfer of part of Wentworth (A) to Vic. SSD West Mallee	01-07-03
Richmond-Tweed SD Bal	2010	Enlarged to include part of Copmanhurst (A) from Clarence (excl. Coffs Harbour)	01-07-03
Southern Tablelands (excl. Queanbeyan)	4510	Reduced by the transfer of part of Yarrowlumla (A) - Pt B to Central Murrumbidgee (excl. Wagga Wagga)	01-07-04

## STATISTICAL DISTRICT

<i>Name</i>	<i>Code</i>	<i>Nature of Change</i>	<i>Date of change to ASGC</i>
Bathurst-Orange	1012	Enlarged by the transfer of part of Evans (A) - Pt B to Bathurst (C)	01–07–02

## STATISTICAL LOCAL AREA

<i>Name</i>	<i>Code</i>	<i>Nature of Change</i>	<i>Approx. change in area (ha)</i>	<i>Date of change to ASGC</i>
Bathurst (C)	0450	Gained from Evans (A) - Pt B	+58	01–07–02
Canada Bay (A) - Concord	1521	Renamed from Concord (A) and SLA code changed from 1900	nil	01–07–02
Canada Bay (A) - Drummoyne	1524	Renamed from Drummoyne (A) and SLA code changed from 2500	nil	01–07–02
Clarence Valley (A) - Copmanhurst	1731	Created from a major part of Copmanhurst (A)	+258675	01–07–04
Clarence Valley (A) - Grafton	1732	Renamed from Grafton (C) and SLA code changed from 3200	nil	01–07–04
Clarence Valley (A) - Maclean	1733	Created from all of Maclean (A) and part of Richmond Valley (A) Bal	+104907 +29893	01–07–04 01–07–04
Clarence Valley (A) - Nymboida	1734	Renamed from Pristine Waters (A) - Nymboida and SLA code changed from 6421	nil	01–07–04
Clarence Valley (A) - Ulmarra	1735	Created from part of Pristine Waters (A) - Ulmarra	+152529	01–07–04
Coffs Harbour (C) - Pt B	1804	Gained from Pristine Waters (A) - Ulmarra	+15693	01–07–04
Coolah (A)	1950	Gained from Mudgee (A)	negligible	01–07–02
Cooma-Monaro (A)	2050	Split into 2 SLAs. Cooma-Monaro (A) - Pt A and Cooma-Monaro (A) - Pt B	-30268 -492565	01–07–04
Cooma-Monaro (A) - Pt A	2051	Created from part of Yarrowlumla (A) - Pt A	+30268	01–07–04
Cooma-Monaro (A) - Pt B	2054	Created from all of Cooma-Monaro (A)	+492565	01–07–04
Conargo (A)	1850	Gained from Windouran (A) and SLA code changed to 1860	+506300	01–07–02
Conargo (A)	1860	SLA code changed from 1850	nil	01–07–02
Concord (A)	1900	Renamed Canada Bay (A) - Concord and SLA code changed to 1521	nil	01–07–02
Copmanhurst (A)	2250	Lost to Kyogle (A) Split into 2 SLAs. Clarence Valley (A) - Copmanhurst and part included in Richmond Valley (A) Bal	-16 -258675 -57927	01–07–03 01–07–04 01–07–04
Crookwell (A)	2400	Included in Upper Lachlan (A)	-361288	01–07–04

Drummoyne (A)	2550	Renamed Canada Bay (A) - Drummoyne and SLA code changed to 1524	nil	01-07-02
Eastern Capital City Regional (A) - Pt A	2721	Created from part of Yarrowlumla (A) - Pt A	+136182	01-07-04
Eastern Capital City Regional (A) - Pt B	2724	Created from all of Tallanganda (A) and parts of Gunning (A) and Mulwaree (A)	+332166 +12975 +32076	01-07-04 01-07-04 01-07-04
Evans (A) - Pt B	2802	Lost to Bathurst (C)	-58	01-07-02
Gosford (C)	3100	Lost to Wyong (A)	negligible	01-07-02
Goulburn (C)	3150	Gained from Mulwaree (A) Renamed Greater Argyle (A) - Goulburn and SLA code changed to 3311	+90 nil	01-07-02 01-07-04
Grafton (C)	3200	Renamed Clarence Valley (A) - Grafton and SLA code changed to 1732	nil	01-07-04
Greater Lithgow (C)	3300	Renamed Lithgow (C) and SLA code changed to 4870	nil	01-07-02
Greater Argyle (A) - Goulburn	3311	Renamed from Goulburn (C) and SLA code changed from 3150	nil	01-07-04
Greater Argyle (A) Bal	3314	Created from part of Mulwaree (A)	+316452	01-07-04
Greater Queanbeyan (C)	3330	Created from all of Queanbeyan (C) and part of Yarrowlumla (A) - Pt A and SLA code changed from 6450	+5220 +12015	01-07-04 01-07-04
Gunning (A)	3600	Split into 3 SLAs. Parts included in Eastern Capital City Regional (A) - Pt B, Upper Lachlan (A) and Yass Valley (A) - Pt B	-12975 -176775 -31248	01-07-04 01-07-04 01-07-04
Guya (A)	3650	Lost to Inverell (A) - Pt B	-1294	01-07-02
Inverell (A) - Pt B	4202	Gained from Guyra (A)	+1294	01-07-02
Kyogle (A)	4550	Gained from Copmanhurst (A)	+16	01-07-03
Leichhardt (A)	4800	Lost to Sydney (C) - Remainder	-225	01-07-03
Lithgow (C)	4870	Renamed from Greater Lithgow (C) and SLA code changed from 3300	nil	01-07-02
Maclean (A)	5000	Renamed Clarence Valley (A) - Maclean and SLA code changed to 1733	nil	01-07-04
Mudgee (A)	5400	Lost to Coolah (A)	negligible	01-07-02

**APPENDIX 3****SIGNIFICANT CHANGES BETWEEN ASGC  
EDITIONS 2003 AND 2004 .....****INTRODUCTION**

This Appendix summarises those changes which occurred between the ASGC editions and are considered to be statistically significant. These more important changes include spatial unit amalgamations/splits (indicated by link lines), changes in ASGC code numbers and changes in spatial unit names. Comments on these changes are also included.

All changes which affected the spatial units of the Main and the Statistical District Structures are listed in Appendix 2.

INTRODUCTION *continued*

## FOR MORE INFORMATION . . .

### INTERNET

**www.abs.gov.au** the ABS web site is the best place to start for access to summary data from our latest publications, information about the ABS, advice about upcoming releases, our catalogue, and Australia Now—a statistical profile.

### LIBRARY

A range of ABS publications is available from public and tertiary libraries Australia-wide. Contact your nearest library to determine whether it has the ABS statistics you require, or visit our web site for a list of libraries.

### CPI INFOLINE

For current and historical Consumer Price Index data, call 1902 981 074 (call cost 77c per minute).

### DIAL-A-STATISTIC

For the latest figures for National Accounts, Balance of Payments, Labour Force, Average Weekly Earnings, Estimated Resident Population and the Consumer Price Index call 1900 986 400 (call cost 77c per minute).

## INFORMATION SERVICE

Data already published that can be provided within five minutes will be free of charge. Our information consultants can also help you to access the full range of ABS information—ABS user pays services can be tailored to your needs, time frame and budget. Publications may be purchased. Specialists are on hand to help you with analytical or methodological advice.
