ESA Elements					
Pillar	Dimension	Description	Critical Frequency	Critical Spatial	Critical Disaggregation
Economy; Society	Business Performance and Structure; Work	Indicators of labour demand and actual vacant job positions.	Quarterly	National, State/Territory	Industry, Occupation

#### Overall ESA Assessment

The quality for ESA – 307 Job Vacancies was assessed as a green traffic light for the purpose of ESA. The overall quality of this statistic met an acceptable standard for the quality indicators selected and the appropriate quality practices and processes were in place. The data custodian can be contacted for further information about the quality of the dataset which contributed to the statistic.

*For more detailed quality information about each dimension, see over page*

## ESA – 307 JOB VACANCIES

### **Institutional Environment**

The statistic scored a green traffic light for institutional environment. There were sufficient quality and risk management processes in place, protections for confidentiality and archiving processes. Staff were trained in data collation.

### **Relevance**

The statistic scored a green traffic light for relevance. All key information identified in the description of the statistic was available. The critical spatial levels identified for the statistic were produced. Most critical disaggregations identified for the statistic were present. The critical disaggregation, Occupation, was not available.

### **Timeliness**

The statistic scored a green traffic light for timeliness. The critical frequency for the statistic was met. The duration between collection and release of data was timely and users were able to access the release of new data when expected.

### **Accuracy**

The statistic scored a green traffic light for accuracy. The target population was represented sufficiently and there was no known under or overrepresentation in the statistic. There were sufficient measures in place to adjust for non-response. Sampling error was represented for individual figures.

### **Coherence**

The statistic scored a green traffic light for coherence. Some information for the statistic was not able to be compared over time; while population and characteristic definitions remained consistent, there were changes to collection procedures over time. External sources were available for data confrontation.

### **Interpretability**

The statistic scored a green traffic light for interpretability. Data quality statements, information to help users to understand the data and descriptions of conceptual limitations of the data were available. Users were able to access additional support if needed.

### **Accessibility**

The statistic scored a green traffic light for accessibility. The key information, including visualisations such as graphs or maps, was publicly available and users could access data in Excel and other formats such as html. The key information was accessible for free with customised data available at a cost.

### **Areas for Improvement**

The critical disaggregation, Occupation, was not available.
