SEASONAL ADJUSTMENT	<p>Seasonal adjustment is a means of removing the estimated effects of normal seasonal variations from economic time series so that the effects of other influences are obvious. Seasonal variations are the systematic (though not necessarily regular) intra-year movements of economic time series. These are often the result of non-economic phenomena, such as climatic changes and regular religious festivals, e.g. Christmas and Easter.</p>								
TREND ESTIMATE	<p>Smoothing seasonally adjusted series produces a measure of trend by removing the impact of the irregular component of the series. The trend estimates are derived by applying a 13-term Henderson weighted moving average to the respective seasonally adjusted series. Readers are reminded that trend estimates are subject to revision as subsequent months' data become available.</p>								
CHANGES IN THIS ISSUE	<p>There are no changes in this issue.</p>								
SYMBOLS AND OTHER USAGES	<p>n.a. not available n.e.c. not elsewhere classified n.p. not available for publication but included in totals where applicable n.y.a. not yet available p preliminary — figure or series subject to revision r figure or series revised since previous issue * estimate has a relative standard error greater than 25% and is therefore subject to sampling variability too high for most practical uses . . not applicable — nil or rounded to zero</p>

(a) From April 2001 the Labour Force Survey was conducted using a redesigned questionnaire containing additional data items and some minor definitional changes. Although the impact on core labour force series has been minor, revisions have been made to estimates previously published in this table to ensure continuity. The revised series were released on 3 May 2001. *Information Paper: Implementing the Redesigned Labour Force Survey Questionnaire* (Cat. no. 6295.0) contains further information about the questionnaire changes and the revised series. For details on the content of the redesigned questionnaire, see *Information Paper: Questionnaires Used in the Labour Force Survey* (Cat. no. 6232.0)

(a) From April 2001 the Labour Force Survey was conducted using a redesigned questionnaire containing additional items and some minor definitional changes. Revisions have been made to core labour force estimates to ensure continuity, which have been published in Table 3. However, this table contains estimates which have not been revised, so data from April 2001 onwards are not strictly comparable with earlier unrevised data.

Information Paper: Implementing the Redesigned Labour Force Survey Questionnaire (Cat. no. 6295.0) contains further information about the questionnaire changes and the revised series. For details on the content of the redesigned questionnaire, see *Information Paper: Questionnaires Used in the Labour Force Survey* (cat. No. 6232.0).

(b) Total employed person counts for Feb 2000, May 2000, Aug 2000, Nov 2000 and Feb 2001 have been revised to reflect definitional changes introduced in April 2001 whilst counts of employed persons by industry, being non core data items, have not been revised. Hence the sum of each industry for the above reference periods will not add to total employed persons. See footnote (a) for further details.
