NOTES

ABOUT THIS PUBLICATION	This publication contains final estimates for the main commodities collected in the 2003–04 Agricultural Survey. It contains detailed statistics on crops, livestock and livestock products, land use and industry and size characteristics of farms.
CHANGES IN THIS ISSUE	No changes in this issue.
MORE INFORMATION ON ABS AGRICULTURE STATISTICS	Information about ABS activities in the field of agriculture statistics is available from the Agriculture Statistics theme page on the ABS web site < http://www.abs.gov.au >. To access the theme page, select 'Themes' from the menu on the home page.

SUMMARY OF FINDINGS INDUSTRY STRUCTURE

NUMBER OF FARMS

The 2003–04 Agricultural Survey found that the number of farms in Australia fell by 2% in the 12 months ending 30 June 2004, down from 133,000 to 131,000 farms, continuing the decline in farm numbers seen in previous years.

The beef cattle farming industry remained the largest in terms of farm numbers, with around 27% of all farms. The mixed farming sector (grain-sheep/beef cattle) was the next largest with around 12% of all farms, followed by the grain sector with 11%.

SIZE OF OPERATIONS

EVAO of operations

The median estimated value of agricultural operations (EVAO) of all farms was approximately \$123,000 in 2003–04. Around 15% of all farms (20,200 farms) had an EVAO below \$22,500, while at the other end of the scale, 14% (18,000 farms) had an EVAO above \$500,000.

The majority of farms with EVAO below \$22,500 were involved in beef cattle farming (11,700 farms) and sheep farming (2,000 farms) while the majority of farms with EVAO above \$500,000 were involved in grain growing (5,500 farms), mixed grain-sheep/beef cattle farming (2,800 farms), dairy cattle farming (1,700 farms) and beef cattle farming (1,700 farms).

On an industry basis, the cotton, poultry for meat, grain, pig, and poultry for eggs farming industries were dominated by farms with large EVAOs, with around 76%, 54%, 38%, 34% and 32% respectively, having an EVAO greater than \$500,000.

Area of operations

Most farms in 2003–04 were between 100 and 499 hectares in size, and accounted for 42,400 farms (or 32%). These farms were mainly engaged in beef cattle grazing, dairying, sheep grazing or mixed grain-sheep/beef cattle growing.

Small farms under 50 hectares were the second main size group and accounted for 25,100 farms (or 19%). These small farms were mainly engaged in grape growing, beef cattle grazing, fruit growing, vegetable growing and plant nursery operations.

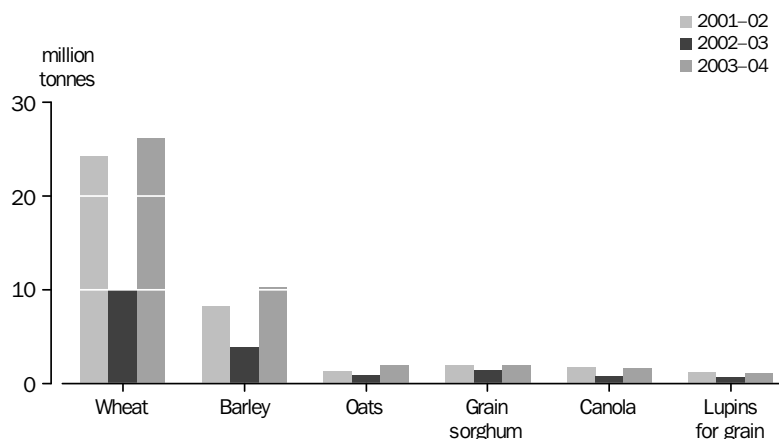

Large farms of over 2,500 hectares accounted for 11% (14,700) of all farms and were mainly engaged in grazing or cropping operations.

SUMMARY OF FINDINGS CROPS

OVERVIEW

The easing of widespread drought saw significant increases in production, with record or near record harvests reported for most of the major crops.

PRODUCTION OF MAJOR CROPS, Australia—2001–02 to 2003–04

CROPS FOR GRAIN

Wheat

Improved conditions in 2003–04 saw records for both area planted to wheat and wheat production. The total area planted increased by 17% to 13.1 million hectares. All states reported increases, with the largest reported in New South Wales (up 33% to 4.0 million hectares) and Western Australia (up 10% to 4.9 million hectares). Wheat production increased by 158% to 26.1 million tonnes, with nearly all states reporting significant increases. The largest were reported in Western Australia (up 174% to 11.1 million tonnes), and New South Wales (up 192% to 7.3 million tonnes).

Barley

The total area of barley planted increased by 16% to 4.5 million hectares. The largest areas planted were in Western Australia (1.3 million hectares) and South Australia (1.2 million hectares). Improved yields, combined with the increase in area planted, saw total production reach a record level of 10.4 million tonnes. The largest producers were Western Australia (up 135% to 3.2 million tonnes), South Australia (up 87% to 2.7 million tonnes) and Victoria (up 375% to 2.3 million tonnes).

Oats

The total area of oats planted increased by 20% to 1.1 million hectares. This was the fourth year of increased planting. Production increased by 111% to 2.0 million tonnes, the highest level reported since 1984. The largest producers were Western Australia (up 58% to 752,000 tonnes), New South Wales (up 309% to 610,000 tonnes) and Victoria (up 103% to 507,000 tonnes).

Grain sorghum

The total area of grain sorghum planted increased by 10% to 734,000 hectares. Production increased by 37% to 2.0 million tonnes, with significant increases in Queensland and New South Wales, the main growing states.

Lupins for grain

The total area planted to lupins for grain fell by 17% to 851,000 hectares due mainly to a 16% fall in the main growing state of Western Australia. This was the sixth annual decrease in lupins plantings and reflects a longer term trend towards oats and barley. Increased yields after drought saw total production increase by 63% to 1.2 million tonnes.

SUMMARY OF FINDINGS CROPS *continued*

OTHER CROPS

Canola

Canola plantings fell by 7% to 1.2 million hectares, with falls in New South Wales and Victoria partly offset by increases in South Australia and Western Australia. Improved conditions in many areas saw production increase to pre-drought levels. Production rose by 96% to 1.7 million tonnes, with increases reported in all the main growing states.

Cotton lint

Continuing lack of water for irrigation saw plantings of cotton fall by 7% to 227,000 hectares. Total cotton lint production was down by 13% to 317,000 tonnes. Increases in plantings and production in Queensland were more than offset by decreases in New South Wales.

Rice

Some reductions in water restrictions in 2003–04 saw the area planted to rice increase by 45% to 66,400 hectares. Rice production increased by 26% to 553,000 tonnes, but this was still less than half the harvest from 'normal' years. The production of rice is entirely dependent on access to water, and the lingering effects of the drought continued to affect the major growing regions of New South Wales.

SUMMARY OF FINDINGS HORTICULTURE

FRUIT

Grapes

In 2003–04 grape production rose by 35% to a record harvest of 2.0 million tonnes. The largest increases were reported in South Australia (up 44% to 886,000 tonnes), Victoria (up 31% to 532,000 tonnes) and New South Wales (up 25% to 483,000 tonnes). The total area of bearing vines increased by 5% to a record 151,000 hectares, with the main growing state of South Australia reporting an increase of 8% to a record 65,000 hectares.

Oranges

Orange production decreased by 34% to 395,000 tonnes after near record production in the previous year. Decreases were reported in the three main growing states of New South Wales (down 35% to 181,000 tonnes), South Australia (down 36% to 122,000 tonnes) and Victoria (down 39% to 69,400 tonnes). The total number of bearing orange trees fell by 4% to 6.8 million trees, due mainly to an 8% fall in tree numbers in New South Wales.

Bananas

Banana production fell by 3% to 257,000 tonnes, with falls in production reported in Queensland and New South Wales. The total bearing area of bananas rose by 2% to 10,900 hectares.

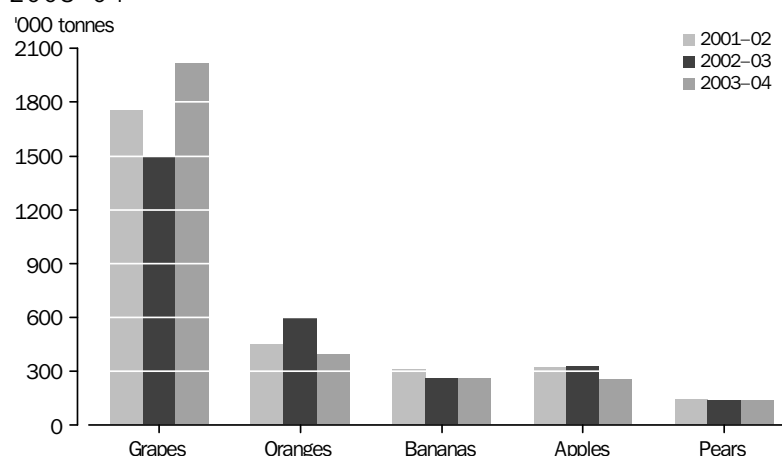

Apples

Apple production fell by 22% to 255,000 tonnes, with falls reported for every state except Queensland. The largest decreases in production were reported for Victoria (down 29% to 84,100 tonnes), New South Wales (down 23% to 47,700 tonnes) and Tasmania (down 29% to 37,300 tonnes). The total number of bearing apple trees rose by 6% to 8.9 million, with increases reported in all states except Tasmania.

Pears

Pear production rose by 2% to 139,000 tonnes. Victoria's production of 121,000 tonnes accounted for 87% of total Australian production. The total number of bearing pear trees rose by 6% to 1.4 million.

PRODUCTION OF MAJOR FRUIT CROPS, Australia—2001–02 to 2003–04

SUMMARY OF FINDINGS HORTICULTURE *continued*

VEGETABLES

Potatoes

Production of potatoes in 2003–04 rose by 5% to 1.3 million tonnes, due mainly to a 25% increase in production in Victoria (up to 338,000 tonnes). The only state to report a fall in production was New South Wales (down 11% to 119,000 tonnes). The total area planted to potatoes remained steady at 36,100 hectares, with increases in plantings in Victoria, Tasmania, Western Australia and Queensland, offset by decreases in South Australia and New South Wales.

Tomatoes

Production of tomatoes rose by 30% to 474,000 tonnes, with significant increases reported in the three main growing states of Victoria (up 28% to 270,000 tonnes), Queensland (up 33% to 125,000 tonnes) and New South Wales (up 40% to 67,100 tonnes). The area planted to tomatoes rose by 16% to 8,500 hectares, with increases reported in all states except Western Australia.

Carrots

Production of carrots fell marginally to 303,000 tonnes, with falls in all states except South Australia and Tasmania. The area planted to carrots fell by 2% to 7,200 hectares, with falls in Victoria, Western Australia and Queensland partly offset by increases in South Australia and Tasmania. New South Wales remained steady.

Onions

Production of onions rose slightly to 233,000 tonnes. Increases in production in Tasmania, New South Wales, Victoria and Western Australia were partly offset by decreases in South Australia, the main producing state, and Queensland. The area planted to onions rose by 6% to 5,600 hectares, with increases reported in all states except Queensland.

Lettuces

Production of lettuces rose by 5% to 127,000 tonnes. Increases in Queensland, Western Australia and South Australia were partly offset by falls in Victoria, New South Wales and Tasmania. The area planted to lettuces remained steady at 6,100 hectares.

PRODUCTION OF MAJOR VEGETABLE CROPS, Australia—2001–02 to 2003–04

SUMMARY OF FINDINGS LIVESTOCK

OVERVIEW

Cattle numbers recovered slightly in 2003–04, but were limited in their recovery by ongoing effects of drought in some areas and also by lower cow numbers available for breeding from the previous year. Sheep and lamb numbers also showed signs of recovery with better conditions contributing to improved lambing percentages. Pig numbers fell and chicken numbers were steady.

NUMBERS OF LIVESTOCK, Australia—2001–02 to 2003–04

MILK CATTLE

The number of milk cattle remained steady at 3.1 million head at 30 June 2004. A small decrease in milking cow numbers was offset by an increase in other milk cattle. The most significant movements were reported in Queensland (up 10% to 255,000), and Tasmania (down 6% to 189,000). Victoria had the majority of milk cattle, with its herd steady at 1.9 million.

MEAT CATTLE

Meat cattle numbers increased by 3% to 24.4 million after the badly drought-affected season in the previous year. Increases in meat cattle numbers were reported in Queensland (up 7% to 11.2 million head), Western Australia (up 8% to 2.0 million), Northern Territory (up 3% to 1.7 million) and Tasmania (up 3% to 496,000). These were partly offset by falls in Victoria (down 4% to 2.4 million) and South Australia (down 4% to 1.2 million). New South Wales remained steady at 5.4 million.

SHEEP AND LAMBS

Sheep and lamb numbers increased by 2% to 101 million, with lamb numbers up by 12%, but sheep numbers down slightly. This was due mainly to increases in the largest producing states of New South Wales (up 5% to 35.2 million) and Western Australia (up 5% to 25.1 million). However these were partly offset by falls in Victoria (down 2% to 20.0 million), South Australia (down slightly to 12.9 million) and Tasmania (down 4% to 3.2 million).

Lamb markings rose by 7% to 36.3 million, with increases reported in New South Wales (up 13% to 12.8 million), Western Australia (up 6% to 9.2 million) and Queensland (up 61% to 1.2 million). The number of ewes mated to produce these lambs was little changed from the previous year, with improved lambing percentages (up from 77.6% in 2002–03 to 83.0% in 2003–04) responsible for the increased numbers of lambs.

SUMMARY OF FINDINGS LIVESTOCK *continued*

PIGS

Australian pig numbers fell by 4% to 2.5 million, with falls reported in all states except Queensland, which rose by 4%. Trends of recent years have shown an industry move away from New South Wales as the main pig-producing state, to Queensland, which has for the first time reported a bigger herd than New South Wales.

CHICKENS

The number of chickens for meat production remained steady at 70.7 million birds. Decreases in New South Wales and Western Australia were offset by increases in Victoria and Queensland. The number of chickens for egg production fell slightly to 12.7 million birds. Egg production remained steady at 193 million dozen.

— nil or rounded to zero (including null cells)

(a) Excludes crops harvested for hay and seed, and pastures and grasses.

(b) Total area of establishments with EVAO of \$5,000 or more.

(c) Non-agricultural land is the difference between agricultural land as reported in the Agricultural Survey and total area of the state or territory. It comprises conserved land, forestry, urban and unused land such as vacant Crown land, commercially unused land on Aboriginal and other Crown reserves and waste land, ephemeral lakes and mangrove swamps, as well as establishments not included in the scope of the Agricultural Survey.

(d) Total area for Australia includes Jervis Bay.

Note: Agricultural land is generally divided into cropped land, land sown to pasture and grasses and a broad balance comprising grazing land, land lying idle or under fallow, etc.

EXPLANATORY NOTES

- INTRODUCTION**
- 1** This publication contains final estimates for the main commodities collected in the 2003–04 Agricultural Survey and related Supplementary Collections (i.e. Apples and Pears Collection and Vineyards Collection). It contains detailed statistics on crops, livestock and livestock products and industry and size characteristics of farms.
- GENERAL**
- 2** Where figures have been rounded, discrepancies may occur between sums of the component items and totals.
- SCOPE AND COVERAGE**
- 3** Estimates of farm production are based on information obtained from the Agricultural Survey conducted at 30 June 2004. Prior to 1999–2000 information was obtained for the period ending 31 March. The Australian Bureau of Statistics (ABS) has changed the collection period to 30 June to better align with other ABS surveys. A study of respondent data indicated that there should be no significant difference in estimates collected between the reference periods.
- 4** The scope of the 2003–04 Agricultural Survey is establishments undertaking agricultural activity with an estimated value of agricultural operations (EVAO) of \$5,000 or more. This is the same as the scope for Agricultural Censuses from 1993–94 to 1996–97 and for 2000–01, and the Agricultural Surveys from 1997–98 to 1999–2000, 2001–02 and 2002–03. Prior to 1993–94 scope has varied and these details are available on request.
- 5** From 2005–06 the ABS will use the Australian Business Register as the main source of frames for its agricultural surveys. Until then, the Agriculture Survey sample will be selected from the 2001–02 survey frame.
- 6** For the 2002–03 Agriculture Survey, a sub-sample of 28,000 units was selected from the stratified random sample of 35,000 farms selected in the previous year. This helped control the estimates of movement for that year which was particularly important given the impact of the drought.
- 7** The sample for the 2003–04 Agriculture Survey included the same 28,000 units selected for the 2002–03 survey. A further 3,000 units were selected to cover sample loss due to units in the original selections having ceased farming, and to improve relative standard errors where commodities were approaching or exceeding design parameters in the 2002–03 Agriculture Survey. A proportion of the 3,000 units was also used to sample units that commenced farming since 2001–02. This strategy was used to help ensure good estimates of movements as parts of Australia move out of the drought.
- AGRICULTURAL ESTABLISHMENTS**
- 8** An agricultural establishment is the smallest accounting unit of business within a state or territory controlling its productive activities and maintaining a specified range of detailed data enabling value added to be calculated. In general, an establishment covers all operations at a physical location, but may consist of a group of locations provided they are within the same Statistical Local Area (SLA) or contiguous SLAs. The majority of establishments operate at one location only.
- INDUSTRY CLASSIFICATION**
- 9** Since 1991–92, units in the Agricultural Census and the Agricultural Survey have been classified according to the methodology described in *Australian and New Zealand Standard Industrial Classification (ANZSIC)* (cat. no. 1292.0). Prior to 1991–92, establishments were classified according to the methodology described in the 1983 edition of *Australian Standard Industrial Classification (ASIC), Volume 1 – The Classification* (cat. no. 1201.0). Therefore care should be taken when making comparisons between years where different classifications have been used.
- SAMPLE ERROR**
- 10** The estimates in this publication are based on information obtained from a sample drawn from the total farm population in scope of the collection, and are subject to sampling variability; that is, they may differ from the figures that would have been produced if all farms had been included in the Agricultural Survey. One measure of the

EXPLANATORY NOTES *continued*

SAMPLE ERROR *continued*

likely difference is given by the standard error (SE) which indicates the extent to which an estimate might vary by chance because only a sample was taken. There are about two chances in three that a 'sample' estimate will differ by less than one SE from the figure that would have been obtained if all farms had responded, and about nineteen chances in twenty that the difference will be less than two SEs.

11 In this publication, 'sampling' variability of the estimates is measured by the relative standard error (RSE) which is obtained by expressing the SE as a percentage of the estimate to which it refers.

12 Most published national estimates have RSEs less than 5%. For some states with limited production of certain commodities, RSEs are greater than 10%. Estimates that have an estimated relative standard error between 10% and 25% are annotated with the symbol '^'. These estimates should be used with caution as they are subject to sampling variability too high for some purposes. Estimates with an RSE between 25% and 50% are annotated with the symbol '*', indicating that the estimate should be used with caution as it is subject to sampling variability too high for most practical purposes. Estimates with an RSE greater than 50% are annotated with the symbol '**' indicating that the sampling variability causes the estimates to be considered too unreliable for general use. Separate indication of the RSEs of all estimates is available on request.

13 A table with RSEs for selected commodities follows:

RELATIVE STANDARD ERRORS OF SELECTED COMMODITIES—At 30 June 2004

	NSW	Vic.	Qld	SA	WA	Tas.	NT	ACT	Aust.

.. not applicable

— nil or rounded to zero (including null cells)

CROPS, PASTURES AND HORTICULTURE

14 Statistics on area and production of crops relate, in the main, to crops sown during the year ended 30 June. Statistics of perennial crops relate to the position at 30 June and the production during the year ended on that date, or fruit set by that date. Statistics for apples and pears and grapes, which in some states are harvested after 30 June, are collected by supplementary collection forms and are included in this publication.

LIVESTOCK SLAUGHTERING AND LIVESTOCK PRODUCTS

15 The statistics on livestock slaughtering and meat production are based on data collected from abattoirs and other major slaughtering establishments and include estimates of animals slaughtered on farms and by country butchers and other small slaughtering establishments. Care should be taken when using this information as the figures only relate to slaughtering for human consumption and do not include animals condemned or those killed for boiling down. Definitions of livestock categories may differ between states and within states, particularly with regard to calves.

EXPLANATORY NOTES *continued*

WOOL

16 Wool production statistics contained in this publication are derived from the quarterly ABS Wool Brokers and Dealers Receipts Collection and are published on the basis of state of production.

17 Wool receipts statistics show the amount of taxable wool received by brokers and dealers from wool producers. It excludes wool received by brokers on which wool tax has already been paid by other dealers (private buyers) or brokers.

MILK

18 Milk statistics have been collected and provided to the ABS by Dairy Australia. Data for the Australian Capital Territory are included with New South Wales; data for the Northern Territory are included with South Australia.

POULTRY SLAUGHTERING

19 Poultry slaughtering statistics have been compiled from quarterly returns supplied by commercial poultry slaughtering establishments. Producers in Tasmania, the Northern Territory and the Australian Capital Territory are not included in the aggregates derived from the Poultry and Game Birds Slaughtered collection. However, the statistics represent a high level of coverage.

ABS DATA AVAILABLE ON REQUEST

20 As well as the statistics included in this and related publications the ABS may have other relevant data available on request. Inquiries should be made to either the National Information and Referral Service on 1300 135 070 or Gordon Cameron on Hobart (03) 6222 5939.

GENERAL ACKNOWLEDGMENT

21 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated: without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.

RELATED PUBLICATIONS

22 A range of agricultural publications is produced by the ABS, including:
Livestock and Meat, Australia — Electronic Publication, cat. no. 7218.0.55.001
Livestock Products, Australia, cat. no. 7215.0
Principal Agricultural Commodities, Australia, Preliminary, cat. no. 7111.0
Value of Agricultural Commodities Produced, Australia, cat. no. 7503.0
Value of Principal Agricultural Commodities Produced, Australia, Preliminary, cat. no. 7501.0

23 For comparisons of the agriculture industry with other industries, users are referred to:

Australian National Accounts: National Income, Expenditure and Product, cat. no. 5206.0

Australian National Accounts: State Accounts, cat. no. 5220.0

24 Current publications and other products released by the ABS are listed in the *Catalogue of Publications and Products* (cat. no. 1101.0). The Catalogue is available from any ABS office or the ABS web site <<http://www.abs.gov.au>>. The ABS also issues a daily Release Advice on the web site which details products to be released in the week ahead.

FOR MORE INFORMATION . . .

- INTERNET* **www.abs.gov.au** the ABS web site is the best place to start for access to summary data from our latest publications, information about the ABS, advice about upcoming releases, our catalogue, and Australia Now—a statistical profile.
- LIBRARY* A range of ABS publications is available from public and tertiary libraries Australia-wide. Contact your nearest library to determine whether it has the ABS statistics you require, or visit our web site for a list of libraries.
