KEY FIGURES

PRELIMINARY DATA

	<i>Population at end Sep qtr 2003</i>	<i>Change over previous year</i>	<i>Change over previous year</i>
	<i>'000</i>	<i>'000</i>	<i>%</i>
New South Wales	6 699.3	54.1	0.8
Victoria	4 933.6	64.6	1.3
Queensland	3 817.0	86.1	2.3
South Australia	1 529.4	9.0	0.6
Western Australia	1 959.7	29.5	1.5
Tasmania	478.4	5.2	1.1
Northern Territory	198.6	0.3	0.2
Australian Capital Territory	322.6	1.0	0.3
Australia (a)	19 941.3	249.8	1.3

(a) Includes Other Territories. At September quarter 2003 the estimated resident population for Other Territories was as follows: Jervis Bay (293); Christmas Island (795) and Cocos (Keeling) Islands (314).

KEY POINTS

ESTIMATED RESIDENT POPULATION

- The preliminary estimated resident population (ERP) of Australia at September 2003 was 19,941,300 persons, an increase of 249,800 persons since September 2002 and 59,900 persons since June 2003.
- Natural increase for the September quarter 2003 was 27,700 persons, a 12% increase on September quarter 2002 and a 13% decrease on June quarter 2003.
- Preliminary net overseas migration was 32,100 persons in September quarter 2003, a 25% increase on September quarter 2002.

POPULATION GROWTH RATES

- The Australian population grew 0.3% in the September quarter 2003 and 1.3% in the 12 months ended September 2003.
- In the September quarter 2003 all states and the Northern Territory had positive growth rates. The Australian Capital Territory declined by 0.1%.
- For the year ended September 2003 all states and territories experienced a positive population growth. Queensland recorded the highest growth rate (2.3%) and the Northern Territory recorded the lowest (0.2%).

INQUIRIES

- For further information about these and related statistics, contact the National Information and Referral Service on 1300 135 070 or Rachael Hill on Canberra (02) 6252 6296.

.....

INTRODUCTION

Estimated resident population (ERP) data in this publication are based on the 2001 Census of Population and Housing (2001 census). Exceptions are tables 8 (excluding 2001 estimates), 16, 17 and 18 which are still based on the 1996 Census of Population and Housing (1996 census).

CHANGES IN THIS ISSUE

The layout and content of this publication has changed. The major changes are detailed below.

- A *Technical Note—Measuring Net Overseas Migration* has been included as part of this publication. This document outlines how the Australian Bureau of Statistics (ABS) calculates estimates of net overseas migration by state and territory, including adjustments made to overcome some limitations of existing migration data.
- The term 'Category Jumping' has been replaced with 'Migration Adjustment'.
- From table 12 — Net permanent and long-term migration and components of Category Jumping have been removed. Migration adjustments have been incorporated in all table cells where available.
- From table 13 — Total permanent and long-term arrivals have been removed.
- From table 14 — Total permanent and long-term departures have been removed.
- Table 15 (of previous issues) — *Net permanent and long-term movement*, has been removed.

Revisions included in this issue are as follows:

- Table 5 — ERP, major population regions are now based on 2003 Australian Standard Geographical Classification (ASGC) boundaries.

ERP DATA STATUS

At any point in time this publication contains final, revised and preliminary ERP data. The status of the ERP data included in this issue is as follows:-

- Final — All ERP data up to and including June quarter 2001
- Revised — ERP data from September quarter 2001 to June quarter 2002, inclusive
- Preliminary — ERP data from September quarter 2002 to September quarter 2003, inclusive.

DATA NOT YET AVAILABLE

Data not yet available in this issue are as follows:-

- Household estimates for 2002 and 2003 in tables 17, 18 and 19 are currently under review.

MAIN FEATURES

INTRODUCTION

The preliminary estimated resident population (ERP) of Australia at September 2003 was 19,941,300 persons, an increase of 249,800 since September 2002 and 59,900 since June 2003. The national growth rate during the 12 months ended September 2003 was 1.3%, an increase of 0.1% from the growth rate for the previous 12 months.

COMPONENTS OF AUSTRALIA'S POPULATION CHANGE

The growth of Australia's population has two components; natural increase (the number of births minus the number of deaths) and net overseas migration (net permanent and long-term movement plus the migration adjustment).

Natural increase

Natural increase in September quarter 2003 was 27,700 persons, a 13% decrease on June quarter 2003, but a 12% increase on September quarter 2002. The number of births registered in September quarter 2003 (64,800) was 2% higher than in June quarter 2003 (63,500) and September quarter 2002 (63,700). However, the number of deaths in September quarter 2003 (37,100) was 17% higher than in June quarter 2003 (31,700), but 5% lower than in September quarter 2002 (38,900).

Natural increase for the year ended September 2003 was 118,200 persons, an increase of 4% on the number recorded in the year ended September 2002 (113,300). Births contributed 249,100 babies and deaths removed 130,900 persons from the population in the year ended September 2003.

Net overseas migration

Preliminary net overseas migration was 32,100 persons in the September quarter 2003, an increase of 46% from the number recorded in the June quarter 2003 (22,100). During the September quarter 2003 there were 111,100 permanent and long-term arrivals and 79,000 permanent and long-term departures after migration adjustments.

The ABS applies a number of adjustments to the overseas arrivals and departures data used to produce estimates of net overseas migration (NOM). These mainly comprise adjustments designed to reflect differences between stated travel intentions and actual travel behaviour, but (in the case of revised NOM estimates) also include adjustments to transform numbers of overseas movements into numbers of travellers. Until recently, adjustments used by ABS to produce NOM estimates were collectively referred to as 'category jumping adjustments'. They are now referred to more simply as 'migration adjustments'.

For more information see the *Technical Note—Measuring Net Overseas Migration* on page 33.

STATES AND TERRITORIES

Population

The population of Australia's states and territories at September 2003 was as follows: New South Wales 6,699,300, Victoria 4,933,600, Queensland 3,817,000, South Australia 1,529,400, Western Australia 1,959,700, Tasmania 478,400, Northern Territory 198,600 and the Australian Capital Territory 322,600.

Consistent with the recommendations of the *Joint Standing Committee on Electoral Matters*, from this issue estimates of the population of each of the Other Territories will be listed separately in the Key Figures of this publication. The population of these Territories continue to be included in the Australian totals (see paragraph 2 of the Explanatory Notes).

MAIN FEATURES *continued*

Growth rates

With the exception of the Australian Capital Territory all states and the Northern Territory recorded positive growth in the September quarter. Queensland recorded the highest growth (0.5%) followed by Western Australia (0.4%), Victoria and Tasmania (each 0.3%), New South Wales (0.2%), South Australia and the Northern Territory (each 0.1%). The Australian Capital Territory recorded a loss (-0.1%), mainly due to increased interstate migration losses (-900 persons) in the September quarter 2003, compared with the loss of 500 persons in June quarter 2003.

For the year ended September 2003 all states and territories recorded a positive growth rate. The highest growth rate was recorded by Queensland (2.3%) followed by Western Australia (1.5%). The lowest growth rate was recorded by the Northern Territory (0.2%).

Interstate migration

With the exception of Queensland, Western Australia and Tasmania, all states and territories experienced a net loss through interstate migration in the September quarter 2003. Queensland had a gain of 9,100 persons while Tasmania increased by 800 persons. Western Australia recorded a net gain through interstate migration for the first time since March quarter 1999 increasing by 200 persons. New South Wales recorded the largest net loss through interstate migration (-7,600), followed by the Australian Capital Territory (-900), the Northern Territory (-800), South Australia (-700) and Victoria (-300).

For the year ended September 2003 all states and territories, with the exception of Queensland, Tasmania and Victoria, recorded a net loss through interstate migration. Queensland had the highest gain of 38,500 persons, followed by Tasmania (2,700) while Victoria experienced little change with an increase of just 40 persons. New South Wales lost the largest number of persons (-32,200), followed by the Northern Territory (-3,200), South Australia (-2,200), the Australian Capital Territory (-2,000) and Western Australia (-1,600).

NET INTERSTATE MIGRATION, States and territories

(a) See Explanatory Notes for concepts used and the Glossary for definitions of terms used. Includes Other Territories from September 1993—see paragraph 2 of the Explanatory Notes.

(b) Differences between total growth and the sum of natural increase and net migration during 1996-2001 are due to intercensal discrepancy.

na not available

(a) Includes Other Territories—see paragraph 2 of the Explanatory Notes.

(b) Series A assumes high levels of fertility, mortality, net overseas migration and net interstate migration.

(c) Series B assumes medium levels of fertility, mortality, net overseas migration and net interstate migration.

(d) Series C assumes low levels of fertility, net overseas migration and net interstate migration and a medium level of mortality.

(a) With the exception of 2001 data which are 2001 census based all other data are 1996 census based. Estimates and the low projections series assume no change in the propensity to identify as Indigenous, as recorded on the 1996 census forms. The high projections series assumes a change in propensity based on the 1991–1996 period.

(b) Includes Jervis Bay Territory.

EXPLANATORY NOTES

INTRODUCTION

1 This quarterly publication contains the most recent estimates of the resident populations (ERP) of Australia and the states and territories based on the results of the Census of Population and Housing held on 7 August 2001 (with various adjustments described in paragraph 4). The publication also contains estimates of the number of households by household size as well as the latest available statistics of births, deaths (including infant deaths) and overseas and interstate migration. In addition, the publication includes estimates of the resident population by age and region, population projections for Australia and experimental estimates and projections of the Aboriginal and Torres Strait Islander population. Periodically, articles on specific demographic topics will be released on the ABS web site in conjunction with this publication.

2 Following the 1992 amendments to the *Acts Interpretation Act* to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing from September quarter 1993 include estimates for these two territories. To reflect this change, another category of the state and territory level has been created, known as Other Territories. Other Territories include Jervis Bay Territory, previously included with the Australian Capital Territory, as well as Christmas Island and the Cocos (Keeling) Islands, previously excluded from population estimates for Australia. Data for Other Territories are detailed separately in the Key Figures on page 1 and are included in Australia totals commencing from September quarter 1993.

POPULATION AND COMPONENTS OF POPULATION CHANGE

3 Australia's population estimates for the period since 1971 are compiled according to the place of usual residence of the population. An explanation of the place of usual residence conceptual basis for population estimates is given in *Demographic Estimates and Projections: Concepts, Sources and Methods*, Statistical Concepts Library, ABS web site, <<http://www.abs.gov.au>>.

Method of estimation

4 The estimated resident population is an estimate of the Australian population obtained by adding to the estimated population at the beginning of each period the components of natural increase (on a usual residence basis) and net overseas migration. For the states and territories, account is also taken of estimated interstate movements involving a change of usual residence. Estimates of the resident population are based on census counts by place of usual residence, to which are added the estimated net census undercount and Australian residents estimated to have been temporarily overseas at the time of the census. Overseas visitors in Australia are excluded from this calculation.

5 After each census (at 30 June of the census year), estimates for the preceding intercensal period are revised by incorporating an additional adjustment (intercensal discrepancy) to ensure that the total intercensal increase agrees with the difference between the estimated resident populations at the two 30 June dates in the respective census years.

Natural increase: births and deaths

6 In this publication births and deaths data are presented by state and territory of usual residence. For preliminary estimates, births and deaths by quarter of registration are used as a proxy for quarter of occurrence. For revised estimates a factor has been applied to the number of occurrences to allow for those occurrences which are yet to be registered. For final estimates after 30 June 1991 year/quarter of occurrence data are used. The births and deaths data in the this publication are shown by year of occurrence for revised and final data and year/quarter of registration for preliminary data which may affect comparison within relevant tables.

Net overseas migration

7 Conceptually, net overseas migration (NOM) is the difference between permanent and long-term arrivals, and permanent and long-term departures. Estimates of NOM are derived from information provided on incoming and outgoing passenger cards, as well as other data supplied by the DIMIA. Data on the intended duration of stay of overseas

EXPLANATORY NOTES *continued*

Net overseas migration *continued*

visitors arriving in Australia and the intended duration of absence of Australian residents travelling overseas are used to determine the numbers of permanent and long-term arrivals, and permanent and long-term departures. Passenger card data are also used to calculate migration adjustments and determine the state and territory distribution of NOM. The processes of adjusting movement data on travellers' stated intentions to reflect their actual behaviour are complex, and depend upon the amount and type of movement data available at a particular point in time. The methods currently used compare data on actual travel movements over a one year period with those first advised by individual travellers, and are explained in more detail in *Demography Working Paper 2003/5 - Net Overseas Migration: Adjusting for Actual Duration of Stay or Absence* (<<http://www.abs.gov.au>>, select Themes > Demography > ABS Demography Working Papers). In order to conduct such a comparison, data for a 15 month period (i.e. one year plus one quarter) are required. The adjustment methods described in the working paper have been applied to NOM data from the September quarter 2001 onwards and will be subject to further investigation and improvement with the accumulation of additional data and time series. For more information see the *Technical Note—Measuring Net Overseas Migration*.

Net interstate migration

8 Estimates of interstate migration since June 1986 have been derived from the latest census data on interstate movement in the preceding one year and unidentified information on interstate changes of address advised to the Health Insurance Commission in the process of administering Medicare.

CORRECTION OF PRISON DATA FOR QUEENSLAND

9 For the 2001 Census of Population and Housing, most prison data was received for processing via electronic data files. During the post-processing evaluation cycle, it was established that the male and female counts for Queensland prisons (only) were incorrectly captured. This resulted in the publication of incorrect census counts for males and females for various Queensland geographical areas and, as a consequence the incorrect numbers for males and females for Queensland and Australia. Revised population estimates for the 2001–02 financial year phased in a correction for this error. Information on the geographical areas affected are available in the *2001 Census Working Paper—Fact Sheet: Correction of Prison Data for Queensland* on the ABS web site <www.abs.gov.au>.

RATES OF POPULATION GROWTH

10 The average annual growth rate, r , is calculated as a percentage using the formula:

$$\left[\left(\frac{P_n}{P_0} \right)^{\frac{1}{n}} - 1 \right] \times 100$$

where P_0 is the population at the start of the period, P_n is the population at the end of the period and n is the length of the period between P_n and P_0 in years.

EXPERIMENTAL ESTIMATES OF ABORIGINAL AND TORRES STRAIT ISLANDER POPULATION

11 Estimates of the Indigenous population are experimental in that the standard approach to population estimation is not possible because satisfactory data on births, deaths and internal migration are not generally available. Furthermore, there is significant intercensal volatility in census counts of the Indigenous population, thus adding to the problem of estimating the true Indigenous population. This volatility can in part be attributed to changes in the propensity of persons to identify as being of Indigenous origin. As a result, a method based on the use of life tables is used to produce time series data. For further details see *Experimental Estimates of the Aboriginal and Torres Strait Islander Population* (cat. no. 3230.0).

EXPERIMENTAL PROJECTIONS OF ABORIGINAL AND TORRES STRAIT ISLANDER POPULATION

12 Experimental estimates of the Indigenous population as at 30 June 1996 are used as the base population for projections of the Indigenous population to 30 June 2006. A low and a high projection series have been generated, and respectively imply a low and high overall growth rate of the Indigenous population. The low series uses a nil change in propensity to identify assumption based on the premise that the Indigenous

EXPLANATORY NOTES *continued*

EXPERIMENTAL PROJECTIONS OF ABORIGINAL AND TORRES STRAIT ISLANDER POPULATION *continued*

population (as recorded in the 1996 census) will only change as a result of natural increase. The high series uses a change in propensity to identify assumption based on the increase in the Indigenous population observed between the 1991 and 1996 censuses which cannot be attributed to natural increase. For further details see *Experimental Projections of the Aboriginal and Torres Strait Islander Population* (cat. no. 3231.0).

ESTIMATED RESIDENT HOUSEHOLDS

13 Estimates of households are based on the estimated resident population series, to which propensities to form households are applied. These propensities were estimated from the Census of Population and Housing, and updated using the monthly Labour Force Survey. A detailed description of the method used to produce household estimates is contained in *Household Estimates 1986, 1991–94* (cat. no. 3229.0).

OVERSEAS ARRIVALS AND DEPARTURES ESTIMATION METHOD

14 Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated and processed. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.

15 From July 1998 the DIMIA is able to determine the actual length of stay for departing overseas visitors and arriving Australian residents which was previously collected from information on intended length of stay supplied on the arrival or departure card by the passenger. This new method has resulted in a change in data distribution with the number of passengers staying for one year exactly declining significantly.

POPULATION PROJECTIONS

16 Population projections presented in this publication are not predictions or forecasts. They are an assessment of what would happen to Australia's population if the assumed levels of components of population change—births, deaths and migration—were to hold for the next 50–100 years.

17 The ERP at June 2002 is the base for the projections series. The three series published in this publication and their assumptions are as follows:

- Series A—assumes that the total fertility rate (TFR) will reach 1.8 babies per woman by 2011 and then remain constant, life expectancy at birth will continue to improve through to 2050–51 reaching 92.2 years for males and 95.0 years for females, net overseas migration (NOM) of 125,000 per year from 2005–06 through to 2050–51, and high flows of interstate migration.
- Series B—assumes that the TFR will fall to 1.6 babies per woman by 2011 and then remain constant, life expectancy at birth will continue to improve each year, though at a declining rate, and will reach 84.2 years for males and 87.7 year for females in 2050–51, NOM of 100,000 per year from 2005–06 through to 2050–51, and medium flows of interstate migration.
- Series C—assumes that the TFR will fall to 1.4 babies per woman by 2011 and then remain constant, life expectancy at birth will continue to improve each year, though at a declining rate, and will reach 84.2 years for males and 87.7 years for females in 2050–51, NOM of 70,000 per year from 2005–06 through to 2050–51, and small flows of interstate migration.

For additional series and information (e.g. age, sex, states/territories and capital cities/balances of state) see *Population Projections, Australia, 2002–2101* (cat. no. 3222.0).

EXPLANATORY NOTES *continued*

ROUNDING

18 In this publication population estimates and their components have sometimes been rounded to the nearest hundred. Neither rounded figures nor unrounded figures should be assumed to be accurate to the last digit shown.

19 Where figures have been rounded, discrepancies may occur between sums of component items and totals.

24 Statistics of overseas arrivals and departures and related data are also published regularly by DIMIA (see the Department's quarterly publication, Immigration Update) and by the Bureau of Tourism Research (on international travel and tourism).

TECHNICAL NOTE MEASURING NET OVERSEAS MIGRATION

BACKGROUND

1 Estimates of the Australian population are generated on a quarterly basis by adding natural increase (the excess of births over deaths) and net overseas migration (NOM) occurring during the period to the population at the beginning of each period. This is known as the cohort component method, and can be represented by the following equation:

$P_{(t+1)} = P_{(t)} + B - D + \text{NOM}$, where:

$P_{(t)}$ = the estimated resident population at time point t

$P_{(t+1)}$ = the estimated resident population at time point $t+1$

B = the number of births occurring between t and $t+1$

D = the number of deaths occurring between t and $t+1$

NOM = net overseas migration occurring between t and $t+1$.

2 For state and territory population estimates, an additional term is added to the equation representing net interstate migration occurring between t and $t+1$.

3 Net overseas migration accounts for around half of population growth at the national level. This note outlines how the ABS calculates NOM estimates by state and territory, including adjustments made to overcome some limitations of existing migration data.

4 The ABS estimates the level of NOM occurring during each quarter using data on incoming (i.e. arriving) and outgoing (i.e. departing) passenger movements at Australian air and sea ports. These movements are classified into three main categories depending on the stated duration of stay in Australia or overseas:

- permanent movement
- long-term (one year or more) movement
- short-term (less than one year) movement.

5 Conceptually, NOM is the difference between permanent and long-term arrivals, and permanent and long-term departures. However, at the time a person crosses the Australian border, it is not empirically known how long they will actually spend in Australia or overseas. For example, overseas visitors might change their travel plans and extend their stay in Australia (perhaps utilising on-shore visa grants), or depart earlier than they first intended. Similarly, Australian residents travelling overseas may change their plans while abroad (e.g. some might state that they are departing the country permanently, but return less than a year later, while others might stay overseas longer than they initially intended).

6 Some of these differences between stated travel intentions and actual travel behaviour may also reflect short interruptions to longer periods of stay or absence. For example, overseas students arriving in Australia might state that they intend to stay for three years, but return home for brief periods during this time. Similarly, Australians working or studying overseas might state that they intend to be away for more than a year but return for brief holidays.

7 The following diagram summarises the contributions of different types of overseas movements to NOM. Estimates of NOM are derived from information provided on incoming and outgoing passenger cards, as well as other data supplied by the DIMIA. Data on the intended duration of stay of overseas visitors arriving in Australia and the intended duration of absence of Australian residents travelling overseas are used to determine the numbers of permanent and long-term arrivals, and permanent and long-term departures. Passenger card data are also used to calculate migration adjustments and determine the state and territory distribution of NOM.

Migration adjustments

8 The ABS applies a number of adjustments to overseas arrivals and departures data in order to produce estimates of NOM. These mainly comprise adjustments designed to reflect differences between stated travel intentions and actual travel behaviour, but (in the case of revised NOM estimates) also include adjustments to transform numbers of overseas movements into numbers of travellers. Until recently, adjustments used by ABS to produce NOM estimates were collectively referred to as 'category jumping adjustments'. They are now referred to more simply as 'migration adjustments'.

9 The processes of adjusting movement data on travellers' stated intentions to reflect their actual behaviour are complex, and depend upon the amount and type of movement data available at a particular point in time. The methods currently used compare data on actual travel movements over a one year period with those first advised by individual travellers, and are explained in more detail in *Demography Working Paper 2003/5 - Net Overseas Migration: Adjusting for Actual Duration of Stay or Absence* (<<http://www.abs.gov.au>>, select Themes > Demography > ABS Demography Working Papers). In order to conduct such a comparison, data for a 15 month period (i.e. one year plus one quarter) are required. These adjustment methods described in the working paper have been applied to NOM data from the September quarter 2001 onwards and will be subject to further investigation and improvement with the accumulation of additional data and time series.

10 Table 1 below describes the impact that various types of migration adjustments have on NOM estimates. The adjustments applied to preliminary and revised NOM estimates are described in more detail elsewhere in this document.

1. MIGRATION ADJUSTMENTS APPLIED TO NOM ESTIMATES

<i>Migration Adjustment</i>	<i>Treatment in adjusted estimates</i>
.....	
ADJUSTMENTS MADE TO PRELIMINARY NOM ESTIMATES	
Persons whose stated travel intentions differed from actual travel behavior(a)	
Long-term visitor arrivals assumed to be staying in Australia short-term	Subtract from NOM
Long-term resident departures assumed to be staying overseas short-term	Add to NOM
Short-term visitor arrivals assumed to be staying in Australia long-term	Add to NOM
Short-term resident departures assumed to be staying overseas long-term	Subtract from NOM
.....	
ADJUSTMENTS MADE TO REVISED NOM ESTIMATES	
Persons whose stated travel intentions differed from actual travel behaviour(b)	
Permanent arrivals who actually stayed in Australia short-term	Subtract from NOM
Permanent departures who actually stayed overseas short-term	Add to NOM
Long-term visitor arrivals who actually stayed in Australia short-term	Subtract from NOM
Long-term resident departures who actually stayed overseas short-term	Add to NOM
Short-term visitor arrivals who actually stayed in Australia long-term	Add to NOM
Short-term resident departures who actually stayed overseas long-term	Subtract from NOM
Multiple movements of travellers	Subtract from NOM(c)

- (a) Based on trends observed for the proportions of long-term and short-term arrivals and departures who change their travel behaviour.
- (b) Based on matched passenger records comparing stated travel intentions with actual behaviour.
- (c) Numbers of movements are converted into numbers of persons by matching passport numbers and other identifying personal details.

State and territory distribution of NOM

11 The state or territory distribution of NOM is based on information reported by travellers on arrival in or on departure from Australia. Incoming passenger cards provide information on the state or territory of a traveller's intended address within Australia, while outgoing passenger cards provide information on the state or territory in which a traveller lives or spent most time. However, the way in which this distribution is calculated differs between preliminary and revised estimates of NOM due to the amount of data available.

12 The following sections of this document describe how preliminary and revised estimates of NOM are created and distributed between states and territories. Estimates of NOM are finalised after the five-yearly Census of Population and Housing.

PRELIMINARY NOM ESTIMATES

13 The ABS produces quarterly estimates of Australia's resident population (known as the ERP) five to six months after the end of the reference quarter, and is required under legislation to provide population estimates as at 31 December by early June of the following year. Since estimates of NOM (adjusted for actual travel behaviour) require 15 months of data, preliminary estimates of NOM are calculated to meet more immediate ERP requirements.

Migration adjustments

14 There are four main groups of travellers who provide an intended duration of stay on their passenger cards who have the potential to change their duration of stay or absence:

- long-term overseas visitors who stayed in Australia for less than 12 months (i.e. long-term visitors who stayed in Australia short-term)
- short-term overseas visitors who stayed in Australia for 12 months or more (i.e. short-term visitors who stayed in Australia long-term)
- Australian residents departing long-term who stayed overseas for less than 12 months (long-term departures who stayed overseas short-term)

Migration adjustments
continued

- Australian residents departing short-term who stayed overseas for 12 months or more (short-term departures who stayed overseas long-term).

15 Migration adjustments applied to preliminary NOM estimates are based on the trends observed for the proportions of long-term and short-term arrivals and departures who change their travel behaviour. Table 2 shows the proportion of long-term and short-term travellers in 2001-02 who had changed their stated travel intentions. Preliminary migration adjustments are only applied to the four major movement categories (i.e. long-term visitor arrivals, short-term visitor arrivals, long-term visitor departures and short-term resident departures).

2. CHANGES IN TRAVEL BEHAVIOUR(a), Selected categories of movement(b)—September quarter 2001 to June quarter 2002

Period	LONG-TERM		SHORT-TERM	
	Arrivals	Departures	Arrivals	Departures
	%	%	%	%
2001				
September	70.6	49.2	4.1	3.7
December	69.3	47.8	3.6	3.7
2002				
March	71.3	52.3	4.1	4.1
June	69.0	48.7	3.5	3.2
Average	70.0	49.5	3.8	3.7

- (a) Proportion of travellers whose actual duration of stay or absence differed from their stated intentions.
- (b) Based on stated intentions.

16 An average adjustment based on the most recent complete financial year for which 15 months of data exist is applied to each new quarter of movement data. For example, preliminary NOM estimates for the June quarter 2003 and September quarter 2003 each assumed that, based on the 2001-02 evidence, 70.0% of long-term visitor arrivals during the quarter would in fact stay in Australia for less than 12 months, while 49.5% of long-term resident departures would return to Australia within 12 months. These preliminary data are expected to be revised in the March 2004 and March 2005 issues, respectively, of *Australian Demographic Statistics* (cat. no. 3101.0).

17 Table 3 below shows how the preliminary NOM estimate for the September quarter 2003 was calculated.

TECHNICAL NOTE MEASURING NET OVERSEAS MIGRATION *continued*

Migration adjustments
continued

3. COMPONENTS OF NET OVERSEAS MIGRATION, Original and adjusted estimates—September quarter 2003

Initial category of movement	ORIGINAL	MIGRATION		ADJUSTED
	ESTIMATE	ADJUSTMENT(a)	%	ESTIMATE FOR PRELIMINARY NOM
	no.	no.	%	no.
Permanent movement				
Permanent (settler) arrivals	28 688	28 688
Permanent departures	-14 012	-14 012
Long-term movement				
Visitor arrivals	49 876	-34 934	70.0	14 942
Resident arrivals	23 125	23 125
Visitors departures	-20 278	-20 278
Residents departures	-20 022	9 908	49.5	-10 114
Short-term movement				
Visitors arrivals	1 163 359	44 376	3.8	44 376
Residents arrivals	909 028
Visitors departures	1 141 142
Residents departures	947 696	-34 603	3.7	-34 603
Net overseas migration	47 377	-15 253	..	32 124

.. not applicable

(a) Refer to Table 1 in this document for further information on the migration adjustments applied to preliminary NOM estimates.

State and territory distribution

18 As noted above at paragraph 10, the state or territory distribution of NOM is based on information reported by travellers on arrival in or on departure from Australia. However, at the time preliminary NOM estimates are calculated, information on the state or territory in which long-time arrivals will actually spend most time in is not available because outgoing passenger cards for these persons have not yet been completed. State and territory distributions of long-term arrivals therefore refer to the state or territory of their intended addresses, as advised on incoming passenger cards. Similarly, state and territory distributions of permanent arrivals refer to their intended addresses as advised on incoming passenger cards, which may differ from the state or territory where they settle in the longer term.

19 The state and territory distribution of preliminary migration adjustments for a particular quarter is assumed to be the same as that of permanent and long-term arrivals in the same quarter. In practice, a national total is calculated for the migration adjustment. This is then distributed across the states and territories, by age and sex, using the distribution of permanent and long-term arrivals by state or territory of intended address. For example, since 24.8% of all permanent and long-term arrivals in the September quarter 2003 intended to live in Victoria, 24.8% of the total migration adjustment (-3,783) is also applied to this state. Table 4 shows components of net overseas migration for September quarter 2003 by state and territory.

4. COMPONENTS OF NET OVERSEAS MIGRATION, States and territories—September quarter 2003

Category of movement	NSW	Vic.	Qld	SA	WA	Tas.	NT	ACT	Aust. (a)
Permanent and long-term arrivals	39 802	25 221	17 078	4 343	11 759	751	776	1 957	101 689
Permanent and long-term departures	23 307	11 703	9 070	2 369	5 217	498	441	1 699	54 312
Migration adjustment	-5 970	-3 783	-2 562	-651	-1 764	-113	-116	-294	-15 253
Net overseas migration	10 525	9 735	5 446	1 323	4 778	140	219	-36	32 124

(a) Includes Other Territories—see paragraph 2 of the Explanatory Notes.

*State and territory distribution
continued*

20 The current method of distributing the preliminary migration adjustment across states and territories is the same as that which has been previously used for preliminary category jumping estimates (see paragraph A3.24 of *Demographic Estimates and Projections: Concepts, Sources and Methods* (cat. no. 3228.0), available from the ABS web site).

21 However, the ABS plans to review this method, with the prospect of applying a distribution method which allows for positive as well as negative adjustments for individual states and territories. In the interim, the preliminary estimates of NOM are subject to revision when more complete data are available.

REVISED NOM ESTIMATES

22 Preliminary estimates of NOM for a financial year are usually revised in the following March issue of *Australian Demographic Statistics* (cat. no. 3101.0). These revised NOM estimates use matched passenger records to calculate the actual duration of stay relating to overseas movements. Migration adjustments applied to NOM estimates are based on these matched data and include, in addition to the four major movement categories previously identified, a subset of movements relating to permanent arrivals and permanent departures:

- permanent (settler) arrivals who arrived in and left Australia in the same quarter, and did not return at any point during the 12 months following this arrival
- permanent departures who left and returned to Australia in the same quarter, and did not depart at any point during the 12 months following this departure.

23 Migration adjustments applied to revised NOM estimates also adjust for multiple movements of travellers (i.e. converting numbers of movements into numbers of persons).

24 The current methodology for these revised migration adjustments has been applied from the September quarter 2001 to June quarter 2002. Table 5 shows how revised NOM estimates were calculated for 2001-02.

REVISED NOM ESTIMATES
continued

5. COMPONENTS OF NET OVERSEAS MIGRATION, Original and adjusted estimates—2001–02

<i>Initial category of movement</i>	<i>Original estimate</i>	<i>Migration adjustment(a)</i>	<i>Adjusted estimate for revised NOM</i>
Permanent movement			
Permanent (settler) arrivals	88 900	-4 487	84 413
Permanent departures	-48 241	2 382	-45 859
Long-term movement			
Visitor arrivals	175 873	-128 059	47 814
Resident arrivals	88 598	..	88 598
Visitors departures	-79 375	..	-79 375
Residents departures	-92 071	46 942	-45 129
Short-term movement			
Visitors arrivals	4 768 294	182 494	182 494
Residents arrivals	3 344 976
Visitors departures	4 837 760
Residents departures	3 367 870	-122 400	-122 400
Net overseas migration	133 684	-23 128	110 556

.. not applicable

(a) Refer to Table 1 in this document for further information on the migration adjustments applied to revised NOM estimates.

State and territory distribution

25 As is the case for preliminary NOM estimates, the state and territory distribution of revised NOM estimates is determined based on information reported on incoming and outgoing passenger cards (i.e. state or territory of intended address for arrivals and state or territory of residence/spent most time for departures).

26 The state and territory distributions of the migration adjustment are calculated based on the initial passenger card that identifies the movement of the traveller. For example, a long-term resident departure who returned to Australia within twelve months is added back to the state of residence they reported on departure (as identified on their outgoing passenger card). A long-term visitor arrival who actually stayed in Australia for less than twelve months is taken away from the state or territory they intended to live in (as identified on their incoming passenger card).

27 This method may be considered to be reasonable for people who, on arrival, intend to settle or stay in Australia for more than twelve months. However, there is less certainty about the reliability of the state or territory of intended stay for those persons who originally stated that they intended to stay for less than twelve months, but actually stayed longer, and this component of the migration adjustment is treated differently.

28 In the absence of direct information from outgoing passenger cards for this group, the ABS has applied the state and territory distribution for short-term visitors departing Australia who were in Australia for between six and twelve months. The state and territory distributions used for revised NOM estimates (shown in Table 6) are still subject to revision. The ABS expects that these estimates will improve as investigations proceed, and as actual data on state or territory of stay becomes available for this segment of the overseas visitor population (i.e. as outgoing passenger cards become available).

TECHNICAL NOTE MEASURING NET OVERSEAS MIGRATION *continued*

6. COMPONENTS OF NET OVERSEAS MIGRATION, States and territories—2001–02

Category of movement	NSW	Vic.	Qld	SA	WA	Tas.	NT	ACT	Aust. (a)
Permanent and long-term arrivals	144 441	83 181	60 711	13 781	38 645	2 731	2 597	7 256	353 371
Permanent and long-term departures	93 101	48 932	35 845	9 300	21 338	2 249	2 453	6 419	219 687
Migration adjustment	-6 929	-13 997	1 622	-1 683	-2 337	-175	511	-139	-23 128
Net overseas migration	44 411	20 252	26 488	2 798	14 970	307	655	698	110 556

(a) Includes Other Territories—see paragraph 2 of the Explanatory Notes.

CHANGES TO MIGRATION ADJUSTMENT METHODS

29 Due to changes in the methods used to adjust NOM estimates, caution should be used when comparing estimates over time. Table 7 describes the adjustment methods that have been applied to NOM estimates since September quarter 1996 (i.e. since the last intercensal period). Adjustments applied to overseas migration estimates will also be discussed in a special article in *Migration, Australia, 2002-03* (cat. no. 3412.0), scheduled for release on 28 April 2004.

7. MIGRATION ADJUSTMENT METHODS, September quarter 1996 to September quarter 2003

Period	Adjustment method
September 1996 - June 1997	Category jumping' adjustments applied using previous methodology(a)
September 1997 - June 2001	No adjustments applied (i.e. 'category jumping' set to zero)
September 2001 - June 2002	Current migration adjustments used (revised NOM estimates)
September 2002 - September 2003	Current migration adjustments methods used (preliminary NOM estimates)(b)

(a) For further information, refer to Appendix 3 in Demographic Estimates and Projections: Concepts, Sources and Methods (cat. no. 3228.0).

(b) Estimates for the 2002-03 financial year will be revised in the March 2003 issue of Australian Demographic Statistics (cat. no. 3101.0), scheduled for release in September 2004.

FURTHER INFORMATION

30 For further information on the measurement of net overseas migration, contact Rhonda de Vos on Canberra (02) 6252 6639, email <rhonda.devos@abs.gov.au>.

GLOSSARY

Age-specific fertility rates	Age-specific fertility rates are the number of live births (occurred or registered) during the calendar year, according to age of mother, per 1,000 of the female estimated resident population of the same age at 30 June. For calculating these rates, births to mothers under 15 years are included in the 15–19 years age group, and births to mothers aged 50 years and over are included in the 45–49 years age group. Pro rata adjustment is made in respect of births for which age of mother is not given.
Average annual rate of growth	The average annual growth rate, r , is calculated as a percentage using the formula: $\left[\left(\frac{P_n}{P_0} \right)^{\frac{1}{n}} - 1 \right] \times 100$ where P_0 is the population at the start of the period, P_n is the population at the end of the period and n is the length of the period between P_n and P_0 in years.
Average household size	Average household size refers to the number of persons per household in private dwellings.
Birth	The delivery of a child, irrespective of the duration of pregnancy, who, after being born, breathes or shows any other evidence of life such as heartbeat.
Category of movement	Overseas arrivals and departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main categories of movement: <ul style="list-style-type: none">■ permanent movements■ long-term movements (one year or more)■ short-term movements (less than one year). A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly, in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.
Estimated resident population (ERP)	The official measure of the population of Australia is based on the concept of residence. It refers to all people, regardless of nationality or citizenship, who usually live in Australia, with the exception of foreign diplomatic personnel and their families. It includes usual residents who are overseas for less than 12 months. It excludes overseas visitors who are in Australia for less than 12 months.
Household	A household is a group of two or more related or unrelated people who usually reside in the same dwelling, who regard themselves as a household and who make common provision for food or other essentials for living; or a person living in a dwelling who makes provision for his or her own food and other essentials for living, without combining with any other person. Households include group households of unrelated persons, same-sex couple households, single-parent households as well as one-person households. A household usually resides in a private dwelling (including caravans etc. in caravan parks). Persons usually resident in non-private dwellings, such as hotels, motels, boarding houses, jails and hospitals, are not included in household estimates. This definition of a household is consistent with the definition used in the census. The number of households can be either based on count or estimated resident population.
Household estimate	Household estimate is a measure of the number of households of the usually resident population. It is based on the census count of households which is adjusted for missed households, households of overseas visitors, households of Australian residents where all members were temporarily overseas at the time of the census and households of

GLOSSARY *continued*

Household estimate <i>continued</i>	Australian residents where all members were not home on census night and spent census night in a non-private dwelling in Australia.
Household population	The household population is the estimated resident population (ERP) that usually lives in private dwellings. It is the ERP less the population that usually lives in non-private dwellings.
Household size	Household size refers to the number of persons per household.
Infant mortality rate	The number of deaths of children under one year of age in a financial year per 1,000 live births in the same financial year.
Intercensal discrepancy	Intercensal discrepancy is the difference between two estimates at 30 June of a census year population, the first based on the latest census and the second arrived at by updating the 30 June estimate of the previous census date estimate with intercensal components of population change which take account of information available from the latest census. It is caused by errors in the start and/or finish population estimates and/or in estimates of births, deaths or migration in the intervening period which cannot be attributed to a particular source.
Intercensal error	Intercensal error is the difference between two estimates at 30 June of a census year population, the first based on the latest census and the second arrived at by updating the 30 June estimate of the previous census year with intercensal components of population change which do not take account of information available from the latest census.
Local Government Area (LGA)	Local Government Areas (LGA) are the spatial units which represent the geographical areas of incorporated local government councils and incorporated Community Government Councils (CGCs) where the CGC is of sufficient size and statistical significance. The various types of LGAs are cities (C), areas (A), rural cities (RC), towns (T), shires (S), district councils (DC) and municipalities (M). Further information concerning LGAs is contained in <i>Australian Standard Geographical Classification (ASGC)</i> (cat. no. 1216.0).
Long-term arrivals	Long-term arrivals comprise: <ul style="list-style-type: none">■ overseas visitors who intend to stay in Australia for 12 months or more (but not permanently)■ Australian residents returning after an absence of 12 months or more overseas.
Long-term departures	Long-term departures comprise: <ul style="list-style-type: none">■ Australian residents who intend to stay abroad for 12 months or more (but not permanently)■ overseas visitors departing who stayed 12 months or more in Australia.
Migration Adjustment	The ABS applies a number of adjustments to overseas arrivals and departures data in order to produce estimates of net overseas arrivals and departures (NOM). These mainly comprise adjustments designed to reflect differences between stated travel intentions and actual travel behaviour, but (in the case of revised NOM estimates) also include adjustments to transform numbers of overseas movements into numbers of travellers. Until recently, adjustments used by ABS to produce NOM estimates were collectively referred to as 'category jumping adjustments'. They are now referred to more simply as 'migration adjustments'.
Natural increase	Excess of births over deaths.
Net interstate migration	The difference between the number of persons who have changed their place of usual residence by moving into a given state or territory and the number who have changed their place of usual residence by moving out of that state or territory during a specified time period. This difference can be either positive or negative.
Net overseas migration	Net overseas migration is net permanent and long-term overseas migration plus an adjustment for the net effect of category jumping.

GLOSSARY *continued*

Net permanent and long-term movement	The difference between the number of permanent (settler) and long-term arrivals and the number of permanent and long-term departures. Short-term movements are excluded.
Overseas arrivals and departures (OAD)	Overseas arrivals and departures (OAD) refer to the arrival or departure of persons, through Australian airports (or sea ports), which have been recorded. Statistics on OAD relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted).
Permanent arrivals (settlers)	<p>Permanent arrivals (settlers) comprise:</p> <ul style="list-style-type: none">■ travellers who hold migrant visas (regardless of stated intended period of stay)■ New Zealand citizens who indicate an intention to settle■ those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens). <p>This definition of settlers is used by the Department of Immigration and Multicultural and Indigenous Affairs (DIMIA). Prior to 1985 the definition of settlers used by the Australian Bureau of Statistics (ABS) was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and the DIMIA.</p>
Permanent departures	Permanent departures are Australian residents (including former settlers) who on departure state that they are departing permanently.
Population growth	For Australia, population growth is the sum of natural increase and net overseas migration. For states and territories, population growth also includes net interstate migration. After the census, intercensal population growth also includes an allowance for intercensal discrepancy.
Population projections	Population projections are not predictions or forecasts. They are an assessment of what would happen, in future years, to Australia's population given a set of assumptions about future trends in fertility, mortality and migration.
Short-term arrivals	<p>Short-term arrivals comprise:</p> <ul style="list-style-type: none">■ overseas visitors who intend to stay in Australia for less than 12 months■ Australian residents returning after a stay of less than 12 months overseas.
Short-term departures	<p>Short-term departures comprise:</p> <ul style="list-style-type: none">■ Australian residents who intend to stay abroad for less than 12 months■ overseas visitors departing after a stay of less than 12 months in Australia.
Standardised death rate	<p>Standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The ABS standard populations relate to the years ending in 1 (e.g. 1991). The current standard population is all persons in the Australian population at June 2001. They are expressed per 1,000 or 100,000 persons. There are two methods of calculating standardised death rates:</p> <ul style="list-style-type: none">■ The <i>direct method</i> — this is used when the populations under study are large and the age-specific death rates are reliable. It is the overall death rate that would have prevailed in the standard population if it had experienced at each age the death rates of the population under study.■ The <i>indirect method</i> — this is used when the populations under study are small and the age-specific death rates are unreliable or not known. It is an adjustment to the crude death rate of the standard population to account for the variation between the actual number of deaths in the population under study and the number of deaths which would have occurred if the population under study had experienced the age-specific death rates of the standard population.

Wherever used, the definition adopted is indicated.

GLOSSARY *continued*

State or territory and Statistical Local Area of usual residence	<p>State or territory and Statistical Local Area (SLA) of usual residence refers to the state or territory and SLA of usual residence of:</p> <ul style="list-style-type: none">■ the population (estimated resident population)■ the mother (birth collection)■ the deceased (death collection). <p>In the case of overseas movements, state or territory of usual residence refers to the state or territory regarded by the traveller as the one in which he/she lives or has lived. State or territory of intended residence is derived from the intended address given by settlers, and by Australian residents returning after a journey abroad. Particularly in the case of the former, this information does not necessarily relate to the state or territory in which the traveller will eventually establish a permanent residence.</p>
Statistical District (S Dist)	<p>Statistical Districts (S Dist) consist of selected, significant, predominantly urban areas in Australia which are not located within a Capital City Statistical Division (SD). S Dists enable comparable statistics to be produced about these selected urban areas. Further information concerning S Dists is contained in <i>Australian Standard Geographical Classification (ASGC)</i> (cat. no. 1216.0).</p>
Statistical Division (SD)	<p>Statistical Divisions (SD) consist of one or more Statistical Subdivisions (SSD). The divisions are designed to be relatively homogeneous regions characterised by identifiable social and economic units within the region, under the unifying influence of one or more major towns or cities. Further information concerning SDs is contained in <i>Australian Standard Geographical Classification (ASGC)</i> (cat. no. 1216.0).</p>
Statistical Local Area (SLA)	<p>Statistical Local Areas (SLA) are, in most cases, identical with, or have been formed from a division of, whole Local Government Areas (LGA). In other cases, they represent unincorporated areas. In aggregate, SLAs cover the whole of a state or territory without gaps or overlaps. In some cases legal LGAs overlap statistical subdivision boundaries and therefore comprise two or three SLAs (Part A, Part B and, if necessary, Part C). Further information concerning SLAs is contained in <i>Australian Standard Geographical Classification (ASGC)</i> (cat. no. 1216.0).</p>
Statistical Subdivision (SSD)	<p>Statistical Subdivisions (SSD) are of intermediate size, between Statistical Local Areas (SLA) and Statistical Divisions (SD). In aggregate, they cover the whole of Australia without gaps or overlaps. They are defined as socially and economically homogeneous regions characterised by identifiable links between the inhabitants. In the non-urban areas an SSD is characterised by identifiable links between the economic units within the region, under the unifying influence of one or more major towns or cities. Further information concerning SSDs is contained in <i>Australian Standard Geographical Classification (ASGC)</i> (cat. no. 1216.0).</p>
Total fertility rate	<p>The sum of age-specific fertility rates. It represents the number of children a woman would bear during her lifetime if she experienced current age-specific fertility rates at each age of her reproductive life.</p>

FOR MORE INFORMATION . . .

- INTERNET* **www.abs.gov.au** the ABS web site is the best place to start for access to summary data from our latest publications, information about the ABS, advice about upcoming releases, our catalogue, and Australia Now—a statistical profile.
- LIBRARY* A range of ABS publications is available from public and tertiary libraries Australia-wide. Contact your nearest library to determine whether it has the ABS statistics you require, or visit our web site for a list of libraries.
- CPI INFOLINE* For current and historical Consumer Price Index data, call 1902 981 074 (call cost 77c per minute).
- DIAL-A-STATISTIC* For the latest figures for National Accounts, Balance of Payments, Labour Force, Average Weekly Earnings, Estimated Resident Population and the Consumer Price Index call 1900 986 400 (call cost 77c per minute).

INFORMATION SERVICE

Data already published that can be provided within five minutes will be free of charge. Our information consultants can also help you to access the full range of ABS information—ABS user pays services can be tailored to your needs, time frame and budget. Publications may be purchased. Specialists are on hand to help you with analytical or methodological advice.
