KEY POINTS

SUMMARY

- Total credit market outstandings of the domestic non-financial sectors at 31 December 2008 was \$3,231.0b, a decrease of \$117.5b from the previous quarter. Demand for credit during the quarter was \$58.4b and valuation decreases were \$175.9b.
- Demand for credit was down \$2.3b from the previous quarter, driven by decreased demand by state and local public non-financial corporations (down \$4.0b), households (down \$2.6b) and private non-financial corporations (down \$0.9b). This was offset by an increase in demand by national and state and local general government, \$3.0b and \$2.2b respectively.

NON-FINANCIAL CORPORATIONS

- Non-financial corporations raised a net \$41.1b, mostly through equity, bonds and loans issuance, net \$19.8b, \$10.5b and \$10.2b respectively.

GENERAL GOVERNMENT

- State and local general government borrowed net \$3.1b in loans.

HOUSEHOLDS

- Households raised a net \$8.5b during the December quarter 2008, down \$2.6b from the September quarter 2008 estimate of \$11.1b.

CHANGES TO THIS ISSUE

Please refer to the note titled 'ABS treatment of internally securitised paper' on page 6.

SIGNIFICANT EVENTS

The global financial crisis has caused changes in the structure and behaviour of financial markets. Sudden shifts in structural relationships which have existed for some time mean that data supplied by businesses to the ABS and ABS editing and compilation practices may not reflect the impact of these changes fully and in a timely manner. The ABS is working with providers and reviewing and updating, where needed, a range of methods relating to the collection and compilation of financial sector output, income, transactions, positions and prices. This process is likely to lead to revisions in future releases.

There were no significant privatisations impacting the aggregates this quarter.

REVISIONS IN THIS ISSUE

There have been revisions back to December quarter 2006 to previously published aggregates due to quality assurance work undertaken with data providers to the ABS Survey of Financial Information, ABS Survey of International Investment and APRA administrative data sets.

ABS TREATMENT OF INTERNALLY SECURITISED PAPER

TREATMENT OF INTERNALLY SECURITISED PAPER IN ABS STATISTICS

Since March quarter 2008 a number of banks have engaged in the practice of internal securitisation, where a bank sells a pool of mortgages to a related special purpose vehicle (SPV), and the SPV in turn issues debt securities, which are held entirely by the bank which originated the mortgages. These securities are eligible for use as collateral in repurchase agreements (repos) with the Reserve Bank of Australia (RBA).

Following consultation with major users, the ABS considers that the sale of these mortgages from the bank to the internal trust represents a 'clean sale', even though the underlying credit risk is not transferred outside the group. The ABS also considers the issue of debt securities by the trusts satisfies the System of National Accounts definition of a 'debt security'. Furthermore, these securities are treated as securitisation debt securities, that is residential mortgage backed securities (RMBS), as they are backed by a pool of mortgages, use existing SPVs which issue RMBS to the market, pass through the principal and interest payments to the security holder, and the securities are rated.

The amount issued under internal securitisation is recorded against issuance of debt securities (RMBS) by securitisers in the Financial intermediaries n.e.c sector, Table 12. An equal amount of loan assets is recorded against securitisers in the Financial intermediaries n.e.c sector, Table 12. Asset holdings of RMBS securities by bank licensed entities (Table 6) and a reduction in mortgages held by bank licensed entities (Table 6) are recorded. Flows can be seen in the corresponding transaction tables.

To the extent that internal securitised paper is used by banks in repos with the RBA, the holdings of Financial intermediaries n.e.c sector paper for both RBA and banks are adjusted to reflect the ABS treatment of repo security trades.

The ABS treatment of internally securitised paper creates differences between sub-sectoral loan aggregates published by the ABS, APRA and the RBA. However, total loans remain equal for the series.

ANALYSIS AND COMMENTS SECTORAL SUMMARY

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains financial profiles of each subsector of the economy and the market for each conventional financial instrument. There are also tables showing inter-sectoral financial transactions and measures of sectoral financial surpluses and deficits.

2 Financial accounts of various types – which are also called flow of funds statistics – are published by many Organisation for Economic Co-operation and Development (OECD) countries, including the United States of America (from 1945), the United Kingdom (from 1952) and Canada (from 1962). In Australia, the Reserve Bank produced annual flow of funds accounts for the reference years 1953–54 to 1988–89. The final edition of these was published in the Reserve Bank's Bulletin for November 1989. The Australian Bureau of Statistics (ABS) has published quarterly estimates commencing with experimental estimates of inter-sectoral financial transactions for the March and June quarters 1989.

CONCEPTS, SOURCES AND METHODS

3 From the September quarter 1998 the ABS financial accounts are compiled in accordance with international standards contained in the *System of National Accounts, 1993* (SNA93). There are significant conceptual differences between the SNA93-based ABS Financial Accounts and the previous Financial Accounts. For further information, see ABS Information Paper: *Upgraded Australian National Accounts: Financial Accounts* (cat. no. 5254.0).

4 *Australian National Accounts: Concepts, Sources and Methods* (cat. no. 5216.0) provides detailed descriptions of the concepts, data sources and methodologies used in compiling the Australian national accounts, including the financial accounts, on an SNA93 basis. Selected concepts, sources and methods are outlined below. More detailed explanations can be obtained from the contact on the front cover of this publication.

STOCK AND FLOW CONCEPTS

5 Tables 1 to 16 and 34 to 41 present balance sheet data at market prices at the end of each calendar quarter. Balance sheet data are also known as stock, level or position data. In contrast, tables 17 to 33 show net inter-sectoral financial transactions during the quarters. These are flow data. In this publication, the net transactions or flows are defined as active dealing in a financial instrument.

THE CLASSIFICATION OF INSTITUTIONAL SECTORS AND SUBSECTORS

6 The institutional sectors are based on the *Standard Economic Sector Classifications of Australia, 2002* (cat. no. 1218.0) and are the same as the sectors used in national income and expenditure accounts.

7 The basic unit that is classified by sector is the institutional unit, which is defined as an economic entity that is capable, in its own right, of owning assets, incurring liabilities and engaging in economic activities and transactions with other entities.

SOURCES OF DATA

8 Most of the financial data in this publication are derived from statistical surveys conducted by the ABS and from information collected by the Australian Prudential Regulation Authority (APRA). Some other data sources are used, particularly for valuation adjustments.

9 The quarterly sectoral capital accounts in the flow of funds matrices are prepared using a variety of indicators to dissect annual estimates based on survey data. Some of the indicators used are known to be of poor quality; these are footnoted in tables to note the quality concerns and should be used with caution.

COMPILATION METHODS

10 The levels (stock) tables are prepared by gathering together balance sheet information from various sources and selecting the better estimates. A choice is often possible because different data sources provide alternative or counterpart measures of the same item. For example, borrowing by state owned non-financial corporations will be reported by the state central borrowing authorities or Treasuries as assets and by the non-financial corporations as liabilities. The subsector aggregates derived from these data do not agree because the ABS does not survey all state owned non-financial corporations. In this case, the data from the central borrowing authorities and Treasuries are therefore used to estimate both the asset and liability aspects of these borrowings.

11 In some cases, transactions data are directly collected. In other cases transactions must be derived from the difference in consecutive levels. These net financial transactions are derived by taking the difference between closing and opening levels of balance sheet items and, where possible, eliminating changes on the balance sheet caused by valuation effects such as exchange rate movements.

ACCOUNTING BASIS

12 SNA93 states explicitly that the national accounts should record transactions on an accrual basis (as opposed to a cash or 'due for payment' basis), to reflect the time when economic value is transferred rather than when cash relating to the transaction is paid or falls due for payment. For practical reasons complete implementation of accrual accounting throughout the national accounts is not yet possible. Some areas where accrual accounting has not been adopted include:

- accrual of household income tax; and
- accrual of certain employee entitlements, including recreation and long service leave.

13 In these statistics tradeable securities, which include shares listed on the Australian Stock Exchange (ASX) and debt securities traded on organised markets, are valued at market prices.

14 Other securities are assigned estimated market values. For example, equity not listed on ASX is valued on the basis of value of total assets of the enterprise in question less the value of any repayable liabilities.

15 Deposits, loans and other accounts payable/receivable are recorded at their face value.

16 Net equity of pension funds in life office reserves are valued on the basis of market value of total assets (including non financial assets) of the funds less any repayable liabilities.

DATA AVAILABLE ON REQUEST

18 The ABS has available on request stock data back to the December quarter 1988 and transactions flow data back to the March Quarter 1989. Also, different views of the data are available.

19 In addition to catalogued products, some priced special data reports are available covering bank lending to households and unincorporated businesses, public sector debt and net financing requirement, detailed sectoral capital account data, housing loans outstanding by type of lending institution, and details of households' deposits with banks.

20 A more extensive set of Explanatory Notes and a Glossary relevant to the financial accounts are available on the ABS web site <<http://www.abs.gov.au>>.

21 Inquiries should be made to the contact on the front cover of this publication.

EFFECTS OF ROUNDING

22 Any discrepancies between totals and sums of components in the tables are caused by rounding.
