ABOUT THIS PUBLICATION

This publication presents information about the labour force experience of people aged 15 years and over during the 12 months ending February 2007. It presents information about time spent in labour force activities, including episodes of working or looking for work, and time spent out of the labour force.

The statistics in this publication were compiled from data collected in the Labour Force Experience Survey conducted throughout Australia in February 2007 as a supplement to the Australian Bureau of Statistics (ABS) monthly Labour Force Survey (LFS).

For this publication, labour force activity over a 12-month period was determined from a more limited set of questions than is used in the monthly Labour Force Survey (LFS). For this reason, the terms *worked* and *looked for work* are used, rather than the more precisely defined terms *employed* and *unemployed*, as used in the LFS. In this survey, the concepts *worked* and *looked for work* are used to determine whether a person was *in the labour force during the year*. Therefore, this concept is also based on a more limited set of questions than the Labour Force Survey.

Labour force experience relates to a person's labour force activities over a 12-month period. Labour force activity consists of either working or looking for work.

This survey measured the number of weeks people were engaged in these labour force activities during the year, the number of spells of looking for work during the year and the main activity of people when not in the labour force.

NOTES ABOUT THE ESTIMATES

The scope of the Labour Force Experience Survey was expanded in February 2007 to include all people aged 15 years and over. For previous surveys, the scope was restricted to people aged 15 to 69 years. All the results in this publication relate to all people aged 15 years and over, unless otherwise specified. This change has resulted in an extra 1,773,000 people coming within the scope of this survey. Users need to exercise care when comparing the estimates in this publication with previous releases.

From 2006, occupation data are classified according to the ANZSCO—*Australian and New Zealand Standard Classification of Occupations, First Edition 2006* (cat. no. 1220.0). The new classification replaces the ASCO—*Australian Standard Classification of Occupations, Second Edition, 1997* (cat. no. 1220.0). Data classified according to the ASCO are available on request.

Also from 2006, industry data are classified according to the *Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006* (cat. no. 1292.0). This new classification replaces the *Australian and New Zealand Standard Industrial Classification (ANZSIC), 1993* (cat. no. 1292.0). Data classified according to the ANZSIC 1993 are available on request.

ROUNDING

As estimates have been rounded, discrepancies may occur between sums of the component items and totals.

Brian Pink
Australian Statistician

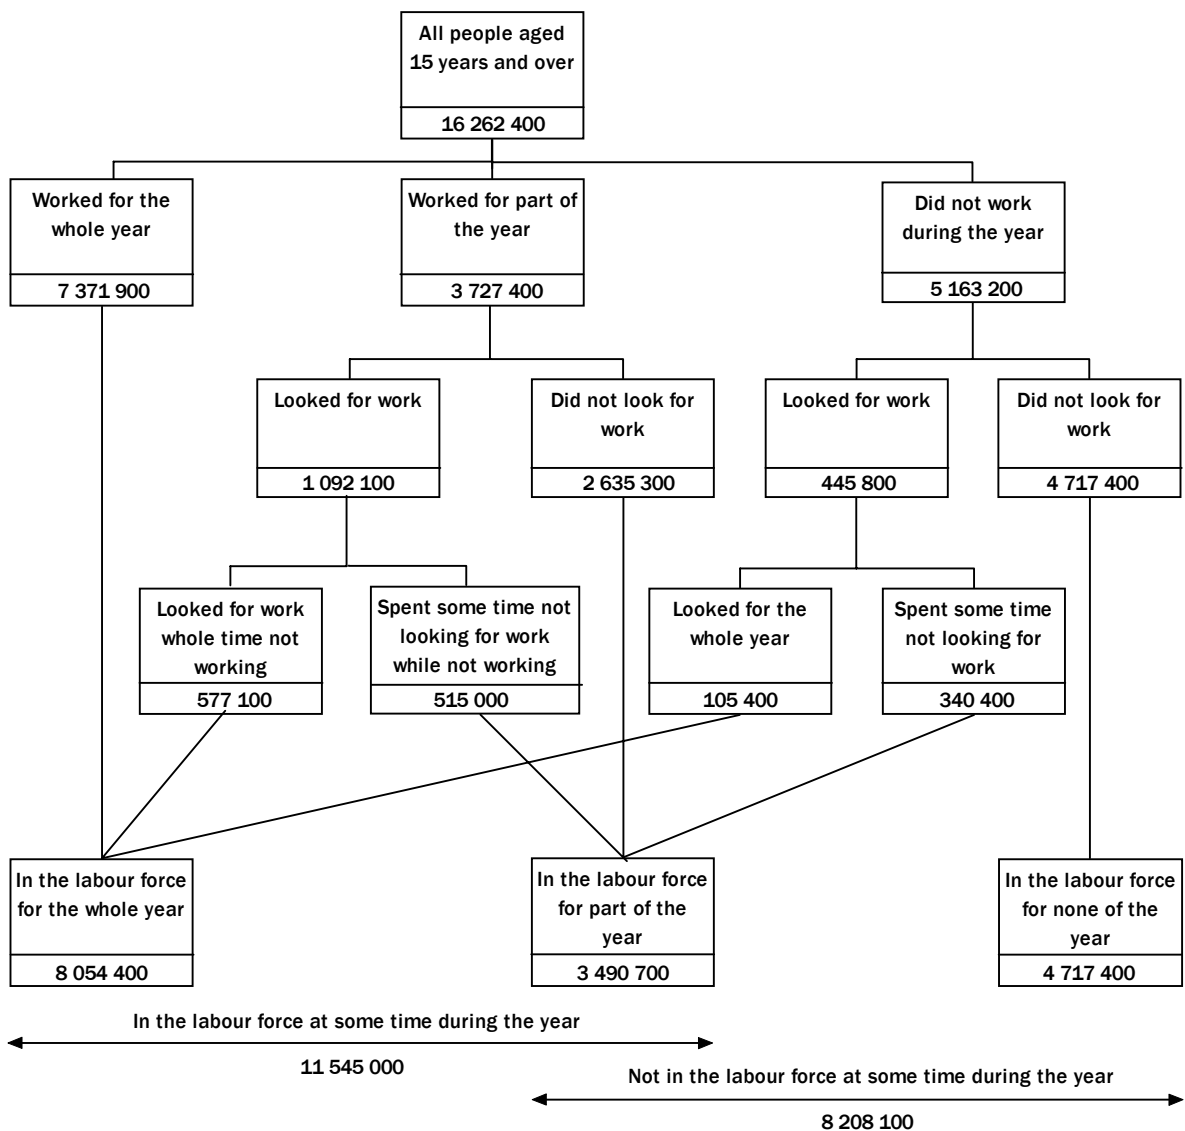

CONCEPTUAL FRAMEWORK

CONCEPTUAL FRAMEWORK

The following diagram illustrates the conceptual framework for the Labour Force Experience Survey. People aged 15 years and over were classified according to their labour force activity over a 12-month period, that is, whether they were working or looking for work.

The framework firstly differentiates between people who worked for the whole year, part of the year or did not work during the year. People who worked part of the year or did not work during the year were asked whether they looked for work during the year. People who looked for work were also asked about the time they spent looking for work.

Note that the terms *worked* and *looked for work* are not the same as the more precisely defined terms *employed* and *unemployed*, which are used in the monthly Labour Force Survey to describe current labour force status. See the Glossary for the definitions of these terms.

SUMMARY OF FINDINGS

ALL PEOPLE

In February 2007, there were 16.3 million people aged 15 years and over (excluding institutionalised people, boarding school pupils and people in very remote parts of Australia). During the 12 months to February 2007, 75% of these people did not change their labour force status. Of those, 60% worked for the whole year, 39% were not in the labour force for the whole year and 1% looked for work for the whole year.

During the year ending February 2007:

- 11.1 million people worked at some time during the year, of whom 7.4 million spent the whole year working
- 1.5 million people looked for work at some time during the year, of whom 105,400 spent the whole year looking for work
- 8.2 million people were not in the labour force at some time during the year, of whom 4.7 million spent no time in the labour force.

Participation in the labour force

There were just over 11.5 million people aged 15 years and over in the labour force at some time during the year ending February 2007. That is, 71% of Australians aged 15 years and over either worked or looked for work at some time during the year.

Of men aged 15 years and over, 77% participated in the labour force at some time in the 12 months to February 2007. For women, the proportion participating in the labour force at some time during the year ending February 2007 was 65%.

The age group with the highest rate of participation in the labour force at some time during the year ending February 2007 were people aged 20–24 years (91%). For older people, the proportion participation in the labour force at some time during the year was 73% for those aged 55–59 years, 52% for those aged 60–64 years, and 11% for those aged 65 years and over.

LABOUR FORCE PARTICIPATION DURING THE YEAR ENDING FEBRUARY 2007, Age—By sex

Men participated at higher rates than women in all age groups except for those aged 15–19 years in which women participated at a slightly higher rate (73%) than men (70%).

Of the people who were in the labour force at some time during the year, 70% spent the whole year in the labour force and 17% spent 39 to 51 weeks in the labour force.

SUMMARY OF FINDINGS *continued*

PEOPLE WHO WORKED AT SOME TIME DURING THE YEAR

There were 11.1 million people aged 15 years and over who worked at some time during the year ending February 2007. Of these, 6 million (54%) were men and 5.1 million (46%) were women. Some 70% of these men worked for the entire 52 weeks, compared to 62% of women.

Of those people who worked at some time during the year ending February 2007:

- 65% worked full-time only (78% of men and 49% of women)
- 25% worked part-time only (14% of men and 39% of women)
- 10% worked a combination of full-time and part-time (8% of men and 12% of women).

Over three-quarters (79%) of people who worked full-time only worked for the whole year, compared to 41% of people who worked part-time only.

The majority of people who worked at some time during the year ending February 2007 had only one employer or business during that time (77%). Nearly one quarter (24%) of people who worked part-time only had two or more employers or businesses during the year, compared to 18% of people who worked full-time only.

PEOPLE WHO LOOKED FOR WORK AT SOME TIME DURING THE YEAR

There were 1.5 million people aged 15 years and over who looked for work at some time during the year ending February 2007. These comprised approximately equal numbers of men (774,700) and women (763,200).

Of those people who looked for work at some time during the year ending February 2007:

- 21% looked for work for between 1 and 3 weeks
- 39% looked for work for between 4 and 12 weeks
- 16% looked for work for between 13 and 25 weeks
- 24% looked for work for between 26 and 52 weeks, including 7% who looked for the whole year.

The mean (average) duration of time spent looking for work was 15.7 weeks. On average, women who looked for work spent less time doing so (14.7 weeks) than men (16.7 weeks). People aged 55 years and over spent, on average, the most time looking for work (20.4 weeks), while people aged 15–19 years spent, on average, the least time (13.4 weeks).

Almost three-quarters (71%) of people who looked for work during the year had also worked during the year.

PEOPLE WHO WERE NOT IN THE LABOUR FORCE AT SOME TIME DURING THE YEAR

There were 8.2 million people aged 15 years and over who were not in the labour force at some time during the year ending February 2007. Of these, 41% were men and 59% were women. Over half (57%) of the people aged 15 years and over who were not in the labour force at some time during the year ending February 2007 spent no time in the labour force during the year.

The following were the main activities most commonly reported by men, while not in the labour force:

- 'retired or voluntarily inactive' (30%)
- 'holiday, travel or leisure activities' (23%)
- 'attended an educational institution' (19%).

SUMMARY OF FINDINGS *continued*

PEOPLE WHO WERE NOT IN THE LABOUR FORCE AT SOME TIME DURING THE YEAR *continued*

For women, the most commonly reported main activities were:

- 'home duties or child care' (39%)
- 'retired or voluntarily inactive' (21%)
- 'holiday, travel or leisure activities' (13%)
- 'attended an educational institution' (13%).

COMPARISONS WITH PREVIOUS SURVEYS

Prior to 2007, the scope for the Labour Force Experience Survey was restricted to people aged 15 to 69 years, so direct comparisons between 2007 and previous years can only be made using this common population.

In February 2007, there were 14.5 million people aged 15 to 69 years (excluding institutionalised people, boarding school pupils and people in very remote parts of Australia). There were an estimated 11.4 million people aged 15 to 69 years who participated in the labour force at some time during the year ending February 2007. That is, 79% of Australians aged 15 to 69 years either worked or looked for work at some time during the year. This proportion has increased from 77% in 1997.

The proportion of men aged 15 to 69 years participating in the labour force at some time during the 12 months to February 2007 was 85%. This figure has remained relatively steady since 1997. For women, the proportion participating has steadily increased from 69% in 1999 to 73% in 2007.

There were 11 million people aged 15 to 69 years who worked at some time during the year ending February 2007. The proportion of men who worked at some time during the year has risen from 80% in 1997 to 82% in 2007. Similarly, the proportion of women who worked at some time during the year has steadily increased throughout that period from 64% in 1997 to 69% in 2007.

During the year ending February 2007, an estimated 772,700 men and 762,700 women aged 15 to 69 years spent some time looking for work. The proportion of men who looked for work at some time during the year has steadily decreased, from 17% in 1997 to 11% in February 2007. Similarly, the proportion of women who looked for work at some time during the year, has decreased from 13% in 1997 to 11% for the 12 months ending February 2007.

EXPLANATORY NOTES

INTRODUCTION

1 The statistics in this publication were compiled from data collected in the Labour Force Experience Survey that was conducted throughout Australia in February 2007 as a supplement to the Australian Bureau of Statistics (ABS) monthly Labour Force Survey (LFS). Respondents to the LFS who were in scope of the supplementary survey were asked further questions.

2 The publication *Labour Force, Australia* (cat. no. 6202.0) contains information about survey design, sample redesign, scope, coverage and population benchmarks relevant to the monthly LFS, which also apply to supplementary surveys. It also contains definitions of demographic and labour force characteristics, and information about telephone interviewing which are relevant to both the monthly LFS and supplementary surveys.

CONCEPTS SOURCES AND METHODS

3 The conceptual framework used in Australia's LFS aligns closely with the standards and guidelines set out in Resolutions of the International Conference of Labour Statisticians. Descriptions of the underlying concepts and structure of Australia's labour force statistics, and the sources and methods used in compiling these estimates, are presented in *Labour Statistics: Concepts, Sources and Methods* (cat. no. 6102.0.55.001) which is available on the ABS website <<http://www.abs.gov.au>> (Methods, Classifications, Concepts & Standards).

SCOPE

4 The scope of the LFS is restricted to people aged 15 years and over and excludes the following people:

- members of the permanent defence forces
- certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations
- overseas residents in Australia
- members of non-Australian defence forces (and their dependants).

5 Students at boarding schools, patients in hospitals, residents of homes (e.g. retirement homes, homes for people with disabilities), and inmates of prisons are excluded from all supplementary surveys.

6 This supplementary survey was conducted in both urban and rural areas in all states and territories, but excluded approximately 120,000 people living in very remote parts of Australia who would otherwise have been within the scope of the survey. The exclusion of these people will have only a minor impact on any aggregate estimates that are produced for individual states and territories, except the Northern Territory where such people account for over 23% of the population.

COVERAGE

7 The estimates in this publication relate to people covered by the survey in February 2007. In the LFS, coverage rules are applied which aim to ensure that each person is associated with only one dwelling and hence has only one chance of selection in the survey. See *Labour Force, Australia* (cat. no. 6202.0) for more details.

SAMPLE SIZE

8 Supplementary surveys are not always conducted on the full LFS sample. Since August 1994 the sample for supplementary surveys has been restricted to no more than seven-eighths of the LFS sample.

9 The initial sample for the February 2007 LFS consisted of 41,663 private dwelling households and special dwelling units. Of the 33,989 private dwelling households and special dwelling units that remained in the survey after sample loss (e.g. households selected in the survey which had no residents in scope for the LFS, vacant or derelict dwellings and dwellings under construction), approximately 31,486 or 96.9% were fully responding to the Labour Force Experience Survey. The number of completed interviews obtained from these private dwelling households and special dwelling units (after taking into account scope, coverage and subsampling exclusions) was 54,689.

EXPLANATORY NOTES *continued*

RELIABILITY OF THE ESTIMATES

- 10** Estimates in this publication are subject to sampling and non-sampling errors:
- Sampling error is the difference between the published estimate and the value that would have been produced if all dwellings had been included in the survey. For more information see the Technical Note.
 - Non-sampling errors are inaccuracies that occur because of imperfections in reporting by respondents and interviewers and errors made in coding and processing data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient processing procedures.

SEASONAL FACTORS

- 11** The estimates are based on information collected in the survey month, and, due to seasonal factors, may not be representative of other months of the year.

CLASSIFICATIONS USED

- 12** Country of birth data are classified according to the *Standard Australian Classification of Countries (SACC), 1998* (cat. no. 1269.0).

- 13** From 2006, occupation data are now classified according to the *ANZSCO—Australian and New Zealand Standard Classifications of Occupations, First Edition, 2006* (cat.no. 1220.0). This new classification replaces the *ASCO—Australian Standard Classifications of Occupations, Second Edition, 1997* (cat.no. 1220.0). Data classified according to the ASCO are available on request.

- 14** Also from 2006, industry data are classified according to *Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006* (cat.no. 1292.0). This new classification replaces the *Australian and New Zealand Standard Industrial Classification (ANZSIC), 1993* (cat.no.1292.0). Data classified according to the ANZSIC 1993 are available on request.

COMPARABILITY OF TIME SERIES

- 15** Revisions are made to population benchmarks for the LFS after each five-yearly Census of Population and Housing. The last such revision was made in February 2004 to take account of the results of the 2001 Census of Population and Housing. Estimates from supplementary surveys conducted from and including February 2004 are therefore based on revised population benchmarks.

COMPARABILITY WITH MONTHLY LFS STATISTICS

- 16** Due to differences in the scope and sample size of this supplementary survey and that of the LFS, the estimation procedure may lead to some small variations between labour force estimates from this survey and those from the LFS.

PREVIOUS SURVEYS

- 17** Results of similar surveys, conducted in February 1969, 1973, 1975, 1976, 1977, annually from February 1979 to February 1989, annually from March 1990 to March 1994, and in February 1995, 1997, 1999, 2001, 2003 and 2005 have been given in previous issues of the publication *Labour Force Experience, Australia* (cat. no. 6206.0) and the Standard Data Service *Labour Force Experience on Hardcopy, Australia* (cat. no. 6206.0.40.001).

NEXT SURVEY

- 18** The ABS plans to conduct this survey again in February 2009.

ACKNOWLEDGEMENT

- 19** ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated: without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.

EXPLANATORY NOTES *continued*

RELATED PUBLICATIONS

20 ABS publications which may also be of interest include:

APPENDIX 1 POPULATIONS AND DATA ITEMS LIST

DATA AVAILABLE ON REQUEST

The ABS has a range of data available on request from the Labour Force Experience Survey. This section lists the data items and populations which relate to the survey. More detailed breakdowns of some data items may also be available on request.

The population(s) for a particular data item refers to the people in the survey to whom the data relates. Where alternative output categories are available for the same data item, these are shown and the data item name is followed by a bracketed numeral (e.g. Country of birth (2)).

For more information about ABS data available on request, contact Kerry O'Brien on Canberra (02) 6252 7246, or by facsimile on (02) 6252 7512, or by email to <kerry.obrien@abs.gov.au>.

POPULATION 1

All persons.

POPULATION 2

Persons in the labour force at some time during the year ending February 2007.

POPULATION 3

Persons who worked at some time during the year ending February 2007.

POPULATION 4

Persons who looked for work at some time during the year ending February 2007.

POPULATION 5

Persons who were not in the labour force at some time during the year ending February 2007.

(a) Latest data available June 2003, from the ABS website cat. no. 6291.0.55.001 annual, or on request.

(b) Latest data available on request July 2001.

(c) This product replaces the publication Working Arrangements, Australia (cat. no. 6342.0).

INTRODUCTION

1 Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability. That is, they may differ from those estimates that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three (67%) that a sample estimate will differ by less than one SE from the number that would have been obtained if all dwellings had been included, and about 19 chances in 20 (95%) that the difference will be less than two SEs. Another measure of the likely difference is the relative standard error (RSE), which is obtained by expressing the SE as a percentage of the estimate.

2 Due to space limitations, it is impractical to print the SE of each estimate in the publication. Instead, a table of SEs is provided to enable readers to determine the SE for an estimate from the size of that estimate (see table T1). The SE table is derived from a mathematical model, referred to as the 'SE model', which is created using data from a number of past Labour Force Surveys. It should be noted that the SE model only gives an approximate value for the SE for any particular estimate, since there is some minor variation between SEs for different estimates of the same size.

CALCULATION OF STANDARD ERRORS

3 An example of the calculation and the use of SEs in relation to estimates of people is as follows. Table 3 shows that the estimated number of people aged 15 years and over in the labour force for part of the year was 3,490,700. Since this estimate is between 2,000,000 and 5,000,000, table T1 shows that the SE for Australia will lie between 17,150 and 29,250 and can be approximated by interpolation using the following general formula:

$$\begin{aligned}
 & SE \text{ of estimate} \\
 &= \text{lower SE} + \left(\frac{\text{size of estimate} - \text{lower estimate}}{\text{upper estimate} - \text{lower estimate}} \right) \times (\text{upper SE} - \text{lower SE}) \\
 &= 17,150 + \left(\frac{3,490,700 - 2,000,000}{5,000,000 - 2,000,000} \right) \times (29,250 - 17,150) \\
 &= 23,200 \text{ (rounded to the nearest 100)}
 \end{aligned}$$

4 Therefore, there are about two chances in three that the value that would have been produced, if all dwellings had been included in the survey, will fall within the range 3,467,500 to 3,513,900, and about 19 chances in 20 that the value will fall within the range 3,444,300 to 3,537,100. This example is illustrated in the diagram below.

5 In general, the size of the SE increases as the size of the estimate increases. Conversely, the RSE decreases as the size of the estimate increases. Very small estimates are thus subject to such high RSEs that their value for most practical purposes is unreliable. In the tables in this publication, only estimates with RSEs of 25% or less are considered reliable for most purposes. Estimates with RSEs greater than 25% but less than or equal to 50% are preceded by an asterisk (e.g. *3.4) to indicate they are subject

CALCULATION OF STANDARD ERRORS *continued*

to high SEs and should be used with caution. Estimates with RSEs of greater than 50%, preceded by a double asterisk (e.g. **0.3), are considered too unreliable for general use and should only be used to aggregate with other estimates to provide derived estimates with RSEs of 25% or less.

MEANS AND MEDIANS

6 The RSEs of estimates of mean and median duration of time spent looking for work are obtained by first finding the RSE of the estimate of the total number of people contributing to the estimate (see table T1) and then multiplying the resulting number by the following factors:

- mean duration of time spent looking for work (weeks): 0.76
- median duration of time spent looking for work (weeks): 1.63

7 The following is an example of the calculation of SEs where the use of a factor is required. Table 11 shows that the estimated number of males aged 15 years and over looking for work at some time during the year was 774,700 with a median duration of time spent looking for work of 10 weeks. The SE of 774,700 can be calculated from table T1 (by interpolation) as 10,000. To convert this to an RSE we express the SE as a percentage of the estimate, or $10,000/774,700 = 1.3\%$.

8 The RSE of the estimate of median duration of time spent looking for work for males aged 15 years and over is calculated by multiplying this number (1.3%) by the appropriate factor shown in the previous paragraph (in this case 1.63): $1.3 \times 1.63 = 2.1\%$. The approximate SE of this estimate of median duration of time spent looking for work for males aged 15 years and over is therefore 2.1% of 10 weeks, i.e. about 0.2 weeks. Therefore, there are two chances in three that the median duration of time spent looking for work for males aged 15 years and over that would have been obtained if all dwellings had been included in the survey would have been within the range 9.8 weeks to 10.2 weeks, and about 19 chances in 20 that it would have been within the range 9.6 weeks to 10.4 weeks.

9 Estimates of means and medians produced from population estimates smaller than the values provided in table T2 have RSEs larger than 25% and should be used with caution. Table T2 also indicates the size of population estimates that would produce means and medians with RSEs greater than 50%, which are considered too unreliable for general use.

PROPORTIONS AND PERCENTAGES

10 Proportions and percentages formed from the ratio of two estimates are also subject to sampling errors. The size of the error depends on the accuracy of both the numerator and the denominator. A formula to approximate the RSE of a proportion is given below. This formula is only valid when x is a subset of y.

$$RSE\left(\frac{x}{y}\right) = \sqrt{[RSE(x)]^2 - [RSE(y)]^2}$$

11 Considering the example from the previous page, of the 3,490,700 people aged 15 years and over in the labour force for part of the year, 515,000, or 14.8%, looked for work at some time during the year. The SE of 515,000 may be calculated by interpolation as 8,200. To convert this to an RSE we express the SE as a percentage of the estimate, or $8,200/515,000 = 1.6\%$. The SE for 3,490,700 was calculated previously as 23,200, which converted to an RSE is $23,200/3,490,700 = 0.7\%$. Applying the above formula, the RSE of the proportion is:

$$RSE = \sqrt{(1.6)^2 - (0.7)^2} = 1.4\%$$

TECHNICAL NOTE DATA QUALITY *continued*

PROPORTIONS AND PERCENTAGES *continued*

12 Therefore, the SE for the proportion of people aged 15 years and over who looked for work at some time during the year is 0.2 percentage points $(=(14.8/100) \times 1.4)$. Therefore, there are about two chances in three that the proportion of people aged 15 years and over who looked for work at some time during the year is between 14.6% and 15%, and 19 chances in 20 that the proportion is within the range 14.4% to 15.2%.

DIFFERENCES

13 Published estimates may also be used to calculate the difference between two survey estimates (of numbers or percentages). Such an estimate is subject to sampling error. The sampling error of the difference between two estimates depends on their SEs and the relationship (correlation) between them. An approximate SE of the difference between two estimates $(x-y)$ may be calculated by the following formula:

$$SE(x-y) = \sqrt{[SE(x)]^2 + [SE(y)]^2}$$

14 While this formula will only be exact for differences between separate and uncorrelated characteristics or subpopulations, it is expected to provide a good approximation for all differences likely to be of interest in this publication.

(a) Refers to the number of people contributing to the estimate.

GLOSSARY

Employed	<p>People aged 15 years and over who, during the reference week:</p> <ul style="list-style-type: none">■ worked for one hour or more for pay, profit, commission or payment in kind, in a job or business or on a farm (comprising employees, employers and own account workers); or■ worked for one hour or more without pay in a family business or on a farm (i.e. contributing family workers); or■ were employees who had a job but were not at work and were:<ul style="list-style-type: none">■ away from work for less than four weeks up to the end of the reference week; or■ away from work for more than four weeks up to the end of the reference week and received pay for some or all of the four week period to the end of the reference week; or■ away from work as a standard work or shift arrangement; or■ on strike or locked out; or■ on workers' compensation and expected to return to their job; or■ were employers or own account workers who had a job, business or farm, but were not at work.
Industry of main job	<p>In this publication, industry of main job refers to ANZSIC Division as classified according to the <i>Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006</i> (cat. no. 1292.0).</p>
In the labour force at some time during the year	<p>People who had worked or looked for work for one week or more during the year. Note that the specific criteria used to determine whether a person was employed or actively looked for work, according to the LFS, were not applied.</p>
In the labour force for the whole year	<p>People who had either worked or looked for work every week for the whole year. Note that the specific criteria used to determine whether a person was employed or actively looked for work, according to the LFS, were not applied.</p>
In the labour force for part of the year	<p>People who had either worked or looked for work for one week or more during the year, but had some weeks when neither activity was undertaken. Note that the specific criteria used to determine whether a person was employed or actively looked for work, according to the LFS, were not applied.</p>
Looked for work at some time during the year	<p>People who looked for work for one week or more during the year. Note that the specific criteria used to determine whether a person actively looked for work, according to the LFS, were not applied.</p>
Main English-speaking countries	<p>Comprises the United Kingdom, Ireland, Canada, South Africa, the United States of America and New Zealand.</p>
Mean duration of time spent looking for work	<p>Obtained by dividing the aggregate number of weeks a group has been looking for work by the number of people in that group.</p>
Median duration of time spent looking for work	<p>The duration which divides people who looked for work into two equal groups, one comprising people whose time spent looking for work during the year is above the median, and the other, people whose time spent looking is below it.</p>
Not in the labour force at some time during the year	<p>People who had neither worked nor looked for work for one week or more during the year. Note that the specific criteria used to determine whether a person was employed or actively looked for work, according to the LFS, were not applied.</p>
Number of employers/businesses during the year	<p>The number of employers/businesses a person worked for during the year.</p>
Number of spells of looking for work during the year	<p>The number of different periods, including the current period, during which a person was not working but was looking for a job.</p>

GLOSSARY *continued*

Occupation of main job	In this publication, occupation of main job refers to Major Group as defined by the ANZSCO — <i>Australian Standard Classification of Occupations, First Edition, 2006</i> (cat. no. 1220.0).
Time in the labour force during the year	The total number of weeks a person reported having either worked or looked for work during the previous year. Note that the specific criteria used to determine whether a person was employed or actively looked for work, according to the LFS, were not applied.
Time not in the labour force during the year	The total number of weeks a person reported having neither worked nor looked for work during the previous year. Note that the specific criteria used to determine whether a person was employed or actively looked for work, according to the LFS, were not applied.
Time spent looking for work during the year	The total number of weeks a person spent looking for work, while not working.
Time worked during the year	The total number of weeks a person reported having either worked or been on paid leave. Periods of one week or more on strike or time off without pay are not classified as time worked.
Time worked full time during the year	The total number of weeks a person reported as having either worked or been on paid leave during the year, minus any weeks during the year where they reported working part time.
Time worked part time during the year	The response given by a respondent to the question 'For how many weeks did you work part time?'
Unemployed	People aged 15 years and over who were not employed during the reference week, and: <ul style="list-style-type: none">■ had actively looked for full time or part time work at any time in the four weeks up to the end of the reference week and were available for work in the reference week; or■ were waiting to start a new job within four weeks from the end of the reference week and could have started in the reference week if the job had been available then.
Worked	Activity in a job, business or farm, for pay, profit, commission or payment in kind; or any activity in a family business that contributed to the operation of that business although no payment was received. Includes being absent, but on paid leave, from such activity. Note that the specific criteria used to determine whether a person was employed, according to the LFS, were not applied.
Worked at some time during the year	People who reported having worked and/or been on paid leave for one week or more during the year.
Worked for part of the year	People who reported having worked and/or been on paid leave for part of the year.
