ESA Elements					
Pillar	Dimension	Description	Critical Frequency	Critical Spatial	Critical Disaggregation
Society	Crime	Includes indicators on the prevalence, characteristics and experiences of people exposed specifically to violence.	Five yearly	National, State/Territory, Local Government Area, Indigenous Region	Age, Sex, Indigenous Status, Offence Type, Relationship of Victim to Offender

Overall ESA Assessment

The quality of ESA – 739 Personal Experiences of Violence was assessed as a green traffic light for the purpose of ESA. The overall quality of this statistic met an acceptable standard for the quality indicators selected and the appropriate quality practices and processes were in place. The data custodian can be contacted for further information about the quality of the dataset which contributed to the statistic.

For more detailed quality information about each dimension, see over page

ESA – 739 PERSONAL EXPERIENCES OF VIOLENCE

Institutional Environment

The statistic scored a green traffic light for institutional environment. There were sufficient quality and risk management processes in place, protections for confidentiality and archiving processes. Staff were trained in data collation.

Relevance

The statistic scored a green traffic light for relevance. All key information identified in the description of the statistic was available. The critical disaggregations identified for the statistic were present. The critical spatial levels, Local Government Area and Indigenous Region, were not available and State/Territory was only available for some information.

Timeliness

The statistic scored an amber traffic light for timeliness. The critical frequency for the statistic was met and the duration between collection and release of data was timely. Users were not able to access the release of new data when expected due to delays in release of data.

Accuracy

The statistic scored a green traffic light for accuracy. There was no known under or overrepresentation in the statistic and there were sufficient measures in place to adjust for non-response. Sampling error was represented for individual figures. Most of the target population was sufficiently represented for the statistic, however very remote Aboriginal and Torres Strait Islander communities were not enumerated.

Coherence

The statistic scored a green traffic light for coherence. Information for the statistic was able to be compared over time with no changes to collection procedures and population and characteristic definitions remaining consistent. External sources were available for data confrontation.

Interpretability

The statistic scored a green traffic light for interpretability. Data quality statements, information to help users to understand the data and descriptions of conceptual limitations of the data were available. Users were able to access additional support if needed.

Accessibility

The statistic scored a green traffic light for accessibility. The key information, including visualisations such as graphs or maps, was publicly available and users could access data in a machine readable format, Excel and other formats such as html. The key information was accessible for free with customised data available at a cost.

Areas for Improvement

- The critical spatial levels, Local Government Area and Indigenous Region, were not available.
- The critical spatial level State/Territory was only available for some information.
- Users were not able to access the release of new data when expected due to delays in release of data.
